VOYAGES and TRAVELS.

BOOK I.

An Account of the Circum-Navigators of the GLOBE, and of the Diſcoveries of the *Eaſt* and *Weſt Indies.*

CHAP. III.

Comprehending the Diſcovery, Settlement, and Commerce of the WEST INDIES.

SECTION I.

Of the Importance of the new-diſcovered Continent of America, *the Nature of that Diſcovery, the Felicities attending it, the Advantages derived from thence to the Art of Navigation, and the principal Points to be treated of in this Chapter.*

1. *All Ages and all Nations have concurred in admiring ſuch as have diſtinguiſhed themſelves by the Diſcovery of new Countries.* 2. *The Art of Navigation much improved in* Columbus's *Time, and yet he had great Difficulties to ſtruggle with in Theory and Practice.* 3. *By his Scheme he avoided the Imputation of Hereſy, which had fallen upon all who maintained* Antipodes *before him.* 4. *No juſt Imputation on him that he did not find* America *exactly as he conjectured.* 5. *A ſuccinct Account of the Subjects that are to be treated of in this Chapter.*

1. THERE are very few Points as to which the Judgments of different Times and ſeveral Nations have ſo well agreed, as in the Fame due to thoſe who firſt diſcovered diſtant Countries. In reſpect to the fabulous Hiſtory, *Bacchus* is highly celebrated for his *Indian* Expedition, and chiefly becauſe he durſt penetrate farther than any Man had ever gone before, he was reputed a Deity. The *Egyptians*, who were eſteemed to be the wiſeſt People of Antiquity, and with reaſon, ſince almoſt all the Sciences travelled into this Part of the World from thence, paid the higheſt Tribute of Praiſe to ſuch of their Monarchs as were ſuppoſed to have conquered the Eaſt, and to have penetrated into Countries where, before that Time, no victorious Armies had ever come. It was for the ſame Cauſe that the *Tyrian Hercules* was ſo much magnified by his Countrymen; and it was the Glory which thoſe Heroes had acquired, that prompted *Alexander*, the moſt ambitious and moſt daring of the *Greeks*, to undertake his famous Expedition againſt the *Indians*, that he might not fall ſhort of any whoſe Names were recorded in Hiſtory; which Vanity of his tranſported him to ſuch a Degree, that though, after the Ruin of the *Perſian* Empire, he eſteemed himſelf only the firſt of Men; yet, on his framing the Project of invading *India*, he conceived himſelf, and expected that others ſhould conceive him, ſomewhat more than Man. In ſucceeding Times, we find this Humour far from being worn out, ſince even the *Romans*, who, if not a wiſer, were moſt certainly a more moderate and better-judging People than the *Greeks*, eſteemed the Invaſion of *Britain* by *Julius Cæſar*, the moſt glorious of his Actions, and that which redounded moſt to the Honour of their Empire.

Upon the ſame Principle the famous Emperor *Trajan* was ſo extremely deſirous of following the Example of *Alexander*, and carrying the Terror of the *Roman* Arms into Countries which their Anceſtors never knew. But, after all, this Notion of puſhing their Conqueſts in this manner carries in it nothing ſo truly noble as the Project of diſcovering Countries far removed from other Parts of the World by vaſt Tracts of Sea; and this for many Reaſons, but principally for theſe Three. Firſt, Becauſe the former is the bare Reſult of Force; whereas the latter muſt be the Effect of Skill. To enjoy Courage only is common with other Animals; but Fortitude of Mind, with reſpect to Dangers not felt, but foreſeen, is peculiar to us as Men; and ſo likewiſe is the Conduct by which Providence has enabled us to guard againſt them. Secondly, In attempting the Diſcovery of diſtant and unknown Regions, we not only combat thoſe Difficulties which other Conquerors meet with; but, at the ſame Time, attempt to ſubdue Nature, and to make her, who is the Miſtreſs of Mankind, obedient to our Will, which, in ancient Times, was ſuppoſed to have ſomewhat in it of Divinity, becauſe, to ordinary Minds, it ſeemed beyond the Reach and Power of Man. Thirdly, Whereas other Conqueſts tend only to the Benefit of this or that Nation; theſe are advantageous to the Species, and add Dominion not to a ſingle People, but to the whole Race of Mankind.

2. We muſt allow that the Uſe of the Compaſs had brought about conſiderable Changes in the Art of Navigation, before any Attempt was made to diſcover new Countries by ſailing Weſtward; but, however, there were great Difficulties to be overcome, before any Deſign of that ſort could be accompliſhed. The Veſſels then in uſe were very unfit for long Voyages, in Point of Form, Capacity, and Strength. The Seamen again had very little Experience, were naturally inclined to coaſting, and knew not enough of their Art to be clearly ſatiſfied what could, or what could not, be performed by it. Add to all this, that their Skill conſiſted rather in practiſing what they had ſeen before, than in the Knowledge of any ſettled Principle of Science, capable of directing them in any extraordinary Caſes that might happen. And even as to their Obſervations, they were far enough from being exact, partly from the Meanneſs of their Inſtruments, and partly from the Narrowneſs of their Notions about the Uſe of them.

We may ſubjoin to theſe another Difficulty, as great, or perhaps greater, than any of the reſt; which was their Proneneſs to Superſtition, a Thing incident to all Arts, while indifferently underſtood, which made them, on the one hand, liable to be ſurprized and confounded by every little Accident, and, on the other, rendered them ſo obſtinate and intractable, that it was very hard, and, in ſome Caſes, almoſt impoſſible, to force them out of their ordinary Road, notwithſtanding their being directed by Perſons of ſuperior Abilities, and who, by a long Courſe of Study and Obſervation, had conquered all or moſt of theſe Difficulties. Theſe Errors and Imperfections in ſuch ſort of People might, however, be very eaſily excuſed, when thoſe who, both from their Parts and their Profeſſions, ought to have been freer from theſe Foibles and Follies, entangled themſelves, by their own Wilfulneſs and Vanity, in ſtill greater Miſtakes. Thus, for inſtance, it became a Point of Faith to deny that there were *Antipodes*, and the learned Biſhop of *Saltzburg* was condemned as a Heretic for holding the contrary Opinion.

There has, indeed, been ſome Endeavours uſed to palliate this Matter, and to make the World believe that the Clergy, in thoſe Days, were not quite ſo ignorant as they have been repreſented. With this View we are told, that St. *Auguſtin*, on whoſe Authority the Prelate before-mentioned was condemned, was far enough from believing, that the Earth upon which we live was flat, like a Trencher, which may be granted; but then let us hear how they explain the Matter, and in what manner they ſtate the Caſe of the *Antipodes*, ſo as to render the Belief of them an Hereſy. Why, ſay they, though the Church acknowledged the Earth to be a Globe, and that there was an inferior, as well as ſuperior Hemiſphere; yet they denied that the latter was habitable, becauſe, as it muſt be ſeparated from us by a great Ocean, the Conſequence they thought muſt have been, that, if it was peopled, the Inhabitants could not have been deſcended from *Adam*, and therefore the aſſerting a World ſo peopled was, in their Judgment, a flat Contradiction of the Scriptures. This Poſition of theirs, though a little better Senſe, was as effectual a Bar to Science, and as much calculated to prevent Diſcoveries, as the other Opinion of the Earth's being flat; ſo that, conſidering the Power of the Church in the fifteenth Century, one cannot help wondering how it came into the Head of ſo religious a Man as *Chriſtopher Columbus* to maintain the Poſſibility of ſuch an Enterprize; and one ought to wonder much more that, after he did maintain ſuch a Doctrine, it was not condemned as a Hereſy.

3. At firſt ſight, the examining this Point may ſeem to be a little wide from our Purpoſe; but I hope, before I have done with it, to convince the ingenious Reader that nothing can contribute ſo much to the perfect underſtanding the Subject of this Section. We have already ſhewn, at the Beginning of the former Volume, that, when *Columbus* firſt propoſed his Scheme, it met with great Oppoſitions, more eſpecially from the Learned, who, either not comprehending the Force of his Arguments, were reſolved to conceal their own Ignorance the beſt Way they could; or elſe, from a Principle of Envy, were aſſiduous in maintaining that what he aſſerted was falſe and abſurd, merely becauſe they had not Penetration enough to make ſuch a Diſcovery themſelves: But we never hear that they charged him with Hereſy, and therefore I am inclined to think, that the Reaſon before aſſigned for condemning the Opinion of the *Antipodes* was the true one.

The Buſineſs then is to ſhew how *Columbus* avoided ſplitting upon this Rock, and maintained his Notion without running into that, to which the Church was, in his Time, as little reconciled as when the Biſhop of *Saltſburg* was adjudged an Heretic. In order to clear up this, the Reader is to underſtand, that though *Columbus* diſcovered that great Continent, now called *America*; yet he was very far from declaring, at leaſt, or perhaps from believing, before he undertook his firſt Voyage, that there was any ſuch Continent; by which I mean, a Continent ſeparated from *Europe* by ſo large a Part of the Ocean on one Side, and as far ſeparated from *Aſia* in like manner on the other. For, had he ſo conceived, or, at leaſt, had he maintained this Conception, however agreeable to good Senſe and Truth, he had been moſt certainly eſteemed a Heretic.

But the Principle he went upon, though not ſtrictly true, exempted him from all Imputation. It was, in few Words, this, That the Earth being globular, it was reaſonable to ſuppoſe, that the Continent and Iſlands of the *Eaſt Indies* extended themſelves in ſuch a Manner into the inferior Hemiſphere, as that they might be reached very conveniently by ſailing Weſtward. It is very evident that, by this Suppoſition, he entirely avoided the Hereſy of maintaining, that there might be another Continent, inhabited by Men that were not deſcended from *Adam*. It is very true that he might maintain and publiſh this Doctrine, without believing it; but, as the Reader will hereafter ſee, this was not the Caſe; for he really ſpoke as he thought. Nor does it appear that he was undeceived, even by the firſt Voyage that he made; but, on the contrary, firmly believed, that the Iſlands he had viſited were ſuch as lay at ſome Diſtance from the Continent of the moſt Eaſtern Part of *Aſia*.

4. There is nothing in this Error of *Columbus* which can in the leaſt prejudice him in the Opinion of a judicious and intelligent Perſon; but quite the contrary, ſince it was impoſſible for him, or indeed, for any Man, to diſcover, by the Force of his Genius only, how the Divine Providence had diſtributed the Continent and Iſlands in that unknown Hemiſphere. On the contrary, we learn from hence, that there is always ſomething magnificent and ſhining, and, if I may be allowed the Expreſſion, a ſhadowy Reſemblance of Truth even in the Miſtakes of great Men. It was the Opinion of this able Perſon, that after traverſing a wide Sea, he ſhould fall in with that Archipelago of Iſlands which *Marco Paulo* had deſcribed, and which he had called *Zipango*, or *Cipango*, which are what we call *Japan*; and, if the Continent of *America* had not lain in his Way (which, as I ſaid, it was impoſſible

The whole being regulated by
Astronomical Observations
By Eman. Bowen.
Geographer to His Majesty.
The Currents are observ'd to be generally near the Coast or in Straits &c. and more or less as they are affected by the Winds. Without the limits of the Trade Winds (which are included within 30 Deg. North & South of the Equator) the Sea is Subject to Variable Winds: tho usually, a Stormy West Wind prevails here. Within ye Trade Winds in this Ocean they are for ye most part gentle & regular, which makes Sailing both safe & pleasant: hence it is, that ye usual Course to Virginia &c. is made so much to the Southward.
Tho' Columbus is generally supposed to have been the first Discoverer of ye New World, Yet there is great probability that Madoc a Prince of North Wales sailed from thence & landed on ye Coast of Florida [illegible] see p. 190 of this Work

P R E F A C E.

THE fowing Volume, as it makes a Part of this great Work, the Reader will find be properly divided in reſpect to Books, Chapters, and Sections; but here we ppoſe to conſider it in another Light, and according to that natural Way of Dſion ariſing from the different Subjects that are treated in it. In the Beginni, more eſpecially, we have largely conſider'd the Nature of Settlements or Pltations; in the Middle Part of the Book we have ſhewn from Examples, the Uity of Travelling through all Parts of the habitable World; and we have elſewhere diſcourſed of ie great Importance of new Diſcoveries, and the Advantages which a Trading Nation may dve from the opening freſh Channels of Communication with the Inhabitants of diſtant Counes, and conſequently of diſpoſing of their Commodities and Manufactures, in Places, where, erhaps, they were never ſeen or heard of before. In this Place we ſhall very ſuccinctly mention me of the Capital Uſes that may reſult from the Manner in which we have treated theſe ſeveralranches of our Subject, and refer the inquiſitive Peruſer, for a more copious and circumſtant View of the Diſpoſition and Connection of the ſeveral Parts of this Deſign, to the Concluſio where we have Reaſon to hope they are ſo ſtated, as to give him entire Satisfaction.

The great Point with nect to Plantations, is to ſhew, that the Riches, Power, and Happineſs of the Mother-Country, depds, in a great Meaſure, upon them; and that on the other Hand, this Connection is ſo far fromeing grievous, burthenſome, or prejudicial to the Colonies, that, on the contrary, their Peace, Were, and Proſperity, are dependant upon this, and upon this only; ſo that the Benefits and Advantagof Settlements and their Mother-Countries are always reciprocal; whence ariſes the Tie of mutual Obation, that renders it equally unnatural for one to regret the Share ſhe pays out of the Profit of her Labrs, or the other to repine at the Demands that are now and then made for Aſſiſtance and Protection.It is a Thing of the higheſt Conſequence, that theſe Notions ſhould be thoroughly deſeminated, d all the Points before inſiſted on univerſally underſtood. The ſending People abroad to ſettle for Time in a Plantation, ought to be conſidered in the Light of publick Service, becauſe ſo in Fact it iſince we have proved in the following Pages, that every Planter abroad, finds Employment for ſevl Men, perhaps for ſeveral Families at Home; there cannot therefore be any thing more unjuſt, th to give a Preference of any Kind to thoſe whom he maintains, before him who maintains them. here is alſo nothing more abſurd, than to fancy that well regulated Colonies tend to depoplate tir Mother-Countries; which is ſo far from being true, that the more populous any Plaations e, the better peopled their Mother-Countries muſt be; for the more flouriſhing the Settlement,he greater Conſumption of Manufactures and Home Commodities in that Settlement: Now theſennot be conſumed unleſs they are furniſhed, and they cannot be furniſhed without a Multitude of Has; but Employment will always procure theſe, and conſequently People in a Plantation, like Waten the Sucker of a Pump, ſets the Machine in Motion, and by a Kind of political Attraction, produs that Circulation of Induſtry which is the Health of the Conſtitution. *Laſtly*, Though all Trade isvantageous, the Trade between Mother-Countries and their Plantations is of all others moſt advaneous, becauſe wherever the Profit falls, the ſame People reap it, and little or nothing is diverted to foreign Channels. The large Hiſtory enſuing may be conſidered as a practical Commentary upothis Text, in which by innumerable Inſtances it is proved, that where theſe Notions are adverted and followed, Mother-Countries and their Plantations thrive equally, and that both pine, dwindand decay, where theſe Maxims are either neglected or deſpiſed.

In Regard to Travels by Ind, the Benefits reſulting from them are partly in common, and partly diſtinct from thoſe which ar from Voyages; we ſhall inſiſt here only upon the latter. We derive from well-written Relationſf theſe, Accounts that may be relied on as to the Natural Hiſtory of Countries, their Climate, S and Produce, whether Vegetables, Animals, or Minerals, and are thereby enabled to form ſomKind of Notion of thoſe immenſe Treaſures, which with a wiſe as well as bountiful Hand, the gre Author of the World has diſtributed through all its Parts. We are next informed concerning t State of our own Species in every Country, more or leſs diſtant, or however ſituated in reſpect to our own, their Manners, Cuſtoms, Relon, Government, Laws, Forces, Revenues, and Trade. Beſides all this, we learn the Progreſs Art in the Improvement of Nature, which is a Point of higher Conſequence than is commonly imined; ſince upon a ſtrict Review it will be found, that even amongſt the moſt uncouth and barous Nations, there are many ingenious Inventions to be met with, ſome taken from Accident, t moſt dictated by Neceſſity, which in neither Way have ever occurred, even to the moſt lively Iminations, amongſt People more civilized. As for Inſtance, The neat Cloaths of Skins, Hunting and Fing Tackle without Iron, and Boats that cannot ſink among the *Greenlanders*; their flying Prows ongſt the Inhabitants of the *Marian Iſlands*; their Feather Works amongſt the ancient *Mexicans*, &c y reading as well as ſeeing theſe Things, the human Mind is vaſtly enlarged and improved; we beme weaned and eſtranged from thoſe little, narrow, and childiſh Notions which are the Effects of ſordid Education, and by which even the brighteſt Genius is held in Chains. Neither is this the on Benefit, for the Extenſion of true Science naturally heightens and improves our moral Notions, tches us Affability, Kindneſs and Commiſeration for Strangers, and puts us in this reſpect upon ecuting the Fundamental Maxim of the Chriſtian Law, by doing unto others as we would wiſh to done by in their Circumſtances. It teaches us Wiſdom alſo, enables us to find out Means for morating our own Soil and Climate, and introducing as well foreign Fruits and Timber, as Animal and by Labour prudently directed, making them our own. In the ſame Manner we transfer their rts alſo, which though invented in particular Countries, and indiſpenſably neceſſary in ſome, are gerally ſpeaking, uſeful and convenient in all. Whatever Books of Travels therefore treat of theſe atters moſt copiouſly, circumſtantially, and correctly, deſerve moſt to be read, and beſt to be reſerved; which Rule we have ſtudied to follow for the Reader's Emolument, as well as in Diſcrge of our own Duty.

In Reference to new Diſcoveries, and opening freſh Channels of Tra, we have ſpared no Pains, nor have been deterred by any Hazards. We have conſidered every Qter of the Globe, and after enquiring how far it is already known and viſited, have pointed out homuch farther and better it might be known, and what Advantages might probably be expected om thence. We have not ſtood in Awe, upon theſe Occaſions, either of the Cenſures of haſt Criticks, of the Raillery of ſuch as deſpiſe all Projects but thoſe of Pleaſure, or of the Reſentment Men who fancy that ſuch Diſcoveries would be an Intruſion upon their Rights, though they ne attempt to turn theſe, ſo much, as to their own Advantage. What we have offered, has procled from a right Intention, from a Deſire of employing the Poor, of affording ſuitable Rewards to terprizing Minds; and in a Word, of contributing, ſo far as this Opportunity put it in our Por, to the Benefit of Society, which is a Tribute due from every Member of it, for the Protection, d other Bleſſings that he enjoys in that Capacity. We have in every Inſtance had Reaſon for o Guide at leaſt, and ſometimes alſo Experience. We have propoſed the undertaking of nothin without ſhewing that there were probable Grounds of finding the Undertaking both beneficial and acticable. We have ſtudied to be as clear in the one, and as certain in the other, as it was poſſibl neither have we pretended to dictate, but have contented ourſelves with propounding fairly wh appeared to us feaſible. To this we were chiefly encouraged by obſerving, that the ſame noble an generous Spirit, which animated our Anceſtors not only to attempt, but to perform ſo many a ſo great Actions, of which we feel the Benefit, began to revive in the preſent Age for our own Aantage, as we hope, as well as for that of our Poſterity. What was in our Power we have done cheriſh and keep alive this glorious Flame, and to enable it to mount as high at preſent as in pa Times; and if in doing this we have ſometimes digreſſed with ſome degree of Acrimony into expng the oppoſite Humour of preferring Indolence and Pleaſure to Activity and Induſtry, we hope e Warmth of our Zeal will at leaſt excuſe that of our Language. It is our Comfort however, tt if it does not, it can offend only the Idle and Taſteleſs, whom, to ſay the Truth, we never had Thought to pleaſe. They muſt look for a Library of this Kind elſewhere, for this is conſecred entirely to the Service of ingenious and intelligent Readers, who ſeek Improvement and Inſiction, and have no Notion of being entertained at the Expence of their Time and their Underſdings.

This we flatter ourſelves will be found a fair Repreſentation of th principal Matters that are to be met with within the Compaſs of this Volume; and having ſaid tl, we have nothing farther to add, than that we heartily wiſh the Peruſal of it may, in ſome Meaſe, anſwer our Aim, and contribute to diffuſe that publick Spirit which teaches Men not only to h well to the World in general, and to their own Country in particular, but to expreſs the Sirrity of their Wiſhes in their Studies, their Diſcourſes, and their Actions. We ſhall then be amp rewarded for all the Anxiety and Labour with which the atchieving ſo great a Work has been tended, and ſhall chearfully leave it as a Monument to Poſterity, that we have not been idle inr Generation, or unworthy of the Examples that have been ſet us in this Kind of Writing, by great Men in the laſt Age; in our own, and in other Countries.

last

CONTENTS.

THE TABLE of CONTENTS OF THE SECOND VOLUME.

BOOK I.

An Account *of the* CIRCUM-NAVIGATORS *of the* GLOBE, *and of the Diſcoveries of the* Eaſt *and* Weſt, *and* Weſt-Indies.

CHAPTER III.

Comprehending the Diſcovery, Settlement and Commerce of the WEST-INDIES.

SECTION I.

Page
OF the Importance of the new diſcovered Continent of *America*, the Nature of that Diſcovery, the Felicities attending it, the Advantages derived from thence to the Art of Navigation, and the principal Points to be treated of in this Chapter. 1

SECT. II.

The firſt Voyage of *Chriſtopher Columbus*, in which he diſcovered the *Lucayo Iſlands*, and afterwards *Cuba* and *Hiſpaniola*, which opened a Paſſage from *Europe* to *America*, with his Return to *Spain*, and Reception by their Catholick Majeſties. 3

SECT. I.

The ſecond Voyage of the Admiral *Don Chriſtopher Columbus* to the *Weſt Indies*, including an Account of all the Diſcoveries made by him in that Voyage. 16

SECT. V.

The third Voyage of *Don Chriſtopher Columbus* to the *Weſt Indies*, in which he firſt ſaw the Continent of *America*, including the Troubles to which he was expoſed, and his being ſent home in Irons. 27

SECT.

The fourth Voyage of the Admiral *Don Chriſtopher Columbus* his Diſcoveries on the Continent, and of the Iſland in *America*; with an Account of his Return from that Voyage to *Spain*, and his Deceaſe. 39

SECT.

The Hiſtory of the ſeveral Diſcoveries, Settlements and Conqueſts made by the *Spaniards* in the *Weſt Indies*, after the Death of the Admiral *Don Chriſtopher Columbus*, to the Expedition of *Ferdinand*, or *Hernan Cortes*. 49

SECT. V.

Page
The Expedition of *Hernan Cortes* for the Reduction of *New Spain*, from the Time of his being appointed to that Command, unto his being obliged to return to the Iſland of *Cozumel*. 63

SECT. VIII.

The Progreſs of this Expedition from the Time of the *Spaniards* embarking for *New Spain*, to the firſt Meſſage ſent by *Cortes* to *Montezuma*, Emperor of *Mexico*. 70

SECT. IX.

The Continuation of *Hernan Cortes*'s Expedition; His Alliances with ſeveral *Indian* Nations; his Succeſs in quelling various Seditions in his own Army, and his Preparation for his March to *Mexico*, by burning his whole Fleet. 77

SECT. X.

The Hiſtory of the War of *Tlaſcala*, from its breaking out to *Cortes*'s concluding a Peace with that Republick, and his taking them into the Confederacy againſt the *Indian* Emperor *Montezuma*. 85

SECT. XI.

The March of the *Spaniards* to *Mexico*; the Reception given to *Cortes* by *Montezuma*; his Impriſonment, and other Tranſactions to the Time of his ordering the *Spaniards* to quit his Dominions. 94

SECT XII.

The Hiſtory of *Cortes*'s Expedition continued to the Death of *Montezuma*, and the *Spaniards* being forced to abandon the City of *Mexico*. 103

SECT. XIII.

The Concluſion of *Hernan Cortes*'s Expedition including the Hiſtory of the remaining Part of the War, to the Reduction of the City and Empire of *Mexico*, by which the *Spaniards* acquired their extenſive Dominions on the Continent of *North America*. 114

TABLE of CONTEN S.

Page

SECT. XIV.

The Diſcoveries made by the *Spaniards* in the Province called *Golden Caſtile*; their firſt Knowledge of the *South Sea*, and their Eſtabliſhment of *Panama*, by which a Paſſage was opened to the Diſcovery and Conqueſt of the great Empire of *Peru*. 136

SECT. XV.

The Hiſtory of the Diſcovery and Conqueſt of the Empire of *Peru* by *Francis Pizarro*; together with the Diſcovery of *Chili*, and the Conqueſt of that Country alſo. 143

SECT. XVI.

A Conciſe Hiſtory of the Diſcovery, Settlement, and Cultivation of *Brazil* by the *Portugueſe*; the Conqueſt of the greateſt Part of that Country, by the *Dutch*; the Recovery thereof by the *Portugueſe*; and the vaſt Advantages that have accrued to them of late Years from this noble Colony. 166

SECT. XVII.

The Diſcoveries and Settlements made by the *Engliſh* in different Parts of *America*, from the Reign of *Henry* VII. to the cloſe of that of Queen *Elizabeth*, interſperſed with various Remarks on the Progreſs of our Trade and Naval Power; and the Difficulties which the Nation had to ſtruggle with in their firſt Attempts. 189

SECT. XVIII.

The Hiſtory of the Diſcoveries, Settlements, and other Tranſactions of the *Engliſh* Nation in *America*, from the Aeſſion of King James I. to the Reſtoration. 221

Page

SE T. XIX.

An Hiſtorical Accour of the *Britiſh* Settlements in *America*, fron the Reſtoration of King *Charles* II. to the Ivolution. 274

SE T. XX.

The Hiſtory of the *ritiſh* Colonies in *America*, from the Revoluticto the Death of his late Majeſty King *George* 301

SE T. XXI.

The Hiſtory of theRiſe, Progreſs, and preſent State of the Coloy of *Georgia*, with the Attempt made upon by the *Spaniards*, and their total Defeat; intrſperſed with original Papers. 323

SE T. XXII.

A ſuccinct Hiſtory othe Diſcoveries, Settlements, and Conqueſts mae by the *French* in *America*; A View of their lolicy, Numbers, Commerce and Strength in nat Part of the World; and ſome Conjecturesas to the Event of their Deſigns, extracted hiefly from their own Authors. 348

SE T. XXIII.

The Diſcoveries, Cnqueſts, Settlements, and preſent State of the *Dutch* Colonies in *America*; the Nature and Value of their Commerce with the *Spaniards*, and the Manner in which their Returns are made to *Europe*; to which is added, An Account of the *Daniſh* Settlement; the whole collected chiefly from the *Dutch* Writers. 364

BOOK II.

Voyages and Diſcoveries towards the North, ad through moſt of the Countries of EUROPE.

CHAP. I.

The Diſcoveries made directly towards the North, *and the Attempts hitherto made for finding the* North-Eaſt *and* North-WeſtPaſſages.

SECT. I.

THE Hiſtory of the Countries lying round the North Pole, their Climate, Soil and Produce, together with an Account of the Cuſtoms, Manners, and Trade of their Inhabitants. 377

SECT. II.

The rational Philoſophical Motives for ſeeking a Paſſage into the *South-Seas*, by the North-Weſt, examined and explained; together with the Hiſtory of the Attempts made with that View for the Space of One hundred and thirty Years. 399

SECT. III.

The accurate and admirable Voyage of Captain *Thomas James*, for the Diſcovery of a Paſſage into the *South-Seas* by the North-weſt, his wintering in *Charon* Iſland, and wonderful Return with his Ship, and moſt of the Crew into *England*. 406

ECT. IV.

The late Attents made for the Diſcovery of a Paſſage to th *South-Seas* from *Hudſon's*-Bay, more particurly that of Captain *Chriſtopher Middleton*, Cmmander of his Majeſty's Sloop the *Furnace*. 437

SECT. V.

A ſuccinct Acqunt of the Grounds upon which a North-ea Paſſage into the Sea of *Japan* has been exected and ſought for. The Attempts of t *Engliſh* and *Dutch* on that Side, with the Rons why all Thoughts of a Paſſage that Wy have been for many Years given up. 452

TABLE of CONTENTS.

CHAP. II.

Comprehending ſuch Voyages and Travels as relate to the Northern Parts of Europe, *and ſuch of the Countries adjacent as are ſubject to any of the* European *Powers.*

SECT. I.

Page

A Voyage to the North, containing an Account of the Sea-coaſts and Mines of *Norway*, the *Daniſh*, *Swediſh*, and *Muſcovite*, *Laplands*, *Borandia*, *Siberia*, *Samogedia*, *Zembla*, and *Iceland*, with ſome very curious Remarks on the *Norwegians*, *Laplanders*, *Ruſſians*, *Poles*, *Circaſſians*, *Coſſacks*, and other Nations. 457

SECT. II.

A ſuccinct and impartial Account of the Kingdom of *Sweden*, with Reſpect to its Climate, Soil and Produce; as alſo of the Temper, Genius, Cuſtoms, Policy, Form of Government, Force, and Trade of its Inhabitants. 493

SECT. III.

The preſent State of the Dominions of the Crown of *Denmark*, and of its Subjects in reſpect to their Manners, Cuſtoms, Laws, Forces, Revenues, Commodities and Commerce, with occaſional Obſervations and Remarks. 501

SECT. IV.

A Comprehenſive Account of the Kingdom of *Poland*, the Situation, Extent, Climate, Soil, Produce and Commerce of that Country, together with the Laws, Cuſtoms, Manners, Form of Government, and Genius of the Inhabitants, the Privileges of their Nobility, and Power of their Kings. 508

SECT. V.

A ſhort Account of the *Ukrain*, and of its Inhabitants the *Coſſacks*. 516

CHAP. III.

Comprehending Travels through the middle Parts of Europe, *particularly the* United-Provinces, *the* Auſtrian Low-Countries, Germany, Italy, Switzerland, Savoy, *and the Territories of the Republick of* Genoa.

SECT. I.

THE Travels of Mr. *Maximilian Miſſon* through Part of *Holland*, the *Spaniſh Low-Countries*, *Germany*, *Tyrol*, and the Biſhoprick of *Trent*, in his Way to *Italy*; containing a diſtinct Account of whatever appeared to him remarkable in the Places through which he paſſed; together with Political, Hiſtorical, and Critical Remarks upon Perſons and Things as he has Occaſion to repreſent them. 521

SECT. II.

The Travels of Mr. *Maximilian Miſſon* through a great Part of *Italy*, with a diſtinct Detail of whatever is curious or worthy of Obſervation in the Places he viſited; and many judicious and important Remarks on the Manners, Cuſtoms, *&c.* of the Inhabitants. 535

SECT. III.

The Travels of Mr. *Maximilian Miſſon* continued, from his Arrival at *Rome* to his Departure out of *Italy*; with Obſervations and Remarks. 561

SECT. IV.

Biſhop *Burnet*'s Travels through *Swiſſerland*, Part of *Italy*, ſome Provinces of *Germany* and the *Low-Countries*, in which are contained many curious, Hiſtorical and Political Remarks on the Manners of the People, the Form of Government, and the State of the Countries beforementioned. 590

SECT. V.

The Travels of the Reverend Mr. *John Ray*, through the *Low-Countries* and *Germany* towards *Italy*, interſperſed with curious Obſervations, Natural, Topographical, Moral, Phyſiological, *&c.* 641

SECT. VI.

The Travels of the Reverend Mr. *John Ray*, through the Dominions of the State of *Venice*, *Lombardy*, *Tuſcany*, the Kingdom of *Naples*, the Iſlands of *Sicily* and *Malta*, the Eccleſiaſtical State, the Biſhoprick of *Trent*, the Country of the *Grizons*, *Switzerland*, &c. 658

CHAPTER IV.

Containing Travels through Spain, France *and* Navarre; *with Deſcriptions of the ſeveral Provinces and leſſer Diſtricts of thoſe great Countries; of the chief Cities and Ports in them, and of the Commodities and Manufactures for which they are principally famous.*

SECT. I.

THE Travels of *Francis Willoughby*, Eſq; through the Kingdom of *Spain*, with Obſervations on the Climate and Soil, as well as Produce of the Country: Accounts of natural Curioſities, remarkable Inſcriptions, principal Commodities and Manufactures, and of the Temper, Genius, and Cuſtoms of the *Spaniſh* Nation. Interſperſed with ſome Remarks by another Hand. 694

SECT. II.

Travels through *Portugal* and *Spain*, with a diſtinct Deſcription of the principal Cities in both Kingdoms; particularly *Liſbon*, *Coimbra*, *Porto*, and *Braga* in the former; *Madrid*, *Valentia*, *Alicant*, Page

Alicant, &c. in the latter: With a curious and correct Detail of the Curioſities in the *Eſcurial*, and a ſuccinct Deſcription of the other Royal Palaces of their Catholick Majeſties. 705

SECT. III.

The Travels of *Philip Skippon*, Eſq; afterwards Sir *Philip Skippon*, and the Reverend Mr. *John Ray*, through the beſt Part of the Kingdom of *France*; interſperſed with a great Variety of Hiſtorical, Political Philoſophical and Mechanical Remarks and Obſervations. 715

SECT. IV.

Travels of Dr. *John Northleigh* through *France*; interſperſed with Hiſtorical, Political, and Medical Obſervations, made with great Care and Circumſpection in two different Journies through that Kingdom, the laſt of which was compleated in the Year 170, and the whole reviſed by the Author a little before his Death. 727

CHAPTER V.

Comprehending Travels through the remoteſt Parts of Germany, Bohemia, Moravia, Hungary, *&c. to the very Frontiers of* Europe *upon that Side; interſperſed with the Hiſtory of Mines, Salt-Works, Fiſheries, and other curious Particulars.*

SECT. I.

A Voyage from *England* to *Holland*, with a Journey from thence by Land through the Electorates of *Cologne*, *Treves* and *Mentz*, the Lower and Upper *Palatinate*, *Bavaria* and *Auſtria*, to *Vienna*, from thence through *Moravia*, *Bohemia* and *Saxony*, to *Hamburgh*; with many judicious and uſeful Obſervations, by Dr. *Edward Brown*. 741

SECT. II.

A Deſcription of the noble Kingdom of *Hungary*, in which its various Prerogatives, and many Excellencies are pointed out; the Nature of the Country, its various and admirable Productions, the Diſpoſition of the People, their Language, Manners, and Cuſtoms, are, from the Knowledge of the Writers clearly and copiouſly ſet forth; interſperſed with a variety of Geographical, Hiſtorical, Phyſical, Political, and Literary Remarks upon various Subjects 759

SECT. III.

Travels through *Hungary* into *Theſſaly*; a Deſcription of the City of *Lariſſa*, and of the *Grand Signior*'s Court there; with other curious Particulars; together with a Deſcription of other Parts of *Hungary*, more eſpecially of the Gold Mines; and ſome Remarks upon the adjacent Countries, then and now making Part of the Hereditary Dominions of the Houſe of *Auſtria*. 765

APPENDIX to the former Section.

A Journey from *Vienna* to *Venice* by Land; with a diſtinct Account of the Quick-ſilver Mines in *Friuli*, including the Author's Obſervations in his Paſſage thro' *Styia*, *Carinthia* and *Carniola*. 781

BOOK III.

Voyages to, and Travels through the Dominions of the *Grand Signior*, and through the other Empires, Kingdoms and States in ASIA; with curious and copious Accounts of ſuch Parts of that great Continent as are leaſt known.

CHAPTER I.

Voyages through the Iſlands of the Archipelago: *Travels through moſt of the Provinces under the Dominion of the* Grand Signior; *with a full Account of the preſent State, Forces, Revenue, Commerce,* &c. *of the* Turks.

SECT. I.

THE Voyages and Travels of the celebrated Mr. *John Thevenot* from *Italy* to *Conſtantinople*, including a very curious and exact Deſcription of the ſeveral Places he touched at in his Paſſage; of the ſeveral Cities he viſited upon the Coaſts, and a moſt exact View of *Conſtantinople* at the Time he viſited it: Interſperſed with a great Variety of Hiſtorical and Political Remarks, equally inſtructive and entertaining. 790

SECT. II.

Containing an Account of the Cuſtoms and Manners of the *Turks*; their Learning and Religion; the Form of their Government; their Forces by Sea and Land; as alſo an Account of the Chriſtians and *Jews* inhabiting the Countries that are ſubject to the *Grand Signior*. 805

SECT III.

An Account of ſeveral of the moſt remarkable Cities in *Aſia*; of various Iſlands in the *Archipelago*, and of things moſt obſervable in them, both with reſpect to their ancient and preſent Condition; with Remarks Hiſtorical, Phyſical and Geographical. 822

SECT.

TABLE of CONTENTS.

SECT. IV.

Page
The Journey of the Reverend Mr. *Henry Maundrell* from *Aleppo* to *Jeruſalem*, containing a curious and accurate Deſcription of the Holy Land and City; interſperſed throughout with great Variety, as well of Philological, Phyſical and Philoſophical, as Hiſtorical and Critical Remarks. 841

CHAPTER II.

Containing Travels through the Empire of PERSIA, *and the Provinces depending thereon; with a large Account of their Climate, Soil and Produce; the Conſtitution of the Empire, and Nature of the* Shah's *Government; the Laws, Manners, Religion, Commerce, Diverſions,* &c. *not only of the Native* Perſians, *but of the ſeveral Nations living in the Country, and ſubject to the* Shah; *with a brief Account of the late Revolutions in that Empire.*

SECT. I.

THE Travels of Sir *John Chardin* by the Way of the *Black Sea* through the Countries of *Circaſſia, Mingrelia*, the Region of the *Abcas*; *Georgia, Armenia* and *Media* into *Perſia* proper; with a very curious and accurate Account, not only of the Countries through which he travelled, but of the Manners and Cuſtoms, Religion and Government, Commerce and Inclinations of the ſeveral Nations that inhabit them; Relations ſo much the more Curious, as theſe Countries, and the People dwelling in them, had not been tolerably deſcribed before by any Author. 862

SECT. II.

A copious and circumſtantial Deſcription of the great Empire of *Perſia*; its Situation, Extent, Diſtribution of its Provinces, Climate, Rivers, Seas, Soil and Produce, and the chief Cities throughout the Country, ſo as to afford a perfect Idea of its Condition in paſt and preſent Times. 876

SECT. III.

Of the Diſpoſition and Temper of the *Perſians*; their Perſons, Habits, Manner of Living; their Artificers and Mechanicks; the Reſpect paid to Merchants; the Method in which their Inland Trade is carried on; the paſt and preſent State of the *Engliſh* Commerce, and other Particulars; together with ſome curious Obſervations on the Nature of the Silk Trade, and a Computation of the annual Balance in favour of *Perſia*. 891

SECT. IV.

Containing an Account of the Government and Conſtitution of *Perſia*; the Nature of the *Shah*'s Power; the Diſtribution of Civil, Eccleſiaſtical and Military Offices; the interior Policy of the Empire; the regular Forces kept up there, both Horſe and Foot; and the Nature and Amount of the publick Revenues. 897

SECT. V.

A ſuccinct View of the *Perſian* Hiſtory, from the earlieſt Accounts, down to the preſent Time, in which is contained, a conciſe Repreſentation of the ſeveral remarkable Revolutions in that Empire, Ancient and Modern; the Conqueſts thereof by ſeveral Nations; and the Succeſſion of their reſpective Monarchs, ſo far as is neceſſary to illuſtrate what has been delivered in the foregoing Sections. 907

CHAPTER III.

A Deſcription of the North-Eaſt Parts of ASIA, *and the extenſive Empire of* CHINA, *with the Countries depending thereon, and the Manners and Cuſtoms of the ſeveral Nations that inhabit them.*

SECT. I.

THE Travels of his Excellency *E. Yſbrants Ides*, Ambaſſador from *Peter* the Great to the Emperor of *China*, through *Great Uſtiga, Siriana, Permia, Siberia, Daour*, &c. to the Frontiers of *China*, containing an exact Deſcription of the Extent and Limits of thoſe Countries; the Nations by which they are inhabited; with a curious and copious Account of their Religion, Government, Marriages, Dwellings, Diet, daily Occupations, *&c.* 918

SECT. II.

Travels through the Countries of the *Mongul Tartars* lying between the *Ruſſian* and *Chineſe* Empires; the Paſſage through the famous Wall, and from thence through ſeveral conſiderable Places to the City of *Peking*, the Capital of all *China*; with Obſervations Hiſtorical, Phyſical, Chorographical, Critical and Political, on the ſeveral Nations converſed with by our Authors, and the Countries by them inhabited; with ſome Conjectures alſo as to their former Inhabitants.

SECT. III.

The Author's Reception at the Court of *China*; the great Civilities paid him there; the wonderful State and Magnificence of the Imperial Palace; the Ceremonies of a publick Audience; the Perſon and Manners of the Emperor deſcribed. An Account of the Curioſities of the City of *Peking*; the grand Eſtabliſhment of the *Jeſuits*; the Civilities paid by them to the *Ruſſian* Miniſter; remarkable Things obſerved by him during the Time of his Stay in the Imperial Reſidence; the pompous Ceremonies of his Audience of Leave; his Return from *China* by Land; the Accidents attending his

Journey, the many and great Hardſhips he ſuſtained therein, notwithſtanding his Intereſt in both Empires, and his ſafe Arrival, after ſo many Hazards, and enduring ſo great Fatigues at *Moſcow*. 944

SECT. IV.

A very copious and no leſs curious Account of the North-eaſt Part of *Aſia*, comprehending a diſtinct, particular, and authentick Deſcription of all that has hitherto paſſed under the general Name of *Siberia*, ſhewing the Extent and Situation of the ſeveral Diſtricts thereof, their Climate, Soil, and Produce; the Riſe and Courſe of the principal Rivers, Deſcriptions of all the great Cities upon their Banks; of the ſeveral barbarous Nations that inhabit near theſe Rivers; of the Value of their Furs, and Fiſheries, with the Manner of their Commerce, and a clear and full Explanation of a Multitude of leſſer Circumſtances, as well as material Points of Fact which contribute to the perfect Underſtanding the Condition of this hitherto unknown Country, and all its Inhabitants: To which is added, a ſuccinct Recapitulation of the State of the *Chineſe* Empire towards the Cloſe of the laſt Century; with ſome very impartial as well as judicious Remarks on the Temper, Genius, and boaſted Oeconomy of that famous Nation; with a free Cenſure of thoſe Hyperbolical Panegyrics that have been beſtowed on the Progreſs of Science amongſt them. 951

SECT. V.

A Geographical Deſcription of the extenſive Empire of *China*, and of the Sixteen Provinces into which it is divided. In which is contained, a ſuccinct View of the Situation, Bounds, Produce, remarkable Curioſities, and whatever elſe is worthy of Notice in each Province, taken entirely from the Writings of the *Chineſe* themſelves, and more eſpecially from their authentick Records, and natural Hiſtories penned by Direction of the State, with ſuch incidental Accounts of their Antiquities, and of the perſonal Hiſtory of the moſt famous Emperors, Heroes, Stateſmen, and Philoſophers as have been born or flouriſhed in any of thoſe Provinces through the Courſe of many Ages.

SECT. VI.

A copious, accurate, and authentick Account of whatever is moſt remarkable, in Regard to Perſons or Things, throughout the whole Empire of *China*, more eſpecially the Number of the Inhabitants in general, and of the Chriſtians in particular, the Rivers, Shipping, Lakes, Bridges, &c. The different Religions that prevail, and have prevailed amongſt the People, their Manners, Ceremonies, and extraordinary Politeneſs. Of the remarkable Trees, rich Fruits, and valuable Drugs in this Country, together with a ſuccinct Account of thoſe Kingdoms, that either now depend or formerly depended upon it. 975

SECT. VII.

A curious and conciſe Deſcription of the Country, Hiſtory of the Inhabitants, and Account of the preſent State of the Kingdom of *Corea*, together with ſome Hints of the Eaſe, with which Commerce might be eſtabliſhed in its Ports, the Benefits that might be expected from thence, the great Likelihood of gaining an Entrance from thence into *Japan*, or at leaſt an Intercourſe with the *Japoneſe*; and many other entertaining and inſtructive Particulars relative to this Subject, and the Trade that is or might be carried on in the Dominions and Dependencies of the Emperor of *China*. 1000

SECT. VIII.

A ſuccinct Account of Part of the North-eaſt Frontier of the *Ruſſian* Empire, commonly called the Country of *Kamſchatka*, or *Kamſchatſka*, including the Voyages of Captain *Behring* for diſcovering towards the Eaſt; with many curious and entertaining Circumſtances relating to thoſe diſtant Countries and their Inhabitants; and alſo an Enquiry into the Probability of the Country, which he diſcovered, being connected with *North America*; with a Variety of other Points of great Conſequence, in relation to the Deſigns now on Foot in various Parts of *Europe*, for making a thorough Diſcovery of the ſuperior Parts of the Northern Hemiſphere, which would be of the utmoſt Conſequence to Trade and Navigation in general, and to thoſe of *Great Britain* in particular. 1016

CONCLUSION.

A retroſpective View of this whole Collection, in which its particular Advantages are explained, and an Account given of the Uſes to which the Contents may be applied. 1042

Sir John Hawkins Kt.

M Vr Gucht Sculp

far from being difficult to avoid it, provided a Man has a tolerable Preſence of Mind; for the Rhinoceros ſeeing only ſtraight forward, and turning being very troubleſome, ſtriking twice or thrice out of the Road, is ſufficient to eſcape all Danger: For this Creature very rarely turns back, or changes his Path, but deſtroys, without Mercy, whatever he finds in it[a].

The general Name of this Creature, in the *Indies*, is *Abada*; and in *Perſian*, it is called *Kerkeden*, much eſteemed for the Virtues of its Horn: And therefore, notwithſtanding the Danger of the Exerciſe, induſtriouſly hunted by the Natives of the Country, who, when they are ſo lucky as to kill it, ſuffer nothing to be loſt, but apply every Part of it to ſome Uſe or other. The Fleſh is ſaid to be hard and ſtringy, but, in other reſpects, wholſome and well-taſted; ſo that the *Europeans* eat it readily, and think it no contemptible Veniſon.

The Horn is extremely precious, and ſells at a great Rate, from the Property it is ſuppoſed to have, of diſcovering Poiſon: The Fact is univerſally believed in the *Indies*, and a Man would be as much laughed at there for doubting it, as he would be here for believing it: Yet ſome Writers of unqueſtionable Credit, have aſſerted the Truth of this from their own Knowledge, particularly Mr. *Kolben*, who aſſures us, that, at the Cape of *Good Hope*, they make Cups of this Horn, which are finely adorned with Gold or Silver; and that, upon pouring Wine into them, a great Ebullition follows; but, if there be any Poiſon mixed with the Wine, the Cup infallibly breaks, as it alſo does, if the Poiſon be put in unmixed. The Experiment, we are told, has been made ſo frequently, and with ſuch conſtant Succeſs, that Thouſands of Perſons ſettled at the Cape of *Good Hope*, might be produced, as Witneſſes to the Truth of it[b].

For my own Part, I muſt confeſs, that I think it almoſt as difficult to believe, that Mr. *Kolben* himſelf, or any other Writer of Reputation, ſhould endeavour to impoſe upon Mankind by ſuch a Report, if there was no Truth in it, as to believe the Fact. I therefore incline to think, that the Relation is only delivered in too general Terms; and that, inſtead of aſſerting, that this Horn breaks, on the pouring into a Cup made of it any kind of Poiſon, an Inquiry ought to be made, what ſort of Poiſon really breaks it? For I very much ſuſpect, that if we knew what kind of Poiſon it is, we ſhould be able to account for it from natural Cauſes: And I am the rather led to this Opinion, from what the ſame Author tells us, of the bubling or boiling of Wine, when poured into the ſame Cup.

10. The *Indians* fancy, that, in ſplitting the Horn, they diſcern, on each Side, the Figure of a Man, marked out by little white Spots; as alſo Birds of ſeveral Kinds, as we ſee in *Egyptian* Pebbles[c]: But, without doubt, this is the Effect of a very ſtrong Fancy, with regard to both. It is, however, highly probable, that, as it ſerves to raiſe the Price of this Commodity, it alſo ſerves to ſupport its Credit, for the more Wonders are reported of any thing, the more readily the common People believe them. In the Iſland of *Java*, where there are many of theſe Creatures, they are moſt valued, and the Virtues of their Horns in the higheſt Eſteem; ſo that when they are ſent to be turned, they always order a Perſon to ſtand by, to collect the Shavings, that no Part may be loſt: For of this ſort of Ivory, they give a certain Quantity, boiled in Water, or in Broth, for Convulſions, Fainting fits, and other Diſeaſes that proceed from Diſorders in the Nerves. The Blood likewiſe, of this Animal, is held to be extremely medicinal: And therefore, when it can be got freſh, they ſet it in a Cup made of the Rhinoceros's Horn, in the Sun, till it grows hard; and then they preſerve it in a Bottle cloſe-ſtopped, for the following Uſes: They conceive it to be a ſpecific for all Obſtructions, and, at the ſame time, admirable for healing and conſolidating broken Veſſels; but, above all, it is held an infallible Cure for the Spitting of Blood. The manner of taking it is, by mixing a few Grains of the Blood in a Diſh of Tea or Coffee.

It is moſt certain, that, on the firſt coming of the *Europeans* into theſe Countries, they found the People univerſally perſuaded of the Efficacy of theſe Drugs: And we are told by the famous *John Hugo Linſchoten*, one of the moſt candid Writers on this Subject, that in *Bengal* the Rhinoceros Horn was ſold at a very high Price. He tells us likewiſe ſome other Circumſtances, that deſerve to be mentioned: ‘ Theſe Horns, ſays he, are much valued throughout all *India*, as effectual Remedies againſt Venom and Poiſon; for which, likewiſe, the Teeth, Claws, Fleſh, Skin, Blood, Urine, and Dung, of this Animal, are likewiſe much valued: And that this is not an idle Notion, but an Opinion founded in Truth, I can, from my own Experience, atteſt. There is, however, one thing, which is to be remembered, that all theſe Horns are not of equal Value and Price, becauſe all of them are not of equal Goodneſs; for ſome will ſell for 200 or 300 Pardoes, while others of the ſame Size and Colour will not fetch above three or four Pardoes. The Reaſon which the Natives aſſign for this Difference, is their feeding in different Places; for they believe, that the Virtue of the Horn is derived from the Herbs by which the Creature is nouriſhed; and therefore, they have almoſt an equal Eſteem for the Horns of the wild Goats that feed in the ſame Places[d].’

I ſhall conclude this Account with the Relation of Father *Borri*, in his Account of *Cochin-China*, as to the Hunting of the *Abada*, which, however, he deſcribes as covered over with Scales; tho' this might, perhaps, ariſe, from his ſeeing him only at a Diſtance. His Account is curious; and therefore I ſhall give it in the Author's own Words, the rather becauſe it not only confirms many things before related, but furniſhes us alſo with ſome Particulars that are new. ‘ When I was at *Nuocmon*, a City in the Province of *Pulucambi*, ſays he, the Governor went out to hunt a Rhinoceros, that was in a Wood near our Dwelling-place: He had with him above an hundred Men, ſome on Foot, and ſome on Horſeback; and eight or ten Elephants. The Rhinoceros came out of the Wood; and, ſeeing ſo many Enemies, was ſo far from giving any Tokens of Fear, that it furiouſly encountered them all, who opened and making a Line, let the Rhinoceros run through, till it came to the Rear, where the Governor was mounted on his Elephant, waiting to kill it. The Elephant endeavoured to lay hold with his Trunk, but could not, by reaſon of the Rhinoceros's Swiftneſs: And leaping, to wound the Elephant with its Horn, the Governor knowing it could receive no Hurt, by reaſon of the Scales, unleſs they ſtruck it on the Side, waited, till leaping it laid open the naked Place; and, caſting a Dart, dexterouſly ſtruck it thro', from Side to Side; with great Applauſe, and Satisfaction of all the Multitude of Spectators, who, without any more to do, laid it upon a great Pile of Wood, and, ſetting Fire to it, leapt and danced about, while the Scales were burning, and Fleſh roaſting; cutting Pieces as it roaſted, and eating them. Of the Entrails, that is, the Heart, Liver, and Brain, they made a more dainty Diſh, and gave it to the Governor, who was upon a Riſing ground, diverting himſelf with their Merriment. As I was preſent at the taking of this Creature, I obtained from the Governor the Hoofs; which I eſteemed not inferior to his Horn: And this is thought as effectual in expelling Poiſon, as that of the Unicorn.’ This ſeems to countenance my Sentiment, that theſe Horns, as Alcalis, may ſerve as Remedies for a certain kind of Poiſons.

11. The Lion, of which ſo many extraordinary Stories are told us by the Antients, is alſo a Native of the *Indies*, and more common there than in any other Part of the World, except *Libya*. The Lion of the true Kind, of full Size, and with a flowing Mane of yellow Hair, is by all Authors acknowledged to be, at once, the moſt majeſtic, and the moſt dreadful Sight, that is furniſhed by the Animal Creation. The Lioneſs has no Mane; her Ears are ſhorter and wider; and ſhe has more Fierceneſs, and leſs Dignity in her Countenance, than the Lion[e].

[c] *Herbelot Bibliot. Orient p.* 959.

[d] *Voiage aux Indes p.* 191.

[e] *Ariſtot. Hiſt. Anim. l. lib* vi. c. 31. *Ælian. lib.* xvii. c. 26.

It is poſitively inſiſted on, both by *Ariſtotle* and *Pliny*[a], that the Bones of the Lion are much firmer, and more ſolid than thoſe of any other Beaſt; which ſome Moderns have denied: But ſuch as have had the beſt Opportunities of inquiring into, and being ſatisfied as to the Matter of Fact, aſſure us, that the Antients are in the right; and that the Cavity in the Leg-bones of a Lion is not larger than thoſe of a Tobacco-pipe; ſo that when they are ſuffered to lie and dry in the Sun, that Cavity is intirely filled up; and they become ſo ſmooth, ſo ſtrong, and perfectly united, that they will ſtrike Fire like Flints. When he falls upon his Prey, he firſt brings it to the Ground, and then beats its Breath out with his Paw, before he tears or eats it; and generally accompanies this Death-ſtroke with a loud Roar[b].

Their Strength is prodigious, and much beyond their Size; which is the Reaſon, that other Beaſts fly at the Sight of them. We are told by *Pliny*, that they never prey upon Men, till they become very old, and cannot provide themſelves with other Food; in which time of Diſtreſs, they watch about the Skirts of Villages, and even of great Towns, that they may catch and devour ſuch as come out careleſly in a Morning, or are returning in an Evening.

The *Romans* thought there was ſomething ominous in the manner in which Lions were introduced into their Amphitheatres. *Sylla* the Dictator exhibited one hundred Lions, which fought all at once. After him *Pompey* expoſed ſix hundred; and his Competitor, *Julius Cæſar*, expoſed four hundred. All which, the *Romans* obſerved, happened in Times when their Liberty was declining. But what contributed to ſpread this Notion the moſt of all, was the Contrivance of *Mark Antony*, who, after the Defeat of *Brutus* and *Caſſius*, cauſed himſelf to be drawn through *Rome* in a Chariot, to which two Lions were yoked, at the ſame time that there ſat with him one *Cytheris* an Actreſs, his favourite Miſtreſs, before he became acquainted with *Cleopatra*. This, ſays *Pliny*, ſeemed to preſage, that Men of high Spirit, and noble Courage ſhould be tamed, and brought into Subjection to ſuch as were only remarkable for their Pride and Luxury: And for my Part, continues he, I conſider the very Sight of ſo monſtrous a Spectacle, as none of the leaſt of the Calamities of theſe unhappy Times[c].

It was not at *Rome* only, that ſuch Notions prevailed; the *Carthaginians* ſeem alſo to have had the ſame Sentiments; for when *Hanno*, who was one of their moſt excellent Citizens, and greateſt Generals, had found a Way to tame a Lion, ſo that he ſtroked and handled him like a Dog, they took Occaſion from thence to drive him into Baniſhment, believing that the Liberties of a People could not be ſafe, where that Man had any Power, who had Skill enough to alter the Nature of the fierceſt Beaſt, and make him tame and gentle as a Spaniel.

It is very doubtful, whether there be any Truth in what is reported of the Lioneſs bringing forth but five times in her Life, and having at firſt five Whelps, then four, and the laſt time but one: Neither is there much Credit due to what is ſaid, of their living to a great Age; ſince we know, by Experience, that they are not a very long-lived Animal. But with reſpect to its Magnanimity, and diſdaining to eat ſuch as approach in an humble and ſuppliant manner, it is affirmed as well by modern Travellers, as the Writers of Antiquity: And it is on all hands agreed, that if this Beaſt does not laſh himſelf with his Tail, or ſet up his Mane, a Man may ſafely go by him.

There are a kind of Lions that have no Manes, but are ſmooth like the Lioneſs: Theſe are ſaid to be a mongrel Breed between the Leopard and the Lioneſs. As to the Antipathy between the Lion and the Cock, and the former's flying, if he hear the latter crow, it is no better than a Fable; of which there are more related of this, than almoſt any other Animal. And, in Truth, one cannot but wonder how ſo grave a Writer as *Pliny* could bring himſelf to ſet down ſo many improbable Stories as he did, upon this Subject; which as they could only ſerve to tire, without inſtructing the Reader, I think it beſt to omit. The Fleſh of this Animal is often eaten, is not at all unpleaſant, and is not known to prove unwholſome; but, whether any Part of this Creature be of any Uſe in Phyſick, I am not able to ſay.

12. The Tyger is juſtly reported by the Antients one of the fierceſt, ſwifteſt, and ſtrongeſt of all wild Beaſts. Other Animals, of which we have hitherto ſpoken, are found in ſeveral Countries beſides the *Indies*; but the true Tyger is, in a manner, peculiar to that Part of the World: They differ from the Leopard in Size, and in Spots; for the Tyger is much bigger, having yellow Spots that are very round, with black Hair about them; whereas the Leopard is ſpotted with black, almoſt in the Shape of Horſe-ſhoes. The Female, which is called the Tygreſs, is even fiercer than the Male, as appears from what *Pliny* tells us of the Manner in which the Huntſmen caught her young ones in thoſe Times. They provided themſelves, ſays he, with a very ſwift Horſe, on which one of the boldeſt went in Search of the Tyger's Den, while the reſt remained with their Boat by the River-ſide. When he who was on Horſeback had an Opportunity, by the Abſence of their Dam, he carried away the Whelps, and rode as hard as he was able to join his Companions; but the Tygreſs, miſſing her Young, frequently came up with the Huntſman before he reached the River-ſide, who, as ſoon as he found himſelf in Danger, dropped one of the Whelps, which the Tygreſs taking up, and carrying back to her Den, gave him Time to eſcape with the reſt to his Companions, who immediately quitted the Place with the utmoſt Expedition. This Story ſhews the quick Scent, and prodigious Speed, of this Creature; of which, however, *Pliny* does not give us any particular Deſcription[d].

By comparing, however, the ſeveral Accounts we have of this Creature in modern Travels, it appears, that their Eyes are wonderful bright and ſhining, their Necks ſhort and ſtrong, their Teeth and Claws prodigiouſly ſharp, their tabby Skins of a beautiful Colour, and their Hair ſhort and gloſſy. The Kingdom of *Malabar* is, of all others, the moſt famous for theſe Animals, of which they diſtinguiſh theſe three Sorts: The firſt is ſomewhat bigger than a wild Cat, makes a frightful Noiſe, not unlike the Lowing of a Cow, and does a great deal of Miſchief. The ſecond Sort, which is moſt common, is of the Size of a ſmall Calf, wonderfully briſk and active, and, withal, exceſſively cruel. The third is called the Tyger Royal, and is very near as big as a Horſe, for the Skin of one of them will ſerve for a Coverlid for a Bed ſix Foot long; and for this they are much uſed in the *Indies*. The Furs of all the Species of this Creature are very valuable, both in the *Indies*, and in *Europe*. They are uſed there chiefly for Beds and Palankins; and here for Horſe-furniture, and for lining Cloaths in the Winter, eſpecially in the North[e].

As the Lion never eats any Creature till it is dead, ſo the Tyger tears his Prey to Pieces while it is living; and if he meets by chance with a dead Sheep, or Horſe, he will not touch them: But if, at any time, they fall in with an Herd or Flock, where they have Plenty of Cattle at their Mercy, they ſeldom eat them at all, but content themſelves with ſucking their Blood; by which it is incredible what Havock they make. A Tyger, Tygreſs, and two of their young ones, have been known to deſtroy upwards of an hundred Sheep in a Night's-time, in this manner: They generally hide themſelves behind Buſhes or Hedges, in an incloſed Country, from whence they leap at once, with almoſt incredible Force, upon whatever paſſes by: Neither are they at all afraid of Men; but, whenever they have an Opportunity, ſeize them generally in the Middle, carry them into the Woods, and there tear them to-pieces, and devour them. The Fleſh of this Creature is remarkably white and tender: Such as have eat it affirm, that it is as delicate as any kind of Veal, and much better taſted: And the Fleſh of young Tygers is ſaid to be as tender and ſweet as that of Fowls[f].

The Antients report, that Tygers often mingle with Dogs; which, having been obſerved by the *Indians*, they were wont to carry a certain Number of Bitches into the

W[illegible], where the Tygers frequented, and there left them tied to Trees. By this Contrivance they obtained a Species of Dogs ſo fierce and ſtrong, that they were not afraid of attacking even a Lion: And it was of this Breed that *Sopithes*, an *Indian* King, preſented ſome to *Alexander* the Great; of which we have a particular Account in the Hiſtory of *Diodorus Siculus*. *Alexander*, having a mind to make an Experiment of their Strength and Courage, let looſe a large Lion upon two of them, which not being able to manage him, he ordered two other Dogs to be let go: The Lion, being ſurrounded by theſe four, was very ſoon over-powered; upon which the *Indian* King ſent a Perſon with a Sword, who cut off the Right Thigh of one of the Dogs by little and little; and, in ſpight of all the Pain he endured, the Dog neither howled, nor let go; but held the Lion faſt, till he fell down dead. The Number of theſe Creatures, given to *Alexander* by this *Indian* Prince, was one hundred and fifty, which that Hero eſteemed a very valuable Preſent [a].

A *Dutch* Traveller informs us, that in the Kingdom of *Congo* the Tygers ſeldom or never attack white Men; and, as a Proof of it, he tells us, that when he was there, a Tyger ſurprized a white Man and a Black aſleep, and immediately tore the Negro to-pieces, but left the White untouched: And we have the ſame thing aſſerted by other Writers, but, I think, without any good Grounds, farther than as it may be ſuppoſed, that the Tygers are better acquainted with the Blacks in thoſe Countries; and, therefore, may be more apt to attack a Prey they have been uſed to [b].

In the Voyages of *Walter Schouten* we have a very curious Account of theſe Creatures; and, as that *Dutch* Writer is highly eſteemed for his ſtrict Regard to Truth, the Reader will not, probably, be diſpleaſed with the Tranſlation of what he has given us upon this Subject. ‘It is very true, ſays he, that the Tyger thirſts as much after human Blood, as after that of Beaſts. He catches a Man exactly as a Cat does a Mouſe, and carries him off with as much Eaſe. At the firſt Leap he ſticks his fore Paws into the Shoulders, or, rather, a little below them; and, having brought the Man down, he ſtrikes his Teeth, on both Sides, through his Ribs. One may very well ſay, that a Man is loſt, upon whom a Tyger ſets his Eyes: The Sight of them, and the being attacked, are, in a manner, inſtantaneous; ſo that the Fright, and the being paſt all Fright, is over in two or three Minutes. The Deſarts of *Bengal* are ſomewhat leſs dangerous in the Light than in the Dark; for then the Tygers quit their Thickets and Caverns, and come even into Houſes and Villages, where they ſeize any they find abroad, and tear them to-pieces. They have even the Boldneſs to attack Men on Horſeback; as alſo the largeſt and ſtrongeſt Buffaloes of that Country, which are of an extraordinary Size: They, generally, leap upon their Shoulders, and tear them to-pieces in an inſtant; ſome Inſtances of which happened while we were there. It is looked upon as a Thing certain among the *Indians*, that the Tyger and Rhinoceros live in great Harmony together. There are many of both Sorts of theſe Creatures in the Woods of *Bengal*, and it is never known, that they attack each other. The Reaſon which the *Indians* give for this is very ſingular: They ſay that Tygers, after gorging themſelves with the Fleſh of Men or Beaſts, grow extremely ſick, and find Relief by eating the Dung of the Rhinoceros, which, as it feeds chiefly upon green Herbs, that are of great Virtue, they are ſtill very wholſome, even when they have paſſed through his Body; of which they appear to be very throughly perſuaded, ſince they frequently make uſe of the ſame Medicine themſelves.’ The ſame Writer tells us, ‘that in this Part of the *Indies* they are forced to travel in Company, for fear of theſe merciless Creatures; and that their Dogs, when they hear the Cry of them in the Woods, tremble, and ſweat in a moſt ſurpriſing Manner. The People, however, at certain Seaſons of the Year, aſſemble in great Numbers to hunt the Tygers, and carry along with them ſeveral of their Conjurers, who pretend to inchant them; which is, at once, a ſtrong Proof both of their Folly and their Fear [c]. There are a ſmaller Sort of Tygers in *Africa*, and, it is ſaid, in *America*; but it is very doubtful whether the latter are at all of the ſame Species: And, as to the former, though they are very fierce, and do infinite Miſchief, eſpecially in the *Dutch* Settlements, near the *Cape of Good Hope*, yet they are far below the Size of an *Indian* Tyger, and are only equal at moſt to the ſecond Sort. This Difference is occaſioned, in all Probability, by ſome Mixture in the Breed; for it appears plainly, by comparing the Accounts of antient Writers with thoſe of modern Travellers, that it was the large *Indian* Tyger was known to the former, and not the ſmaller Sorts, which, if then exiſting, were called by other Names.

13. The Leopard and Panther are the Male and Female of the ſame Species, which, though not equal in Size, is very little inferior in Strength, to the Lion, and not at all leſs miſchievous. It is not, however, very common for them to attack Men, at leaſt if they are not under the Neceſſity of doing it; for, in that Caſe, there is no Creature bolder. The Skins of theſe Animals were much valued by the Antients, on account of the Beauty and Regularity of their Spots, which, as I before obſerved, were ſmall, and of a ſemicircular Figure, not unlike an Half-moon [d]: But on the Shoulder they were ſuppoſed to have a larger Mark, which not only reſembled, but was in a manner governed by the Moon, increaſing as ſhe did, and decreaſing likewiſe in the ſame manner; having now blunt Points, now ſharp, and ſometimes a complete Orb, like the Full Moon [e]. One would find it more difficult to believe, that ſuch Opinions as theſe would gain Credit with Men of Learning and Senſe, if there were not Inſtances, even in our Days, of as ridiculous Notions prevailing with Men who pretend to follow no other Lights than thoſe of Reaſon and Experience.

The Antients tell us, that theſe Creatures had a very ſingular way of hunting. They derive from Nature a kind of muſky Smell, which being agreeable to Deer, Goats, and other Animals, they were wont to frequent the Haunts of the Panthers, till at the Sight of her fierce Countenance they were frighted, and fled; which this Creature obſerving, ſhe contrived to hide herſelf behind the Buſhes, that, when theſe Animals were attracted by her Smell, ſhe might leap on them at once; by which Method ſhe eaſily ſurpriſed them. The *Indians* hunt them very aſſiduouſly, as well for their Fleſh, which they eſteem very wholſome as well as ſavoury, as for the ſake of taking their Young, which they breed up tame, and then preſent them to their Kings, who breed them up for hunting; and find them not only ſuperior to any kind of Dogs in Swiftneſs and Strength, but in Fidelity alſo; for they conſtantly bring back what they take without tearing it: And, even to this Day, it is found, that they make uſe of the ſame Method of inticing their Prey that has been before deſcribed from the Antients. The *Arabians* call this Creature *Beber*; the *Turks*, *Joz*; and the *Tartars*, *Jem*: But the general Name of them through the Eaſt, is *Pars*, which is a *Perſian* Word; and it ſignifies, alſo, the Country of *Perſia*, properly ſo called: And hence it is, that the Perſon, who has the Care of theſe Creatures that are kept for the hunting of the Grand Signor, is called *Parſigi*: And ſo jealous they are in the *Indies* of this kind of Sport, that no private Man is permitted to hunt with Leopards [f].

When the Panther has young ones, it is reported, that the Leopard, though much ſtronger, will not defend himſelf againſt her, but ſuffers himſelf to be very ill treated, till the young ones are grown up, and able to ſhift for themſelves. It is certain, that, however fierce in their Nature, the Panthers are extremely tender of their Whelps, of which *Pliny* gives us a very ſingular Inſtance. A Panther, by ſome Accident or other, had her whole Litter tumbled into a deep Pit, out of which ſhe was not able to deliver them. In this Diſtreſs ſhe went to the next

Highway, in hopes of finding ſome Paſſenger, that might be kind enough to aſſiſt her. The firſt who came by, was the Father of *Philinus* the Philoſopher; about whom the Panther played and friſked, without offering to hurt him. The Man would willingly have eſcaped from her Careſſes, but found it impoſſible. At laſt ſhe lay down at his Feet, and ſeemed to bemoan herſelf; and then taking hold of his Robe, led him gently to the Place where her Offspring lay: By which diſcovering the Cauſe of this Change in the Nature of the Beaſt, he deſcended into the Pit, and reached up her young ones. When the Whelps were once in Safety, they fell to leaping and playing with their Dam, who, in Company with her young ones, led their Benefactor ſafely out of the Wilderneſs[a].

There are many ſtrange Things reported by the Antients, as to the Amours between the Leopard and the Lioneſs. The latter, they ſay, is exceedingly prone to the Company of the former; and fearing that the Lion ſhould detect her Infidelity by the ſtrong Smell of the Leopard, ſhe keeps, for ſome time, at a Diſtance from her Conſort; but, when ſhe finds herſelf pregnant, ſhe deſerts him intirely, and reſorts to the Haunts of the Leopard; becauſe, when the Lion finds her young ones ſpotted, he tears the ſpurious Breed to-pieces, and chaſtiſes the Lioneſs herſelf ſeverely[b]. In the Travels of *Apollonius Tyaneus*, we meet with many Inſtances of the Tenderneſs of Panthers to their Young, and of their Gentleneſs and Fidelity. *Philoſtratus* informs us, that from their natural Wantonneſs the Panthers were held ſacred to, and Symbols of, *Bacchus*; but other Authors aſcribe this to their Love of Wine, in which they differ extremely from other Beaſts[c]. But, whatever the Cauſe might be, the Fact is certain, that they were held ſacred to that Divinity; and that the Chariot of *Bacchus* is frequently repreſented as drawn by Leopards: But as it is ſometimes neither drawn nor attended by Tygers, I am inclined to think, that both were uſed for the ſame Reaſon, *viz.* to ſhew that he was the Conqueror of the *Indies*, where theſe Creatures naturally reſide; if there was not a moral Reaſon for this Repreſentation, which might be intended to ſhew, that even the fierceſt and moſt intractable Natures were ſoftened and civilized by the Charms of ſocial Mirth[d].

There was an old Law at *Rome*, which forbad the bringing any of theſe Species into *Italy*; but for what Reaſon it was made, or why they were more afraid of thoſe than of other wild Creatures, does not appear. However, when *Cneius Aufidius* was Tribune of the People, he procured a Licence, notwithſtanding this Law, to bring over Leopards for the *Circenſian* Games. *Scaurus* was the firſt Man, who in his Ædileſhip exhibited one hundred and fifty Leopards. *Pompey* the Great exceeded this very far; for he produced four hundred and ten. But, at the Dedication of the Temple of *Marcellus*, *Auguſtus* exhibited to the People four hundred and twenty Leopards, and a tame Leopard in a Cage, which was never ſeen before. But the Emperor *Claudius* produced four tame Leopards at once[e].

But this is now thought no extraordinary thing; for, in the *Indies*, they tame even thoſe of the largeſt and fierceſt Kind, and keep them at their Tables, where they feed as freely and as quietly as Dogs[f]. As to the Age to which theſe Creatures attain, we meet with nothing certain, either in old Authors, or in new; but it is probable, that as in other reſpects they reſemble, ſo in their Age they come near the Lion, which is not obſerved to enjoy a very long Life. Some report, that the Tygers and Leopards mingle; which may be true in *Africa*, but ſuch Conjunctions are not frequently obſerved in the *Indies*. It may not be amiſs to add, that in hunting with theſe Beaſts, when tame, they ſit on the Crupper of the Huntſman's Horſe, with their Eyes covered till the Game is rouſed; and then they are let go[g].

14. The Camel is, at once, as uſeful and as remarkable a Creature as any that has been yet mentioned; nor is there one that makes a greater Figure in the Works of the Antients, who ſeem to have conſidered it with greater Attention; and therefore ſpeak of it more accurately than of almoſt any other Animal in this Part of the World[h]. The Camel is cloven-footed, hath a large fleſhy Bunch on his Back, which is peculiar to the Species, another leſſer Bunch on the bending of each Knee, which appears to be of Uſe in ſupporting his Body: His Tail is like that of an Aſs in Shape, but has four Knots in it, like that of the Cow[i].

This is the Deſcription of *Ariſtotle*; but a *Chineſe* Writer that I have before cited, gives us, in my Judgment, a much better Picture of a Camel: And, therefore, I will ſubmit it to the Reader's Inſpection[k]: 'This Creature, ſays 'he, is a kind of Ship by Land; for he tranſports vaſt 'Quantities of Goods from one Country to another, in a 'ſhort Space of Time, at ſmall Coſt, ſince he eats ſeldom, and 'ſcarce ever drinks in his Paſſage. His Form is ſingular, 'and not ſo beautiful as his Qualities are valuable; for in the 'Neck and Fore-part of him he is made moſt like a Sheep: 'In his Body he reſembles a Horſe: His Back and Hindlimbs are peculiar to his Species; for ſcarce any other 'Creature has any Reſemblance to him therein. Nature 'has furniſhed this Animal with a Palate, to which Thiſtles, 'and ſuch-like harſh Food, are moſt agreeable; two Stomachs admirably contrived for Digeſtion, and ſo lined, 'as to receive a Quantity of Water ſufficient to moiſten 'his dry Food for many Days. Beſides this, he derives, 'from the ſame bounteous Hand, two Qualities, that the 'Sagacity of Man could never reach; for by his Scent he 'diſtinguiſhes Springs, how deep ſoever they lie: And 'whoever digs where a Camel ſcrapes, will never miſs of 'finding Water, let the Soil ſeem ever ſo unpromiſing. 'Their ſecond Property is, foreſeeing venomous and 'burning Winds, which fly ſwiftly, and are mortal in a 'Moment: A little while before they come, the Camels 'run together, cry, and hide their Noſes in the Earth; 'but as ſoon as they are paſt, they lift up their Heads, 'and continue their Journey.'

Ariſtotle aſſerts, that they go twelve Months, and never bring forth more than one Foal. *Pliny* either copies him, or is of the ſame Opinion: But *Suidas* holds, that they go but ten Months complete, and bring forth in the beginning of the eleventh. According to *Ariſtotle*, they are very private in their Copulation, retiring into unfrequented Shades, and remaining there whole Days; at which Seaſons they are very furious[l]. At other times they are a very gentle and tractable Creature, underſtand their Drivers perfectly, and, inſtead of a Whip, are quickened in their Pace either by a Pipe, or the Driver's Whiſtling.

Indeed all Authors agree, that, next to the Elephant, they are of all Animals the moſt ſagacious: They ſtoop, like them, to receive their Burdens, and ariſe as ſoon as they have their accuſtomed Load. But, with all this, they are very vindictive; and, if beaten, bear Malice a long time; and, whenever they have an Opportunity, fail not of taking Revenge. The *Arabians*, who are beſt acquainted with them, reckon two ſorts of Camels; the firſt they call *Hegen*, which are the larger and the ſtronger Sort, and will carry a thouſand or twelve hundred Weight, their Backs been almoſt flat. The ſecond are called *Bocheti*; they are leſs, and cannot carry above half the Weight: Theſe have two Lumps upon their Backs. The *Indians* and the *Perſians* make the ſame Diſtinction, tho' they make uſe of other Terms; for they call the ſtronger the Northern Camels, becauſe bred, for the moſt part, on the Frontiers of *Tartary*: The leſſer they call Southern Camels.

It is certain, that they will travel four or five Days without Water, and ſome ſay much longer; they go a pretty round Pace, and at the Rate of thirty or forty Miles a day, which they will continue, if Occaſion require, for thirty or forty Days together. They are a very timorous Animal; ſo that if at any time they are ſurprized by a Lion, Tyger, Leopard, or other Beaſt of Prey, they are devoured without making the leaſt Reſiſtance. It is remarked of this Creature, as well as of the Elephant, that it troubles the Water before it drinks, and, very probably, for

… v.

the ſame Reaſon. In one reſpect this Creature is very ſingular, which is in having no Teeth in its upper Jaw, and yet it feeds without any Inconvenience from hence; and, perhaps, the want of Teeth is, in ſome Caſes, rather an Advantage to it.

The Smell of this Animal is ſo diſagreeable to Horſes, that they will not endure it; and, by the Knowledge of this *Cyrus* gained a complete Victory over *Cræſus*, King of *Lydia*; for, knowing the other truſted much to his Superiority in Cavalry, *Cyrus* poſted a Body of Camels over-againſt them, and the Horſes no ſooner perceived their Scent, than they fell into Confuſion, and ran away[a]. As to the Age of this Creature Authors are much divided. *Ariſtotle* aſſerts, that they do not live much above fifty Years; but *Pliny* ſays, that if they eſcape Accidents, they often approach, and ſometimes reach, an hundred[b]. Modern Writers agree rather with the former than the latter.

There are few Creatures that are in all reſpects ſo valuable; for, beſides the Services they render by Carriage, their Hair, which they ſhed every Year, is extremely valuable; for of this Hair, Camblets, and other Manufactures, are wrought; and the very Urine of the Beaſt yields a conſiderable Profit, ſince of that the true Sal Armoniac is made. The Lump on the Back is moſt of it Fat, which, when melted, becomes an Ointment of excellent Uſe in diſcuſſing hard Swellings, and in curing all Sorts of Pains in the Limbs, from whatever Cauſe. The Fleſh is well-taſted, and the Broth much uſed by the *Chineſe* in aſthmatic Caſes: The Milk of the Camel is thinner, and therefore eſteemed more wholſome, than any other, eſpecially in Conſumptions. Of the Dung dried a kind of Snuff is made, which is ſaid to cure Bleeding at the Noſe.

The received Opinion amongſt the Antients, that the Camel preſerved Water in its Stomach[c], has been ridiculed by ſome of the Moderns as equally fooliſh and falſe; but others aſſert, that, on Diſſection, there appear four Ventricles, capable of holding a conſiderable Quantity of Water, with Holes into the Stomach, by which it is ſuppoſed this Creature forces the Water, contained in them, to mix with the dry Food that is in its Stomach, by holding its Breath. It is, on the other Side, aſſerted, that, in *Arabia*, there are a Race of Camels that never drink at all, but are ſupplied with Moiſture from the Graſs, and Tops of green Trees, on which they feed; but, with reſpect to this, I do not pretend to decide, deſiring only to report fairly ſuch Facts as I have met with.

The Camel is as much the Theme of Modern Travellers, as of the antient Naturaliſts, and they agree exceedingly well in their Deſcriptions with the former; ſo that we have all the Reaſon in the World to believe, that both may be depended on. The modern Travellers obſerve, that there cannot be any thing better ſuited than the Nature of this Animal to the Commerce of the *Indies*. They tell us, that from the very time the Camel is brought forth, it is accuſtomed to Burdens; that they take care to place its Legs in their proper Poſture under it, and then lay ſuch a Weight upon it as keeps it in that State for a certain time; and, by repeating this Method, they beget ſuch a Habit in the Beaſt, as renders it tractable and obedient for Life. This appears to be the more neceſſary, becauſe, naturally, the Camel has a great Degree of Obſtinacy; and, though it readily kneels to receive its uſual Load, yet, as ſoon as it feels that Weight upon its Back, it riſes at once, and will not ſuffer any Augmentation[d].

The Capacity of this Creature to bear Hunger and Fatigue, is very extraordinary; and the Moderns aſſert more upon this Head than the Antients. We are particularly told, by a Writer eminent for his Candour, that a Camel, in a Fit of Luſt, will go forty-two Days without eating; during which time, they are ſo furious, and ſo miſchievous, that there is no going near them, and therefore they take care to put them into Places where they can do no hurt. Some aſſert, that this Creature is enabled to faſt longer than any other, by a ſort of gradual Conſumption in his own Body, which ſupplies, for a certain time, to the Stomach, what ſhould be derived from Food; but then it weakens him exceedingly, inſomuch that a ſtrong Camel, after the Fit of Luſt is over, is ſcarce able to ſuſtain a tenth Part of his uſual Load[e].

Theſe Animals are at all times very ſober Feeders, ſo that they are able to ſubſiſt on a very little Matter, which enables them to perform ſuch prodigious Journies, as, for the Conveniency of Commerce, they are put upon all over the Eaſt; ſo that it is viſibly the Wiſdom of Providence, that deſtined this Creature to be the Native of Countries where ſuch a Beaſt was abſolutely neceſſary for the Service of the Inhabitants; and it may be regarded as an additional Proof of this, that the *African* Camel, which fares harder, and has ſtill greater and more uncouth Journies to take, is larger, ſtronger, and capable of carrying heavier Burdens, than the Camels of *Aſia*. The Moderns have likewiſe diſcovered ſome medicinal Virtues in the Camel, which do not appear to have been known to the Antients: As for Inſtance; that the Brain of it, when dried, is in a manner a Specific for the Falling Sickneſs; that its Urine is an excellent Preſervative for the Teeth and Gums; and that its Dung is capable of reſolving white Swellings, and is an excellent Cure for green Wounds[f]. It is no wonder, therefore, that the *Arabs* account their Camels their greateſt Wealth; and it is the cleareſt Proof of their Firmneſs in their Cuſtoms, that they are not, in this reſpect, at all changed from what they were in the Days of *Ariſtotle*, who affirms, that ſome of them were poſſeſſed of 3000 of theſe Animals[g].

15. The Dromedary is, in the Opinion of all the Naturaliſts, a Species of the Camel; and, though it be weaker, and leſs capable of carrying Burdens, yet, in other reſpects, it is of no leſs Uſe. Inſtead of one large Bunch on its Back, as the Camel has, the Dromedary has two Lumps of Fat, ſo diſpoſed, that the Vacancy between them is a kind of natural Saddle; and, as they are lighter made than the Camel, and ſerve only to carry a Paſſenger, ſo they go much eaſier, and at a much greater Rate; for whereas the Camel has a ſhuffling uneaſy Pace, in which it goes at the Rate of ten Leagues a-day, or thereabouts; the Dromedary has a regular, briſk, and not very uneaſy Trot, in which it will, without Difficulty, perform a Journey of forty Leagues in a Day. The Feet of this Creature are obſerved to be as ſoft as a Sponge, ſo that they are not hurt either by Stones or Sand, but travel on much at the ſame Rate, let the Road be what it will; they kneel to receive their Riders, as the Camel does for his Load, and riſe as ſoon as a Man is fixed upon their Back[h].

They are likewiſe capable of faring hard, and will endure Thriſt for four or five Days, but are not able to bear altogether ſo much Fatigue as the Camel. The *Arabians* call them *Raguahill*, or *Elmahari*; and the ſtrongeſt and beſt are bred in the Northern Countries: They make uſe of them in the *Indies* for going Poſt, and Expreſſes frequently perform a Journey of eight hundred Miles upon them in the Space of a Week. There is one thing very ſingular in theſe Animals, which is, that they go much better, and have greater Spirits in hot Weather, than if there be any Wind ſtirring; and it is obſerved, that the ſlighteſt Breeze makes them ſluggiſh and lazy[i].

We have in the Memoires of the Royal Academy of Sciences a very curious Paper in relation to this Creature; it conſiſts in the Account given by the *Perſian* Ambaſſador to Mr. *Conſtance*, who, from being a Servant in an *Engliſh* Factory, became firſt Miniſter to the King of *Siam*; and who, at the Requeſt of Miſſionaries, took upon him to inquire of that Ambaſſador what he knew in relation to the Dromedary, which is hardly known to the *Siameſe*. He told him, that they were brought originally from *Turkeſtan*, which is the only Part of *Aſia* were they are bred in Perfection; that they were very much eſteemed in *Perſia*, on account of their carrying ſo

much eaſier than the Camel, by their having two Bunches on their Backs. That, however, theſe Bunches were not made by any Irregularity of the Spine, which was as flat and even under them as in any other Part of the Back; but that they were a kind of glandulous Subſtances, about ſix Inches in Height. He added, that, as to the common Report of their having a Supply of freſh Water in their Stomachs, which, in extreme Neceſſity, Travellers ſometimes were forced to have recourſe to in the Deſarts for the ſaving of their Lives, it was abſolutely a Fable, without the leaſt Foundation [a].

The famous *Shah Iehan*, who governed the *Indian* Empire with ſo much Reputation, contrived a Method, by which he made the Dromedaries extremely uſeful to him in time of War; which was a thing unthought of by any of his Predeceſſors, becauſe they are a timorous Animal, and cannot be brought to charge like a Horſe: But this Emperor made them uſeful in another way: A Rebellion broke out near the City of *Agra* in his Abſence, on a Suppoſition, that it was impoſſible for him to march back again before the Rebels had aſſembled Forces enough to make themſelves Maſters of his Capital. He was no ſooner informed of this, than he mounted 12,000 of his choiceſt Troops upon Dromedaries, and, in the Space of nine Days, made a March of ſeven hundred Miles; which ſo aſtoniſhed the Rebels, when they heard that the Emperor was within a few Miles of them, that they diſperſed without a Blow, and he had the Honour of ſuppreſſing, by the Quickneſs of his Invention, an Inſurrection, that, if the Chiefs of it had gained time to have executed their Purpoſe, might poſſibly have deprived him of the Government; for it was afterwards known, that ſome of the Generals of his Army had ſecret Intrigues with the Malecontents; but this ſudden Victory, gained by the Swiftneſs of his Dromedaries, diſappointed them entirely, and obliged them to lay aſide their Deſign [b].

16. The Giraffe, or Camelopardus, as it is called by the Antients, was a Creature better known to them than it is to us. According to the Accounts they give us of it, it reſembled the Camel only in its Head and Neck, which it carried more upright; and had from thence a bolder and a fiercer Aſpect. The Hair was either red mixed with white, or white mixed with red. It was of the Height of a Horſe, and ſhaped like it in the Cheſt; but towards the Reins it was ſo ſlender, as to be more like the Ape than any other Creature. All that *Pliny* tells us of it is, that the *Ethiopians* called it *Nabis*; and that the firſt time it was ſeen at *Rome*, was when the *Circenſian* Games were exhibited by *Cæſar* the Dictator. Since that time, ſays he, this Creature comes now-and-then to *Rome*, more to be gazed on for the Singularity of its Appearance, than for any Savageneſs in its Nature; of which, ſays he, it has ſo little, that ſome ſtile it a wild Sheep.

The celebrated [c] *Panchymerus*, who was at *Conſtantinople* when one of theſe was brought thither, in the Reign of the Emperor *Michael Palæologus*, towards the Cloſe of the thirteenth Century, gives us a larger Deſcription of it than is any-where to be met with; and therefore I ſhall tranſcribe it; the rather becauſe this is an Author not frequently cited: ‘ The Giraffe, ſays he, is an Animal ſo rare, and ſo wonderful, that I have thought it not improper to inſert a Deſcription of it, to refreſh the Memories of ſuch as ſaw it, and to make it known to ſuch as, perhaps, have not heard of it before. It is of the Bigneſs of an Aſs; its Colour white, ſpotted like a Panther, but with red. Its Shape reſembles that of thoſe Camels which have a Riſing in their Back from their Tails to their Shoulders: Its Fore-legs are longer than its Hinder ones; its Neck ſlender like that of a Crane, with a ſmall Head, ſhaped like that of a Camel; the Belly white; and a broad Streak of Black down its Back, from the Neck to the Tail; its Legs exceedingly thin, and its Hoofs cloven, like thoſe of the Deer. It was ſo gentle, that it ſuffered itſelf to be touched, and even to be guided, by a Child. The Food of this Animal was Herbs, Meal, and Barley. When attacked, it does not defend itſelf with its Heels, as Horſes do; nor with Horns like Oxen; nor with Tuſks, like the wild Boars; nor with its Nails, as Cats; but with its Teeth; which, however, are not very ſharp, and ſerve rather to repel an Injury than to revenge it: Nay, even theſe Teeth have nothing in them venomous, like thoſe of moſt other Animals. This Creature was brought from *Ethiopia*, and preſented to the Emperor, who ordered it to be led thro' the principal Streets of the City, for ſeveral Days, for the Diverſion of his Subjects.’ This is a clear and plain Deſcription from an Eye-witneſs; ſo that there is not the leaſt Reaſon to ſuſpect, as ſome have done, that this is an imaginary Animal, and a Creature that never had Exiſtence in Nature. I do not indeed pretend to deny, that ſome ſuch imaginary Animals are to be met with in the Writings of the Antients: On the contrary, I ſhall give ſome Inſtances of this kind hereafter. At preſent, I think it better to preſent the Reader with another Deſcription, from an Eye-witneſs likewiſe: But it will be neceſſary to premiſe, in the firſt Place, that the Author I am now going to quote, was certainly miſtaken as to his Fact; for the Creatures he mentions could not be thoſe deſcribed by *Pliny*, and by the Author I have before cited; whoſe Deſcription agrees very well with what *Pliny* ſays of them.

Bellonius deſcribe them thus [d]: ‘ I ſaw, ſays he, a Couple of them at *Grand Cairo*; each having two little Horns in the Forehead, about five Inches long; between which appeared a Bunch, like a third Horn, about two Inches high: From the Tail to the Crown of the Head, was about eighteen Feet: His Legs were much of a Length before and behind; but the Upper-joint, or Shoulder-bone, was much longer than the Thigh: His Back ſloped, like the Ridge of a Houſe; his whole Body reſembling, in Colour, that of a Deer; but ſprinkled all over with large ſquare Spots. His Feet were cloven, like thoſe of an Ox; his Upper-lip hanging over the under: His Tail ſlender, indifferently thin of Hair, and tufted at the End; his Mane like that of a Horſe: And he limped in moving, firſt on the right Leg, and then on the Left: When he eat, drank, or took any thing from the Ground, he ſtretched out his Fore-feet; for otherwiſe they would have hindered him. His Tongue, as *Joſeph Barbarus* writes, is two Feet in Length; of a dark-blue Colour, long and round like an Eel with which he gathers Herbs, Leaves, and Graſs into his Mouth, with wonderful Dexterity.’

There is, without doubt, a very wide Difference between theſe Deſcriptions, inſomuch that I very much doubt whether they belong to the ſame Animal: But the Queſtion is, which moſt reſembles the Camelopardus of the Antients: And I muſt confeſs, that, in my Opinion, it is the firſt; at leaſt it is certain, that this is the Creature which is called a Giraffe in the *Indies*, and is frequently found in the Woods of *Bengal*. As for the Creature which *Bellonius* ſaw at *Cairo*, it is an Animal common enough in *Ethiopia*; and is deſcribed by Father *Alphonſo Mendez* under the Name of *Strutho-camelus*, that is, the Oſtrich Camel; becauſe, ſays he, it reſembles, in its Shape, the Oſtrich: But this Creature is allowed by all who have ſeen it to be the talleſt Animal in the World: For, though much ſlenderer, it is higher than an Elephant. Its fore Legs are commonly twelve Hands high, ſo that a Man on Horſeback can paſs under their Belly, as many, who have ſeen them in *Ethiopia*, poſitively aſſert. But it can ſcarce be believed, that if this Creature had been ever ſeen at *Rome* by ſuch a Writer as *Pliny*, he would have given us ſo ſhort and dry a Deſcription of it as that abovementioned, when it muſt have been infinitely a greater Curioſity than any that had ever been ſeen there [e].

On the other hand, it is very clear, that *Panchymerus* ſaw the very Creature that *Pliny* deſcribes; and, therefore, we have good Reaſon to believe, that the Creatures *Bellonius* ſaw were by him only ſtiled *Giraffes*, as Mr. *Ludolf*, in his Hiſtory of *Ethiopia*, blames Father *Mendez* very much for calling the Creature he ſaw *Strutho-camelus*, and not *Camelopardus*, or *Camelopardalus*, which is the Word uſed by *Pliny* [f]. The Amount of all this Reaſoning is no more, than to ſhew, that we are in much greater Danger of being impoſed on by the Criticiſms of the Moderns, than by either the Credulity or the Negligence of the Antients; for, before we can accuſe *Pliny* of having paſſed ſlightly over ſo extraordinary a Creature as this *Ethiopian Giraffe* is ſuppoſed to be, we muſt firſt be ſure, that this was really the Creature he ſaw; whereas, I think, I have made it more than probable, that it was not: After all, if there be, as it is certain there is, a Creature called a *Giraffa*, or *Giraffe*, in the *Indies*, which agrees exactly with the Deſcription of the Animal ſeen at *Conſtantinople* between four and five hundred Years ago, and which was then allowed to be the *Giraffe* of the Antients, I cannot apprehend why we ſhould not admit this to be the Creature mentioned by *Pliny*, which involves us neither in Abſurdity nor Contradiction, rather than agree with *Bellonius* and *Ludolf*, in ſuppoſing this prodigious Animal, which Father *Mendez*, and many other Travellers, have ſeen in *Ethiopia*, to be the *Camelopardus* of the Antients; though it does not, in any reſpect, agree with the Deſcriptions they have given of this Creature.

18. The wild Aſs, as we find it deſcribed by the Antients, is undoubtedly an imaginary Creature; and the very Deſcription of it, is, in a manner, a ſufficient Proof. *Cteſias* tells us, that it is of the Size of a Horſe; that it has a fine white Front, and on it a Horn, of the Length of a Cubit; the Upper-part of which is red, and the lower black: The Head of a purple Colour, the Eye of a bright blue, and the Body white, but ſtreaked with ſeveral Colours; and the Coat of a moſt exquiſite Beauty. When firſt purſued by the Hunters, it does not move at any great Rate; but increaſing its Speed by degrees, it flies, at laſt, with ſuch prodigious Swiftneſs, that no Horſe can come near it. The only Method of taking it, is by watching when it goes into the Meadows to feed its Young; of which it is ſo tender, that it will never abandon them, however diſtreſſed; it expoſes itſelf, in their Defence, to all Dangers, with a moſt deſperate Courage, combating the Hunters both with its Horn and Heels, till, in the End being ſtuck full of Darts, it dies through Loſs of Blood: The *Indians*, as ſoon as it falls, cut off its Horn and its Hoofs, which are of the moſt bright and beautiful Red; and next, ſeizing the young ones, they carry them home, and breed them up tame, Experience having taught them, that if this Creature once attains its full Strength, which it does in about two Years, it is impoſſible, by any Art, to conquer the Savageneſs of its Nature[a]. As *Cteſias* reſided at the *Perſian* Court, and wrote all his Account of the *Indies* from Hearſay, we need not wonder that he fell into ſuch Miſtakes: Neither is it at all improbable, that ſome of theſe Vermilion Horns and Hoofs, which were dyed of this Colour by Art, might be carried to the *Perſian* Court; and this Story of the wild Aſs invented to make them ſell at a dearer Rate; ſince many Inſtances might be given of Frauds of the like Nature, practiſed with the ſame View, in regard to other Commodities.

This Story, however improbable, ſeems to have kept its Ground for a long time, ſince *Pliny* tells us, that the *Indian* Aſs had only one Horn; and that no other Creature, that did not divide the Hoof, had Paſtern Bones[b]. But he gives us no diſtinct Deſcription of this Animal. The oriental Hiſtories ſpeak much of the wild Aſs, and acknowledge it to be the ſwifteſt and moſt beautiful of all four-footed Animals. In the old *Perſian* Language, this Creature was called *Gur*, or *Gour*. And *Baharam*, one of the antient Kings of that Country was ſurnamed *Baharam Gur*, though Authors do not well agree as to the Reaſon. Some report, that it was becauſe he once ſhot, when he was hunting, a Lion, and a wild Aſs, that were fighting, with the ſame Arrow: But others affirm, that it was becauſe he delighted much in the hunting of theſe Animals, and was at laſt killed by one of them[c]. The Circumſtances however, of this Creature's fighting with a Lion, is very ſingular, and ſhews the Opinion entertained in the Eaſt of the Courage and Strength of the wild Aſs. We may add to this another Proof of the ſame Nature, *viz.* that one, indeed the laſt of the *Khaliffs*, of the *Ommiades*, was called *Mervan Hemar*,[d] or *Mervan* the Aſs, (for the *Arabians* uſed the Word *Hemar* both for a wild and tame Aſs) on account of his great Courage and Strength. This ſingular Animal is not, however, particularly deſcribed by any who have travelled in the *Indies*. But it is alſo a Native of various Countries in *Africa*. And this affords us an Opportunity of obliging the Reader with an exact Deſcription and Print of it, from an Author of unqueſtionable Credit[e]. He deſcribes it thus:

The wild Aſs is one of the lovelieſt Animals I have ever ſeen; he is of the Size of an ordinary Saddle-Horſe; his Limbs finely turned, and well proportioned; his Coat very ſoft, and cloſe; from his Mane to his Tail there runs a large black Liſt, from whence proceed abundance of Streaks, which, falling regularly down on both Sides, meet under his Belly; theſe Streaks are of different Colours, ſome white, ſome yellow, others of a Cheſnut, which are blended and mixed on their Sides, ſo as to ſtrike the Eye exceedingly by their beautiful Mixture: The Head and the Ears are in like manner ſtreaked with very beautiful Colours: The Hair of his Mane and Tail, for the moſt part, either white or of a Cheſnut-colour, with a ſmall Intermixture of Yellow. This Creature is ſo ſwift, that no Horſe can come near him; ſo that it is with infinite Difficulty he is overtaken; and whenever they are ſo lucky as to catch one, it is ſold at a very extravagant Rate.

Father *Tellez*[f] informs us, that the Great *Mogul* gave two thouſand Ducats for one of them. Abundance of Pains have been taken at the Cape of *Good Hope* to tame them, but to no purpoſe; though they have been taken very young: And it is reported, that, of all Creatures in the World, it has the ſtrongeſt and moſt ungovernable Paſſion for Liberty. The Reader, after reading this Deſcription, which agrees exactly with that given us by another Traveller of great Reputation, will aſk why it is called an Aſs? and the only Anſwer that can be given is, that, with all its Beauty, it has the long and large Ears of that Animal, from whence it derives its Name. Mr. *Ludolf* complains of this moſt heavily, and wiſhes that, to free the Animal from this Diſgrace, it might have its Ears cut off[g]. We owe to this Writer another remarkable Proof of the Beauty and Value of this Creature; who informs us, that an *Abyſſinian* Embaſſador at *Batavia* having made a Preſent of one of them to the *Dutch* Governor-General of the *Indies*; he, by the next Ship, ſent it to the Emperor of *Japan*; who was ſo charmed with it, that he made the Company Returns in Money and in rich Silks, to the Value one hundred and ſixty thouſand Crowns.

Mr. *Thevenot* tells us, that he ſaw one in its Paſſage through *Egypt*, which was a Preſent to the Grand Signor: and was ſo exquiſitely beautiful, that he could not help ſuſpecting there was ſome Art uſed in colouring its Coat; for which, however, there does not appear to be any juſt Foundation[h]. Some of our old Travellers to the *Indies* report, that, near the Mouth of the River *Ganges*, the Natives ſhewed them abundance of Horns, which they aſſerted to be the Horns of wild Aſſes: Whence it appears, that the Author firſt-mentioned did not invent the Story he tells us concerning them[i]. There is a very extraordinary Creature, not only deſcribed, but expreſſed in a wooden Cut, by *Purchas*: He tells us, that it is bred in the Kingdom of *Congo*, and is there called *Zebra*[k]. It is, ſays he, of all Creatures the moſt comely, reſembling an

[h] *Voyage de Thevenot, Vol.* ii. *p.* 755.

[i] I find this Paſſage in the 5th Volume of *Purchas's Pilgrims*, p. 436. in the Travels of one Mr. *Finch*, an *Engliſh* Merchant, who paſſed through the Territories of the *Mogul*, in the Beginning of the laſt Century; who ſays, that the *Indians* affirm them to be the Unicorn's Horn: And told him farther, that ſome of them were of a very great Price; and that it was only of the leſs valuable Horns that they made drinking Cups, and adorned their Bucklers with Pieces of them; of which he ſaw many.

[k] See his *Pilgrims*, Vol, ii p. 984. where there is a Print of the *Zebra*, or *Zabra*: But in his *Pilgrimage*, p. 623. he gives us a larger Account from the Converſation of *Andrew Battel*, who, being Serjeant in a *Portugueſe* Company, thought fit, on ſome Occaſion or other, to run away from them, and lived nine Months in the Woods, which gave him frequent Opportunities of obſerving this, and other wild Beaſts.

Horſe of the fineſt Make, and overlaid with party-coloured Laces or Girts from Head to Tail. It is very clear, from this Deſcription and from the Cut, that this *Zebra* is no other than the wild Aſs. *Purchas* had his Account from *Andrew Battel*, who lived long in the Kingdom of *Congo*, and had ſhot many of theſe Creatures wild in the Woods; for they were ſo little acquainted with Fire-Arms, that, when he had ſhot one, the reſt of the Herd ſtood gazing at him, till he had brought down three or four more: Which Account of his is the more credible, inaſmuch as it agrees perfectly with other Relations concerning this Creature.

19. The Antients mention, beſides the wild Aſs, another *Indian* Animal, which they called in *Greek* the *Monoceros*; in *Latin*, the *Licorn*, or *Unicorn*. This Creature is thus deſcribed by *Pliny:* It is, ſays he, the fierceſt and moſt furious Beaſt in the World; in its Body, reſembling a Horſe; in his Head, not unlike a Stag; his Feet having ſome Likeneſs to thoſe of an Elephant; and his Tail, reſembling that of a Boar. The Noiſe made by this Creature is hideous and terrible; in his Forehead he has a black Horn, about three Feet in Length, with which he ſo defends himſelf, that, as it is ſaid, he cannot poſſibly be taken alive. Another Writer of Antiquity contradicts the latter Part of this Account, and affirms, that the *Indians* not only take, but tame them, and make uſe of them to draw in Chariots; but he owns, that this is impracticable, if they are above two Years old when they are taken; and that they are always governed by a ſharp Bit, or rather a Bit with little Spikes in it. He mentions alſo their black Horns, and ſays, that the Cups made of them will not hold any Poiſon[a]. All theſe Stories ſeem to be founded in the admirable Properties of the Horn of the Rhinoceros, which is, perhaps, the only Unicorn that ever exiſted.

The Manticora is another Creature, which all the antient Writers have mentioned on the Credit of *Cteſias*[b]. But *Ariſtotle*[c], in ſpeaking of it, ſays, that if *Cteſias* be to be believed, there is ſuch an Animal, and then copies his Deſcription; which is this: The Manticora has a Face and Ears reſembling a Man, blue Eyes, and the reſt of its Body red, of the Size and Shape of that of a Lion. It is armed with a triple Row of Teeth, and devours both Men and Beaſts, having a Tail armed with a Sting, like a Scorpion; his Voice reſembles the Noiſe of a Flute and Trumpet ſounded together. This Beaſt is exceſſively ſwift, and one of the moſt dreadful in the World. If we conſider this Deſcription attentively, and make ſome reaſonable Abatements for the Credulity of its Author, and the Paſſion he had for Wonders, we ſhall ſee that it is no other than a Species of the Tyger; I mean that kind which has a Head like a Monkey, and which has been ſhewn in *Europe* under the Name of the Man-tyger; and it is indeed a Creature of a very horrid Aſpect, ſo that, ſeen at a Diſtance, it might well enough ſtrike the Fancy ſo, as to give Riſe to this Deſcription.

As *Cteſias* only deſcribed the Manticora, ſo *Ælian* alone[d] mentions another ſtrange Creature in the *Indies*, called *Poephagos*, of which he gives us the following Account. This Animal, which is as big again as an ordinary Horſe, is much eſteemed by the *Indians* for the exquiſite Beauty of its Hair. The Tail of this Animal is about three Feet in Length, and the Hair of it much finer and ſofter than that of a Horſe, which makes the Women of that Country eſteem it for Head-dreſſes: But few Ornaments are dearer or harder to be met with; for, notwithſtanding its large Size, there is ſcarce any Animal ſwifter than the *Poephagos*, or that is taken with greater Difficulty. It defends itſelf againſt the Hunters, and their Dogs, with wonderful Courage and Obſtinacy; and ſometimes, being too hard for the Dogs, the Huntſmen come in to their Aſſiſtance, and, by a Shower of ſmall poiſoned Arrows, quickly deſtroy the Beaſt. Its Skin is almoſt as valuable as its Tail; but as for its Fleſh, it is abſolutely uſeleſs.

No modern Writer mentions any Creature in the *Indies*, that has the leaſt Reſemblance to this Deſcription; and one might have imagined, that it was purely a Creature of Fancy, if Mr. *Kolben*, whom we have ſo often mentioned, had not aſſured us, that a Creature of this Kind has been actually ſeen in *Africa*, not far from the Cape of *Good Hope*. The Story, in his own Words, runs thus[e]: ‘ I remember to have ſeen, in the Lodgings of Captain ‘ *Olofberg*, the Picture of an Animal which exactly re‘ſembled the Deſcription given of the *Poephagos*. I took ‘ an Opportunity of inquiring after the Beaſt itſelf, and ‘ received from the Captain the following Account: That, ‘ travelling once in the Country of the *Hottentots*, at a ‘ conſiderable Diſtance from the Cape, he ſaw an Animal ‘ exactly like that repreſented in the Picture; and, having ‘ never ſeen, or indeed heard of, any thing like it before, ‘ he took ſome time to conſider it, with ſingular Atten‘tion; by which means, he ſo effectually fixed in his ‘ Mind the Shape, Size, and Look, of the Creature, ‘ that, at his Return, he drew this Picture of it. As to ‘ this Repreſentation, continues Mr. *Kolben*, it does not ‘ make it altogether ſo big as the *Poephagos* is repre‘ſented; and there are beſides ſome other little Differences, ‘ which I ſhall remark: In the firſt place, this Picture ‘ gives the Creature a Mane, like that of a Horſe; in the ‘ next the Shape and Size of it reſembles that of a large ‘ Buffalo. I could not obtain any farther Accounts of this ‘ Animal from any other Perſon, there having been no‘body that remembered the ſeeing any ſuch Creature in ‘ the Country of the *Hottentots*, except the Gentleman I ‘ have before-mentioned.’

It is requiſite to inform the Reader, that moſt of the Animals found in the *Indies* are likewiſe found in *Africa*, and more eſpecially in *Ethiopia*, and in the Neighbourhood of the Cape of *Good Hope*; and though it be true, that the proving ſuch Creatures as the Antients mention are found in theſe Parts, is no direct Proof of their being found in the *Indies*; yet, it certainly demonſtrates, that many of the Animals, mentioned by the Antients, are not Creatures of Imagination, but have a real Exiſtence. We ought likewiſe to remember, that, as the *Romans* extended their Dominions to the Frontires of *Perſia*, ſo they had an Opportunity thereby of being well acquainted with the Curioſities of the moſt inland Parts of the Northern *Indies* towards the Frontiers of *Tartary*, in which moſt of theſe wild Beaſts are bred; for, as moſt of our modern Travellers have not gone any very great Diſtance from the Sea Coaſt, and, conſequently, have not had much Opportunity to make themſelves ſo throughly acquainted with thoſe Parts, as that, on their Reports, we ſhould be able to determine poſitively, whether there are ſuch Creatures in the *Indies* or not. Add to this, that many of them are but very indifferent Judges of what they relate, as appears from their contradicting each other in their Deſcriptions, as the Reader will eaſily perceive from thoſe of the Rhinoceros. On the Whole, where the Accounts of the Antients are equally irreconcileable to Reaſon, and unſupported by modern Teſtimonies, we may very reaſonably give them up; but otherwiſe, it is certainly as adviſeable to preſerve them in Collections of this Nature, that, in proportion as our Diſcoveries increaſe, we may be the better able to diſcern how far they are contradicted or confirmed by thoſe Diſcoveries, which is a Point of great Conſequence towards perfecting natural Hiſtory; the Conſideration of which was what chiefly determined me to take ſo much Pains about it. The Reader will likewiſe find, that the Peruſal of this Chapter will greatly contribute to the perfect Underſtanding of the ſucceeding Voyages.

20. There was nothing contributed more to miſlead and diſtract the Antients, in what they have delivered concerning the Animals in the *Indies*, than the vaſt Number of Apes and Monkeys that were Natives of that Country, and of ſuch different Shapes and Sizes, that it was a very difficult thing to diſtinguiſh their various Sorts; and, for want of doing which, it was very eaſy to miſtake them for different kinds of Beaſts. There are in the *Indies* of

[e] *Deſcription du Cap de Bonne Eſperance, Vol.* iii. *p.* 21.

theſe Creatures of all Colours, and almoſt of all Shades of Colours, black as well as white, red as well as grey, and ſome that with red Bodies have their Heads and Faces of a fine Sky-blue; and theſe laſt ſort are much of the Size of our common Dogs. In ſome Places there are ſuch Numbers of them, that they cover the tops of the Houſes, and by throwing Things down hinder People from going along the Street; others from a like Spirit of Miſchief poſt themſelves in hollow Ways, where they almoſt murder ſuch as paſs by, throwing down broken Rocks and Stones[f].

The antient *Indians*, as they had an Averſion to ſpilling Blood, found a Way to make theſe Creatures, which are by Nature active, not only quiet, but uſeful. In ſuch Places as produced Pepper and Cacao-trees, they were wont, in the Sight of the Monkeys, to cut the higheſt Branches within their Reach, and lay them regularly on the Ground. This they did in a Morning, and then leaving the Place, theſe natural Mimicks pulled all the Fruit that was out of Man's Reach, and laid it in the ſame Order upon the Ground, where the *Indians* coming in the Night, found their Harveſt gathered to their Hands, and carried it away. When their Numbers made them exceſſively troubleſome, the *Indians*, as *Strabo* and *Diodorus Siculus* inform us, turned this imitating Faculty upon them to their own Deſtruction, for coming to their Haunts with Baſins full of Water, or of Honey, they waſhed their Faces in the Sight of theſe Animals, and then ſubſtituting Pots of thin Glew inſtead of the Water or Honey, retired out of Sight. The Monkeys, as ſoon as they were gone, came down and waſhed their Faces likewiſe, and ſticking their Eyes together, became blind, and were eaſily taken. In other Places they brought Boots into the Woods, and putting them on and off, left them well lined with Glue, or a ſort of Bird-lime, ſo that when the Monkeys put them on, they ſtuck faſt, and hindered them from making their Eſcape. A third Method they invented of taking them was by the Help of Springs at the Back of Looking-glaſſes, which when the Monkeys came to handle, as they had ſeen the Men do before, held them faſt, and diſabled them from making a Retreat; but the moſt dangerous of their Enemies was the Lion, for finding their Fleſh equally pleaſant and wholeſome, he purſued them with greater Eagerneſs than any other ſort of Beaſts[g].

It is a very ſingular Paſſage that *Strabo* relates of their giving an Alarm to the Army of *Alexander the Great*. Every body knows that the *Macedonians* were diſtinguiſhed by the Severity of their Diſcipline, and the exact Order in which they marched; it happened, that in paſſing through that Part of *India*, which lies between the Rivers *Indus* and *Ganges*, they travers'd a Wood, and paſſed on the Edge of a Mountain, which ſerved theſe Creatures for a Retreat, and encamped in their Neighbourhood all Night. The next Morning, when the Army began to move, they ſaw at a Diſtance many thouſands of theſe Creatures drawn up in Batalia, and not doubting but that it was the Army of their Enemies, the Trumpets ſounded, and *Alexander* himſelf began to prepare for an Engagment; but the *Indian* Prince *Taxiles*, who was then with *Alexander*, ſoon informed him of his Miſtake, and aſſured him that upon his advancing theſe Creatures would again betake themſelves to their Woods and Mountains, as in Effect they did[h]. The moſt remarkable Property of theſe Animals is their Attachment to each other, and living in a kind of Society, of which the Ancients took great Notice; and as to the Truth of the Fact, a ſingle Inſtance from a modern Traveller of great Reputation may ſuffice. The famous Monſieur *Tavernier* tells us, that returning from *Agra* with the *Engliſh* Preſident to *Surat*, they paſſed within four or five Leagues of *Amenabad*, through a little Foreſt of *Mangoes*. "We ſaw there, ſays he, a vaſt Number of very large Apes, both Male and Female, many of the latter having their Young in their Arms. We were each of us in our Coaches, and the *Engliſh* Preſident ſtopped his to tell me that he had a very fine new Gun, and knowing that I was a good Markſman, deſired me to try it by ſhooting one of the Apes. One of my Servants, who was a Native of the Country, made a Sign to me not to do it; and I did all that lay in my Power to diſſuade the Gentleman from his Deſign; but to no Purpoſe, for he immediately levelled his Piece and ſhot a She-Ape, which fell through the Branches of the Tree on which ſhe was ſitting, her young ones tumbling at the ſame time out of her Arms upon the Ground. We preſently ſaw that happen which my Servant apprehended, for all the Apes, to the Number of ſixty, came immediately down from the Trees and attacked the Preſident's Coach, with ſuch Fury, that they muſt have infallibly deſtroyed him, if all who were preſent had not flown to his Relief, and by drawing up the Windows, and poſting all the Servants about the Coach, protected him from their Reſentment. I muſt confeſs I was not a little afraid, though they did not offer to meddle with me, becauſe they were very large, and of incredible Strength, and their Fury was ſo great, that they purſued the Preſident's Coach for near three Leagues[i]."

It is very natural to ſuppoſe, that from the Sight of the larger ſort of theſe Creatures the Ancients were confirmed in their Notions of Fawns, Satyrs, and wild Men; and if I might preſume to ſpeak my own Opinion freely, as to the Attendants of *Bacchus*, as they appear on the Coins, Gems, and Baſs-Reliefs of the Ancients, I ſhould ſay that theſe were no more than ſo many different ſorts of Apes thus repreſented to ſignify his Conqueſt of theſe Countries. I would not be underſtood to aſſert, that the Ancients conſidered them in this Light, the contrary of which is very certain; but what I mean is, that their Fables altered and diſtorted the original Fact, and occaſioned frequent Changes in the Figures to make them ſuit the better with the Stories they invented, whereas originally the Chariot drawn by Leopards, and followed by theſe Inhabitants of the Woods, was a very natural Picture of the Conqueror of the *Indies*. I might enlarge conſiderably on this Topick, and ſhew from a Variety of Authors, that in truth all the Satyrs and wild Men mentioned by old Writers, were no other than Apes and Baboons of an overgrown Size; and this might be likewiſe confirmed by comparing the Accounts given by thoſe Writers, with the Relations of modern Travellers; but as this would take up a great deal of Room, and as I have Reaſon to believe that the Notion is in itſelf ſo plain and ſo agreeable to Truth, that it does not ſtand in Need of any Arguments to ſupport it, I ſhall not proſecute it farther at this Time, the rather, becauſe this Chapter begins already to grow very long, and I have ſtill ſome remarkable Creatures that before I finiſh it I find it neceſſary to mention.

20 Among the other Wonders of the *Indies*, it is a little ſtrange, that the Animal, which produces Muſk, was ſo long before it was known to the Ancients; for *Pliny*, the moſt curious and the moſt diligent Collector among their Writers, has left us nothing that ſeems to have the leaſt Relation to this Subject, the firſt Notice of which we received from *Arnobius* and *Apuleius*. Yet this Perfume was always in very great Eſteem in the *Indies*, and when properly tempered, muſt be acknowledged the richeſt of its kind. It is taken from an Animal called the Moſch or Muſk, which is very common throughout all *China* and the *Indies*[k], and is about the Size of a Fawn, or rather a little leſs; this Creature is ſaid to be ſo lazy, that the Hunters are hardly able to make it ſtir, but are obliged to diſcover its Haunts, which once done, they kill it without the leaſt Reſiſtance. When this is done, they cut off a little Excreſcence cover'd with Down, which grows near its Navel, from whence they take a kind of Blood, or rather Juice, clotted, of a moſt odoriferous Smell; and then they ſkin and cut it to Pieces.

But beſides this Liquor, which is a kind of Eſſence of Muſk, there are three other Methods of making this valuable Commodity, though not in the ſame Degree of Perfection. The firſt is, by taking the Hind Quarters of the Animal from its Kidneys, and ſteeping them in its Blood; they are then bruiſed and beat in a Mortar into a ſort of Pap, which is dried and put up in little Purſes made of that Animals Skin[l]. When it is propoſed to make a greater Quantity of Muſk, though not quite ſo rich, the Fleſh of the whole Animal it taken and chopped to Pieces, and beat in a Mortar into a kind of Paſte, which is afterwards moiſtened with the Blood, and ſo put up into Purſes made of the Skin of the Beaſt, as the former. The third Sort, which is alſo tolerably good, though much ſhort in Value to either of the former, is made only of the Forepart of the Animal, from the Reins to the Head; and thus no Part of this valuable Creature is ever loſt [m]. In *China*, where all Preparations of this Kind are beſt underſtood, it is managed in quite a different Manner. They take from the Animal a little Cod or Bag, which lies under its Belly, about thrice as big as a Man's Thumb; it contains a Subſtance not much unlike Tallow, which is dried till it is fit to powder, and then it appears of a light Yellow, and has a Smell that is exceedingly agreeable. It is ſold even in *China* itſelf for its Weight in Silver; but they are prohibited from ſelling it not to Strangers, and therefore, for common Sale, they make a counterfeit Muſk in the following Manner. They take rotten Wood, which they ſteep in the Blood and Juices of the Animal, and then ſew it up in Purſes made of its Skin, and having dried it, vend it for the true Muſk [n]. They aſcribe to it many Virtues in that Country, and amongſt the reſt one that is very ſingular, which is this; they ſay, that being worn under the Stocking when People are obliged to travel through Woods or Mountains where there are abundance of Serpents, they are preſerved thereby from being attacked by them; and the Reaſon aſſigned for this ſeems to be natural and probable enough: The Animal, ſay they, which produces Muſk, feeds chiefly upon Serpents, and therefore the Smell makes them quit the Place, from an Apprehenſion of their own Danger [o]. This rich Perfume has loſt much of its Credit in this Part of the World, and is conſequently much ſunk in its Prince; the very beſt Muſk from *China* is ſold at *Amſterdam* for about nine Florins an Ounce by the *Eaſt-India* Company; and that of *Bengal*, which is eſteemed the ſecond Sort, is not worth above five Florins: The *Ruſſian* Muſk, which has the ſtrongeſt Smell, but loſes its Scent in a ſmall Space of Time, may be had for leſs than a Florin an Ounce [p]. There are ſome People who have ſtill a high Opinion of the Virtues of this Drug. They ſay that it is an excellent Remedy for almoſt all nervous Diſorders; and to confirm this they aſſure us, that though in their own Country, the *Dutch* are frequently attacked by Apoplexies, yet at *Batavia*, and other Places in the *Eaſt-Indies*, where Muſk is very much uſed [q], they do not find themſelves ſubject to theſe Diſorders. It is upon this Principle that they attribute the Increaſe of nervous Complaints within fifty or ſixty Years paſt in theſe Parts of *Europe*, to the quitting the Uſe of this Perfume, which is ſaid to have been owing to the Averſion which the Queen of *France*, Conſort to *Lewis* XIV. had to the Smell of Muſk, which firſt drove it out of that Court, and by Degrees made it unfaſhionable every where elſe [r]. I do not pretend to anſwer for the Truth of this Obſervation; but as it is certainly very curious, and the Examination of it may poſſibly be of Uſe to Mankind, I thought it might not be amiſs to report it.

After this Hiſtory of the Beaſts of *India*, it is natural to ſay ſomewhat of the Reptiles and Inſects there, of which we have a very large Account from the Ancients, and thoſe not at all leſs remarkable than what has been already taken Notice of with regard to other Animals, the rather becauſe in their Kind they appeared much more ſurprizing, and withal more terrible to Strangers: For as there is a Kind of innate Diſlike to to the Reptiles of our own Countries, which are generally in our Eye; ſo when we ſee Creatures to which we have ſuch an Averſion, of a Size infinitely beyond what we have beheld before, it naturally inſpires us with Horror, our Antipathy riſing in the ſame Proportion that the Object becomes more dreadful; eſpecially if the Creature be fierce or venomous in its Nature, and capable as well of hurting as of frighting us. From hence, very probably, it comes to paſs, that ſuch extraordinary Relations of theſe frightful Creatures have been, in all Ages, well received; becauſe it is natural for us to hear with Pleaſure, of Miſchiefs to which we are not expoſed, the Proſpect of diſtant Dangers, adding to the Senſe of our own Safety, and gratifying our Curioſity at the ſame Time.

22. The Dragon was a Creature frequently mentioned by the old Naturaliſts, and deſcribed as one of the moſt dreadful in the World. *Ariſtotle* mentions the Dragon's living in continual Enmity with the Eagle; and alſo ſays, that when the Dragon is ſurfeited with eating Apples it has Recourſe to Lettuce for Relief [s]. *Egypt* and *Ethiopia* were Countries the moſt famous, next to the *Indies*, for producing Dragons of unuſual Size. We have, in an ancient Author, a very large and circumſtantial Account of the taking a Dragon on the Frontiers of *Ethiopia*, which was One and twenty Feet in Length, and was carried to *Ptolemy Philadelphus*, who very bountifully rewarded ſuch as ran the Hazard of procuring him this Beaſt [t]. Yet, terrible as theſe were, they fall abundantly ſhort of Monſters of the ſame Species in *India*; with reſpect to which, St. *Ambroſe* tells us, that there were Dragons ſeen in the Neighbourhood of the *Ganges*, near ſeventy Cubits in Length [u]. It was one of this Size that *Alexander* and his Army ſaw in a Cave, where it was fed, either out of Reverence or from Curioſity, by the Inhabitants; and the firſt Lightening of its Eyes, together with its terrible Hiſſing, made a ſtrong Impreſſion on the *Macedonians*, who with all their Courage could not help being frighted at ſo horrid a Spectacle [w]. The Dragon is nothing more than a Serpent of enormous Size; and they formerly diſtinguiſhed three Sorts of them in the *Indies*, *viz*, ſuch as were found in the Mountains, ſuch as were bred in Caves, or in the flat Country, and ſuch as were found in Fenns and Marſhes: The firſt is the largeſt of all, and are covered with Scales as reſplendent as poliſhed Gold. Theſe have a Kind of Beard hanging from their lower Jaw, their Eye-brows large, and very exactly arched; their Aſpect the moſt frightful that can be imagined, and their Cry loud and ſhrill; their Creſt of a bright Yellow, and a Protuberance on their Heads, of the Colour, of a burning Coal. Thoſe of the flat Country differ from the former in nothing but in having their Scales of a ſilver Colour, and in their frequenting Rivers, to which the former never come. Thoſe that live in Marſhes and Fenns, are of a dark Colour, approaching to a Black, move ſlowly, have no Creſt, or any Riſing upon their Heads [x]. *Strabo* ſays, that the painting them with Wings, is the Effect of Fancy, and directly contrary to Truth: But other Naturaliſts and Travellers, both ancient and modern, affirm, that there are ſome of theſe Species winged [y]. Yet, after all theſe terrifying Accounts, *Pliny*, and many other Writers, aſſure us that both Sorts are rather dreadful than dangerous, their Bite having nothing in it venomous [z]; the Reverſe of which is aſſerted by later Authors, and ſeveral Facts alledged in Support of their Opinion [a]. But what makes the greateſt Figure in the Works of the Antients with relation to this extraordinary Animal, is, the Stone ſuppoſed to grow in its Head, and reputed of ineſtimable Value [b]. It is ſaid to be naturally divided into Tables like a Diamond of the brilliant Cut, and to have as high a Luſtre. But, to preſerve this Quality, it is neceſſary that it ſhould be taken out of the Head of the Animal the Moment it is killed; for otherwiſe it loſes all its Virtues and all its Beauty, and yet becomes ſo extremely hard, that no Tool will touch it. *Pliny* [c] gives us a long Catalogue of medicinal and magical Properties, which he aſcribes to the Skin, Fleſh, Bones, Eyes, and Teeth of the Dragon, which are too ridiculous to be repeated; and, beſides, ſuch Stories have now entirely loſt their Credit, ſince the

2 *Indians*,

Indians, at preſent, confine the Value of theſe Animals to the Stone in their Heads; which, however, no *European* could ever find, and to the Quality that their Bones are ſuppoſed to have of reſiſting Poiſon. It is for this Reaſon that they are as aſſiduous as ever in hunting Dragons; concerning which, old Writers tell us, this was their conſtant Method. They hung before the Mouth of the Dragon's Den a Piece of Stuff flowered with Gold, which attracted the Eyes of the Beaſt, till by the Sound of ſoft Muſick they lulled him to Sleep, and then cut off his Head [d].

As for the Dragons on the Mountains, they coſt them much more Pains; for they were forced to purſue them with Lances and Arrows, with great Danger to themſelves. The Dragon, in his Turn, hunted the Elephant, and, if we may credit ſome Authors of great Rank in the learned World, was from Inſtinct his mortal Enemy. In order to deſtroy him, he mounted a Tree in the Foreſt where the Elephants fed, from whence, as ſoon as one of them came by, he threw himſelf on his Back, and twiſting himſelf round him, thruſt his Head into his Noſtril, and thereby ſtrangled him. The Hate of this Animal towards the Elephant, was thought an apt Symbol of human Malice, for in his Fall, the Elephant cruſhed him to Death; ſo that the Combat was equally fatal to both [e].

The Ancients tell us further that if it was not for the annual Inundations, this Country would be infeſted with a vaſt Variety of other Serpents and deſtructive Inſects of different Kinds, which, as in all hot Climates, breed here in prodigious Numbers. Amongſt others they mention a kind of Viper of a moſt dangerous Nature, and ſome other Reptiles, the Bite of which is infallibly mortal, when the Simples, which have a ſpecifick Quality of curing theſe Wounds, are not immediately taken, with which Simples the Country through the eſpecial Care of Providence plentifully abounds. There are ſome of theſe Vipers, they ſay, twelve or fifteen Feet long, others not above half a Foot; and theſe, together with the Scorpions, are the moſt dangerous, becauſe they are ſo ſmall, that it is very difficult to guard againſt them [f]. But the annual Inundations in a great Meaſure purge the Country of thoſe dangerous and deſtructive Creatures, without which it would ſcarce be habitable. The *Macedonians* ſuffered exceedingly from theſe venomous Animals before the *Indians* acquainted them with the proper Remedies, and the only way before that by which they could defend themſelves, was by hanging their Beds between Trees, and ſleeping, as it were, in the open Air [g].

Several modern Travellers report almoſt as ſtrange Things of theſe *Indian* Serpents as the Ancients; for inſtance, *Peter Van Caerden*, who was Admiral of a *Dutch* Fleet in the *Indies*, aſſures us, that at *Calicut* they are as big about as Hogs, their Bodies ſix Feet long, and their Heads larger and longer than that of a wild Boar, yet the Natives aſſured him that theſe Animals were not venomous. It is very remarkable that he tells us, theſe monſtrous Creatures haunted chiefly their Marſhes, ſo that, according to the foregoing Diſtinction, they muſt have been the leaſt of that Species in that Country, and probably they were ſo; for the ſame Author tells us, that there were others, which, if they but drew Blood of a Man, their Bite was mortal upon the Spot. He adds, that beſides theſe he ſaw many of the Size of Water-Snakes. While he was at Anchor on the Coaſt of *Mozambic*, a Boy that was waſhing himſelf by the Ship-ſide was ſeized by the Middle by a Serpent of enormous Size, that dragged him under Water at once in the Sight of the whole Fleet [h].

Mr. *Rechteren* tells us, that while he lived in the Iſland of *Banda*, his Fowls were continually ſtolen, and on his complaining to his Neighbours, they told him they were carried away by the Serpents, which he was not very forward to believe [i]. However, having ſet ſome People to watch, they in the Night alarmed him with the Cry of the Serpent, which had got in amongſt the Fowls. They purſued it, cut off its Head and Tail with Hatchets, which they had in their Hands, and then opened its Belly, in which they found a Pig, a Duck, and five Fowls, and what is not a little extraordinary, the ſkinned theſe Creatures, and together with the Body of the Serpent, boiled, and made Broth of them.

An Author, whom we have cited more than once, aſſures us [k], that he has ſeen of theſe Animals twenty-five Foot long, and five round, their Throats ſo large, that they were able to ſwallow a Stag whole. Theſe monſtrous Serpents live both on Land and in the Water, where, when they have gorged themſelves with their Prey, they ſleep, which Opportunity the Natives take to kill and eat them, eſteeming the Fleſh excellent, and not at all venomous. The ſame Writer ſays, that at *Golconda* there are Serpents of a prodigious Size, the Bite of which is inſtantly mortal; and obſerves farther, that whenever theſe Creatures are ſeen a Sea, it is a certain Sign of their being near the *Indian* Coaſt.

Admiral *Verhoven* tells us a ſingular Story of a Sea-Serpent in the Streights of *Sincapoua*. A Seaman waſhing himſelf by the Ship-ſide was ſeized by one of theſe Creatures, upon which he roared ſo loud, that one of his Companions threw him a Rope and pulled him into the Ship; but the Serpent had tore ſuch a Piece out of his Side, that he died immediately. The Serpent continued about the Ship, till at laſt it was taken, and was the largeſt they had ever ſeen. Upon opening its Belly, they found therein the Piece of Fleſh which he had torn from the Sailor, and which they buried with him [l].

Mr. *Thevenot*, a moſt careful and candid Writer, informs us, that they Country about *Golconda* is terribly infeſted by Serpents, the Bite of which is mortal, unleſs Care be taken to apply proper Remedies immediately: Of theſe he mentions two, which are both very extraordinary; the one is holding a light Coal very near the Wound, which draws out the Venom by Degrees, and which is very ſingular, the Patient does not feel any great Inconveniency from the Heat during the Time of the Operation [m]. The other Remedy is the Snake-ſtone, or, as they call it, *Cobra*, the Manner of making and applying of which he deſcribes very particularly.

The beſt are made in the City of *Dieu*, and are compoſed of the Roots of certain Plants burnt to Aſhes, which Aſhes are mixed with a particular kind of Earth, and then burnt a ſecond Time. Of this Compoſition reduced into a Paſte, they form the Stone made of the Size of a Pigeon's Egg; this is applied in caſe a Perſon is bit by any kind of Serpent or Viper, or wounded by a poiſoned Arrow in the following manner: They firſt prick the Wound with a Needle till the Blood comes, and then clap the Stone to it, which ſticks faſt, and remains there till it falls off of itſelf. It is afterwards put into Breaſt, or, if that cannot be had, into Cows Milk, where it purges itſelf of the Poiſon; and if this be not done immediately the Stone burſts [n].

Dr. *Fryer*, who was ten Years in the *Indies*, and who, as a Phyſician, was certainly a proper Judge of ſuch Matters, ſpeaks alſo of theſe Snakes-ſtones; he ſays, they are made by the *Gioghis*, and that they are Counter-poiſon to all deadly Bites. If the Stone ſticks, ſays he, it attracts the Poiſon, and put into Milk, it recovers itſelf again, leaving its Virulency therein, which is diſcovered by its Greenneſs [o]. I have mentioned this Circumſtance of the *Cobra*, the rather becauſe the common Notion in the *Indies* is, that it is a Stone taken out of a Serpent's Head, which, as we have ſeen, is altogether fabulous.

22. In reſpect to the Dragon, the Ancients have only exceeded as far as we can judge from modern Relations in certain Circumſtances the Truth; but as to the Gryphon, all they ſay appears the pure Effect of Imagination, and ſo ſtrange an Animal they make it, that I was in ſome doubt whether it belonged to this or to the ſubſequent Section; but perceiving that it would be liable to the ſame Objections there, I thought it might be as well to diſpatch it here. According therefore to the Accounts we have of it, it is hard to ſay whether it be Beaſt or Bird, Inhabitant of the Earth, or of the Air. They ſay it has four Feet, and is of the Size of a Lion; thus far then it is plainly a Beaſt; but then they ſay farther, that it is entirely covered with Feathers, and has the Head and Beak of an Eagle.

[o] *Fryer's* Travels, *p.* 53.

It has either Wings, or ſomething like them, that is to ſay, a Membrane reſembling that which the Bats fly with. The Colour of the Body is a dark brown, or black; but the Breaſt is of a bright red, or, as ſome ſay, purple [p].

This Creature was conſecrated to *Apollo*, and faſtened to the Chariot of the Sun, becauſe among its other ſingular Properties, it was held, that the Gryphon could ſteadily look upon the Sun in its full Splendor. It was ſuppoſed to inhabit the Woods and Mountains, where the Ancients imagined it diſcovered and guarded the Gold Mines; but they do not tell us to what Uſes it converted this Metal, or why departing from the Inſtinct of Beaſts it ſhared in the Follies of Men. It is alſo affirmed, that this Animal was one of the fierceſt and moſt cruel, fearing no other Enemies than the Lion, the Tyger, and the Elephant, over which alſo it ſometimes triumphed. The *Indians*, whenever they attacked it, went in conſiderable Bodies, and generally in a Moon-light Night, in hopes of finding it aſleep, which, however, they rarely did, and were forced to buy the Treaſures, guarded by the Gryphon, at the Expence of their Blood. The Watchfulneſs of this Animal was one of its moſt remarkable Qualities; and in all the Fables that are related concerning it, it is a Circumſtance always thrown in, that the Gryphon ſeldom or ever ſleeps [q].

If there had been any ſuch Creature, it fell undoubtedly under our Cognizance, becauſe the Ancients affirm that they are no where elſe to be met with but in the Northern Part of the *Indies*, which however does not agree extremely well with the Taſk they aſſign them of guarding the Gold Mines, becauſe in truth there are no ſuch Mines there. It muſt however be acknowledged, that ſome of the Ancients themſelves have given us plainly to underſtand, that they looked upon all that had been ſaid of the Gryphon as mere Fables; but whence thoſe Fables aroſe, or why they were invented, is a Queſtion that the Reader, from the Scope of this Work, which is to leave nothing unexplained, may expect ſhould be anſwered.

On this Head I muſt ſay, that I take the Origin of it to have been an *Egyptian* Hieroglyphick; and my Reaſon for it is, becauſe taken in this Light, it has a Meaning, and otherwiſe none. In this Senſe then the Gryphon was a Figure invented, which ſignifies the Power of the Sun in the ſign of the Lion; and hence proceeded the Notion that the Gryphons guarded the Mines of Gold, becauſe according to the old Doctrines of the *Egyptian* Chemiſtry, the Sun in this Sign had an extraordinary Operation in that Reſpect; and hence alſo ſome of the old Alchymiſts, or at leaſt ſome Writers who are impoſed on us under ancient Names, make uſe of the Gryphon, and ſome other ſuch-like imaginary Creatures, for the better veiling of their Secrets; but when the *Greeks* firſt ſaw theſe Figures without being let into their Meaning they took them, as it was natural enough for them to do, for the Repreſentations of real Animals, and the *Indies* being the Place where the moſt extraordinary Creatures they were acquainted with reſided, they took the Liberty of ſuppoſing that the Gryphons came from thence, and from the Northern *Indies*, becauſe there were more wild Beaſts there than any where elſe.

This I take to be the true Account of the Riſe of this Notion, which afterwards came to be employed ſymbolically, of which Sir *Thomas Brown* [r] has given us a very rational Account. It doth well make out, ſays he, the Properties of a Guardian; the Ears implying Attention; the Wings, Celerity in Execution; the Lion-like Shape, Courage and Audacity; the hooked Bill, Reſervance and Tenacity. It is alſo an Emblem of Valour and Magnanimity, as being compounded of the Eagle and Lion, the nobleſt Animals in their reſpective kinds; and ſo it is applicable to Princes, Generals, Preſidents, and all in chief Authority, which is the Reaſon that the Heralds laid hold of it, and we ſee it borne in the Coats of Arms of the nobleſt Families in *Europe*.

In taking leave of this Subject, it will be proper for me to obſerve, that the Gryphons mentioned in Scripture [s] are no more than a kind of Eagle, and not the imaginary Gryphon; and therefore in our Tranſlation, it is very well rendered after *Tremellius*, as I conceive, the Oſſifrage, which is, properly ſpeaking, the Sea-Eagle.

23. There is no Creature of which the Ancients have talked more than of the Cameleon, and perhaps, of all the Animals they have mentioned, there is not one of which they have reported more Abſurdities, or ſhewn a leſs Regard to Truth. In all Probability, they were originally miſled by the Report of the *Indians* themſelves, who have always been inclined to exaggerate, and have ſhewn leſs Care in examining the real Nature of Creatures than in framing ſuch Stories of them as might beſt ſuit their Parables and Ænigmas. It muſt, however, be allowed, that the Ancients are not all alike faulty in this reſpect, either in believing the Dreams of others, or reporting their own; for though *Pliny* and *Solinus* [t] poſitively affirm, that the Cameleon lives wholly on Air; yet *Ariſtotle* [u], who went before them, and has written largely upon the Subject, ſays not a ſingle Word of this ſupernatural Quality. Indeed, it is wonderful that ever this Opinion prevailed at all, becauſe the very Formation of the Animal plainly refutes it, as is very well obſerved by the learned Sir *Thomas Brown* [w].

The Word Cameleon in *Greek* ſignifies a *little Lion*; and this Name muſt have been given it from ſome Reſemblance it had to that Animal, not ſurely in its Figure, for therein it approaches the Crocodile, but rather from its Vigilance in catching its Prey, a Notion irreconcilable to its living upon Air. It is for this Purpoſe certainly, I mean of catching its Prey, that it has a long ſharp Tongue, which it can thruſt out to a Length equal to one Third of its Body; and though very ſlow in its Motion, yet it manages this Memberr with extraordinary Agility; and therefore, from the eſtabliſhed Law of Nature, we may preſume: that its Tongue is of extraordinary Uſe, and as we cannot conceive that it ſhould be of any Uſe with reſpect to drawing in the Air, which might be done without, it naturally leads us to believe that it ſerves to furniſh the Animal with other Food. In the next Place, it hath very remarkable Teeth, which is another Indication of its living on Prey; and what ſeems to put it beyond all Doubt, is, the Formation of its Stomach and Guts; to which we may add its voiding Excrement, a Fact admitted by *Pliny* [x], though manifeſtly deſtructive of his own Opinion.

It is no Wonder, therefore, that this Notion was ſoon exploded, or that we find *Auguſtine*, *Stobæus*, *Forunus Licetus*, and many other great Men, oppoſing themſelves to this popular Sentiment. But *Bellonius* poſitively affirms that it feeds on Flies, Caterpillars, Beetles, and other Inſects, and that from the beſt Reaſon in the World; becauſe, upon Diſſection, he found theſe Animals in their Bellies [y]; to which we may add what other learned Writers have affirmed as to its drinking Water, and delighting to catch Meal-worms. We will therefore quit the Ancients, as inſufficient Guides in this reſpect, and have Recourſe to the Moderns, by whom this ſingular Animal has been very fully and faithfully deſcribed.

The Cameleon then, according to their Account, reſembles a large Lizard, except that it has two great wide Ears, which lie pretty far back upon its Neck. It lives commonly in the Clifts of Rocks, or in Holes of a Wall. It has four Feet and five Claws upon each Foot, which ſerve for its perching upon the Branches of Trees or Shrubs, where it likewiſe ſecures its Station, by twiſting its Tail round them. Its Motion on the Ground is as ſlow as that of a Tortoiſe, but upon Trees it moves from Branch to Branch with great Agility [z]. The largeſt of theſe Animals are about eleven or twelve Inches in Length from the Head to the Extremity of the Tail, and about three

Inches round, that is to ſay, when they puff out and extend themſelves; for otherwiſe they have not half that Bigneſs, and, in all Probability, it was from this ſtrange Property of ſwelling and leſſening their Bodies, that the Notion of their living upon Air was firſt derived.

When they do not puff up themſelves, their Skin hangs looſe, in ſuch a Manner, that the Spine of their Back is plainly ſeen through it, their Ribs may be counted, and the Tendons of their fore and hind Limbs are plainly viſible. It was from the Conſideration of the Creature in this Condition, that *Tertullian* was led to ſay, a Camelion was no more than a living Skin [a]. It muſt be confeſſed, that this Property is not only very ſingular, but, in ſome meaſure, alſo inconceivable, for that it diſtends itſelf by receiving Air is a Point generally agreed; and yet, how this Air ſhould paſs from the Lungs into the Habitude of the Body, is a Thing not hitherto accounted for.

There is another Quality of this ſtrange Animal no leſs admirable, which is, that when it is thinneſt, and the Skin hangs as it were upon the Bones, the Motion of its Heart cannot be perceived, which one would imagine in ſuch a State muſt be very ſenſible. Its Skin is very cold to the Touch, and very uneven in its Surface, full of little Points like Shagreen; but, at the ſame Time, not at all rough, but very finely poliſhed. The Colour, when the Creature is ſtill, and in the Shade, is, for the moſt part, of a Blue-grey, about the Feet it is of a White, inclining to Yellow, and, on the Body, there are ſome Streaks of a pale Red, which is likewiſe intermixed with Yellow.

Ariſtotle ſays their Skin is black; but it is certain, that the Camelion ſeen in *Europe* hath its Skin naturally of a Blue-grey, which it likewiſe retains after it is taken off. At firſt alſo it retains the Streaks before-mentioned, but by degrees, and as it grows dry, they wear out, and are no longer viſible. When theſe Animals are placed in the Sun, they change their Colour intirely, and aſſume that which is called an *Iſabella*, compoſed of a pale yellow on the Surface, and a deep red underneath. When removed out of the Sun, this beautiful Colour goes off, and the natural Blue-grey returns by degrees. The Camelion being touch'd and diſturbed when in the Sun, there appeared immediately on its Shoulders and Legs black Spots as big as one's Nail. Sometimes again its Skin appears checquered with brown Spots, inclining to a dark green.

Upon wrapping the Camelion in Linen, it was taken out white. *Aldrovandus* ſays, that he ſaw one ſo changed in this manner, that it ſeemed to diſappear, being not diſtinguiſhable in its Colour from the very Linen it lay upon [b]; but this Deſcription ſeems to be a little exaggerated; for commonly it is obſerved to change only to a light grey, and its natural dark Colour comes on again in the Space of two or three Minutes. But notwithſtanding this, the Experiment moſt evidently refutes what *Plutarch* and *Solinus* gravely tell us, that the Camelion aſſumes all Colours except white [c]. *Ariſtotle* likewiſe ſeems to be in the wrong in affirming, that it changes its Colour through its whole [d] Body, whereas in all the modern Experiments the Skin, inſtead of being uniform, has been ſpotted with different Colours. It muſt however be confeſſed, that moſt of theſe Circumſtances have varied in different Experiments, ſo that it is very difficult to ſpeak exactly of all theſe Particulars.

It is natural to conclude with ſome Account of the Diſcoveries made by the Moderns as to its Food, which ſeems to put that Point entirely out of Diſpute. They have found that it is ſo far from living upon the Air and Sunſhine, as ſome learned Men reported, and credulous People believed, that it is in Fact a Beaſt of Prey, and more ravenous than could be expected from its Size.

The Tongue of the Camelion is the Weapon with which he does all this Miſchief. It is covered conſtantly with a kind of natural Glew, which draws to it Flies and other little Animals, which ſtick faſt therein, and are drawn back therewith into the Creature's Mouth, with ſuch prodigious Agility, that it is hardly poſſible to perceive this Motion of throwing out and recalling the Tongue. Upon examining this Member cloſely with a Microſcope, we diſcern a Multitude of very ſmall Fibres which run winding like a Screw from the Root to the Point of the Tongue, which, doubtleſs, contributes very much to that extraordinary Quickneſs of Motion with which this Creature uſeth it. Upon Diſſection, there are found in the Ventricle and in the Inteſtines the Flies and Worms which it has ſwallowed [e].

It voids from Time to Time a kind of Stones of a Size and Weight ſuperior to any thing it could ſwallow; and theſe Stones have afforded Matter for freſh Obſervations. After having examined them cloſely, and making ſome Experiments on them with diſtilled Vinegar, it has been found that they have the Head of a Fly, or ſome ſuch thing in the Centre, round which the ſtony Maſs forms itſelf, and riſes to a conſiderable Bulk before it is thrown out. I do not find that the Moderns have at all enquired into one Fact expreſly aſſerted by *Ælian* [f], which is, that this Creature is not afraid of or affected by the Bite of the moſt venomous kinds of Serpents; which perhaps might lead us into new Diſcoveries.

24. The Deſcription and Hiſtory of the Ants of *India* recorded by ancient Authors, is at once the moſt ſingular and extraordinary of any thing they have related concerning this Part of the World, and the more ſo, becauſe it is on the one hand confidently reported, not by one or two Authors only, but by almoſt all the great Writers of Antiquity [g]; and on the other, the ſtricteſt Enquiry that can be made by the Moderns, furniſhes us with no ſort of Intelligence, to prove that either there are, or ever were, any ſuch Animals as theſe in Nature. It would take up too much of the Reader's Time to enter into a particular Account of all the Stories that the old Writers tell us with regard to the *Indian* Piſmires; and therefore to cut the Matter ſhort, I ſhall report what *Pliny* ſays upon this Head, as containing the Subſtance of what other Writers have delivered.

There are ſtill to be ſeen, ſays he, in the Temple of *Hercules* at *Erythræ*, the Horns of a certain *Indian* Ant, which were there ſet up to employ the Wonder as well as Curioſity of all Poſterity. Theſe Ants in the Northern *Indies* and eſpecially in the Country of the *Dardians*, burrough in the Ground like Rabbits, and from thence throw up abundance of fine Gold from the Mines under the Earth in which they make their Holes. Theſe Creatures are of the Colour of Cats, and of the Size of Wolves or Foxes in *Egypt*. This Gold, which they throw up in the Winter Seaſon, the Natives of that Country endeavour to ſteal from them in the extreme Heat of Summer, taking that Opportunity, when the Piſmires, to ſhun the raging Heat of the Sun, lie cloſe ſhut up in their Caves. Yet this is even then performed with great Danger; for if the Creatures gain any Scent of them, they purſue with incredible Boldneſs and Speed, neither can the Swiftneſs of their Camels ſave them; but they are frequently torn in Pieces by theſe furious Animals, eager to recover that Gold in which they ſo much delight [h].

Ariſtotle hath treated largely of the Nature of Ants in general, and ſeems to have examined the Subject with great Diligence and Application [i]; yet he ſays nothing of theſe *Indian* Ants, though the Story had been told by Writers who flouriſhed long before him, and therefore in all Probability he looked upon it as a Fable. *Philoſtratus* ſays, that theſe Creatures are not only found about the Sources of the *Indies*, but alſo in *Ethiopia* [k]; and yet ſuch Travellers as have viſited that Country, ſay nothing of any ſuch Animals, which it is impoſſible they ſhould have omitted, if they had either ſeen or heard of it. It appears however clearly both from *Strabo* and *Arrian*, that this Tale, and all the Circumſtances relating to it, came originally from *Megaſthenes*, who pretends that he had ſeen the Skins of theſe Animals, which were ſpotted like the Skins of Tygers; and he alſo reports another Circumſtance not mentioned by *Pliny*, which is, that the Inhabitants, by ſeattering the Limbs of Animals, cut to Pieces near the Dens or Holes of the Piſmires, drew them to feed upon theſe; and while they were thus employed, carried away their Golden Stores. *Nearchus* alſo has aſſerted, that he likewiſe ſaw the Skins of theſe Ants in the *Macedonian* Camp; but both *Strabo* and *Arrian* ſeem to give no Credit to theſe Relations [l].

---

[a] *Oper. p.* 795. [b] *Hiſt. Nat. p.* 33. [c] *Plutarch. Oper. p.* 1153. [d] *Ariſtot. de Hiſt. Anim. lib.* xi. *cap.* 11. [e] *Memor. de l'Acad. Tom.* iii. *p.* 53. [f] *Ælian. de Animal. lib.* iv. *c.* 33. [g] *Herodot. lib.* iii *c.* 102. *Strabo, lib.* xv. *Clem. Alexandrin. Pædag. lib.* ii *p.* 207. *Bochart. Hierozoici p.* 11. *lib.* vi. *c.* 4. [h] *Plin. Hiſt. Nat. lib.* xi. *c.* 31. [i] *Ariſtot. de Hiſt. Animal. lib.* v. [k] *Philoſtrat. de Vita Apollon. Tyan. lib.* vi. *c.* 1.

One might be tempted to imagine, that the original Reporters of theſe Stories miſtook the Creature of which they ſpoke, and that they ought rather to have ſtiled that a Mole than an Ant; I ſay we might ſuſpect this, if in any later Writer there was the leaſt Notice taken of this Method of coming at Gold; but as there is not, I muſt confeſs I look upon the whole as a Fable, invented by the *Indians*, to prevent Strangers from being too buſy in looking after their Gold Mines. *Pomponious Mela* [m] reports the Fact without the leaſt Mark of Diffidence. " *India*, ſays he, produces " Ants not inferior in Size to the largeſt Dogs, which, after " the manner of Gryphons, are ſaid to diſcover and watch " over Gold with incredible Sollicitude." A Thing in itſelf ſo incredible, that it is amazing any could ſpeak of it without Suſpicion.

That there are, however, vaſt Numbers of Ants in this Country, and of a large Size, is very certain; and theſe too very miſchievous; ſo that to avoid their Depredations, the Inhabitants in ſome Places are obliged to have their Cheſts fixed upon four Feet, and thoſe Feet ſet in a Veſſel full of Water to prevent the Ants from getting into them. But then the largeſt of theſe Creatures are not ſaid to be above a Finger's Length, which with reſpect to ſuch a Creature is a prodigious Bigneſs [n]. There are alſo infinite Numbers of theſe deſtructive Animals in *Africa*, which raiſe Hills of a ſurprizing Height; but theſe are not ſaid to be above half an Inch in Length [o], ſo that after all the Enquiry poſſible, I have not been able to diſcover any Fact that could be depended upon capable of giving Light into what the Ancients have related upon this Head. It is not however amiſs to preſerve even the moſt extravagant of their Accounts, becauſe future Travellers, by peruſing them, may have an Opportunity of making ſuch Enquiries as may poſſibly diſcover what gave Riſe to theſe Fables; for it would be eaſy to ſhew from many Inſtances, that a ſtrict Examination of Falſhoods has frequently led to the Diſcovery of very important Truths.

25. After the Peruſal of this Chapter, the Reader will be able to judge for himſelf as to the Capacity of the Ancients, with reſpect to the Deſcription of the *Indies*, and be able to decide wherein they deſerved Praiſe, and how far they are liable to Cenſure. It will be clear to him, that in ſome Reſpects they had the Advantage of us, though not in many. As for inſtance, in the Knowledge of the Nature, Diſpoſition and Strength of Elephants, which were much in uſe both with the *Greeks* and *Romans*, after *Alexander* had opened a Paſſage to the *Indies* [p]. This muſt have given them many Opportunities of examining carefully into all the Qualities of that Creature, which are Opportunities that we have not. *Ariſtotle* [q] has written about them with great Judgment and Accuracy; but as to the Work of *Ælian* [r], I muſt confeſs he ſeems to have ſtudied to amuſe, rather than inform his Readers.

The Terror of the *Roman* Arms was ſo great, eſpecially after they had reduced *Egypt* into the Form of a Province, that the *Indians* were extremely afraid of them, and therefore made uſe of all the different Methods they could invent to hinder them from making that Uſe they might have done of their Maritime Power. It was with this View that they ſent Embaſſadors to their Emperors, and with them Preſents of wild Beaſts and Serpents, that on the one hand they might perſuade them of their Submiſſion, and on the other fright them from undertaking Expeditions into a Country, where they were to run ſo many Hazards from Beaſts as well as Men. It was from the ſame Principle that they filled their Ears with dreadful and falſe Reports. If they had Spices, they pretended that they were obtained with infinite Difficulty, and by ſuch a dangerous Navigation, as ſcarce any Man in his Senſes would attempt; if they had Gold, it was taken from the Dens of Gryphons, and other fierce and terrible Beaſts, ſo that it appeared infinitely better to obtain this precious Commodity by Traffick, than to expoſe themſelves to the Dangers which the poor *Indians* ran in procuring it; if their Markets were furniſhed with precious Stones, they likewiſe were collected with incredible Hazard; which kind of Fables, joined to the Diſtance of the Country, and the natural Averſion which the *Roman* Legions had to ſerving in Climates different from their own, for many Ages had a good Effect in ſecuring the *Indians* from their boundleſs Ambition.

The falſe Religion of the *Romans*, and their great Proneneſs to Superſtition, was another invincible Bar to their arriving at any true Knowledge of the Countries they viſited. Their Heads were ſo full of Fables, Omens, and Prodigies, that it was very eaſy to make them believe that the *Indies* was inhabited by Giants, and that the *Ganges*, and all the other Rivers in it, ſwarmed with Monſters. We have a ſtrong Proof of this in what happened when the Learning of *Rome* was at its greateſt Height. It was found neceſſary to change the Courſe of the River *Orontes* to facilitate the bringing up their Fleet to *Antioch*; a prodigious Work, that, however, they undertook and executed; which ſhews that there was nothing that ſo enterprizing a People might not have performed, if they had not been liable to the Terrors of Superſtition. When the Waters of the River were turned out of their old Channel, they diſcovered a Sepulchre of Earth, above ſixteen Feet long, filled with Bones of an enormous Size; and which, nevertheleſs, the People of that Country perſuaded them were thoſe of a Man; upon which the Oracle of *Apollo*, at *Claros* in *Ionia*, was conſulted, and they were informed, that theſe were the Remains of *Orontes*, a Native of the *Indies*; which was enough to confirm them in the Opinion they had conceived, that the Inhabitants of that Country were much ſuperior in Size to the reſt of Mankind [s].

The great Reverence paid by them to Antiquity, was another Source of Errors. One would imagine, from reading ſome of their Writers, that they had ſworn never to be wiſer than thoſe who went before them: Almoſt all the voluminous Work of *Pliny* is taken from *Greek* Authors, and thoſe not of the beſt Credit [t]. Whoever will take the Trouble of comparing the Geography of *Pomponius Mela*, with the Hiſtory of *Herodotus*, will plainly perceive, that he has borrowed from him the beſt Part of what he has written, particularly that Paſſage relating to the Ants that dig Gold. And hence it comes to paſs, that when we diligently trace any of the incredible Stories we meet with in old Writers upwards, we find the original Author to be *Cteſias*, *Herodotus*, or *Megaſthenes*, decry'd, and yet copied in all Ages.

But for thoſe Things which fell immediately under the Eyes and Obſervation of their beſt Writers, ſuch as *Ariſtotle*, *Strabo*, *Diodorus Siculus*, *Arrian*, *Plutarch*, and many others, they are very candidly and fairly reported; at leaſt, as far as the Lights they had would permit. We muſt not, therefore, either implicitly believe whatever they have delivered, for, if we do, we ſhall fall into the ſame Errors that they did from that very Cauſe, of truſting to the Ancients; and, on the other hand, we muſt not imagine that wherever they differ with the Moderns, or are not abſolutely ſupported by them, they are conſtantly in the wrong, and deſerve no Credit at all; becauſe ſuch a Notion may, and probably will betray us into new Miſtakes; becauſe, in ſome Things, the Ancients had better Opportunities of knowing than we; and Experience has ſhewn us, that, after ſeveral Things they have told us have been exploded for Fables, they have, upon further Diſcoveries, been acknowledged for Facts.

The only true Rule of judging, is, to conſider the Nature of the Thing related, the Character of the Author who relates it, and how far he is ſupported or contradicted by others; but, in ſuch Caſes as do not afford us an Opportunity of having Recourſe to theſe Rules, the beſt

way is to avoid all haſty Deciſions, and to wait till new Enquiries afford us new Lights. But it is now Time to proceed to the Accounts which theſe Writers have given us of the other Animals of the *Indies*, that live either in the Water or the Air; and in regard to them as well as to the Land-Animals, we ſhall confine ourſelves only to a few of the moſt remarkable; and, even with reſpect to them, ſet down nothing more than what ſeems moſt ſtriking and worthy of Notice; which Method, if we did not purſue, each of theſe Sections might be very eaſily ſwelled into a Volume; ſo that, if any think them rather too much extended, I flatter myſelf they will alter their Opinion, when they conſider how much is omitted, in order to bring only the capital Points within Bounds.

SECTION XIV.

An Account of the moſt remarkable FISH *and* FOWL *in the* Eaſt-Indies, *as deſcribed by ancient and modern Authors, with proper Obſervations and Remarks.*

1. *The Notions of the Ancients with regard to ſeveral Kinds of Whales, Sea-elephants, and other Fiſh of enormous Size in the* Indian *Ocean, with a particular Account of the Hound-fiſh.* 2. *An exact Deſcription of the River-cow, with the Reaſon why the Teeth of this amphibious Animal are preferred to Ivory.* 3. *The fabulous Accounts of the Dolphin examined, with a ſingular Relation from* Ælian *on that Subject.* 4. *Of the Purpura, or Purple fiſh; the Hiſtory of the famous Dye made from this Fiſh by the* Tyrians; *and an Enquiry into the Cauſes of our loſing this Secret.* 5. *The Pearl-fiſhery in the* Indies, *deſcribed from ancient and modern Authors; with many Remarks upon that Subject.* 6. *Of the Flying-fiſh in the* Indies, *from ancient Writers, compared with* Martinius's *Account of a Flying-fiſh in* China, *and the Tobiwo in* Japan. 7. *The ſeveral Kinds of Tortoiſes in the* Indies, *their extraordinary Size, the Uſes and Value of their Shells.* 8. *The Crocodile deſcribed by ancient Authors; the vaſt Size of theſe Creatures in the* Indies, *and many curious Paſſages relating to them, drawn from Works of modern Travellers.* 9. *Of the Cyonoeides, or Blue-worm in the* Ganges, *a kind of Serpent that ſeems to be unknown to the Moderns.* 10. *The* Indian-*Eagle deſcribed; an Account of all the remarkable Properties of that Bird, and a diſtinct Relation of what is ſaid as to the Aetites, or Stone found in the Neſts of Eagles, and its Virtues.* 11. *A Deſcription and ſuccinct Hiſtory of the Oſtrich, in which many Errors relating to that Bird are corrected, and the Cauſes of them explained.* 12. *Of the Pelican, the ſingular Qualities of this Creature, and the many Fables that have been invented concerning it.* 13. *The Hiſtory of the Phœnix, from the Writers of Antiquity; the Fables on this Subject examined, and the true State of the Queſtion explained.* 14. *Of the* Semendal, *or* Scaliger's Phœnix, *a Bird really found in the* Indies. 15. *An accurate Deſcription of the Caſoar, one of the largeſt and moſt extraordinary Fowls in the* Indies, *and which ſeems to have been unknown to the Ancients.* 16. *Of ſome other remarkable Birds mentioned by* Eaſtern *Writers, or in the Relations of modern Travellers.* 17. *Miſcellaneous Obſervations and Remarks on the foregoing Deſcriptions, tending to the farther Illuſtration of the Subject.*

1. IT ſeems to have been an eſtabliſhed Opinion among the Ancients, that, of all the Elements, Water breeds the moſt, the largeſt, and the greateſt Variety of living Creatures, or at leaſt was inhabited by ſuch: and of all Seas, or Collections of Salt-water, that which waſhed this Shore of the *Indies* was held to be the moſt fruitful in large Fiſh, and thoſe too of the greateſt Size in their reſpective Kinds. We have already mentioned, in the Circumnavigation of *Nearchus*, how the Fleet of *Alexander* the Great was alarmed by a Shoal of Porpuſſes, and what mighty Whales were ſeen by them in thoſe Seas. *Pliny* carries the Matter much farther; he talks of Whales in the *Indian* Sea, that covered four Acres of Land; and mentions a leſſer kind, called *Priſtes*, which in all Probability, were a Sort of Fin-fiſh, two hundred Cubits, or three hundred Feet in Length; and at this, ſays he, we need not wonder, ſince, in that Country, even the Locuſts are four Cubits in Length; and that there are Eels in the River *Ganges* that meaſure thirty Feet. He farther obſerves, that, in the Red-ſea, there is a Peninſula, called *Cadara*, which runs far out into the Sea, and makes thereby a Bay ſo commodious, and ſo well covered from all Winds, that the Fiſh lie there as quiet and as ſtill as in a Mill-pond; and there, ſays he, are bred thoſe Whales of an enormous Size, which, ſometimes venturing out to Sea are caught by Storms, eſpecially about the Dog-days, and thrown on the oppoſite Coaſt of *Perſia*, where the People eat the Fleſh, and build themſelves Cabins of the Bones, as we have, long ago, heard from *Nearchus*, whoſe Voyage on that Coaſt ſeems to be the beſt Account that even in the Days of *Pliny* they had of thoſe Seas[a].

In the *Ganges* there were Fiſh reſembling Dolphins in Shape, called Plataniſtæ, which were more than twenty Feet long; and theſe I take to have been a kind of Sturgeon; but what moſt aſtoniſhed them was, the Reports they had, that in the *Indian* Ocean there were Fiſh reſembling all kinds of Land-animals; and of theſe they mention particularly the Sea elephant, which they held to be five Times as large as the Creature from which it borrowed its Name, and of theſe they had not bare Reports only, but ſome of them had been ſeen and meaſured. As for Sea-lions, Sea dogs, and Calves, they were common in thoſe Seas, and though extremely terrible in their Deſcriptions, yet appear plainly to have been nothing more than different Species of the Seal, as I take the Sea-lions in the *Weſt-Indies* to be. But of theſe, that which ſeems to have been the moſt dangerous was the Sea-hare, which Creature, *Pliny* affirms, was, in the Mediterranean, a mere Lump, or very ill-ſhaped Fiſh; but, in the *Indian* Seas, he aſſures us, that it was very like the Land-hare, and of a Nature ſo venomous, that the very Touch of it cauſed Sickneſs at the Stomach, ſtrong Vomitings, and other deadly Symptoms[b].

What is related of the Hound fiſh, or Sea-dog, ſeems very fabulous; and, one would imagine, was invented by the Pearl-fiſhers in order to ſet the higher Price upon their Commodities. It is affirmed of theſe Monſters, that they attack the Divers when under Water, who are forced to keep them off with long Poles, at the Head of which are Spears, or ſharp Points. The ſafeſt Way, as they found, by Experience, was, to attack theſe Animals firſt, for this ſtruck a Terror into them, and kept them at a Diſtance; but the Danger was not then over, ſince, when the Divers had done their Buſineſs, and began to aſcend, the Sea-dogs returned to their Charge, and followed them with greater Fury than ever, while the Man was leſs able to defend himſelf, as being obliged to employ one Hand in holding the Rope which drew him up, ſo that he had only the other, in which he held the Pole, which was to keep off his Enemy, But the greateſt Difficulty of all was, to pull him up into the Ship; for theſe furious Animals were ready, at the Inſtant he roſe from the Water, to leap after him, and devour him in Sight of his Companions. To avoid ſo cruel a Death, the Man was forced to draw up his Legs and Feet as cloſe as he could to his Body, while thoſe on Board drew him up with a quick Jerk, and ſome of them with Handſpikes, Trout-ſpears, and whatever elſe came to hand, ſtood ready to defend him from the Sea-dogs, in caſe they leaped after him out of the Water. Theſe Creatures were no leſs ſubtle than cruel; and therefore geting under the Keel of the Veſſel, they kept themſelves very ſecure, and were ready again to renew their Attack upon the next Diver that was let down [c].

---

[a] *Nat Hiſt. lib.* xi.

[b] *Plin. lib.* ix. *Ælian. lib.* xvi.

Now, though many Circumſtances of this Account are very improbable, yet, it muſt be allowed, that the Pearl-divers run very great Hazards from thoſe voracious Animals, with which theſe Seas abound, as we have already ſhewn by various Inſtances of Men torn to Pieces even in the Harbours, and in the Sight of the Crews of a whole Squadron, not by the Hound-fiſh, or Sea-dog, but by Sharks, Crocodiles, or Sea-ſerpents [d]. It is highly probable that they were in all Ages liable to the like Misfortunes, and that the Reports of theſe, which, in themſelves, were true, gave Birth to this and other Stories of the ſame kind, which however fabulous in their Circumſtances, were not at the Bottem abſolutely void of Foundation.

2. It was in the ſame Manner that they magnified by miſapprehending what they were told concerning amphibious Creatures; and hence it is that they report theſe come out of the Sea and Rivers, and make ſtrange Havock in the Meadows and Corn-fields, which ſhews what an Impreſſion the Accounts they had received of the Sea-horſe, or Sea-cow, for it is called by both Names, had made upon them; for though they were in ſome meaſure acquainted with it in *Egypt*, and ſome of them had been brought to *Rome*, yet thoſe of the *Indies* were much larger; and, indeed, there were few Animals more capable of ſtriking with Aſtoniſhment by their Deſcription, ſuch as were unacquainted with them before.

The Sea-cow in the *Eaſt-Indies* reſembles in Size and in Shape the Rhinoceros; and as that Animal has Legs ſhorter than the Elephant, ſo the Legs of this amphibious Creature are ſtill ſhorter than his. When it riſes out of the Sea or River to come on Shore, it ſpouts a vaſt Quantity of Water through its Noſtrils. The Head in its Make reſembles that of a Horſe, except that it is much bigger, and therefore from thence, and from Clumſineſs of its Limbs, it derives its Name of the Sea or River *Cow*. The Coat is hairy, but very cloſe, the Skin an Inch thick at leaſt. It has on each Side two ſtrong Teeth about a Foot and half in Length, weighing each of them about ten Pounds. Theſe are eſteemed the very beſt Ivory, or rather better than any Ivory, if we underſtand that Word ſtrictly of the Elephants Teeth, becauſe they have one Property which thoſe Teeth have not, and that is, that they never loſe their Colour, which is exceedingly white, whereas the fineſt Ivory grows yellow by Degrees.

The Sea Cow hath Udders, and ſuckles her young ones in the ſame manner that the Land Cows do their Calves, and they are often found with them in the Meadows; the Feet of theſe Creatures are divided into four, and they move pretty faſt, notwithſtanding their Bulk, when they are purſued. Their Fleſh is eſteemed more delicate than any other, and the Fat is as hard and as ſweet as Butter. It is ſaid, that feeding upon this Animal will change all the Juices in the Human Body, and therefore it is held the beſt Reſtorative, and the moſt effectual Cure for Scurvys, Gouts, and other ill Habits of Body [e]. It is allowed that theſe Creatures feed moſtly upon Graſs, and may poſſibly eat Corn too if it comes in their Way; but that they come up in Droves, and breaking into Corn-fields, trample down and deſtroy the whole Fruits of a Harveſt, is a thing not to be believed. We will now proceed to the Fiſh, properly ſo called, that are taken notice of by thoſe Writers, or at leaſt of ſuch as are moſt remarkable.

3. The Dolphin ſeems to have exerciſed in a very particular manner the Attention of the Ancients, who have deſcribed it with greater Care, and preſerved more Particulars relating to it than any other Fiſh; though at the ſame time it muſt be confeſſed, that the Accounts they have given us ſerve rather to raiſe our Admiration than to increaſe our Knowledge, becauſe it ſo falls out, that with the Help of all they have told us, we are not able to affirm, with any Certainty, what Fiſh it was they diſtinguiſhed by this Name. They report that it was exceſſively ſwift in ſwimming, that it carried its Head a little above Water, and that it had an extraordinary Kindneſs for Mankind. They likewiſe ſay, that the Dolphin was very common in the *Mediterranean*, the *Atlantick* Ocean, and the *Indian* Sea [f].

It is very certain, that at preſent we meet in none of thoſe Seas with any Fiſh that reſembles the Figure of the Dolphin, as repreſented by the Ancients, neither is it known that any Fiſh has thoſe Properties which they aſcribe to the Dolphin. *Pliny* tells us a remarkable Story of a Dolphin that took a Fancy to a Boy in the Kingdom of *Naples*, and carried him on his Back acroſs an Arm of the Sea to and from School every Day, the Boy calling him *Simo*; which Fact, he ſays, he would not have related, but that he found it mentioned before in ſeveral authentick Writers as a thing ſo well known, that it could not admit either of Doubt or Diſpute [g].

I have but juſt mentioned this Paſſage, becauſe it hath been already tranſcribed by many Writers; but there is another Story in *Ælian* to the full as remarkable, which is worthy the Reader's Notice. It happened under the Reign of *Ptolemy Philadelphus*, that ſome young Men were bathing themſelves in the Sea at the Mouth of the Port of *Alexandria*, when a Dolphin ſwam in amongſt them, and taking a particular Liking to one of them, encouraged him to get upon his Back, which the young Man did, and it carried him a good way out to Sea. This being ſeveral times repeated, the Spectacle at laſt became common, and was beheld by Multitudes of Spectators. The End, however, was as tragical as the Beginning had been pleaſant; for Dolphin having one Day forgot to ſhut cloſe the ſharp Finn upon his Back, one of the Spikes ran into the young Man's Thigh, and he fainted with the Loſs of Blood. The Fiſh perceiving his Diſtreſs by his not conducting him as uſual, brought him back to the Shore, and then beholding the Condition he was in remained likewiſe on the Sand, and periſhed with him [h].

It would be an eaſy Matter to collect many more Relations of this ſort from the Writings of the ancient Naturaliſts, if what has been ſaid was not more than ſufficient to ſhew, that upon certain Occaſions they ſet no Bounds to their Credulity, and their Fondneſs for wonderful Stories. They likewiſe report of this Animal, that it was of ſuch a ſocial Nature, as to ſwim in company with others of its own kind, for the ſake of reſiſting mutually with greater Strength any Attempts that might be made upon them. They likewiſe aſſure us, that the Dolphins were drawn towards the Shore, and kept there by the Sound of Muſick, which is as incredible as any of the reſt, and ſeems calculated purely for Amuſement. Some other Circumſtances they report which are more probable, ſuch as that the Dolphin was naturally an Enemy to the Crocodile, and defended itſelf from the Attacks of that furious Creature, by raiſing the ſharp Fin upon its Back [i].

Certain it is, that from a Notion of its Friendſhip to Men the Ancients forbore eating its Fleſh, and the *Cyre-*

nians carried their Reverences ſo far as to erect a Temple to it. It was from the ſame Notion that *Alexander the Great* appointed a Boy to execute the Office of High-Prieſt to *Neptune*, becauſe the prevailing Opinion then was, that the Dolphins had a great Tenderneſs for Youths. As for the Fiſh that is known to us by this Name, they have been deſcribed in the former Chapter, and will be mentioned in ſubſequent Voyages; and therefore, without dwelling longer on a Topic, upon which ſome learned Men have written large Treatiſes, we will proceed in our Diſcourſe to other Inhabitants of the *Indian* Seas that have exerciſed the Pens of the Writers of Antiquity[k].

4. Of the Purpura, or Purple Fiſh, many Authors ſpeak largely; and from them we gather, that there were ſeveral different Sorts, ſome fed amongſt rotten Mud, others on Sea-Weeds, a third Sort in the Gravel; but that which was the richeſt, and yielded the ſtrongeſt Dye, was called *Dialutæ*, or the *Wandering Fiſh*, that fed in all the different Soils before-mentioned. This Fiſh had a long ſharp Tongue, of the Size of one's Finger, ſo hard, and ſharp at the Point, as to be able to pierce into other Shell-fiſh, and ſuck them; and thus living on their Blood, it became, when digeſted in the Body of that Fiſh, the noble Dye which was ſo much eſteemed, and carried to ſo great a Price, that the *Tyrians* gained not only immenſe Wealth, but immortal Reputation, by their Skill in managing their Trade therein[l].

The Manner in which they carried on this Fiſhery was thus: At the proper Seaſon, which was in the Beginning of the Autumn, or the Beginning of the Spring, they let down into the Sea certain ſmall Nets, in which were Cockles, or ſome other ſmall Shell-fiſh, which had been for ſome time out of the Water. Theſe opening their Shells for Suſtenance, the Purple Fiſh, which, as we obſerved before, was a Fiſh of Prey, came preſently about them, and greedily thruſting their Tongues into the Shells of the other Fiſh, they cloſed upon them, and ſo they were drawn up together. Then, as ſome Writers ſay, the Vein of the Purple Fiſh was opened, and the Colour drawn out. But *Pliny* gives us a much clearer and more copious Account of this Matter; for he tells us, that as ſoon as the Fiſh was caught, they did not take out the Colour, but the Vein that contained it; and having obtained a ſufficient Quantity, they mixed it with Salt, and in this Condition it remained three Days; then to eight Gallons of Water they put one hundred and fifty Pounds of Colour, and boiling it over a gentle Fire, ſkimming it from time to time, it came in about five Hours to look perfectly clear and bright. In order, however, to judge the better of this Dye, and to know when it was perfectly boiled, they dipped now and then a Lock of Wool into it, by conſidering of which they knew when it required a higher and when a lower Degree of Fire[m].

After the Colour was thus prepared, they put into it ſuch a Quantity of Wool as they intended to dye, which ſoaked in it for five Hours; then it was taken out, dried and carded, and afterward thrown into the Dye-Tub again[n]; and after it was dried a ſecond time, was delivered to the Manufacturers to be ſpun, and wrought into Cloth. This was what was properly called the true Purple, which had been uſed in *Rome* Time out of Mind, when *Pliny* wrote, but not in common; for *Romulus* never appeared in this Colour, but when he put on his Robe called *Trabea*; and even in the Days of *Auguſtus* it was at a high Price; but afterwards it grew cheaper, or at leaſt it grew more common, as *Pliny* tells us at large[o].

There ſeems to be no doubt that this was the fineſt and richeſt Colour known to the Ancients, eſpecially the Dibapha, or double-dyed *Tyrian* Purple; for whatever Changes there might happen in Faſhions, that from the firſt to laſt was eſteemed the beſt. A great Queſtion has been raiſed how this Colour came to be loſt, ſince all the different kinds of Shell Fiſh, from whence it was taken, were found in various Parts of *Europe*, as well as in the *Indies*; and the loſing this Colour has been always mentioned as an extraordinary Misfortune, and as one of the Things in which we fall moſt ſhort of the Antients. But, perhaps, when this Matter comes to be more ſeriouſly examined, the Loſs will not be found ſo great, nay, I doubt, if upon the whole, we ought to account it any Loſs at all.

In the firſt place, let us conſider how it is poſſible the Art of managing this Dye ſhould have been forgot, which was in ſo many Hands, eſteemed at ſo great a rate, and in general Credit throughout *Europe*; I ſay, let us conſider this, and we ſhall plainly ſee, that it could have been loſt no other Way than by the coming in of ſome other Colour, or rather of ſome other Dye, which afforded as fine a Colour, and at a cheaper Rate. We learn from *Pliny*[p], that a Pound of the true *Tyrian* Purple was worth a thouſand Denarii, or upwards of thirty-two Pounds of our Money, which was ſurely an exorbitant Price; and therefore, if in ſucceeding Times a Method has been found of dying Purple at a cheaper Rate, there is no Ground for ſaying that we fall ſhort of the Ancients, that a valuable Colour has been loſt, or that either their Knowledge or their Induſtry, at leaſt in this Reſpect, was greater than ours.

But after all, there ſeems to be ſome Reaſon to doubt whether the Fact be true, I mean, that this Secret is loſt; ſince both our own Royal Society, and the Academy of Sciences at *Paris*, have made conſiderable Diſcoveries on this Head, that is to ſay, their Members have made ſeveral Experiments on the Purple extracted from Shell-fiſh; and if their Experiments have ſucceeded but indifferently, I do not think it can be underſtood as a Proof that the Ancients excelled us in this Particular. Father *Gage*, in his Survey of the *Weſt-Indies*, tells us boldly, that the *Spaniards* have retrieved there the Secret of the ancient Purple, and that they dye Cloths, which are ſold for twenty Crowns a Yard. I muſt confeſs this is a Fact that I do not find confirmed by later Writers, and therefore I think there is Reaſon to ſuſpect the Truth of it.

Father *Labat*, a much more careful and accurate Writer, has given us a very curious Account of the Attempts made in the *French* Iſlands in *America* to recover this kind of Dye, which is very worthy of the Reader's Notice; and therefore I ſhall give him as clear and as ſuccinct an Account of it as I can. They have in thoſe Parts a kind of Shell-fiſh, about the Bigneſs of the Top of one's Thumb, reſembling in its firſt Appearance the common ſort of Snails; but when examined more cloſely, and after the Fiſh is taken out, it appears one of the moſt curious and beautiful Shells that can be imagined[q]. It is, though very thin, of a very ſtrong Subſtance, and of a beautiful Azure Colour. The Fleſh of the Fiſh is extremely white, but its Inteſtines of ſo bright a Red, that the Colour is ſeen through its Body; and it is this Colour which tinges the Slime it throws out, when taken, of a Violet, or rather of a deep Blue. In order to oblige theſe Animals to throw out a greater Quantity of this Slime, they are put alive into a Diſh, and ſtruck one againſt another, either with the Hand, or with a little Twig, upon which the Diſh is preſently covered with this kind of Slime, in which, if a Piece of Linen be dipped, it is immediately dyed red, and by degrees becomes, as it grows dry, of a deep Purple. But Father *Labat* obſerves very cautiouſly, and like a Writer very careful of ſpeaking Truth, that if this be the Purple of the Ancients, we have not hitherto the Art of fixing it; for how deep ſoever the Colour may appear when the Linen is dried, it ſoon decays, and, if waſhed, is ſpeedily taken out[r].

This Fiſh, while admired only for its Shell, was called ſimply *le Burgau*; but ſince this Diſcovery it is called *le Burgau de Teinture*. Our Author himſelf made ſeveral Experiments toward arriving at a finer Colour from a Plant in the ſame Country, and not without Succeſs, which I think plainly proves that he had no great Hopes of obtaining any fixed and perfect Colour from the Shells. On the whole therefore, I think it as plain as any thing can well be made, that the Purple of the Ancients gave way to ſome brighter and cheaper Colour; and if ever this Secret ſhould be recovered, it would prove a Curioſity only, and never could be brought again to a Manufacture, becauſe in all the Experiments that have been made in this Country, and in *France*, it has been found, that a great Difficulty would ariſe in procuring Shells enough to furniſh a ſufficient Quantity of this Colour for Uſe: whence it follows, that after all the Improvements that could be made for fixing and perfecting this Dye, the Dearneſs of it would hinder it from coming again into Uſe, as heretofore it drove it out.

[r] *Voyage de l'Amerique.*

Before I part with this Subject, I think it may not be amiſs to obſerve, that in ſome Lakes in the North, and in the Weſt of *Scotland*, there are a kind of Muſcles, which have in them a Purple Vein at the Extremity of the Shell, in which there is contained a Drop or two of a Liquor that ſtains Linen of a deep Crimſon, which is not at all apt to wear out, but continues as long as the Cloth can be worn; but I do not know whether this Fiſh be very common, or whether this Purple Vein be natural to it, or the Effect of ſome Diſeaſe, which has been ſuſpected of the true Purple[s].

5. We will now proceed from this Source of Riches, which at preſent is loſt, to another that ſtill ſubſiſts, I mean the Pearl-Fiſhery; for it is allowed that the fineſt and moſt perfect Pearls are, and in all Ages have been, brought from the *Indies*. It is true, they do not at this Day fetch ſo high a Price in *Europe* as they did formerly; but ſtill the Oriental Pearls are of conſiderable Value, and are like to continue ſo, inaſmuch as they have all the Properties that are requiſite to render them fit to be reckon'd amongſt the moſt beautiful Jewels that can be, neither are there any Counterfeits that at all approach them in their Luſtre: Though People have attained in that Art to a Degree of Perfection ſcarce to be expected.

The Fiſh that produces the Pearl is a kind of Oiſter, but much larger than the common Sort, or indeed than any that are found in our Seas; they are common on the Coaſt of *Perſia*, near *Ormus*, about Cape *Comorin*, and on the Coaſt of the Iſland of *Ceylon*[t]. The Shell-fiſh which produces them is called the Mother of Pearl. The Ancients had an Opinion that Thunder and Storms had ſome Effect in producing them; for which we ſhall be able to give a tolerable Account, without admitting any thing wonderful, in the Fact. The Fiſhing of Pearl was a Thing always attended with great Hazard and Danger; ſuch as were employed in it being obliged often to dive in Places thirty Fathom deep, where they were expoſed to many ravenous Monſters, peculiarly thirſting after human Blood. They were let down out of the Veſſel to which they belonged with a Weight of Stone, fixed either to their Side or to their Feet, that they might deſcend the quicker and remain the more ſteady under Water. In their Right-hand they had a ſharp Iron, which they uſed for removing the Oiſters from their Beds; and on their Left-arm hung a Baſket, in which they put the Fiſh when they were caught, and about this Arm alſo a Cord was tied, by which they gave Notice to thoſe in the Ship when to pull them up by another Cord that was about their Middle[u]. Some Writers ſay they carried their Baſket or Bag, into which they put their Fiſh, about their Necks.

The largeſt Sort of Fiſh were found far in the Sea; and if they were at any Time drove upon the Coaſt, it was by tempeſtuous Weather. And hence the Opinion aroſe, that great Thunders and Storms contributed to ſwell and to encreaſe the Pearl. The Fact therefore was true, that after Tempeſts the largeſt Pearls were found: But the Opinion grounded upon this, that the Thunder was the Cauſe of the Pearls Increaſe, ſeems to have no Foundation in Reaſon. So eaſy a Thing it is to miſtake Effects for Cauſes, and to introduce Errors in Natural Philoſophy, by reaſoning wrong upon Facts. When the Divers touched the Oiſters, eſpecially thoſe of the largeſt Size, they clung ſo ſtrongly to the Rock, that, very often, there was no removing them, even with the Help of their iron Inſtrument. In the Oiſters they brought up, when opened, the Pearls appeared like little Drops of fair Water or Dew, which hardened with being expoſed to the Air, and were then carefully taken off the Shell. In one Oiſter there were commonly ten or twelve, in ſome more, in ſome leſs; but the more there were the ſmaller; and if there was but one, it was generally of a very conſiderable Size, and of greater Value than many ſmall ones; ſo that theſe Shells were eſteemed the richeſt of all[w]. The Shell itſelf is alſo of ſome Value, as having a prodigious Luſtre, and being extremely fit for In-laying, and other Uſes.

Philoſtratus has a very curious Paſſage in relation to this Subject, if his Accounts could be abſolutely depended upon; but whether they be or be not, as what he relates is very remarkable, it deſerves at leaſt to be related; and then let the Reader think of it as he pleaſes. The Story, as he tells it, is this; ſome of the *Indian* Pearl-fiſhers have a Method of obtaining that valuable Commodity, without bringing up the Oiſters at all. In order to this, the Divers carry down with them a certain kind of rich Perfume, which they hold before the Mother-of-pearl; and while the Fiſh ſucks it, which it will do very greedily, they gently open the Shell, from whence a Liquor diſtills Drop by Drop, that preſently hardens into Pearls[x]. It might be alleged, in Support of this Story, that both *Athenæus* and *Pliny* ſeem inclined to believe that Pearls are at firſt liquid; which is, indeed, agreeable enough to their Form and to their Luſtre[y].

At this Day, there are four conſiderable Pearl-fiſheries in the *Eaſt*. The firſt is on the Coaſt of the Iſland of *Baharen*, in the *Perſian* Gulph, of which the *Portugueſe* were formerly Maſters, but now this Fiſhery belongs to the *Perſians*. The ſecond is near *Catifa*, on the Coaſt of *Arabia the Happy*, over-againſt *Baharen*. The Pearls taken at theſe Fiſheries are moſt eſteemed in the *Indies*, though of a yellowiſh Caſt; for they aſſert, that the Pearls of a brighter Water do not laſt, but turn of a muddy Yellow in the Space of about thirty Years; whereas thoſe which have originally a little Mixture of the Lemon-colour, are thoroughly ripened, and never abate of their Luſtre. A great Part of the Pearls taken in this Fiſhery are carried to *Balſora*; from whence they are diſtributed all over the *Indies*; thoſe again which are tranſported into *Perſia* and *Muſcovy*, are ſold at *Bandarcongo* two Days journey from *Ormus*. They fiſh twice a Year; firſt in the Months of *March* and *April*, and again in the Months of *Auguſt* and *September*. The Depth where they fiſh is from four to twelve Fathoms; and the deeper the Oiſter is found, the Pearls are the brighter, becauſe the Water is not ſo hot there, the Sun not being able to penetrate ſo deep.

The third Fiſhery is on the Coaſt of the Iſland of *Ceylon*, at a Place which is called *Manar*. The Pearls found there are of a good Water, but ſmall; and the greateſt do not ſurpaſs two Carats; nay, it is ſeldom that they are found of that Weight: But, in Recompence of this, there is great Quantity of Seed-pearl fit to powder. The fourth and laſt Fiſhing is at *Japan*; the Pearls there are of a Water white enough, and heavy, but ill-ſhaped, moſt of which fall into the Hands of the *Dutch Eaſt-India* Company; becauſe the *Japoneſe* themſelves have no Eſteem for Jewels of any Kind. The poor People employed in theſe Fiſheries live very meanly, and ſcarce get a Subſiſtence by them; even thoſe who deal in Pearls are far enough from being rich, through the Oppreſſion of their Princes on one Side, and the Art of the *Dutch*, on the other; who finding that the bright Pearls taken on the Coaſt of *Ceylon* are moſt eſteemed, and go off at the greateſt Rate in *Europe*, employ a *Brachman* to buy them up as they are caught, which he does at a very low Rate; the Perſons concerned in this Trade, launching out into greater Expences than they can afford, and thereby ſubjecting themſelves to the dreadful Neceſſity of parting with the Fruits of their Induſtry to ſuch as are poſſeſſed of Money[z].

---

[s] This is the Sentiment of M. *Reaumur*, who made many Experiments on the Purple-fiſh on the Coaſt of *Provence*.

This

[a] This tempts ſome of them to a very baſe Practice, which is throwing a poiſonous Drug into the Sea, near the Banks where the beſt Fiſh lie; upon which they immediately remove to another Coaſt, where ſuch as are in the Secret fiſh for them, and become rich before their Roguery is found out[b]. There are now ſeveral Pearl-fiſheries eſtabliſhed in the *Weſt-Indies* and in other Parts of the World, as we ſhall ſhew in their proper Places. But, as the Value of thoſe Pearls ariſes from their approaching in their Colour and Water to the Oriental Pearl, this ſufficiently ſhews that the Excellence attributed to them by ancient Writers, is not at all prejudiced by the Diſcoveries made in latter Times, to which the Policy of the *Indian* Princes contributes not a little; for by purchaſing the faireſt Pearls at high Rates, they keep up their Price to the *Europeans*, ſo that there never came ſuch Numbers into this Part of the World as to ſink them much in their Value; hence it is whatever becomes of the Pearls of other Countries, thoſe of the Eaſt ſtill keep up their Credit, and a Pearl of the Weight of four Carrats is worth ten or twelve Pounds, and of a larger Size and well ſhaped much more[c].

6. As the Pearl-fiſh and the Pearl-oiſter were deſervedly admired for their Value and Price, ſo the *Indian*-Seas afforded other Fiſh that were held extremely remarkable for their extraordinary Properties. Amongſt theſe the Flying-fiſh were thought none of the leaſt extraordinary. The Flying-fiſh that are common in the *Weſt-Indies*, are of the Size of a Herring, with a round Head, and a Sort of large Fins, which ſerve them for Wings, and with which they fly about the Height of a Pike from the Sea, and are then forced to drop again into that Element, becauſe their Wings become dry[d]; but theſe no way reſemble the Flying-fiſh in the *Eaſt-Indies*, or at leaſt thoſe mentioned by the Ancients; for they came out of the Sea, or out of Rivers, at certain Seaſons, and leaped about in the Meadows like Graſs-hoppers[e]. The Story is ſtrange, and we have it told in very ſuccinct and general Terms by *Athenæus*, who is the only Author who reports it[f]. But *Marco Polo*, one of our moſt ancient Travellers, mentions ſomething of the like Nature, and ſays, that from its living in this Manner, the Creature is called the *Sea-locuſt*[g].

Martinius, who has written as copiouſly, and with as great Reputation of the Empire of *China*, as any Author whatever, confirms this; and informs us, that the *Chineſe* call it *Hoangcioqu*; but he is very ſhort in his Deſcription; for he tells us only that it is a yellow Fiſh, or, rather a Bird; for in the Summer, ſays he, it flies on the Mountains, but towards the End of Autumn, it throws itſelf into the Sea, and becomes a Fiſh of a moſt exquiſite Taſte[h]. He tells us, likewiſe, of another Creature that he ſaw, that had the Head of a Bird and the Tail of a Fiſh, which it was reported had ſome very ſingular Qualities[i].

It appears from theſe Citations, that we ought not, abſolutely, to reject the ſtrange Things told us by ancient Authors, without Examination; becauſe, though the Facts they relate cannot be verified, yet, as in this Inſtance, it may be plainly made appear, that they are not pure Inventions; and, therefore, it is better to preſerve even what ſeems incredible in their Writings, in order to encourage Enquiries that may, in Time, bring out the Truth. It may not be amiſs to obſerve, that, in *Japan*, they have likewiſe a Flying-fiſh of about a Foot long, which, in their Language, is called *Tobiwo*; and is ſaid to be very ſcarce, but excellent Eating[k].

It were to be wiſhed, that ſuch as travel in theſe Countries, would be more careful in examining the Animals they meet with upon the Spot, and in committing their Deſcriptions to Writing immediately; becauſe, we ſhould not then be ſo much at a Loſs as we now are, what to make of their Deſcriptions.

7. The Tortoiſe, though it cannot be ſaid to be a Creature peculiar to the *Indies*, yet the *Indian* Tortoiſes are ſo much larger than any others, that in this reſpect they deſerve to be particularly conſidered. Of theſe Creatures there are three different Sorts. The firſt live entirely on Land; the ſecond in the Sea; and the third in freſh Waters. The Figure of this Creature is very extraordinary. It has a Head ſo very ſmall that it ſeems to bear no Proportion to its Body. They have not either Teeth or Tongue, and yet the Tortoiſe not only breaks to Pieces the hardeſt Shells, but even Stones with its Lips; which, by their exceſſive Hardneſs, very effectually ſupply the ſeeming Want of Teeth. The Feet of this Animal are very ſhort, and its Motion remarkably ſlow. It has, on its Back, a Lump of Fleſh, which communicates with its Shell, by which it is entirely covered, and it even extends beyond its Body, when the Animal withdraws itſelf into it, and thereby proves a ſure Defence anainſt all Dangers from without; and are ſo ſtrong that a Waggon well laden, may paſs over them as over a Stone, without any Injury either to the Shell, or the Creature within it. They are five or ſix Foot long, which is a monſtrous Size, conſidering the Bulk of theſe Creatures in other Countries; and yet ſome ancient Writers ſpeak of Tortoiſes in the *Indies* of a much larger Size, the Shells of which are ſaid to be big enough to cover a ſmall Cabin; and it is ſaid, that in the Iſland of *Taprobana* they made uſe of no other Covering for their Houſes[l].

There were various Methods practiſed in taking theſe Creatures; for ſometimes they gorged themſelves to ſuch a Degree in the Meadows, that they were not able to retire; and then, whoever found them, turned them on their Backs. Sometimes the Sea Tortoiſes were, in like manner, left on Shore at the Time of Ebb; and ſometimes they placed round Sticks in their Road to the Meadows; and as ſoon as they ſet their fore Feet upon them, thoſe who watched for that Purpoſe, laid hold of one End of the Stick, lifting it ſuddenly up, turned the Creature over. Their Fleſh is both wholeſome and pleaſant, and their Eggs, which in Size reſemble thoſe of a Hen, are excellent[m].

Pliny reports, that their Fleſh, their Blood, and even their Excrements, are very medicinal. Among other Receipts from this Creature, he gives us that which follows. Take, ſays he, three Land-tortoiſes, he means thoſe of the ſmaller Kind, throw them on a Fire made of Vine-twigs; and as ſoon as their Shells begin to part from each other, pull them out immediately: and having taken their Shells off, boil them in a Gallon of Water, with a ſmall Quantity of Salt, till a third Part of the Liquor be conſumed; the Broth will be then, ſays he, a ſovereign Medicine for ſuch as are troubled with the Palſy, the Gout, or Rheumatiſm[n].

But that, for which this Creature is chiefly valued, is, his Shell, of which, over all the *Indies*, but particularly in *China*, they make a Multitude of uſeful Things, as well as many beautiful Toys. Theſe were Arts far from being unknown to the Ancients; for, as we learn from *Pliny*, *Carbilius Pollio*, a Man of a wonderful Invention, was the firſt who introduced the Uſe of Tortoiſe-ſhell-plates for In-laying all Sorts of Houſhold Furniture. It is reported, that the *Portugueſe* ſettled in the *Eaſt Indies*, place Sea-tortoiſes near the Fire till their Shells begin to riſe; and then taking them off in an Inſtant with a flat Knife, they afterwards throw the Creature back into the Sea, where, they affirm, that, in a ſingle Year, they gather a new Shell, as firm and as beautiful as the former[o].

Beſides the Uſes that have been already mentioned, there is another to which thoſe Tortoiſes are applied, the Fleſh of which is not fit for eating, and that is, boiling it into Oil, which Oil not only ſerves for Lamps, but alſo for many phyſical Uſes; and more eſpecially for reſtoring waſted Limbs, or ſuch as have had their Sinews ſhrunk. The Tortoiſe is exceedingly annoyed by the Sea Eagle, which taking the ſmaller ſort in his Talons, carries them a great way up into the Air, and then letting them fall on a Rock, breaks the Shells, and ſo feeds upon their Fleſh, which, but for this Contrivance, would be ſecure from his Fury[p].

8. The Crocodile is another amphibious Creature common to *Africa* and the *Indies*; but the *Indian* Crocodiles are by far the largeſt, and thoſe that frequent the Marſhes near the River *Ganges* are believed to be the biggeſt in the World. *Ariſtotle* has given us a very large Deſcription of this Animal, which is withal very accurate and juſt: He informs us, that the Female Crocodile lays ſixty Eggs or upwards at a time, each of the Size of a Gooſe's Egg, and the Animal, when hatched, is of the ſame Proportion; but as it grows as long as it lives, it reaches in ſome Countries a larger, and in others a leſs Size; *Ariſtotle* mentions fifteen Cubits, which is two-and-twenty Feet and a half, as the largeſt Size he had heard of; but in the *Indies* there are Crocodiles of twice that Bigneſs, for which we ſhall hereafter aſſign a probable Reaſon[q].

The Crocodile is of the Lizard kind, and therefore we need not enter into a particular Deſcription of it; it has no Tongue, and moves only the upper Jaw. Its Teeth, which are very ſtrong and ſharp, ſhut into each other like the Teeth of two Combs. It is alſo armed with terrible Claws; and his Back and Legs are covered with Scales ſo ſtrong, that they are not to pierced. He paſſes the Day moſtly on Shore, and retires in the Night moſtly into the Water, where having gorged himſelf with Fiſh, he comes on Shore when the Sun is up, and ſleeps upon the Sand. *Pliny* ſays, that for four Months in the Winter the Crocodile retires to ſome Cave or Den, where it ſleeps for that Time, without receiving any Suſtenance[r].

As this Creature is only bred in hot Countries, ſo it ſeems incapable of living in colder Climates. There was one brought into *France* in 1681, and being landed at *Rochelle* was brought from thence by Land to *Verſailles*; but they were frequently obliged to lay it before the Fire, for otherwiſe it would not have ſurvived the Journey. It would eat nothing after it left the Ship, and died when it had been kept about a Month at *Verſailles.* When they diſſected it, they found in its Stomach a conſiderable Quantity of Sand, and ſome Snails with their Shells whole. It appears from hence, that the Accounts of this Creature that are given us by the Ancients are juſtified by Experience[s].

Thus far of Crocodiles in general, we will now ſpeak particularly of thoſe in the *Indies*, and compare the Accounts given us of them by the Writers of Antiquity, with the Relations of ſuch modern Travellers as are thought to deſerve moſt Credit. *Strabo* informs us, that when *Alexander* found the River *Hydaſpes* much infeſted with Crocodiles, and *Egyptian* Beans growing on its Banks, he made no ſort of Queſtion that he had found the Head of the *Nile* in the *Indies*; nay, to ſuch a Degree was he perſuaded of the Truth of this Diſcovery, that he actually directed a Fleet to be prepared in order to have ſailed that way into *Egypt*, from whence it ſeems highly probable, that before *Alexander*'s Expedition the Ancients did not know that there were Crocodiles in the *Indies*[t].

It is from *Strabo* likewiſe that we learn that theſe ravenous Creatures have an Averſion to Swine's Fleſh, which, however, is a Point that deſerves to be enquired into[u]. *Philoſtratus*, in the Life of *Apollonius Tyaneus*, enters into an expreſs Compariſon between the Rivers *Indus* and *Nilus*, which, he obſerves, have a great Reſemblance, eſpecially in theſe two Particulars, their overflowing annually, and their being full of Crocodiles; but in this as in many other things, that Writer is plainly miſtaken, for the River *Nilus* is not the only River in *Africa*, in which Crocodiles are bred, nor are theſe Creatures peculiar to the *Indus*, but infeſt generally moſt of the large Rivers in the *Indies*, and particularly the *Ganges*, where are the largeſt Crocodiles perhaps in the World; and it is obſerved by *St. Ambroſe*[w], that it paſſed for a kind of Miracle among the *Indians*, that at the Seaſon of the Year when the *Brachmans* paſſed that River to go to their Wives, they were never infeſted by theſe terrible Animals.

If we could confide in what the Miſſionaries have told us of this Subject, we might add ſome curious Particulars to the natural Hiſtory of Crocodiles. Father *Francis Colin* aſſerts poſitively, that this Creature voids no Excrement, nor has any Paſſage for it, which I doubt is not agreeable to Truth. It is likewiſe affirmed both by him and Father *Navarette*, that the Female Crocodile deſtroys her Young, ſwallowing them as they run from the Sands, where they are hatched, into the Water, which is another wonderful Circumſtance that never occurred to the Ancients, or for any thing I know to any other of the Moderns. As to what both theſe reverend Writers relate of Muſk-bags[x] being found in this Animal, it is ſingular, but not at all improbable, becauſe almoſt all Writers agree, that the Fleſh of the Crocodile has a very muſky Scent; and in the *Weſt-Indies* the Mouths of the Rivers where theſe Creatures haunt have their Waters ſo ſtrongly tinctured with this Smell and Taſte, that they are not drinkable.

Gaſper Balbi, whoſe Travels through the *Indies* are extremely curious, in his Deſcription of the City of *Pegu*, which he viſited in 1576, has the following extraordinary Paſſage[y]: "The Inhabitants of the City lead, for the moſt "part, a lazy and ſcandalous Life; they are very ſluttiſh "in their Houſes, in which, generally ſpeaking, they keep "Hogs. They drink the Water in their Ditches rather from "Superſtition or Cuſtom, than from any other Reaſon, "which is the more wonderful, ſince the Crocodiles in "thoſe Ditches are not only numerous, but of an extraordinary Size, inſomuch that many of them exceed thirty "Feet in Length, and yet the People, who ſee ſome or "other devoured by them every Day, are ſo ſtupid as to "reverence them as they do the Apes, and this from a "firm, as well as fooliſh Perſuaſion, that the Souls of ſuch "as are devoured by the Crocodiles find the direct Road to "Heaven. The Subtilty of theſe Creatures is very extraordinary. When the People come with their Pitchers to "take up Water, they conceal themſelves under the green "Weed, or under the Reeds, which grow on the Side of "the Ditch, and laying hold of the Perſon by the Hand, "or by the Foot, pull them to him. Men and Women "have been ſeen in this manner with their Heads and "Hands above Water, roaring out for Help, till ſuch "time as they were dragged to the Hole where the Crocodile lay, and who was diſtinctly heard to devour them. "Remonſtrances having been once made to the King on this "Subject, he ordered the largeſt Crocodile, and which "was known to have done moſt Miſchief, to be taken and "killed. This Creature was of an enormous Size, and of "a moſt terrible Appearance. After his Death there were "not ſo many People killed as before; and it ſeems not "a little wonderful, that they did not purſue the Extirpation of theſe Animals for the Preſervation of the Inhabitants. It is obſerved here, that though the Elephant, "which is a very hot Creature, not only drinks out of "thoſe Ditches, but frequently goes into them to cool and "refreſh himſelf; yet the Crocodiles never venture to "attack him, which is ſuppoſed to be owing to the Bigneſs of the Creature; for it is obſerved, that the Crocodile is as cowardly as it is cruel."

Peter Vanden Broek tells us, that on the Coaſt of *Coromandel* the Crocodiles are very common in all the Rivers, inſomuch that the People are afraid to paſs them, or to go by Water; and this with great Reaſon, ſince while he was there, there were ſeveral, both Men and Women, devoured by them[z]. In the Iſland of *Java*, when the *Dutch* firſt viſited it, the Rivers were full of Crocodiles, and People were often devoured by them; yet the *Chineſe*, who lived in that Iſland, had the Secret of taming them, fatted, and afterwards killed and eat them; which will appear the leſs ſtrange, when we are told, that *Ariſtotle* relates the ſame Thing as done in his Time in *Egypt*[a]. In the Iſland of *Ceylon*[b] they are much infeſted with Crocodiles, which the *Portugueze* call *Lagartos*, they are generally about eighteen Feet long, and the Inhabitants of that Country report, that they have a Stone in their Head, which is a Specifick for all gravelly Complaints, and is even capable of diſſolving the Stone.

[y] *Voyages aux Indes*, 135.

[z] *Voyage de P. Vanden Broek, p.* 495.

The *Arabians* call this Creature *Temſa*, the *Perſians Nibenk*, the *Turks Lowi*, and the *Chineſe Tchen*; they all agree, that they are as long-lived as a Man; and this ſeems to account for their monſtrous Size, ſince I do not find, that what the Antients relate of their growing as long as they live is diſputed by the Moderns; and that in *India* they ſhould be larger than in any other Country, may be accounted for from two Cauſes, the firſt is, the Heat of the Climate, which is allowed to have a great Effect on ſuch kind of Animals; the ſecond is, the prepoſterous Reverence ſhewn to theſe deſtructive Creatures in many Places, by which they are preſerved to a greater Age, and conſequently arrive at a larger Size than in other Countries, where the People have Wiſdom and Reſolution enough to rid themſelves of theſe Monſters.

9. The *Ganges*, and as ſome antient Writers report, the River *Indus* alſo nouriſhes in it a Worm or rather Serpent, of a moſt ſingular kind, conſidering either its Form or its Properties; its Skin is of a dark blue, from whence it receives its Name *Cyonoeides*; it is in Length ſix Cubits; *Pliny* by ſome Error ſure in the tranſcribing, has ſixty Cubits, and is about two Feet round; it has but one Tooth in each Jaw, which is about four Inches long, with which laying hold of whatever Animal comes to drink at the River, whether Horſe, Cow, Camel, or Elephant, it pulls them under Water, and there tears to pieces and devours them, the Entrails only excepted[c].

This dreadful Creature is caught with a Hook hid under the Belly of a Sheep or Goat, and the Uſe made of it when dead, is to the full as ſingular as what is related of it while living. The Fiſhermen after it is caught hang it up by the Tail in the open Air, where, by the Heat of the Sun, in the Space of three Weeks it conſumes into a kind of Oil, which has this ſingular Quality, that it takes Fire of itſelf if expoſed to the Air, and is abſolutely unextinguiſhable. It was for this Reaſon, that the Emperors of *Perſia*, who were Maſters of the Provinces bordering upon the River *Indus*, and the *Indian* Princes, Succeſſors to *Sandracottus*, who were in Poſſeſſion of the ſame Provinces after the Succeſſors of *Alexander* quitted their Claim to them, reſerv'd all this Oil for their own Uſe, and employ'd it in Time of War to ſet the Gates of any City on Fire, which they intended to take by Storm[d].

This Serpent appears to have been at leaſt as ſtrong, and at the ſame time much more fierce, than the Crocodile; which, as we have heard, never ventur'd to attack the Elephant. The original Writer of this ſtrange Story was *Cteſias*[e], who was told it at the *Perſian* Court, where perhaps they had ſome ſuch Oil brought from the *Indies* with this Fable tack'd to it, to make it eſteemed more valuable; which, from numerous Inſtances we have ſhewn, was a common Artifice of theſe People to fright other Nations from making any Expeditions into their Country. The Reader may perhaps be ſurpriz'd at my ſuppoſing it poſſible, that there ſhould be any ſuch Oil; and therefore I think myſelf obliged to mention my Reaſon for it: Our Chymiſts have a Secret of making a black Powder which is called *Pulvis Infernalis*, that will take Fire by being expoſed to the open Air; and therefore, I ſee nothing abſurd in admitting, that there might be an oily Compoſition which had the ſame Quality. It is alſo certain, that the *Greeks* had a kind of Wild-fire of the ſame Nature, which they employ'd in burning the Ships of the *Saracens* when they block'd up the Port of *Conſtantinople*.

It is certain, that none of our modern Travellers mention any Thing, that has the leaſt Relation to this extraordinary Creature; but in all Probability, the Accounts given us by theſe antient Writers, took Riſe from ſome of thoſe Water Serpents that are common in the Mouths of moſt Rivers in the *Indies*, of which we have ſpoken before under the Head of Dragons, and of theſe great Numbers are brought down into the Sea on the Coaſt of *China*, as they are alſo by the Rivers that run thro' the *Terra Auſtralis*, or the *Southern Continent*, as we obſerv'd before in the Account given of Captain *Abel Taſman*'s Voyage for the Diſcovery of that Country; and if there be any Probability in the Arguments drawn by *Philoſtratus*, of the Likeneſs of *Æthiopia* to the *Indies*, from the Reſemblance between the *Nile* and the *Indus*, we might from hence infer, that there is a like Correſpondence between the Climates of the *Southern-Continent* and the *Indies*.

The ſame *Philoſtratus*[f], differs from other Writers as to this Serpent in ſeveral Circumſtances; firſt, he ſays, it is found in the River *Hyphaſis*, next he affirms it to be white; and laſtly, he ſays nothing of its Teeth or of its Fierceneſs. *St. Ambroſe*[g] mentions another very ſingular Worm in the *Ganges*, which he ſays looks at firſt like a long Pipe, with the Horns of the Animal appearing at one End; then it changes to a Sort of Worm, rolls itſelf up ſoon after in a Ball or Caſe, like that of the Silk-Worm, and when it comes out from thence, puts on the Appearance of a Butterfly. He adds, that from the Ball they draw a kind of Silk, of which are made the fineſt Stuffs in in the Country; but this too, if any ſuch Creature there be, is not known to the Moderns, which is the more extraordinary, becauſe it is generally believed that we are much better acquainted with the Manufactures of the *Indies* than the Antients; ſo that upon the whole, I am apt to ſuſpect, that this is no more than a miſtaken or erroneous Account of the Silk Worm.

It cannot, however, be amiſs, to preſerve all theſe Relations, becauſe however improbable or even incredible they may appear, yet it is not impoſſible, that there may be ſomething of Truth at the bottom, even of the moſt extravagant Relations. This at leaſt is certain, that for many Ages the *Indians* concealed not only the Sources of their Riches, but the Secret of their Manufactures, and eſpecially that of Silk, as we ſhall have Occaſion to ſhew at large; and it is no leſs certain, that in order to conceal them, they invented a Multitude of Fables, with which for a long Time they impoſed upon the World. One would ſuſpect that ſomething of this Spirit remains ſtill among the *Chineſe*, from the improbable Accounts that are given us by the Miſſionaries of that Country, and every thing in it; but more of this in its proper Place; at preſent, we have done with the Animals that inhabit the Water, and are next to examine the Volatiles of the *Indies*.

10. The Eagle is generally conſidered by all Naturaliſts as the *King* of *Birds*, which Title is ſuppoſed to have been beſtowed on this Creature for its ſuperior Strength, for the natural Terror that it ſtrikes into the whole feather'd Race, and for the Boldneſs of its Flight, in which it ſoars higher than any Bird whatever[h]. It was very poſſibly the Conſideration of theſe Properties, that induced *C. Marius*, when a ſecond Time Conſul, in the Year after the Building of *Rome* 650, and the Year before *Chriſt* 103, to ſuppreſs the Figures of the Wolf, the Minotaur, the Horſe, and the wild Boar, which hitherto (as well as the Eagle) had been borne on the Roman Enſigns, in order to ſubſtitute the Figure of the Eagle, with her Wings half diſplayed, in their Stead, as an Emblem more ſignificant than any, or than all the former, and more capable of exciting the Ardour, Courage, and Emulation of the Soldiers, than any that could be deviſed; and this Alteration of his was ſufficiently juſtified by the Event[i].

Pliny diſtinguiſhes ſix kind of Eagles, among which however he allows only one to be the true Royal Eagle, of which we are now to ſpeak. It is a very difficult Thing to aſſign the true Size of this Bird, becauſe the Records of Hiſtory, and the Experience of later Ages, do not very well agree. The Antients report, that the Eagle is very long-lived, ſo as to reach a full Century, and to grow as long as he lives, which, if certain, might induce us to believe what *Athenæus* tells us, that at the Inauguration of *Ptolemy Philadelphus*, there were Eagles carried in the Proceſſion, the Wings of which, when extended, meaſured thirty Feet[k]. A modern Naturaliſt aſſures us[l], that not far from *Dreſden* in *Saxony*, an Eagle's Neſt was diſcovered, in which there were three young Birds full fledged, but not quite able to fly, tho' their Wings expanded reached ſeven Yards. But in the Memoirs of the Royal Academy at *Paris*[m], there is a large Account of a She-Eagle diſſected there, which falls very far ſhort of what is mentioned in the former Relations; for this Bird meaſured but two Feet nine Inches from the Beak to the Tail; the Extent of her Wings was but ſeven Feet, and the whole Weight of the Bird no more than ten Pounds. In all Probability this was a very ſmall Eagle, and perhaps not of any of thoſe Sorts mentioned by the Antients, who agree very well in their Accounts, and particularly in this, that the *Indian* Eagles excelled the reſt in Courage and Strength, and conſequently in Size.

[i] *Plin. Hiſt. Nat. lib.* x. *cap.* 4. Where he obſerves, that ſeldom or never any Corps of *Roman* Troops encamped with fewer than two Eagles. But *Ariſtomenes* had long before this borne an Eagle on his Buckler, as we are informed by *Pauſanias*, *lib.* iv. *p.* 319.

The ſame Writers obſerve, that this Bird has a very briſk Eye, which is fixed pretty deep in the Head, covered in ſome Meaſure by the Bone which projects over it, and ſtrengthened by a Membrane of a ſingular Texture, being made up of ſeveral ſmall Scales. The Ball of the Eye is of a bright Iſabella, and has all the Life and Beauty of a Topaz. The Tongue of the Eagle is not pointed like that of other Birds, but in a manner ſquare, of a ſort of cartilaginous Subſtance with two hard Points at the Bottom like the Barbs of the Head of an Arrow. The Wind pipe of this Animal is prodigiouſly ſtrong, and in breathing is diſtended to ſuch a Degree, as to be near two Inches in Diameter. Its Bones are very thick and hard, and have ſcarce any Marrow: Its Brain is ſaid to be of ſo hot a Nature, as when given in Powder to occaſion Madneſs: Its Blood is very thick, and in a Manner fibrous: Its Gall ſharp, penetrating, and capable of eating into whatever it touches, and its very Feathers are of ſuch a corroſive Quality, that they deſtroy, if mixed with them, the Feathers of the other Birds[n].

The Voracity of the Eagle is ſo great, that it requires a conſiderable Extent of Country to furniſh Prey ſufficient for his Subſiſtance; and hence it is obſerved, that two Eagles never live near each other. *Ariſtotle* and *Pliny* tell us, that when the young Eagles grow up and begin to fly, the old ones not only drive them from their Airies, but alſo force them to quit the adjacent Country[o]. Theſe voracious Birds not only prey on all Sorts of large Fowl, but hunt alſo Rabbits, Hares, Sheep, Goats, and Fawns, which they kill and carry away. We have an Account from *Ælian*[p], of an Eagle of extraordinary Size, which ravaged Part of the Iſland of *Crete*, and was ſo furious, that he hunted Bulls and Oxen, as well as ſmaller Creatures: The Manner in which he deſtroy'd them was this, he fixed his Talons betwixt their Horns, and then began to tear their Heads with his Beak, and often covering their Eyes with his Wings, the Creatures, mad and blind, ran as faſt as they were able, till they either fell over Precipices, or ſtuck faſt in ſome Moraſs, where the Eagle tore out their Bellies, and having thus killed them, devour'd them at his Leiſure.

As this Creature lives entirely on the Fleſh of Animals, he taſtes no Liquid but their Blood, and never drinks Water but when he is ſick. It is ſaid that the Stork is the only Creature able to reſiſt him; and in one of the old Poets we have a large Deſcription of a Battle between theſe Birds, in which, however, there is a greater Appearance of Imagination than Reality[q]. Other Animals are ſo fearful of the Eagle, that they tremble at his Cry; and even the Dragon is ſaid to retire for Shelter to his Den. The Sea Eagles hover over that Element, or over the Lakes, and darting with prodigious Force into the Water, ſeize the Fiſh in their Talons, carry them on Shore and devour them; it is for this Reaſon that the *Indians* proſecute them with a cruel and never ceaſing War, and are ſaid to deſtroy them with burning Arrows.

One of the moſt ſingular Qualities of this Bird is, the Capacity he has of beholding without Inconvenience the Sun in his Meridian Luſtre; and of this Property he is ſo jealous, as to deſtroy (if the Antients ſay Truth) ſuch of its Progeny as wink, when in their Neſts the old one turns their Heads toward the Sun[r]. But with reſpect to the young ones that are able to bear this Trial, the Eagles cheriſh them with as much Tenderneſs as any other Bird, and defend them with the moſt obſtinate Reſolution in caſe any Attempt be made to take them. They fly round their Neſt, and vary their Flights for the Inſtruction of their Young; and afterwards taking them on their Backs, they ſoar with them aloft in order to try their Strength, ſhaking them off into the Air; and if they perceive them too weak to ſuſtain themſelves, they with ſurprizing Dexterity fly under them again, and receive them on their Wings to prevent their Fall. The Eagle is ſuppoſed to be the only ſort of Bird indued with this kind of Inſtinct, and this ſerves to explain one of the boldeſt and moſt beautiful Similes in the Sacred Writings[s].

The young Eagle, perfected by ſuch Inſtructions, wings his Flight into the ſuperior Regions of the Air, and notwithſtanding his great Bulk, frequently ſoars out of Sight, flying always directly towards the Sun. Hence is derived the Fancy of the Poets, that *Ganymede* was carried by an Eagle up to Heaven, and there became the Cup-bearer of the Gods; and hence alſo another Notion took Riſe, that the Souls of Heroes were in like manner conveyed to the Celeſtial Regions[t]. It is pretended, that the true Reaſon why ſome of the young Eagles are not able to bear the piercing Light of the Sun is their having ſome Defect in their Eye-lids; for it is ſaid, that they are furniſhed by Nature with two Membranes for this Purpoſe, of one of which we have before ſpoken, which covers the Eye, and ſhuts out the Light entirely, the other of a thinner and more delicate Texture, which being drawn over the Eye, preſerves it from being any way injured by the ſtrongeſt Rays of Light[u]. It is however very remarkable, that in the Memoirs of the Royal Academy at *Paris* relating to the Diſſection of this Bird, there is nothing ſaid of this ſecond and thinner Membrane, though the Eye and the other ſcaly Membrane are very accurately deſcribed[w].

In this, however, all Writers antient and modern agree, that the Eagle is not at all incommoded by the Sun-beams, and that it is very probable he renews his Strength, or preſerves his Youth by towering ſo near that Fountain of Light and Heat. We are particularly told by ſome Writers, that once every ten Years he makes an unuſual Progreſs in his Journey, and that for this Reaſon: He finds his Wings and other Feathers heavy and unfit for flying, which induces him to riſe with all his Force, in order to reach as near the Sun as poſſible; and having thus heated his Plumage exceſſively, he drops at once into the Sea, after which all his Feathers fall off by degrees, and others ſucceed them[x].

Ælian aſſures us, that the Eagle is exceedingly grateful[y], an Inſtance of which he gives us in a Bird of that kind, which attended the great Conqueror *Pyrrhus* all his Life, and which he was wont to feed with his own Hand; and which after the Death of that illuſtrious Perſon, refuſed to take any Nutriment from another Hand, but choſe rather to ſtarve. He mentions likewiſe another Fact ſtill more remarkable, which is, that an Eagle flew into the Funeral Pile of one by whom it was brought up, and was there conſumed with the dead Body of his Benefactor.

---

[s] This occurs in the Song of *Moſes*, where he thus deſcribes the March of the Children of *Iſrael* through the Wilderneſs. "As an Eagle ſtirreth up her Neſt, fluttereth over her Young, ſpreadeth forth her Wings, and beareth them "upon them: So the LORD alone did lead him, and there was no ſtrange God with him." *Deut.* xxxii. 11, 12. [t] *Vide Kippingum, Antiq. Roman. p.* 503, *& ſeq.* [u] *P. Ange, Traite d' Optique.* [w] *Memoirs de l' Academie*, as before cited. [x] *Bochart. Hieroz.* ii. *P. lib.* ii. *c.* 1. *& ſequen.* This is thought to be alluded to *Pſalm* ciii. 5. "who ſatisfieth thy Mouth with good Things: ſo that thy Youth is renewed like the Eagles." [y] *De Animal. lib.* ii. *cap.* 40.

Ariſtotle aſſures us [a], that the Eagle lives to a great Age, and is at laſt ſtarved to Death; the upper Bill growing over the under in ſuch a manner as that the Bird can receive no ſort of Suſtenance. In the *Perſian* Language the Eagle is called *Homai*, that is to ſay, the Royal Eagle, which is held in a manner ſacred throughout the Eaſt, becauſe they are perſuaded, that though this be the boldeſt and fierceſt of all Birds, yet it injures no Creature living, but feeds upon Bones that it finds in the Deſerts [a]. But we muſt have a care to diſtinguiſh this Royal Eagle from the Oſſifrage or Bone-breaker, which is another kind of Eagle that lives chiefly on Shell-fiſh, as alſo on Carrion, and is reported to have frequented Church-yards, and to have torn open the Graves in order to feed upon the dead Bodies.

It is neceſſary before we leave this Subject to mention the Eagle-Stone, or *Lapis Aëtites*, as it was called by the Antients. This was held to be found in the Eagles Neſt; and *Pliny* ſays [b], that there were generally two without, which the Eagle could not hatch. That Writer ſays there are four ſorts of Eagle-Stones, the firſt bred in *Africa*, ſmall and ſoft, with a little Piece of white Clay included within it, which had a very pleaſant Smell; and this was ſaid to be the Female Eagle Stone. The ſecond was found in *Arabia* of the Size of a Walnut, and of a reddiſh Colour; it had alſo a little Stone in the middle, and was accounted the Male. The third was found in *Cyprus*, which reſembled thoſe found in *Africa*, but was broader and flatter. The fourth was called *Taphiuſius* from the Region in which it was found, and was ſoft like Clay. Theſe Eagle-Stones, of which I have one before me, are in truth little bigger than a Hazle-Nut, of a greyiſh Colour, and have another Stone within them which rattles. They are light, and ſeem to be ſome kind of Vegetable petrefied, having a black Spot at one End, as if they had been broken off from a Stalk. *Pliny* ſays they were much eſteemed for their Medicinal Virtue, which conſiſted in making the Female of every kind of Animal go its full Time with Young. At the Time of Delivery, however, it was to be remov'd, for otherwiſe they held that the Creature could not be delivered; and this Notion prevailed in the laſt Century, when theſe Stones were ſold at a great rate; but at preſent ſuch Notions are out of Date, and conſidered as mere Fictions.

11. After the Eagle the Oſtrich was the Bird moſt conſidered in the *Indies* on account of its large Size, the Singularity of its Shape, and other extraordinary Qualities. The Antients thought its Neck and Head reſembled thoſe of a Camel, the Eyes ſparkling, the Beak blunt, and the Noſtrils very wide [c]. The Neck, the Head, and the Thighs of this Creature, are without Feathers; the Legs remarkably ſtrong, the Feet cleft or divided into two Toes. There were ſome Years ago no leſs than eight of theſe Birds exhibited at *Paris*, of which *M. Perrault* has given us a Deſcription. They were ſeven Feet high from the Ground to the Top of the Head, that is to ſay, four from the Flat of the Back to their Feet, and three from the riſing of the Neck to the Top of their Heads, from the Rump to the Head, the Neck being extended in a right Line from the Back, they were ſix Feet in Length. The Tail about a Foot, the Wing without the Feathers a Foot and a half, and with the Feathers three Feet. It is of the Feathers of the Oſtrich that the Plumes heretofore worn on the Helmet, and the Feathers now uſed in Hats, are made. As they grow on the Bird they are alternatively white and black, or black and grey.

Almoſt all other Birds have two ſorts of Feathers, one downy and ſoft to keep them warm, and defend them from Water; the other ſtrong and ſtiff, to aſſiſt them in flying. In the Oſtrich, however, it is quite otherwiſe; for tho' the Feathers of this Bird be long, yet the Subſtance is downy and ſoft, which, notwithſtanding, does not ſeem to keep them very warm, neither do they enable them to fly. There is another thing remarkable in their Feathers, becauſe they likewiſe differ therein from thoſe of other Birds. The latter have more of the feathery Subſtance on one Side of the Quill than on the other, and on both Sides ſo ranged, as to end in a kind of Point. In the Feathers of the Oſtrich the Quill runs directly through the middle, and the End is in a manner round. To apprehend this the better, it is neceſſary to obſerve, that the former kind of Mechaniſm is of great Uſe in flying, for theſe two Reaſons; firſt, that the Air reſiſts the Stroke of the Wing powerfully, and thereby enables the Bird to riſe; the ſecond, that the Air makes the leaſt poſſible Reſiſtance in the ſhutting of the Wing for the next Stroke, ſo that the Bird loſes little of that Advantage which he gained by the former Stroke. It is for the ſame Reaſon that the Quill extends to the very Extremity of the Feathers, ſo that the Wing forms a kind of Arch when expanded, by which means the Bird preſſes upon, and is ſuſtained by the Air gathered under it. But there is nothing of this kind obſervable in the Structure of the Feathers of the Oſtrich, which are not connected to each other, but lie looſe on each Side of the Quill, and are not at all ſtiff or gummy like thoſe of other Birds.

Hence *Ariſtotle* long ago obſerved [e], that the Feathers of the Oſtrich reſembled more the Hair of Beaſts than the Plumage of other Fowls, that is to ſay, were rather contrived to cover the Body, than to aſſiſt the Bird in her Flight. To ſay the Truth, this Animal, as *Ariſtotle* rightly obſerves, is incapable of riſing itſelf from the Ground; but then it runs at a great rate, ſo that they hunt it with Grey hounds, the Huntſmen mounted on fleet Horſes bred on purpoſe to the Sport.

The Antients were of Opinion, that the Wings of the Oſtrich was one great Cauſe of its Swiftneſs; but the *French* Author before cited has taken a great deal of Pains to ſhew, from the Structure of the Feathers, that they cannot poſſibly have any ſuch Effect, becauſe they are intirely deſtitute of the Qualities requiſite for that Purpoſe, which though contrary to the Sentiments of antient Naturaliſts, was, however, a thing known long ago to ſome of the Curious [f]. It has been likewiſe aſſerted, that the Oſtrich had an Inſtinct in gaining the Wind, which by ſwelling its Wings forced the Creature along at a great rate; but modern Experience contradicts this likewiſe, and it is generally affirmed, that this Bird very ſeldom runs with the Wind, but on the contrary is often in danger of falling, by running oppoſite thereto when the Gale is briſk. It is notwithſtanding generally allowed, that the Oſtrich throws Stones behind her in her Flight with equal Agility and Force.

The Inſide of this Animal is to the full as curious and remarkable as the Out. The Stomach of this Bird is about fifteen Inches long, and eight wide, ſeparated by a muſculous Piece of Fleſh, which, in the Middle, may be two Inches thick, or ſomewhat more. In theſe two Cavities were found conſiderable Quantities of Graſs, Hay, Barley, Beans, Bones, and Flints, ſome of which were of the Bigneſs of a Hen's Egg, together with ſeventy Pieces of little Copper Money, of the Size of our Farthings. The greater Part of theſe were Three-fourths conſumed by their rubbing one againſt another, and againſt the Flints, and not by any acid Spirit which had corroded them; which manifeſtly appeared from hence, that whereas one Side was quite ſmooth and poliſhed, by continually rubbing; the other, being preſerved by its lying hollow, had the Impreſſion quite fair.

All that was contained in the Stomach of the Creature, whether Stones, Bones, or Beans, were all over of a greeniſh Colour. The antient Naturaliſts, therefore, had certainly no Idea of the true Manner in which Stones, Iron, and ſuch like Things were conſumed in the Stomach of the Oſtrich, ſince, they plainly aſſert, that this was done by ſome particular Quality in the Juices; ſo that, as the Stomachs of other Creatures were fitted for the Digeſtion of Fiſh, raw Fleſh, and Bones, that of the Oſtrich had the peculiar Power of conſuming Metals and Stones. For, if the Stomach of this Animal had any ſingular or particular Quality of digeſting Metals, they would, moſt certainly, be digeſted in the ſame Manner as other

[a] *De Hiſt. Animal. lib.* ix. *cap.* 1. [a] *Herbelot. Biblioth. Orient. p.* 456. [b] *Hiſt. Nat. lib.* x. *cap.* 3. *lib* xxxvi. *cap.* 21. [c] *Ariſtot. de Part. Animal. lib.* iv. *cap* 14. *Pliny Hiſt Nat. lib.* x. *cap.* 1. [d] *Memoires de l' Academie, Tom.* iii. *p.* iii *p.* 113. [e] *De Part. Animal. ubi ſupra.* [f] *Ariſtot. de Hiſt. Animal lib* iv. *cap.* 4. yet as to its prodigious Swiftneſs, the Author of the Book of *Job* obſerves, xxxix. 18. "When the Oſtrich lifteth herſelf on high, ſhe ſcorneth the Horſe and his Rider."

Food is digeſted, that is, by melting and diſſolving them into a Liquid; whereas Experience ſhews us, that this Operation is performed in the Stomach of the Oſtrich in the ſame Manner as it would be performed out of it, if Pieces of Copper were to be rubbed and bruiſed with a Mixture of acid Herbs, and by the Help of rough Bodies. It is, therefore, highly probable, that the Oſtrich, being a voracious Animal, has occaſion to ſwallow hard Things to aſſiſt in bruiſing and conſuming its Food, and that abuſing this Inſtinct of Nature, it ſwallows Iron and Copper, which inſtead of anſwering that Intention, becomes poiſonous, and turns to the Deſtruction of the Animal. This ſeems to be put quite out of Diſpute, by a Fact which has been atteſted by thoſe who have the Care of the *Menagerie* at *Verſailles*, who affirm, that when the Oſtriches kept there, have ſwallowed conſiderable Quantities of Copper and Iron, they have died ſoon after; and therefore they have had Orders given them to hinder People from throwing Nails or Pieces of Copper to theſe Birds[g].

The hot Conſtitution of this Creature, may be very well ſuppoſed to contribute not a little to its Fruitfulneſs. The Oſtrich lays, generally ſpeaking, Fourſcore Eggs in a ſhort Space of Time, each of them weighing twelve or fifteen Pounds, ſo that one is ſufficient to ſerve ſix or ſeven People for a Meal[h]. The Shell of theſe Eggs is very near as hard as a Stone, ſo that it cannot be for fear of breaking them, that the Oſtrich abandons them, and leaves them to be hatched by the Heat of the Sun, as the common Opinion is; but either from Forgetfulneſs, as ſhe lays every Egg in a different Place, or from a certain kind of Inſtinct, which is therefore made a very proper Symbol of Cruelty[i]; not that it is really ſo in itſelf, becauſe the young Oſtriches do not ſtand in Need of their Parents Care: But that it appears ſo in the Eyes of Men; and by Compariſon with the Tenderneſs of other Animals, and of other Fowls eſpecially.

The Fact, upon which this Obſervation is grounded, is ſufficiently made out by the Multitude of Oſtriches that are ſeen in thoſe Countries where they inhabit. Such as ſeveral Iſlands in the *Eaſt-Indies*, a great Part of *Arabia*, *Syria*, *Africa*, and *South-America*, in all which Countries there are large Deſerts, in which they multiply exceedingly.

The *Arabians* are ſaid to be ſo credulous, that, as an eminent Traveller informs us, they are content to believe that the Oſtriches hatch their Young by looking at them. I will give the Reader the Story in his own Words. "We "read (ſays he) in an old *Arabian* Manuſcript, that when "this Fowl would hatch her Eggs, ſhe does not cover "them as other Fowls do, but both the Male and Female "contribute to hatch them by the Efficacy of their Looks "only; and, therefore, when one has Occaſion to go to "look for Food, it advertiſes its Companion by its "Cry, and the other never ſtirs during its Abſence, "but remains with its Eyes fixed upon the Eggs, till "the Return of its Mate, and then goes, in its Turn, to "look for Food: And this Care of theirs is ſo neceſſary, "that it cannot be ſuſpended for a Moment, for if "it ſhould, their Eggs would immediately become "addle[k]."

This Story, no doubt, is fabulous; but why do I ſay ſo, when, at the Bottom, the *Arabians* believe no more of it than we do? In reality, it is no more than a parabolical Fiction, to expreſs the perpetual Attention of Providence, in which the Egg repreſents the Univerſe, and the parental Inſpection of the Oſtrich, the continual Interpoſition of the Father of all Things for its Preſervation. Thus, in the Letter, this Story is idle and fooliſh, and ſo are moſt Fables; but the Interpretation or Moral is noble and juſt.

The *Ethiopians* eat the Eggs of this Bird, and eſteem them the moſt exquiſite Food that can be, and the common People eat the Fleſh of the Oſtrich in all Countries where they are found; though it is admitted, that it is dry, and very indifferent; but there muſt, probably, have been ſomething very exquiſite in the Reliſh of its Brains, ſince the Emperor *Heliogabalus* cauſed ſeveral Plates filled with this Sort of Food to be ſerved at one of the Entertainments that he gave to the Nobility of *Rome*[l], of which it was common for him to ranſack the whole Empire for Dainties. We learn alſo from *Ælian*[m], that to the Time in which he wrote, the *Indian* Princes eſteemed the Brains of the Oſtrich one of the greateſt Delicacies their Country produced.

12. The Phœnix is the Theme on which the *Greek* Writers ſeem to have exhauſted their Eloquence; and that with ſo good Succeſs, as, in ſome meaſure, to have impoſed on the wiſeſt of the *Latin* Writers. The Author of this Fiction, at leaſt, as high as we are able to trace it, was *Herodotus*[n]; and yet he does not deſerve to be treated as a fabulous Writer, for what he has left us upon this Subject, ſince he acknowledges fairly, that he knew nothing more of this Bird than from Report and from Picture. On his Authority, however, the Story was ſo often repeated, that, by Degrees, it gained Credit with the Learned as well as the Vulgar, inſomuch that *Pliny*[o] gives us a long and plauſible Account of it.

"The Birds of *India* (ſays he) are moſt of them of "different Colours and ſuch as a Man can hardly deſcribe. But the Phœnix is the moſt noble of all; neither "know I whether it be a Fable or a Truth, that there is "but one in the World, and that but rarely ſeen. It "is ſaid to be of the Size of an Eagle, its Neck as "refulgent as Gold, the Body of a deep Purple, the "Tail compoſed of blue Feathers, mixed with red, the "Head adorned with a beautiful Tuft of different Colours. *Manilius*, a noble *Roman* Senator, diſtinguiſhed "by his Excellence in every kind of Learning, was the "firſt who wrote at large of this ſingular Bird; and by "him it is reported, that the Phœnix is never ſeen to "eat: That, in *Arabia*, this Bird is held ſacred to the "Sun, that he lives Six hundred and ſixty Years, and "that finding himſelf old and beginning to decay, he "builds himſelf a Neſt with the Twigs of *Caſſia*; and "having filled that Neſt with Frankincenſe and other "Aromatics, he therein expires. But from his Bones and "Marrow is produced a little Worm, which, in Time, "becomes a young Phœnix; and the firſt thing it does, "is to celebrate the Funeral of its Parent, by transferring the whole Neſt to the City of the Sun, which is "near *Panchaia*, and leaving it there upon the Altar. The "ſame *Manilius* reports, that the great Year agrees exactly with the Term of this Bird's Life, when the heavenly Bodies return to their firſt Points, and the Seaſons revolve again in their former Order, this Year "commencing at *Noon*, when the Sun enters the Sign "*Aries*. According to his Computation, therefore, this "great Year began when *P. Licinius* and *M. Cornelius* "were Conſuls; but *Cornelius Valerianus* writes, that "*Quintius Plautius* and *Sextus Papinius* being Conſuls, "the *Phœnix* appeared in *Egypt*. It is alſo ſaid, that this "Bird was brought to *Rome* when *Claudius* was Cenſor, "that is, in the Year of the City Eight hundred, and was "openly ſhewn in a full Aſſembly, as the publick Records atteſt; but in this reſpect falſely, nobody at this "Time doubts."

Such is the Account given us by *Pliny*; yet in ſuch general Eſtimation was this Story grown, that Pope *Clement*[p] in his Epiſtle to the *Corinthians*, written in the Name of the Church of *Rome*, makes uſe of this Hiſtory of the Phœnix to prove to them the Poſſibility of the Reſurrection; the Paſſage is very curious, and therefore I ſhall tranſcribe it for the Entertainment of the Reader. "Let "us (ſays he) conſider that Prodigy which happens in the "Eaſt, where they behold a certain Bird called the Phœnix, "which is the ſingle Bird of its Species. This Animal "lives five hundred Years, and when it perceives its End "approaching, it makes a Neſt of Myrrh, Incenſe, and "other Aromatics, in which it ſeats itſelf, and after a

“ certain time there, finiſhes its Days. Out of its Fleſh when corrupted, there ſprings a kind of a Worm, which feeding for ſome time on the Remains of this Animal, begins at length to be covered with Feathers; and when it becomes ſtronger it carries away the Neſt, which contains the Relicts of its deceaſed Parent, and paſſing from *Arabia* into *Egypt*, bears them to the City of *Heliopolis*. There in full Day, and in the Sight of a Multitude of Spectators, it flies to the Altar of the Sun, and having thereon depoſited its Burden, immediately retires. The *Egyptian* Prieſts having conſulted their Annals, and having from them made an exact Computation, find, that this happens preciſely at the Cloſe of five hundred Years.”

This Fable was not only current in *Italy*, but in *Africa*, as appears from the Writings of *Tertullian*[q], who makes uſe of this Example with the ſame Intention as St. *Clement*. The Ancients, however, differed much about the Manner in which the Phœnix died. According to the former Accounts, it expired in the ordinary way; but a Multitude of Writers affirm, that having raiſed its funeral Pile, it ſet Fire thereto, and fanning that Fire with its Wings, was therein conſumed to Aſhes, out of which Aſhes aroſe the new Phœnix thus conſecrated to the Sun[r]. The Date of its Life was a Point no leſs controverted. An *Ethiopian* Prince, in a Letter of his to a Pope, cited by *Voſſius*, ſays, that it lives three hundred Years. *Herodotus*, *Ælian*, *Philoſtratus*, and *Aurelius Victor*, extend the Term of its Life to four hundred and forty, or five hundred Years[s]. *Pliny*, on the Authority of *Manilius*, as we have ſeen before, to ſix hundred and ſixty. *Martial* and *Lactantius* to a thouſand; but the *Arabian*, *Egyptian*, and *Rabbinical* Writers, far beyond this, in conſequence, as they pretend, of its not having taſted the forbidden Fruit[t].

In the midſt, however, of theſe Contradictions, and though ſeveral of the ancient Authors freely profeſs their Suſpicions of the whole Story, yet *Tacitus*[u] does not ſeem to queſtion the Fact, but rather to admit, that ſuch a Bird had been ſometimes ſeen in *Egypt*; and another Hiſtorian ſays, that its coming to *Rome* was conſidered as an ill Omen by the Augurs, and thought to portend the Death of the Emperor *Tiberius*. Father *Martinius*, in his *Chineſe Atlas*[w], aſſures us, that it was ſeen in *China* in the Beginning of the Reign of *Kahoar* IV. and that it was thought to come from the *Indies*. All the Circumſtances of the Story are ſo apparently fabulous, that it would be loſing time to refute them. If the curious Reader has a mind to ſee this done effectually he may conſult Sir *Thomas Browne*[x], who has handled this, as he does every other Subject, with great Learning and Capacity; but I have choſen rather to inſiſt on the Facts reported by ancient Writers, than to enter into a Detail of Arguments, which would extend this Article to an extravagant Length, and be at the ſame time quite beſide the Purpoſe.

It may not be amiſs, however, before we conclude, to ſay ſomewhat of the Origin of this Fable, which ſome have imagined aroſe, or was at leaſt ſtrengthened by the ſame Word, ſignifying in *Greek* both the Phœnix and the Palmtree[y]. Thus much is certain indeed, that a miſtake of this kind has brought this Bird into the Scriptures, the Authority of which can never be brought to juſtify ſuch Fables, though ſome, to ſhew their Learning, are for finding in them whatever Facts or Reaſons they have a mind to eſtabliſh. The true Source, however, of this Notion, lay like that of the Gryphon in the *Egyptian* Hieroglyphicks. It was from the *Egyptians* that *Plato* and the reſt of the Ancients borrowed their Notion of the great Year which they never fully underſtood; and the Reigns of their ſeveral Gods, which have given ſo much Trouble to our moſt learned Chronologers, were in truth no more than the Periods of the Planets, that is to ſay, the Spaces of Time in which they finiſhed, according to the *Egyptian* Syſtem, their Revolutions; and this is the true Cauſe why, after all the Pains that have been taken about them, the Accounts we have are almoſt as perplexed as ever.

The true Story of the Phœnix, though applied by the Chriſtian Fathers to the Reſurrection, was by the ancient *Egyptians* underſtood of another ſort of Reſurrection; for they conceived, that when the great Year of all was accompliſhed, the Univerſe was to be deſtroyed by Fire, and a new Syſtem ariſe out of the Ruins of the old. This I conceive they borrowed from the *Indians*; at leaſt thus much is certain, that this was, and ſtill is, a Principle of their Philoſophy, which, as the learned Dr. *Burnet*[z] of the *Charterhouſe* well obſerves, they explained by another Symbol, *viz.* that of a Spider, which after ſpinning various Webs, reſumes them again all into himſelf, and re-produces the ſame Matter under other Forms; and thus Philoſophical Similitudes, which imperfectly expreſſed what Reaſon could ſcarce comprehend, came by the Miſtakes of vulgar Minds to corrupt natural Philoſophy, by introducing imaginary Creatures, which never had, or could have, Exiſtence according to the Laws of Nature.

13. After the Fable of the Phœnix had been rejected by almoſt all the Learned, it was again in ſome meaſure reſumed by the great *Julius Cæſar Scaliger*[a], a Man, whoſe Eminence in all kind of Learning gave him ſo high a Reputation in the World, that his Opinions were received as a kind of Oracles. He thought that the Accounts given of a certain Bird found in the Southern Countries of the *Indies*, called *Semenda*, or *Semendal*, had ſome Relation to the Phœnix, and that conſequently all that had been advanced in relation to this Bird was not abſolutely falſe and fictitious.

In order to judge the better of this, it will be requiſite to enter into the Deſcription of this laſt mentioned Bird, and ſee how far it accords with that of the Phœnix. The *Semendal* is ſaid to have a triple Bill, or three Bills raiſed one over another, by the Help of which, when ſhe is near her Death, ſhe makes a moſt delightful Harmony. Then forming a Pile of odoriferous Wood, ſhe ſets fire thereto, and fanning it with her Wings, ſuffers herſelf to be conſumed to Aſhes, out of which a Worm is produced that afterwards changes into the ſame kind of Fowl[b].

This is viſibly nothing more than the old Fable a little varied, and yet it is true enough, that there is in the Iſland of *Java*, and in the Spice Iſlands belonging to the *Dutch*, a kind of Bird that has two Bills, and therefore is called by the Inhabitants the *Double Bill*; but as to its ſinging, I find no Evidence to that Point. As it is a Native of the *Moluccas*, it is very probable that it may make its Neſt of Spices; but that it conſumes itſelf therein there is no good Teſtimony to prove, notwithſtanding what the ſingle Traveller, on whoſe Relation the original Fact is grounded, has advanced[c].

It may indeed be alledged, that ſome Eaſtern Writers have countenanced this Notion by their Relations[d]; but then we know that ſuch Accounts as theſe are liable to great Suſpicions, and eſpecially to that of giving an Air of Matter of Fact to Parables. On the whole therefore, there is juſt as little Reaſon to credit the modern Story of the Semendal, as to yield any Belief to what the Ancients have related concerning the Phœnix, or to expreſs the thing plainly, and in few Words, they are both Fables equally deſtitute of Foundation. It is very hard to diſcover the Motive why even the greateſt Men are unwilling to give up Authority, when it is directly contrary not only to Reaſon, but the Laws of Nature; and yet that this is frequently the Caſe, many Inſtances might be brought to prove, but this before us is more than ſufficient; and therefore I ſhall trouble the Reader no farther upon this Subject.

What has been already ſaid was neceſſary to ſhew, that no Pains have been ſpared to examine theſe Points, and to ſet the Truth in a fair Light, which was thought the more requiſite, becauſe moſt Writers of Voyages are ſo much inclined to report ſtrange and wonderful things, and to call in to their Aſſiſtance the Relations of the Ancients, that without the Aid of ſuch clear and explicit Commentaries as we have given, it is ſimply impoſſible to cure the Minds of many People of that ſort of ſuperſtitious Credulity which theſe kind of Relations naturally induce. And with the Refutation of which, we ſhould have been forced to interrupt the Thread of ſubſequent Voyages, if we had not once for all diſpatched the Subject in this and the foregoing Chapter.

14. The Pelican is a very ſingular Bird, concerning which the Ancients have written largely, and yet there have been very great Diſputes among the Moderns as to the Bird which they have deſcribed, the Reaſon of which, as well as of the Fables current about this Creature, will quickly appear. *Ariſtotle*[e] and *Ælian*[f] call it by the ſame Name, *viz.* Pelican, or Pelecan; but *Pliny* deſcribes it under the Name of *Onocrotalus*[g], yet their Accounts agree ſo exactly, that there ſeems to be no Reaſon to doubt they meant one and the ſame Bird. The Author laſt mentioned tells us there is but one thing remarkable in this Creature, which is, that it has a falſe Stomach, into which it ſwallows its Prey when firſt taken, and throws it out again from thence in order to feed upon it.

There are ſome of theſe Birds that live moſtly on Land, and others that reſort conſtantly to the Waters; yet the Figure of both is the ſame. There were ſeveral of them kept for many Years in *France*, and in the Memoires of the Royal Academy of Sciences, we have a very diſtinct Account of them. According to their Deſcription the Pelican is five Foot high from the Beak to its Feet, the Wings when extended eleven Feet from one Extremity to the other. Their Beak about fourteen Inches in Length, and an Inch and an half broad at the End, its Legs fifteen Inches, the longeſt of its Claws four Inches and a half, the Length of its Neck about ten Inches[h].

There is ſcarce any Bird except the Eagle of ſo great Strength as the Pelican, which is alſo a Bird of Prey, and flies to a great Height. *Culmanus*, in a letter of his to *Geſner* the famous Naturaliſt[i], tells us of a tame Pelican that ſoared ſo high as to appear in the Air no bigger than a Swallow, and which having for a long time attended the Army of the Emperor *Maximilian*, that Prince ordered it to be maintained, and allowed for that Purpoſe four Crowns a Day, which Bird lived in *Germany* fourſcore Years. This Fact is the more credible, becauſe in the Menagery of *Lewis* XIV. there were many Pelicans, and it was obſerved, that they were the only kind of Birds of which there died not one in the Space of twelve Years. Two of them were by Order of that Prince diſſected at *Paris*. The firſt was intirely covered with white Feathers, except the Wings, in which there were ſome black, and others brown; and in the Feathers on the Body there was a little Mixture of red. The other was altogether of a Fleſh Colour, without any Mixture of black or white Feathers. Some of the reſt of the Pelicans in the Menagery were all over grey, except the Extremity of their Wings, which was white. Some had a large Tuft of Feathers behind the Head, and ſome wanted that Tuft, ſo that it may be affirmed there are few Birds more differently feathered than this.

But there is one Mark which ſufficiently diſtinguiſhes this Bird from all others: It has under its Beak a large Bag which is quite naked, and hangs down on its Neck. In this Pouch it keeps its Food till it is properly prepared for Digeſtion, and then if there be nothing hard or undiſſolved, it ſwallows the whole at once; but if there be, it diſcharges it, and picks out what is eaſieſt for Digeſtion. *Ariſtolle*[k] had obſerved this long ago; for he tells us, that the Water Pelican was wont to ſwallow Shell-fiſh, keeping them in her Stomach till they opened, and then threw them up and picked out the Fiſh. *Ælian*[l] ſays the ſame thing, which ſufficiently proves that we are not miſtaken as to this Bird, but that the Pelican known to us is the very ſame Creature which is deſcribed by the Ancients.

The old Fathers of the Chriſtian Church exceeded the *Greeks* themſelves in the Fables they reported upon this Subject; they had heard that the Pelican fed her young ones out of this Pouch, or falſe Stomach; and thi being told them either imperfectly, or with Addition of ſome fabulous Circumſtances, they from thence framed a Parable or Similitude between this and the moſt ſolemn Myſtery in the Chriſtian Religion; and to render it the more apt, they deviſed new Circumſtances, and inlarged every Part of the Story to make it anſwer their Intention the better. The Tale then ran thus; that the Female Pelican killed her young ones by careſſing them too much with her Beak, and then mourned over them for three Days, till the Male Pelican becoming ſtill more ſenſible, tore his Breaſt open with his Beak, and by the Effuſion of his own Blood, reſtored the young Pelicans to Life[m]. This, without Queſtion, is very wild and extravagant, and has nothing to countenance it in the Works of any of the Naturaliſts; whence the learned *Voſſius*[n] very juſtly concludes, that theſe Stories were invented by ſuch as were in Love with Alluſions and Hieroglyphics.

We find in the Writings of a very learned *German* Author, whoſe Name is *John-George Volkamer*[o], that he ſaw at the Fair of *Leyden* a Pelican, which the Man who kept it affirmed to have been in his Cuſtody upwards of fifty Years. It was much larger and ſtronger than an Eagle, but otherwiſe very like it both in Size and in the Colour of its Feathers, except that from its Head to its Wings it was grown quite white through Age; he aſſures us, that of all Birds it lives the longeſt, that it renews its Feathers like the Eagle, and that it often ſurvives to upwards of an hundred. He adds, that its falſe Stomach, which hangs upon its Neck, is big enough to admit one's Hand, and that he actually thruſt his own into the Pouch of the Pelican, where he felt the Food he had taken half diſſolved, and ſo hot that he was not able to endure it. He tells us likewiſe, that from thence it feeds its young ones. The Ancients having long ago obſerved the ſame thing, this, as I obſerved, gave the firſt Riſe to the Stories which have been told of this Bird's feeding its young ones with its Blood: yet in Fact there is nothing extraordinary in this, ſince the ſame thing has been obſerved of very many, and perhaps might be obſerved of moſt Birds who fill their Gizzards full of whatever they meet with when their Females are hatching, and diſgorge it again for the Support of the Hen and her Brood.

It is therefore through want of Attention to the Animals in our own Country, that we are ſo much ſtruck with the Singularities reported by Travellers of the Animals in other Countries; for without doubt, if we examined carefully what paſſes every Day under our Eyes, we ſhould not only be leſs apt to be ſurprized at ſuch Relations, but be alſo better able to judge how far they ought or ought not to be believed. It is in this Reſpect that the Study of natural Hiſtory is exceedingly uſeful, not only by guarding us againſt Credulity, but enabling us to correct the confuſed and diſcordant Accounts given us by ſuch as from a ſuperficial View of Foreign Creatures venture to deſcribe them, and often add ſuch Circumſtances from Hearſay as are not to be depended upon, but out of which an intelligent Naturaliſt will be able notwithſtanding to pick the Truth.

15. All who have viſited the moſt Southern Iſlands of the *Indies*, particularly *Sumatra*, *Banda*, and the reſt of the *Moluccas*, agree in relating ſome extraordinary Particulars of a very large Bird, common in thoſe Iſlands, and of which it does not appear that the Ancients had any Knowledge. This Bird the Natives call *Emeu*, but the *Dutch* uſually diſtinguiſh it by the Name of the *Caſoar*. This Creature is thus deſcribed by Mr. *John Nieuhoff*, a *Dutch* Traveller[p], very juſtly eſteemed for his Fidelity, and the Exactneſs of his Relations, and therefore I ſhall ſet down his Deſcription in his own Words.

“ This Bird, ſays he, carries his Head very upright,
“ and then it is about five Foot from the Ground; the
“ Length of his Body, from the Breaſt to the Tail, is
“ about three, or perhaps a little more. The Head ap-
“ pears ſmaller in Proportion than the Body, and is very

ſmooth, and in Colour of a dark Blue; on the Cheſt there hang two Excreſcences like Bags: The Eyes are large and fierce, behind which are the Ear-holes, and almoſt at the Extremity of the Bill two Noſtrils: And from the Midſt of the Bill to the Crown of the Head grows a hard yellow Subſtance like a Cockle-ſhell, eſpecially in the Males. They have very long and groſs Legs, covered with a yellowiſh Rind; their Feet are thick, knobby, and without Spurs; inſtead of which they have on the Fore-part three long, horny Claws, in which they differ from the Oſtrich, whoſe Feet are cloven both before and behind. They are covered all over with Feathers, or rather Plumes of a dark Red, mixed with black: Theſe upon the Breaſt and Thighs grow two and two together; but thoſe on the Tail are of much greater Length, and ſtronger; underneath the Feathers which grow on both Sides, are hidden certain Pens, which ſerve them in running; for theſe Birds are ſcarce able to raiſe themſelves from the Ground. They are exceedingly greedy, devouring every Thing they meet with, even to Iron and burning Coals, all which they evacuate backwards without any Alteration; nay, they ſometimes do not throw out what they have eat till a Year after, without the leaſt Signs of any Digeſtion; for the reſt they live upon Herbage. Their Strength conſiſts in their Legs and Feet, and they run ſo faſt that no Man can overtake them; and when exaſperated, kick with their Feet backwards and ſideways like a Horſe. They lay greeniſh Eggs upon the Ground among the Shrubs, ſcarce ſo big as our Hen-eggs, ſpeckled with dark green Spots, the Yolks whereof are eaten by the Inhabitants. They have not either Tongue or Tail.”

This Bird was firſt ſeen in *Europe* in the Year 1597, when the *Dutch* brought home one on their Return from their firſt Voyage to the *Indies* [q]. It had been given them as a great Curioſity by one of the *Javaneſe* Princes, as a Mark of their Friendſhip; and the Deſcription of it having made a great Noiſe in the World, *Lewis* XIV. when he formed his Menagery at *Verſailles* had one ſent him in the Year 1671, by the Governor of the Iſland of St. *Lawrence* or *Madagaſcar*, who bought it of ſome Merchants who touched at that Iſland in their Return from the *Indies*. This was the firſt of its Kind that had been ſeen in *France*, and it lived at *Verſailles* about four Years. The King had afterwards ſeveral of theſe Birds ſent him, which gave the Members of the Royal Academy an Opportunity of examining and diſſecting ſome of them: The largeſt was five Foot and a half high, its Legs two Foot and a half, its Head and Neck a Foot and a half, the largeſt of its Claws five Inches long, and the Nail of its ſmalleſt Claw three Inches and a half. The Wing, which was compoſed only of five bare Quills, was ſo ſmall that it was entirely covered by the Feathers on its Back. The Head, Neck, and Cheſt of this Creature were abſolutely bare, and the reſt of its Body might be more properly ſaid to be covered with Hair than with Feathers: In all other Reſpects the Deſcription given by them of this Bird agrees exactly with that which we have before given, and therefore it would be tedious to repeat it, only it may not be amiſs to obſerve, that the Head and Neck are ſaid to have reſembled a Turkey-cock's, and to have been ſpotted with blue, violet, and red, a large Comb behind its Head and its Gills, inſtead of hanging immediately under its Beak, appeared on the Bottom of its Neck, where it joined the Breaſt. In its Size it came neareſt to the Oſtrich, and was, in every Reſpect, as greedy and voracious [r].

16. There are, beſides theſe, a great many remarkable Birds in the *Indies*, of which modern Travellers have given us very exact Accounts; and of theſe we will mention a few. The *Dronte* is a very ſingular Creature, and common in all the Southern Parts of the *Indies*. In Bigneſs it is betwixt an Oſtrich and a large Turky, and has ſome Reſemblance to the laſt, in his Feathers and Tail. His Head large, not unlike that of a Cuckow, but covered all over with a Skin. The Eyes are large and black, the Neck crooked and very thick, the Bill very long, thick, and of a pale Blue, except towards the Extremities; the uppermoſt thereof is blackiſh, and the undermoſt yellowiſh, but both Shape and Bent of his Body is very thick and round, covered with ſoft grey Feathers, like thoſe of an Oſtrich. The Belly and upper Parts are ſo thick as almoſt to touch the Ground, which is the Reaſon he is very eaſily caught. On both Sides he has certain Pens inſtead of Wings, of a pale Yellow Colour, and, inſtead of a Tail, five curled Plumes of the ſame Colour. His Legs ſhort and thick, with four large Claws. The Meat, eſpecially that on the Breaſt, is fat and pleaſant enough, and three or four of theſe Creatures afford a Meal for one hundred Perſons. In his Stomach is ſometimes found a certain porous hard Stone [s].

The Cormorant, which is very common in the Iſland of *Java*, and indeed in moſt Parts of the *Eaſt Indies*, ſeems to me to be the Water-pelican of the Ancients. They reſemble our Geeſe in Shape, but much exceed them in Size, and have underneath their Beaks a large Bag, which they can extend and draw together at Pleaſure, and in it keep ſuch Fiſh as they have ſwallowed. Their Feet are like thoſe of the Swan, and their Bills are crooked towards the Extremities. They are ſo greedy after Prey that they ruſh out from among the Flags with ſuch Violence, that they are eaſily taken. They ſwallow Oiſters with their Shells, and keep them in their Bags till they open, when they ſpew them up again, and pick out the Oiſter [t].

If we could depend upon the Accounts given us by the Miſſionaries of the Birds found in *China*, we might venture to yield implicit Credit to whatever the Ancients have delivered, their Stories of the Phœnix not excepted; for to ſay the Truth, the Miſſionaries affirm of their own Knowledge Things full as ſtrange; and we muſt either believe theſe or renounce their Teſtimony entirely. The Reader ſhall have an Inſtance of this from Father *Navarette* [u], and in his own Words, that we may not ſeem to juſtify the Truth of this Obſervation, by giving an extravagant Turn to what he relates.

“On the Sea-coaſts, ſays he, of the *Chineſe* Iſlands, there is a very ſingular Bird called *Tabon*; now what I, and many beſides me admire is, that being no bigger in Body than an ordinary Chicken, though its Legs are very long, it lays an Egg larger than that of a Gooſe; ſo that the Egg is really bigger than the Bird itſelf; and no Man living would judge that the Egg could be contained within it: In order to lay its Eggs, it digs in the Sand above a Yard in Depth; after laying, it fills up the Hole, and makes it even with the reſt; there the Eggs hatch with the Heat of the Sun and Sand. When the Chickens are hatched, by natural Inſtinct, they break through the Sand upwards; and ſo get out of that Dungeon their Parent put them into; then they walk directly to the Sea in ſearch of Weeds to feed on. Another Thing in it is wonderful, which is, that they are not ſtifled when they come out of the Shell with the Heat and Weight of the Sand, how they breathe till they get out, and how they have the Strength to break through ſo great a Weight. They are Prodigies of the Almighty's making. The *Indians*, to find theſe Eggs, ſtick ſharp Canes into the Ground; when they find the Sand light, they ſtop and throw it up ſomething above the Length of a Man's Arm, and there they find them. They are of a pleaſant Reliſh; one of them is enough for a Man who has a good Stomach; the ſtaler the Egg the better. One Morning, having been on ſhore, and near the Place where theſe Birds reſorted, we repaired thither carefully, and making a Noiſe, a great Company of them came out of their Holes, in which we found many Eggs, ſome hot, ſome cold, ſome white, ſome of the Colour, of the Sand, which were ſtale ones. I had before eaten of the latter, and now eat of thoſe that were freſh and warm; but, in truth, the ſtale ones were much better. There were

[u] *Hiſtory of China.*

“ among them ſome which had Chickens, and I obſerved, that the *Indians* eat them eagerly, and they courted me to eat, but I could not endure to look at them, and it went againſt my Stomach to ſee other People eat them. Once they preſſed me ſo much, that at laſt, not without great Averſion, I reſolved to taſte one ; I did ſo, and made an End of it, regretting very much that I had not eaten of them before. I muſt own, that, ſince I was born, I never eat any thing more pleaſant and palatable, and I am convinced, there is nothing in the World to compare to it.”

There may be, and doubtleſs there is, a great deal of Truth in this Relation ; that is to ſay, there is ſuch a Bird, its Eggs are very large, and they are eaten as the Author deſcribes ; but then every thing is ſo much exaggerated, that the whole has the Air of a Fable, which ſhews plainly to how little Purpoſe large Collections are made of ſuch kind of Writers, ſince what they relate cannot either entertain or inſtruct, becauſe it is impoſſible to read ſuch Stories without ſuſpecting and diſbelieving them. But to return to the remarkable Birds mentioned by the Moderns.

All the Writers that have mentioned *Macaſſar* inform us, that no Country in the World produces ſo many ſpeaking Birds. Amongſt theſe there is none more extraordinary than the *Lory*, which is as big as a Parrot, but infinitely more beautiful in its Plumage ; its Breaſt, which is very large and high, being covered with bright yellow Feathers; the Wings are green, the Head black, and ſhining with a yellow Bill. The *Indians* give ſometimes thirty Crowns for ſuch a Bird, becauſe they will learn and ſpeak ſeveral Languages, and are very tame. There is another with large and long Tails, ſometimes three quarters of a Yard long ; theſe are blue on the Back, and yellow under the Belly, and commonly called Kakkataws, or *Indian* Ravens. Another kind there is which is white all over, except a yellow Tuft on the Head, which they ſet upright when they are vexed : They have alſo ſome Reſemblance both in Shape and Bigneſs to our Magpies, or Black-birds ; theſe imitate a Man's Voice much more diſtinctly than Parrots, they are of a blueiſh Colour, mixed with dark purple Spots and Streaks ; they have a yellow Tuft on the Head, which is black, and as ſmooth as Velvet [w].

The Kokoy, which is common in the *Indies*, is a kind of Heron, but much exceeding ours in Beauty, being yellow before, and green over all the reſt of its Body. On the Head he has a delicate Plume ſpreading all over the Neck; the young ones eat tolerably well, but the old ones eat tough, and taſte much of Fiſh. The Kolibry is the leaſt of all Birds, being no bigger than a Horſe-Fly, it hath a very ſharp Bill, with which it ſucks its Suſtenance out of the Flowers, though ſome are of Opinion it feeds upon the Dew ; it has all the Colours of the Rainbow, and its Wings are not unlike thoſe of Pigeons or Ducks. It builds a very neat Neſt to the South, under the Branches of Orange, Lemon, or Cotton Trees, to defend itſelf againſt the Injuries of the North Winds. Its Eggs are no bigger than Peaſe. There is another which ſings exceedingly fine, but not ſo beautifully coloured ; it weighs no more than 24 Grains [x].

17. Theſe Obſervations plainly diſcover, that no Part of the World was better ſtocked with uſeful, valuable, and beautiful Creatures than the *Indies*. For domeſtic Service, beſides the Horſe and the Aſs, which are common with us in *Europe*, they had the Elephant, the Camel, and the Dromedary, fitted in every reſpect for carrying on the inland Commerce of that Country, which was in all Ages very conſiderable. They had for the Service of Agriculture a very ſtrong Race of black Cattle, and for the Pleaſure of Hunting, they had the fineſt Dogs that we read of in Hiſtory for Courage, Speed, and Strength. If their Woods were full of wild Beaſts, they had it in their Power to leſſen the Number of theſe Enemies ; and to turn this to their Profit, as well as to their Diverſion, the Skin, Horns, Teeth, or other Animal Productions, ſufficiently compenſating the Trouble they took, and the Dangers to which they were expoſed in the Chace.

The Sea that waſhed their Coaſt, and the Rivers that watered their Country, were abundantly provided with Fiſh, ſo that no People had either better or greater Plenty, which to the lower ſort was a great Relief ; they likewiſe drew a very conſiderable Profit from their Fiſheries, eſpecially thoſe of Purple and Pearl, and from the Sale of Tortoiſe-Shell, which was highly valued in thoſe Times for its admirable Clearneſs, and for the Beauty and Variety of its Colours. The Birds and Fowls in the *Indies* were likewiſe of all ſorts, and all of them the largeſt and fineſt in their reſpective kinds. The Birds of Prey, and particularly the Pelican and the Cormorant, were of great Service; for the former feeding naturally upon Snakes, Serpents, and other Vermin, cleared the Country of them in thoſe Months when they were moſt numerous and moſt dangerous ; and as for the latter, they taught them in *China*, and other Parts of the *Indies*, to catch Fiſh, and to bring them to ſuch as kept thoſe Creatures, as we ſhall ſee hereafter in its proper Place. As for Geeſe, Ducks, Hens, and other domeſtick Fowl, they were, and are ſtill as common and as cheap as in any Country in the World ; and of the beautiful Feathers of a Multitude of other Birds, they made Hats, Umbrellas, Screens, and other Utenſils of exquiſite Workmanſhip, and at the ſame time of great Price.

There is no great Wonder therefore, that all the antient Writers, ſuch as *Strabo*, *Pliny*, *Arrian*, *Plutarch*, *Ælian*, and many others, ſhould ſo highly extol this Country, and ſpeak of every thing found therein with Aſtoniſhment. But notwithſtanding all this, it muſt appear ſomewhat ſurprizing, that the Antients were acquainted with Animals, Trees, Fruits, and precious Stones, of the moſt diſtant Parts of the *Indies*, to which without doubt they never penetrated at all, notwithſtanding what we find reported in their Writings of the Iſlands of *Taprobana*, *Panchaia*, the Country of the *Seres*, and other Places, which renders it neceſſary for us to give a clear Account of that Point, which ſhall be done in the two ſucceeding Sections, which will conclude our Labours with reſpect to the antient Hiſtory of *India*.

SECT.

SECTION XV.

An Account of the Deſcriptions left us by the Ancients of the Eaſtern and Northern Parts of the Indies, *the Notions they had of their Riches, together with an Enquiry into the Reaſons which hindered the extending their Diſcoveries on that Side.*

1. *A brief Deſcription of the Country of the* Sinæ *or* Thinæ *from ancient Authors.* 2. *Obſervations on the foregoing Deſcription, proving, that this Country was the Kingdom of* Siam. 3. *Of the* Indian *Iſlands, as deſcribed by old Authors; and more particularly of the famous Iſland of* Taprobana, *and their Miſtakes about it.* 4. *This Point more particularly inquired into, and the* Taprobana *of the Ancients ſhewn to be no other than the Iſland of* Ceylon. 5. *Of the Country called* Serica, *and the Nation of the* Seres, *from the beſt Writers of Antiquity.* 6. *An Objection ariſing from the Knowledge which the Ancients had of the* Chineſe *fully ſtated, and clearly reſolved.* 7. *A ſecond Objection taken from the Commerce of the ancient* Chineſe, *ſtated and examined.* 8. *A third Objection from the ſeeming Diſcordancy of theſe Accounts, explained and refuted.* 9. *An Account of the Iſland of* Panchaia, *and a full Proof of its being abſolutely imaginary.* 10. *The high Ideas which the Ancients had of the Riches of the undiſcovered* Indies. 11. *Their Errors as to the Poſſibility of eſtabliſhing a regular Commerce with thoſe Countries.* 12. *The Cauſes which impeded their Diſcoveries, and occaſioned the Decline of that Trade which they actually had to the* Indies. 13. *The Concluſion of this Part of our Subject, with Obſervations and Remarks on the principal Paſſages therein.*

1. IN what has been delivered in the former Sections, we have confined ourſelves to ſuch Points as regard the actual Diſcoveries of the Ancients. But it is no leſs neceſſary to give the Reader ſome Account of another ſort of Diſcoveries, I mean ſuch as were made by their Geographers, who by the Help of ſuch Relations as were, from time to time, publiſhed of theſe diſtant Countries, and which are long ago loſt, compiled a ſyſtematical Account of the Regions bordering upon, and even thoſe that lay very far beyond the *Ganges*. It is however certain, that they were but very indifferently informed as to the Courſe of this River; and *Cellarius* [a] corrects the Miſtake of *Artemidorus* in *Strabo*, who ſays that, from the Mountains called *Emodi*, it runs South as far as the Town of *Ganges*, and afterwards Eaſt, becauſe it is contrary to the Diſcoveries of our Times.

The firſt remarkable Town mentioned by *Ptolemy* beyond the furthermoſt Mouth of the *Ganges* was *Pentapolis*, or rather this was the Name of a Diſtrict; next to that lay the Emporium, or Mart of *Baracura*, beyond the Mouth of the River *Toccoſanna*, then the Country called *Argentea*, with ſeveral Towns; next to that lay the Country of the *Biſyngetti*, who were Man-eaters, their Capital *Beſynga*, an Emporium. From hence Southward lay the *Aurea Cherſoneſus*, or *Malacca*. On the Weſt Side of it *Tacola*, an Emporium, and on the Eaſt Side the Cape *Malæi-Colon*, with ſeveral Towns [b]. Many are of Opinion, that this was *Solomon*'s *Ophir*, which ſeems to be favoured by *Joſephus* [c], who ſays, *Solomon*'s Veſſels ſailed into a Country of *India*, formerly called *Sophira*, but then the *Golden Land*; *St. Jerom* ſays, it was alſo in *India*, but calls it an Iſland.

Bochart [d] alledges it was the Iſland *Taprobana*, now *Ceylon*, and founds his Conjecture upon an Etymology. But *Cellarius* rejects as mere Dreams the modern Diſputes about *Ophir*, and ſees no juſt Cauſe why the latter Opinions ſhould be better than the former. He ſays, the Length of the Expedition mentioned in the ſacred Hiſtory ſhews, that *Ophir* muſt have been at a great Diſtance from *Paleſtina*, or the *Arabian* Gulph; yet he is not diſpleaſed that *Bochart* diſtinguiſhes betwixt the *Indian* and *Arabian Ophir*, becauſe the Gold of *Ophir*, mentioned in the Book of *Job* [e], could not, becauſe of the Ignorance of thoſe Times, be eaſily underſtood of the *Indian* Gold. *Bochart* places the *Arabian Ophir* near the Country of the *Sabæans*, and thinks the *Arabs* called the *Indian Ophir* by its Name when they diſcovered it. Beyond this *Cherſoneſus* to the North lay the Country of the *Læſtæ*, who were Pirates and Robbers. The River *Sobannus* runs through it. Next to that lay *Ptolemy's Sinus Magnus*, in which were *Balonga* and *Corgatha*, Metropolitan Towns; and here *Ptolemy* finiſhes the maritime Coaſt of *India* beyond *Ganges*. The inland Parts were ſo obſcure, that it is needleſs to inſiſt upon them by the Situation of the Country; theſe Places laſt-mentioned ſeem to have been in that Kingdom which is now called *Siam*.

2. The next Country deſcribed by *Ptolemy* is that of the *Sinæ*, which he places fartheſt towards the Eaſt of all the Regions mentioned by him, as lying beyond the great Bay or Opening of the Sea, which he ſtiles *Sinus Magnus*, and ſays, their Country extended very far to the South. It is well obſerved by *Cellarius*, that this Country is not to be confounded with the modern *China*, although it reaches as far North as *Serica* [f]. *Ptolemy* calls the Country beyond this to the Eaſt and South, *Terra Incognita*, and bounds it on the Weſt by *India* beyond the *Ganges*. He places about the Equator the *Ethiopes Ichthyophagi*, or Fiſh-eating *Ethiopians*, and beyond the Equator the River *Contiares* and *Catigara*, which he calls a Harbour of the *Sinæ*. *Martianus Heracleota* [g] places the *Sinæ* likewiſe at the Extremity of the habitable World towards the Eaſt, and next to the *Terra Incognita*, or Country to that time undiſcovered.

It muſt be allowed, that all this is very dark and very perplexed, ſo that it is extremely difficult to paſs any certain Judgment as to the Places mentioned. On the other hand, however, it ought to be conſidered, that even theſe dark and obſcure Accounts are infinitely better than the Fables that preceded them, and the ridiculous Stories that prevailed of theſe Countries and their Inhabitants in ſucceeding Times. If we compare what *Ptolemy* has written with the confuſed Accounts that *Pliny* has collected from ancient Authors, we may eaſily diſcern that one contented himſelf with Fables, and tranſcribed whatever came to hand, to ſhew a Variety of Reading, whereas the other examined very carefully ſuch Deſcriptions as he received from the Merchants that traded in theſe Countries, and by comparing them with each other, he gathered from them ſuch Lights as enabled him to draw up a ſhort and imperfect Account indeed, but at the ſame time ſuch an Account as appears very conformable to Truth; and would appear much more ſo, if the Manuſcripts of *Ptolemy* were not incumbered with ſo many various Readings, which renders it extremely difficult to come at the true Senſe of that learned Writer.

In the following Ages again, when *Science* once more gave way to *Fable*, the World was amuſed with wild and ridiculous Accounts of theſe Countries, and he who wrote the ſtrangeſt things was read with the greateſt Approbation.

---

[a] *Geograph. Antiq. Tom.* ii. *p.* 747. The Paſſage in *Artemidorus*, which he corrects, is found in *Strabo. lib. xv. p.* 494. [b] *Geograph. lib.* vii. *cap.* 3. *Tab.* 2. *Aſiæ.* [c] *Antiquit. Judaic. lib* viii. *cap.* 2. [d] *Geograph. Sacr.* [e] Job. xxii. 24. xxviii. 16. [f] *Iſaac Voſſ. de ætate mundi, cap.* 11. *p.* 276, 277, advances an Opinion very probable and worthy of Notice, *viz.* that the *Sinæ* of theſe ancient Writers are the *Siameſe*. The very learned Biſhop *Huet* is for extending this Denomination to the *Tonquineſe*, the *Cochinchineſe*, &c. but I am for adhering to *Voſſius*'s Conjecture, becauſe *Ptolemy* owns all beyond theſe unknown. [g] *In Peripl. Maris Erythræi.*

For this is a certain and juſt Obſervation, that in Times of Ignorance, what is moſt wonderful is the beſt received, and that on the contrary in the learned Ages plain and unadorned Relations are the moſt eſteemed. The Deſign of *Ptolemy* was to improve, as far as he was able, that Branch of Knowledge, to the Study of which he had addicted himſelf, and not to report the Notions of other Men, who wrote for the ſake of ſeeming wiſer than the reſt of Mankind ; and therefore confidently ſet down as things certain what Fables ſoever they met with relating to theſe diſtant Parts of the World. But in *Ptolemy*'s Account, as we before noted, the true Method of treating the Subject is purſued, the Sea-coaſt diſtinctly deſcribed ; and if the Names only of a few Cities are mentioned, thoſe few ſeem to be all that from good Memoirs he was able to mention, ſo that the known and the unknown are not confounded ; but the Reader is clearly informed, that beyond ſuch a Tract theſe Eaſtern Countries are abſolutely undiſcovered, and therefore they were properly the Objects of future Inquiries.

This was the way, and indeed the only way of coming at real, certain, and uſeful Knowledge ; neither is it to be doubted, that the full Diſcovery of theſe Eaſtern Countries would have been purſued, if the Troubles and Diſturbances which overwhelmed the *Roman* Empire had not equally deſtroyed the Paſſion for exploring unknown Countries, and the Means of gratifying it. But beſides the Countries ſituated on the Continent, the Ancients had ſome Knowledge alſo of the Iſlands of *India*, partly from their own Commerce, and partly from the Reports of the *Indians*, with whom they traded on the Main; and therefore of theſe we are next to give ſome Account from the ſame Authorities.

3. *Ptolemy* places the Iſlands of the exterior *India* betwixt the Mouths of the *Indus* and *Ganges*. Thus, in the Bay of *Cembus* lies *Barace*, and from thence to the Bay of *Colchis*, *Milizigeris*, *Heptaneſia*, *Perperina*, *Triacadira*, *Trinecia*, *Leuce*, *Panigeris* ; and in the Bay of *Argaris* the Iſland *Cory*. *Taprobana*, which is the nobleſt and largeſt of all the Iſlands in this Sea, is placed by *Ptolemy* between the Bay of *Colchis* and *Algaris*. The Ancients differed much about its Situation, ſome placing it near the Continent, others twenty Days Sail from it; and ſome queſtioned whether it was an Iſland, or the Beginning of another Continent, particularly *Mela*[h] ; though before him it was generally reckoned an Iſland, as appears by *Dionyſius* in his *Periegeta*[i], which the learned agree to have been writ in the Time of *Auguſtus*.

Strabo[k] compared it to *Britain* for Dimenſions : *Pliny*[l], in his Account of the Embaſſy which the Inhabitants ſent to *Claudius Cæſar* (ſuppoſing the Iſland he ſpeaks of *Taprobana*) ſays, it contained five hundred Towns, and that *Palæſimundum* their Capital, and the Seat of their King, had two hundred thouſand Inhabitants, that they had a Lake called *Megiſba* of 375 Miles in Circuit, which contained ſeveral fruitful Iſlands, and ſent out two Rivers, one of which fell with three Mouths into the Harbour of *Palæſimundum*, that in ſome Places was five Stadia in Breadth, and in others fifteen ; this Harbour lay in the South Side of the Iſland, and they had another on the North called *Cidara*, four Days Sail from *India*, the Iſland of the *Sun* being in the Middle betwixt them. *Ptolemy* places it nearer the Continent, and though he makes it very long, and extends it beyond the Equator, reckons but thirty Towns in it ; nor does he ſay any thing of the great Lake, nor of the Town and River of *Palæſimundum*, all which occaſioned the Learned to doubt whether his and *Pliny*'s *Taprobana* was the ſame ; and though moſt agree now, that *Taprobana* was *Ceylon*, yet others will have it to be *Sumatra* : But *Salmaſius*, *Bochart*, and *Voſſius*, think it is *Ceylon*, it being incredible that the *Romans* or *Alexandrians* ever ſailed ſo far as *Sumatra*.

Cellarius thinks alſo that *Ptolemy*'s *Taprobana* was *Ceylon*, though he placed it too far South, and extended it beyond the Equator. It was anciently, as many Authors affirm, called *Inſula Palæſimundi*, and *Saliæ*, and the Inhabitants *Salæ*. Yet ſome, as is ſaid before, will have *Palæſimundum* to be different from *Taprobana*. The Towns and Capes mentioned by *Ptolemy* in this Iſland, were, 1. In the North Cape *Boreum*, over-againſt *Conry*, or *Conigicum* in *India*. 2. In the Weſt lay *Margana* and *Jogana*, with Cape *Anariſmundum* ; next to them the River *Soana*, the *Portus Priapeus*, Cape *Jovis*, and the Bay of *Praſodes*. On the South Shore lay the Mouths of *Hyſanus*, the Towns *Odoca*, *Dana*, or *Dagana*, ſacred to the Moon. The Promontory of the Birds of *Dionyſius*, with a Town of the ſame Name, and *Cetæum*. On the Eaſt-ſide lay the Harbours of *Mordus*, *of the Sun*, *Rhizola* and *Spatana*, with the Town of *Procurus*, and a River called *Ganges* ; and towards the North lay the great Marts of *Moduti* and *Talacori*. In the inland Parts northward were the royal Seat *Anurogramum*, and the Metropolis *Magrammum*.

Pliny's *Iſland of the Sun* is different from that which others place near *Gedroſia* and *Carmania*, and ſome think it to be *Cory*. *Ptolemy* reckons in the Bay of *Ganges* the Iſland *Bazacata* ; and far from hence ſouthward, under the Equator, the *Iſland of good Fortune*[m] ; and near the great Bay, againſt the Country of the *Sinæ*, he places the three *Iſlands of the Satyrs* ; and from hence ſouthward, the Iſland of *Jobadium*, which produced Gold, and whoſe Capital was named *Argentea*. *Cellarius* corrects *Stephanus* for making this the Metropolis of *Taprobana*. Ancient Authors mention ſeveral other Iſlands in theſe Parts ; but *Cellarius* looks upon many of them to be fabulous, and takes their *Chryſe* to be the ſame with the *Aurea Cherſoneſus*, or Peninſula of *Malacca*.

4. In the Examination of theſe Points, I have hitherto followed other Writers, and reported their Sentiments on the Subject, for the Reader's Information ; but as I am afraid that what has been hitherto ſaid will appear a little dark and perplexed, I think it may not be amiſs to endeavour, by a due Compariſon of Facts, to find out the Truth ; and, without any unneceſſary Diſplay of Learning, ſet this ſeemingly confuſed Matter in the cleareſt Light to the *Engliſh* Reader.

In the firſt Place, then, I lay it down as a Thing certain, that the Name of *Taprobana* was long known to the Ancients before they had an Opportunity of being acquainted with the Country itſelf ; and as they were told in general, that this Iſland was very large, thoroughly inhabited, abounding not only with all the Neceſſaries and Conveniencies of Life, but alſo with Spices, precious Stones, Gold, and other rich Commodities, they were very deſirous of knowing it more perfectly ; and therefore, whenever they met with any Accounts of an Iſland in the *Indian* Sea that was fertile, pleaſant, and abounding with rich Commodities, they immediately pronounced it *Taprobana*, of which they had heard ſo much.

Thus that Iſland, which was viſited by *Iambulus*, of which we have before given a large Account, was, without Heſitation, taken for *Taprobana* ; though the Author of that Voyage does not either call it ſo, or deſcribe it in ſuch a Manner as to juſtify their Suppoſition, when thoroughly conſidered. In like manner, *Pliny* makes no Scruple of aſſerting that the Iſland which *Annius Plocamus* diſcovered, and from whence Embaſſadors were ſent to the Emperor *Claudius*, was *Taprobana* ; which, however, we have diſproved, as the Reader has already ſeen. Hence it was that ſuch different Accounts were given of this Place ; one Author affirming it near the Continent, another at a great Diſtance from it, according as they affixed the Name of *Taprobana* to this or that Iſland which had been diſcovered in their Times.

I muſt confeſs, it ſeems very probable, that ſome of the more ancient Writers, ſuch as *Dionyſius*, *Strabo*, and *Pliny*, when they ſpeak as Geographers of the Iſland of *Taprobana*, mean the true Iſland ſo called, that is, the Iſland deſcribed by *Ptolemy* ; but as for the Iſland diſcovered under the Reign of *Claudius*, which was firſt called *Palæſimundus*, and afterwards *Salica*, it was not *Taprobana*, but the Iſland at the Mouth of the River *Indus*, which had been long before known to and examined by

---

[h] *De Situ Orbis*, *lib.* iii. *cap.* vii. where, however, he mentions this as the Sentiment of *Hipparchus*.

[i] *Periegot. Verſ.* 252. which is thus tranſlated by *Avienus Feſtus*, *Inſula Taprobanæ gignit feros Elephantes*.

[k] *Geograph. lib.* xi.

[l] *Hiſt. Nat. lib.* vi. *p.* 22. As I have before given this Account at large, I only mention ſo much of it here as is neceſſary to connect the Diſcourſe.

[m] *Ptol. ubi ſupra.*

Alexander the Great; and I conceive that the calling of this Iſland by the Name of *Taprobana*, was the principal Occaſion of all the Miſtakes and Confuſion that have been diſcovered in ſubſequent Accounts.

But as for the *Taprobana*, which *Strabo* mentions very cautiouſly, and as a Writer afraid of offending the Truth, and which *Ptolemy* more largely deſcribes from the Accounts that were current in his Time at *Alexandria*, it is moſt likely to be the Iſland of *Ceylon*. I ſhall not trouble the Reader with a long Account of the Reaſons which other Writers have aſſigned for this Opinion, but content myſelf with giving him, as ſuccinctly as I can, the Motives which have induced me to believe that the Iſlands of *Taprobana* and *Ceylon* are the ſame. In the firſt Place, the Situation of *Taprobana*, as laid down by *Ptolemy*, agrees very well with that of the Iſland of *Ceylon*. He mentions four Places in *Taprobana*, and ſets down their Latitudes thus. The Mart or Emporium of *Talaconi* 11° 20', *Nagadiba* 8° 30', *Maugramman*, which was the Metropolis of the Iſland, 7° 20', the Bay of *Praſodes* 1° 0'. The beſt modern Maps lay down the Iſland of *Ceylon* from one to ten Degrees of North Latitude, the Capital of the Iſland lying very near in the ſame Poſition with that which *Ptolemy* has aſſigned it. In the next Place, the Ancients ſay that *Taprobana* was famous for producing the largeſt Breed of Elephants, which is true of *Ceylon*, where the Elephants are acknowledged to be the largeſt and ſtrongeſt in the *Indies*. Thirdly, *Taprobana* was celebrated for its Spices; and in *Ceylon* there are found not only Ginger, Pepper, and Cardamums, but Cinnamon alſo is the ſtaple Commodity, and is very juſtly eſteemed the fineſt in the World. Fourthly, there are ſaid to have been abundance of precious Stones in this Iſland of *Taprobana*; and, except Diamonds, all Sorts of Jewels are found in *Ceylon*, and particularly Rubies, Topazes, and Saphires, the beſt in all the *Indies*. Laſtly, *Taprobana* is celebrated for its great Fertility in various Sorts of Corn, and this too may be affirmed of *Ceylon*, where they have not only five Kinds of Rice, which ripen one after another, but alſo eight other Kinds of Grain, of which they make either Bread or Oil. On the whole, therefore, when we conſider that all the Variations in the Accounts given us by the Ancients of the Iſland of *Taprobana*, may be ſo eaſily accounted for; and that this laſt and cleareſt Deſcription by *Ptolemy* is ſo reconcileable to the Accounts we have of *Ceylon*, I ſee no Reaſon why we ſhould not acquieſce in the Sentiment of the learned *Voſſius*, that the *Taprobana* of the Ancients is the *Ceylon* of the Moderns [n].

It may indeed be objected, that *Ptolemy* extends the Iſland of *Taprobana* ſouthward beyond the Line, which does not by any means agree with *Ceylon*; but I anſwer to this, that *Ptolemy* ſometimes uſes the plural Number, and mentions the Iſlands of *Taprobana*; ſo that it is not impoſſible that he might include ſome of the *Maldives* under that Name. I do not ſay that this is certain, but that it is poſſible, and, I might add, probable too; becauſe ſince the Ancients were acquainted with the Sea in which the Iſland of *Ceylon* lies, and the Coaſt that is oppoſite to it on the Continent, it is not eaſy to conceive how they could be abſolutely ignorant of ſo conſiderable an Iſland, which lay directly in the Way of all the Commerce carried on in this Part of the *Indies*. On the other Hand, if the Ancients were really acquainted with *Ceylon*, as it is very improbable that they ſhould not, this furniſhes us with a new Argument, and indeed the ſtrongeſt Argument of all, that their *Taprobana* was our *Ceylon*; for, if it was not, it is moſt certain that the Ancients have left us no Account of any Iſland that reſembles it, which is a Piece of Negligence of a Nature directly oppoſite to their uſual Exactneſs [o].

5. It is to be obſerved farther, that, except *Taprobana*, the Ancients do not mention any Iſlands on the Coaſt of *India* of any Conſequence; and from hence it is plain, that they were not acquainted either with the larger or leſſer Iſlands that lay farther to the Eaſt. It is neceſſary, therefore, that we ſhould return once more to the Continent, in order to mention another eaſtern Nation, very famous in Antiquity. Theſe were the *Sares*; and their Country is by *Ptolemy* called *Serica*, which he repreſents as bordering upon *Scythia*; ſo that, according to his Deſcription, this Country of *Serica* lay thus. On the Weſt it was bounded by *Scythia* beyound Mount *Imaus*. On the North, and on the Eaſt, by Countries unknown; on the South by *India* beyond the *Ganges*. *Ptolemy* mentions many Regions into which this Country is divided, and abundance of Cities in them, in all which he has been copied by many ſucceeding Writers; but it is not eaſy to ſay what Part of the higher *Aſia* they have deſcribed under the Name of *Serica* [p].

Many of our Criticks are of Opinion that *Serica* is the northern Part of *China*, which may poſſibly be true; tho' in that Caſe, it is not very accurately deſcribed. But the Accounts they give us of the People are much ſtronger and better Proofs, that by the *Seres* they meant the *Chineſe*, than any that can be drawn from the Deſcription of their Country. The *Seres*, ſay they, were a People that ſpoke a Language peculiar to themſelves, and very *guttural*, which is exactly true of the *Chineſe*. They were very juſt in their Dealings with Strangers, but had a very odd Way of carrying on Commerce; for they took all the Goods that were brought them, without giving any Thing immediately in Exchange: Yet afterwards they fully ſatisfied the Strangers for what they had thus taken, in their own Commodities. This, as we ſhall hereafter ſee, was likewiſe the conſtant Practice of the *Chineſe*, as it ſtill is of the *Japoneſe*. It is alſo affirmed of the *Seres*, that they were the firſt Manufacturers of Silk, that they were, generally ſpeaking, cloathed in that Manufacture, and that they made their Exchange either in Silk or in Goods made of Silk, which agrees perfectly well with the Practice of the *Chineſe*. So that, on the whole, we have no Reaſon to doubt that the *Seres* and the *Chineſe* were the ſame People; eſpecially as all the ancient Writers agree, that the *Seres* were extremely fond of their own Country, very diffident of Strangers, and not inclined to travel, which are all of them Circumſtances very applicable to the Inhabitants of *China*, before their Country was ſubdued by the *Tartars* [q].

It muſt, however, be confeſſed, that there are ſome Variations in theſe ancient Accounts, and that ſeveral Writers mention Circumſtances that do not ſo well agree with the *Chineſe* as thoſe that have been related; and yet there ſeems to be no juſt Cauſe from the Conſideration of theſe Miſtakes, to reject the Matter of Fact, which, from the foregoing Circumſtances, appears to be ſo well founded; for if we conſider the Contradictions met with in modern Writers, and particularly ſuch as have teated of this Country, inſtead of being ſurpriſed at the Miſtakes of the old Geographers, we may juſtly wonder, that their Errors were ſo few, and of ſo little Conſequence; more eſpecially, if we reflect on the prodigious Difference between their Lights and ours [r].

---

[n] I have been guided in my Remarks on this Subject, by comparing the Tables of *Ptolemy* with the beſt modern Maps, and the Particulars mentioned of this Iſland by ancient Writers, with the Remarks made by Mr. *Robert Knox*, who was many Years on the Iſland, as well as thoſe of *Ribero*, a *Portugueze*, who likewiſe reſided for a great while in *Ceylon*.

[o] In *Ptolemy*'s Catalogue of famous Cities, with their Longitudes and Latitudes, which is very accurately publiſhed in the third Volume of Dr. *Hudſon*'s Collection of the ancient *Greek* Geographers, *Ptolemy* uſes the plural Number, and ſeems to make *Taprobana* the chief of ſeveral Iſlands; and it is remarkable that our firſt Voyagers to the *Eaſt Indies* aſſert, that the little Princes of the *Maldives* were ſubject to the King of *Ceylon*.

[p] As *Ptolemy* was forced to ſupply from his own Judgment the Situation of the Regions he mentions, and as all the Maps drawn from his Tables depend likewiſe in a great meaſure on the reſpective Judgments of thoſe who drew them, the Reader cannot but diſcern the Reaſonableneſs of what I have aſſerted in the Text.

[q] All this will be fully juſtified in our ſucceeding Collection of Voyages, which, by their being placed in the proper Order of Time, will enable the Reader to underſtand the Matter perfectly, and to ſee clearly the Truth of theſe Obſervations, which are not intended to leſſen the Credit of the Ancients, but to repreſent Things as they really are.

[r] This Difference chiefly conſiſts in their Writings from Memoirs picked up by their Merchants, and from the Reports of the *Indians*; whereas we take our Accounts not only from ſuch as have actually viſited theſe Countries themſelves, but from thoſe who have reſided there many Years, and have had all poſſible Opportunities of knowing the Facts which they relate.

6. There are, however, ſome Objections that will naturally occur to the intelligent Reader, and ought not to be paſſed over in Silence, becauſe if they cannot be fully anſwered, they have a direct Tendency to overturn the beſt Part of what we have delivered, and therefore it is requiſite that we ſhould conſider them more at large. The firſt is, that if we ſuppoſe the Ancients to have been acquainted with *China* and the *Chineſe*, it abſolutely contradicts what has been before aſſerted of their knowing little or nothing of the Countries beyond the *Ganges*, and extends their Knowledge of the Eaſt to ſuch a Degree, as is abſolutely incompatible with the Sentiments of the moſt learned Writers upon this Subject, as well as with the foregoing Part of our own Work; ſo that, inſtead of clearing this Matter, we ſhould only perplex it the more, and be ſo far from making it conſpicuous to the *Engliſh* Reader, that on the contrary we ſhould entangle him in new Doubts, and leave him upon the whole in at leaſt as great Obſcurity as we found him. That this, notwithſtanding, is very far from our Intention, appears plainly from the Pains already taken, and from our ſtating this Objection fully and fairly; and it ought likewiſe to paſs for a ſtrong Teſtimony of our aiming at Satisfaction in this Point, that we ſo freely mention the Difficulties that occur in the Execution of this Undertaking.

In order to the clear Solution of this Point, it is neceſſary to remember, that in this Section we do not handle the actual Diſcoveries of the Ancients, but the Accounts given by their Geographers, which are very different Things. We ſuppoſe, agreeable to the beſt Lights that Antiquity affords, that the Ancients never actually ſailed farther than the Mouths of the *Ganges*, and that they might do by coaſting round Cape *Comorin*, and ſo along the Coaſt of *Coromandel*; neither is it very probable that they made many Voyages ſo far, but rather that the beſt Part of their Knowledge was derived by Travels made by Land through the Countries that lie between the Rivers *Indus* and *Ganges*[a].

Upon this Suppoſition, all that they have written may be very well accounted for, and the ſeeming Differences between what is related in the foregoing Sections and this very eaſily reconciled. To make this Matter clearer, we will examine in their natural Order the Seas mentioned by ancient Writers, which will in a great meaſure enable us to extricate ourſelves from theſe Doubts. In the firſt place then they navigated the *Mare Erythræum*, which lies between the *Arabian* Gulph, and the oppoſite Side of *India*; and having in their Commerce often heard of *Taprobana*, they were led into many Miſtakes about that Iſland, till by degrees their Veſſels ſailing on the Coaſt of *Malabar* in doubling Cape *Comorin*, diſcovered *Ceylon*, which is the true *Taprobana*. The Gulph of *Bengal* was their *Mare Eoum*, and the upper Part of it towards the Continent *Sinus Gangeticus*, or the Bay of the *Ganges*, becauſe the Mouths of that River fell into this Bay. The Gulph of *Siam* was their *Sinus Magnus*, or *Great Bay*; but this they knew by Hearſay only, their Navigation never extending thither.

But it may be demanded what Proof there is of this? To which I anſwer, all that the Nature of the Subject will admit affirmative and negative. As to the firſt, it is plain they never were thoroughly acquainted with the Iſland of *Taprobana*. *Strabo* makes it of the Size of *Britain*, and writes no doubt from Information only pretty near the Truth; but *Ptolemy* extends it much beyond its real Bounds, by ſuppoſing (at leaſt this is the only way of accounting for it) the *Maldives* belonging thereto, or dependent thereon. Yet the Situation of the principal Places he mentions therein are not repugnant to Truth, ſo that the Weſt and North Parts of it were tolerably known in his Time, but not the South. The *Maldives* very imperfectly, if at all; and therefore the *Romans* and *Alexandrians* had not puſhed their Commerce very far on this Side, much leſs into the *Sinus Magnus*, or Bay of *Siam*. This appears from the very Name, which undoubtedly was given it from a Notion that it was a very wide ſpreading Sea, whereas in Fact it is much narrower than the *Sinus Gangeticus*.

As to the negative Proofs, they are ſtronger and more in Number: For in order to have ſailed into the *Sinus Magnus*, they muſt have paſſed through the Streights of *Malacca*, which had opened to their View all the *Indies* that are now known, and of which there is not a Word in *Ptolemy*, or even in *Ammianus Marcellinus*, and conſequently no Colour for believing they had any other Knowledge of that Bay than from the Relation of the *Indians*, with whom they traded. Their actual Diſcoveries therefore went no farther than we before mentioned; but by the Help of theſe Diſcoveries, the Reports of Travellers, and his own Sagacity, *Ptolemy* formed his Tables, which ſeem to extend the Knowledge of the Ancients ſo much farther. We might, to verify this Matter, mention a Multitude of Errors in thoſe Tables, and in other Accounts of thoſe Times, which could ariſe from no other Cauſe than their Authors ſetting down the Names and Situation of Places from very indifferent Memoirs, and yet from the beſt they had; but that this is unneceſſary, ſince *Ptolemy* himſelf ingenuouſly owns, that beyond the Country of the *Sinæ*, or *Thinæ*, which is certainly the Kingdom of *Siam*, they knew nothing to the Eaſt at all.

It is moſt evident from theſe Obſervations, that we have done the ſtricteſt Juſtice to the Ancients, both with reſpect to the Voyages made by them, and the Uſes they made of the Knowledge derived from thence; and have ſhewn, that inſtead of treating their Geographical Deſcriptions with Contempt, as ſome have done on Account of the many Miſtakes in them, we ought rather to applaud their Diligence in making the beſt Uſe of the Materials in their Power, and thereby furniſhing to ſuch as are their profeſſed Admirers very plauſible Arguments for maintaining, that the Ancients knew almoſt as much of theſe Countries as ourſelves. Indeed, while they ſpeak in general Terms only, they ſeem to juſtify this Opinion; for they aſſure us, that this Eaſtern Part of the World is inhabited by the *Indians*, the *Seres*, and the *Scythians*; that is, in the Language of the Moderns, by the *Indians*, the *Chineſe*, and the *Tartars*, which is very true; but when they endeavoured to aſſign the Bounds of the ſeveral Countries which thoſe Nations inhabit, they ſhew us plainly that they do not underſtand what they themſelves ſaid, by their bringing the *Chineſe* almoſt as far as the *Ganges*, and placing beyond them a Race of Man-eaters in *China* properly ſo called. To ſum up all, and anſwer this Objection in few Words, the Accounts left us by the Ancients do not prove that they viſited any Part of the *Indies* beyond the *Ganges*, though the Informations they received in their Commerce enabled their Geographers to lay down Tables of a few other Countries, about which, however, they were much miſtaken in their Conjectures.

7. It may very poſſibly happen, as it very often does, in the diſcuſſing ſuch perplexed Subjects, that by removing one Objection the Means is afforded of raiſing another; and that perhaps no leſs ſpecious than the former. It may in ſhort be ſaid, that from the Account we give of the Knowledge the Ancients had of the *Seres*, which we allow to be the *Chineſe*, we admit that they had extended their Dominions very much beyond what they poſſeſs at this Day; and, as great Conqueſts are evident Proofs of extraordinary Power, it follows, that the *Seres* could not have been ſuch a diſperſed People as they are repreſented, but muſt have poſſeſſed a very large and flouriſhing Empire, which, if they had done, it muſt have been famous through the Eaſt, as the other Empires raiſed in that Part of the World were. The Force of this Objection, therefore, conſiſts in making the Deſcription given us by the Ancients inconſiſtent with itſelf, and by overturning that, our Anſwer to the former Objection will be overturned alſo.

Now to this I anſwer, that the Matter of Fact, which is, that the *Chineſe* were known to the Ancients by the Name of the *Seres*, has been clearly made out; and therefore there is no receding from that, let its Conſequences be what they will. But it ſo falls out, that we have not only the Authority of the ancient Writers before cited, to prove that the *Seres* or *Chineſe* extended themſelves very far on this Side, but alſo the Accounts of the *Chineſe* themſelves, which aſſert, that they were Maſters of *Cochin-China*, and

---

[a] The Reader will naturally call to mind on this Occaſion what we have already ſaid of *Megaſthenes* and other Perſons, whoſe Negociations with the *Indian* Princes gave the Ancients not only the firſt, but the beſt Lights they had into the Situation of theſe Countries, and the Manners of the Inhabitants.

Pegu; that is, in all Probability, thoſe Countries were ſubject and tributary to them. It is likewiſe very probable, that they were Maſters of *Tibet*, or *Thibet*, from whence it will follow, that whoever traded in the Countries near the Mouth of the river *Ganges*, might very well obtain ſome ſuch dark and imperfect Relations of the *Seres* as thoſe are which the Ancients have left us; and upon this Occaſion I ſhall not ſcruple to advance, that their Darkneſs and Imperfection, inſtead of being conſidered as Marks of Falſhood, ought in reality to paſs for Proofs of their being true; for it plainly appears from a Multitude of inſtances, which we have already given in this Work, that not only the *Chineſe*, but the *Indians* alſo, were very little inclined to let Strangers into the Hiſtories of their Countries, or into the Secrets of their Governments; and therefore it was very natural for ſuch as endeavoured to make Enquiries into theſe Matters, to report Things ſlightly and imperfectly. We may be the better ſatisfied of this, if we conſider, that it appears from all the Accounts of the *Indies* publiſhed by the Ancients, that theſe Countries were extremely populous, full of large Cities well fortified, and a great Number of Sea-ports, in which a great Trade was driven amongſt themſelves; theſe Particulars plainly prove, that, however barbarous their Cuſtoms might appear to Strangers, yet within themſelves theſe Eaſtern Nations were perfectly well governed, and in the ſtrict Senſe of the Word thoroughly civilized.

What ſerves chiefly to confound us is our conſidering the *Indians* of thoſe Times in the ſame View that they are repreſented to us by modern Travellers, which is what we ought not to do; for though it be reaſonable, and in that Light we have made uſe of it often as a probable Argument, that the Accounts given us by ancient Writers of Wives burning themſelves with the dead Bodies of their Huſbands, the *Brachmans* living in a kind of Collegiate State, and the whole People being divided into Tribes, are true, becauſe in a great meaſure we obſerve the ſame things among the *Indians* at preſent, yet it does not follow that in every reſpect the modern *Indians* reſemble their Anceſtors. On the contrary, we ought to reflect, that the Accounts we have from the Ancients refer to the firſt and flouriſhing Ages of the *Indian* Principalities, when they were abſolutely free and independent, when their Philoſophy was pure and ſublime, their political Conſtitutions in their full Vigour, their Laws well ſupported, and thoroughly executed, their military Eſtabliſhments ſo well adjuſted to the Regulation of their civil Affairs, that in Times of imminent Danger they were able ſuddenly to ſet on Foot Armies ſo puiſſant, that their very Countenance was ſufficient to teach the moſt ambitious Princes Moderation; as was the Caſe of *Alexander*, and ſome of his Succeſſors. The *Indians*, therefore, in thoſe Days, were another ſort of People than the *Indians* known to us, and though the latter may ſtill retain in ſome meaſure the Manners of the former in private Life, yet in their publick Conduct they can furniſh us with no Idea of their Progenitors. In few Words, though they have preſerved ſome of their Cuſtoms, they have loſt all their Spirit.

It is the ſame thing with reſpect to the *Chineſe*, they are no longer what they have been; and if we admire the Wiſdom of their preſent Government, and the wonderful Exactneſs with which their Affairs are adminiſtered, we ought to conceive much higher and more magnificent Notions of their Power and Splendor in former Times. That Accuracy and Regularity which ſtrikes us ſo much at preſent are no more than the Remains of thoſe Inſtitutions which took place when their Empire was much greater and more glorious than at this Day. It is true, that we have received from the Miſſionaries great Lights with regard to the *Chineſe* Hiſtory; but we are very far from having any thing compleat in this kind, even at this Day. We have only general and ſhort Accounts of the Revolutions that have happened in that Country, and of the Conqueſts made of its frontier Provinces; no wonder therefore that we are not better acquainted with the Conqueſts made by them, and yet, as I hinted above, we do not want Authority to prove that the *Chineſe* actually extended their Power into Countries that might make their Fame known to the *Alexandrian* Traders; and perhaps in its proper Place we ſhall be able to account for their relinquiſhing thoſe Conqueſts.

Here, however, it is ſufficient to obſerve, that it appears very clearly from what we know of the *Chineſe* Hiſtory, that there was a conſtant Fluctuation in their Politicks, and that ſometimes a Spirit of Dominion, and at others a pacifick Diſpoſition, took Place; and there are extant, even in the modern Languages, Diſcourſes addreſſed to the *Chineſe* Emperors by their Miniſters, exhorting them to be content with their hereditary Countries, and rather contract their Power than extend it, that they might govern with greater Eaſe to themſelves, and with Effects more beneficial to their Subjects. After theſe Reflections, it will be eaſy to underſtand how the Ancients came to know ſo much, and, at the ſame Time, ſo little of theſe People. It was their penetrating Southward and Weſtward, that gave the Ancients an Opportunity of knowing any thing of them at all, ſince it is very certain, that if they had been always reſtrained within the Bounds of *China*, ſtrictly ſo called, they would never have been heard of; and therefore theſe Accounts, inſtead of diſcrediting the Facts before-mentioned, when thoroughly looked into, and coolly conſidered, carry in them the higheſt Probability, and the moſt evident Marks of Truth. That, upon Enquiry, the Ancients being informed that the Country, which is now called *Thibet*, was under the Power of the *Seres*, ſhould from thence conclude it the native Soil of thoſe People, and their Geographers be induced from thence to give it the Name of *Serica*, has nothing in it ſtrange at all, any more than that they ſhould imagine that the Metropolis of this Country was the Capital of the *Seres*, and the chief Seat of their Empire. Thus it is hoped this Difficulty is entirely taken away, the Credibility of the Teſtimonies before alledged fully eſtabliſhed, and the Difference between the ancient and modern Geography of theſe Countries rationally accounted for, without offering any Injury either to the old Writers or the new, and conſequently what is laid down in this Section, perfectly reconciled to all that has been aſſerted in the former.

8. There is a third Point in reference to this Subject which requires ſome Attention, and then I think we may ſafely proceed. As the laſt Objection reſpected the Country of the *Seres*, ſo it is very poſſible that ſome Doubts may ariſe as to the People who are deſcribed by *Pliny* and other old Writers, equally removed in their Manners from the reſt of Mankind, as ſeparated from them by the great Diſtance of their Country. It may, I ſay, be ſuggeſted, that the Cuſtoms of the *Seres*, as they ſtand recorded in ancient Writers, have no ſort of Reſemblance to thoſe of the *Chineſe*, if the Accounts I have juſt now given of them be well founded; for whereas I make them a potent, wiſe, and polite People, they paint them as a kind of Savages, differing in their Dialect from the reſt of Mankind, and ſhunning, as much as might be, all Converſation with Strangers.

Now, to reconcile theſe Contradictions, we are to conſider, firſt that the Ancients themſelves ſpeak very differently of the *Seres*, ſometimes commending them for their ſtrict Juſtice and Probity, for the Purity of their Manners, and for their having no Deſire to injure their Neighbours; and at others, as a Race of intractable People, abſolutely bent to conceal themſelves in their Woods and Fortreſſes, and trading no other Way than by Exchange, and that too by leaving and taking of Goods without any Intercourſe between the Merchants who ſold them, and thoſe who purchaſed. Secondly, it appears from the Diverſity of theſe Accounts, that the Ancients were entirely led in this Matter by Hear-ſay, and by the Hear-ſay of a People who were not much inclined to let them into all they knew. Thirdly, it is neceſſary to remember that the *Indians*, from whom the Ancients had every Tittle of what they report concerning the *Seres*, might give them ſuch Informations as were grounded on Truth, but were ſo unintelligible to the *Greeks*, that they were not able to report them without Miſrepreſentation.

As for Inſtance, the *Indians* might tell them that the *Seres* made uſe of a Language very different from that of other Men, and in this they would have told them no more than has been juſtified by Experience; but in repeating this, the Ancients have repreſented the Tongue of the *Chineſe* as if it had nothing in common with human Speech, which is a manifeſt Exaggeration. That the ancient *Seres* had a great Averſion to Strangers, and an invincible Reſolution of continuing in their own Country, is another Fact true in itſelf, but ſtrangely miſrepreſented. All the *Chineſe* Hiſtories agree, that this Nation had, as indeed they ſtill have, a great Jealouſy of Foreigners, and by their Laws forbad their ſettling amongſt them; yet the ſame Hiſtories ſhew, that notwithſtanding this Jealouſy and theſe Laws, they have always had a great many Foreigners in their Country; and theſe not only *Scythians* or *Tartars*, *Indians*, *Perſians*, and *Turks*, who were in ſome ſort their Neighbours, but *Jews*, *Chriſtians*, and *Mohammedans*; and that for ſuch a Length of Time, that it is almoſt impoſſible to account for their coming into and ſettling in *China*, as is evident from the learned Diſſertations that have been wrote expreſsly upon theſe Subjects. The Amount of all this, therefore, can be ſtretched to nothing more than our not having very diſtinct Relations of what paſſed a long Time ago in a very diſtant Country, which is not very wonderful. But however obſcure, however contradictory, theſe Accounts may be in other Reſpects, yet in this they agree perfectly well, that ſuch a Jealouſy always ſubſiſted in this Nation, though for particular Reaſons, and under particular Circumſtances, they were content to diſpenſe with thoſe Laws, which from this Spirit of Jealouſy they had enacted.

To make this Matter ſtill plainer, let us conſider the *Chineſe* in their preſent Situation, and in regard to the different manner in which they carry on Commerce at home and abroad. Their Junks ſail annually to almoſt all the different Ports in the *Indies*, but particularly to *Batavia*, where they trade as other People do, and comply with all the Regulations that are thought neceſſary in thoſe Places for the Security and right Management of Commerce, from whence they have acquired very juſtly the Character of being as active, as induſtrious, and as general Traders, as any in that Part of the World. This, one would think, might effectually purge them from the Imputation of having a Diſlike to Strangers, and an Unwillingneſs to correſpond with other Nations, and, in ſhort, of all Intractability on the Head of Commerce. Yet when we look into their Management at home, we ſhall find many things that may very well juſtify ſuch a Charge even at this Day. For there are but one, or at moſt but two, of their Ports open to Strangers, *viz. Canton* and *Amoy*; they do not ſuffer any *European* Nations to make Settlements in their Dominions, if we except the *Portugueze*, and even they are not only Subjects, but in a manner Slaves to the *Chineſe*; their Port Duties are not high only, but very extravagant; the Precautions they take againſt, and the Hardſhips they put upon Foreigners, are ſo many and ſo inconvenient, that it is plain they only tolerate Trade inſtead of encouraging it. If this therefore be, as moſt certainly it is, the Caſe, why ſhould we accuſe the ancient Accounts of Abſurdity and Contradiction?

It would be needleſs and unneceſſary to enter into a Digreſſion about the Navigation of the ancient *Seres*, how far it extended, and what the Conſequences were that attended it. I ſay, it would be needleſs and unneceſſary; becauſe, after all the Pains that could be taken, we ſhould find it very difficult, if not impoſſible, to give a tolerable Account of it; but in general, however, we know, that in very ancient Times they traded to moſt of the *Indian* Iſlands, ſettled Colonies in many of them, and, as there are good Grounds to believe, were the Anceſtors of the *Chingaleſe*, which are the moſt powerful Nation in the Iſland of *Ceylon*. Theſe Circumſtances ſeem abſolutely to contradict another Part of their general Character, which is, that they have no Inclination to leave their own Country on any Terms. In all Probability, their Settlements abroad were created by domeſtick Confuſions, when Numbers choſe rather to ſeek new Habitations, than to be expoſed to certain Death or Deſtruction from the Rage of their Adverſaries, which, nevertheleſs, implies no Alteration in the Nature of theſe People; for it is one thing to be of a roving Diſpoſition, and another to prefer Baniſhment to Death.

Upon the whole, if there be any thing certain in the *Chineſe* Hiſtory, it is this; that both the People themſelves have the moſt ſincere Love for their Country, and deſire to remain in it; and that this is nouriſhed in them by their Laws, and the Propagation of this Spirit made a capital Point of their Politicks. On ſcanning thereof this Matter as ſtrictly as it is poſſible, we ſee that, taking all Things together, the oldeſt Accounts of the *Chineſe* are not liable to more Objections, or incumbered with greater Difficulties than the modern; and therefore, if the Ancients have repreſented the *Seres* as a People of an odd Humour, and their Practice and Principles conſidered ſomewhat inconſiſtent with themſelves, we have the more Reaſon to be poſitive, that the *Seres* and the *Chineſe* are the very ſame Nation, becauſe from the Knowledge we have of them at preſent, it is impoſſible to conceive that any Character given of them in paſt Ages, ſhould come nearer the Truth than that which from a ſuperficial View ſeems incompatible therewith. In Caſes of this Nature, Nations are to be deſcribed as they really are, and of ſuch Temper and Diſpoſition as their Actions ſpeak them; other Accounts may be more plauſible, and, to ſuch as take up with the firſt Appearance of Things, more credible; but unqueſtionably the beſt way is to write the Truth, becauſe in the end, and after the ſtricteſt Examination, it will be found, that Truth will always juſtify itſelf.

9. There ſtill remains an Iſland mentioned in ancient Writers as lying in the *Indian* Ocean, though never diſcovered by any of the Moderns, of which we promiſed, and of which it is neceſſary that we ſhould give a clear Account, the rather, becauſe though ſurrounded with a Miſt of Fables, there is at the Bottom ſomething which deſerves our Notice, and which may enable us to detect ſuch kind of Relations when we meet with them elſewhere. The Name of this Iſland is *Panchaia*, and it is ſuppoſed to lie between the *Arabian* Gulph and the oppoſite Coaſt of *India*. There was but one ample and diſtinct Relation of this Country, which is ſtill preſerved almoſt entire in the Works of the learned *Diodorus Siculus*, which therefore we ſhall fairly tranſcribe for ſeveral Reaſons. Firſt, that the Nature of ſuch kind of Relations may plainly appear, and the Reader be able to judge for himſelf of the Difficulty in diſtinguiſhing between Facts faithfully related, and Fictions ſo elegantly dreſſed out. Secondly, that he may the better underſtand the Detection of this fabulous Hiſtory. And, thirdly, that he may be ſatisfied we do not impoſe upon him our own Notions and Senſe of Things, but admit him freely and fairly to the Sight of our Authorities.

There are, ſays our Author, many Things obſervable in *Panchea*, or *Panchaia*, that deſerve to be taken notice of. The natural Inhabitants are thoſe they call *Panchæi*; the Strangers that dwell among them are People of the Weſtern Parts, together with *Indians*, *Cretans*, and *Scythians*. In this Iſland there is a famous City called *Panara*, not inferior to any for Wealth and Grandeur. The Citizens are called the Suppliants of *Jupiter Triphylius*, and are the only People of *Panchaia* that live under a Democracy, without a Monarch. They chuſe every Year the Preſidents or Governors that have all Matters under their Cognizance; but what concerns Life and Death, and the moſt weighty Matters, they refer to the College of their Prieſts. The Temple of *Jupiter Triphylius* is about ſixty Furlongs diſtant from the City, in a fair, open Plain. It is in great Veneration for its Antiquity, and the Statelineſs of the Structure, and Fertility of the Soil. The Fields round about the Temple are planted with all ſorts of Trees, not only for Fruit, but for Pleaſure and Delight; for they abound with tall Cypreſſes, Plane-Trees, Laurels, and Myrtles. The Place is well furniſhed with running Water; for near the Temple there is ſuch a mighty Spring of ſweet Water ruſhes out of the Earth, ſo that it very ſoon becomes a navigable River. Thence it divides itſelf into ſeveral Currents, and waters all the Fields thereabouts. It produces thick Groves of tall and ſhady Trees, amongſt which, in Summer, abundance of People ſpend their Time, and a Multitude of Birds of all ſorts build their Neſts, which creates great Delight, both by affecting the Eye with the Variety of their Colours, and charming the Ear with the Sweetneſs of their Notes. Here are many Gardens, ſweet and pleaſant Meadows, decked with all ſorts of Herbs and Flowers, and ſo glorious is the Proſpect, that it ſeems to be a Paradiſe worthy the Habitation of the Gods themſelves. Beſides all theſe, there are a Multitude of Vines of all ſorts ſpringing up on high, and ſo curiouſly interwoven one among another, that they are exceeding pleaſant to the View, and greatly augment the Delights of the Place.

The Temple was built of white Marble, moſt artfully jointed and cemented, two hundred Yards in Length, and as many in Breadth, ſupported with great and thick Pillars, curiouſly adorned with carved Work. In this Temple were placed huge Statues of the Gods of admirable Workmanſhip, and amazing Bulk; round the Temple are built Apartments for the Prieſts that attend the Service of the Gods, by whom every thing in that ſacred Place is performed. All along from the Temple is an even Courſe of Ground, four Furlongs in Length, and one hundred Yards in Breadth; on either Side of which are erected vaſt brazen Statues, with four-ſquare Pedeſtals; at the End of the Courſe breaks forth the River from the Fountain beforementioned; from whence flows moſt clear and ſweet Water, the drinking of which conduces much to the Health of the Body. This River is called the Water of the Sun. The whole Fountain is lined on both Sides, and flagged at the Bottom with Stone at vaſt Expence, and runs out on both Sides for the Space of four Furlongs: It is not lawful for any but the Prieſts to approach the Brink of the Fountain.

All the Land about for two hundred Furlongs round, is conſecrated to the Gods, and the Revenues beſtowed in maintaining the public Sacrifices and Service of thoſe Gods beyond theſe conſecrated Lands, is an high Mountain dedicated likewiſe to the Gods, which they call the Throne of *Cælus* and *Tryphilius Olympus*; for they report, that *Uranus*, when he governed the whole World, pleaſantly diverted himſelf in this Place; and from the Mount obſerved the Motion of the Heavens and Stars; and that he was called *Tryphilius Olympus*, becauſe the Inhabitants were compoſed of three ſeveral Nations, *Panchæans*, *Oceanites*, and *Doians*, who were afterwards expelled by *Ammon*; for it is ſaid, that he not only rooted out this Nation, but utterly deſtroyed all the Cities, and laid *Doia* and *Aſteruſia* even with the Ground. The Prieſts every Year ſolemnize a ſacred Feſtival in this Mountain with great Devotion. Behind this Mount, in other Parts of *Panchaia*, they ſay there are abundance of wild Beaſts of all kinds, as Elephants, Lions, Leopards, Deer, and many other wonderful Creatures, both for Strength and Proportion. In this Iſland there are three chief Cities, *Hipacia*, *Dalis*, and *Oceanis*; the whole Country is very fertile, and eſpecially in the Production of all ſorts of Wine in great Plenty.

The Men are warlike, and uſe Chariots in Battle after the ancient Manner. The whole Nation is divided into three Tribes; the firſt is compoſed of the Prieſts, with whom are joined the Artificers; the ſecond conſiſts of the Huſbandmen; and the third of Militia and Shepherds. The Prieſts govern all, for they give Judgment in all Controverſies, and have Authority in all publick Tranſactions of State. The Huſbandmen till the Land; but the Fruit is brought into the common Treaſury, and he who is judged the moſt ſkilful in Huſbandry, receives the largeſt Share of the Fruits for a Reward in the firſt Place, and ſo the ſecond and the reſt according to that Rule, as every one merits in the Judgment of the Prieſts. In the ſame manner the Shepherds and Herdſmen carefully bring in to the public Stock the Victims and other Things both by Number and Weight, as the Nature of the Things are; for it is not lawful for any to appropriate any thing to themſelves, except a Houſe and Garden for all the young Breed of Cattle, and other Things; and all the Revenues are received by the Prieſts, and they juſtly diſtributed to every one as their Neceſſity requires, only the Prieſts have a double Proportion.

They wear ſoft Garments, for their Wool is much finer here than any where elſe; both Men and Women likewiſe deck themſelves with golden Ornaments, Necklaces of Gold, and Bracelets about their Arms, and, like the *Perſians*, have Rings hanging at their Ears; their Shoes are ſuch as others wear, and of different Colours. Their Soldiers, who are hired for Pay, defend the Country, and have their proper Poſts, and in proper Parts of the Iſland Fortreſſes, the Hills being infeſted with Thieves and Robbers, who often ſurpriſe the Huſbandmen. To conclude, theſe Prieſts, for Delicacy, State, and Purity of Life, far exceed all the reſt of the Inhabitants. Their Robes are of white Linen, and ſometimes of pure ſoft Wool. They wear likewiſe Mitres embroidered with Gold. Their Shoes are Sandals, curiouſly wrought with exquiſite Workmanſhip; and in their Ears hang golden Ear-rings, like Womens. They attend chiefly upon the Service of the Gods, ſinging harmonious Songs in their Praiſe, ſetting forth their glorious Acts and Benefits beſtowed upon Men. The Prieſts, ſay they, came originally from *Crete*, and were brought over into *Panchaia* by *Jupiter*, when he was upon Earth, and governed all the World, and alledge their Language for a Confirmation of this Aſſertion, inaſmuch as they retain many Words of the *Cretan* Tongue among them; and moreover ſay, that they derived from their Anceſtors that Civility and Kindneſs wherewith they entertain the *Cretans*, the Fame and Report of their ancient Conſanguinity deſcending continually in a perpetual Succeſſion to their Poſterity; they ſhew likewiſe a Record, written, as they ſay, by *Jupiter*'s own Hand, at the Time when he was on Earth, and laid the Foundation of the Temple.

There are in this Iſland likewiſe Mines of Gold, Silver, Braſs, and Iron, but not lawful for any to export them. Nay, it is not permitted to any of the Prieſts to go out of the Verge of the conſecrated Ground; and if any do, it is lawful for any Perſon who finds them to kill them. They have, under their Charge, innumerable Veſſels, and other conſecrated Things, both of Gold and Silver, which have been laid up there in Honour of the Gods for many Ages. The Gates of the Temple are of admirable Workmanſhip, beautified with Gold, Silver, and Ivory, and Thyne-wood. The Bed of the God is ſix Cubits long, and four broad, of maſſy Gold, moſt curiouſly wrought in every Part; and near adjoining ſtands the Table, as large, and of the like Materials and Workmanſhip with the other in every Reſpect. In the Middle of the Bed is placed a great golden Pillar, whereon are Letters inſcribed in that called by the *Egyptians* ſacred Writings, expreſſing the famous Actions of *Uranus*, *Jupiter*, *Diana*, and *Apollo*, written, as they ſay, by *Mercury* himſelf: But this may ſuffice concerning the Iſlands lying in the Ocean over-againſt *Arabia*.[t].

Such is the Account delivered to us of this Iſland by *Diodorus Siculus*, who had this Account from a more ancient Writer, one *Euemerus*, a *Meſſenian*; ſo that he is not to be charged with inventing the Fable, but with giving it a Stamp of Authority, by taking it into his Hiſtory. But if the Reader ſhould enquire what induced the original Author of the Story to frame ſo circumſtantial a Relation out of his own Head, and attempt therewith to cheat and impoſe upon Poſterity, it falls out very luckily, that we are able to reſolve this Queſtion, and to ſet the Truth in the cleareſt Light poſſible; from whence it will appear, that theſe Fictions of the Ancients were not deviſed with a malicious Intention of impoſing Fables for Matters of Fact upon credulous Readers, tho', undoubtedly they very often had this Effect; but they were contrived chiefly for another and better Purpoſe, as appears plainly from the Caſe before us.

Plutarch[u] not only knew that the whole of this Relation was an abſolute Fiction, but he likewiſe knew, and fairly informs his Reader of the End for which it was framed. He ſays, that the Author of it was an irreligious Man, or an Atheiſt, who, in delivering this Story of the Iſland *Panchæa*, aimed chiefly at inculcating his own Opinions, without running the Hazard of being puniſhed by Law. Now thoſe Opinions of *Euemerus* the *Meſſenian*, which *Plutarch* very prudently ſtiles atheiſtical, were no other than theſe, that moſt of the Deities worſhipped in his Time, ſuch as *Uranus Jupiter*, *Apollo*, and the reſt, were, in Fact, no other than Men famous in their Life-times, and, by the Flattery of Poſterity, magnified as Gods after their Deceaſe. This Opinion was certainly well founded and agreeable to Truth; but if that Author had delivered it ſimply and plainly as his own, he had probably died a Martyr for ſpeaking Truth improperly and againſt the Laws; and therefore he invented this Hiſtory of *Panchæa*, to inſinuate that the Prieſts there had a Record of this Matter written in golden Characters. By this Means he, without Danger to himſelf, intimated to his intelligent Reader, that whatever the Vulgar might believe of theſe Deities, yet, in Fact, they were no other than Men; and the Stories related of them the bare Inventions of Prieſts.

---

[t] *Diodor. Sicul. lib.* v. *p.* 220.

[u] *Plutarch. de Iſide & Oſir.*

I muſt confeſs, that it is my own Opinion, *Plutarch* did not unveil this Myſtery with a Deſign of expoſing its Author, as he ſeems to do, for an impious Man, and an Atheiſt, but with an Intention to deliver this Matter more clearly, and by giving the Key of *Euemerus*'s Story more effectually to divulge the Truth: For, whoever conſiders the Drift and Deſign of his Diſſertation concerning *Iſis* and *Oſiris*, will eaſily diſcern that he wrote it with much the ſame View that *Euemerus* invented his Fable of *Panchæa*; and as for the hard Words he beſtows on that Writer, they ſerved only to cover and ſcreen himſelf; ſince, undoubtedly, had he not ſtiled theſe Notions impious and atheiſtical, he had paſſed (with the Vulgar at leaſt) for as impious and atheiſtical a Writer as *Euemerus* whoſe Fiction he unveils [w].

A great Happineſs it is, that the Chriſtian Diſpenſation has freed Mankind entirely from this Tyrannical Yoke of Superſtition, and opened a free Paſſage to Men's Thoughts, without Danger or Diſtruſt. But it has, notwithſtanding, ſo fallen out, that even under the Light of the Goſpel, Superſtition has ſometimes prevailed to ſuch a Degree, that learned Men have found themſelves under a kind of Neceſſity of making uſe of the ſame Artifice, as appears by Sir *Thomas Moor*'s *Utopia*, and other Works of the like Nature, which, however, are penned in ſuch a manner as very ſeldom to miſlead the Reader, or impoſe upon him Fictions for Truth. Thus we have at length finiſhed both the real and feigned Accounts of the *Indies*, as delivered to us by the Ancients, and are now at Liberty to take Notice of their Obſervations and Reflections upon theſe Accounts, which are of ſo much greater Importance, as they certainly kept up the Fame of theſe Countries, and in a great meaſure excited that Spirit which lead to the more perfect Diſcovery of them.

10. As ſlight as the Knowledge was which the Ancients had of the Inland Parts of *India*, yet they took great Pains to propagate a very high Opinion of its Fertility and Riches. *Diodorus Siculus* gives a very pompous Deſcription of the Advantages poſſeſſed by *India* beyond any other Country. He aſſerts, that the Air is remarkably ſettled and ſerene, the Seaſons equally regular and pleaſant, the Mountains covered with Fruit-trees of the moſt exquiſite Kinds; the flat Country ſo rich as to yield two Crops every Year, one of Wheat, and the other of Millet, Rice, or ſome ſuch Grain; the Waters ſo delicate and pure as greatly to contribute to Health and long Life, and moſt of the Rivers overflowing annually like the *Nile*, and thereby leſſening the Labour of the Inhabitants in the Cultivation of their Grounds.

After this Repreſentation of the golden Age, as ſtill remaining in *India*, we are further aſſured, that the Treaſures which the Earth contains in her Boſom, are much ſuperior to thoſe born upon her Surface, and that Gold, Silver, Braſs, Iron, and Tin, are more common there than in any other Country. Yet, after this magnificent Detail of the Plenty and Riches of the *Indies*, he plainly puts the River *Ganges* as the Boundary of all the *Indian* Regions with which he was acquainted; for, into that, he ſays, the reſt of the Rivers of *India* fall; and in the Neighbourhood of this River he places the *Gandarides*, a Nation ſo powerful that *Alexander* was glad to leave them untouched, as having four thouſand Elephants trained to War, and a proportionable Number of Horſe and Foot; which ſufficiently ſhews, that, in his Opinion, the Conqueſt of this Country was not to be attempted.

He likewiſe ſets another Bound to the Deſire of diſcovering, by affirming, that a great Part of this Country lies under the Line, for ſo he muſt be underſtood, and not under the Tropick of *Capricorn*, as ſome of his Interpreters would have it; for, he adds immediately after, that in many remote Parts of *India*, the Sun caſts no Shadow, neither is the North Pole, or any of the Conſtellations near it, ſeen there in the Night, which was ſufficient to deter the Travellers of thoſe Times from all Hopes, and even from all Wiſhes of penetrating into theſe Regions [x].

Strabo likewiſe gives us a large and magnificent Account of the Plenty and Riches of *India*, and aſſures us that it abounds with all kinds of Wealth, more eſpecially Pearls, Carbuncles, Diamonds, and other precious Stones; he mentions likewiſe Aromaticks and Spices, as Part of the Commodities brought from the *Indies*, but he does not tell us in what particular Parts of *India* [y] theſe valuable Commodities are found; and indeed all the Writers of Antiquity are alike faulty in this Point.

Pliny, who had read almoſt every Author extant on this Subject [z], is very clear in the general, as to the Plenty of all things neceſſary for the Service of Mankind in this Country, and gives us very copious Accounts of the rich Metals and various kinds of precious Stones that were brought from thence, ſome of which he tells us were found in Rivers, others in the Clefts of Rocks, and not a few in the Mines of Gold and Silver; but with reſpect to the Places where theſe Mines lay, or how they were to be reached, he is ſilent; and we may ſay the ſame thing of *Arrian*, and all the ancient Writers cited by *Athenæus*; for though they are profuſe in their Commendations of *India* and in their Panegyricks on its Wealth and Riches, yet they never diſtinguiſh where we are to look for this precious Commodity, or where that is to be found; but content themſelves with aſſuring us, that all are to be met with in the *Indies*.

This was owing, beyond all Queſtion, to the Conduct of the *Indians* in their Commerce with the Ancients; for they always pretended that things were brought to them from diſtant Countries with infinite Hazard and Danger; and theſe Pretences ſerved at once to heighten the Value of their Goods, and to deter Strangers from going in Search of them, as it likewiſe hindered them from making ſuch Enquiries as might have acquainted them with the Truth, which was, that many of the valuable Commodities of the *Indies* were actually the Produce of thoſe Countries they viſited.

It may not be amiſs to obſerve here, that in the Deſcription of the *Erythræan* Sea aſcribed to *Arrian*, and in all the other Works of the ſame Nature that are ſtill extant, the *Indians* are every-where repreſented as much given to, and extremely well verſed in, all the Arts of Commerce. It appears from thoſe Accounts, that there was a very conſiderable Trade carried on in all their Sea-ports, and that where-ever the Situation of their Rivers afforded them an Opportunity of conveying their Merchandize in ſmall Veſſels within Land, they had great Cities upon their Banks, full of Artificers and Manufacturers, where every thing was carried on with the utmoſt Regularity, ſo that the Fame of their Induſtry was equal to that of their Riches. I make therefore no Scruple of aſſerting, that theſe were the flouriſhing Times of that Country, and that the *Indians* have been ſince on the Decline, which will appear the more credible, if we conſider, that the prodigious Trade of *China*, which is the great Source of the Wealth and Happineſs of its People, is, properly ſpeaking, a domeſtick Commerce; that is to ſay, the beſt Part of it is carried on amongſt themſelves, and from one Province of that Empire to another.

It is not therefore at all wonderful, that People thus practiſed in Trade ſhould be able, by ſtudied Relations, to impoſe upon Strangers, who finding them all in the ſame Story, took this for an inconteſtible Argument of Truth; and hence it is that we are told of rich Mines of Gold in the Northern *Indies* on the Frontiers of *Scythia*, and of Diamonds and Precious Stones found there, whereas in all probability, the Gold which the Ancients met with in *India* came from the Peninſula of *Malacca*; the Diamonds were found near Cape *Comorin*, and the Rubies and other colour'd Stones were brought from *Taprobana* or *Ceylon*. We will conclude theſe Remarks on the Riches of the *Indies* with a few Lines from the Poem of the famous Geographer *Dionyſius*, whom ſome Criticks place as high as the Reign of *Auguſtus*, and which *Priſcian* has thus rendered into *Latin*. They occur towards the End of the Poem, and contain a moſt lively and elegant Picture of the Riches of the *Indies*, with as much Accuracy and Correctneſs as any Proſe Writer whatever, and may ſerve as a Specimen both of the Matter and of this Manner of Writing.

Signaque concipiunt arcana luce futuri.
Pſittacus hic viridis decoratus torque rubenti
Naſcitur, humanæ ſimulat qui verbera linguæ.

11. The principal Hindrance that the Commerce of the Ancients met with was owing to the following Cauſes; firſt, the over-valuing their own Knowledge, and ſuppoſing all Nations at a Diſtance from them *Barbarians*, and more or leſs ſo in proportion to that Diſtance; the next was their adhering to their old Notions in Coſmography, notwithſtanding the Arguments their own Experience furniſhed to the contrary; and thirdly, their diſcontinuing their Voyages to diſtant Countries during domeſtick Confuſions, by which thoſe Routs were loſt which were known in former Times, and their Diſcoveries ſo confounded, that it is ſcarce poſſible to affirm any thing about them with Certainty.

The two former were voluntary Errors, the laſt was rather their Miſfortune than their Fault. We have an Account in *Strabo* of a very ſingular Navigation to the *Indies* performed in the Reign of *Ptolemy Euergetes*, which, if carefully purſued, might have opened to them a much ſhorter and eaſier Paſſage to the *Indies* than they had been hitherto acquainted with. The Guards that were appointed to patrol on the Shore of the *Arabian* Gulph found an *Indian* half-dead upon that Shore, and brought him to the King; all they could tell of him was, that he alone had eſcaped a Shipwreck; but as they underſtood not his Language, they were not able to ſay whence he came. The King cauſed him to be well taken care of, and to be inſtructed in the *Greek* Language, in which, when he had attained a ſufficient Knowledge to diſcourſe, he acquainted him, that in a Voyage from the *Indies*, being driven out of the uſual Courſe, he loſt all his Companions by Hunger; and the Ship being ſtranded, he eſcaped alone on Shore, where the Guards found him.

This Man offered to pilot a Ship to his own Country, which he did, and carried one *Eudoxus* with him. The Voyage was very happily performed, and they found in the Country to which this *Indian* carried them Aromaticks, and ſeveral ſorts of Precious Stones, ſome of which the *Indians* found in their Rivers, and others they dug out of the Earth in the ſame manner that Chryſtal is found. *Eudoxus* conceiving that he had acquired Experience enough by this Voyage, ſet up for a great Navigator, and undertook ſeveral Voyages to very little Purpoſe, becauſe he followed his own Notions inſtead of endeavouring to acquire proper Lights from the *Indians*, notwithſtanding it clearly appears from the Accident that befel this Man, that the *Indians* were much bolder and better Seamen than the *Greeks*.

But theſe laſt were ſo perſuaded of their own Skill, and had ſuch a Contempt for the Nations they held *Barbarians*, that nothing could induce them to change their Sentiments, or prevail on them to think of obtaining Lights from thoſe they ſo much deſpiſed. Biſhop *Huet*, ſpeaking of this Paſſage, ſeems to be of Opinion, that from the Time of *Ptolemy Philadelphus* the *Egyptians* had neglected their *Indian* Commerce, and recovered it by this Accident. I muſt confeſs this does not appear at all probable to me, and I am rather inclinable to believe, that this *Indian* carried the Ship he navigated to a Part of the *Indies* with which till then they had never been acquainted; and this by the perfect Knowledge he had of the *Monſoons*, or conſtant Trade-Winds; for I cannot believe that the *Indians*, in theſe early Ages, had any other Secret which enabled them to make long Voyages in leſs Time than other People. This is an Inſtance of the firſt Error.

As to the ſecond, one might collect many; but that I may not dwell too long upon this Subject, I will take notice only of one. They had a Notion that the Eaſtern and unknown Part of the *Indies* was bounded by the Ocean, and that this Ocean communicated with the *Hyrcanian* or *Caſpian* Sea; and upon this they grounded their Hopes of diſcovering the moſt diſtant Part of the *Indies* by the Navigation of the latter. *Strabo* declares plainly, however, that he believes this Navigation never had been performed; but at the ſame time admits that it was practicable. This he did on the Credit of *Patrocles*, who was ſent to make Diſcoveries on this Side by the *Seleucidæ*; and this he labours very earneſtly to prove by that kind of Reaſoning, which will always affect the Vulgar among the Learned, and which no great Man ever wants, to eſtabliſh what he thinks probable.

Pliny alſo mentions the Voyages of *Patrocles*, and ſeems to inſinuate that he actually diſcover'd ſome ſuch Paſſage; but what he ſays is very dark and perplexed; ſo that after all, one can affirm nothing poſitively from his Writings. The Opinion however grew common, and paſſed for current, even upon ſuch obſcure Teſtimonies; and this drew after it, as a neceſſary Conſequence, a Notion that only an inconſiderable Part of the World remained undiſcovered; and this, together with the whimſical Apprehenſion that one Zone was intolerably hot, and two as intolerably cold, damped the Spirit of Inquiring, and confined Men to the Spots where they happened to be born, or, at moſt, to thoſe which their Anceſtors had diſcovered by Accident or good Fortune, rather than Induſtry. Indeed, this circumſcribing Scheme is ſo ſtrong in the Ancients, and even in thoſe Works, which, at firſt Sight, appear calculated for a different Purpoſe, as for Inſtance, the Story of the Iſland *Atlantis*, related by *Plato*, and the famous

Expedition of *Hanno*, that they contain much more to affright and terrify, than to allure and invite Men to undertake long Voyages, and endeavour great Diſcoveries; which had this bad Effect, that it quite daſtardized common Minds, and rendered them incapable of being wrought into a Temper fit to go through the Hardſhips that muſt be met with in ſuch Undertakings.

The third Diſadvantage they laboured under was, the frequent Revolutions their own Countries were expoſed to; for this laid them under many and great Difficulties. They had this Method or that preſcribed to them by a ſuperior Power, and they were to purſue ſuch Plans only as were agreeable to the Government under which they lived, and thoſe too no longer than they were agreeable. Another Inconvenience was, the Interpoſition of the State on any Diſcovery, or ſurmiſed Diſcovery. It was to be cultivated or neglected at the Will of the Government, and not of the Adventurers, for the Spirit of Negotiation was not ſo free as it is now; but any Attempts out of the ordinary Mode of Commerce gave Jealouſies to ſuch as ought to have been beſt pleaſed with them.

Theſe Diſcouragements, at particular Times, and under particular Circumſtances, interrupted ſeveral kinds of Commerce, and kept the Whole in ſuch a Condition as hindered private Men from turning their Thoughts this Way; for, otherwiſe, no doubt, they would have thought of ſettling Colonies, and ſecuring ſome Footing in the *Indies*, in order to have examined the Whole of it, and putting the Navigation of it into a certain and irreverſible Order; ſo that nothing which happened at home might have affected thoſe Colonies: But after the Time of *Alexander*, or at leaſt of his immediate Succeſſors, we find nothing of this ſort thought of, but every thing abandoned to Chance and the Humour of the Times.

12. There were many Impediments beſides thoſe already mentioned, which hindered the Progreſs of Diſcoveries among the Ancients, and ſome of them of ſuch a Nature as to be almoſt invincible. Their Ships were built in ſuch a Manner, as did not, by any means, render them fit for long Voyages; for their Contrivance was ſuch, that they could not bear a high Sea, or go ſafely before the Wind at any great Rate. In the next place, their Ships wanted Room; and though this ſeems to be contradicted by the Accounts we have of Veſſels which carried ſeveral hundred Men, yet, when theſe come to be cloſely examined, they appear to be no other than a ſort of Barges, or rather Gallies, fit for tranſporting Men acroſs an Arm of the Sea, or for fighting, where this could be done in a few Hours after they were on board; and this will be the more evident, if we reflect on the Scenes of naval Combats mentioned in the *Greek* and *Roman* Hiſtories. The Labour of working their Ships was likewiſe intolerable in a long Voyage; and theſe Inconveniencies, taken together, appeared in the Eyes of their Seamen ſo dreadful, that they were more apt to mutiny, eſpecially when employed in Diſcoveries, than can well be imagined; ſo that if it had not been for ſome Accidents, and their being encouraged by the Examples of the *Arabians* and *Indians*, it is ſcarce credible that they would have made ſuch long Voyages as they really did.

If it ſhould be inquired how the *Arabians* and *Indians* made ſuch frequent Voyages in ſpite of theſe Inconveniencies, the Anſwer is eaſy, they made uſe of another ſort of Veſſels, which, though leſs ſtout in Appearance, were much better Sailers; nor would it be difficult to prove, even from the Accounts of *Strabo* and other ancient Writers, that the *Indians* actually made uſe in thoſe Days of the Paraos or Proes, which before a Wind are allowed to be the beſt ſailing Veſſels in the World. The Ancients wanted likewiſe the Aſſiſtance of Charts, which are ſo eſſentially neceſſary to Navigation; for it appears plainly from the Voyages already inſerted, and from the Accounts we have in *Pliny*, and in other Authors, that they were guided ſolely by a kind of Tables, containing the Names of Places on the Coaſt, and their Diſtances from each other; neither had they any Ideas of ſailing in a different manner, becauſe they knew not how to regulate their Courſe in an open Sea, which forced them upon the Choice of that ſort of Navigation which is now with Reaſon held to be the moſt dangerous, and in which they could make uſe of ſuch Veſſels only as had a ſmall Draught of Water; and this was particularly inconvenient in the Navigation of which we are ſpeaking, becauſe the *Indian* Coaſts are very foul, and by ſailing near them, they loſt the Advantage of the Trade-Winds, which, before the Invention of the Compaſs, afforded the only means of making long Voyages with Safety.

It muſt be owned that many of theſe Facts have been diſputed, and that too by very learned Men, who have endeavoured to perſuade us, that the Ancients wanted very few of the Conveniencies poſſeſſed by modern Navigators, as will be largely ſhewn in another Place; but at preſent it may be ſufficient to obſerve, that moſt of their Arguments are drawn from their own Explications of perplexed and obſcure Paſſages in Hiſtorians or Poets, whereas ours are grounded on the Scope of their general Hiſtories, and on Declarations in our Favour, as expreſs as can be deſired. For inſtance, *Vegetius* aſſures us, that the Seas were ſhut from *November* to *March*, and that it was not thought ſafe to undertake any Voyage of Conſequence before the Month of *May*. This very plainly proves the Defects of their Navigation, and that they loſt a great Part of the Year for want of thoſe Helps and Advantages, which, purely from a Spirit of Contradiction, theſe learned Men would perſuade us they enjoyed.

It may not be amiſs to remark, that ſuppoſing their Opinion to be true, it is ſo far from adding to the Credit of the Ancients, that it really does a greater Injury to their Reputation, than the contrary Aſſertion taken in the ſtrongeſt Senſe; for if the Ancients had the Uſe of the Compaſs, and of Sea-Charts, as theſe learned Writers maintain, their not making a better Uſe of them is altogether inexcuſable, and ſhews ſuch a Want of Spirit, and ſuch a Defect of Genius, as is abſolutely irreconcileable to their Performances in other Arts; but what ſeems to put the Matter beyond all Queſtion is this, that the *Arabians*, becoming Maſters of the *Greek* Learning as well as of their Empire, and tranſlating into their own Language the beſt Books that were written on theſe Subjects, met with nothing that at all corroborates this Notion of the great Knowlege of the Ancients, with reſpect to the Inſtruments of Navigation neceſſary in long Voyages.

Sir *John Chardin*, who was a Man of much Reading, as well as of a good Underſtanding, and withal a great Traveller, has delivered his Sentiments upon this Subject in the following Terms, which I the rather cite in this Place, becauſe I ſhall not hereafter have any Opportunity of entering again on ſuch Reflections in the Courſe of this Chapter. “ I “ cannot tell, ſays he, whether the *Chineſe* found out the “ Art of Navigation and the Compaſs, as they did the Art “ of Printing and Artillery; we ſhould conſult the learned “ Men amongſt them to be aſſured of it. But for the “ other *Aſiatics*, I boldly aſſert, they are beholden to us “ for this wonderful Inſtrument, which they had from “ *Europe* by the Hands of the *Arabs*, a long time before “ the *Portugueze* Conqueſts: For, firſt, their Compaſſes “ are exactly like ours, and they buy them up of the *Europeans* as much as they can, ſcarce daring to meddle “ with their Needles themſelves. Secondly, it is certain “ the old Navigators only coaſted it, which I impute to “ the Want of this Inſtrument to guide them, and inſtruct “ them in the wide Ocean. We cannot pretend to ſay “ they were afraid of venturing far from home; for the “ *Arabs*, the firſt Navigators in the World in my Opinion, “ at leaſt for the Eaſtern Seas, have, Time out of Mind, “ ſailed from the Bottom of the *Red Sea* all along the Coaſt “ of *Africk*, down to the Tropick of *Capricorn*, which is “ a Space of fifty Degrees; and the *Chineſe* have always “ traded with the Inhabitants of the Iſlands of *Java* and “ *Sumatra*, which is alſo a very conſiderable Voyage. So “ many Iſlands uninhabited, and at the ſame time productive, ſo many Lands unknown to the People I ſpeak of, “ are a Proof that the old Navigators had not the Art of “ ſailing on the wide Sea. I have nothing but Argument “ and Conjecture to offer touching this Matter, having “ never met with any body in *Perſia*, or the *Indies*, to “ inform me when the Compaſs was firſt known among “ them, though I made Enquiry of the moſt learned

“ Men in each Country, I have ſailed from the *Indies* to
“ *Perſia* in *Indian* Ships when no *European* has been on
“ Board but myſelf: The Pilots were all *Indians*, and they
“ uſed the Foreſtaff and Quadrant for their Obſervations.
“ Theſe Inſtruments they have from us, and made by
“ ours, not in the leaſt varying therefrom, except that the
“ Characters are *Arabic* ; and by the way I obſerved, that
“ the *Arabs* are the moſt ſkilful Navigators of all the
“ *Aſiatics* and *Africans* ; but neither they nor the *Indians*
“ make uſe of Charts, and indeed they do not much want
“ them ; ſome they have, but they are copied from ours,
“ for they are quite ignorant of Perſpective.”

13. After the copious Detail we have given of the Progreſs of the Commerce of the Ancients in the Eaſt, we ſhall conclude this Section with a very ſuccinct Compariſon between their Endeavours and Succeſſes in this reſpect, and the Labours in the ſame way of the Moderns. In the firſt place then we have made it highly probable, that even in the moſt flouriſhing State of their Trade, their actual Diſcoveries did not reach farther to the Eaſt than the Peninſula of *Malacca* ; for as to the *Sinus Magnus*, they could know nothing of it but by Hear-ſay, unleſs they had known all the reſt of the *Indies*. On the Continent again the *Sinæ*, which were the *Siameſe*, were the laſt People they knew on that Side. In regard to the Northern *Indies*, they knew very little with any ſort of Certainty beyond the *Emodian* Mountains; and moſt evident it is, even from their beſt Writers, that they had not ſo much as Reports of the Nations inhabiting beyond the Mountains of *Imaus*. But we have diſcovered Eaſtward the Country of *Cochin-China*, and all the Countries dependant upon it, the Kingdom of *Tonkin*, the vaſt Empire of *China*, all the Iſlands of the *Sound*, the *Moluccas*, the *Old* and *New Philippines*, and the Country of *New Guinea*, ſo that conſidered in this Light, our Diſcoveries exceed theirs by twenty Degrees of Longitude. Towards the North again, beſides what has been diſcovered by Land, the *Dutch* have moſt certainly proceeded as high as forty-five Degrees ſailing to the North-eaſt of *Japon*, ſo that without exaggerating, the Part of *Aſia* made known to us by our *Eaſt-India* Voyages is equal to all the reſt of *Aſia* that was known to the Ancients. It is not therefore at all ſtrange, that our *India* Trade ſhould ſo much exceed theirs, though carried on at ſo much greater Diſtance.

In the next place, it may be obſerved, that though the Trade to the *Indies* was never carried to Perfection by the *Egyptians*, *Tyrians*, or *Romans*, yet it was known to them, and made the Subject of their Books for a long Courſe of Ages, ſince from the firſt Kingdom of *Tyre* to the Reign of *Conſtantine the Great* includes above eight hundred Years, whereas all our Diſcoveries of the *Eaſt Indies* were made within two Centuries after a Paſſage was found thither by the *Cape of Good Hope*, ſo that in this reſpect the Induſtry of the Ancients is very far ſuppaſſed by that of the Moderns.

The Third Obſervation I ſhall make is with regard to the Difference between a Land Force and a Naval Power. We have ſeen how many fruitleſs Attempts were made by the *Aſſyrian* and *Perſian* Monarchs to extend their Conqueſts towards the Eaſt ; and we have likewiſe ſeen of how ſhort a Continuance the Conqueſts were of *Alexander the Great*, and his Succeſſors, together with the Attempts made by the *Romans*, after they had reduced *Egypt* to a Province, and were Maſters of a great Part of *Aſia*, which, all of them, are nothing in Compariſon of the Empire eſtabliſhed by the *Portugueze*, or rather the Compariſon falls as far ſhort as the Power of the little Kingdom of *Portugal*, when thrown into the Balance with that of the Empire of *Rome* ; and the Eſtabliſhments of the *Engliſh* and *Dutch* in thoſe Parts, but more eſpecially of the latter, plainly demonſtrate, that with reſpect to the Advantages derived from Conqueſts, a Maritime Power is infinitely ſuperior to the Strength even of the moſt extended Empires.

The *Romans* had in this reſpect in all Appearance the higheſt Advantages ; they were Maſters of the Country to the very Mouth of the *Arabian* Gulph on one Side, and had a very large Tract of Country on the other. The Terror of their Name was ſo great, that they had hardly any Oppoſition to fear by Land or Sea ; and if one Expedition had failed, they might very ſoon have repaired the Loſs ſuſtained in it, and have been in a Condition to have undertaken another. Yet we ſee nothing of this happened ; and it was not above twice or thrice thouhgt of, and then to no great Purpoſe. *Auguſtus* had formed a Deſign of reducing the *Peninſula* of *Arabia*, to which he was excited by many Reaſons ; ſuch as that the Inhabitants of the Coaſt between the *Arabian* and *Perſian* Gulphs were in Poſſeſſion of the whole Trade of the Eaſt ; there were ſome of the Nations on the Coaſt oppoſite to *Egypt* that were extremely addicted to Piracy, and greatly diſturbed the Navigation of the *Romans*, which probably happened from their having lighter Veſſels, and ſuch as ſailed better ; ſo that if at any time they met with Ships of greater Force, they were able to leave them, and make their Eſcapes ; the Situation of the Country alſo might probably be a ſtrong Inducement to the attempting this Conqueſt, becauſe it ſeemed to promiſe the intire Poſſeſſion of the Oriental Commerce without Interruption. But we have ſeen how that Expedition, undertaken with ſo great Precaution, and with ſuch a Force as was never employed in the Eaſt by any modern Potentate, was intirely defeated, The Emperors *Flavius* and *Titus Veſpaſian* had alſo ſome Thoughts of puſhing their Conqueſts on this Side ; but Hiſtory does not inform us, that they ever took any effectual Steps towards putting thoſe Deſigns in Execution. *Trajan* made the laſt Attempt upon *Arabia* from the *Perſian* Side, with a potent and victorious Army and this with no other View, than to have made himſelf Maſter of the Wealth which the *Arabians* had amaſſed by their extenſive Commerce ; but he likewiſe failed, and from a too quick Senſe of his Diſappointment broke his Heart.

Let us now conſider what Proſpect the *Portugueze* had of reaching and making Conqueſts in the *Indies*. Inſtead of croſſing from the Mouth of the *Arabian* Gulph to the Coaſt of *Malabar*, which is a Voyage only of a few Days they were to ſail round the whole Continent of *Africa*, then a Coaſt in a great meaſure unknown ; and at the ſame time the adjacent Seas were remarkable for their being almoſt conſtantly ſubject to Storms and Tempeſts, inſomuch, that when the utmoſt Cape was firſt diſcovered, the Diſcoverer called it the *Tempeſtuous Cape* ; but the King of *Portugal* foreſeeing the Advantages that would reſult from this Navigation, changed that Name for *The Cape of Good Hope*, and with a few Ships, and a very ſmall Force, attempted and ſettled not only a Commerce with the *Indies*, but raiſed a very conſiderable Empire there in ſpite of all the Oppoſition that could be given him. This manifeſtly ſhews not only the Superiority of the Moderns over the Ancients in Point of Navigation, but likewiſe that the moſt diſtant Voyages are beſt ſuited to the raiſing a Maritime Power, that is to ſay, a Power by Sea that is permanent, and not raiſed and overthrown ſuddenly, as the Maritime Powers among the Ancients frequently were. It alſo effectually demonſtrates, that it is not a mighty but a well-conducted Force that is proper for eſtabliſhing diſtant Conqueſts ; and that when a Nation is once poſſeſſed of a conſiderable Fleet, there is no Country at ſuch a Diſtance as to be out of her Reach, neither are her Settlements in any Danger of being deſtroyed, while they are worth keeping, and while the Government at home is ſufficiently attentive to their Preſervation ; ſo that the Circumſtances which ſeem at firſt Sight the moſt diſcouraging in regard to the attaining Foreign Power and Maritime Force, are, in reality, thoſe which moſt contribute to the Eſtabliſhment of it ; and to the preſerving it when eſtabliſhed, by ſecuring a conſtant Supply of all that is neceſſary for that Purpoſe.

It is by long Voyages only, made with Danger and Uncertainty, that People acquire the Means of making long Voyages with Eaſe and Safety ; the Perils they eſcape once they know how to avoid again ; they become acquainted by degrees, and by Experience, with the Nature of Things, which never could have been reached by the Penetration even of the ſharpeſt Underſtanding ; and by thus becoming acquainted with the Laws, or rather with the Courſe of Nature, they gain inſenſibly a kind of Superiority over Nature ; ſo that in ſome Senſe the very Winds and Seas may be ſaid to obey them. When the *Portugueſe* firſt undertook their *Indian* Expedition, they neither had good Ships, nor knew how to build them. It was

Expedition of *Hanno*, that they contain much more to affright and terrify, than to allure and invite Men to undertake long Voyages, and endeavour great Diſcoveries; which had this bad Effect, that it quite daſtardized common Minds, and rendered them incapable of being wrought into a Temper fit to go through the Hardſhips that muſt be met with in ſuch Undertakings.

The third Diſadvantage they laboured under was, the frequent Revolutions their own Countries were expoſed to; for this laid them under many and great Difficulties. They had this Method or that preſcribed to them by a ſuperior Power, and they were to purſue ſuch Plans only as were agreeable to the Government under which they lived, and thoſe too no longer than they were agreeable. Another Inconvenience was, the Interpoſition of the State on any Diſcovery, or ſurmiſed Diſcovery. It was to be cultivated or neglected at the Will of the Government, and not of the Adventurers, for the Spirit of Negotiation was not ſo free as it is now; but any Attempts out of the ordinary Mode of Commerce gave Jealouſies to ſuch as ought to have been beſt pleaſed with them.

Theſe Diſcouragements, at particular Times, and under particular Circumſtances, interrupted ſeveral kinds of Commerce, and kept the Whole in ſuch a Condition as hindered private Men from turning their Thoughts this Way; for, otherwiſe, no doubt, they would have thought of ſettling Colonies, and ſecuring ſome Footing in the *Indies*, in order to have examined the Whole of it, and putting the Navigation of it into a certain and irreverſible Order; ſo that nothing which happened at home might have affected thoſe Colonies: But after the Time of *Alexander*, or at leaſt of his immediate Succeſſors, we find nothing of this ſort thought of, but every thing abandoned to Chance and the Humour of the Times.

12. There were many Impediments beſides thoſe already mentioned, which hindered the Progreſs of Diſcoveries among the Ancients, and ſome of them of ſuch a Nature as to be almoſt invincible. Their Ships were built in ſuch a Manner, as did not, by any means, render them fit for long Voyages; for their Contrivance was ſuch, that they could not bear a high Sea, or go ſafely before the Wind at any great Rate. In the next place, their Ships wanted Room; and though this ſeems to be contradicted by the Accounts we have of Veſſels which carried ſeveral hundred Men, yet, when theſe come to be cloſely examined, they appear to be no other than a ſort of Barges, or rather Gallies, fit for tranſporting Men acroſs an Arm of the Sea, or for fighting, where this could be done in a few Hours after they were on board; and this will be the more evident, if we reflect on the Scenes of naval Combats mentioned in the *Greek* and *Roman* Hiſtories. The Labour of working their Ships was likewiſe intolerable in a long Voyage; and theſe Inconveniencies, taken together, appeared in the Eyes of their Seamen ſo dreadful, that they were more apt to mutiny, eſpecially when employed in Diſcoveries, than can well be imagined; ſo that if it had not been for ſome Accidents, and their being encouraged by the Examples of the *Arabians* and *Indians*, it is ſcarce credible that they would have made ſuch long Voyages as they really did.

If it ſhould be inquired how the *Arabians* and *Indians* made ſuch frequent Voyages in ſpite of theſe Inconveniencies, the Anſwer is eaſy, they made uſe of another ſort of Veſſels, which, though leſs ſtout in Appearance, were much better Sailers; nor would it be difficult to prove, even from the Accounts of *Strabo* and other ancient Writers, that the *Indians* actually made uſe in thoſe Days of the Paraos or Proes, which before a Wind are allowed to be the beſt ſailing Veſſels in the World. The Ancients wanted likewiſe the Aſſiſtance of Charts, which are ſo eſſentially neceſſary to Navigation; for it appears plainly from the Voyages already inſerted, and from the Accounts we have in *Pliny*, and in other Authors, that they were guided ſolely by a kind of Tables, containing the Names of Places on the Coaſt, and their Diſtances from each other; neither had they any Ideas of ſailing in a different manner, becauſe they knew not how to regulate their Courſe in an open Sea, which forced them upon the Choice of that ſort of Navigation which is now with Reaſon held to be the moſt dangerous, and in which they could make uſe of ſuch Veſſels only as had a ſmall Draught of Water; and this was particularly inconvenient in the Navigation of which we are ſpeaking, becauſe the *Indian* Coaſts are very foul, and by ſailing near them, they loſt the Advantage of the Trade-Winds, which, before the Invention of the Compaſs, afforded the only means of making long Voyages with Safety.

It muſt be owned that many of theſe Facts have been diſputed, and that too by very learned Men, who have endeavoured to perſuade us, that the Ancients wanted very few of the Conveniencies poſſeſſed by modern Navigators, as will be largely ſhewn in another Place; but at preſent it may be ſufficient to obſerve, that moſt of their Arguments are drawn from their own Explications of perplexed and obſcure Paſſages in Hiſtorians or Poets, whereas ours are grounded on the Scope of their general Hiſtories, and on Declarations in our Favour, as expreſs as can be deſired. For inſtance, *Vegetius* aſſures us, that the Seas were ſhut from *November* to *March*, and that it was not thought ſafe to undertake any Voyage of Conſequence before the Month of *May*. This very plainly proves the Defects of their Navigation, and that they loſt a great Part of the Year for want of thoſe Helps and Advantages, which, purely from a Spirit of Contradiction, theſe learned Men would perſuade us they enjoyed.

It may not be amiſs to remark, that ſuppoſing their Opinion to be true, it is ſo far from adding to the Credit of the Ancients, that it really does a greater Injury to their Reputation, than the contrary Aſſertion taken in the ſtrongeſt Senſe; for if the Ancients had the Uſe of the Compaſs, and of Sea-Charts, as theſe learned Writers maintain, their not making a better Uſe of them is altogether inexcuſable, and ſhews ſuch a Want of Spirit, and ſuch a Defect of Genius, as is abſolutely irreconcileable to their Performances in other Arts; but what ſeems to put the Matter beyond all Queſtion is this, that the *Arabians*, becoming Maſters of the *Greek* Learning as well as of their Empire, and tranſlating into their own Language the beſt Books that were written on theſe Subjects, met with nothing that at all corroborates this Notion of the great Knowlege of the Ancients, with reſpect to the Inſtruments of Navigation neceſſary in long Voyages.

Sir *John Chardin*, who was a Man of much Reading, as well as of a good Underſtanding, and withal a great Traveller, has delivered his Sentiments upon this Subject in the following Terms, which I the rather cite in this Place, becauſe I ſhall not hereafter have any Opportunity of entering again on ſuch Reflections in the Courſe of this Chapter. “I
“ cannot tell, ſays he, whether the *Chineſe* found out the
“ Art of Navigation and the Compaſs, as they did the Art
“ of Printing and Artillery; we ſhould conſult the learned
“ Men amongſt them to be aſſured of it. But for the
“ other *Aſiatics*, I boldly aſſert, they are beholden to us
“ for this wonderful Inſtrument, which they had from
“ *Europe* by the Hands of the *Arabs*, a long time before
“ the *Portugueze* Conqueſts: For, firſt, their Compaſſes
“ are exactly like ours, and they buy them up of the *Eu-*
“ *ropeans* as much as they can, ſcarce daring to meddle
“ with their Needles themſelves. Secondly, it is certain
“ the old Navigators only coaſted it, which I impute to
“ the Want of this Inſtrument to guide them, and inſtruct
“ them in the wide Ocean. We cannot pretend to ſay
“ they were afraid of venturing far from home; for the
“ *Arabs*, the firſt Navigators in the World in my Opinion,
“ at leaſt for the Eaſtern Seas, have, Time out of Mind,
“ ſailed from the Bottom of the *Red Sea* all along the Coaſt
“ of *Africk*, down to the Tropick of *Capricorn*, which is
“ a Space of fifty Degrees; and the *Chineſe* have always
“ traded with the Inhabitants of the Iſlands of *Java* and
“ *Sumatra*, which is alſo a very conſiderable Voyage. So
“ many Iſlands uninhabited, and at the ſame time produc-
“ tive, ſo many Lands unknown to the People I ſpeak of,
“ are a Proof that the old Navigators had not the Art of
“ ſailing on the wide Sea. I have nothing but Argument
“ and Conjecture to offer touching this Matter, having
“ never met with any body in *Perſia*, or the *Indies*, to
“ inform me when the Compaſs was firſt known among
“ them, though I made Enquiry of the moſt learned
“ Men

“ Men in each Country, I have ſailed from the *Indies* to
“ *Perſia* in *Indian* Ships when no *European* has been on
“ Board but myſelf: The Pilots were all *Indians*, and they
“ uſed the Foreſtaff and Quadrant for their Obſervations.
“ Theſe Inſtruments they have from us, and made by
“ ours, not in the leaſt varying therefrom, except that the
“ Characters are *Arabic*; and by the way I obſerved, that
“ the *Arabs* are the moſt ſkilful Navigators of all the
“ *Aſiatics* and *Africans*; but neither they nor the *Indians*
“ make uſe of Charts, and indeed they do not much want
“ them; ſome they have, but they are copied from ours,
“ for they are quite ignorant of Perſpective.”

13. After the copious Detail we have given of the Progreſs of the Commerce of the Ancients in the Eaſt, we ſhall conclude this Section with a very ſuccinct Compariſon between their Endeavours and Succeſſes in this reſpect, and the Labours in the ſame way of the Moderns. In the firſt place then we have made it highly probable, that even in the moſt flouriſhing State of their Trade, their actual Diſcoveries did not reach farther to the Eaſt than the Peninſula of *Malacca*; for as to the *Sinus Magnus*, they could know nothing of it but by Hear-ſay, unleſs they had known all the reſt of the *Indies*. On the Continent again the *Sinæ*, which were the *Siameſe*, were the laſt People they knew on that Side. In regard to the Northern *Indies*, they knew very little with any ſort of Certainty beyond the *Emodian* Mountains; and moſt evident it is, even from their beſt Writers, that they had not ſo much as Reports of the Nations inhabiting beyond the Mountains of *Imaus*. But we have diſcovered Eaſtward the Country of *Cochin-China*, and all the Countries dependant upon it, the Kingdom of *Tonkin*, the vaſt Empire of *China*, all the Iſlands of the *Sound*, the *Moluccas*, the *Old* and *New Philippines*, and the Country of *New Guinea*, ſo that conſidered in this Light, our Diſcoveries exceed theirs by twenty Degrees of Longitude. Towards the North again, beſides what has been diſcovered by Land, the *Dutch* have moſt certainly proceeded as high as forty-five Degrees ſailing to the North-eaſt of *Japon*, ſo that without exaggerating, the Part of *Aſia* made known to us by our *Eaſt-India* Voyages is equal to all the reſt of *Aſia* that was known to the Ancients. It is not therefore at all ſtrange, that our *India* Trade ſhould ſo much exceed theirs, though carried on at ſo much greater Diſtance.

In the next place, it may be obſerved, that though the Trade to the *Indies* was never carried to Perfection by the *Egyptians*, *Tyrians*, or *Romans*, yet it was known to them, and made the Subject of their Books for a long Courſe of Ages, ſince from the firſt Kingdom of *Tyre* to the Reign of *Conſtantine the Great* includes above eight hundred Years, whereas all our Diſcoveries of the *Eaſt Indies* were made within two Centuries after a Paſſage was found thither by the *Cape of Good Hope*, ſo that in this reſpect the Induſtry of the Ancients is very far ſuppaſſed by that of the Moderns.

The Third Obſervation I ſhall make is with regard to the Difference between a Land Force and a Naval Power. We have ſeen how many fruitleſs Attempts were made by the *Aſſyrian* and *Perſian* Monarchs to extend their Conqueſts towards the Eaſt; and we have likewiſe ſeen of how ſhort a Continuance the Conqueſts were of *Alexander the Great*, and his Succeſſors, together with the Attempts made by the *Romans*, after they had reduced *Egypt* to a Province, and were Maſters of a great Part of *Aſia*, which, all of them, are nothing in Compariſon of the Empire eſtabliſhed by the *Portugueze*, or rather the Compariſon falls as far ſhort as the Power of the little Kingdom of *Portugal*, when thrown into the Balance with that of the Empire of *Rome*; and the Eſtabliſhments of the *Engliſh* and *Dutch* in thoſe Parts, but more eſpecially of the latter, plainly demonſtrate, that with reſpect to the Advantages derived from Conqueſts, a Maritime Power is infinitely ſuperior to the Strength even of the moſt extended Empires.

The *Romans* had in this reſpect in all Appearance the higheſt Advantages; they were Maſters of the Country to the very Mouth of the *Arabian* Gulph on one Side, and had a very large Tract of Country on the other. The Terror of their Name was ſo great, that they had hardly any Oppoſition to fear by Land or Sea; and if one Expedition had failed, they might very ſoon have repaired the Loſs ſuſtained in it, and have been in a Condition to have undertaken another. Yet we ſee nothing of this happened; and it was not above twice or thrice thouhgt of, and then to no great Purpoſe. *Auguſtus* had formed a Deſign of reducing the *Peninſula* of *Arabia*, to which he was excited by many Reaſons; ſuch as that the Inhabitants of the Coaſt between the *Arabian* and *Perſian* Gulphs were in Poſſeſſion of the whole Trade of the Eaſt; there were ſome of the Nations on the Coaſt oppoſite to *Egypt* that were extremely addicted to Piracy, and greatly diſturbed the Navigation of the *Romans*, which probably happened from their having lighter Veſſels, and ſuch as ſailed better; ſo that if at any time they met with Ships of greater Force, they were able to leave them, and make their Eſcapes; the Situation of the Country alſo might probably be a ſtrong Inducement to the attempting this Conqueſt, becauſe it ſeemed to promiſe the intire Poſſeſſion of the Oriental Commerce without Interruption. But we have ſeen how that Expedition, undertaken with ſo great Precaution, and with ſuch a Force as was never employed in the Eaſt by any modern Potentate, was intirely defeated, The Emperors *Flavius* and *Titus Veſpaſian* had alſo ſome Thoughts of puſhing their Conqueſts on this Side; but Hiſtory does not inform us, that they ever took any effectual Steps towards putting thoſe Deſigns in Execution. *Trajan* made the laſt Attempt upon *Arabia* from the *Perſian* Side, with a potent and victorious Army and this with no other View, than to have made himſelf Maſter of the Wealth which the *Arabians* had amaſſed by their extenſive Commerce; but he likewiſe failed, and from a too quick Senſe of his Diſappointment broke his Heart.

Let us now conſider what Proſpect the *Portugueze* had of reaching and making Conqueſts in the *Indies*. Inſtead of croſſing from the Mouth of the *Arabian* Gulph to the Coaſt of *Malabar*, which is a Voyage only of a few Days they were to ſail round the whole Continent of *Africa*, then a Coaſt in a great meaſure unknown; and at the ſame time the adjacent Seas were remarkable for their being almoſt conſtantly ſubject to Storms and Tempeſts, inſomuch, that when the utmoſt Çape was firſt diſcovered, the Diſcoverer called it the *Tempeſtuous Cape*; but the King of *Portugal* foreſeeing the Advantages that would reſult from this Navigation, chânged that Name for *The Cape of Good Hope*, and with a few Ships, and a very ſmall Force, attempted and ſettled not only a Commerce with the *Indies*, but raiſed a very conſiderable Empire there in ſpite of all the Oppoſition that could be given him. This manifeſtly ſhews not only the Superiority of the Moderns over the Ancients in Point of Navigation, but likewiſe that the moſt diſtant Voyages are beſt ſuited to the raiſing a Maritime Power, that is to ſay, a Power by Sea that is permanent, and not raiſed and overthrown ſuddenly, as the Maritime Powers among the Ancients frequently were. It alſo effectually demonſtrates, that it is not a mighty but a well-conducted Force that is proper for eſtabliſhing diſtant Conqueſts; and that when a Nation is once poſſeſſed of a conſiderable Fleet, there is no Country at ſuch a Diſtance as to be out of her Reach, neither are her Settlements in any Danger of being deſtroyed, while they are worth keeping, and while the Government at home is ſufficiently attentive to their Preſervation; ſo that the Circumſtances which ſeem at firſt Sight the moſt diſcouraging in regard to the attaining Foreign Power and Maritime Force, are, in reality, thoſe which moſt contribute to the Eſtabliſhment of it; and to the preſerving it when eſtabliſhed, by ſecuring a conſtant Supply of all that is neceſſary for that Purpoſe.

It is by long Voyages only, made with Danger and Uncertainty, that People acquire the Means of making long Voyages with Eaſe and Safety; the Perils they eſcape once they know how to avoid again; they become acquainted by degrees, and by Experience, with the Nature of Things, which never could have been reached by the Penetration even of the ſharpeſt Underſtanding; and by thus becoming acquainted with the Laws, or rather with the Courſe of Nature, they gain inſenſibly a kind of Superiority over Nature; ſo that in ſome Senſe the very Winds and Seas may be ſaid to obey them. When the *Portugueſe* firſt undertook their *Indian* Expedition, they neither had good Ships, nor knew how to build them. It was not therefore in Virtue of their great naval Force, that they became Maſters of theſe Countries, but it was their Deſire of becoming Maſters of them, that put them upon raiſing one capable of atchieving it.

It is very remarkable, that the firſt Place in the *Indies* at which they arrived, was *Malabar*, a Country which, as we have ſhewn, was known to the Ancients, and that too for a long Tract of Time, but ſo imperfectly that they were not ſo much as able to give us a tolerable Deſcription of it. Whereas in the Space of fifty Years, or leſs, the *Portugueſe* were Lords not only of that, but of all the adjacent Countries, raiſed and depoſed Princes as they thought fit, and diſpoſed of Kingdoms at their Pleaſure The great Iſland of *Ceylon*, which, as we have proved, was the *Taprobana* of the Ancients, of which, after ſo many Voyages to the *Indies*, they have given us ſuch lame Accounts, was not only perfectly diſcovered within the Space of Time before mentioned, but in the Hands of the *Portugueze*, who impoſed a Tribute upon the Inhabitants, though all the Force they had then in the *Indies* was not equal to a thouſandth Part of their Number.

Theſe Reflections will lead the intelligent Reader into many more upon this Subject, and enable him to comprehend perfectly the Difference between the Attempts made by the Ancients, and the Exploits of the Modetns in this Part of the World, which, at preſent, is all our Buſineſs; and having thus travelled through the darkeſt and moſt perplexed Part of our Subject, on which we were obliged to enlarge ourſelves, in order to be perfectly underſtood, and to ſatisfy the Reader, that though every Thing within this Period of Time was confuſed and embarraſſed enough; yet it was far from being ſo utterly unintelligible, as it has been hitherto repreſented; we may have Leave to be more conciſe for the future, in reſpect to thoſe Things that are better known, and with regard to which therefore long Digreſſions are unneceſſary.

In order to connect the ancient and modern Hiſtory of the Commerce between *Europe* and the *Eaſt-Indies*, it is requiſite that we ſhould give a ſhort Account of the Intercourſe between the Subjects of the *Greek* Empire and the People of the *Indies*; for the Reader muſt naturally apprehend that after the imperial Seat was transferred from *Rome* to *Conſtantinople*, *Egypt*, remaining ſtill a Province no leſs uſeful to the latter than the former, this Commerce which had hitherto been in a manner annexed to the Poſſeſſion of *Egypt*, muſt have been not only preſerved, but encouraged and extended.

He will likewiſe, no doubt, be glad to ſee the Changes that happened in it, the new Routs that were opened to and from the *Indies*, by which the Commodities of thoſe Countries came by ſo many different Chanels into *Europe*, and which by the Riches they derived to the ſeveral Nations that intermeddled with this Commerce, excited that Spirit of Diſcovery which has ſince laid open that Trade directly to all the modern maritime Powers, and made their Eſtabliſhments in the *Indies* the moſt ſolid Proofs of their having a juſt Right to that Title. Theſe, God willing, we ſhall diſpatch within the Compaſs of two ſhort Sections, and then we ſhall enter on the Travels to the *Indies*, which firſt acquainted the northern and weſtern Parts of the World, with the Interior of thoſe Countries, the Nature of their Inhabitants, the Conſtitution of their Governments, and the Hiſtory of the moſt remarkable Events which had fallen out in them.

A Sort of Travels that, as they appeared ſtrange and ſurpriſing in the Times in which they were firſt publiſhed, ſo when exhibited ſimply and plainly as their Authors wrote them, and without the whimſical Additions by which they were disfigured in our old Tranſlations, they cannot fail of being thought equally curious and inſtructive even at this Day, the rather becauſe we love to trace Things to their Beginnings, and to ſee what ſtrange Impreſſions the Sight of Countries, People, and Manners ſo different from their own, made upon the Minds of thoſe who firſt viſited thoſe remote Regions, and that too in an Age not altogether ſo free from Superſtition and Prejudice as this in which we live.

SECTION XVI.

A conciſe Hiſtory of the Riſe, Progreſs, and Decline of the Conſtantinopolitan *Empire, together with the Commerce of its Subjects in the* Eaſt; *as alſo a brief Detail of the Riſe of the* Arabian *Empire, the Recovery of the* Indian *Commerce in* Egypt, *and the reviving the Trade of* Alexandria.

1. *A Deſcription of the City of* Conſtantinople, *and a ſhort View of the many Advantages derived to it from its commodious Situation.* 2. *The great Care taken by the Succeſſors of* Conſtantine, *for the Support of maritime Power.* 3. *The great naval Strength of that Empire, and the Diſpoſition of its Fleets.* 4. *The Ruin of the Silk-Trade under the Emperor* Juſtinian. 5. *Silk-worms firſt brought to* Europe, *and a compendious Hiſtory of that Manufacture to the preſent Times.* 6. *A large Account of the ſeveral* Indian *Commodities that were brought to* Conſtantinople. 7. *A conciſe View of the State of that Empire, from the Reign of* Juſtinian *to that of* Heraclius. 8. *The Victories of* Heraclius *over the* Perſians, *and the Embaſſies ſent him from the* Indies. 9. *The Riſe and Progreſs of the* Arabian *Empire, to the Time of the Conqueſt of* Egypt. 10. *The Foundation of* Grand Cairo, *and the Revival of the* Indian *Trade in* Egypt. 11. *The Hiſtory of the* Arabian *Commerce continued, with the Revival of that of* Alexandria. 12. *The State of* Conſtantinople, *to the Time of its being taken by the* Turks. 13. *Obſervations and Remarks upon the foregoing Hiſtory.*

1. THE beſt Writers of Antiquity differ very much as to the Reaſons which induced *Conſtantine* the Great to remove the Seat of Empire from *Rome* to the new City, which he called by his own Name. Some aſcribe it to his Care of the Eaſtern Provinces, and others to his being ſenſible that the *Romans* hated him. Whatever his Reaſons were, moſt certainly the Majeſty of *Old Rome* could not have been tranſlated to a City better ſeated for Empire than this, which the Emperor *Conſtantine* ſtiled *New Rome.* Its old Name was *Byzantium*; and it had run through a great Variety of Accidents before *Conſtantine*, who firſt thought of rebuilding *Troy*, caſt his Eyes upon it, and immediately diſcerned that no Place was ſo fit to become the Metropolis of the *Roman* Empire, and Miſtreſs of the World. It ſtands on a Point of Land on the ancient *Boſphorus* of *Thrace*, where there is a narrow Straight which ſerves to divide *Europe* and *Aſia*, and, at the ſame time, forms a Communication between the *White* and the *Black-Sea.*

The City ſtretches itſelf out in the Manner of an Amphitheatre, having on its Right-hand the *Archipelago*, and all the *Mediterranean*; and on the Left, the *Black-Sea* up to the *Palus Meotides*; ſo that it has all *Aſia* in

Front, and all *Europe* behind. It is in Virtue of this Situation that this City is very juſtly ſtiled the Key both of the Mediterranean and Black Sea. The Emperor, its Founder, took all imaginable Care to render it the moſt magnificent Place in all the World, to adorn it with Churches, Palaces, and other publick Buildings; and to provide for its Security, by all the Arts of Fortification practiſed in thoſe Days. But ſtill the Conveniency of its Situation ſeems to have had a greater Share in rendering it populous, and in preventing ſucceeding Emperors from thinking either of going back to *Rome*, or of chuſing any other Place of Reſidence, than all the Pains taken by *Conſtantine* to render it equally ſtately and commodious.

The ſpacious Fields of *Thrace* that lay immediately behind it, furniſhed Corn in Abundance, and that Part of *Aſia* which was over-againſt it, was, for many Ages, the beſt peopled and the beſt cultivated Country in the World. The Markets were always full of Fleſh and Fowl, at the cheapeſt Rates; and for Fiſh it had, and has ſtill a greater Abundance than any other City in the Univerſe, inſomuch that twenty Boats have been laden with one Net. The Inhabitants were ſupplied with Wines of the richeſt Growths, in the greateſt Plenty, ſo that in antient Times they were reproached with being continually at the Bottle; and, even to this Day, the *Greeks* lie under the ſame Imputation; though the *Turks* being reſtrained by their Religion, are leſs addicted to this Vice, though not wholly exempt from it neither. As to Timber, *Conſtantinople* is ſo plentifully ſupplied from the Woods which extended from *Propontis* quite to *Colchis*, in a Tract of more than forty Days Journey, that in the Space of ſo many Ages as ſhe has already ſtood, ſhe has never felt the leaſt Inconvenience, notwithſtanding ſhe has ſupplied all the neighbouring Parts with what was requiſite for building Ships and Houſes, and even *Egypt*, *Arabia*, and *Africa*, have likewiſe received Materials from her Stores.

But the greateſt Beauty, the greateſt Advantage, the moſt diſtinguiſhing Felicity of this imperial City, is her Port, by Nature the moſt lovely in the World, being ſix Miles in Compaſs, a full Mile over, and every where ſo deep that Ships may lie with their Heads aſhore, without Danger. This Harbour is not more ſafe and ſpacious than convenient; for when the Winds are N. N. E. or N. W. ſo that no Ships can come in from the Mediterranean, they bring in thoſe from the black Sea; and when they vere about to the oppoſite Points of S. S. W. or S. E. they bring up the Veſſels from the Mediterranean; ſo that conſidered in this Light, *Conſtantinople* ſeems deſigned by Nature to be the Centre of Commerce for *Europe*, *Aſia*, and *Africa*.

2. It was very probably the Senſe which they had of theſe prodigious Advantages that induced the Emperors, for a long Series of Time, to bend a great Part of their Endeavours to the Encouragement of Merchants and Mariners. The Emperor *Conſtantius*, for Example, exempted them from all Charges and Contributions to which the other Subjects of the Empire were liable; and this in ſo ample a Manner, that no pretended Caſes of Neceſſity could affect them. Succeeding Emperors diſtinguiſhed between Merchants and Mariners, ſubjecting the former to Duties and Impoſitions, but exempting the latter, and extending their Privileges to a very great Degree. The Reaſon of this was, becauſe that Merchants reaped all the Profits of Commerce to all the Hazards and Dangers of which the Mariners alone were expoſed. As the Emperors had frequent Occaſion to fit out Fleets for the publick Service, and as the Manning of theſe might have been very prejudicial to Commerce, a Law was provided which remedied this Inconvenience, and that in ſo ſingular a Manner, that it deſerves to be particularly taken Notice of.

There were certain Lands, in the Nature of Fiefs, granted for this Service; that is to ſay, the Owners poſſeſſed them, together with the Privileges incident to Mariners, upon expreſs Condition, that in Conſideration of theſe Eſtates they ſhould furniſh, according to their reſpective Values, a certain Number of Seamen, whenever the publick Service required them. Thus the Burthen was laid upon Lands, and not upon Perſons; and as the Circumſtances of People might change, and this Duty of providing Seamen, become inconvenient, or even impracticable; for the original Poſſeſſors of ſuch Eſtates, the Law provided that they might be at Liberty to diſpoſe of them to ſuch as might be more capable of complying with the Terms upon which they were held.

By this Method the *Greek* Emperors were able to fit out very great Fleets in caſe of Neceſſity, as appears by that of the Emperor *Leo*, in the Middle of the fifth Century, which was intended againſt the *Vandals* and conſiſted of eleven hundred Sail, which, however, were all deſtroyed on the Coaſt of *Africa* by the Treaſon of him who commanded them. This alone is a ſtrong Proof of the great maritime Power of the *Conſtantinopolitan* Empire, while it flouriſhed; but we have a much more ſignal Proof in the Eſtabliſhments made by theſe Emperors for the ſeveral Fleets appointed for the Defence and Support of their Empire, which Eſtabliſhments appear very clearly from the ſeveral Bodies of their Laws ſtill remaining, and which prove, beyond all Contradiction, that ſo long as this Empire continued in a flouriſhing Condition, the utmoſt Care was taken for the Encouragement and Protection of Commerce, by a right Application of that maritime Force we have before deſcribed.

3. The Province of *Egypt* was of no leſs Importance to the *Greek*, than to the *Roman* Empire; and the utmoſt Care was taken to regulate the annual Fleets from that Province, ſo that the City of *Conſtantinople* might be regularly ſupplied with whatever Proviſions ſhe had Occaſion for from thence, and have likewiſe the moſt valuable Returns that were made from the *Indian* Commerce by the way of the *Red-Sea*. It was by this means that immenſe Riches were regularly drawn from thence, and the beſt Part of the Profits of that advantageous Trade conſtantly conveyed to the Imperial Reſidence, as appears by a Multitude of Laws yet extant in relation to the Fleet of *Alexandria*, on Board of which thoſe Treaſures were carried to *Conſtantinople*. The next ſtationed Fleet was that of *Africa*, which was chiefly deſigned for the Benefit of *Old Rome*; for all the Commerce of *Alexandria* being diverted to *Conſtantinople*, that Supply of Proviſions, for which hitherto *Rome* had depended upon the Fleet of *Egypt*, was now to be received by this of *Africa*; and for a long Courſe of Years this Expedient anſwered the End very well.

The Third Fleet was that of the Eaſt, the principal Station of which at *Seleucia*, a City of *Syria*, ſeated on the River *Orontes*; and this Fleet ſeems to have been divided into ſeveral Squadrons, and from the many Laws made about it, appears to have been of very great Importance. It was chiefly by the help of this Fleet that the Commerce of *Perſia* and the *Higher Aſia* was carried on, which was very rich, and included ſome Branches of that of the *Indies*. Great Care was taken in the regulating this Trade, to prevent the Empire from ſuffering by the ſending of *Perſian* Spies, in the Garb of Merchants, into the *Roman* Provinces. The Places therefore to which the *Perſian* Merchants might repair, were pointed out, and ſettled by Law; as alſo the Seaſons at which Fairs were to be held, and the Time they were to laſt, by which Contrivance a Door was opened for conveying all the Trade of *Aſia* into this Channel; for when the Goods purchaſed at different Places were brought by the reſpective Fleets attending the Provinces in which thoſe Fairs were held to *Seleucia*, they were there embarked on Board the Grand Fleet for *Conſtantinople*.

Beſides theſe there was another Fleet in the *Pontus Euxinus*, or *Black Sea*, which brought annually vaſt Quantities of Corn to *Conſtantinople*, together with abundance of rich Commodities, and amongſt them ſome from the *Indies*, which were brought thither by a Rout that will be explained in the next Section. This Fleet ſerved likewiſe to awe the ſeveral barbarous Nations inhabiting the Coaſts of that Sea, and thereby contributed exceedingly to the Tranquillity of the Empire. It is very probable from the Laws that we find in the Code of the Emperor *Juſtinian*, that beſides theſe great Fleets, every maritime Province of the Empire had its peculiar Squadron ſtationed at a certain Port, which every Year carried the Revenues of the Province to *Conſtantinople*. There were likewiſe vaſt Numbers of flat-bottomed Veſſels maintained at the publick Expence on all the great Rivers that paſſed through the Empire for the tranſporting Troops, and other requiſite Services, as Occaſion required.

Whoever conſiders this Diſtribution of Things attentively, will eaſily diſcern that there never was a Government in the World, the Peace and Proſperity of which depended more immediately on the right Management of Maritime Affairs, than that of this Empire. But as it was very extenſive, and as an equal Care was neceſſary for the preſerving Order in every Part of it, we need not wonder, that in Proceſs of Time many Errors crept in, and a Multitude of Laws were made neceſſary for remedying the Inconveniencies they produced, till by degrees the new Regulations claſhing with the old ones, occaſioned greater Miſchiefs than all the reſt, and joined to a Depravity of Manners among their Governors, and the Invaſions from barbarous Nations, to which they were continually expoſed, brought on the Ruin of an Empire, which was grown too bulky to be well managed.

4. It is very certain, and we ſhall quickly have an Opportunity of making it evident, that ſo long as the *Greek* Empire was in a ſafe and flouriſhing Condition, the Subjects thereof had a general Correſpondence in the Eaſt, and carried on a conſiderable Commerce to the *Indies* by different Canals. It would take up too much Room to ſtate a Multitude of Facts from the *Byzantine* Hiſtorians which might eſtabliſh this Aſſertion; but that we may not leave this Part of our Hiſtory leſs perfect than the reſt, it ſeems reaſonable to report ſome few Inſtances which may anſwer this Purpoſe, and that too in a narrow Compaſs. The learned Hiſtorian *Procopius*, who has preſerved a Multitude of curious Paſſages in reſpect to the Reign of the Emperor *Juſtinian*, in which he flouriſhed, has among the reſt two very ſingular Facts that fall in exactly with our Deſign.

He tells us, that this Emperor, who began his Reign *A. D.* 528, and who had found a way to grant Monopolies of almoſt every ſort of Commodity, except Silks, took the following Method of getting that likewiſe into his Hands. It ſeems, this Manufacture was carried on no where but in the Cities of *Berytus* and *Tyre* in *Phœnicia*, and Silks were of a ſudden grown to a moſt extravagant Price, which was ſaid to ariſe from the Covetouſneſs of the *Perſian* Monarch, who had impoſed a heavy Duty upon Silks, which the *Roman* Merchants were obliged to pay for all they purchaſed in his Dominions; the Emperor finding this conſidered as a great Hardſhip, publiſhed an Edict, by which he pretended to ſettle the Price of Silk at eight Crowns of Gold for a Pound, and threatened with Confiſcation of their Goods ſuch as ſhould preſume to ſell it dearer.

This ruined the Merchants who dealt in that Commodity, who found themſelves obliged by this Law to ſell Silk for leſs than it coſt them; and therefore they quitted Trade, and diſpoſed privately of all the Silk they had to Perſons they could confide in. The Empreſs *Theodora*, having Intelligence of this, cauſed all their Goods to be confiſcated, and impoſed a large Fine on them beſides. By this Contrivance all the Silk in the Empire fell into her Hands; and by the Aſſiſtance of one *Peter Berſamez*, who was her Inſtrument, ſhe ſold it out publickly at the Rate of ſix Crowns an Ounce for that of an ordinary Dye; and the ſuperfine Colours were ſold at different Rates up to twenty-four Crowns an Ounce, all the Manufacturers working for them. By this iniquitous Practice the Emperor and Empreſs got immenſe Wealth, and *Berſamez* their Agent much more; but in the mean time the Merchants of *Conſtantinople* were ruined and undone, the Manufacturers at *Berytus* and *Tyre* reduced to abſolute Beggary, and Numbers of induſtrious Perſons forced to leave their Wives and Families in order to ſeek Employment in *Perſia*.

This is a very curious Paſſage, inaſmuch as it ſhews us the State of the Silk Trade at that Time, the Places in which Silk was wrought up, and the Value of that Commodity. But the ſecond Article we ſhall borrow from that Hiſtorian is ſtill more curious, becauſe it ſhews how the Price of Silk was reduced, not only throughout the *Greek* Empire, but throughout all *Europe*. Before we come to this, however, it is requiſite to obſerve, that even in the midſt of this Extortion there had been a Time when Silk was much dearer. For under the Reign of the Emperor *Aurelian* Silk had been ſold for its Weight in Gold; that is to ſay, a Pound of one was weighed againſt a Pound of the other; but as theſe Gold Crowns, or Aurei, as they are called in old Hiſtorians, were made by dividing a Pound of Gold into one hundred Parts, it is plain, that the Empreſs's Agent ſold Silk of common Colours for ſeventy-two Aurei, and Silk undyed perhaps cheaper. We may conceive from hence the Hardſhips that the Merchants were laid under by their being obliged to ſell it for twelve Aurei, which conſidering that they imported it from *Perſia*, and the *Perſians* at that time probably from *India*, it muſt have come to them at a much dearer Rate.

5. This exceſſive Price of Silk, whatever temporary Miſchiefs it might produce, had a very good Effect in the main; for the Emperor perceiving that his Subjects were chiefly tied to a continual Trade with *Perſia*, for the ſake of this Commodity, diſcovered a great Deſire to ſee them freed from this Inconvenience; upon which two *Indian* Monks, or rather two Monks that had travelled to the *Indies*, went to the Emperor, and told him, that they could very eaſily ſettle that Manufacture amongſt his Subjects, ſo as that they might never be under the Neceſſity of dealing with any Strangers, much leſs with the *Perſians*, for that Commodity. This Silk, ſaid they, which is ſo precious here, is in *Serinda*, the moſt populous and moſt civilized Country in the *Indies*, where we have ſpent many Years, ſpun by certain little Worms, which Inſtinct they receive from Nature. As for theſe Worms, it is impoſſible to tranſport them; but their Eggs may be brought from thence without any Difficulty, and hatched here by giving them a certain Degree of Heat.

Such were the Propoſals made by the Monks to *Juſtinian*, who readily cloſed with them, making them great Promiſes, in caſe they were able to bring this Matter to bear, which without much Difficulty they did; for returning to the *Indies*, they brought from thence a conſiderable Quantity of the Eggs, nouriſhing the Worms when they came out with the Leaves of Mulberries; and thus, ſays my Author *Procopius*, was the Art of making Silk introduced into the *Greek* Empire.

This Tranſaction fell out *A. D.* 550, but it was a long time before it ſpread itſelf much beyond the Bounds of the *Greek* Empire; for we find, that *A. D.* 1130, *Roger* King of *Sicily*, having conquered a Part of *Greece*, brought over into his own Country the Art of managing Silk-Worms, which was quickly transferred from thence to *Calabria*, and other Parts of *Italy*, where it flouriſhed for ſome Ages, before it was transferred to the Southern Parts of *France*, which the great Hiſtorian *Mezeray* tells us, happened under the Reign of *Francis* the Firſt, in which, however, he is miſtaken; for *Lewis* XI. *A. D.* 1470, introduced it into his Dominions, and ſent for Perſons ſkilful in the Art of managing Silk, not only from *Genoa*, *Venice*, and *Florence*, but alſo from *Greece*; and by his Letters Patent, dated in the Year 1480, granted them great Privileges. But the Price of this Commodity was ſtill kept up at a great Height.

Our King *Henry* VIII. who was a very magnificent Prince, wore commonly Woollen Hoſe, unleſs by Chance he had a Pair of Silk from *Spain*. His Son *Edward* VI. had a Pair of Silk Stockings preſented him by Sir *Thomas Greſham*, which Preſent of his was much taken Notice of. Queen *Elizabeth*, in the third Year of her Reign, had a Pair of black knit Silk Stockings given her by Mrs. *Montague*, and ſhe never wore Worſted afterwards. In the Year 1600, Mr. *William Lee*, a Native of *Nottingham*, and educated in St. *John's* College *Cambridge*, invented the Art of Frame-work Knitting, which has been ſince much improved. Having thus traced the Silk Manufacture from the *Indies* hither, we will now return to the proper Subject of this Section, and endeavour to make good what we have before aſſerted, that the *Indian* Commerce did not ſuffer by this Change of the Seat of Empire.

6. It appears clearly from hence, that under the *Greek* Emperors, Voyages to the *Indies* were become more common than in former times; but we could ſcarce have believed that ſo many different kinds of *Indian* Commodities, and almoſt from every Part of *India*, were common at *Conſtantinople*, if it were not verified to us by the publick Laws of the

Empire, collected into a Body by the Emperor *Juſtinian*; from whence it appears, that there were ſeveral Duties impoſed upon a Multitude of Goods brought from the *Indies*, ſuch as Spices of different kinds; for inſtance, Cinnamon, which came from the Iſland of *Ceylon*, but not in any great Quantity; for it was always very dear, the *Xilo Cinnamomum* was no other than the Wood of the Cinnamon Tree, on which there was alſo a Duty; but it does not appear of what Uſe it was, or whence it grew into Eſteem; perhaps it was uſed in the ſame manner that we do other Woods, in Decoctions. *Caſſia*, deſcribed at large by ſeveral antient Authors, from whom it appears to have been a ſort of milder Cinnamon; this likewiſe comes from *Malabar* and *Ceylon*. We learn from ſome very judicious Writers, and who are well acquainted with the Manner of collecting Spices in the *Indies*, that the *Caſſia Lignea* is, in truth, nothing more than the thick Bark of the true Cinnamon Tree, which has very little Flavour, by which they mean that this is the Spice known to the Antients by that Name; but the Modern Caſſia is another thing, and ſomewhat of a higher Flavour.

Pepper of ſeveral kinds, ſuch as long Pepper, white Pepper, and black Pepper, all of them from the *Indies*. *Pliny* is very angry that this Spice ſhould be ſo much admired; for, as he obſerves, other things are either pleaſant to the Sight, the Smell, or the Taſte, whereas there is nothing in Pepper agreeable to any of theſe Senſes; and yet, ſays he, what grows wild, and is of no Value in the *Indies*, is with us ſold by Weight, like Gold or Silver, for no other Reaſon, adds he, but becauſe it comes from *India*. In his Time the long Pepper was worth about nine or ten Shillings a Pound of our Money, white Pepper was of half that Value, and black about half a Crown a Pound; and it ſeems to have been as dear at *Conſtantinople*. Ginger, of which *Pliny* tells us, that many in his Time thought it the Root of the Pepper Tree; but he aſſures us, that was a vulgar Miſtake, for that in Reality it was the Root of a little Herb, which grew commonly in the Meadows of *Arabia*, and in the Country of the *Troglodites*. This Spice is likewiſe deſcribed by *Dioſcorides*, who agrees very well with *Pliny*. But after all, Ginger does not grow either in the Manner, or in the Countries they mention. It is, indeed, a kind of Lilly, the Flower of which is red mixed with green. It grows in the moſt remote Parts of the *Indies*, and over a great Part of *China*; but ſince it has been tranſplanted into the *Weſt-Indies*, we have the beſt Part of our Ginger from thence. The *Chineſe* eſteem it very much, eſpecially as a wet Sweet-meat, and tranſport a great deal of it to *Batavia*, where it is generally eat after Meals to aſſiſt Digeſtion. It did not bear a very high Price among the Antients; for in the Time of *Pliny* it was not above three Shillings a Pound; and at *Conſtantinople* it was not worth ſo much, It may not be amiſs to obſerve, that in thoſe Days they adulterated their Spices very dexterouſly; from whence it is evident, that they were much in uſe, and conſequently they muſt have been brought from the *Indies* in conſiderable Quantities.

Precious Stones of all Sorts, ſuch as Diamonds from different Parts of the *Indies*; Pearls from the Coaſt of *Perſia* and *Ceylon*; Emeralds, which were always held by the Antients for Oriental Stones, though there is great Reaſon to doubt the Truth of that Fact; but, however, they had good Cauſe to believe it, becauſe they were brought to them from the Eaſt, however they came thither. Another precious Stone, called Ceraunium, becauſe it was ſuppoſed to be found in Places where Thunder had fallen. *Pliny* mentions it, and indeed gives us a long Account of it, but ſuch a one as does not help us at all in finding out what Stone he means. He ſays, it is white, like Chryſtal, that it derives Light from the Sun and Moon, and has a ſort of Fire in it which ſeems to change its Place as the Stone is turned this Way or that, and that this Jewel comes from that Part of the *Indies* which borders upon *Perſia*. *Tertullian* mentions it among the Ornaments worn by Women, and aſſures us, that it had a glittering Appearance as if there had been Fire in it. We may venture to aſſert, that either this Stone is not known to us, or is a kind of Opal; for, except that, I know of no Stone that in any reſpect agrees with this Deſcription.

The Hyacinth or Jacinth, which was brought from *Callicut*, or *Cambaye*; it received its Name from its Reſemblance to the Flower ſo called, and muſt therefore have been of a purple Colour, inclining to a blue. The Jacinths known to us are of different Colours; but none of them reſemble the Stone known to the Antients; for ours are either of a Flame-Colour, of an amber Caſt, almoſt white, or of a pale Red. It is therefore probable, that the Jacinths of the Antients were a kind of Saphire. They were very much valued for graving, and were held to have many Virtues, which in reality were never yet to be found in any Stone.

Beryls, which *Pliny* ſays approach nearly to the Colour of an Emerald, and which owe moſt of their Beauty to their being cut hexangularly, and he diſtinguiſhes many kinds of them; ſome that had a yellow Caſt, others of a blueiſh Colour, and ſome mixed with white. He aſſures us, that the *Indians* valued theſe more than any other Stones, eſpecially when they were long, for then they bored and wore them without ſetting; and had alſo a Method of putting a gold Wire through them, which made them appear extremely beautiful at a Diſtance. One might write a large Diſſertation upon this ſingle Stone, ſince there are many very learned Naturaliſts that believe what we call the Beryl was the Diamond of the Antients. Certain it is, the Beryls we have from the *Indies*, do not at all reſemble the foregoing Deſcription, except that they are ſometimes found very long and large, but rather of a greeniſh Colour than a blue. They are moſtly to be met with in *Cambaye*, *Malabar*, or *Pegu*; but the fineſt and largeſt, of which ſometimes Cups and other ſmall Veſſels are made, come from the Iſland of *Ceylon*. There is, indeed, a Stone which ſome take to be a kind of Beryl, but which is better known by the Name of *Aqua Marina*, or *Aigue Marine*, from its Reſemblance in Colour to the Water of the Sea. Of theſe ſome are very hard, and of ſuch Beauty, that many Jewelers have been impoſed upon by them, and have taken them for Diamonds.

Saphires, about which we are more at a Loſs than about any other Stone whatever; but this ſeems to be certain, that whatever the Saphire of the Antients was, it had no Sort of Reſemblance to that Stone known to us by the ſame Name; for it appears that the Saphires of the Antients were not tranſparent, ſo that poſſibly they might be a kind of *Lapis Lazuli*. It is not, however, impoſſible that the Antients might be acquainted with the true Saphire; tho', if they were, they mentioned it by ſome other Name, and my Reaſon for ſuppoſing they might know it, is, that our Saphire comes from *Calicut*, *Cananor*, and the Iſland of *Ceylon*, from whence they had moſt of their precious Stones, and eſpecially ſuch as were coloured. We might add to theſe, many other kinds of precious Stones, of which, at this Day, we no know more than the Names: But that we are afraid of fatiguing the Reader, and therefore we ſhall only mention one Remark on this Subject, and that is, with regard to the Doubts and Difficulties that attend it. It ſeems to be a very ſtrange Thing, that we ſhould be more at a Loſs about the Jewels mentioned in old Authors than almoſt about any other Thing; but when we conſider what *Pliny* tells us, that the *Indians* were very dextrous in making falſe Jewels of all Colours; and when we obſerve that he mentions ſome true Stones, which, loſing their Luſtre, recovered it again by being put into Vinegar, in which Salt of Nitre had been diſſolved; I ſay, when we conſider, and lay theſe Circumſtances together, with the Addition of their Deſcriptions, it may very well beget a Doubt in us, whether many of the precious Stones mentioned by the Antients, might not be Compoſitions; but whatever they were, they came from the *Indies*, and this is another Proof, that even in the moſt early Times, the *Indians* were much better ſkilled in theſe Matters than any other Nation.

We likewiſe find amongſt the reſt of the *Indian* Commodities charged with Duties, all Sorts of Silk and Cotton Manufactures, which they brought as we do from thoſe Countries, and probably for the ſame Reaſon, becauſe they found that Method cheaper than bringing the Commodity and working it up at home. Ivory was alſo brought from thence as well as from *Africa*, and great Quantity of Skins and Furs which are diſtinguiſhed under the two Heads of *Babylonian* and *Parthian*; and they likewiſe brought many wild Beaſts, ſuch as Lions, Bears, Leopards, Panthers, and ſome Birds. As to Metals, we find none mentioned except Iron or Steel, under the Title of *Ferrum Indicum*; and this, we are told by *Pliny*, came from the Country of the *Seres*, and was eſteemed the very beſt in the World; and next to it was the *Parthian* Iron, but whether it came wrought or unwrought does not very clearly appear, but the former is the moſt probable. That they might, under the Reigns of the *Greek* Emperors, have this fine Iron or Steel from *China*, where that Commodity is ſtill met with in the greateſt Perfection, I will not deny; but that it came from thence in the Time of *Pliny*, is not eaſy to comprehend; and therefore I am apt to believe that they received it from the *Siameſe*, who might inform them that they had it from the *Seres*.

We find Cotton alſo, and a Sort of Mohair amongſt the Commodities that were brought from the *Indies*; and though the true Purple was to be had in *Europe*, yet it ſeems that of the *Indies* was moſt admired, and in the greateſt Eſteem, otherwiſe it cannot be imagined that they would have taken the Pains to have brought it from Countries at ſo great a Diſtance. It would take up too much Time, ſhould we endeavour to trace out the different Ways by which all theſe *Indian* Commodities were brought to *Conſtantinople*. It is ſufficient for our Purpoſe that they were brought thither, ſince this clearly ſhews that the Subjects of the *Greek* Empire had a conſiderable Trade to the *Indies*.

We might alledge, to prove this ſtill more largely, the Teſtimony of *Ammianus Marcellinus*, and ſeveral of the *Byzantine* Hiſtorians, which however would lead us into abundance of critical Diſputes, and therefore we ſhall wave their Authorities, eſpecially ſince the Account already given of the *Indian* Monk or Monks, who had travelled to the *Indies*, for with reſpect to our Subject it is much the ſame Thing which they were, is as clear a Teſtimony on this Head as we could wiſh. It is alſo very certain, and the Reader will meet with the cleareſt Proof of it in a ſucceeding Section, that by this Time, or very ſoon after, the *Syrians* had not only reached *China*, but were even eſtabliſhed there, and formed a Chriſtian Church, the Members of which were very numerous in all the Provinces of that extenſive Empire; neither can it be imagined that, upon this Eſtabliſhment, they ſhould immediately relinquiſh all Correſpodence with their Countrymen; though this might, and indeed really did happen in Proceſs of Time, and for Reaſons that will appear hereafter.

7. We have very different Characters given us of the Emperor *Juſtinian* by different Writers, according as their Humours led them; but upon the whole, it is very certain that he was one of the beſt Princes this Empire ever had, took the greateſt Pains to ſettle and ſupport the Government, to regulate the Laws, and to leave every thing in ſuch a Condition that ſucceeding Princes might be able to govern without Trouble, by adhering to the Rules which he had laid down.

He deceaſed in the eighty-third Year of his Age, *A. D.* 565, and was ſucceeded by his Nephew *Juſtin* II. in whoſe Time the Empire was ſo ſhaken by Domeſtick Confuſions, and towards the latter End of his Reign invaded by the *Perſians* on the one Side, and by the *Avares* on the other, that the Weight of Government became abſolutely inſupportable, inſomuch that he fell diſtracted. *Tiberius* had thereupon the Adminiſtration of the Empire committed to his Care, with the Title of *Cæſar*; and after the Death of *Juſtin*, he ſucceeded him in the Empire, which he governed with great Magnanimity, and had ſuch Succeſs againſt the *Perſians*, as reduced their Power very low.

He was ſucceeded, *A. D.* 582, by *Mauritius*, who married his Daughter *Auguſta*, and in the Beginning of his Reign was very proſperous, repelled the Invaſion of the *Perſians*, and when that Kingdom fell into Confuſion, and their King *Choſroes* expelled, he received that Monarch into his Dominions, and treated him with great Generoſity and Kindneſs; he likewiſe raiſed a great Army to reſtore him, which he alſo performed very happily; and by this Means the Commerce between the *Greeks* and the *Perſians* was renewed, to the great Advantage of both Empires. The Cloſe of this Emperor's Reign was not at all anſwerable to its Beginning; for the *Avares*, under the Command of their King *Chajanus*, invaded the Empire; and notwithſtanding all the Precautions the Emperor could take to prevent the Progreſs of their Arms, ravaged all *Thrace*, and were on the Point of beſieging *Conſtantinople*; but in this however they were prevented by a Plague, which ſwept off moſt of their Army, upon which their King, who had twelve thouſand of *Mauritius*'s Subjects Priſoners, offered to ranſom them for Half a Crown a piece, which not being granted, he put them all to Death. This ſo much incenſed the People of *Conſtantinople*, that they rebelled, and called the Emperor a cruel, and greedy Tyrant. He, on the other hand, was ſo afflicted with this unhappy Accident, that he begged the Prayers of all religious People, that this Offence might be pardoned, or that he might receive his Puniſhment for it in this World. In this he ſoon had his Wiſh; for *Phocas*, who from a common Soldier came to be General of his Army, rebelled againſt him, was proclaimed Emperor by the Army, and purſued *Mauritius* to *Chalcedon*, where he put him with his Wife and Children to Death, which *Mauritius* ſuffered with great Patience, uttering theſe Words, *Thou art juſt*, O LORD, *and thy Judgment is righteous*. Theſe Events fell out in the Year 602.

This *Phocas*, as he attained the Empire by Treaſon and Murder, ſo he governed with all the Circumſtances of Cruelty and Barbarity that could render a Tyrant odious; for being ſenſible at firſt that his Title was bad, he endeavoured to ſecure himſelf in the Poſſeſſion of the Empire, by deſtroying, without Mercy, all who were any way related to the Imperial Family, or who were ſo diſtinguiſhed by their Virtues, or their Employments, as to give him any Umbrage; and this leading him to ſhed the Blood of a Multitude of the Nobility, raiſed a general Abhorrence of his Government over all the Empire. But beſides theſe domeſtick Troubles, *Phocas*, almoſt from the Beginning of his Reign, was preſſed by a formidable Foreign Enemy. This was *Choſroes* King of *Perſia*, who, in Gratitude for the Kindneſs ſhewn him by the Emperor *Mauritius*, was no ſooner informed of his Murder, than he invaded the Provinces of the *Greek* Empire bordering upon his Dominions; and this War, as it grievouſly diſtreſſed a great Part of the Empire, ſerved to increaſe the Hatred of the People againſt the Monſter who had occaſioned it. As Misfortunes of this kind ſeldom come alone, and as it is natural for ambitious Neighbours to to take all Advantages over a declining Government, ſo while the Affairs of *Phocas* were in this Condition, the *Avares*, *Sclavonians*, and other barbarous Nations, broke into and ravaged his Dominions. He, in the mean time, inſtead of reforming, continued his Cruelty and Lewdneſs, till he was ſurpriſed in his Palace by *Photinus*, whoſe Wife he had raviſhed, and delivered to the Son of *Heraclius*, one of his Generals, who had taken Arms againſt him. *Heraclius*, after upbraiding *Phocas* with his Crimes, cut off his Feet, Hands, and Privities; and at laſt beheaded him. Such was the End of this barbarous and blood-thirſty Tyrant, who, notwithſtanding, was flattered by the Churchmen of his Time; crowned by the Patriarch of *Conſtantinople* while the Emperor *Mauritius* was ſtill living, and owned by the *Roman* Pontiff, on whom he beſtowed the Title of Univerſal Biſhop.

8. The general Corruption of the People, and a Succeſſion either of Tyrants or weak Princes, had ſo enfeebled the *Greek* Empire, that when *Heraclius* aſcended the Throne, which was *A. D.* 610, he found it ſcarce poſſible to make the neceſſary Proviſions for the Security of the State; and therefore, when he was attacked by *Choſroes* King of *Perſia*, he did not behave with that Conſtancy that might have been expected from a Man of his great Courage; for, inſtead of arming to oppoſe them, he endeavoured to purchaſe Peace; but when this was found impracticable, he compromiſed Matters with the *Avares*, who were Enemies no leſs formidable than the *Perſians*,

and addreſſed himſelf to the War, though his Treaſury was ſo exhauſted, that he was forced to coin the Church Plate. While he was engaged in this War, the *Avares* broke the Peace, and advanced even to the Gates of *Conſtantinople*, which they beſieged, but without Succeſs. *Heraclius* ſoon after concluded the *Perſian* War with much Honour to himſelf, after it had laſted ſix Years.

It was one of the moſt fatal of which we find any mention in Hiſtory; for it exhauſted the Strength, and in its Conſequences proved the Ruin of both Empires; for while the *Perſians* were victorious at firſt, they over-ran all *Egypt*, plundered the People without Mercy, interrupted their Commerce, and deſtroyed their Magazines. When the *Greeks* in their Turn had the better of the *Perſians*, they revenged theſe Wrongs ſo effectually, that they intirely broke the Force and Spirits of the *Perſians*, which ſcarce proved a greater Misfortune to that Nation than to the *Romans* themſelves; for if the *Perſians* had not been in ſo weak a Condition, the *Saracens* would never have been able to have over-run their Country in the manner they did, and which afterwards afforded them an Opportunity of reducing the moſt valuable Provinces of the *Greek* Empire.

It is very remarkable, that upon the firſt News of the Victories which *Heraclius* gained over the *Perſians*, one of the principal Monarchs of the *Indies* ſent to compliment him upon that Occaſion, and made him a Preſent of a conſiderable Quantity of fine Pearl, and precious Stones, and ſome Years afterwards repeated his Civility much to the Emperor's Satisfaction. This is a very ſingular Circumſtance, and ſhews that there muſt have been ſome previous Correſpondence between theſe Princes; but it was one of the laſt Inſtances of Friendſhip which paſſed between theſe States; for before the Deceaſe of this Emperor, all the Provinces from which any Correſpondence could be carried on with the *Indies*, were torn from the *Greeks*; and as this is a Circumſtance which very nearly concerns our Subject, it is requiſite, for the better underſtanding it, that we ſhould enter into a more particular Account of this remarkable Event.

9. *Mohammed*, the Author of a new Religion, and of a new Empire, ſet up for a Prophet about two Years before *Heraclius* began to reign; but the *Hegira*, or Flight from *Mecca*, which is the Æra of the *Mohammedans*, and which happened when *Mohammed* was fifty-four Years old, is fixed, according to the beſt Hiſtorians, to *July* 6, *A. D.* 622. *Mohammed* ſurvived this ten Years, and though at his firſt aſſuming the Sovereignty, he had no more than thirty Subjects; yet before his Death he had laid the Foundation of a very powerful Monarchy. He was ſucceeded by his Father-in-law *Abdallah*, ſurnamed *Abubekre*, by which Name only he is mentioned in moſt Hiſtories. The Meaning of it in *Arabic* is, *The Father of the Virgin*; and he was ſo called, becauſe his Daughter *Aiſcha* was the only one of *Mohammed*'s Wives whom he married while a Virgin.

This *Abubekre* was the firſt *Khaliff*, which is another *Arabic* Word that ſignifies a *Vicar* or *Subſtitute*, and a *Succeſſor*, and the *Khaliffs* were eſteemed both, with reſpect to *Mohammed*. In the ſecond Year of his Reign he invaded *Perſia*; and in the third and laſt he ſent *Khaled*, one of his ableſt Commanders, with an Army of 36,000 Men to invade the *Greek* Empire, which he performed with Succeſs, and defeated a great Army which *Heraclius* ſent againſt him.

Omar ſucceeded *Abubekre* in the thirteenth of the *Hegira*, in the firſt Year of his Reign he became Maſter of *Damaſcus*, and in the ſecond he reduced all *Syria*, having forced *Heraclius*, who came in Perſon to its Relief, to retire precipitately. The next Year he made himſelf Maſter of *Jeruſalem*, and all the Country of *Paleſtine*, while one of his Lieutenants intirely ſubdued *Perſia*, and put an End to that ancient Kingdom in the Perſon of *Jezdegerd*, who was the laſt of their Princes.

After this Conqueſt the *Saracens*, as they were then called, demanded Tribute of *Egypt*; and *Cyrus* Biſhop of *Alexandria*, knowing the diſtreſſed Condition of the Empire, and fearing the Conſequences of a War, conſented to pay an annual Tribute of 200,000 Aurei, with which for two Years the *Saracens* were contented, and very probably would have been ſo for a long Space of Time, if the Emperor *Heraclius* had not taken this in ill Part, and treated it as a fleecing of his Subjects to inrich the Infidels. He beſtowed therefore the Government of *Egypt* on an *Armenian*, whoſe Name was *Manuel*, with the Title of *Præfectus Auguſtalis*, who, when the Tribute was demanded next, anſwered, that they had formerly a Prieſt, but now a Soldier to deal with. *Omar* thereupon ſent *Amrou* his General with a potent Army into that Country, where, when it was too late, *Heraclius* would have renewed the Treaty made by *Cyrus*, and would willingly have paid the former Tribute. But *Amrou*, in the Space of two Years, conquered the beſt Part of the Country, and laid Siege to *Alexandria*. While he lay before the Place, which held out fourteen Months, the Emperor *Heraclius* died, and being ſucceeded by his Son, who was a Minor, the *Saracens* at their Leiſure proſecuted the Conqueſt of *Egypt*, and ſoon after annexed thereto all the adjacent Countries.

Omar the ſecond *Khaliff* reigned but ten Years and a half, and in that Space of Time ſubdued *Syria*, *Chaldea*, *Meſopotamia*, *Perſia*, *Egypt*, and Part of *Africa*; that is to ſay, as far as *Tripoli* in *Barbary*. By this Blow the *Romans*, as they ſtiled themſelves, or *Greeks*, as they were ſtiled by others, loſt all their Eaſtern Provinces, and the Trade to the *Indies* intirely, which for the preſent ſuffered an abſolute Interruption, the *Arabs* being at that time intirely addicted to War; and though they were avaritious enough, had no great Notion of Commerce. It is ſcarce to be conceived how great an Alteration the Riſe of this new Empire made in the Face of Affairs, and what prodigious Deſolation enſued before theſe Conquerors came to be ſoftened to ſuch a Degree, as to cultivate the Arts of Peace, and to endeavour, by the Rules of Policy, to eſtabliſh and maintain the mighty Empire they had acquired, the greateſt indeed and moſt extenſive that the World had ever ſeen, reaching Weſtward as far as *Spain*, and Eaſtward to the very Frontiers of the *Indies*. Our Subject obliges us to examine the Progreſs of their Power in *Egypt*, becauſe it not only opened once again the Trade through the *Red-Sea*, but alſo that of *Europe*, by the ſame Canal, to the *Eaſt Indies*.

10. That Impetuoſity and Violence which enabled the *Saracens* to make themſelves Maſters in ſo ſhort a time of ſuch vaſt Dominions, was not like to ſuffer them to continue long under one Head, which, however, was undoubtedly the Deſign of *Mohammed* their Founder. We have not room to enter here into all the Reaſons of that Diviſion which happened among the *Arab* Princes, and therefore ſhall content ourſelves with one, which was the great Diſtance of their Provinces, that naturally gave an Opportunity to ſuch as were intruſted with the Government of them to ſet up for themſelves.

We have already ſhewn how all that Part of *Africa*, which had been under the Dominion of the *Romans*, fell into their Hands; and we ſhall next obſerve, that *Abulcaſſem Mohammed Ben Abdallah*, being in Poſſeſſion of Part of *Africk*, ſet up for himſelf in the Year of the *Hegira* 296, and took the Title not of *Khaliff*, but of *Mahadi*, which ſignifies Director, or Chief Prieſt. He fixed the Seat of his Government at *Cairoan*, which is a Name the *Arabs* beſtowed on the ancient City of *Cyrene*, or rather a new City built on the Ruins of the old one. He left the Government to his Son *Cajem*, who removed the Seat of Empire to *Mahadie*, a new City which his Father had erected; and his Grandſon *Abou Temim Maad*, better known by his Sirname *Moez Ledinillah*, who ſucceeded in the Year of the *Hegira* 341, proſecuted the Deſign which his Anceſtors had entertained of making himſelf Maſter of *Egypt*.

With this View he ſent his General *Giaubar*, who was a *Greek* by birth, to invade that Country, of which he made himſelf intirely Maſter; and in the Year of the *Hegira* 358, laid the Foundation of a new City, which *Moez Ledinillah* reſolved ſhould be the Capital of his Dominions. As the *Arabs* were exceedingly addicted to Aſtrology, particular Care was taken that the firſt Stone of this City ſhould be laid, when the Planet *Mars* was in the Aſcendant; and as this Planet is by them called *Cabar*, the new City was called *Caberab*, or *Al Caberab*, that is, the Victorious; and is the ſame which the *Europeans* call *Cairo*, or *Grand Cairo*. I have been the more careful in marking the Date of this City's Foundation, which agrees with the Year of our Lord 968, becauſe many, otherwiſe accurate Writers, have been led into Miſtakes about it; particularly the learned Biſhop *Huet*, who in the forty eighth Chapter of his Hiſtory of the Commerce of the Ancients, ſays, it was built *A. D.* 795; and in the fifty-eighth Chapter of the ſame Work, tells us, it was built *A. D.* 984.

As ſoon as *Moez Ledinillah* was informed that this City was finiſhed, he removed, with all his Treaſure, from his old Capital, and made his Entry into *Cairo* in the Year of the *Hegira* 362, and there took the Title of *Khaliff*. His Succeſſors were ſtiled *Khaliffs* of *Egypt*, to diſtinguiſh them from the *Khaliffs* of *Bagdat*, who were eſteemed the true Succeſſors of *Mohammed*. This City was very conveniently ſituated on the *Nile*, and became in Time no leſs conſiderable for its Commerce, than for its being the Seat of Empire: and it was by this Means that the old Trade, by the Way of the *Red Sea*, was once more reſtored to *Egypt*, which flouriſhed exceedingly under this new Race of Princes, as appears by the Revenue which it produced to its Khaliff, and which, as *Elmacinus* tells us, amounted to no leſs than Three hundred Millions of Crowns of Gold.

The Khaliffs of *Egypt* were nine in Number, and the laſt of them was *Adhad*, who was depoſed by *Saladin* General of *Noureddin*, Sultan of *Damaſcus*, in the Year of the *Hegira* 567, *A. D.* 1171. *Saladin* entering the Palace of the Khaliff, who died immediately after he was depoſed, found there prodigious Riches, and amongſt the reſt a noble Proof of the Commerce of the *Indies*, which was the fineſt Ruby in the World, perfectly fine and bright, and weighing very near an Ounce and a half. This prodigious Wealth, and the having a great Army abſolutely at his Devotion, tempted him to ſet up for himſelf; and having made himſelf Maſter of *Egypt*, he ſoon after extended his Dominions over all the Countries of *Damaſcus*, *Paleſtine*, and *Syria*. He left, at his Deceaſe, his Kingdom of *Egypt* to his ſecond Son *Othman*, who died in the Year of the *Hegira* 595, and was ſucceeded by his Brother, who was ſoon deprived by his Uncle *Maleck al Adel*, whoſe Grandſon *Malek Al Salek* ſucceeded, in the Year of the *Hegira* 647. He enlarged the City of *Cairo*, and fortified it with a ſtrong Wall, and was victorious over St. *Lewis* of *France*, in the Year of the *Hegira* 648. But this Prince was however the laſt of his Houſe; for not long after, the *Mamlouks*, or *Mamelucs*, as they are generally called, who were a kind of mercenary Soldiers, revolted from him, and forced him to take ſhelter in a wooden Tower, which hung over the *Nile*. To this Tower the Mutineers ſet Fre, and thereby compelled the unfortunate Monarch to jump into the *Nile*, where he was drowned.

By this Accident *Egypt* once again changed its Maſters; for theſe *Mamelucs* became Sovereigns of the Country, and choſe their General, whoſe Name was *Ibek*, Sultan, who thereupon took the Name of *Almalek Al Azis*. He was the firſt Prince of the *Dynaſty* of theſe *Mameluks*, which were diſtinguiſhed by the Name of *Baharites*, or *Marines*; for theſe People were, generally ſpeaking, either young *Turks* or *Tartars*, ſold into *Egypt* by the Merchants, from whom again they were bought by the Sultan, educated at his Expence, and employed to defend the maritime Places in the Kingdom. The plain Reaſon of this Inſtitution was, becauſe the native *Egyptians* were found ſo weak and effeminate, from a long Courſe of Slavery, that they were unfit for Arms; and perhaps this is the Caſe of all Nations, when in the State of the *Egyptians*, that is to ſay, when they have no Property to fight for, are neither to be the better for Victory, nor can be worſe by any Defeat. Theſe Foundlings made excellent Soldiers; for, having no Relations or Friends, but amongſt their own Corps, they turned all their Thoughts to the excelling in their Profeſſion, as they placed all their Hopes in acquiring the principal Poſts in their Militia. This extraordinary Event fell out in the Year of the *Hegira* 648, *A. D.* 1250. They elected, on the Death of a Prince, another out of their own Body, and held the Kingdom without Interruption till the Year of the *Hegira* 784, when they were deprived of it exactly in the ſame Manner in which they had acquired it.

For, as they found it neceſſary to keep up a numerous ſtanding Army, becauſe, though they made but a Part of the Sultan's Troops, yet it was impoſſible for them to truſt either the *Arabs* or the *Egyptians*; they therefore had Recourſe to the purchaſing all the Children they could meet with, but particularly the *Circaſſians*, which inhabit a Part of the Coaſt of the *Black Sea*; and have, in all Ages, had a barbarous Cuſtom of making Merchandiſe of their Children; and for the better procuring of theſe Children, the *Mamelucs* entered into a Treaty with the *Greek* Emperors, for ſending an annual Fleet into the *Black-Sea*. Theſe Children they trained up in their own Diſcipline; but by an unaccountable Blunder in Politicks, never incorporated them into their own Corps, but diſpoſed of them in Garriſons in the Heart of their Country, in a ſort of Fortreſſes, which they called *Borge*; and from thence this new Corps of *Mamelucs* took the Name of *Borgites*; and growing more numerous than the old Corps, deprived *Kelaun*, who was the laſt Sultan of the firſt Dynaſty of the Empire, and transferred it to themſelves.

It is of this ſecond Dynaſty of the *Mamelucs*, of which moſt Authors are to be underſtood when they ſpeak of the *Mamelucs* as the Children of Chriſtians, for ſuch the *Circaſſians* were. Theſe *Borgites* remained Maſters of *Egypt* to the Year of the *Hegira* 923 *A. D.* 1517, when their laſt Prince *Thomam Bey* was defeated by *Selim* the firſt, Emperor of the *Turks*, who cauſed him to be hanged over one of the Gates of *Grand Cairo*; and to the *Turkiſh* Empire *Egypt* has been a Province ever ſince. It was under theſe *Mamelucs* that the *Eaſt India* Trade was, in a great meaſure, reſtored to its old Channel; that is to ſay, all Sorts of *Indian* Commodities were conveyed by the *Red-Sea* to the Coaſts of *Egypt*; from thence to *Grand Cairo*, and ſo by the *Nile* to *Alexandria*, where a great Part of them was purchaſed by the *Europeans*; and it was by this Commerce that *Egypt* was ſo rich in their Time, that the Predeceſſors of *Thomam Bey* gave, at his Acceſſion to the Throne, by way of Largeſs to his Soldiers, ten Millions of Ducats at once. Having thus, as briefly as poſſible, run through the Hiſtory of *Egypt*, it will be requiſite to enter more particularly into the Commerce of the *Arabians* in the Eaſt, without which, the ſubſequent Part of the Work could not be perfectly underſtood; and this likewiſe we ſhall do with all imaginable Brevity, in order to preſerve a due Proportion between this Section and the reſt, as well as that neceſſary Connection between the ſeveral Parts of this Hiſtory; ſo that the different Turns which this Trade to the *Indies* hath taken, may the more evidently appear. A Taſk difficult to accompliſh in ſo narrow a Compaſs, and the more ſo, becauſe we travel through an unbeaten Road, and are obliged to change our Guides almoſt at every Stage.

11. One would naturally imagine, from the foregoing Accounts of the *Arabians* and *Mohammedans* in general, that they were not the People in the World beſt diſpoſed for cultivating Trade, and ſettling themſelves in different Parts of the World with a View to Commerce; yet it will appear plainly in the Courſe of this Work, that they were actually diſperſed into the moſt diſtant Countries in the *Indies*, nay, and through *China* itſelf, without the Aſſiſtance of Force, and where they could not have been led by the Spirit of Ambition, for which we have ſeen them hitherto diſtinguiſhed. It is therefore neceſſary that we ſhould give the Reader a fair Account of this Matter, and make him acquainted with the Means by which they ſpread themſelves in ſo extraordinary a Manner, became ſole Maſters of the *Indian* Commerce, even in the *Indies* themſelves, and thereby drew it into ſuch Countries as were under their Dominions; from whence it was carried out into other Parts of the World, but ſtill in ſuch a Manner, that the beſt Part or the prodigious Profits ariſing from that Trade centered in them. In order to this, and that the whole may be brought into as little Room as poſſible, we ſhall, upon this Head obſerve, that, from their own Hiſtories it is clear, the *Arabs* formed their Settlements four ſeveral Ways; by Conqueſt, by Diſcovery, by Trade, and by Miſſion: By the firſt they poſſeſſed themſelves of all the Provinces, which made their

vaſt Empire; by the ſecond, they got footing in *Africa*, down to *Cape Corientes*, among the poor unarmed *Cafres*, who had it not in their Power to prevent them from ſeizing on what Parts they ſaw good. Their Colonies of *Magadoxo*, *Brava*, and *Quiloa*, were ſomewhat in the Nature of ours in theſe latter Times, but not ſo difficult to maintain, becauſe of the Proximity of the *Red Sea*, whence the *Arabs* had all Sorts of Aſſiſtance. By the two other, they ſeated themſelves in all other Parts, but more eſpecially by Commerce.

Theſe Voyages were not in thoſe Days ſo ſafe and ſo frequent, and therefore the Merchants were under a Neceſſity of making a long Stay at the principal Marts, where they took Wives; their Religion allowing Plurality. Theſe new Families brought on others, and the Princes being ſenſible it was greatly for their Advantage to draw the Trade of *Perſia*, *Arabia*, and at the ſame Time of *Egypt* and *Europe* by the *Red Sea*, into their own Ports, theſe Merchants met every where with the kindeſt Uſage they could wiſh. The Idolatrous Princes, confirmed in their old Superſtitions, were not at all ſcrupulous about Differences in Religion, but admitted all indifferently; ſo they readily allowed their Subjects to embrace *Mohammediſm*, which they preferred to the reſt, becauſe of the Hopes theſe *Arabs* gave them of Protection from the Sultans, whoſe Power was known in the remoteſt Parts of the Eaſt. Even Princes themſelves made Profeſſion of *Mohammediſm* in troubleſome Times, that the *Moors* might join them; for, in latter Days, they were ſo multiplied, that they peopled whole Cities, or at leaſt a Part of the moſt conſiderable. Thus this Religion, which has nothing very inconvenient in it, did, by little and little, obtain in many Parts; and at length received an Acceſſion of Power, when ſome of its Profeſſors being raiſed to the firſt Poſts in the Courts of *Cambaya* and *Guzzarat*, invited a greater Number of thoſe *Aſiatic Turks* called *Rumis*, and even ſeized on ſome Poſts; as *Malic Aziz*, who raiſed a conſiderable Settlement at *Diu*, from whence he a long Time infeſted the *Portugueſe*.

By Trade and Religion, the *Arabs* got footing in ſome Parts of *Malabar*; and by the ſame Means they came to be very conſiderable upon *Malacca*. They firſt went thither as Merchants, and ſome of them there fixing their Abode, gained many of the Idolaters over to *Mohammediſm*. From *Malacca* they ſailed round to the *Moluccas*; and having prevailed on the Kings of *Tidore* and *Ternate*, together with ſeveral others to join with them in Religion, they reaped great Benefits from theſe Princes, whom the Concerns of Trade, and the Protection theſe *Moors* gave them room to hope, confirmed in *Mohammediſm*. According to the *Portugueſe* Writers, they had not been long ſettled in the *Moluccas*, before this Diſcovery of the *Indies*. Thus, in a very ſhort Space of Time, and without the Aſſiſtance of any conſiderable maritime Force, the *Arabs* did more than the *Greeks* and *Romans* in the Courſe of ſo many Ages; and it is highly probable, they would have puſhed Matters ſtill farther on this Side, if they had not been hindered by the ſailing of the *Portugueſe* into this Part of the World, which put an immediate Stop to their Progreſs.

They found, however, Means to make the moſt of their good Fortune, and to become the Carriers of *Europe* with reſpect to the Commerce of the Eaſt; and this too in ſuch a manner, that they ſhut out all others from navigating thoſe Seas, and thereby drew an immenſe Profit to themſelves. For the *Indians* brought by Land to *Cabul* and ſome other Places, and by Sea to *Baſora* and *Siraf*, all the Commodities of the *Indies* and *China*. Furs were brought into *Syria* by the Provinces of *Aderbejan*, by *Curdiſtan*, and other Parts more northerly; great Quantities of the ſame they alſo had from the *Barbary* Coaſt, and by the Way of the *Red-Sea*, from whence a Trade was carried on with them all over *Egypt*. From the ſame Places they had Gold-duſt; Gold alſo they had from the Mines of *Sofala*, brought to them by the *Negroes*, who traded with *Egypt* by the Way of the *Deſart*, or from Port to Port quite to the *Red-Sea*; from *Ceylon* and the *Indies*, they by their Trade with the *Chineſe* and *Indian* Merchants, had Silk, rich Stuffs, and many other Manufactures, Drugs, and Spices.

With this Stock of Goods they drove a very conſiderable Commerce by the Way of *Caherah*, or *Cairo*, with the *Venetians*, the *Genoeſe*, the *Catalans*, and the *Greeks*, which was eaſily done by reviving the old Mart of *Alexandria*; which Port, though it was far from recovering its former Magnificence, became once more famous in the World, by becoming what it formerly was, the Centre of Commerce between the Eaſtern Parts of the World and the Weſt. This ſhews the great Conſequence of a right Situation, and is a new Proof of the Wiſdom and Penetration of *Alexander the Great*, who foreſaw, that whatever became of his Empire, the new City which he erected, and which he honoured with his Name, would continue to make a conſiderable Figure, as long as Trade was capable of giving Credit to any Place. It is true, that the Revolutions which happened in the Government of *Egypt*, after it fell under the Dominion of the *Mohammedans*, and of which we have already given a ſuccinct Account, frequently affected this City to a very great Degree; but ſtill the Excellence of her Port, and the many Conveniences that reſulted from the Commerce carried on thereby to the Maſters of *Egypt*, whoever they were, preſerved her from total Deſtruction, though in the Hands of the moſt barbarous Nations; for the Deſire of Wealth is ſo natural to Mankind, that it ſoftens the moſt rugged Natures, and diſpoſes them for the ſake of Intereſt to a kind of counterfeit Humanity.

But it was the *Portugueſe*, who by the Diſcovery of the Paſſage to the *Indies* by the *Cape of Good Hope*, that gave the laſt Blow to this Commerce, and finally extinguiſhed the Glory of *Alexandria*; which, as we have ſhewn, depended upon their Sovereigns preſerving the Monopoly of the *Indian* Trade.

It was for this Reaſon that the *Venetians* aſſiſted privately the *Mohammedans* in their Endeavours to prevent the *Portugueſe* from ſettling in the *Indies*; from whence we may diſcern, that Intereſt operates more ſtrongly than Religion, Neighbourhood, or indeed any other Principle whatever. The *Portugueſe* were *Chriſtians*, *Europeans*, and good Allies to the State of *Venice*; the *Mohammedans* were none of theſe, but their Intereſt and Trade was the ſame; and whatever affected the Commerce of the one, muſt neceſſarily be detrimental to that of the other. In ſhort, the Diſpute was, whether the Poſſeſſors of *Egypt*, and the *Venetians*, ſhould divide between them the Profits of the *Indian* Commerce, or whether it ſhould remain intirely to the *Portugueſe*; and there is no Reaſon to wonder, that when this was the Queſtion, a ſtate depending ſo much upon Commerce as that of *Venice* did, ſhould ſet all Conſiderations aſide, in order to attend more cloſely to her Intereſt.

It is not, however, to be underſtood from hence, that the *Indian* Commerce, by the Way of *Egypt*, is even at this Day entirely deſtroyed, or that the *Venetians* have no farther Concern therein; neither of which is, ſtrictly ſpeaking, true; but that this Commerce is nothing now to what it was, either with reſpect to the *Egyptians*, or the *Venetians*, is daily declining, and muſt decline more and more, the Paſſage by the *Red-Sea*, the Country of *Egypt*, and the Commerce of the Port of *Alexandria*, having now loſt thoſe diſtinguiſhing Advantages which for ſo many Ages they poſſeſſed, and which enabled them to recover as they did, after ſuch intolerable Devaſtations as they were expoſed to.

We may eaſily ſatisfy ourſelves as to the Truth of this, by comparing the Revenues of *Egypt*, when in the Hands of the *Arabians*, with what they now produce, to the *Turk*: The former amounted to three hundred Millions of Crowns, and the People were not at all oppreſſed; the latter are fixed at three Millions, and the People are beggared by the raiſing that Sum. We may add to this, that formerly there were in *Egypt*, as *Diodorus Siculus* informs us, three thouſand Cities, whereas now there are not above three hundred conſiderable Towns, and none of theſe can boaſt any thing of their ancient Splendor. It is now time for us to return to the *Greek* Empire, and to ſhew in as few Words as poſſible how it ſunk into Ruin.

12. *Conſtantine* the ſon of *Heraclius* ſucceeded his Father; but in the fourth Month of his Reign he was poiſoned by his Mother-in-law *Martina*, a Woman of great

Parts, and of bewitching Speech. She raiſed her own Son to the Throne; but the Government being in Confuſion, and all things going to Wreck, the Senate cut out the Empreſs's Tongue to prevent her deluding the People any more with her Eloquence; and cut off his Noſe, leſt he ſhould gain the People's Affection by his Beauty. *Conſtans*, the Grandchild of the old Emperor, was then raiſed to the Throne, and reigned twenty-ſeven Years; his ſon *Conſtantine* ſucceeded him, under whom *Conſtantinople* was beſieged by the *Saracens*; but they were obliged, however, to raiſe it, and he had afterwards great Succeſs againſt them. His Son *Juſtinian* was ſtill more fortunate, but withal ſo perfidious, that when he had made a Peace with them upon good Terms, he broke it when he thought it for his Advantage, which expoſed him to Hatred abroad, and Contempt at home, ſo that he was depoſed and baniſhed; but was afterwards reſtored, by the Aſſiſtance of the *Bulgarians*, and behaved with great Cruelty, after he recovered his Dominions. He even invaded the Territories of that Prince, who had protected and reſtored him, by whom his Army was totally defeated; and now being grown odious to every body, his Subjects rebelled againſt him, and cut off his and his Sons Heads.

The two ſucceeding Emperors were depoſed, and *Theodoſius* abdicated the Empire of his own accord; and then *Leo* the third became Emperor, who was the Son of a Shoemaker, in whoſe Time the *Saracens* again blocked up the City of *Conſtantinople* for three Years, but were at laſt obliged to retire: He was ſucceeded *A. D.* 741, by his Son *Conſtantine Copronimus*, who was very ſucceſsful againſt the *Saracens*, and held the Empire thirty-four Years, and then left the Throne to his Son *Leo* IV. who was likewiſe a great Prince, and defended his Dominions with equal Courage and Succeſs. He ruled the Empire only five Years, and might have eſtabliſhed both the Reputation of his Government, and the Succeſſion of his Family, if it had not been for the over-bearing Temper of his Empreſs *Irene*, who after his Death firſt governed in Conjunction with her Son *Conſtantine Porphyrogenitus*, and afterwards murdering him and all the Royal Family, reigned for ſome time alone, till in *A. D.* 802, ſhe was depoſed, and ſhut up in a Monaſtery.

Charlemagne having now aſſumed the title of Emperor of the Weſt, it ſunk the Reputation of the *Greek* Monarchs exceedingly; and the ſucceeding Emperors being moſt of them unfortunate, and many of them unworthy, there fell out nothing but Tyrannies, Rebellions, Depoſitions, Murders, and ſuch-like Confuſions, during the Space of between three and four hundred Years, till the Holy War broke out, when through the Madneſs of the Weſtern Princes the Emperors of the Eaſt might, if they had managed prudently, have recovered their former Glory; but they behaved unſteadily, baſely, and perfidiouſly, during the whole War; and beſides, they were perpetually plagued with Rebellions and Revolutions, in which the *Latins*, for their own ſakes, taking Part, ſet up *Alexis Angelus*, whom the *Greeks* murdered; which threw all that Part of the World into the utmoſt Confuſion, ſo that the Chriſtian Princes, inſtead of proſecuting their Wars againſt the *Turks*, turned their Arms upon the *Greeks*, who in the midſt of theſe Misfortunes could not agree amongſt themſelves, but divided their Empire into two under *Alexis Comnenus*, who made *Trebiſond*, a Town in *Natolia* on the *Euxine* Sea, his Capital; and *Theodorus Laſcaris*, who made *Adrianople* the Seat of his Government, while the *Latins* ſeized the greateſt Part of the Empire, becauſe the *Greeks* did not reimburſe their Charge for reſtoring young *Alexis*. By this Means the *Greek* Empire was divided into three Parts, and the *Latins* ſet up *Baldwin*, Count of *Flanders* to be Emperor at *Conſtantinople*.

This great Event happened about the Year 1200, and the *Latin* Emperors, which were five in Number, remained poſſeſſed of *Conſtantinople* for ſixty Years; and then it was recovered by the *Greek* Emperor *Michael Paleologus*, who, though a bad Prince, enlarged his Dominions, and defended himſelf bravely againſt all his Enemies; and after a Reign of twenty-three Years, left the Empire to his Son *Andronicus* II. who ruled it forty-five Years with various Fortune, till in his old Age his Grandſon *Andronicus* III. by the Aſſiſtance of the *Genoeſe*, dethroned him, and ſhut him up in a Monaſtery. It was under the Reign of this latter *Andronicus* that the *Turks* became very formidable, and threatned to compleat that Ruin which the *Saracens* had begun, to which they were encouraged by the looſe Adminiſtration of this Emperor and his Succeſſors.

John Cantacuzenus being left Guardian to *Andronicus*'s two Sons, *John* and *Manuel*. uſurped the Throne in 1338. In the Beginning of his Reign he was chaſed from *Conſtantinople*, where the People had crowned *John* the Son of *Andronicus*, which occaſioned a long War; *Cantacuzenus* made a League with the *Turks*, ſubdued *Lydia*, *Cappadocia*, and other Provinces, with the Help of the *Venetians*; but *John Paleologolus*, by the Help of the *Genoeſe*, defeated him by Sea and Land; after which he retired to a Monaſtery or Mount *Athos*, with his Son *Matthew*, whom he had aſſociated into the Empire; and his Empreſs retired to a Nunnery. During his Retirement he wrote the Hiſtory of his own Reign in four Books, which is reckoned one of the fineſt Pieces written by any of the modern *Greeks*.

John VI. of the Family of *Paleologus*, ſucceeded in 1354. He was ſucceſsful in his War againſt the *Bulgarians*, and afterwards made a League with the *Turks*; but was deſpiſed by the Sultan *Amurath* I. who took ſeveral Places from him, and made *Adrianople* the Seat of the *Turkiſh* Empire in 1362. *Andronicus*, Son to *John*, conſpired againſt his Father, for which he was impriſoned, and had his Eyes put out; but making his eſcape to *Amurath*, he by his Aſſiſtance, and that of the *Genoeſe*, dethroned his Father, and impriſoned him and his Uncle *Emanuel*, who making his Eſcape to *Bajazet* the Sultan of the *Turks*, and offering to hold the Empire of him, dethroned his Nephew in the third Year of his Reign; yet afterwards the *Turks* broke with him, and beſieged *Conſtantinople*, which obliged him to go about to the chief Courts of *Europe* for Relief. He ſtayed two Years at *Paris*, where, hearing that *Tamerlane* had defeated *Bajazet* Emperor of the *Turks*, and obliged him to raiſe the Siege, he returned to *Conſtantinople*; but being ſtill unſucceſsful, he reſigned the Empire to his Son *John*, and retired into a Monaſtery, where he died.

His Son *John* VII. ſucceeded in 1418. During his Reign the *Turks* took *Theſſalonica*, and became Maſters of moſt of the *Greek* Empire, except *Conſtantinople*. This obliged *John* to have Recourſe to the *Latins* for Aſſiſtance, and to wiſh for an Union of the *Greek* and *Latin* Churches. It was with this View that he came to *Ferrara*, where the Pope had ſummoned a Council; and there he had great Promiſes made him of Support againſt the *Turks*; and returning from thence to *Conſtantinople*, he died about ſix Years afterwards.

Conſtantine XV. ſucceeded his Brother in 1445. He had ſignalized himſelf in the War of *Peloponneſus*, and for his great Strength was ſurnamed the *Dragon*. Pope *Nicholas* V. ſent a Cardinal to renew the Agreement, wherein he ſucceeded, on promiſe of aſſiſting him; but the *Latins* being ſlow in ſending their Supplies, Sultan *Mahomet* II. ravaged *Greece*, beſieged *Conſtantinople* by Sea and Land, and carried it after fifty-eight Days. The Emperor *Conſtantine* did all that was poſſible to defend the Place; but being neglected by the *Latins*, and not ſupplied with Money by the Citizens, the *Turks* prevailed, and himſelf, after taking Leave of his Officers, went to defend the Breach, where he was killed, fighting valiantly; and being known by his Armour, the *Turks* cut off his Head, and carried it on a Lance through the City. This happened on the 28th of *May* 1453. The *Turkiſh* Emperor deſtroyed afterwards all the Imperial Family, and having totally overturned the *Greek* Monarchy, eſtabliſhed the Seat of the *Turkiſh* Empire at *Conſtantinople*, where it has ever ſince remained.

If we conſider the extenſive Dominions, the vaſt Power, and the wiſe Form of Government, originally eſtabliſhed in this Eaſtern Empire; one cannot help wondering that it ſhould be overturned, and extinguiſhed in ſuch a manner. But, on the other hand, if we reflect on the Luxury, Corruption, and tyrannical Abuſe of Power, that ſo manifeſtly appeared in the Adminiſtration of almoſt all the Emperors after *Juſtinian*, and conſider at the ſame time the mutinous and ſeditious Diſpoſition of their Subjects, we may be rather inclined to wonder how, under ſuch Circumſtances, this Empire could ſubſiſt ſo long.

On the whole, there is no room to doubt, that the Ruin of the *Greek* Power was not owing ſo much to the Force of its barbarous Enemies, as to the Weakneſs of its Government, and the diſſolute Manners of the People. The excellent Situation of its Provinces, and their happy Communication with the Capital of the Empire, rendered the *Greeks*, in Times of Peace, incredibly rich, as appears from what the Hiſtorian *Zonaras* informs us, with reſpect to the Treaſure of the Emperor *Baſilius*, who reigned in the Middle of the Ninth Century; and who, beſides vaſt Heaps of Silver, was poſſeſſed of two hundred thouſand Talents in Gold, which at the loweſt Eſtimation amount to upwards of thirty-eight Millions of our Money.

As the Empire diminiſhed, its Trade and Riches muſt ſink of courſe; but even long after this, they were ſo conſiderable, that a Traveller, who will be hereafter mentioned, reports in the thirteenth Century, that the Cuſtoms and Exciſe of *Conſtantinople* amounted to twenty thouſand Crowns a Day at the very time that it was deſtroyed; and when the People refuſed to furniſh the Emperor with Money to defend the City and themſelves, they were ſo immenſely rich, that the Fleet, which was laden with the Plunder, was ſcarce able to keep the Sea, the Ships being ſo overcharged with their Riches.

All this ſufficiently ſhews what prodigious Wealth had accrued to them by their Commerce. To ſay the Truth, it was this Abundance that proved the Ruin of the *Greeks*; for what between the vaſt Riches that flowed in upon them from all Parts of the World (for to the very laſt their City was the Centre of the Trade of *Europe*) and the mighty Plenty they had of all ſorts of Proviſions and rich Wines in their own Neighbourhood, they grew ſo inſolent and ungovernable, that the ill uſe of their Proſperity rendered the Preſervation of it impoſſible.

The *Venetians* and the *Genoeſe* aggrandized themſelves by the Fall of the *Greeks*, and preſerved for a long time the Fragments of that Empire of which they made themſelves Maſters. By this means likewiſe the *Europeans* became better acquainted with the Eaſtern Nations, and found leſs Difficulty in viſiting their Countries; ſo that by degrees a Deſire of penetrating by Land into the moſt remote Parts of the Eaſt, and which had ſcarce been thought on in former Ages, came to diffuſe itſelf through all *Europe*; the Power of the *Turks* likewiſe excited great Jealouſies in the Chriſtian Princes, who were their Neighbours, and the Wars that theſe occaſioned afforded new Opportunities of looking into the State of theſe diſtant Countries by thoſe who remained long Priſoners amongſt them, ſo that though at firſt Sight it may ſeem a Paradox, yet we may with Reaſon affirm that the Ruin of the Eaſtern Empire by the *Mohammedans*, contributed not a little to the Eſtabliſhment of that Empire which the ſeveral Nations of *Europe* now poſſeſs in the Eaſt.

This Obſervation is of greater Conſequence than may at firſt Sight appear; for whoever looks into almoſt all the great Events that have fallen out in the ſeveral Ages of the World, will very plainly perceive that they have been brought about by the moſt unlikely Means. The ſudden Riſe of the *Saracen* Empire, threatened all *Europe* with an Inundation of barbarous Tyranny; but the Humour of undertaking the Holy War, as it was called, for the Recovery of the City of *Jeruſalem* from the Infidels, proved the moſt effectual Means of preventing that Misfortune, by occupying the *Mohammedans* in the Défence of the Countries which they had already acquired, at the ſame time that it excited ſuch a martial Spirit in almoſt all the Nations of *Europe*, as rendered them capable of ſuſtaining that Shock by which otherwiſe they muſt have been overpowered.

One may carry this Reflection ſtill farther, if we advert to that maritime Power which has been raiſed in *Europe*, by the Diſcovery of the *Eaſt* and *Weſt-Indies*, and which has viſibly ſet bounds to the Ambition of all the *Mohammedan* Princes, who, notwithſtanding the vaſt Dominions they poſſeſs, and the prodigious Armies they are able to raiſe, are, notwithſtanding, very apprehenſive of the Power of the Chriſtians by Sea, who are indeed able to make them extremely uneaſy upon any Quarrel, notwithſtanding their ſeeming Superiority. This ſufficiently ſhews the Solidity of that Maxim, that whoever is Maſter at Sea, muſt be likewiſe Maſter on Land, or, which is the ſame thing, have the Power of controuling ſuch as eſteem themſelves Maſters. Theſe Remarks ariſe naturally from the Subject, and therefore claim the Attention of every Reader, eſpecially in a Country like ours, which has always affected the Dominion of the Sea, and never can be deprived of it but by want of Attention.

13. We have now run through the Hiſtory of the Commerce between the Weſtern Parts of the World and the *Eaſt-Indies* from the earlieſt Accounts, and this without ever loſing the Connection, or leaving the Subject untraced through any Period of Time. The Diſcuſſion of this Point has indeed taken up a great deal of Time, and of Room; but in return, it has furniſhed us with a great deal of uſeful Knowledge; for the Reader will eaſily perceive, that in purſuing this Topic, we have been led into a kind of Univerſal Hiſtory of Commerce, a thing of far greater Conſequence, and infinitely more inſtructive than the tacking together an incoherent Collection of Voyages, which, however, has been the Scheme of almoſt all former Writers, who perceiving their Error too late, have endeavoured to mend it by Prefaces, Diſſertations, and Extracts from antient Writers; whereas by purſuing a right Method, and being content to take the Pains of bringing what is ſcattered, through a Diverſity of Authors, into its proper Order, we have furniſhed the Reader with the Means of underſtanding this Subject perfectly, and of being able to pronounce, with Certainty, how and by whom this advantageous Commerce was managed at any Time given.

We have indeed inſiſted ſomewhat largely on the Hiſtory of the ſeveral Empires, which we were obliged to mention in the Courſe of this Work; but beſides that in doing this we have relieved the Reader from the Fatigue of reading a dry Narration of Facts, unenlivened by Circumſtances, it will be found that we have mentioned nothing that does not contribute to the better apprehending the principal Subject, and to the rendering the following Voyages and Travels perfectly intelligible, which never could have been done any other way. A particular Writer who ſits down to give the World an Account of what he has ſeen abroad in a certain Number of Years, never propoſes, and indeed it cannot be expected he ſhould propoſe delivering a general Hiſtory of the Countries and Kingdoms through which he paſſed; and yet without a competent Knowledge of theſe, his Accounts can never be thoroughly underſtood. But when we undertook to give not only a Series of the beſt and moſt authentick Pieces of this kind, but alſo to furniſh the World with a Hiſtory of the Diſcovery and Settlement of the *Eaſt-Indies*, it was requiſite to provide againſt all theſe Inconveniencies, which induced us to be more copious in theſe Sectious than otherwiſe we ſhould have been, that the Reader may come prepared in ſuch a manner for the Peruſal of the reſt of this Work, as not to be interrupted at every Turn with critical Remarks, which always diſtract and confound the Narrations with which they are intermixed.

It is with the ſame View, that after ſo large a Detail of the Progreſs of this Commerce in the Hands of its principal Poſſeſſors, we have added yet another Section to explain the ſeveral Routes by which, when the principal Channel of this Trade was interrupted, it was ſtill in ſome meaſure preſerved and carried on.

This will be found extremely uſeful for two very important Purpoſes; for in the firſt place, it will explain the Means by which ſo many different Nations came one way or other to have a Share in the Commerce of the *Indies*, and by what Accidents they have been deprived of that Share; how far it is, and how far it is not, poſſible to retrieve the Methods of carrying on this Trade, which have been formerly in uſe, or to ſupply them by ſtriking out new Routes. Secondly, in giving us great Light into the Means by which ſo many Strangers found their Way into, and ſettled themſelves in the *Indies*, as were met with there by the moſt antient Travellers, whoſe Writings have reached our Times, and whoſe Accounts might have been ſuſpected, if from the Knowledge of theſe Routes the Probability of all that they relate did not manifeſtly appear.

We may likewiſe add, that in the Deſcription of theſe ſeveral Routes to and from the *Indies*, we ſhall have frequent Occaſion to examine and compare the Induſtry of the Antients and Moderns; from whence it will fully appear, that the latter owe their Superiority over the former, rather to their Diſcoveries in Sciences, and the lucky Improvement of Lights derived by various Accidents, than to any Elevation of Genius, or extraordinary Degree of Virtue or Application. It is true, we might have found means to have inſerted many, or indeed, moſt of theſe Accounts in the foregoing Part of our Work; but then it would have led us into long and frequent Digreſſions, which would have obſcured the principal Subjects of our ſeveral Sections, and at the ſame time would have rendered the Account of theſe Routes much more perplexed; whereas by their following one another in a certain Order, the Reader will the more eaſily apprehend them, and by comparing of them with each other, will form a better Notion of their Conveniencies and Inconveniencies, will enter more eaſily into the Circumſtances attending the Riſe, and bringing on the Diſuſe of them; and in a word, will, with Facility and Pleaſure, conquer, in a ſhort Space of Time, thoſe Difficulties, which, if they had occured to him in the Peruſal of Voyages or Travels, would either have hindered his Progreſs, or have coſt him much Time and Pains to have got over them.

SECTION XVII.

An Account of the ſeveral Paſſages to the Indies *both by Sea and Land, that have been attempted, diſcovered, or practiſed by the Antients.*

1. *Of the North-Eaſt and North-Weſt Paſſages, and the Improbability of their being at all known to the Antients, notwithſtanding what ſome Authors have aſſerted on this Subject.* 2. *Of the Paſſage by Land from* Ruſſia *to* China, *and the Probability of its being antiently practiſed.* 3. *Of the Route by* Samarcand *and the* Caſpian *Sea, and of* Pompey's *Project for ſecuring the Commerce of the* Indies *by that Route to the* Romans. 4. *Of the old Route by* Bogar, *and of the Alterations that have happened to ſome of the great Rivers in* Tartary. 5. *Of the Paſſage through the Country of the* Arians, *as deſcribed by* Ammianus Marcellinus. 6. *Of another Route from the* Indies *through the Country of the* Sacæ *or* Saces, *deſcribed by the ſame Author.* 7. *Of the Route by* Cabul, *and of the great Commerce antiently carried on that way between* Perſia *and the* Indies. 8. *Of the great Route by* Candahar, *how far it was known to the Antients, and how much it has been improved ſince.* 9. *Of the Paſſage to the* Indies, *through the Country of the* Sinæ *or* Thinæ, *and of the Miſtakes of the Antients on that Subject.* 10. *Of ſome other Routes to the* Indies, *and particularly that by* Palmyra. 11. *Of the ſeveral Paſſages diſcovered or practiſed ſince the* Mohammedans *became Maſters of* Egypt. 12. *Of the Commerce carried on by the* Genoeſe *at* Caffa *in* Crim Tartary. 13. *Remarks and Obſervations tending to the farther Explanation of this Subject.*

1. THE firſt Route to the *Indies* which we ſhall mention is that by the North-Eaſt, through thoſe that are ſtiled the Straits of *Waygatz*; a Paſſage often attempted for Reaſons that will be hereafter ſhewn in their proper Place, but never hitherto performed; though, doubtleſs, of all others the ſhorteſt Paſſage to that Country, at leaſt from this Part of the World. This Route is ſuppoſed to lie through that which is generally called the *Icy-Sea*, ſteering North-Eaſt, along the Coaſts of *Lapland*, *Muſcovy*, and *Grand Tartary*, till you enter the *Indian* Ocean by the Straits of *Uries*, and ſo fall on the Coaſt of *Japan* and *China*. That the Antients never had any Notion of ſuch a Paſſage is very certain, becauſe they were not at all acquainted with the Navigation of the Northern Seas till the Time of *Auguſtus*; and even then, the utmoſt Limits of their Diſcoveries was the *Cimbric Cherſoneſe*, which is the Country now called *Jutland*; and indeed, conſidering their maritime Skill, this was a very conſiderable Diſcovery. The Reaſon that we take Notice of this Paſſage, in the firſt Place is, on Account of a Matter of Fact which has never been diſputed, and which ſome modern Writers conſider as an infallible Proof that ſuch a Paſſage is not only poſſible, but practicable.

The Fact is this: About the Year before Chriſt 57, a ſmall Veſſel, having ſeveral *Indian* Merchants on board, was ſhipwrecked on the Coaſt of *Germany*, and all the Perſons who eſcaped that Misfortune were entertained by the King of the *Suevi*, who preſented them to *Metellus Celer*, then the *Roman* Proconſul in *Gaul*[a]. The Writers beforementioned are very poſitive that theſe *Indians* came from *Japan*, or the Land of *Jedſo*, through the Straits of *Waygatz*, and ſo into the Northern Ocean, from whence they infer, that, with due Induſtry and Application, we might be able to diſcover a Paſſage the ſame Way.

But in anſwer to this it has been ſaid, that theſe *Indians* might have fallen upon the Coaſt of *Germany* by another Way, which, like the former, hath never yet been practiſed, but differs from it in this, that it is beyond all queſtion practicable; and if ever it ſhould be brought into uſe, might divert a great Part of the *Indian* Commerce from the Southern and Weſtern Parts of *Europe* into thoſe which lie moſt towards the North. This Paſſage then is thus laid down: Theſe *Indians* are ſuppoſed to have embarked on the River *Oxus*, and ſo to have paſſed through the *Caſpian-Sea*; thence up the River *Volga*, and ſo into the *Dwina*, which, falling into the *Baltic*, might well enough have brought them to the Coaſt on which they are ſuppoſed to have been ſhipwrecked. It is however very improbable that ſuch a Thing ſhould have happened, becauſe it ſuppoſes theſe *Indians* to have been perfectly acquainted with the Navigation of Rivers, which it is much more likely they never heard of, and it is very poſſible are unacquainted with ſo much as their Names to this very Day.

It is one Thing to deſcribe a Paſſage to a diſtant Country and to recommend it to Trial, and quite another Thing to inſiſt that ſuch a Trial has been actually made: If therefore any Writer ſhall inſiſt on the Poſſibility of carrying on a Commerce to *India*, by the Canal laſt-mentioned, it ought to be granted him, that the Thing is feaſible, and might turn much to the Advantage of the *Ruſſian* Empire, eſpecially at this Juncture, when it is almoſt entirely in the Power of the *Shah Nadir* to eſtabliſh ſuch a Commerce, as being poſſeſſed of the greateſt Part of the Country between the *Caſpian-Sea* and the Frontiers of *India*. But whoever would endeavour to perſuade us that in thoſe early Ages, when Geography was ſo little underſtood as then in the Eaſt or in the North, and Men were ſo timorous in navigating even known Seas, that the Inhabitants of the remoteſt *Indies* ſhould attempt, not only to ſail through the *Caſpian-Sea*, for that is not ſo improbable, but to enter the *Volga*, and pretend to ſeek a Paſſage that Way into the *Baltick*, is to bid us lay aſide common Senſe and Experience, in order to take up with Improbabilities and Fictions.

---

[a] *Plin. Hiſt Nat. lib.* ii. *cap.* 67. He there affirms them poſitively to be *Indians*, and to have paſſed from *India* thither.

But it may be ſaid, you have already admitted the Fact. You own that it is not to be diſputed, that theſe *Indians* were thrown upon the Coaſt of *Germany*, and preſented by the King of the *Suevi* to the Proconſul of *Gaul*; why then ſhould you deny their coming either of theſe Ways, when it does not appear there was any other Way for them to come, at leaſt by Sea (and that they did come by Sea cannot be conteſted) becauſe you admit they were ſhipwrecked? All this is true; but with Biſhop *Huet*, and other learned Men, I very much doubt whether theſe People were *Indians*; becauſe it is very certain the Antients very frequently beſtowed that Appellation upon very remote Nations, merely becauſe they were very remote. It is therefore much more probable that theſe People, who were thus caſt on ſhore on the Coaſt of *Germany*, were *Norwegians*, or *Scritoſinnians*, which are the ſame People that we now ſtile *Laplanders*; or, it may be, they were *Icelanders*, if we ſo far credit the Northern Hiſtories, as to ſuppoſe that Iſland was ſo early inhabited. This, I ſay, is infinitely more credible than that they were *Indians* ſtrictly and properly ſpeaking; and that this is more credible, appears from hence, that Accidents of the like Nature have happened in *Scotland*[b], and elſewhere; that is to ſay, ſome of theſe People have been driven on ſhore in their little Fiſhing-boats; and when an Accident of this Sort happened in thoſe early Times, before the Northern Parts of the World were ſo well known as they are at preſent, it is no great Wonder that ſuch People ſhould be taken for *Indians*.

While we are upon this Subject, I cannot help hinting a Conjecture of my own, which is, that if they muſt needs be *Indians*, it is much more likely that they were *Weſt-Indians*, and that they came into the *Baltick* through *Hudſon*'s Bay. Yet I do not lay this down as either certain or probable, but mention it only as a Thing more agreeable to modern Diſcoveries, than the former Notion of their coming from the *Eaſt-Indies*; but with regard to the Fact itſelf, I am firmly of Opinion that they were *Norwegians*; and that for theſe Reaſons, there were many of them, and they were on board a kind of Bark or Veſſel of ſome Burthen; whereas the *Finns* and *Laplanders* are not known to make uſe of any other than ſmall Boats, which one Man can manage.

The ſame Reaſons may be applied to another Fact of the ſame Nature, ſince, it is affirmed, that under the Reign of the Emperor *Frederick Barbaroſſa, A. D.* 1160, certain *Indians* were again caſt upon the Coaſt of *Germany*[c]; but there is no more Proof that theſe were really *Indians* than the former; for in both Caſes it is acknowledged, that they were a ſtrange People, whoſe Language was not underſtood, which might be true if they were *Norwegians*, but moſt certainly is no kind of Evidence, that they came either from the *Eaſt* or from the *Weſt-Indies*, or through the North-Eaſt or North-Weſt Paſſage.

I muſt not however omit, that according to *Pliny*, they had ſome Suſpicion that the firſt mentioned *Indians*, and the ſame has been hinted with reſpect to the laſt, came on the Coaſt of *Germany* by ſurrounding the Continent of *Africa*[d]; that is to ſay, by the Route of the *Cape of Good Hope*, which is however a Thing abſolutely incredible, ſince it cannot be imagined the *Indians* ever victualed their Ships for a Voyage of ſuch a Length; neither is it to be believed, that if ſo much as one of their Veſſels had reached *Europe*, and returned, we ſhould have had ſome Account of this from them, as well as of other Points of their Hiſtory, which are well enough preſerved in ſome Places. But it is Time to quit a Subject on which we can ſay little that is either uſeful or entertaining, and therefore we ſhall paſs on to another Route to the *Indies*.

2. This was by Land, from *Ruſſia* to *China*, a Thing now commonly known, ſince the Hiſtory of the Embaſſy ſent by the *Czar* in the Year 1659, when his Miniſter paſſed to the North of the Kingdom of *Boutan*, and through the Deſarts of *Great Tartary*. There is no Reaſon to believe that there is any Thing new in this Paſſage, or that it had not been as much frequented of old as in the preſent Times; for as we have heretofore ſhewn, it was in the moſt early Ages of the World that the *Chineſe* and *Indian* Empires were in their moſt flouriſhing Condition, and carried on the moſt extenſive Commerce; whence I conceive it highly probable, that they made uſe of Caravans on this Side, in the ſame Manner as they do now; and it is not impoſſible that, by the Paſſage of theſe Caravans through the *Northern Indies*, the Antients came to hear of the *Seres*, ſince it is very certain that the Country in which they placed them, is not very far diſtant from the Route theſe Caravans muſt have taken[e].

That there muſt have been ſome Paſſages on the North appears alſo from hence, that the Antients were ſo fully perſuaded that the *Indian* Ocean communicated with the *Caſpian Sea*, a Thing that could never have come into their Heads if they had not been informed that there was ſome kind of Commerce carried on between the northern Parts of *Europe* and the *Indies*; and it is not eaſy to conceive how any Commerce of that Kind ſhould be carried on, unleſs by the Route which we have mentioned, which was always practicable, and which therefore there is no Improbability in ſuppoſing it was formerly practiſed. The only formidable Objection that can be made to this is, the Fierceneſs and Barbarity of the Nations inhabiting between *China* and *Ruſſia*; and therefore this Objection deſerves ſome Conſideration.

In the firſt Place then, I obſerve, that the Antients had no diſtinct Account of theſe People at all, and therefore whatever they have advanced ought to make no Impreſſion to the Diſadvantage of theſe Nations. In the next Place, I muſt put the Reader in mind, that what they have told us of the *Seres* does not appear to agree with the *Chineſe* Hiſtory; and though I am very far from aſſerting that we ought to give an implicit Credit to all that is advanced in that Hiſtory, yet I think there is nothing abſurd in ſuppoſing that the *Indians* or the *Chineſe* might be as knowing and as induſtrious in Commerce, as we know with Certainty, that the *Chaldeans* and the *Iſhmaelites* were, in Times much earlier than thoſe in which we conceive this Commerce to have been in uſe.

Human Nature is every where the ſame; and it appears even from the Reports of the *Greek* Hiſtorians, that the *Indians*, from the earlieſt Accounts they had of them, were as civilized and as well governed a People as any in the World, which certainly adds ſome Credit to the *Chineſe* Hiſtory, whether we believe that the *Indians* derived any Part of their Knowledge from the *Chineſe*, or which is a Notion more probable in itſelf, and much better ſupported by Authority, that the *Chineſe* were indebted for the beſt Part of their Improvements to the Lights they received from the *Indians*. The firſt Account we had of the *Tartars* repreſented them as a Race of ſtupid and ignorant Barbarians; but their own Hiſtories ſhew quite the contrary, and carry in them this intrinſick Evidence of their own Veracity, that they muſt have been ſuch a People as their Hiſtories repreſent them; becauſe, had it been otherwiſe, thoſe Hiſtories could not have been written[f].

To ſpeak my own Opinion freely and fairly, we are but too apt to treat People that have lived at a great Diſtance of Time, as we do thoſe that live at a great Diſtance in Point of Place; that is to ſay, we meaſure their Wiſdom and Civility by their Remoteneſs from our own Country, and even our own Time, which is particularly hard upon the Eaſtern Nations, ſince both Reaſon and Experience teach us, that as they were firſt ſettled, their Governments firſt formed, and Laws firſt introduced among them, there is the higheſt Probability that Knowledge of every kind came earlier to Maturity amongſt them than amongſt other Nations, though afterwards their Countries might be over-run, their Governments ſubverted, and their Manners much altered by the Interruption of other Nations, yet were truly barbarous with reſpect to them; that is to ſay, differed widely from them in point of Laws and Cuſtoms, and eſtabliſhing themſelves by Force of Arms, diſturbed that Order they found, and were a long Time before they eſtabliſhed any regular Conſtitution in its Place.

---

[b] There have been ſeveral *Greenlanders*, in their little Boats, taken up on the Coaſts of the *Orkneys* and *Caithneſs*.

[c] *Lopez Gomara* in *Hiſt. Indiæ, lib.* 1. *cap.* 10. He too aſſerts theſe People were *Indians*.

[d] It is very plain, that *Pliny* meant this Paſſage, for he labours in this Chapter to prove that the Continent of *Africa* had been often ſurrounded; and aſſerts in Proof of it, that the Wrecks of *Spaniſh* Veſſels had been found in the *Indian* Seas; which, tho' it proves nothing as to the Matter of Fact, yet it ſhews clearly that the Antients had a Notion that ſuch a Paſſage was practicable.

[e] We have conſidered this Subject at large in the fifteenth Section.

[f] The Reader will find this verified, if he conſults the genealogical Hiſtory of the *Tatars*, written by a *Tartar* Prince, and of which we have a very good Tranſlation in *Engliſh*.

3. We ſhall apprehend this Matter better, if we conſider the next Route to *China*, which was by *Samarcand*, the Capital of the Country, called *Tranſoxiania*; that is, the Country beyond the River *Oxus*. It was by this River, which runs at no great Diſtance from *Samarcand*, that a Trade was carried on to the North, by ſailing down that River into the *Caſpian-Sea*, and ſo to the Mouth of the *Volga*. Biſhop *Huet*[g] hath very juſtly obſerved, that by this Route, there was no great Difficulty in paſſing from *China* to *Spain*, without ever entering the Ocean. For, as he remarks, if after entering the *Volga*, and ſailing up that River as high as the Country of the *Coſſacks*, the Merchants and Merchandiſe went by Land no greater Journey than ſix *German* Leagues, they might then ſail down the *Tanais*, and ſo into the *Black-Sea*; and paſſing the Straits of *Conſtantinople*, proceeded by the *Mediterranean* to *Gibraltar*.

Strabo[h] has pointed us out another Route by the *Caſpian-Sea*, ſtill ſhorter than that of the *Volga*, which is by turning towards *Albania*, and ſo entering the River *Cyrus*, and ſailing up as far as it is navigable, and then proceeding by Land directly to the *Black Sea*. But tho', as he obſerves, this might be a ſhorter Way, yet certainly it was not ſo commodious, or at this Time ſo practicable; however the Account he has given of it, is a plain Indication, that all theſe Things had been very well conſidered by the Antients.

But *Pliny*[i] carries the Matter much farther; for he tells us on the Authority of *Varro*, that *Pompey* the Great, during the War that he carried on againſt *Mithridates*, had actually a Deſign of opening a Commerce this Way. He was, ſays he, informed, that it was but ſeven Days Journey from the Frontiers of *India* through the Country of the *Bactrians* to the River *Icarus*, which falls into the *Oxus*; ſo that the Merchandiſe of *India* might be this Way tranſported into the *Caſpian-Sea*, and from thence carried up the River *Cyrus* to within five Days Journey of *Phaſis* in *Pontus*, which five Days Journey might be very eaſily performed over Land[k]. *Solinus*[l], indeed, ſpeaks of the Veſſels paſſing this Way; but that is a Miſtake, he muſt have meant the Merchandiſe. It is impoſſible to mention this Route to and from the *Indies*, without obſerving, that it was the neareſt and moſt convenient that could be to *Conſtantinople*; and there ſeems to be no Reaſon to doubt, that it was made uſe of, eſpecially when the Inhabitants of the *Pontus Euxinus*, or *Black-Sea*, were Subjects to the *Greek* Emperors, or in Times of Peace; and by this means it might probably happen, that the Commerce of the *Indies* was preſerved after the Eaſtern Provinces of the Empire were loſt, becauſe it was a long time after that before this Road was in any Danger of being diſturbed by the Excurſions of the *Arabs*.

This would have become ſtill an eaſier and better Method of carrying on this Trade; perhaps we ſhould not err much in ſaying the eaſieſt, and beſt of all, if the Project, which *Pliny* tells us, on no leſs Authority than that of the Emperor *Claudius*[m], was formed by *Seleucus Nicator*, had been carried into Execution, either by him, or by the *Greek* Emperors, who had a much better Opportunity of doing it, which was by cutting a Canal from the *Cimmerian Boſphorus* to the *Caſpian-Sea*, which would have ſhortened the Paſſage extremely, and would beſides have enabled the Merchants to have conveyed their Goods by Water all the Way.

The Scheme itſelf is truly great, and was originally that of *Alexander*, who, as we obſerved in the Account we gave of that great Conqueror's Deſigns, ordered the *Caſpian-Sea* to be perfectly ſurveyed, with this very View of finding ſome Communication with the *Pontus Euxinus*, that he might thereby open a Paſſage from the *Indies* to his hereditary Dominions of *Macedon*[n]. One would imagine, that this might have been more in the Power of the Grand Signor; but as the *Turks* have no great Genius for Trade, we need not wonder that it has been hitherto neglected; but if ever the *Shah Nadir* ſhould compaſs his Deſign of penetrating as far as the *Black-Sea*, there is good Reaſon to believe that he would revive this Project, as well on account of his known Attention to whatever regards Commerce, as becauſe he would then be intirely Maſter of the Country through which this Trade muſt be carried on.

4. The City of *Bogar* ſtands not far from *Samarcand*, and is much nearer to the River *Oxus*; it was formerly a Place of very great Trade, and is ſtill reſorted to by abundance of Merchants from *Cathay*, or *Great Tartary*, *China*, and the *Indies*, on this and on the other Side the *Ganges*; as alſo by the *Perſians* and *Muſcovites*, who there furniſh themſelves with all the rich Commodities of the Eaſt, ſo that it ſtill paſſes for a very great Mart in that Part of the World[o].

Our Countryman *Anthony Jenkinſon*, who was actually there in 1558, aſſures us, that in his Time the River *Oxus* did not fall into the *Caſpian-Sea*, as of old, but emptied itſelf into another River called *Ardocke*, which, he ſays, runs towards the North; and after running a thouſand Miles underground, riſes again, and falls into the Lake of *Kithay*. This is a Fact which he expreſsly affirms in one Place; but in another, he gives the following Account of the Matter. "On the 26th of *November* we departed from " the Town of *Urgence*, and having travelled by the River " *Oxus* one hundred Miles, we paſſed over another great " River called *Ardocke*, where we paid a certain petty " Cuſtom. This River *Ardocke* is great, and very ſwift; " and falling out of the aforeſaid *Oxus*, it paſſes about a " thouſand Miles to the Northward, and then conſumeth " itſelf in the Ground; and paſſing under the ſame about " five hundred Miles, iſſueth out again, and falleth into " the Lake of *Kithay*, as I have before declared[p]."

He had forgot, it ſeems, what he had before declared; for there he ſays, in ſo many Words, that it paſſes under the Ground above one thouſand Miles; but as what he relates in both Places muſt be from Hearſay, it is the leſs to be regarded. As to what he records of his own Knowledge, it deſerves Notice, becauſe he has the Reputation of being an Author of great Fidelity. He aſſures us then, that all the Country thereabouts is watered by Canals drawn from the River *Oxus*, which, in his Judgment, is a great Detriment to that River, and the Cauſe that it does not fall into the *Caſpian-Sea*, as it did in Times paſt. He adds, that in a ſhort time all that Country is like to be deſtroyed, and to become a Wilderneſs for want of Water, when the River *Oxus* ſhall fail. He likewiſe gives us an Account of the City of *Bogar*, as it was in his Time.

He ſays, that it is ſeated in a low Country, not far from the River *Oxus*, which is there navigable, and is ſurrounded with a high Wall of Earth; the City is divided into three Parts, two of which belong to the King and the Inhabitants, and the third to the Foreign Merchants; all of the ſame Trade living in the ſame Place. This City is very large, and the Houſes, for the moſt Part, of Earth; but there are alſo many of them, and all the Temples and publick Buildings, of Stone, ſumptuouſly built, and very richly gilt, eſpecially their Bagnios, which, in the Opinion of this Writer, exceed any in the World. The King had a Tenth of all Wares that were ſold; but what is more to our Purpoſe, he gives us a very copious Account of theſe Wares, and of the Trade carried on there in his Time.

There is, ſays he, yearly a great Reſort of Merchants from *Perſia*, *Balk*, *Ruſſia*, and in Times paſt from *Cathay*, when there was a Paſſage: the *Indians* bring white Cottons for Turbants; but for Gold, Silver, precious Stones, and Spices, they bring none; but all that ſort of Trade is carried on by the *Portugueze* on the Ocean. The *Indians* carry back with them wrought Silks, red Hides, Slaves, Horſes, and other Things. The *Indians* he ſaw there came from the Country of *Bengal*, and beyond it; the *Perſians* brought Woollen Cloth, Linnen Cloth, ſeveral ſorts of Silks, and carried back red Hides, other *Ruſſian* Commodities, and Slaves. As for the Cloth, he tells us, he found, upon Enquiry, they brought it from *Aleppo*. The *Ruſſians* dealt in red Hides, Sheep-Skins, Woollen Cloth, Wooden-ware, Bridles, Saddles, and other ſuch-like Goods, which they exchanged for Cotton and Silk Manufactures. He farther tells us, that the Caravans which came from *Cathay* in time of Peace, and when the Ways were open, brought Muſk, Rhubarb, Sattins, Damaſks, and other rich Commodities; but by reaſon of the Wars, there had been no Caravans in three Years; and when they did come, he tells us, their Journey took up nine Months. He left the City of *Bogar* on the 8th of *March* 1559, in a Caravan, conſiſting of ſix hundred Camels, and arrived on the 23d of *April* following on the Coaſt of the *Caſpian-Sea*.

[o] *Hiſtoire de Commerce des Antiens, cap.* 56.

[p] *Hackluyt's* Voyages, Vol. II. *p.* 358.

It is clear from what this Writer delivers, that the Accounts we have of the ancient Commerce in theſe Parts, and particularly by the Way of *Bogar*, are exactly agreeable to Truth; and there is no doubt, that the Splendor of this City, the fine Houſes, Temples, and other publick Edifices, were owing to the Wealth which this Commerce produced; and it is no leſs plain, that in Times of Peace, and when the *Perſian* Empire, upon which the Kingdom of *Bogard* or *Bucharia* depends, is thoroughly ſettled, this Commerce may be revived to very great Advantage.

5. There is another Rout which could not differ much from that before deſcribed, mentioned by *Ammianus Marcellinus*[q], which he ſays lay through the Country of the *Arians*, ſituated, with regard to the *Oxus*, between the North and the Weſt; and which Rout likewiſe led to the *Caſpian-Sea*. According to the Deſcription he has given us, there was a River, called *Arias*, which ran through that Country, and which was navigable. He farther ſays, that the Navigation through this Country to the *Caſpian-Sea* did not exceed a hundred Leagues. According to all the ancient Maps, and even according to *Ptolemy*'s Tables, there is no navigable River to be found in this Part of the Country, except the *Oxus*, into which there might run ſome little Rivulet from the Country of the *Arians*; and indeed *Strabo* mentions ſuch a Rivulet by the Name of *Zariaſpe*. One might be tempted to think, from the Similitude of Names, that this River might be the ſame that *Jenkinſon* mentions, and which he calls *Ardoche*; but that it is evident, from his Account, that even this River does not run into the *Caſpian-Sea*; ſo that no Navigation could be carried on this Way in the Manner that *Ammianus Marcellinus* mentions. But we ought likewiſe to conſider, that it is very clear from *Jenkinſon*'s Account, that the Rivers in this Country have ſuffered much Alteration ſince the time that *Ammianus* wrote; and we muſt likewiſe conſider, that he wrote entirely from the Information of others, and not from his own Knowledge; ſo that, very probably, he may be ſomewhat miſtaken in this Matter, at leaſt in ſome of the Circumſtances. And this Rout, through the Country of the *Arians*, might be carried on by Land, and by the help of Caravans, as *Jenkinſon* aſſures us it was in his Time. After all, there does not ſeem to be any good Reaſon for diſtinguiſhing this from the former Paſſage, ſince, in all Likelihood, the *Indian* Commodities that were thus tranſported, were carried no farther than either *Bogar*, or *Samarcand*, and paſſed from thence down to the *Caſpian-Sea*.

6. We are indebted to the ſame ancient Author for the Account of another Road from the Country of the *Seres*, which lay through that of the *Sacæ*, a very fierce and barbarous People, as all the Writers of Antiquity agree that mention them[r]. *Ptolemy*, in the Account he has left us in this Country, mentions two Rivers, the one called *Araxates*, and the other *Dymas*, which, he ſays, running near each other, ſometimes over-flow the adjacent Country, and cauſe a great Tract of marſhy and fenny Ground, which from its lying near the River *Oxus*, is called the *Oxian* Marſhes.

This Paſſage is very perplexed and obſcure, and ſeems to give us an Idea of the *Oxus* very different from that which *Jenkinſon* had of it when he travelled thither in the laſt Century. In order to reconcile theſe Differences, and to give as full and fair an Account as is poſſible of this River, which upon the whole appears to have been the grand Canal in ancient Times of the Commerce of the Eaſt, we ſhall give ſuch a Deſcription of it as is to be met with in the beſt modern Accounts of theſe Parts.

The River *Oxus* is now called *Amu*. It riſes in the high Mountains on the Frontiers of the *Leſſer Bucharia*, which ſeparate the Dominions of the Great Mogul from the Country of *Great Tartary*, in the Latitude, as near as can be diſcovered, of 29° 30 N. This River paſſes thro' the Country of *Grand Bucharia*, running from Eaſt to Weſt, and about forty Leagues from its Mouth divides itſelf into two Branches. That which runs to the left continues its Courſe weſtward, till it falls into the *Caſpian-Sea*, in the Country of *Aſtarabat*, which belongs to the *Perſian* Empire, in the Latitude of 38° 20 N. As for the Right-hand Branch, which formerly paſſed by the City of *Urgence*, it fell likewiſe into the *Caſpian-Sea*, about twelve Leagues more to the North than the other Branch; but at preſent it has changed its Courſe, and running North-Weſt, falls into another River called *Khoſel*, not far from the little Town of *Tuk*. The old Channel, which paſſed by the City of *Urgence*, is abſolutely dry, and all the Country thereabouts is become a Deſert, as our old *Engliſh* Traveller foreſaw it would for want of Water[s].

This Account is taken from the Diſcoveries made in theſe Parts, by the Order of the late Czar; and if it may be depended upon, as indeed I ſee no Reaſon why it ſhould not, it frees us from all the Difficulties that ariſe from the former Deſcription, and enables us to account for the wide Difference between the ancient and modern Relations of the Commerce in theſe Parts. As for the other Branch of the *Amu*, or *Oxus*, which continues its Courſe to the *Caſpian-Sea*, it is ſtill a large navigable River; the Country about it extremely fertile and pleaſant, producing the largeſt and fineſt Melons in the World, and other excellent Fruits, which are carried not only into *Perſia* and *India*, but alſo into *Ruſſia*.

[t] 7. The next Rout, declining ſtill a little to the South, is that of *Cabul*, or *Caboul*, which derives its Name from a City of the ſame Name, ſeated in the Latitude of 34° North, on the Frontiers of *Great Bucharia*, on the South Side of the Mountains, which divide the Territories of the Mogul from that Part of *Great Tartary*. This City of *Cabul* is the Capital of a little Province, called from thence *Cabuliſtan*; it is one of the fineſt Cities in that Part of the World, large, rich, and very populous. As it is conſidered as the Key of the Great Mogul's Dominions, great Care is taken to keep its Fortifications in conſtant Repair, and a numerous Garriſon is maintained for its Security. This City is very ancient, and has been always famous, as it ſtill is, for being the great Mart or Centre of Commerce between *India*, *Perſia*, and *Great Bucharia*.

The *Uſback Tartars* drive there a great Trade in Slaves, as alſo in Horſes, of which it is ſaid, that not fewer than ſixty thouſand are ſold there every Year. It ſtands on a little River which falls into the *Indus*, and thereby affords a ſhort and ſpeedy Paſſage for all the rich Commodities in the Country behind it, which, when brought to *Cabul*, are there exchanged for Slaves and Horſes, and are conveyed from thence by Merchants of different Countries into other Parts of the World. The Neighbourhood of this City, is one of the pleaſanteſt and moſt fertile Regions that can be imagined; the Climate temperate and wholeſome, well watered, producing Fruits of all Kinds in equal Plenty and Perfection. The Inhabitants are moſt of them *Indian Pagans*, though the Officers of the Mogul and moſt of the Garriſon are *Mohammedans*.

8. A little farther to the South, lies the greateſt and moſt frequented Road to the *Indies*, by the City and Pro-

[t] The Facts mentioned in this Paragraph will be abundantly verified in the ſucceeding Sections.

vince of *Candabar*, which has been for many Ages the Centre of Commerce between *Perſia* and the *Indies*. The City of *Candabar* is ſeated in 33° 10′ N. and is by Nature one of the ſtrongeſt Places in the Eaſt. There is great Reaſon to believe from the Compariſon of our modern Maps with the old Tables of *Ptolemy*[u], that this City is either raiſed out of the Ruins, or built very near the Place where *Alexandria* ſtood, and is a new Proof of the Wiſdom of *Alexander* the Great, in the Choice of a proper Situation for the Colonies he intended to have erected in this Part of the World. Some learned Men have thought that the modern, as well as the ancient Name of this Place, is derived from that of this great Conqueror, who is called in the Eaſt *Iſcander*; but there ſeems to be more Reaſon to believe that it derives its preſent Appellation from the *Candarians*, an ancient People that were formerly the Inhabitants of the adjacent Country[w].

This City and Province has been expoſed to many Revolutions. It was long an independent Principality, preſerved in that Condition, not ſo much by the Strength of the Place, and the Power of its Princes, though both were in paſt Times very great, as by its advantageous Situation on the Frontiers of the two great Empires of *Perſia* and the *Indies*, which ſecured it a powerful Protector on one Side whenever it was attacked on the other. It has been ſince however ſometimes in the Hands of the Mogul, ſometimes in thoſe of the *Perſians*, where it is now like to remain. It is not very large, but extremely well built and well peopled; and the Caravans from *Iſpahan* and *Agra* paſs conſtantly through it, and even continue there for ſome time for the Conveniency of Merchants of all Nations, who reſort thither to exchange the Commodities of their own Countries for thoſe of the Eaſt.

It is highly probable that this Commerce was in a very flouriſhing Condition, under the *Perſian* Kings cotemporary with the firſt Emperors of *Conſtantinople*, and that by the regular Returns of Caravans from the *Indies*, the *Perſians* were furniſhed with vaſt Quantities of the Commodities of *India*, which they afterwards carried into their frontier Provinces, in order to diſpoſe of them at the Fairs in which they traded with the *Greeks*. The Settlements of the *Europeans* in the *Indies* have certainly leſſened this Commerce by *Candabar*, as well as all the inland Trade of thoſe Parts. But, as we ſhall ſee hereafter, it is for all that very conſiderable, and muſt always continue ſo, from the natural Conveniency of the Place, which renders it the Staple of *Perſian* as well as *Indian* Commodities.

9. There is yet another Rout more to the South than any of thoſe we have mentioned, *viz.* through the Country of *Sinæ*, or *Thinæ*, whom we have mentioned before, and have ſhewn them to be the *Siameſe*. We have this Account from the Author of that Periplus of the *Red-Sea*, which goes under the Name of *Arrian*, and a very dark Account it is, though not altogether unworthy of Notice. The city of *Thina* lies, as he tells us, on the Sea-ſide in the ſouthern Part of the Country, and from thence ſilk and cotton Manufactures are carried by Land through the Country of *Bactria* to *Barygaza*, and from thence to *Limyrica* by the *Ganges*. There cannot be any thing wilder, or more abſurd than this Story; for, according to *Ptolemy*'s Tables, there is a Diſtance of 32° of Latitude between the Country of *Bactria* and *Barygaza*, and 25° of Longitude between *Limyrica* and the *Ganges*[x].

One need not, however, much wonder at theſe Miſtakes, when, in the ſame Deſcription, we find this Author placeing this City of *Thina* very near the Pole, which is ſo extravagant an Error, as plainly betrays his Want of Skill in Geography. He proceeds to inform us, that this City is exceſſively difficult of Acceſs, ſo that few People go to it; and yet he talks of its Vicinity to *Pontus* and the *Caſpian-Sea*, which renders all he ſays abſolutely unintelligible. He informs us farther, that there came annually to the Frontiers of the Country of the *Sinæ*, a People whom he calls *Seſatas*, and whom he deſcribes as a Sort of Savages, of a low Stature, broad-faced, and with flat Noſes, between whom and the *Sinæ* a very conſiderable Commerce was carried on.

The very learned Biſhop *Huet*[y], profeſſes himſelf at a Loſs to know what to make of theſe People. I muſt confeſs, that there cannot well be any thing more dark or confuſed than this Story; but, for my own Part, I believe that the Text is corrupted, and that the Meaning of the Paſſage may poſſibly be this, that there was anciently a Trade carried on over Land between the *Tartars*, for ſuch I conceive thoſe People to have been from this Deſcription, and the *Siameſe*; but whether I am right in my Conjecture or not, I muſt leave the ingenious Reader to determine. This, however is certain, that if I have gueſſed right, it will make ſome Senſe of this Paſſage, of which hitherto the beſt Commentators have been able to make no Senſe at all.

There is another ancient Writer who mentions this City in the following Terms: There lies, ſays he, in that Part of *India* which is beyond the *Ganges*, the *Golden Cherſoneſe*, beyond which is the *Sinus Magnus*, then the Country of the *Sinæ*, whoſe Capital is called *Thina*, which ſtands on the Frontiers of the Country known and unknown[z]. That is, in plain *Engliſh*, this City of *Thina* was the very laſt Place in the *Indies* of which the Ancients had any Knowledge.

Taking this therefore altogether, it amounts, I think, to this; that there was anciently a very great inland Commerce throughout the *Indies*, from the Countries that lay fartheſt to the North, to thoſe which lay in the remoteſt Parts of the South and Eaſt: Which is very agreeable to what I have before laid down, that notwithſtanding the Reports of their Barbarity, which aroſe wholly from their being unknown, the ancient *Indians* were much addicted to Commerce; which, by the Help of their Rivers and Caravans paſſing from River to River, they carried on in a manner the moſt extenſive; of which, the *Alexandrians*, by their Commerce on the Sea Coaſt, came to have ſome Knowledge, and from their natural Prejudice, reported Things in this dark and confuſed manner.

10. We have now gone through moſt of the Routs to and from the *Indies*, which are mentioned in ancient Authors, excepting ſuch as were performed both by Land and Sea; of which it will be neceſſary to ſay ſomewhat, tho' we ſhall not dwell long upon them, becauſe we ſhall have Occaſion to mention them in the ſubſequent Sections. After the Time of *Alexander*, there was always a very conſiderable Trade carried on, at leaſt in Times of Peace, through *Perſia* to the *Indies*, by the Help of regular Caravans, which there is great Reaſon to believe went annually from the Banks of the *Tygris* to thoſe of the *Indus*. But in Proceſs of Time, a great Part of this Journey was ſaved, and the *Indian* Commodities being ſhipped at *Muziris*, *Barygaza*, or at *Patala*, were carried by Sea through the *Perſian* Gulph, and then up the River *Euphrates*, within a very ſmall Diſtance of *Palmyra*, to which City they ſeem to have been tranſported by Land; where they were laid up in moſt ſtately Magazines, till, as Occaſion ſerved, they were tranſported thence to *Antioch*, and ſo over all *Europe*[a].

We have already mentioned the Riſe and Ruin of that famous City, and ſhall here only obſerve, that it is highly probable that the Commerce of this Place fell off by Degrees, and not all at once, as moſt Writers ſeem to imagine; for Want perhaps of the Hiſtories of thoſe Countries after the *Roman* Empire began to decline. It certainly required a long Courſe of Time to eſtabliſh ſo large, ſo well-built and rich a City; and therefore it is by no means credible, that it ſhould be deſerted and abandoned all at once. There are, to ſay the Truth, ſome Paſſages in Oriental Hiſtorians, which would incline one to believe, that it was ſtill a City of conſiderable Figure and Trade under the *Khaliffs*; and therefore, I think, it may be concluded, that its total Deſtruction was owing to the Trade to the *Indies* taking another Courſe, eſpecially after the Foundation of *Bagdad*; as alſo to the Wars, to which the adjacent Countries have been continually expoſed for ſo many Years laſt paſt; firſt between the *Arabs* and the *Tartars*, and ſince between the *Perſians* and the *Turks* [b].

[a] See the Hiſtory of *Palmyra, p.* 33. 65.

Yet ſtill the old Rout is, in ſome meaſure, preſerved by the Caravans that paſs from *Perſia* to *Aleppo*; which ſhews of how great Conſequence it is, to have the Rout of an advantageous Commerce once laid down through any Country: For though through the Alterations, and Revolutions to which all Places are, in ſome meaſure, liable, it may be for ſome Time interrupted or diſuſed, yet ſooner or later it is again revived, tho' perhaps not exactly in the old Manner, yet ſo near it, that the Inhabitants are ſeldom totally deprived of the Benefits reſulting from it [c].

It has been of late apprehended, that the preſent Monarch of *Perſia*, *Kouli Khan*, has it in View to ruin this Commerce intirely, as prejudicial to his Subjects, or rather detrimental to his Plan of Power, which is to draw the Commerce Northward, and make himſelf ſole Maſter of the Trade to the *Indies* through his Dominions. But there is good Reaſon to doubt, whether this be not a Scheme too large for him to execute in his Life-time; and whether his Succeſſors may not be brought to alter it, and to put things again upon their old Foot: Yet thus much is certain, that if this Monarch and his Succeſſors ſhould ever compaſs this Deſign, and divert the whole Trade of their Dominions to the *Caſpian-Sea*, it will have its Effects with reſpect to *Aleppo* and the other Towns on that Coaſt, and that in the ſame Manner, and to as high a Degree, as the Diſcovery of the Paſſage to the *Indies* has had on the Port of *Alexandria* in *Egypt*.

11. As the *Arabian* Empire took Riſe in the Peninſula of *Arabia*, ſo as ſoon as the Princes of that new Power had any Leiſure to form a Scheme of Politicks, they began to frame a Deſign of attracting the *Indian* Trade from the Country of *Perſia* where it then centered, as near as poſſible to the Place of their own Reſidence. It was with this View, that *Omar* the Second Khaliff, in the 15th Year of the Hegira. A. D. 636, cauſed the City of *Baſſora*, or *Balſora*, to be built a little above the Entrance into the *Perſian* Gulph.

There never was perhaps a City more happily erected, or which ſooner came to anſwer the End for which it was erected than this. The Khaliffs did not indeed make it the Place of their Reſidence, and if they had, it is highly probable it would have been rather diſadvantageous than ſerviceable to it. But they always ſent thither a Perſon of Diſtinction as Governor, and made it the grand Port of their Dominions. It became by this Means, and by the Privileges allowed to all Merchants that ſettled there, exceedingly rich and very populous; and that too in a ſurprizing ſhort Space of Time.

It was for ſeveral Ages a Place of the greateſt Concourſe, and of the greateſt Trade in the known World. The richeſt Commodities in the Eaſt, but more eſpecially Spices, precious Stones, Drugs, Silk and Cotton Manufactures were brought hither, and diſperſed from hence by Caravans, till ſuch Times as the *Portugueze* became Maſters of the City and Iſland of *Ormuz* on the Coaſt of *Perſia*; which for a long Time ſunk the Commerce of *Baſſora*. But after the Shah *Abbas*, with the Aſſiſtance of the *Engliſh*, made himſelf Maſter of that Iſland, and raiſed the famous Emporium of *Bander Abaſſi*, or *Gambroon*, on the oppoſite Coaſt of *Perſia*, the Trade of *Baſſora* began to revive, and has ever ſince conſidered as, beyond Compariſon, the greateſt Mart of this Part of the World, as ingroſſing all the Trade of the *Perſian* Gulph.

It was, as we have already ſhewn, originally in the Hands of the *Arabs*; the *Perſians* became afterwards its Maſters: But ſince the Year 1668 it has belonged to the *Turks*.

At the ſame Time that the Khaliffs ſecured to their Subjects all the Trade on this Side, by opening ſo convenient a Port as that of *Baſſora*, they took no leſs Care of the *Arabian* Gulph, and of the Trade carried on thereby; for they directed a Canal to be cut from *Cairo* to *Suez*, which is ſtill viſible, though at preſent choaked up with Sand; and partly by Shipping, partly by Caravans, eſtabliſhed ſuch a Trade there, as very near equalled that carried on in the Days of the *Romans*. Thus the Reader ſees that, for a long Tract of Time, the whole Trade of the *Indies* was in the Hands of the *Mohammedans*, and carried on by them with all the Caution and Succeſs imaginable.

It is true, that this is now in a great meaſure in the Hands of the *Europeans*, who are eſtabliſhed in all the Ports of this Part of the World, and carry on a prodigious Trade in their own Bottoms. But notwithſtanding this, perhaps we yet owe the Trade of the *Indies* more to the Weakneſs of the *Turkiſh* Policy, than to any other Cauſe whatever; for, notwithſtanding our Superiority in Maritime Skill and Maritime Force, if the Turks were a People in any degree addicted to Trade, they might ſtill drive a great Part of that to the *Indies* by the old Rout through the *Red-Sea*, in ſpight of all our Power and of all our Settlements.

This will appear clearly to the Reader, if he conſiders that *Surat* is ſo well ſituated, that it might be very eaſily made the Centre of all the Commerce of the *Indies*. From *Surat* to *Suez* is not above a Month or five Weeks Sail; and from *Suez* to *Cairo* is a Journey of no more than three Days; from *Cairo* to *Alexandria* Goods may be conveyed in the ſame Space of Time; and from *Alexandria* to *Marſeilles* is a Voyage only of a Fortnight or three Weeks. So that taking this altogether, it appears far from being an Impoſſibility for a Perſon to go from *Marſeilles* to *Surat* in the Space of two Months, or ten Weeks. It may indeed be objected, that the Voyage from *Suez* to *Surat*, and conſequently that from *Surat* to *Suez*, depends on the *Monſoons*; but, notwithſtanding this, if proper Magazines were erected at both Ports, and Fleets went regularly between them at Spring and Fall, an immenſe Quantity of *Indian* Goods might be this Way brought into *Europe* much freſher, and in much better Condition, than they are at preſent [e].

This is a Project the *French* have often had in their Heads; and if ever they ſhould prevail with the *Ottoman* Port to concur with them in carrying it into Execution, there is no anſwering for its Conſequences. It muſt be owned, that an Attempt of this ſort might in the Beginning meet with many Obſtacles; but if once the *Turks* taſted the Sweets of this Commerce, or were tempted by the Offer of a large Sum of Money to be paid annually at *Conſtantinople*, as an Equivalent for the Duties with which Goods coming this Way into *Europe* might be charged, it is not eaſy to ſay how far this might operate; for how indolent and negligent ſoever they may be with regard to Trade and Navigation, yet there is no Nation in the World more avaricious than they, or more ready to do any thing to which they are prompted for Money.

12. The laſt Rout we ſhall mention, is one not very ancient, and which nevertheleſs is now, in a manner, abſolutely forgot. The *Genoeſe* had it formerly in their Hands, and it is no other than the Port of *Caffa*, in *Crim Tartary*. This Country was anciently called the *Cherſoneſus Taurica*; and this City is very often mentioned by old Writers under the name of *Theudoſia* [f]. It was taken from the *Genoeſe*, who, while they poſſeſſed it, were Maſters of the Trade of the *Black-Sea*, by *Mohammed* the Great, A. D. 1475. It was then in a very flouriſhing Condition, and was one of the beſt-built and richeſt Places of its Size in *Europe*.

It ſtands at the Foot of a ſmall Hill upon the Sea-Shore, North and South, with long Walls ſtretching on both Sides down to the Sea; ſo that from the Port, which is very large, very ſafe, and very commodious, it makes a very agreeable Appearance: There is a Caſtle on the South Side, in which the *Turkiſh* Baſhaw reſides, with his Garriſon. The Number of Houſes in the Place is about 4000; of which 800 belong to Chriſtians, the reſt to *Turks* and *Tartars*, but the former are Maſters here, and it is the only Place the Grand Seignor has in *Tartary*.

After the *Genoeſe* were driven from hence, they carried on for a long time a very advantageous Trade with the Inhabitants, who, by the Way of the *Caſpian-Sea*, found means to enter into a conſiderable Trade in Spices, Drugs, Cotton, Silk, and other *Indian* Commodities. At laſt the *Turks* grew jealous of the Intercourſe of the *Genoeſe* in theſe Parts, and abſolutely excluded them, as well as all other Nations, from trading to, or even entering into the *Black-Sea*. Yet this did not immediately put an End to the Commerce between this Place and *Genoa*; for the *Tartars* preſerved ſo ſtrong a Senſe of the Advantages derived from this Commerce, that for ſome time they proſecuted it in their own Veſſels, and carried the Spices and other *Indian* Goods which they received by Caravans from *Aſtracan*, and which had been brought thither from the oppoſite Side of the *Caſpian-Sea* to *Genoa*; but the *Turks*, equally jealous of this, as they had been of the former Correſpondence, ſoon put an End to this Commerce likewiſe, and thereby ſecured themſelves from the Fears of ſeeing a Chriſtian Fleet in thoſe Seas.

---

[b] See the Article *Balbeck* in *Herbelot*.
[c] All this Commerce has been carried one Way, though not conſtantly in the Hands of one People.
[d] *Elmacin. Hiſt. Saracen.* p. 191.
[e] I take moſt of theſe Particulars from the Deſcription of *Egypt*, compiled from the Papers of M. *Maillet*, the *French* Conſul.
[f] *Cellar. Geograph. Antiq.* Vol. I. p. 409.

Yet *Caffa* ſtill remains a Place of very great Trade, and the Staple of the *Black-Sea*, inſomuch that Sir *John Chardin*[a] tells us, he ſaw in the Space of forty Day no leſs than four hundred Ships ſail in and out of this Port. The *Venetians*, in hopes perhaps of reviving, in ſome meaſure, the old Trade, procured, at a great Expence, in the Year 1672, Leave from the *Porte* to ſend annually a Cargo of their Manufactures on board a ſmall Squadron of their own into the *Black Sea*; but this Trade did not laſt long, for the *Jews* inſinuated ſo many Dangers would ariſe from permitting this Commerce, that in a Year's time the Licence was retracted; and thus ended all Attempts for retrieving the Commerce of the *Indies* by this Rout. In Proceſs of Time, however, it is not at all incredible that it may be reſtored; for ſince the *Ruſſians* are Maſters of *Azoff*, and have a conſiderable Number of trading Veſſels in thoſe Seas, it is not impoſſible that ſome ſuch Revolution may happen, as will ſet the Navigation of the *Black-Sea* entirely open, and thereby reſtore to the *Europeans* in general, but more eſpecially to the *Italian* States, a Commerce highly profitable in itſelf, and capable of great Improvements.

13. We have now entirely done with the ancient Hiſtory of this Commerce, and ſhall add only a very few Obſervations on this, as on the former Sections, and thoſe with no other View, than to convince the Reader of the Importance of this Hiſtory, and to ſhew what an Effect it has had, and is ever like to have, in favour of thoſe who are poſſeſſed of it.

Every one of the four great Empires, which, in paſt Ages, have had the ſupreme Dominion, and the Hiſtory of which ſtill makes ſo great a Part of that Learning which is moſt valued, had each of them a large Share, and many of them the entire Monopoly of the Trade to the *Indies*.

The Accounts we have of the *Aſſyrian* Empire are very ſhort, as well as very obſcure; and yet the Attempt made by *Semiramis* to conquer the *Indies*, is the moſt conſiderable Event of which, with reſpect to that Monarchy, we have any Account. The *Perſians*, as we have ſhewn at large, owed a great Part of their Wealth to this Commerce, as it was carried on by Land, while their conſtant Allies, the *Tyrians*, derived from it much of their Maritime Power, which was almoſt all the *Perſians* had to depend upon by Sea. The Proſpect of ingroſſing it was the principal Object which *Alexander the Great* had in View, which afterwards occupied the Thoughts of his principal Commanders, and which was, at length, in a great meaſure, accompliſhed by the *Ptolemies* in *Egypt*. The *Romans* acquired it, together with the Dominions of thoſe Princes, and held it as long as they retained any Power anſwerable to their ancient Reputation. The *Arabians* became Maſters of it in conſequence of their rapid Victories, and it has ſince proved the great Source of Maritime Power in the *Weſt*.

This ſeems to be a very full and convincing Anſwer to the Objection that has been made, as if the Trade to the *Indies* was in itſelf prejudicial to the *Europeans*. For how is it poſſible to conceive there can be any Truth in this, when we plainly ſee that Riches and Empire conſtantly attended it, and have been as conſtantly loſt together with this Trade. This too will the more ſtrongly appear, when we reflect on the Riſe and on the Decline of the *Italian* Republicks, which, as they owed their Fame and their Riches, the flouriſhing State of their Affairs at home, and their great Power by Sea, to the Share they had in this Commerce, ſo together with that they loſt both, and have made a Figure ſince by Dint chiefly of the Remains of that Wealth and Strength which that Commerce procured them.

It is a Point alſo extremely worthy of Notice, that all the Routs known to, and practiſed by, the Ancients, are ſtill in ſome meaſure preſerved; ſo that almoſt all the different Nations in *Europe*, have ſtill, ſome Way or other, Views upon this Trade. In the North, *Sweden* and *Denmark* carry it on by Sea, with ſome Pains and Difficulty indeed, but, at the ſame time, with conſiderable Profit. The *Ruſſians* have three Ways at coming at the *Indies*; the firſt is, by ſailing North-about from *Archangel* to *Japan*, which though never hitherto accompliſhed, they ſtill believed practicable; and if ever that Rout ſhould be brought into Practice, it will be by them; which however could not be done without changing, in a great meaſure, the Face of Affairs in *Europe*, ſince the Wealth of the *Indies*, joined to the Force of the *Muſcovite* Empire, muſt raiſe ſuch a Power in the North, as could not but produce extraordinary Conſequences. The ſecond is, by Caravans from *Moſcow* to *China* directly; and the third, by the *Caſpian-Sea*, joined to the Caravans that are continually paſſing through the *Greater* and *Leſſer Bucharia*. Such of the *German* Hanſe Towns as ſtill preſerve any Power by Sea, ſuch as *Lubeck*, *Bremen*, and *Hamburgh*, keep up a conſtant Correſpondence with *Venice* and *Alexandria*. *Great Britain*, *Holland*, and *France*, have Settlements in the *Eaſt-Indies*, and trade thither by the *Cape of Good-Hope*. The *Spaniards* ſupply their Empire in the *Weſt-Indies* with the Commodities of the *Eaſt-Indies*, from the *Philippines*; but it does not appear that they bring much of the Merchandize of thoſe Parts into *Europe*. The *Portugueze* have yet in their Hands the Remains of thoſe vaſt Dominions which they once poſſeſſed, and conſequently have ſtill a Share in this Commerce. The *Venetians* drive yet a very conſiderable Trade at *Alexandria*, in Spices, Drugs, Perfumes, Cotton, and Silk Manufactures from the *Indies*.

It is eaſy to diſcern from this general Account of the paſt and preſent State of this important Commerce, that it ſtill ingroſſes the Attention of all the Mercantile World, that Projects are continually forming to enlarge it in Countries where it is already ſettled, and to transfer it into thoſe where at preſent it is not exerciſed: And how far any of theſe Projects are, or may be practicable, the Reader will beſt judge from what has been laid down concerning the ſeveral Routs thither in this Section, which we ſhall conclude with this Remark, That the Oriental Nations have, generally ſpeaking,, adhered cloſely to their own Maxims, and have never once been tempted, by the many Viſits made them by the different Nations of *Europe*, to fit out any Fleet, or even to ſend ſo much as a ſingle Ship beyond the *Cape of Good Hope*; though, with reſpect to their Commerce by Land, as the *Indian* Merchants formerly travelled to great Diſtances in Caravans, they do the ſame at preſent; for though Cuſtom be every where a Law, yet among the Eaſtern Nations it remains moſt inviolate; and, as the Reader will obſerve from the ſubſequent Travels, what was practiſed Ages ago, is ſtill the Uſage in thoſe Parts, or at leaſt Variations have been introduced by Force, and cannot therefore be imputed in any degree to the Genius of the People.

[a] Sir *John Chardin*'s Travels to *Perſia*.

SECTION XVIII.

An Account of the Travels of Two Mohammedans *through* India *and* China, *in the Ninth Century.*

Tranſlated from the *Arabick* by the Abbé RENAUDOT.

1. *A conciſe Account of the original Editor of theſe Voyages, and of the Works which render him famous.* 2. *The Antiquity of theſe Relations, and of the Manuſcript from which they were tranſlated.* 3. *Of the Sea of* Herkend, *and of the Iſlands therein.* 4. *Of the Iſland of* Serandib, *or* Ceylon; *the Riches it contains, and the Manners of its Inhabitants.* 5. *Of ſeveral other Iſlands, particularly thoſe of* Andaman, *the Inhabitants of which eat human Fleſh.* 6. *Of an Iſland in which are Silver Mines, and other extraordinary Things in theſe Seas.* 7. *Of the Trade of* China, *and of the Reſpect ſhewn there to the* Mohammedans. 8. *A very clear and diſtinct Account of the Navigation of* China, *which is probably the firſt Account of it that was ever publiſhed.* 9. *Of an Iſland in which there are no Women ſeen.* 10. *Of the Port of* Canfu *in* China, *and of the Irregularity of the Tides there.* 11. *Of many remarkable Things obſerved in the Countries touched at in this Voyage to* China. 12. *The Cuſtoms and Manners of the* Chineſe *in Civil and Religious Affairs.* 13. *An Account of the four great Kings,* viz. *the* Khaliff, *the Emperor of* China, *the Emperor of the* Greeks, *and the* Balhara *of the* Indies. 14. *A ſuccinct Account of ſeveral other Kingdoms in the* Indies. 15. *The Account of* China *reſumed, the Number of the Cities in that Empire, and the extraordinary Diſcipline maintained in them.* 16. *Of the Burials of the* Chineſe, *and of their domeſtick Affairs.* 17. *Of the Power of the Vice-Roys, and of the Emperor of* China. 18. *Of the publick Revenues of the* Chineſe *Empire.* 19. *Of the Paſſes requiſite for travelling through that Country.* 20. *Of the Adminiſtration of Juſtice in* China. 21. *Their Laws with regard to Bankrupts.* 22. *Other wiſe Regulations practiſed in that Country.* 23. *Miſcellaneous Cuſtoms among the* Chineſe. 24. *Of the Methods practiſed for diſcovering Truth in Trials in the* Indies. 25. *Some other extraordinary Cuſtoms among the* Indians. 26. *The Vices of the* Chineſe, *and the Puniſhment of bad Governors among them.* 27. *Several Laws in* India *and* China. 28. *Strange Cuſtoms that prevail among the Inhabitants of both Countries.* 29. *A Compariſon between* India *and* China. 30. *Of other Countries bordering upon* China. 31. *The Preface of the ſecond Author in Confirmation of what the former had delivered.* 32. *The Hiſtory of a great Revolution in* China, *by the Rebellion of one* Baichu. 33. *The Emperor of* China *reſtored, and the Declenſion of that Empire.* 34. *Of various Puniſhments in uſe among the* Chineſe. 35. *A curious Account of the Maintenance of publick Women in* China. 36. *Of various Regulations in the* Chineſe *Empire.* 37. *Of the Excellence of the* Chineſe *Painters.* 38. *The Hiſtory of* Eben Wahab, *an* Arab, *who made a Voyage into* Perſia. 39. *His Conference with the Emperor.* 40. *Some very ſingular Paſſages in relation to the Knowledge of the Emperor, with regard to the Religions in other Countries.* 41. *Concluſion of the* Arab's *Conference with the Emperor of* China. 42. *Other Circumſtances from that Traveller's Relation.* 43. *Of the Communication between the Ocean and the* Mediterranean. 44. *Of the Province of* Zapage, *and of the Commodities it produces.* 45. *A remarkable Story of an ancient Prince of this Country.* 46. *The War between the King of* Komar *and the King of* Zapage. 47. *The Concluſion of that War.* 48. *Of the Doctrine of the Metempſychoſis, or Tranſmigration of Souls, with a remarkable Story on that Subject.* 49. *A moſt ſingular Act of Juſtice done by the Emperor of* China, *on behalf of an* Arabian *Merchant, againſt his Favourite.* 50. *The great Care taken with reſpect to the Adminiſtration of Juſtice in* China. 51. *Of the Situation of the Province of* Choraſſan. 52. *Of the Animal that produces Musk; the Reaſon why the Musk of* Thibet *is better than that of* China, *and of the ſeveral Sorts of that Perfume.* 53. *Of certain Cuſtoms in* China *that reſemble thoſe of the* Arabs, 54. *The Cuſtom of the* Indians *to burn themſelves on particular Occaſions, and of their great Conſtancy in Acts of this Nature.* 55. *An incredible Story of the deſperate Courage of a certain* Indian. 56. *Other Inſtances of the ſame Nature.* 57. *Of the immenſe Riches of* Serandib, *or* Ceylon, *and of the Laws of that Country.* 58. *Of the flagrant Vices, and exceſſive Debauchery of thoſe People.* 59. *Of the rainy Seaſon in the* Indies. 60. *Of the* Indian *Brachmans and Penitents.* 61. *Monſtrous Errors proceeding from religious Miſtakes.* 62. *Ships built, rigg'd, and laden from a Plantation of Cocoa Trees.* 63. *Of the Country of the* Zinges, *or Negroes, with an Account of thoſe People.* 64. *Of the Iſland of* Socotra, *and its Productions.* 65. *Of the different Seas omitted in the former Relation* 66. *Of the Riches of the* Indian *Ocean.* 67. *Of the Formation of Pearl, according to the Notion of the* Arabs. 68. *A very ſingular Story on the foregoing Subject.* 69. *Some farther Particulars as to the Cuſtoms of the* Indians. 70. *The Uſe of this Section with regard to the Hiſtory of the* Indies *in the Ninth Century.* 71. *Additional Remarks and Obſervations.*

1. THE moſt natural, eaſy, and certain Method of attaining a perfect Knowledge of the Diſcoveries made in the *Eaſt-Indies*, is unqueſtionably that of reading the beſt Voyages and Travels into thoſe Parts, in the Order of Time in which they were made; for by this means they illuſtrate each other, and ſerve as a kind of Commentaries, deliver the Hiſtory of Places and Perſons with the leaſt poſſible Confuſion, and ſhow us at once the different State of the Countries mentioned in them in different Periods of Time, and the Advances that were made in perfecting the Knowledge of thoſe Countries by ſuch as undertook to go thither, and to report what they had ſeen and heard, for the Information of others and of Poſterity. Of all the Travellers into theſe Parts of the World, whoſe Writings are ſtill preſerved, thoſe which are contained in this Section are beyond all doubt the moſt ancient, and in that reſpect, as well as in many others, extremely curious. To render theſe as clear and as intelligible as is poſſible to our Readers, we ſhall firſt give ſome Memoirs of that eminent *French* Critick

who tranſlated and made them publick, and ſhall next give a ſuccinct Account from the Materials he has afforded us of the Authors themſelves, the Nature of their Works, the Circumſtances which peculiarly recommend them, the Reaſons which induce us to believe they are genuine, and the Credit which on that account is due to them.

It was *Euſebius Renaudot* who delivered theſe venerable Remains of Antiquity from the Obſcurity in which they had been buried for Ages, and ſent them abroad in the *French* Language, with ſome very valuable Notes and Diſſertations of his own. He was a Perſon whoſe Family had been diſtinguiſhed for their Learning through ſeveral Deſcents. His Grandfather, *Theophraſtus Renaudot*, eſtabliſhed the *French* Gazette in the Year 1631, under the Patronage of Cardinal *Richelieu*. His Father was firſt Phyſician to the Dauphin, Son to *Lewis* XIV. This Gentleman addicted himſelf chiefly to the Study of Divinity and the Oriental Languages, which might have raiſed him to ſome eminent Station in the Church, if, from his great Modeſty and unaffected Love of Privacy, he had not ſtudiouſly declined it. He was very early taken notice of at Court, where the Politeneſs of his Manners recommended him as ſtrongly to the principal Miniſters, as the Severity of his Studies endeared him to moſt of the learned Men of his Time.

In the Year 1689 he was choſen a Member of the *French* Academy, and in 1691 became a Member of that of Inſcriptions, and of the *Belles Lettres*. He accompanied Cardinal *Noailles* to *Rome* in 1700, and was with him in the Conclave in which *Clement* XI. was raiſed to the Papal Throne, by whom the Abbé *Renaudot* was ſo much eſteemed, that he kept him at *Rome* ſeven or eight Months after the Cardinal's Departure, and forced upon him a Benefice, which he had the Modeſty to refuſe, though his Circumſtances were not ſuch as made it unneceſſary to him.

In his Return to *France*, the Grand Duke of *Tuſcany* kept him a whole Month at *Florence*, where he had an Apartment in the Palace; and during his Stay there, was received into the famous Academy of *la Cruſca*; after which the Grand Duke loaded him with Preſents, and ſent him to *Marſeilles* in his own Veſſels.

He publiſhed, after his Return to *France*, many learned Works, and particularly in the Year 1713, *The Hiſtory of the Patriarchs of* Alexandria, *from St.* Mark *to the Cloſe of the Thirteenth Century*, with an Appendix, containing the Hiſtory of the *Mohammedans* in *Egypt*, from their own Writers; which gained him great Reputation. In 1716 he publiſhed, in Two Volumes in Quarto, *The Hiſtory of the Oriental Liturgies*, which was alſo much eſteemed. And in the Year 1718 he ſent abroad theſe Voyages and Travels, which were likewiſe received with univerſal Applauſe. Beſides theſe, he publiſhed many other learned Treatiſes; and having for many Years weakened his Conſtitution by an aſſiduous Application to his Studies, he died on the 1ſt of *September* 1720, of a ſevere Fit of the Cholick, in the 74th Year of his Age, with the Reputation of being one of the moſt learned Men, and one of the exacteſt Criticks of his Time[a].

2. As to the firſt of theſe Voyages, we know not by whom it was written, the Beginning of it being imperfect; but it appears clearly that it was written in the Year of the Hegira 237, A.D. 851. The latter, which is no more than a Commentary or Diſcourſe upon the former, appears to have been the Work of *Abu Zeid al Haſan* of *Siraf*, who penned it about the Year of the Hegira 303, A.D. 915. It appears therefore, that both of them are, at leaſt, two Centuries older than any Accounts than had been publiſhed before. They were tranſlated from an original Manuſcript in the Library of the Count de *Seignelay*, the Age of which was aſcertained by the Character in which it was written. But there is ſtill a plainer Proof of its being penned in the Year of the Hegira 619, A. D. 1173, becauſe there are at the End of it ſome Obſervations in the ſame Hand, relating to the Extent of the Walls and Fortifications of the City of *Damaſcus*, under the Reign of the famous Sultan *Noureddin*, and of other Cities under his Dominion; in which the Writer ſpeaks of him as ſtill living: and therefore, as that Monarch died the ſame Year, this Manuſcript is clearly between five and ſix hundred Years old[b].

It is alſo very apparent, that there is nothing in either of theſe Works, that can create the leaſt Suſpicion that they are later than theſe Dates ſpeak them; but, on the contrary, all the Facts mentioned in them, which are capable of being examined and compared with other Hiſtories, afford the cleareſt Teſtimonies of their being genuine and authentick. The great Value of theſe Relations ariſes from their giving us a large Account of *China*, above four hundred Years earlier than the Travels of *Marco Polo*[c], who, till theſe Accounts were publiſhed, was always eſteemed the firſt Author we had on that Subject.

There are Abundance of very curious and remarkable Paſſages in both theſe Writers, that inform us of Cuſtoms and Events not mentioned any where elſe; and though it be true that ſome of theſe appear to be fabulous, yet it is no leſs true, that the greateſt Part of them are confirmed and juſtified by the beſt Writers in ſucceeding Ages. But without ſpending Time to little Purpoſe in remarking on what will be obvious to the Reader himſelf in the Peruſal of theſe Pieces, we ſhall proceed to the Relations themſelves. Obſerving only, that the firſt of them begins abruptly, on account of there being a Page or two wanting in the original Manuſcript; which very probably contained the Name and Country of its Author, and the Occaſion of his Voyage; the Loſs of which there is great Reaſon to regret.

3. The third of the Seas we have to mention, is that of *Herkend*[d]. Between this Sea and that of *Delarowi*, are many Iſlands, to the Number, as they ſay, of nineteen hundred; which divide thoſe two Seas from each other[e], and are governed by a Queen[f]. Among theſe Iſlands they find Ambergris in Lumps of extraordinary Bigneſs, as alſo in leſſer Pieces, which reſemble Plants torn up. This Amber is produced at the Bottom of the Sea, as Plants upon Earth; and when the Sea is tempeſtuous, the Violence of the Waves tears it up from the Bottom, and waſhes it to the Shore in the Form of a Muſhroom or Truffle. Theſe Iſlands are full of that kind of Palm-tree which bears the Cocoa-nut, and are from one to four Leagues diſtant from each other, all inhabited. The Wealth of the Inhabitants conſiſts in Shells, of which even the Queen's Treaſury is full. They ſay there are no Workmen more expert than theſe Iſlanders; and that of the Fibres of the Cocoa-nut they make Shirts all of a piece, as alſo Veſts or Tunics. Of the ſame Tree they build Ships and Houſes, and they are ſkilful in all other Workmanſhip. Their Shells they have from the Sea at ſuch times when they riſe up to the Surface, when the In-

---

[a] *Hiſtoire de l'Academie des Inſcriptions*, Tom. V. p. 384

[b] See M. *Renaudot*'s Preface to theſe Relations.

[c] *Marco Polo* returned from his Voyage, *A. D.* 1295.

[d] By the Sea of *Herkend*, in all Probability, our Author means the Sea about the *Maldives*; which, according to the Eaſtern Geographers, divides that Part of the *Indian* Ocean from the Sea of *Delarowi*, which is the Gulph called by the Ancients *Sinus Magnus*. The Eaſtern Writers frequently ſpeak of the ſeven Seas, which ſeems to be rather a proverbial Phraſe, than a geographical Definition. The Seas, without comprehending the Ocean, which they call *Bab-Mahit*, are the Sea of *China*, the Sea of *India*, the Sea of *Perſia*, the Sea of *Kolzuma* or the *Red Sea*, ſo called from a Town which is thought to be the *Clyſma* of the Ancients; the Sea of *Rum*, or of *Greece*, which is the *Mediterranean*; the Sea called *Al-Chozar*, or the *Caſpian*; and the Sea of *Pont*, or the *Pontus Euxinus*; but theſe are not all the Names they give them, for the Sea of *India* is very often called the *Green Sea*; that of *Perſia*, the Sea of *Baſſora*; and other Names they have for particular Parts of theſe Seas.

[e] It is no wonder that the *Arabs* had but a very imperfect Knowledge of theſe Iſlands, ſince we are not very well informed about them to this Day. The Reader may probably think that our Author has multiplied them, from the Number he ſpeaks of; but the Truth is, that he rather diminiſhes them; for the moſt accurate Writers we have aſſure us that there are twelve thouſand of them; and this is ſaid to be the Signification of their Name in the *Malabar* Tongue, *viz. Male Dive*, i. e. a thouſand Iſlands; that round Number being put for the true Number of them, let it be what it will. We ſhall hereafter give the Reader a full Account of theſe Iſlands, and therefore ſhall inſiſt no longer on them here.

[f] The ſubſequent Accounts we have had of the *Maldives* do not juſtify this Particular, if the Intent of the Author was to inform us that theſe Iſlands were always governed by a Woman. It might perhaps be ſo in his Time, where, by Accident, one Woman might have ſucceeded another, as Queen *Elizabeth* did Queen *Mary* here.

habitants throw Branches of the Cocoa-nut Tree into the Sea, and the Shells ſtick to them. They call them *Kaptaje* in their Language.

4. Beyond theſe Iſlands, in the Sea of *Herkend*, is *Serendib* [g], or *Ceylon*, the chief of all thoſe Iſlands, which are called *Dobijat*. It is all compaſſed by the Sea, and on its Coaſt they fiſh for Pearl. In this Country there is a Mountain called *Rabun*, to the Top of which it is thought *Adam* aſcended, and there left the Print of his Foot in a Rock, which is ſeventy Cubits in Length; and they ſay that *Adam* at the ſame time ſtood with his other Foot in the Sea. About this Mountain are Mines of Rubies, Opals, and Amethyſts. This Iſland, which is of great Extent, has two Kings; and here are found Lignum Aloes, Gold, precious Stones, and Pearls, which are fiſhed for on the Coaſt; as alſo a kind of large Shells, which they uſe inſtead of Trumpets, and are much valued.

In the ſame Sea, towards the *Serendib*, there are other Iſles, but not ſo many in Number, though of vaſt Extent, and unknown. One of theſe Iſlands, called *Ramni* [h], is under ſeveral Princes, in which there is great Plenty of Gold. The Inhabitants here have Cocoa-nut Trees, which ſupply them with Food, and therewith alſo they paint their Bodies, and oil themſelves.

The Cuſtom of the Country is, that no one may marry till he has ſlain an Enemy in Battle, and brought off his Head. If he has killed two, he claims two Wives; and if he has ſlain fifty, he may marry fifty Wives. This Cuſtom proceeds from the Number of Enemies which ſurround them; ſo that he amongſt them who kills the greateſt Number, is the moſt conſidered. Theſe Iſlands of *Ramni* abound with Elephants, Red-wood, and Trees called *Chairzan*, and the Inhabitants eat human Fleſh.

5. Theſe Iſlands ſeparate the Sea of *Herkend* from the Sea of *Shelahet*, and beyond them are others called *Najabalus*, which are pretty well peopled; both the Men and the Women there go naked, except that the Women conceal their private Parts with the Leaves of Trees. When Shipping is among theſe Iſlands, the Inhabitants come off in Embarkations, and bring with them Ambergris and Cocoa-nuts, which they truck for Iron; for they want no Cloathing, being free from the Inconveniencies either of Heat or Cold. Beyond theſe two Iſlands lies the Sea of *Andaman*: The People on this Coaſt eat human Fleſh quite raw; their Complexion is black, their Hair frizled, their Countenance and Eyes frightful, their Feet are very large, and almoſt a Cubit in Length, and they go quite naked. They have no Sorts of Barks or other Veſſels; if they had, they would ſeize and devour all the Paſſengers they could lay Hands on. When Ships have been kept back by contrary Winds, they are often in theſe Seas obliged to drop Anchor on this barbarous Coaſt for the ſake of Water, when they have expended their Stock; and upon theſe Occaſions they commonly loſe ſome of their Men [i].

6. Beyond this there is a mountainous and yet inhabited Iſland, where, it is ſaid, there are Mines of Silver; but as it does not lie in the uſual Track of Shipping, many have ſought for it in vain, though remarkable for a very lofty Mountain, which is called *Kaſhenai*. It once ſo happened, that a Ship ſailing in this Latitude had Sight of the Mountain, and ſhaped her Courſe for it, and falling in with the Land, ſent a Boat on ſhore, with Hands to cut Wood: The Men kindled a Fire, and ſaw Silver run from it, which plainly indicated there was a Mine of this Metal in that Place; they ſhipped therefore as much of the Earth or Ore as they thought fit; but as they were proceeding on their Voyage they met with ſuch a Storm, that to lighten their Ship, they were under a Neceſſity of throwing all their Ore overboard.

Since that Time the Mountain has been carefully ſought, but it has never ſince been ſeen. To conclude, there are many ſuch Iſlands in the Sea, more in Number than can be ſet down, ſome inacceſſible by Seamen, and ſome unknown to them. In theſe Seas it often happens, that a whitiſh Cloud at once ſpreads over a Ship, and lets down a long thin Tongue or Spout, quite to the Surface of the Water, which then is turned round as by a Whirlwind; and if a Veſſel happens to be in the Way, ſhe is immediately ſwallowed up thereby. But at length this Cloud mounts up again, and diſcharges itſelf in a prodigious Rain. It is not known whether this Water is ſucked up by the Clouds, or how this comes to paſs. All theſe Seas are ſubject to great Storms, which makes them boil up like Water over a Fire. Then it is that the Surf daſhes Ships againſt the Iſlands, and breaks them to Pieces with unſpeakable Violence; and then alſo it is that Fiſh of all Sizes are thrown dead aſhore upon the Rocks. The Wind, which commonly blows upon the Sea of *Herkend*, is from another Quarter, *viz.* from the N. W. but the Sea is alſo ſubject to as violent Agitations as thoſe juſt mentioned, and then Ambergris is torn up from the Bottom, and particularly where it is very deep; and the deeper it is, the more valuable the Ambergris.

It is likewiſe obſerved, with reſpect to that Sea, that when it is thus toſſed by the tempeſtuous Winds, it ſparkles like Fire, and that it is infeſted by a certain Kind of Fiſh called Lockham, which frequently preys upon Men. This is probably no other than the Shark, which is common enough on all the Coaſts of the *Indies*. Here there is a Part of the Manuſcript loſt, wherein the Author treated of the Trade to *China*, as it ſtood in his Time, and of the Cauſes which had brought it into a declining Condition. He then proceeds thus:

7. Amongſt others, the Fires that frequently happen at *Canfu* are not the leaſt. *Canfu* is the Port of all the Ships of the *Arabs*, who trade in *China*, and Fires are there very frequent, becauſe the Houſes are built with nothing but Wood, or elſe with ſplit Cane; beſides, Ships are often loſt in going and coming, or they are plundered, or obliged to make too long a Stay in Harbours, or to ſell their Goods out of the Country ſubject to the *Arabs*, and there make up their Cargo. In ſhort, Ships are under a Neceſſity of waſting a conſiderable Time in refitting, not to ſpeak of any other Cauſes of Delay.

Soliman, the Merchant [k], relates, that at *Canfu*, which is the principal Reſort of Merchants, there is a *Mohammedan* appointed Judge over thoſe of his Religion, by the Authority of the Emperor of *China*; and that he is Judge of all the *Mohammedans* who reſort to thoſe Parts. Upon feſtival Days he performs the publick Service with the *Mohammedans*, and pronounces the Sermon or Kotbat, which he concludes in the uſual Form, with Prayers for the Sultan of Moſlems (or Muſſelmen). The Merchants of *Irak*, i. e. *Perſia*, who trade thither, are no way diſſatisfied with his Conduct or Adminiſtration in this Poſt, becauſe his Deciſions are juſt and equitable, and conformable to the Koran.

8. As for the Places whence Ships depart, and thoſe they touch at, many Perſons affirm, that the Navigation is performed in the following Order; moſt of the *Chineſe* Ships take in their Cargo at *Siraff* [l], where alſo they ſhip

---

[g] This, as we have ſhewn elſewhere, is the *Taprobana* of the Ancients; and I think ſcarce any Iſland has been called by more Names than thoſe which have been beſtowed on this; but whereas in the ancient Work of *Coſmas Indopleuſtes*, it is called *Sielendiba*, it is very eaſy to account for this, and to ſhew that it is only a *Greek* Termination given to the true Name; for *b* is often put for *u*, and conſequently *Sielendiba* is the ſame with *Sielendive*; that is, *Sielen Iſland*; whence the modern Name, as we uſually write it, *viz.* the Iſland of *Ceylon*.

[h] In ſome of the *Arabian* Geographers, theſe are called the Iſlands of *Rami*; we ſhall give the Reader ſome Account of them in a ſubſequent Voyage.

[i] It is moſt certain, that upon a ſtrict Enquiry, moſt of theſe Stories of *Man-eaters* have been found to be Fables void of all Foundation; but it muſt be allowed, in regard to our Author's Account, that what he ſays has never yet been diſproved; for the very lateſt Accounts we have of the *Indies*, give theſe People the ſame Character that he does.

[k] As to this *Soliman* the Merchant, it is very probable that ſome Account was given of him in the Page that is loſt; but as to the *Mohammedan* Conſul, it is a very extraordinary Fact, and deſerves particular Notice, becauſe it plainly ſhews, that the *Mohammedans* had for ſome Time carried on a regular and ſettled Trade to *China*, which is what from other Accounts we could never have ſuſpected.

[l] It is a very difficult Thing to diſtinguiſh, at this Diſtance of Time, the Route laid down by our Author, chiefly by reaſon of the Changes of Names, of which we have particularly an Inſtance in this great Port of *Siraff*, not to be met with in any of our Maps, of which however we have ſome Mention made in other *Arabian* Writers, who ſay, that it lay ſixty Leagues from *Shiraz*, that it ſtood in the Gulph of *Perſia*, and that when it decayed, the Trade thereof was tranſported to the Iſland of *Ormus*.

their Goods which come from *Baſra*, or *Baſſora*, *Oman*, and other Ports; and this they do, becauſe in this Sea there are frequent Storms, and ſhoal Water in many Places. From *Baſra* to *Siraff* is an hundred and twenty Leagues; and when Ships have loaded at this laſt Place, they there water alſo; and from thence make ſail for a Place called *Maſcat*, which is in the Extremity of the Province of *Oman*, about two hundred Leagues from *Siraff*. On the Eaſt Coaſt of this Sea, between *Siraff* and *Maſcat*, is a Place called *Naſis Bani al Safak*, and an Iſland called *Ebn Kabowan*; and in this Sea are Rocks called *Oman*, and a narrow Strait called *Dordur*, between two Rocks, where Veſſels do venture, but the *Chineſe* Ships dare not. There are alſo two Rocks called *Koſſir* and *Howare*, which ſcarce appear above the Water's Edge: After they are clear of theſe Rocks they ſteer for a Place called *Shitu Oman*, and at *Maſcat* take in Water, which is drawn out of Wells; and here alſo they are ſupplied with Cattle of the Province of *Oman*: From thence Ships take their Departure for the *Indies*, and firſt they touch at *Kaukammali*: And from *Maſcat* to this Place it is a Month's Sail with a fair Wind.

This is a frontier Place, and the chief Arſenal in the Province of the ſame Name: And here the *Chineſe* Ships put in and are in Safety; freſh Water is to be had here, and the *Chineſe* pay a thouſand Drams for Duties, but others pay only from one Dinar to ten Dinars. From *Maſcat* to *Kaukammali* it is a Month's Sail; and then having watered at this Place, they begin to enter the Sea of *Herkend*, and having failed through it, touch at a Place called *Lajabalus*, where the Inhabitants underſtand not the *Arabic*, or any other Language in Uſe with Merchants. They wear no Cloaths, are white, and weak in their Feet.

9. It is ſaid their Women are not to be ſeen[m]; and that the Men leaving the Iſland in Canoes, hollowed out of one Piece, go in Queſt of them, and carry them Cocoa-nuts, Canes, Mouſa, and Palm-wine. This Liquor is white, and, if drank freſh, has the Taſte of the Cocoa-nut, and ſweet like Honey; if kept ſomewhat longer, it becomes as ſtrong as Wine; but if it is kept for ſeveral Days it turns to Vinegar. They give it in exchange for Iron; and in like manner they truck the little Quantity of Amber, which is thrown on their Coaſts, for Bits of Iron. The Bargain is driven by Motions of the Hand. But they are very quick, and are apt to carry off Iron from the Merchants, and leave them nothing in Return.

From hence Ships ſteer towards *Calabar*, the Name of a Kingdom on the Coaſt to the Right-hand beyond the *Indies*. *Bar* ſignifies a Coaſt in the Language of the Country; and this depends on the Kingdom of *Zapage*. The Inhabitants are dreſſed in thoſe Sorts of ſtriped Garments which the *Arabs* call *Fauta*; and they commonly wear but one at a time, which is equally obſerved by Perſons of every Degree. At this Place they commonly take in Water, which is filled from Wells fed by Springs, and which they like better than what is drawn out of Ciſterns and Tanks. *Calabar* is about a Month's Voyage from a Place called *Kaukam*, which is almoſt upon the Skirts of the Sea of *Herkend*. In ten Days after this, Ships reach *Betuma*; from whence, in ten Days more, they come up with *Kedrange*.

It is to be obſerved, that in all the Iſlands and Peninſulas of the *Indies*, they find Water when they dig for it. In this laſt mentioned Place there is a very lofty Mountain, which is peopled by none but Slaves and Fugitives: from thence in ten Days they arrive at *Senif*. Here is freſh Water, and hence comes the aromatic Wood we call *Hud al Seneſi*. Here is a King; the Inhabitants are black, and wear two ſtriped Garments. Having watered at this Place, it is ten Days Paſſage to *Sanderfulat*, an Iſland where is freſh Water; then they ſteer through the Sea of *Sanji*, and ſo to the Gates of *China*; for ſo they call certain Rocks and Shoals in that Sea, forming a narrow Strait, through which Ships paſs. It requires a Month to ſail from *Sanderfulat* to *China*; and it takes up eight whole Days to ſteer clear of theſe Rocks.

10. When a Ship has got through theſe Gates, ſhe, with the Tide of Flood, goes into a freſh Water Gulph, and drops Anchor in the chief Port of *China*, which is that of *Canfu*; and here they have freſh Water both from Springs and Rivers, as they have alſo in moſt of the other Cities of *China*. The City is adorned with large Squares, and ſupplied with every thing neceſſary for Defence againſt an Enemy, and in moſt of the other Provinces there are Cities of Strength, fortified in the ſame Manner.

In this Port it ebbs and flows[n] twice in twenty-four Hours; but with this Difference, that whereas from *Baſra* to the Iſland called *Bani Kabouan*, it flows when the Moon is at full, and ebbs when ſhe riſes and when ſhe ſets; from near *Bani Kabouan* quite to the Coaſt of *China*, it is Flood when the Moon riſes, and when ſhe is towards her Height it is Ebb: And ſo, on the contrary, when ſhe ſets it is Flowing Water, and when ſhe is quite hidden under the Horizon, the Tide falls.

11. They ſay, that in the Iſland of *Muljan*, which is between *Serendib* and *Cala*, on the Eaſtern Shore of the *Indies*, there are Negroes quite naked, and that when they meet with a Stranger they hang him with his Head downward, and ſlice him in Pieces, which they eat quite raw[o]. Theſe Negroes have no King, and feed upon Fiſh, Mauſa, Cocoa-nuts and Sugar-Canes; they have Ponds and ſome Lakes in the Country. They report alſo, that in ſome Parts of this Sea there is a ſmalliſh kind of Fiſh, which flies upon the Water, and which they call the Sea-Locuſt; and that in another Part there is a Fiſh, which leaving the Sea, gets up to the Cocoa-nut Trees, and having drained them of their Juice, takes to the Sea again: To all which they add, that in the Sea there is a ſort of Fiſh like a Lobſter, which petrifies as ſoon as taken out of its Element; they pulverize it, and it is good for ſeveral Diſeaſes of the Eyes.

They ſay alſo, that near *Zapage* there is a Mountain, called the *Mountain of Fire*, which no one can approach; that in the Day-time it ſends forth a thick Smoak, and in the Night it throws out Flames. At the Foot of this Mountain there are two Springs of freſh Water, the one hot, and the other cold.

12. The *Chineſe* are dreſſed in Silk both Winter and Summer, and this kind of Dreſs is common to the Prince and the Peaſant. In Winter they wear Drawers of a particular Make, which fall down to their Feet: Of theſe they put on two, three, four, five, or more, if they can, one over another, and are very careful to be covered quite down to their Feet, becauſe of the Damps, which are very great, and of which they are very apprehenſive. In Summer they only wear a ſingle Garment of Silk, or ſome ſuch Dreſs, but have no Turbans.

Their common Food is Rice, which they often eat; with a Broth, like what the *Arabs* make of Meat or Fiſh, which they pour upon the Rice. The Kings eat Wheat-Bread, and all ſorts of Animals, not excepting Swine and ſome others. They have ſeveral Sorts of Fruits, Apples, Lemons, Quinces, Moulats, Sugar-Canes, Citruls, Figs, Grapes, Cucumbers of two Sorts, Trees which bear a Subſtance like Meal, Walnuts, Almonds, Filberts, Piſtachios, Plumbs, Apricots, Services, and Cocoa-nuts, but they have no Store of Palms, they have only a few about ſome private Houſes.

---

[m] We ſhall have an Opportunity of explaining this ſtrange Story, which is confirmed by *Marco Polo* and *Nicolo di Conti*, when we come to ſpeak of the Travels of the former, who aſſures us that there were two Iſlands, one entirely inhabited by Men, the other by Women, and that theſe People were Chriſtians.

[n] It is very probable, or rather certain, from the Account given by our Author, that this muſt be the Port of *Canton*, and the Irregularity of the Tide is a Circumſtance that ſtrongly confirms it; and a Circumſtance which ſhews, at the ſame Time, that the *Arabs* were not ſo ignorant in thoſe Matters as they are generally imagined.

[o] It muſt be allowed, that there are abundance of very odd Accounts in theſe Relations; but it muſt be owned, at the ſame Time, that there are very few of them which have been diſproved. What follows about petrified Crabs or Lobſters, is a full Proof that the Port he ſpeaks of muſt be *Canton*; for Father *Martini* tells us the ſame Thing; adding, that theſe Crabs are found only on that Part of the Coaſt of *China* which is oppoſite to the Iſland of *Haiman*, and that the *Portugueze* uſe the Powder of theſe petrified Crabs, as an Abſorbent in Fevers. The Story of this Fiſh is alſo reported by Father *Martini*.

Their Drink is a kind of Wine made of Rice; they have no other Wine in the Country, nor is there any brought to them: They know not what it is, nor do they drink of it. They have Vinegar alſo, and a kind of Comfit like what the *Arabs* call *Natef*, and ſome others.

They are not very nice in point of Cleanlineſs, and waſh not with Water when they eaſe Nature, but only wipe themſelves with Paper; they eat of dead Animals, and practiſe many other Things like the *Magians*; and in Truth, the Religion of the one and the other is much the ſame. The *Chineſe* Women appear uncovered, and adorn their Heads with ſmall Ivory Combs, of which they wear ſometimes a Score together; the Men are covered with Caps of a particular Make. The Law they obſerve with regard to Thieves is to put them to Death as ſoon as they are caught.

Our Author ſeems here to interrupt his Narration, and to take occaſion from what he has before reported (and which, in the main, is confirmed by later Writers) to compare the Cuſtoms of the *Indians* and *Chineſe*, intermixing his Diſcourſe alſo with other Matters.

13. The *Indians* and *Chineſe* agree, that there are four great or principal Kings in the World; they all allow the King of the *Arabs* to be the firſt, and to be, beyond Diſpute, the moſt powerful of Kings, the moſt wealthy and the moſt excellent every way; becauſe he is the Prince and Head of a great Religion, and becauſe no other ſurpaſſes him.

The Emperor of *China* reckons himſelf next after the King of the *Arabs*, and after him the King of the *Greeks*, and laſtly the *Balhara*, King of *Moharmi al Adon*, or of theſe who have their Ears bored [p].

This *Balhara* is the moſt illuſtrious Prince in all the *Indies*; and all the other Kings there, though each is Maſter and independant in his Kingdom, acknowledge thus far his Pre-eminence. When he ſends Embaſſadors to them they receive them with extraordinary Honours, becauſe of the Reſpect they bear him. This King makes magnificent Preſents after the Manner of the *Arabs*, and has Horſes and Elephants in great Numbers, and great Treaſures in Money. He has of thoſe Pieces of Silver called *Thartarian Drams*, which weigh half a Dram more than the *Arabian Dram*. They are coined with the Dye of the Prince, and bear the Year of his Reign from the laſt of the Reign of his Predeceſſor.

They compute not their Years from the Æra of *Mohammed*, as the *Arabs* do, but only by the Years of their Kings. Moſt of theſe Princes live a long Time, and many of them have reigned above fifty Years, and thoſe of the Country believe, that the Length of their Lives and of their Reigns is granted them in Recompence for their Kindneſs to the *Arabs*. In Truth, there are no Princes more heartily affectionate to the *Arabs*, and their Subjects profeſs the ſame Friendſhip for us.

Balhara [q] is not a proper Name, but an Appellative common to all theſe Kings, as was *Coſroes* and ſome others. The Country under the Dominion of this Prince begins on the Coaſt of the Province called *Kamkam*, and reaches by Land to the Confines of *China*. He is ſurrounded by the Dominions of many Kings, who are at War with him, and yet he never marches againſt them.

14. One of thoſe Kings is the King of *Harez*, who has very numerous Forces, and is ſtronger in Horſe than all other Princes of the *Indies*, but is an Enemy to the *Arabs*; though he at the ſame Time confeſſes their King to be the greateſt of Kings, nor is there a Prince in the *Indies* who has a greater Averſion to the *Mohammedan* Faith. His Dominions are on a Promontory, where are much Riches, many Camels and other Cattle. The Inhabitants here traffick for Silver, which they watch for, and they ſay there are Mines of the ſame on the Continent: There is no Talk of Robbers in this Country any more than in the Reſt of the *Indies*.

On one Side of this Kingdom lies that of *Tafek*, which is not of very great Extent. This King has the fineſt white Women in all the *Indies*; but he is awed by the Kings about him, his Army being but ſmall. He has a great Affection for the *Arabs*, as well as the *Balbara*.

Theſe Kingdoms border upon the Lands of a King called *Rami*, who is at War with the King of *Harez*, and with the *Balbara* alſo. This Prince is not much conſidered either for his Birth, or the Antiquity of his Kingdom; but his Forces are more numerous than thoſe of the *Balbara*, and even than thoſe of the Kings of *Harez* and *Tafek*. They ſay, that when he takes the Field, he appears at the Head of fifty thouſand Elephants, and that he commonly marches in the Winter Seaſon; becauſe the Elephants, not being able to bear Thirſt, he can move at no other Time. They add likewiſe, that in his Army there are commonly from ten to fifteen thouſand Tents. In this ſame Country they make Cotton Garments in ſuch extraordinary Perfection, that no where elſe are the like to be ſeen: Theſe Garments are for the moſt Part round, and wove to that degree of Fineneſs, that they may be drawn through a Ring of a moderate Size. Shells are current in this Country, and ſerve for ſmall Money, notwithſtanding that they have Gold and Silver, Wood Aloes, and Sable-ſkins, of which they make the Furniture for Saddles and Houſings.

In this ſame Country is the famous *Karkandan* [r], that is, the (*Rhinoceros*, or) Unicorn, who has but one Horn upon his Forehead, and thereon a round Spot, with the Repreſentation of a Man. The whole Horn is black, except the Spot in the Middle, which is white. The Unicorn is much ſmaller than the Elephant; from the Neck downwards he pretty much reſembles the Buffalo; his Strength is very extraordinary, for he excels therein all other Creatures; his Hoof is not cloven, and from his Foot to his Shoulder is all of a Piece. The Elephant flies from the Unicorn, whoſe Lowing is like that of an Ox, with ſomething of the Cry of the Camel; his Fleſh is not forbidden, and we have eaten of it; there are great Numbers of this Creature in the Fens of this Kingdom, as alſo in all the other Provinces of the *Indies*; but the Horns of theſe are moſt eſteemed; and upon them are generally ſeen the Figures of Men, Peacocks, Fiſhes, and other Reſemblances. The *Chineſe* adorn their Girdles with theſe ſorts of Figures, ſo that ſome of their Girdles are worth two or three thouſand Pieces of Gold in *China*, and ſometimes more, the Price augmenting with the Beauty of the Figure: All the Things we have here enumerated are to be purchaſed in the Kingdom of *Rahmi* for Shells, which are the current Money of the Country.

After this Kingdom there is another, which is an inland State diſtant from the Coaſt, and called *Kaſchbin*; the Inhabitants are white, and bore their Ears; they have Camels, and their Country is for the moſt part deſert, and full of Mountains; farther upon the Coaſt there is a ſmall Kingdom called *Hitrange*, which is very poor; but it has a Bay, where the Sea throws up great Quantities of Ambergris; they have alſo Elephants Teeth and Pepper; but the Inhabitants eat it green, becauſe of the Smallneſs of the Quantity they gather. Beyond theſe Kingdoms here mentioned there are others of Number unknown, and among the reſt that of *Mujet*; the Inhabitants are white, and dreſs after the *Chineſe* Mode; their Country is full of Mountains, with white Tops, and of very great Extent; here are very great

---

[p] It is very highly probable, that this *Balhara*, or Monarch of the Nation which have their Ears bored, which is plainly the *Indians*, was no other than the *Samorin*, or Emperor of *Calicut*, who, according to the Reports of the moſt antient *Portugueze* Hiſtorians, was acknowledged as a kind of Emperor in the *Indies*, ſix hundred Years before they diſcovered the Paſſage to them by the *Cape of Good Hope*.

[q] This is another good Reaſon why the Monarch here mentioned ſhould be taken for the Emperor of *Calicut*, ſince he likewiſe was not called by his proper Name, but by ſuch an Appellative as this; and if we could obtain an Etymology of theſe Words that could be depended upon, it is very likely that *Balhara* and *Samorin* would be found to mean the ſame Thing.

[r] We have already given ſo large an Account of the Rhinoceros, that we ſhall not trouble the Reader with any thing on that Subject here, but content ourſelves with obſerving, that it is evident this Writer makes the Unicorn and the Rhinoceros the ſame Creature, agreeable to what we have advanced elſewhere.

Quantities of Muſk, eſteemed the moſt exquiſite in the World. They have War with all the neighbouring Kingdoms.

The Kingdom of *Mabed*[s] is beyond that of *Mujet*; therein are many Cities, and the Inhabitants have a great Reſemblance to the *Chineſe*, even more than thoſe of *Mujet*; for they have Officers or Eunuchs, like thoſe who govern the Cities amongſt the *Chineſe*; the Country of *Mabed* is bordering upon *China*, and is at Peace with the Emperor, but not ſubject to him. The *Mabed* ſends every Year Embaſſadors and Preſents to the Emperor of *China*, who on his Part ſends Embaſſadors and Preſents to them. Their Country is of great Extent; and when the Embaſſadors of *Mabed* enter *China*, they are carefully watched, and never once allowed to ſurvey the Country, for fear they ſhould form Deſigns of conquering it, which would be no difficult Taſk for them, becauſe of their great Numbers, and becauſe they are divided from *China* only by Mountains and Rocks.

15. They ſay, that in the Kingdom of *China* there are above two hundred Cities, with Juriſdiction over others, and have each a Governor, and an Eunuch, or Lieutenant. *Canfu* is one of theſe Cities, being the Port for all Shipping, and preſiding over twenty Towns. A Town is dignified with the Title of City, when it is allowed ſome of thoſe great *Chineſe* Trumpets, which are faſhioned after this Manner: They are three or four Cubits in Length, and as much about as can be graſped with both Hands; but they grow narrow towards the End, which is fitted to the Mouth; on the Outſide they are coloured with *Chineſe* Ink, and may be heard a Mile off. Each City has four Gates, at each of which are five of theſe Trumpets, which the *Chineſe* ſound at certain Hours of the Day, and of the Night. There are alſo in each City ten Drums, which they beat at the ſame time; and this they do as a publick Token of their Obedience to the Emperor; as alſo to ſignify the Hour of the Day, and of the Night, to which End they have alſo Dials and Clocks with Weights.

They coin a great deal of Copper Money, like what the *Arabs* call *Falus*: They have Treaſures like other Kings; but they have only this ſort of ſmall Money, which is current all over the Country; for though they have Gold, Silver, Pearls, Silk, and rich Stuffs in great Abundance, they conſider them only as Moveables and Merchandiſe, and the Copper-Pieces are the only current Coin; from foreign Parts they have Ivory, Frankincenſe, Copper in Pigs, Tortoiſe-ſhells, and Unicorns Horns, which we have mentioned, and with which they adorn their Girdles. Of their own Stock, they have Abundance of Beaſts of Burden, Horſes, Aſſes, and Dromedaries; but they have no *Arabian* Horſes.

They have an excellent kind of Earth, wherewith they make a Ware of equal Fineneſs with Glaſs, and equally tranſparent. When Merchants arrive here[t], the *Chineſe* ſeize on their Cargoes, and convey them to Warehouſes, where they remain ſix Months, and till the laſt Merchantman be arrived, then they take three in Ten, or thirty *per Cent.* of each Commodity, and return the Reſt to the Merchant. If the Emperor hath a Mind for any particular Thing his Officers have a Right to take it, preferably to any other Perſons whatſoever, paying for it to the utmoſt Value. They diſpatch this Buſineſs immediately, and without the leaſt Injuſtice; they commonly take Camphire, which they pay for after the Rate of fifty *Fakuges per* Man, and the *Fakuge* is worth a thouſand *Falus*, or Pieces of Copper. When it happens that the Emperor does not take Camphire, it ſells for half as much again.

16. The *Chineſe* do not bury their Dead till the Day Twelvemonth of their Deceaſe. Till the Expiration of this Term they keep them in Coffins; for having previouſly dried them with Quick-lime, that they may keep, they place them in ſome Part of their Houſes. The Bodies of their Kings are embalmed with Aloes and Camphire. They mourn for three whole Years; and whoſoever ſhould not do ſo would be chaſtiſed with the Bamboo, a Puniſhment both Men and Women are liable to; at the ſame time they are reproached, *What then, thou art not concerned at the Death of thy Parent?*

They bury their Dead in deep Pits, much like thoſe in Uſe among the *Arabs*: Till this is done they conſtantly ſet Victuals before the Corpſe; and as it is in the Evening that they thus exhibit Meat and Drink to their Dead, if the next Morning they find nothing left, they imagine that they have conſumed all, and ſay; *The Deceaſed hath eaten.* They ceaſe not from bewailing their Dead, nor from ſetting Meat and Drink before them as long as they are kept in the Houſe, inſomuch that their Expences upon thoſe Occaſions, and in thus paying their laſt Duties to their departed Relations, are ſo exorbitant as often to ruin them, and conſume their Wealth and Eſtates. Formerly they, with the dead Bodies of their Kings, or others of the Royal Blood, buried very rich Apparel, and thoſe Sorts of Girdles which we have obſerved coſt ſo much; but this Cuſtom is now out of Date, becauſe it has happened that the Bodies of ſome have been dug up by Thieves, for the Sake of what was buried with them.

The *Chineſe*, poor and rich, great and ſmall, learn to read and write; the Titles of their Kings or Governors, are varied according to the Dignity and Rank of the Cities under them. Thoſe of the ſmaller Cities are called *Tuſing*; and this Word ſignifies, the Governor of a Town; thoſe of the greater Cities, as *Canfu*, for Example, are ſtiled *Difu*; and the Eunuch, or Lieutenant, is ſtiled *Tukam*. Theſe Eunuchs are ſelected from the Inhabitants of the Cities. There is alſo a ſupreme Judge, and him they call *Lakſhima-makvan*; other Names they have for other Officers, which we know not how properly to expreſs.

17. A Man is not raiſed to the Dignity of a Prince, or Governor of a City, till he has attained his fortieth Year; for then, ſay they, he hath Experience. When one of theſe Princes, or Vice-Kings, keeps his Court in a City, he his ſeated upon a Tribunal, and receives the Petitions or Complaints of the People. Behind this Tribunal there is an Officer called *Lieu*, who keeps ſtanding, and according to the Order he receives from the Prince, indorſes his Anſwer on the Petition, for they never anſwer otherwiſe than in Writting, or admit of any Applications, but what are committed to Paper. Before the Parties preſent their Petitions to the Prince, they get them examined by an Officer, who, if he diſcovers any Fault, ſends them back again; for no Man may draw up theſe Writings which are to be preſented to the Prince, except a Clerk verſed in Buſineſs; and at the Bottom of each Writing they put, *Written by ſuch a One, the Son of ſuch a One:* And if in this Caſe there happen any Blunder or Miſtake, the Clerk is bambooed[u].

The Prince never ſeats himſelf on his Tribunal till he has eaten and drank, for fear he ſhould be miſtaken in ſome Thing; and each of theſe Princes or Governors has his Subſiſtence from the publick Treaſury of the City he commands. The Emperor of *China*, who is above all theſe Princes or petty Kings, never appears in publick but once in ten Months, fanſying, that if he ſhewed himſelf oftener to the People, they would loſe the Veneration they have for him; for he holds it as a Maxim, that Principalities cannot ſubſiſt but by Force, and that the People know not what Juſtice is; and that thus Conſtraint and Violence muſt be uſed to maintain amongſt them the Majeſty of Empire.

18. They have no Duty impoſed upon their Lands, but are ſubject to a Poll-tax, which is levied upon Men only, and that according to their Condition and Capacity. When any *Arabs*, or other Strangers, are in this Country, the *Chineſe* tax them according to their Subſtance. When any Dearth makes Neceſſaries dear, then the King opens his Store-houſes, and ſells all Sorts of Proviſions much

---

[s] It would be an endleſs thing to fatigue the Reader with Conjectures about theſe Countries, the Names of which are totally unknown to us; ſo that all we can ſay of them with Certainty is, that they lie between Cape *Comorin* and *China*.

[t] This Account of the Conduct of the *Chineſe* towards the Merchants, correſponds ſo well with both with antients and modern Relations, that it leaves no room for us to doubt, either of the Truth of them, or of it, and cannot but illuſtrate, and at the ſame time confirm in the Opinion of the Reader, many Things delivered in our Obſervations on the foregoing Sections.

[u] This kind of Practice is ſtill in Uſe at *China*, ſo that there can be nothing clearer than that this Account is both genuine and exact: ſince it is impoſſible to conceive how an *Arabian* Author of the Age in which this Manuſcript was wrote, ſhould be Maſter of theſe Facts, none of which were known in *Europe* till ſome Ages after.

cheaper than they are to be had at Market: And hence no Dearth is of any long Continuance among the *Chineſe*. The Sums that are gathered from this Capitation-tax, are laid up in the publick Treaſury; and I believe, that from this Tax fifty thouſand Dinars are paid every Day into the Treaſury of *Canfu* alone, although this City is not one of the largeſt in *China*.

The Emperor reſerves likewiſe to himſelf the Revenues which ariſe from the Salt-mines, and from a certain Herb which they drink with hot Water, and of which great Quantities are ſold in all the Cities of *China*, to the Amount of great Sums; they call it *Ttcha*, that is Tea, and it is a Shrub, more buſhy than the Pomegranate-tree, and of a more pleaſant Smell, but has a kind of Bitterneſs with it. Their Way is to boil Water, which they pour upon this Leaf; and this Drink cures all ſorts of Diſeaſes. Whatever Sums come into the Treaſury, ariſe from the Poll-tax, the Duties upon Salt, and the Tax upon this Leaf[w].

19. In each City there is a ſmall Bell hung to the Wall above the Prince's or Governor's Head; and this Bell may be rung by a String, which reaches about three Miles, and croſſes the Highway, to the End that People may get at it; when the String is pulled, the Bell ſtrikes over the Governor's Head, and ſtrait he commands that the Perſon who thus demands Juſtice, be brought before him; and accordingly the Complainant ſets forth his Caſe in Perſon; and the ſame Practice is in uſe throughout all other Provinces.

If a Man has a Mind to travel from one Place to another, he muſt take two Paſſes with him, the one from the Governor, the other from the Eunuch or Lieutenant. The Governor's Paſs permits him to ſet out on his Journey, and takes Notice of the Name of the Traveller, and of thoſe alſo of his Company, the Age and Family of the one and the other; for every Body in *China*, whether a Native, or an *Arab*, or any other Foreigner, is obliged to declare all he knows of himſelf, nor can he poſſibly be excuſed.

The Eunuch, or Lieutenant's Paſs, ſpecifies the Quantity of Goods or Money which the Traveller and thoſe with him take along with them; and this is done for the Information of the frontier Places, where theſe two Paſſes are examined; for whenever a Traveller arrives at any of them it is regiſtered, That ſuch a one, the Son of ſuch a one, of ſuch a Family, paſſed through this Place on ſuch a Day, in ſuch a Month, in ſuch a Year, and in ſuch Company; and by this Means they prevent any one from carrying off the Money or Effects of other Perſons, or their being loſt: So that if any Thing has been carried off unjuſtly, or the Traveller dies on the Road, they immediately know what is become of the Thing, and they are either reſtored to the Claimant or to his Heirs[x].

20. The *Chineſe* adminiſter Juſtice with great Strictneſs in all their Tribunals. When any Perſon commences a Suit againſt another, he ſets down his Claim in Writing, and the Defendant writes down his Defence, which he ſigns, and holds between his Fingers. Theſe two Writings are delivered in together; and being examined, Sentence is delivered in Writing, and each Party has his Papers returned to him; but firſt they give back to the Defendant his Writing, that he may acknowledge it.

When one Party denies what the other affirms, he is ordered to return his Writing; and if the Defendant thinks he may do it ſafely, and accordingly delivers his Papers a ſecond time, they alſo call for that of the Plaintiff, and then they ſay to him who denies what the other affirms, Make it appear that your Antagoniſt has no Right to demand of you what is in Debate; but take Notice, if he makes out what you deny, you ſhall undergo twenty Strokes of the Bamboo upon the Backſide, and pay a Fine of twenty *Fakúges*, which make about two hundred *Dinars*. Now this Puniſhment is ſuch, as the Criminal could not ſurvive; it is ſo grievous, that no Perſon in all *China* may, of his own Authority, inflict it upon another, upon pain of Death, and Confiſcation of his Goods, and ſo nobody is ever ſo hardy as to expoſe himſelf to ſo certain a Danger; wherefore Juſtice is well adminiſtred to every one. They require no Witneſs, nor do they put the Parties upon Oath.

21. When any Man becomes a Bankrupt in this Country, they throw him into Priſon in the Governor's Palace, and he is immediately put upon the Declaration of his Effects. After he has been a Month in Priſon, he is releaſed by the Governor's Order, and Proclamation is made, That ſuch a one, the Son of ſuch a one, has conſumed the Subſtance of ſuch a one; and that if he has any Effects in the Hands of any Perſon, in any Shape whatſoever, it muſt be made known in the Term of a Month. In the mean time the Bankrupt is bambooed on the Backſide if Diſcovery is made of any Effects of his; and at the ſame time is upbraided with having been a Month in Priſon eating and drinking, though he had wherewithal to ſatisfy his Creditors. He is chaſtiſed in the ſame manner, whether he makes any Declaration of his Effects or not. They reproach him, that he has made it his ſtudy to get by Fraud the Subſtance of private Perſons into his Hands, and embezzle it; and that he ought not ſo to defraud thoſe he had Dealings with, by ſtripping them of their Property. But after all, if they cannot diſcover him to have been guilty of any Fraud, and if it is proved to the Magiſtrate, that the Man has nothing in the World, the Creditors are called in, and receive a Part of their Debt out of the Treaſury of the *Bagbun*. This is the ordinary Title of the Emperors of *China*, and ſignifies the Son of Heaven; but we commonly pronounce it after a different Manner, and call him *Magbun*. Then it is publickly forbidden to buy of or ſell to this Man, upon pain of Death, that he may not defraud any of his Creditors by concealing their Money. If Diſcovery be made that he hath any Sums in the Hands of another, and if the Perſon he intruſts makes no Declaration within the Time limited, he is bambooed to Death, and nothing is ſaid to the Proprietor or Bankrupt. The Sums that they diſcover are divided among the Creditors, and the Debtor or Bankrupt muſt never more concern himſelf with Trade[y].

22. The *Chineſe* have a Stone which is ten Cubits high, erected in the publick Squares of their Cities, and on this Stone are engraved the Names of all Sorts of Medicines, with the exact Price of each; and when the Poor ſtand in need of any Relief from Phyſick, they go to the Treaſury, where they receive the Price each Medicine is rated at. There is in *China* no Tax upon Land; they only levy ſo much *per* Head, according to the Wealth and Poſſeſſions of the Subject. When a Male Child is born his Name is immediately entered in the King's Books; and when this Child has attained his eighteenth Year, he begins to pay for his Head; but they demand it not of the Man who has ſeen his eightieth Year on the contrary, he receives a Gratification by way of Penſion from the publick Treaſury; and in doing this, the *Chineſe* ſay, That they make this Proviſion for him in his old Days, in Acknowledgment for what they received of him when he was young.

23. There are Schools in every Town for teaching the poor Children to write and read, and the Maſters are maintained at the publick Charge. The Women wear nothing on their Heads but their Hair, whereas the Men are covered. In *China* there is certain Town called *Tayu*, which has a Caſtle advantageouſly ſeated on a Hill, and all the Fortreſſes in the Kingdom are called by the ſame Name. The *Chineſe* are generally handſome, of

[w] It appears from hence, that the Cuſtom of drinking Tea in *China*, is much more antient then we have generally imagined it, for it muſt have prevailed long before our Traveller went into this Country, otherwiſe a Tax upon it would have been ineffectual. It may not be amiſs to obſerve here, that the Remarks of the Author are equally natural and judicious; for he inſiſts chiefly on thoſe Things in which the *Chineſe* differed moſt from the *Mohammedans*, as that they did not circumciſe, were not very exact in waſhing and made no Conſcience of eating Blood.

[x] The Reader will remember that this was a ſettled Regulation among the antient *Indians*, ſo that it is very probable that the *Chineſe* derived a great Part of their Policy from the *Indians*.

[y] This Fact is likewiſe confirmed by later Travellers; and though there ſeems to be a great deal of Severity in it, yet it is well adapted to the Genius of the *Chineſe*, who would not fail to become Bankrupts frequently, if they were allowed to trade afterwards; and perhaps the introducing this Law in other Countries, in caſe of a ſecond or third Bankruptcy, might be found very effectual.

comely Stature, fair, and by no means addicted to Exceſſes of Wine; their Hair is blacker than the Hair of any other Nation in the World; and the *Chineſe* Women wear it curled.

24. In the *Indies*, when a Man accuſes another of a Crime puniſhable with Death, the Cuſtom is to aſk the Accuſed if he is willing to go through the Trial by Fire; and if he anſwers in the Affirmative, they heat a Piece of Iron till it is red hot. This done, they bid him ſtretch forth his Hand, and upon it they put ſeven Leaves of a certain Tree, and upon theſe Leaves they put the red-hot Iron, and in his Condition he walks backward and forward for ſome time, and then throws off the Iron. Immediately after this they put his Hand into a Leathern Bag, which they ſeal with the Prince's Signet; and if at the End of three Days he appears, and declares he has ſuffered no Hurt, they order him to take out his Hand; when, if no Sign of Fire is viſible, they declare him innocent, and delivered from the Puniſhment which threatned him, and his Accuſer is condemned to pay a *Man* of Gold as a Fine to the Prince.

Sometimes they boil Water in a Cauldron[z], till it is ſo hot that no one can touch it; then they throw an Iron Ring into it, and command the Perſon accuſed to thruſt his Hand down, and bring out the Ring. I ſaw one who did this, and received no manner of Hurt. The Accuſer is in this Caſe alſo to pay a *Man* of Gold.

25. When a King dies in this Iſland of *Sarandib*, they lay his Body on an open Chariot, in ſuch a manner that his Head hangs backwards till it almoſt touches the Ground, and his Hair is upon the Earth; and this Chariot is followed by a Woman with a Broom in her Hand, therewith to ſweep Duſt on the Face of the Deceaſed, while ſhe cries out with a loud Voice, "O Man, behold your King, who was Yeſterday your Maſter, but now the Empire he exerciſed over you is vaniſhed and gone; he is reduced to the State you behold, having left the World, and the Arbiter of Death hath withdrawn his Soul: Reckon therefore no more upon the uncertain Hopes of Life."

This[a] Proclamation, or ſome other like it, they continue for three Days; after which, the dead Body of the King is enbalmed with *Sandal* Wood, Camphire and Saffron, and is then burned, and the Aſhes are ſcattered abroad to the Wind. It is a univerſal Cuſtom all over the *Indies* to burn the Bodies of the Dead. The Iſland of *Sarandib* is the laſt of the Iſlands of the *Indies*. When they burn a King, it is uſual for his Wives to jump into the Fire, and to burn with him; but this they are not conſtrained to do if they are not willing.

In the *Indies* there are Men who profeſs to live in the Woods and Mountains, and to deſpiſe what other Men moſt value. Theſe abſtain from every thing but ſuch wild Herbs and Fruits as ſpring in the Woods, and put an Iron Buckle upon their natural Parts, that they may not be able to have any Commerce with Women. Some of them are quite naked, or have only a Leopard's Skin thrown over them, and in this Plight keep ſtanding with their Faces towards the Sun. I formerly ſaw one in the Poſture I have deſcribed, and returning to the *Indies* about ſixteen Years afterwards I found him in the very ſame Attitude, and was aſtoniſhed he had not loſt his Eye-ſight by the Heat of the Sun[b]. In all theſe Kingdoms the Sovereign Power reſides in the Royal Family, and never departs from it; and the next Heirs of this Family ſucceed each other. In like manner their are Families of learned Men, of Phyſicians, and of all the Artificers concerned in Architecture, and none of theſe are mixed with a Family of a Profeſſion different from their own. The ſeveral States of the *Indies* are not ſubject to one King, but each Province has its own King. The *Balbara* is nevertheleſs in the *Indies* as King of Kings The *Chineſe* are fond of Gaming, and all Manner of Diverſions; on the contrary, the *Indians* condemn them, and have no Pleaſure in them. They drink no Wine, nor make any Uſe of Vinegar, becauſe it is made of Wine; and yet they abſtain not therefrom as a religious Duty, but for another Reaſon. They ſay, that if a King is given to Wine, he ought not to be deemed a King: For, continue they, as there are frequent Wars with the neighbouring States, how ſhould a Drunkard manage the Affairs of his Kingdom?

26. The Wars, in which they engage with neighbouring Princes, are not uſually undertaken with a View to poſſeſs themſelves of their Dominions; and I never heard of any but the People bordering upon the Pepper Country, that have ſeized on the Poſſeſſions of their Neighbours after Victory. When a Prince makes himſelf Maſter of ſome other Principality, he confers the Government thereof upon ſome Perſon of the Royal Family of the conquered Country; and thus he keeps it in Subjection to himſelf, from a Perſuaſion that the Natives would never agree to be otherwiſe governed. When any one of the Princes or Governors of Cities within the Dominions of the Emperor of *China* is guilty of a Crime, he is put to Death, and eaten; and in general it may be ſaid, that the *Chineſe* eat all thoſe that are put to Death. When the *Indians* and *Chineſe* are about to marry, the Parites come to an Agreement; then Preſents are made, and at laſt the Marriage is celebrated with the Sound of many Sorts of Inſtruments and Drums. The Preſents they ſend conſiſt of Money, and in this every one does what he can afford.

27. If a Man in the *Indies* runs away with a Woman, and abuſes her Body, they kill both him and the Woman, unleſs it be proved that ſhe was forced; then the Man only is puniſhed with Death: But if the Woman conſented to the evil Deed, they are both puniſhed with Death. Theft is always puniſhed capitally, as well in the *Indies* as in *China*, whether the Theft be conſiderable or inconſiderable; and particularly in the *Indies*, where, if a Thief has ſtolen but the Value of a ſmall Piece of Money, or a Thing of greater Worth, they take a long, ſtrong, and ſharp Stake, which they apply to his Fundament, and thruſt it through till it comes out at his Neck. The *Chineſe* are addicted to the abominable Vice of Sodomy, and the filthy Practice of it they number among the indifferent Things they perform in Honour of their Idols.

The *Chineſe* Buildings are of Wood, with Stone, Plaſter, Brick, and Morter. The *Chineſe* and *Indians* are not ſatisfied with one Wife, but both Nations marry as many as they pleaſe. Rice is the common Food of the *Indians*, who eat no Wheat; whereas the *Chineſe* eat of Rice and Wheat indifferently. Circumciſion is not practiſed either by the *Indians* or *Chineſe*. The *Chineſe* worſhip Idols, pray to them, and fall down before them; and they have Books which explain the Articles of their Religion. The *Indians* ſuffer their Beards to grow, and I have ſeen one of them with a Beard three Cubits long; they wear no Whiſkers; but the *Chineſe*, for the moſt part, have no Beard, and have all ſmooth. The *Indians*, upon the Death of a Relation, ſhave both Head and Face. When any Man in the *Indies* is caſt into Priſon they allow him neither Victuals nor Drink for ſeven Days together, and this with them anſwers the End of other Tortures to extort from the Criminal a Confeſſion of the Truth. The *Chineſe* have Judges beſides the Governors, who decide in Cauſes between Subject and Subject, and the ſame they have in the *Indies*. Both in *China* and in the *Indies* there are Leopards and Wolves, but no Lions. Highway Robbers are puniſhed with Death.

---

[z] This Manner of finding out the Truth by appealing to God in ſo extraordinary a Manner, was in uſe in moſt Countries. *Sophocles* mentions it as practiſed by the Antients. The *Caffres* on the Coaſt of *Moſambique*, if they are accuſed of any capital Crime, lick Iron to prove their Innocence. The *Indians* of *Calicut* decide their Differences in the ſame Manner. If a Man is accuſed of Theft, he and the Accuſer are brought before the Judge; a Pint of Oil is heated till it almoſt boils, and then the Party accuſed dips in three of his Fingers, which are immediately bound up, and opened on the third Day; when, if it appears he is ſcalded, he ſuffers Death; and if not, the ſame Sentence falls upon the Accuſer. All this is the more probable, ſince this was once the common Law of our own Country, as the Reader will perceive by conſulting any of our Gloſſographers on the Word *Ordeal*.

[a] The Author of the *Arabian* Geography, and many other of the Oriental Writers, have tranſcribed this Paſſage *Verbatim*, from whence it appears evidently that they were acquainted with this Work. The Reader may remember, that the Accounts given by the Antients of the Manners of the Inhabitants of *Taprobana* agree perfectly well with this Account.

[c] Theſe Penances among the *Indians*, as ſurprizing or as incredible as they ſeem to be, are confirmed by all the Travellers that have written of thoſe Countries, whether antient or modern, as we ſhall have an Opportunity of ſhewing in the ſubſequent Part of this Chapter.

29. Both the *Chineſe* and the *Indians* imagine the Idols they worſhip ſpeak to them and give them Anſwers. Neither the one nor the other kill their Meat by cutting the Throat, as the *Mohammedans*, but by beating them on the Mouth till they die. They waſh not with Well-water; the *Chineſe* wipe themſelves with Paper, whereas the *Indians* waſh every Day before they eat.

The *Indians* touch not their Wives while their Diſeaſe is upon them, but turn them out of their Houſes, and avoid them; the *Chineſe* behave in a quite contrary Manner. The *Indians* waſh not only the Mouth, but the whole Body alſo before they eat, which the *Chineſe* obſerve not. The Country of the *Indies* is larger in Extent than that of *China*, and exceeds it by one half; the Number of Kingdoms is greater in the *Indies* than in *China*, but *China* is the more populous of the two.

It is not uſual to ſee Palm-trees either in the *Indies* or in *China*, but they have alſo other Sorts of Fruits and Trees, which we have not. The *Indians* have no Grapes, and the *Chineſe* have not many, but both abound in other Fruits; though the Pomgranate thrives more plentifully in *India* than in *China*.

The *Chineſe* have no Sciences, and their Religion and moſt of their Laws are derived from the *Indians*; nay, they are of Opinion that the *Indians* taught them the Worſhip of Idols, and conſider them as a very religious Nation; both the one and the other believe the *Metempſychoſis* [c]; but they differ in many Points touching the Precepts of their Religions. Phyſick and Philoſophy are cultivated among the *Indians*, and the *Chineſe* have ſome Skill in Medicine; but it almoſt wholly conſiſts in the Art of applying hot Irons or Cauteries. They have alſo ſome Smattering of Aſtronomy, but therein alſo the *Indians* ſurpaſs the *Chineſe*. I know not that there is ſo much as one of either Nation that has embraced Mohammediſm, or ſpeaks *Arabic*. The *Indians* have but few Horſes, and there are more in *China*; but the *Chineſe* have no Elephants, and cannot endure to have them in their Country, for they abhor them. The *Indian* Dominions furniſh a great Number of Soldiers, who are not paid by the King, but when they are rendezvouſed for War, take the Field entirely at their own Expence, and are no Charge to the King; whereas the *Chineſe* allow their Forces much the ſame Pay with the *Arabs*.

China is a pleaſant and fruitful Country; moſt of the *Indian* Provinces have no Cities, whereas in *China* there are many in Number, great in Extent, and well fortified: The Climate of *China* is more wholeſome, and the Country itſelf is leſs fenny. The Air there is alſo much better, and there is ſcarce a blind Perſon to be ſeen, or any one ſubject to the Diſeaſes of the Eyes; and the ſame Advantages are enjoyed by ſeveral Provinces of the *Indies*: The Rivers of thoſe two Countries are large, and ſurpaſs our greateſt Rivers; much Rain falls in both theſe Countries. In the *Indies* are many deſert Tracks, but *China* is inhabited and peopled throughout its whole Extent. The *Chineſe* are handſomer than the *Indians*, and come nearer to the *Arabs*, not only in Countenance but in Dreſs, in their Way of riding, in their Manners, and in their Ceremonies: They wear long Garments, and Girdles in form of Belts. The *Indians* wear two ſhort Veſts; and the Men, as well as the Women, wear golden Bracelets, adorned with precious Stones.

30. Beyond the Continent of *China*, there is a Country called *Tagazgaz*, from the Name of a Nation of the *Turks*, who there inhabit, and alſo the Country of *Kakhan*, or *Tibet*, which is bordering on the Country of the *Turks* [d]. The Iſlands of *Sila* are inhabited by white People, who ſend Preſents to the Emperor of *China*, and who are perſuaded, that if they did not ſend him Preſents, the Rain of Heaven would not fall upon their Country. None of our People have been there to inform us concerning them: They have white Falcons.

As we are now arrived to the End of this Work, it may not be amiſs to offer here ſome Remarks that may tend to enlighten the foregoing Diſcourſe, and prepare us at the ſame time for that which is to come. We are informed that the Date of this Narration was of the *Hegira* 237. *A. D.* 851. which Circumſtance, though preſerved to us in the enſuing Diſcourſe, was very probably contained in the firſt Leaf of this, which is wanting in the Manuſcript. But though it was written then, yet it ſeems highly probable, that our Author's firſt Journey to the *Indies* was, at leaſt, twenty Years before; becauſe he obſerves, that he made a ſecond Journey there ſixteen Years afterwards; and we may very well allow four Years for the Time ſpent in the firſt Journey, and the Space that might intervene between his Return and his compoſing this Treatiſe. According to this Calculation, his firſt Voyage to the *Indies* was in the Year of the *Hegira* 217. *A. D.* 833. and his ſecond *An Heg.* 235. *A. D.* 849.

As to the Occaſion of his Voyages, there is nothing occurs in this Account that can give us the leaſt Light into it; however, it ſeems moſt probable, that he underwent theſe Fatigues on the ſcore of Commerce; for it can hardly be ſuppoſed, that a Man would have made ſo long a Journey a ſecond Time purely out of Curioſity, and to ſatisfy the Deſire of being better acquainted with theſe People, which had been excited by his former Intercourſe with them. There is not much to be obſerved with reſpect to the Form of this Treatiſe, or the Stile in which it is written; and yet ſomething there is worth mentioning with reſpect to each of them. We cannot, indeed, boaſt much of the Regularity of his Method; and yet it would be unjuſt to condemn it entirely, becauſe, for want of having the Introduction to it, we cannot determine exactly what was his Plan, and conſequently cannot ſay how far he came up to or fell ſhort of it. One Thing I think is manifeſt, which is, that the Scope of his Undertaking is a Compariſon between the *Indians* and the *Chineſe*; at leaſt he falls into this immediatly after he has deſcribed the uſual Navigation from *Siraf* to *China*; and conſidered in this Light, his Treatiſe appears regular enough. As to his Stile, it is extremely ſimple and plain, and has nothing of that ſwelling hyperbolical Eloquence which is generally obſerved in oriental Writers; upon which, I beg leave to remark, that with regard to the *Arabs*, as well as other Nations, this was a Vice that prevailed in later Times, after Poetry and Rhetorick had been more cultivated than they were in the firſt Ages of their Empire, which has been the Caſe in moſt other Nations.

One cannot poſſibly doubt, that this Piece was extremely well received when it firſt came abroad, and that it had maintained its Reputation for a conſiderable Space of Time, appears from the ſecond Treatiſe, which we are about to give the Reader. It ſeems, that when the Affairs of *China* were better known, ſome Prince, or other Perſon of Diſtinction, deſired the Author of the following Pages to look over that Diſcourſe, and to inform him, how far the Facts contained therein had been confirmed or contradicted, by ſucceeding Relations. What Time this happened, we cannot with any Certainty ſay, from the Compariſon of the two Pieces, or from the Lights given us by the learned and accurate Critick who publiſhed them. The Manuſcript which the Abbé *Renaudot* made uſe of, was apparenly older than the Year of the *Hegira* 569, which anſwers to the Year of Chriſt 1173; but the Diſcourſe muſt certainly have been written long before that Time. In our Notes we have ſhewn that *Eben-Wahab* travelled into *China*, *A. H.* 285. *A. D.* 898; and the Author of this laſt Treatiſe informs us, that he had converſed with this Man after his Return, and had from him the Facts which he has inſerted in his Diſcourſe; ſo that the Book itſelf muſt have been two Centuries older than the Manuſcript from which the Abbé *Renaudot* publiſhed it, and might probably be written ſixty or ſeventy Years after the foregoing Treatiſe. Theſe are all the Lights which, from an aſſiduous Study of theſe valuable Fragments of Antiquity, we have been able to give the Reader, and therefore we ſhall detain him no longer from the Piece itſelf, which in the Original bears the following Title.

---

[c] Of this Doctrine we have already ſpoken in our Account of the Philoſophy of the *Brachmans*; and in our Notes upon the ſubſequent Treatiſe, we ſhall take Occaſion to ſhew when it was firſt embraced in *China*, and with what Modifications it is ſtill taught there.

[d] We ſhall take another Opportunity of acquainting the Reader with the Hiſtory of the ancient *Turks*, and ſhall only obſerve here, that the Nations here mentioned are to be conſidered as dwelling in their native Region, before they became famous by their Irruption into *Perſia*, which is the Country every where meant in this and in the ſubſequent Treatiſe by the Name of *Irak*, and before they became *Mohammedans*; which is the more neceſſary, becauſe from the preſent State of Things it is very natural to connect the Ideas which we have of the modern *Turks*, with theſe Accounts of their Anceſtors.

The Diſcourſe of Abu Zeid al Haſan *of* Siraf, *concerning the Voyage to the* Indies *and* China.

31. Having very carefully examined the Book I was directed to peruſe, that I might confirm what the Author relates, when he agrees with what I have heard concerning the Affairs of the Sea, the Kingdoms on the Coaſt, and the State of the Countries; and that I might add upon this Head, what I have elſewhere collected concerning them, which is not to be found in this Book, I find it was written in the Year of the Hegira CCXXXVII. and that the Accounts the Author gives in regard to Things at Sea, were in his Time very true, and agreeable to what I have underſtood from Merchants, who from *Irak* failed through thoſe Seas. I find alſo, that all the Author writes is agreeable to Truth except ſome few Paſſages.

Speaking of the Cuſtom of ſetting Meat before the Dead, which he attributes to the *Chineſe*, he ſays, when they have ſerved up the Meat over Night, and find nothing in the Morning, they cry, The Deceaſed hath eaten. We had been told the ſame, and believed it, till we met with a Man of undoubted Credit, who being aſked concerning this Cuſtom, he anſwered, that the Fact was not ſo, and that this Notion was groundleſs, as well as what is vulgarly ſaid of the idolatrous Nations, that they imagine their Idols ſpeak to them.

He told us alſo, that ſince thoſe Days the Affairs of *China* wear quite another Face; and ſince much is related to ſhew the Reaſon why the Voyages to *China* are interrupted, and how the Country has been ruined, many Cuſtoms aboliſhed, and the Empire divided, I will here declare the Cauſes I know of this Revolution[a].

32. The great Troubles which have embroiled the Affairs of this Empire, which have put a Stop to the Juſtice and Righteouſneſs there formerly practiſed, and which have in fine interrupted the ordinary Navigation from *Siraf* to *China*, flowed from this Source: An Officer who was conſiderable for his Employment, though not of the Royal Family, revolted ſome time ago; this Man's Name was *Baichu*, and he began with committing Hoſtilities in the Country, marching his Armies into many Places, to the great Loſs of the Inhabitants, till, winning a Party over to him by his Liberalities, he got together a Multitude of Vagabonds and abandoned People, whom he formed into a conſiderable Body of Troops.

His Army thus ſtrengthened, and himſelf in a Condition to undertake any thing, he diſcovered his Deſign of ſubduing the Empire, and marched ſtreight to *Canfu*, one of the moſt noted Cities in *China*, and at that Time the Port for all the *Arabian* Merchants. This City ſtands upon a great River ſome Days Diſtance from the Entrance, ſo that the Water there is freſh. But the Citizens ſhutting their Gates againſt him, he reſolved to beſiege the Place, and the Siege laſted a great while. This was tranſacted in the Year of the Hegira CCLXIV. and of Chriſt 877.

At laſt he became Maſter of the City, and put all the Inhabitants to the Sword. There are Perſons fully acquainted with the Affairs of *China*, who aſſure us, that beſides the *Chineſe* who were maſſacred upon this Occaſion, there periſhed one hundred and twenty thouſand *Mohammedans*, *Jews*, *Chriſtians*, and *Parſees*, who were there on acount of Traffick. The Number of the Profeſſors of theſe four Religions, who thus periſhed, is exactly known, becauſe the *Chineſe* are exceedingly nice in the Accounts they keep of them.

He alſo cut down the Mulberry-trees, and almoſt all the Trees of other Kinds: But we ſpeak of the Mulberry in particular, becauſe the *Chineſe* cultivate it carefully, for the ſake of its Leaf, on which their Silkworms ſubſiſt. This Devaſtation is the Cauſe why Silk has failed, and that the Trade which uſed to be driven therein through all the Countries under the *Arabs*, is quite at a ſtand. Having ſacked and deſtroyed *Canfu*, he poſſeſſed himſelf of many other Cities, which he attacked one after another, the Emperor of *China* not having it in his Power to ſtop his Progreſs. He advanced then to the capital City, called *Cumdan*; and the Emperor left this, his royal Seat, making a precipitate Retreat to the City of *Hamdu*, on the Frontiers, towards the Province of *Tibet*.

The Rebel, puffed up by theſe great Succeſſes, and perceiving himſelf Maſter of the Countries, fell upon the other Cities, which he demoliſhed, having firſt ſlain moſt of the Inhabitants, with a View, in this general Butchery, to involve all the ſeveral Branches of the Royal Blood, that none might ſurvive to diſpute the Empire with him. We had the News of theſe Revolutions, and of the total Ruin of *China*, which ſtill continues.

Thus were Affairs ſituated, and the Rebel ſtood uncontrolled by any Diſadvantage that might abaſe his Authority[b].

33. At laſt the Emperor of *China* wrote to the King of *Tagazgaz* in *Turkeſtan*, with whom, beſides the Nearneſs of his Dominions, he was, in ſome Degree, allied by Marriage; and, at the ſame time, ſent an Embaſſy to him, to implore his Aſſiſtance for reducing this Rebel. Upon this, the King of *Tagazgaz* diſpatched his Son, at the Head of a very numerous Army, to fight this Oppreſſor; and, after many Battles, and almoſt continual Skirmiſhes, he utterly defeated him. It was never known what became of the Rebel: Some believe he fell in Battle, while others thought he ended his Days in another Manner.

The Emperor of *China* returned then to *Cumdan*, and although he was extremely weakened, and much diſpirited becauſe of the Embbezzlement of his Treaſures, and the Loſs of his Captains and beſt Troops, and becauſe of all the late Calamities, he nevertheleſs made himſelf Maſter of all the Provinces which had been conquered from him. However, he never laid Hands on the Goods of his Subjects, but ſatisfied himſelf with what was yet left in his Coffers, and the ſmall Remainders of publick Money, his Condition indiſpenſably obliged him to take up with what his Subjects would give him, and to require nothing from them but Obedience to his Mandates, forbearing to ſqueeze Money from them, becauſe the King's Governors had exhauſted them already.

Thus *China* became almoſt like the Empire of *Alexander* after the Defeat and Death of *Darius*[c], when he divided the Provinces he took from the *Perſians* amongſt ſo many Chiefs, who erected themſelves into ſo many Kings; for now each of theſe *Chineſe* Princes joined with ſome other to wage

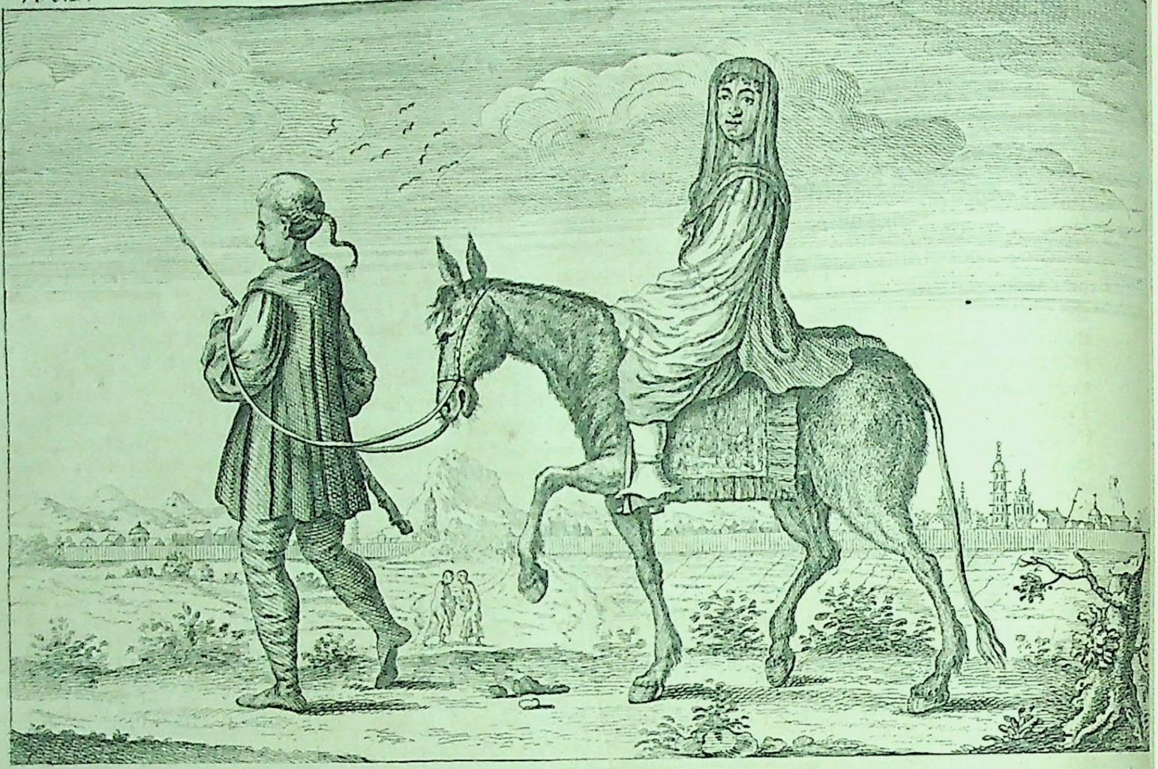
---

[a] The Account here given by our Author, very plainly proves, that the Trade to *China* was conſidered in his Time as very ancient, and of very great Conſequence, inſomuch that whatever affected the Peace of that Country, was looked upon as a Thing of common Concern to all the Nations of the Eaſt. But till theſe Travels were publiſhed, who could have imagined this? Who would have ſuſpected that the Affairs of *China* were ſo well known to the *Arabs*? And therefore when theſe Things are maturely weighed, who can doubt that we had Reaſon to advance it as a Thing highly probable, that long before this, the Empires of *China* and the *Indies* were in the moſt flouriſhing Condition, as well in point of foreign Commerce, as of domeſtick Oeconomy

[b] It is a very difficult thing to pretend to ſettle the Chronology of the *Chineſe* Empire; and the very learned Editor of theſe Travels, confeſſes that he is not able to give any ſatisfactory Account of this Revolution. It ſo falls out, however, that Father *du Halde*, in his Hiſtory of *China*, lately publiſhed, has enabled us to ſet this Matter right, or at leaſt very nearly right. He informs us, that in the Reign of the Emperor *Hi Tjong*, who was the eighteenth of the Dynaſty of *Tang*, the Affairs of *China* fell into very great Diſorder, from the heavy Taxes laid upon the People, and a great Famine cauſed by the Inundation of Rivers, and infinite Numbers of Graſs hoppers that deſtroyed their Harveſts. While Things were in this Situation, there happened ſeveral Revolts in the Provinces, which encouraged a certain Rebel, whoſe Name was *Hoan Tſia*, to put himſelf at the Head of the Malecontents, and that with ſuch Succeſs, as to drive the Emperor from the Imperial City, of which he made himſelf Maſter; but he was afterwards defeated, and the Emperor reſtored. It muſt be owned, that there is about twenty Years Difference between the Time mentioned by our Author, and the Date of this Revolution, aſſigned by Father *du Halde*, I ſhall not take upon me to decide where the Miſtake lies; but I conceive that the Reader will be of the ſame Opinion with me, in concluding this to be the Revolution mentioned in the Text.

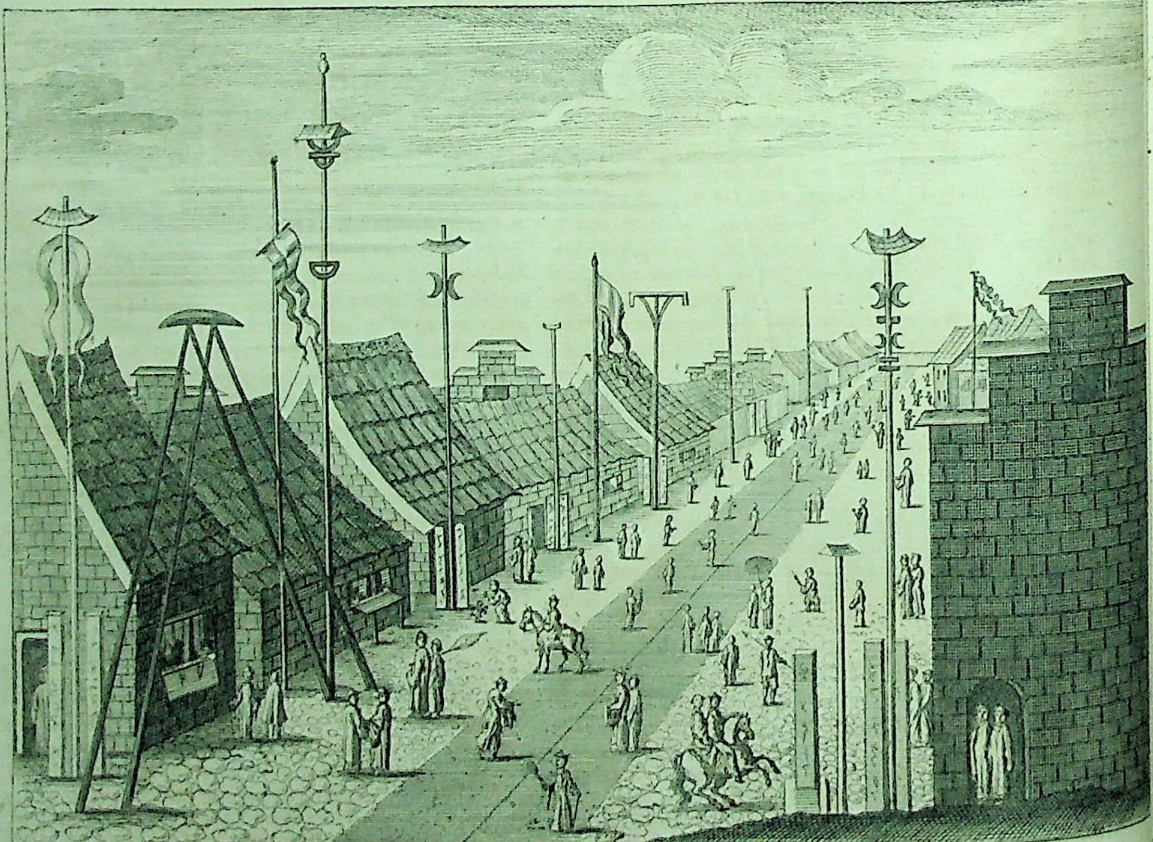
[c] All the Oriental Writers agree in giving a different Account of the Diviſion of the Empire of *Alexander* the Great, from that which is given us by the *Greeks*; and that this Notion of theirs was ancient, appears from what we are told by the Author of the firſt Book of *Maccabees*, who having

Vol. I. p. 531



A Chineſe Proſtitute, riding in Publick, with a Man going before, who makes known her Pric

p. 61



A View of a large Street in one of yᵉ Trading Cities of China shewing how their Signs are placed & Shops disp wage War againſt a third, without conſulting the Emperor; and when the ſtrongeſt had ſubdued the weakeſt, and was become Maſter of his Province, all was waſted and unmercifully plundered, and the Subjects of the vanquiſhed Prince were unnaturally devoured, a Cruelty allowed by the Laws of their Religion, which even permit Human Fleſh to be expoſed to Sale in the publick Markets.

Then aroſe, as was natural from theſe Confuſions, many unjuſt Dealings with the Merchants who traded thither, which having gathered the Force of a Precedent, there was no Grievance, no Treatment ſo bad, but they exerciſed upon the *Arabs*, and the Maſters of Ships; they extorted from the Merchants what was uncuſtomary, they ſeized upon their Effects, and behaved towards them in a Manner directly oppoſite to ancient Uſages, and for theſe Things has God puniſhed them, by withdrawing his Bleſſing from them in every Reſpect; and particularly by cauſing the Navigation to be forſaken, and the Merchants to return in Crouds to *Siraf* and *Oman*; agreeable to the all-ruling Will of the Almighty Maſter, whoſe Name be bleſſed!

34. The Author in his Book notes ſome Cuſtoms and Laws of the *Chineſe*, but mentions not the Puniſhments inflicted on married Perſons, when convicted of Adultery; this Crime as well as Homicide and Theft is puniſhed with Death, and they execute the Criminal in this Manner; they bind both the Hands together, and then force them backwards over the Head, till they reſt upon the Neck; they then faſten the Right-Foot to the Right-Hand, and the Left-Foot to the Left-Hand, ſo that both Hands and Feet are ſtrongly bound behind the Back; and thus bundled up, it is impoſſible for the Criminal to ſtir, nor wants he any Body to hold him. This Torture disjoints the Neck, makes the Joints ſtart out of their Sockets, and diſlocates the Thighs; in ſhort, the Patient is in ſo miſerable a Condition, that were he to continue therein but a few Hours, there would be no need of any thing elſe to make an End of him: But when they have bound him as we have ſaid, they give him ſo many Strokes with a Bambo, which they always uſe upon the like Occaſions, and which alone were ſufficient to kill the Criminal, and leave off when he is at the very laſt Gaſp of Life, abandoning the Body to the People, who eat it[d].

35. There are Women in *China* who refuſe to marry, and chuſe rather to live a diſſolute Life of perpetual Debauchery. The Cuſtom is for theſe Women to preſent themſelves in full Audience before the commanding Officer of the Garriſon in the City, and declare their Averſion to Marriage, and their Deſire to enter into the State of publick Women; they then deſire to be regiſtered in the uſual Form amongſt theſe Proſtitutes, and the Form is this; they write down the Name of the Woman, her Family, the Number of her Jewels, the ſeveral Particulars of her Attire, and the Place of her Abode; thus ſhe is admitted a publick Woman: After this, they put about her Neck a String, at which hangs a Copper Ring with the King's Signet, and deliver to her a Writing which certifies that ſhe is received into the Liſt of common Proſtitutes, and entitles her to a yearly Penſion of ſo many *Falus*, to be paid her out of the publick Treaſury, and threatens with Death the Perſon who ſhould take her to Wife. They every Year give publick Notice of what is to be obſerved with regard to thoſe Women, and turn out thoſe who have worn out their Charms. In the Evening theſe Women walk abroad in Dreſſes of different Colours, without any Veil, and proſtitute themſelves to all new Comers that love Debauchery; but the *Chineſe* themſelves ſend for them to their Houſes, whence they depart not till the next Morning[e].

36. The *Chineſe* coin no Money, beſides the little Pieces of Copper, like thoſe we call *Falus*, nor will they allow Gold or Silver to be coined into Specie, like the Dinars and Drams that are current with us; for, ſay they, if a Thief goes, with an evil Intent, into the Houſe of an *Arab*, where is Gold and Silver Coin, he may carry off ten thouſand Pieces of Gold, and almoſt as many Pieces of Silver, and not be much burdened therewith, and ſo be the Ruin of the Man who ſhould ſuffer this Loſs: Whereas, if a Thief has the ſame Deſign on the Houſe of a *Chineſe* Artificer, he cannot at moſt take away above ten thouſand Falus, or Pieces of Copper, which do not make above ten Meticals or Dinars of Gold. Theſe Pieces of Copper are alloyed with ſomething of a different kind, and are of the Size of a Dram, or Piece of Silver called Bagli; in the Middle they have a pretty large Hole to ſtring them by: A thouſand of them are worth a Metical of Gold, or a Dinar, and they ſtring them by thouſands, with a Knot between every hundred. All their Payments in general are made with this Money, whether they buy or ſell Lands, Furniture, Merchandize, or any thing elſe. There are ſome of theſe Pieces at *Siraf* with *Chineſe* Characters upon them.

I need ſay nothing as to the frequent Fires which happen in *China*, or the *Chineſe* Manner of Building. The City of *Canfu* is built in the manner he deſcribes, that is, of Wood with Canes interwoven, juſt like our Works of Split-cane; they waſh the whole over with a kind of Varniſh, which they make of Hemp-ſeed, and this becomes as white as Milk; ſo that when the Walls are covered therewith they have a wonderful Gloſs. They have no Stairs in their Houſes, nor do they build with different Stories, but put every thing they have into Cheſts, which run upon Wheels, and which in Caſe of Fire they can eaſily draw from Place to Place without any Hindrance from Stairs, and ſo ſave their things preſently.

As for the inferior Officers in the Cities, they commonly have the Directions of the Cuſtoms and the Keys of the Treaſury: Some of theſe have been taken on the Frontiers and caſtrated, others of them have been cut by their own Fathers, who have ſent them as a Preſent to the Emperor. Theſe Officers are at the Head of the principal Affairs of State, of the Emperor's private Affairs, and of his Treaſures; and thoſe particularly who are ſent to *Canfu* are ſelected from this Body[f].

37. It is cuſtomary for them, as well as the Kings or Governors of all the Cities, to appear abroad from time to time, in ſolemn Proceſſion; at ſuch Times they are preceded by Men, who carry great Pieces of Wood like thoſe the Chriſtians of the *Levant* uſed inſtead of Bells: The Noiſe they make is heard a great Way, and as ſoon as it is heard no body ſtands in the Road of the Eunuch, or Prince: If a Man is at his Door, he goes into his Houſe, and keeps his Door ſhut till the Prince or Eunuch of the City is gone by; ſo no Soul is to be ſeen in the Way; and this is enjoined, that they may be held in the greater Veneration, and to ſtrike a Dread, that the People may not ſee them often, and that they may not grow ſo familiar as to ſpeak to them.

The Eunuch, or Lieutenant, and the principal Officers, wear very magnificent Dreſſes of Silk, ſo fine that none of this Sort is brought into the Country ſubject to the *Arabs*, the *Chineſe* keep it up at ſo high a Rate. One of the chief Merchants, whoſe Words cannot be called in queſtion, relates, that he waited on an Eunuch, whom the Emperor had ſent to *Canfu*, in order to purchaſe ſome Things he wanted out of the Goods carried thither from the Country of the *Arabs*; and that upon his Breaſt he perceived a ſhort Veſt, which was under another Silk Veſt, and which ſeemed to be under two other Veſts of the

---

having related the Conqueſt of the *Perſian* Empire by *Alexander* the Great, adds the following remarkable Words 1 *Maccab.* i. 5, 6. "And "after theſe Things, he fell ſick and perceived that he ſhould die. Wherefore he called his Servants, ſuch as were honourable, and had been "brought up with him from his Youth, and parted his Kingdom among them, while he was yet alive."

[d] As barbarous as this Cuſtom may appear, and as ſeemingly inconſiſtent as it may be with the Politneſs of the *Chineſe*, yet it is very certain that our Authors are not the only Writers that have mentioned it, as will appear hereafter, when we come to give the Reader the Travels of the famous *Marco Polo*, who aſſerts the very ſame thing.

[e] This Account of their publick Women is confirmed by a great Number of Writers ancient and modern, ſo that there appears to be no Reaſon for calling the Truth of it in Queſtion. In the Hiſtory of the *Dutch* Embaſſy to the Emperor of *China*, there is a Print of one of theſe Ladies, as ſhe is conducted through the City on an Aſs, attended by a Perſon, who cries her Price, as he would that of any other Commodity.

[f] All theſe Facts are atteſted by later Writers, ſo that notwithſtanding they ſeem at firſt Sight very ſtrange and improbable, yet it muſt be owned there is as good Evidence for them as for any other Facts in the ſeveral Relations we have had of the Cuſtoms and Manners of theſe People.

ſame kind; that the Eunuch obſerving him to look ſtedfaſtly upon his Breaſt, ſaid, "I ſee you keep your Eyes fixed upon my Stomach, what may be the Meaning of it?" The Merchant immediately cried out, *I am ſurpriſed at the Beauty of that little Veſt, which appears under your other Garments.* The Eunuch laughed, and held out his Shirt-ſleeve to him; Count, ſays he, how many Veſts I have above it: He did ſo, and counted five, one on another; and the Waiſtcoat, or ſhort Veſt was underneath. Theſe Garments are wove with raw Silk, which has never been waſhed or fulled; and what is worn by the Princes or Governors, is ſtill more rich, and more exquiſitely wrought.

The *Chineſe* ſurpaſs all Nations in all Arts, and particularly in Painting; and they perform ſuch perfect Work as others can but faintly imitate. When an Artificer has finiſhed a fine Piece, he carries it to the Prince's Palace to demand the Reward he thinks he deſerves for the Beauty of his Performance; and the Cuſtom is, for the Prince to order him to leave his Work at the Palace-gate, where it ſtands a whole Year; if, during that Time, no Perſon finds a Fault therein, the Artificer is rewarded, and admitted into the Body of Artiſts; but if the leaſt Fault be found, it is rejected, and the Workman ſent away empty.

It happened once, as the Story goes, that one of theſe Painters drew an Ear of Corn, with a Bird perched on it, upon a Piece of Silk; and his Performance was ſo admirable, that all who beheld it were aſtoniſhed. This Piece ſtood expoſed to publick View, till one Day a crooked Fellow paſſing by the Palace, found fault with the Picture, and was immediately conducted to the Prince or Governor of the City, who at the ſame Time ſent for the Painter. Then he aſked this crooked Fellow, what Fault he had to find with this Piece; to which he anſwered, "Every body knows that a Bird never ſettles upon an Ear of Corn but it bends under him, whereas this Painter has repreſented his Ear bolt upright, though he has perched a Bird upon it; this is the Fault I have to find." The Objection was held juſt, and the Prince beſtowed no Reward upon the Artiſt. They pretend by this, and ſuch other Means, to excite their Workmen to Perfection, by engaging them to be extremely nice and circumſpect in what they undertake, and to apply their whole Genius to what is to go out of their Hands[g].

38. There was formerly a Man of the Tribe of *Korkiſh*, whoſe Name was *Ebn Wahab*, deſcended of *Hebar* the Son of *Al Aſud*, and he dwelt at *Baſra*; this Man left *Baſra* when that City was ſacked, and came to *Siraf*, where he ſaw a Ship ready to ſail for *China*. The Humour took him to go on board of this Ship, and in her he went to *China*, where in the Sequel he had the Curioſity to travel to the Emperor's Court; and leaving *Canfu*, he reached *Cumdam*, after a Journey of two Months; he ſtaid a long Time at the Emperor's Court, and preſented ſeveral Petitions; wherein he ſignified that he was of the Family of the Prophet of the *Arabs*. Having waited a conſiderable while, the Emperor at laſt ordered him to be lodged in a Houſe appointed for him, and to be ſupplied with every Thing he wanted. This done, the Emperor wrote to the Governor of *Canfu*, commanding him carefully to inform himſelf among the Merchants concerning the Relation this Man pretended to bear to the Prophet of the *Arabs*; and the Governor, by his Anſwers, confirming the Truth of what he had ſaid, touching his Extraction, the Emperor gave him Audience, and made him rich Preſents, wherewith he returned to *Irak*[h].

This Man, when we ſaw him, was much advanced in Years, but had his Senſes perfectly, and told us, that when he had his Audience, the Emperor aſked him many Queſtions about the *Arabs*, and particularly how they had deſtroyed the Kingdom of the *Perſians*. *Ebn Wahab* made Anſwer, that they did it by the Aſſiſtance of God; and becauſe the *Perſians* were immerſed in Idolatry, adoring the Stars, the Sun and Moon, inſtead of worſhipping the true God.

To this the Emperor replied, that the *Arabs* had conquered the moſt illuſtrious Kingdom of the whole Earth, the beſt cultivated, the moſt opulent, the moſt pregnant of fine Wits, and of the moſt extenſive Fame. Then ſaid he, *What Account do the People in your Parts make of the other Kings of the Earth?* To which the *Arab* replied, that he knew them not. Then ſaid the Emperor to the Interpreter, "Tell him we eſteem but five Kings; that he whoſe Kingdom is of wideſt Extent, is the Maſter of *Irak*, for he is in the midſt of the World, and ſurrounded by the Territories of other Kings; and we find he is called the King of Kings. After him we reckon our Emperor here preſent, and we find that he is ſtiled the King of Mankind, for no King is inveſted with a more abſolute Authority over his Subjects, nor is there a People under the Sun more dutiful and ſubmiſſive to their Sovereign, than the People of this Country. We therefore, in this reſpect, are the Kings of the human Race; after us the King of the *Turks*, whoſe Kingdom borders upon us, and him we call the King of Lions. Next is the King of the Elephants, who is the King of the *Indies*, whom we alſo call the King of Wiſdom, becauſe he derives his Origin from the *Indians*. And laſt of all the King of *Greece*, whom we ſtile the King of Men; for upon the Face of the Earth, there are no Men of better Manners, nor of comelier Preſence, than his Subjects. Theſe, added he, are the moſt illuſtrious of all Kings, nor are others to compare with them."

Then ſaid *Ebn Wahab*, he ordered the Interpreter to aſk me, "If I knew my Maſter and my Lord, meaning the Prophet (*Mohammed*,) and if I had ſeen him?" I made Anſwer, "How ſhould I have ſeen him who is with God?" He replied, "That is not what I mean, I aſk you, what ſort of a Man he was in his Perſon?" I replied, "that he was very handſome." Then he called for a great Box, and opening it, he took out another contained therein, which he ſet before him, and ſaid to the Interpreter, "ſhew him his Maſter and his Lord;" and I ſaw in the Box, the Image of the Prophets; whereat I moved my Lips, praying to myſelf in Honour of their Memory.

The Emperor did not imagine I ſhould know them again, and ſaid to the Interpreter, "Aſk him why he moves his Lips?" I anſwered, "I was praying in Memory of the Prophets;" *How do you know them*, ſaid the Emperor? I replied, that I knew them by the Repreſentation of their Hiſtories; "There ſaid I, is *Noah* in the Ark, who was ſaved with thoſe that were with him at the ſame Time," and I made the uſual Salute to *Noah* and his Company. Then the Emperor laughed, and ſaid, "Thou art not miſtaken in the Name of *Noah*, and thou haſt named him right; but as for the univerſal Deluge, it is what we knew not. It is true, indeed, that a Flood covered Part of the Earth; but it reached not our Country, nor even the *Indies*." I made my Anſwer to this, and endeavoured to remove his Objections the beſt I could; and then ſaid again to him, "There is *Moſes* with his Rod, and the Children of *Iſrael*." He agreed with me, as to the ſmall Extent of their Country, and the Manner how the ancient Inhabitants were deſtroyed by *Moſes*. I then ſaid to him; "He there, is Jesus, upon an Aſs, and here are his Apoſtles

---

[g] There is nothing very ſurpriſing in this Account, for the very ſame Method had been in Uſe among the *Greeks* long before, and has been ſince practiſed in *Italy* and elſewhere; and without doubt, it is the true Method of coming at the juſt Knowledge of the Value of ſuch Performances; and therefore ſomething of this ſort is annually practiſed at *Paris*.

[h] It ſeems a little ſtrange, that the learned *Abbé Renaudot* did not endeavour to ſettle the Time when this *Arabian* Traveller went to *China*, eſpecially when there is a Circumſtance which ſeems to fix it, *viz.* the plundering of *Baſſora*, upon which it is ſaid he took a Reſolution of going to *Siraff*. In order to ſupply this Defect, I have conſulted *Abul Pharajus*, who informs us, that *A. H.* 285. which anſwers to *A. D.* 898. there was one *Abu Said*, who revolted againſt the Khalif, and ruined *Baſſora*, which occaſioned the walling and fortifying that City, which coſt fourteen thouſand Pieces of Gold. The Khalif then reigning was *Al Mohated*, in whoſe Time *Elmacinus* informs us, Things were in great Confuſion; and he likewiſe takes notice of this Rebellion. The Date agrees very well with the reſt of this Hiſtory, and particularly with the Account given by this Man, of the Reaſons which induced him to quit his Country in his Conference with the Emperor of *China*.

“ with him. *He*,” ſaid the Emperor, “ *was not long upon* “ *Earth, ſeeing that all he did was tranſacted within the* “ *Space of ſomewhat better than thirty Months*.”

After this the ſame *Ebn Wahab* ſaw the Hiſtories of the other Prophets preſented in the ſame Manner we have already declared; and he fanſied that what was written in great Characters, under each Figure, might be the Names of the Prophets, the Countries whence they were, and the Subjects of their Prophecies. Then ſaid the ſame *Ebn Wahab*, I ſaw the Image of *Mohammed* riding upon a Camel, and his Companions about him on their Camels, with Shoes of the *Arabian* Mode on their Feet, and leathern Girdles about their Loins. At this I wept, and the Emperor commanded the Interpreter to aſk me, why I wept? I anſwered, *There is our Prophet and our Lord, who is alſo my Couſin*. He ſaid I was right, and added, that he and his People had ſubdued the fineſt of all Kingdoms; but that he had not the Satisfaction of enjoying his Conqueſts, though his Succeſſors had.

I afterwards ſaw a great Number of other Prophets, ſome of them ſtretching forth their Right-hand, and with their three Fingers bent down between the Thumb and the Fore-finger, juſt like thoſe who hold up the Hand to make Oath; others were ſtanding, and pointed to the Heavens with their Finger, and others were in different Poſtures. The Interpreter took them to be the Figures of their Prophets, and thoſe of the *Indians*. The Emperor then aſked me many Queſtions concerning the Khaliffs, their uſual Dreſs, and concerning many Precepts and Injunctions of the *Mohammedan* Religion, and I anſwered him the beſt I could.

41. After this, he ſaid, “ What is your Opinion con“ cerning the Age of the World?” I made Anſwer, that Opinions varied upon that Head; that ſome were for ſix thouſand Years, and others would not allow ſo many; and that others reckoned it at a ſtill higher Rate; but that it was, at leaſt, as old as I had ſaid. At this the Emperor and his firſt Miniſter, who was near him, broke out into Laughter, and the Emperor made many Objections to what I had advanced. At laſt, ſaid he, “ What “ does your Prophet teach upon this Subject; does he “ ſay as you do?” My Memory failed me, and I aſſured him *that he did*.

Hereupon I obſerved I had diſpleaſed him, and his Diſpleaſure appeared plainly in his Countenance. Then he ordered the Interpreter to ſpeak to me in the following Terms: “ Take heed of what you ſay, for Kings never “ ſpeak but to be informed of the Truth of what they “ would know. What did you mean by giving the Em“ peror to underſtand, that there are among you various “ Opinions concerning the Age of the World? If ſo it “ be, you are alſo divided upon the Things your Prophet “ has ſaid at the ſame time, that no Diverſity of Opi“ nions are to be admitted on what the Prophets have pro“ nounced, all which muſt be revered as ſure and infalli“ ble; take heed then how you talk at ſuch a Rate any “ more [i].”

To this he ſubjoined many other Things, which, through Length of Time, have eſcaped my Remembrance. At laſt he aſked me; “ How is it that thou haſt forſaken thy “ King, to whom thou art nearer, not only by the Place “ of thy Abode, but by Blood alſo, than thou art to us?” In Return to which, I informed him of the Revolutions which had happened at *Baſſora*, and how I came to *Siraf*, where I ſaw a Ship ready to ſail for *China*; and that having heard of the Glory of his Empire, and its Abundance in all Neceſſaries, Curioſity excited me to a Deſire of coming into his Country, that I might behold it with mine own Eyes; that I ſhould ſoon depart for my own Country, and the Kingdom of my Couſin, and that I would make a faithful Report of what I had ſeen of the Magnificence of the Empire of *China*, and the vaſt Extent of the Provinces it contains, and that I would make a grateful Acknowledgment of the kind Uſage I there met with, which ſeemed to pleaſe him very much. He then made me rich Preſents, and ordered that I ſhould be conducted to *Canfu* upon Poſt-horſes. He alſo wrote to the Governor of the City, commanding him to treat me with much Honour, and to furniſh me with the like Recommendations to the other Governors of the Provinces, that they might entertain me till the Time of my Departure. I was thus treated every-where during my Stay, plentifully ſupplied with all Neceſſaries of Life, and honoured with many Preſents till the Time of my Departure from *China*.

42. We aſked *Ebn Wahab* many Queſtions concerning the City of *Cumdan*, where the Emperor keeps his Court; he told us that the City was very large and extremely populous, that it was divided into two Parts by a very long and very broad Street; that the Emperor, his chief Miniſters, the Soldiery, the ſupreme Judge, the Eunuchs, and all belonging to the Imperial Houſhold, lived in that Part of the City which is on the Right-hand eaſtward, that the People had no manner of Communication with them; and that they were not admitted into the Places watered by Canals from different Rivers, the Borders of which were planted with Trees, and adorned with magnificent Palaces. The Part on the Left-hand weſtward, is inhabited by the ordinary People and the Merchants, where are alſo great Squares, and Markets for all the Neceſſaries of Life. At Break of Day, the Officers of the King's Houſhold, with the inferior Servants, the Purveyors, and the Domeſticks of the Grandees of the Court, come ſome on Foot, others on Horſeback, into that Diviſion of the City, where are the publick Markets, and the Habitations of ſuch as deal in all Sorts of Goods, where they buy whatever they want, and return not again to the ſame Place till their Occaſions call them thither next Morning. It is by the ſame Traveller related, that this City has a very pleaſant Situation in the Midſt of a moſt fertile Soil, watered by ſeveral Rivers, and hardly deficient in any thing except Palm-trees, which grow not there.

43. In our Times Diſcovery has been made of a Thing quite new and unknown to thoſe who lived before us. No body imagined that the great Sea, which extends from the *Indies* to *China*, had any Communication with the Sea of *Syria*, nor could any one apprehend the Poſſibility of any ſuch Thing. Now behold what has come to paſs in our Days, according to what we have heard. In the Sea of *Rum*, or the *Mediterranean*, they found the Wreck of an *Arabian* Ship which had been ſhattered by Tempeſts; for all her Men periſhing, and ſhe being daſhed to Pieces by the Waves, the Remains of her were driven by Wind and Weather into the Sea of *Chozars*, and from thence to the Canal of the *Mediterranean* Sea, and at laſt were thrown on the Shore of *Syria* [k].

This renders it evident, that the Sea ſurrounds all the Country of *China* and *Cila*, or *Sila*, the uttermoſt Parts of *Turkeſtan*, and the Country of the *Chozars*; and that then it enters at the *Streight* till it waſhes the Shore of *Syria*. The Proof of this is deduced from the Conſtruction of the Ship we are ſpeaking of; for none but the Ships of *Siraf* are ſo put together, that the Planks are not nailed or bolted, but joined together in an extraordinary manner, as if they were ſewn. Whereas the Planking of all Ships of the *Mediterranean* Sea, and of the Coaſt of *Syria*, are nailed, and not joined together in that Way [l].

---

[i] This plainly ſhews, that the *Chineſe* were formerly well acquainted with the Hiſtory of other Nations, and affords us good Grounds to believe that their Records muſt have been deſtroyed in ſome ſubſequent Revolution; for, otherwiſe, it is impoſſible to account for their Ignorance in Matters of this Nature in ſucceeding Times.

[k] This is one of the moſt curious Paſſages in this Treatiſe, inaſmuch as it plainly proves, that the *Arabians* had the ſame Notions in Geography with the *Greeks*, or, to ſpeak with greater Propriety, had their Notions of Geography from them. Our Author ſays plainly, that, according to his Judgment, the *Indian* Ocean waſhed the Coaſt of *Great Tartary*, and ſo fell into the *Caſpian Sea*, by which Paſſage he ſuppoſes that this Ship was driven from the *Indian* Sea into the *Mediterranean*. The Conjecture was wrong; but there is ſtill ſomething in it very bold, and well imagined, and at the Bottom ſomething of Truth too; for though it was impoſſible that this Ship ſhould come into the *Mediterranean* in the Manner our Author imagines, yet it is not impoſſible but it might have come through the North-Eaſt Paſſage, agreeable to the firſt Part of his Suppoſition; and if by the Sea of *Chozars*, we underſtand that of *Muſcovy*, he would be quite right.

[l] I very much doubt, whether the Conſtruction of this Veſſel, as our Author deſcribes it, be ſufficient Evidence of its coming from the *Indies*. It is very poſſible that it might have been a Boat belonging to the Inhabitants of *Greenland*, or of ſome other Country bordering upon *Hudſon's-Bay*; ſince it is very certain that there are ſuch Veſſels in theſe Parts, and it is not at all impoſſible that this might have come from thence. I do not pretend, however, abſolutely to contradict him, but only to ſhew that the Argument he uſes is not concluſive, though I think, as Things then ſtood, he had ſufficient Grounds to believe it was concluſive.

We have alſo heard it reported, that Ambergris has been found in the Sea of *Syria*, which ſeems hard to believe, and was unknown to former Times. If this be as is ſaid, it is impoſſible that Amber ſhould have been thrown up in the Sea of *Syria*, but by the Sea of *Aden*, and of *Kolzum*, which has Communication with the Seas where Amber is found: And becauſe God has put a Separation between theſe Seas, if this Story be true, it muſt neceſſarily have been, that this Amber was driven firſt from the *Indian* Sea into the others, and ſo from the one to the other, till it at laſt came into the Sea of *Syria*[m].

44. We will now begin to ſpeak of the Province of *Zapage*, which is oppoſite to *China*, and diſtant from thence a full Month's Sail by Sea, or leſs, if the Wind be fair. The King of this Country is ſtiled *Mebrage*, and they ſay his Dominions are nine hundred Leagues in Circumference, and that this King is Maſter of many Iſlands which lie round about. Thus altogether this Kingdom is above a thouſand Leagues in Extent; among thoſe Iſlands there is one called *Serbeza*, which is ſaid to be four hundred Leagues in Circuit; and another called *Rahmi*, which is eight hundred Leagues in Compaſs, and produces Redwood, Camphire, and many other Commodities. In this ſame Kingdom is the Iſland of *Cala*, which is the mid Paſſage between *China* and the Country of the *Arabs*.

This Iſland, they ſay, is fourſcore Leagues in Circumference; and hither they bring all ſorts of Merchandize, Wood-Aloes of ſeveral ſorts, Camphire, Sandal-Wood, Ivory, the Wood called Cabahi, Ebony, Redwood, all ſorts of Spice, and many other Things too tedious to enumerate. At preſent the Commerce is carried on between this Iſland and that of *Oman*. The *Mebrage* is the Sovereign over all theſe Iſlands; and that in which he makes his Abode is extremely fertile, and ſo very populous, that the Towns almoſt croud one upon another. A Perſon of great Probity relates, that when the Cocks crow at their accuſtomed Hours, juſt as with us when at Rooſt, upon Trees, they anſwer each other a hundred Leagues round, and more, becauſe of the Proximity of the Villages which almoſt touch each other; and he adds, that no Part of it is uninhabited, nor any of its Land uncultivated. Thoſe who travel in this Country may ſtop at every Step, and find Shelter from the Beams of the Noon-Day Sun; and if they are tired, they may repoſe themſelves every Day at Noon, go which Way they will.

45. Yet what follows from the Teſtimony of ſeveral Perſons, is the moſt remarkable Particular we have heard concerning the Iſland of *Zapage*. There was formerly a King, or, as he is there called, *Mebrage*: His Palace is ſtill to be ſeen on a River as broad as the *Tygris* at *Bagdad*, or at *Baſſora*. The Sea intercepts the Courſe of its Waters, and drives them back again with the Flood; and during the Ebb, it ſtreams out freſh Water a good way into the Sea. This River is let into a ſmall Pond cloſe to the King's Palace; and every Morning the Officer, who has Charge of his Houſhold, brings an Ingot of Gold wrought in a particular manner, which is thrown into the Pond in the Preſence of the King. The Tide riſing, covers it with the reſt, and quite conceals them from Sight. But low Water diſcovers them, and they appear plain by the Beams of the Sun. The King comes to view them as often as he repairs to an Apartment of State, which looks upon this Pond. This Cuſtom is very ſcrupulouſly obſerved; and thus they every Day throw an Ingot of Gold into this Pond as long as the King lives, not touching them upon any Account, but regarding this as a ſacred Treaſure.

When the King dies, his Succeſſor cauſes them all to be taken out, and not one of them is ever miſſing. They count them, and melt them down; and this done, the Sums ariſing out of this great Quantity of Gold are diſtributed to thoſe of the Royal Houſhold, Men, Women, and Children, to the ſuperior and inferior Officers, each in proportion to the Rank he bears; and the Surplus is given away to the Poor and Infirm. Then they reckon up the Number of Ingots, and what they weigh, and ſay, Such a *Mebrage* reigned ſo many Years; for he left ſo many Ingots of Gold in the Pond of the Kings, and they were diſtributed after his Death to the People. It is accounted a Felicity with them to have reigned a long while, and to have thus multiplied the Number of thoſe Ingots given away at their Death.

46. Their ancient Hiſtory relates, that one of the Kings of *Komar* would have waged War with him in this Iſland. This Country of *Komar* is the ſame from whence they bring the Wood-Aloes called *Hud al Komari*, nor is there any Kingdom more populous in proportion than that of *Komar*. The Inhabitants are all very courageous, and the boundleſs Commerce with Women, and the Uſe of Wine, are forbidden among them; nor have they any Wine in their Country. This Kingdom was at Peace with that of *Zapage*, where reigned the *Mebrage*. They are divided from each other by a Paſſage of ten or twenty Days Sail, with a very eaſy Gale. They ſay, that in former Days there was a very young and high-ſpirited Prince in this Iſland of *Komar*. This King was one Day in his Palace, which looks upon a River much like the *Euphrates* at the Entrance, and but a Day's Journey from the Sea; his prime Miniſters were with him, and in the Diſcourſe they had together, Notice was taken of the Kingdom of the *Mebrage*, and its Glory, how well it was peopled and cultivated, and the Croud of Iſlands which depended thereupon.

Then ſaid the King of *Komar* to his Miniſter, I am ſeized with a Deſire which I earneſtly wiſh to ſee accompliſhed. The Miniſter, who was a wiſe and a prudent Man, and no Stranger to the Levity of his Maſter, anſwered, My Lord, what is your Deſire? I could wiſh, replied the King, to ſee in a Diſh the Head of the *Mebrage* of *Zapage*. The Miniſter, well aware it was Jealouſy that inſpired him with this impetuous Fury, rejoined, My Lord, I wiſh you would not diſturb your Mind with ſuch Thoughts, ſince nothing ever fell out between thoſe People and us, to furniſh Matter of Complaint; they never offended us by Word or Deed, or ever did us the leaſt Injury; beſides, they are divided from us, and have no manner of Communication with our Country, nor do they diſcover any Inclination of making a Conqueſt of this Kingdom. No one therefore ought to hearken to ſuch Diſcourſe, or make a Word of Anſwer upon this Head. The King was enraged at this Reply, and ſaid not a Word thereto; but without any Regard had to the good Advice of his firſt Miniſter, he opened the ſame thing to the principal Officers of State, and to ſuch of his Courtiers as he thought proper.

47. This Matter being rumoured about, at length reached the Ears of the *Mebrage*. He, who then reigned, was a wiſe and an active Prince, of conſummate Experience, and in the Flower of his Age. He called for his firſt Miniſter, and having acquainted him with what he had heard, ſaid to him, it is by no means proper to publiſh the Behaviour of this giddy Prince, or to betray how little we eſteem him, becauſe of his Youth and ſlender Experience; nor is it expedient to divulge what he ſaid againſt me; for ſuch Speeches cannot but be prejudicial to the Dignity of a King. Having thus enjoined his Miniſter to conceal what had paſſed between them, he commanded him to prepare a thouſand Ships of no extraordinary Size, and to equip them with all Things neceſſary, Arms and Ammunition, and to man them with as many of his beſt Forces as they could tranſport. Then he gave out, that he would make a Voyage through the neighbouring Iſlands under his Dominion, to divert himſelf. He wrote alſo to all the tributary Princes of thoſe Iſlands, to acquaint them, that he deſigned them a Viſit; and this being a publick Talk, each of thoſe Kings prepared for the Reception of the *Mebrage*.

[m] It is moſt evident, from our Author's Way of reaſoning, that he had no Notion of any Paſſage by the *Cape of Good Hope*; for if he had, he would moſt certainly have taken this Opportunity of inſinuating it. At the ſame time, however, I leave it to the Reader's Conſideration, whether this Veſſel, ſuppoſing it to have been built in the *Eaſt Indies*, might not have come this Way into the *Mediterranean*, more probably than by the North-Eaſt Paſſage. It is likewiſe clear from what our Author has delivered, that the *Arabians* knew no more of *Japan*, which they called *Sila*, than they learned from the *Chineſe*, ſince by the Teſtimony of the oldeſt of our Authors, no *Arab* had yet ſet Foot there in the Year of the *Hegira* 230. *A. D.* 844.

When every thing was in readineſs as he had ordered, he went on board his Ships, and with a powerful Army ſailed over to the Kingdom of *Komar*. The King and thoſe belonging to his Court were effeminate Creatures, who all the Day long did nothing but view their Faces and rub their Teeth, with Mirrors and Toothpicks in their Hands, or if they moved, had them carried after them by Slaves. So the King of *Komar* diſcovered nothing of the *Mehrage*'s Purpoſe, till he appeared in the Mouth of the River, on which ſtood the Palace of the King of *Komar*, and till he had landed his Troops, who immediately inveſted the Capital, and there took him. The King was taken in his Palace, and all that belonged to him fled without fighting.

Then the *Mehrage* cauſed Ploclamation to be made, that he granted entire Security of Life and Effects to all the Inhabitants of the Country, and ſeating himſelf on the Throne of the King of *Komar*, now a Captive, he ordered him to be brought into his Preſence, together with his firſt Miniſter. Then addreſſing himſelf to the King of *Komar*, he ſaid, Who was it filled your Head with a Project unequal to your Strength, and abſolutely impoſſible for you to compaſs ? What would you have done if you had gained your Point? This Prince, who had nothing to ſay for himſelf, made no Anſwer. Then, continued the *Mehrage*, if you had enjoyed the Pleaſure you wiſhed, of ſeeing my Head in a Diſh before you, you would have ſpoiled my Kingdom, and retained it after you had committed all ſorts of Violence. I will not ſo behave with Regard to you, but yet I will execute upon you what you wiſhed concerning me, and then will I return into my Kingdom, without touching any Thing in your Dominions, and without carrying away ought of great Value or ſmall, deſirous only that you may be recorded an Example, for the Inſtruction of thoſe who ſhall come after you, that none may exceed the Bounds of his Power, that each may be contented with his own, and that thoſe you have diſturbed may be reſtored to perfect Security [n].

This ſaid, he ordered them to ſtrike off his Head, and then turning to the Miniſter he ſaid, You have done all a good Miniſter could do ; I know you offered good Advice to your Maſter, and that he hearkened not unto you. Conſider who may beſt ſucceed this Fool for the Good of the Kingdom, and ſet him immediately upon the Throne. This done, the *Mehrage* departed for his own Territories, and neither did he or any of his lay Hands on the leaſt Thing in the Kingdom of *Komar*. When he arrived in his own Kingdom, he ſat down upon the Throne, and being in the Palace which looked upon the Pond before-mentioned, he cauſed the Head of the King of *Komar* to be put into a Baſon and ſet before him, and calling in the Chiefs of his Kingdom, he acquainted them with all he had done, and with the Reaſons which had induced him to the Expedition we have related, and they approved the Deed with Acclamations and Prayers for his Proſperity. Then he ordered the Head of the King of *Komar* to be waſhed and embalmed, and put it into a Coffer, and ſent it back to the King of *Komar*, who had been elected in the Room of him he had put to Death ; at the ſame Time writing a Letter to this new Prince in the following Terms: What inclined us to do what we did to your Predeceſſor, and your Lord, was, his known Malevolence towards us ; and that we might ſet an Example to his Equals, we have been ſo happy as to treat him as he would have treated us. But we think it convenient to ſend his Head back to you, having had no Deſign of detaining it, or of arrogating any Glory to ourſelves, from the Advantage we obtained over him. The News of this Action being reported to the Kings of the *Indies* and of *China*, it added to the Reſpect they before had for the *Mehrage*, and from that Time it has been a Cuſtom with the Kings of *Komar*, every Morning they riſe, to turn towards the Country of *Zapage*, to proſtrate themſelves on the Ground, and to make the moſt profound Inclinations in Honour of the *Mehrage*.

48. All the Kings of the *Indies* and of *China* believe the Metempſychoſis or Tranſmigration of Souls, and make it an Article of their Religion. A Perſon of Credit relates, That one of theſe Princes being newly recovered of the Small-Pox, and beholding himſelf in a Glaſs, was deeply troubled to ſee how ſadly his Face was disfigured, and that turning himſelf towards one of the five Sons of his Brother, he ſaid to him, ſure it never happened to any Man as to me, to remain in his Body after ſuch a Change ? But this Body is only a Veſſel puffed up with Wind, and when the Soul leaves it, ſhe paſſes inſtantly into another. Go mount you upon the Throne, for I am about to ſeparate my Body from my Soul, until I return into another Body: At the ſame Time he called for a ſharp and keen *Cangiar*, with which he commanded his Nephew to cut off his Head, which the other did, and he was afterwards burnt, as is the Cuſtom of the Country [o]. Our Author here quits his Subject ſomewhat abruptly, in order to return again to the Country of *China* and the Manners of its Inhabitants. The Reaſon of this is not at firſt Sight very evident, but if we conſider that he follows the former Writer, we ſhall very eaſily diſcern that this was the true Cauſe of his making ſo ſudden a Tranſition. What he had before ſaid was in Conſequence of the Facts delivered by the firſt Author in Regard to the *Indies*, and having diſcuſſed theſe, it was natural for him to follow that Author in what he ſays of *China* and the *Chineſe*, and indeed it muſt be allowed, that notwithſtanding theſe ſmall Interruptions, there are ſcarce any Books of Travels of ſo ancient a Date, written in a clearer or better Method than theſe.

49. The *Chineſe* were wonderfully regular in all Things relating to Government, before the laſt Revolution deſtroyed and reduced them to the State they are in at preſent. There was a certain Merchant, a Native of *Choraſſon*, who coming into *Irak*, there dealt to a conſiderable Amount, and having brought up a Quantity of Goods went to *China*. This Man was extremely ſelfiſh and of incredible Avarice ; it happened that the Emperor of *China* had ſent one of his Eunuchs to *Canfu*, the City of all the *Arabian* Traders, there to purchaſe what he wanted, and was to be had on board of the Ship that was arrived. This Eunuch was one of thoſe who had the largeſt Share in his Maſter's good Opinion and Confidence, and was Keeper of his Treaſure and of all that he eſteemed precious.

A Diſpute aroſe between this Eunuch and the before-mentioned Merchant, about ſome Pieces of Ivory and other Goods, and it ran ſo high that the Merchant refuſed to deal with him. But this Affair making a great Noiſe, the Eunuch puſhed it ſo far, that he forced from him the Choice of his Goods, deſpiſing whatever the other could ſay to him. The Merchant withdrawing himſelf, went privately to *Cumdan* where the Emperor reſides, and which is two Months Journey from *Canfu*, and being arrived he went to the String of the Bell mentioned in the former Book. The Cuſtom was, that whoever pulled it was thereupon ſent ten Days Journey from thence, into a kind of Baniſhment: it was ordered alſo that he ſhould be committed to Priſon, there to remain for two whole Months ; which expired, the Vice-King or Governor of the Province releaſed him, and ſaid you have involved yourſelf in an

---

[n] This is a very pleaſant Story, and well related ; but with reſpect to the Country in which it happened, I think it very difficult to ſay any Thing with Certainty, and yet this does not at all leſſen the Credibility of the Fact. It is not impoſſible however, that this Hiſtory might relate to ſome of the Iſlands which are now called *Philippines* ; or perhaps ſome of the Iſlands in the Straits of *Sonda*. I pretend to determine nothing in ſuch doubtful Points, but leave the Reader to decide for himſelf, according to the Lights given him by the Author, who appears to have written with great Caution and Fidelity.

[o] This Doctrine of the Metempſychoſis is generally held among the *Chineſe*. Their Hiſtories ſay, that one *Xekia*, or *Shekia*, an *Indian* Philoſopher, who lived about a thouſand Years before Chriſt, was the firſt that taught this Doctrine of Tranſmigration ; and our Authors add, that the *Chineſe* had it from the *Indians*. It over-ran *China* in the Year of Chriſt 65, and the Chiefs of this Sect have to this Day their Abode on or near the Mountain *Tientai* in the Province of *Chekiang*. This *Xekia*, according to the *Chineſe* Tradition in *Navarette*, has been born eight thouſand Times over, the laſt Time in the Form of a white Elephant. It is he that was called *Fohes* after his Apotheoſis. The Sect of *Xekia*, as we are told by Father *Martini*, hold the Metempſychoſis ; but this Sect is divided into two Branches, the one believing the exterior Metempſychoſis, or that the Souls of Men paſs after Death into other Bodies, and theſe worſhip Idols, and abſtain from every Thing that has Life, while the other Sect has Faith in an interior Metempſychoſis, which is the principal Foundation of their Morality, which conſiſts in ſuppreſſing the Paſſions, which are as ſo many different Animals proceeding from Man ; but neither the one nor the other expect Rewards or dread Puniſhments in the World to come.

Affair which may turn to your utter Ruin, and to the Loſs of your Life if you ſpeak not the real Truth; foraſmuch as the Emperor hath appointed Miniſters and Governors to diſtribute Juſtice to you and to all Strangers, nor is there any one of them that would not right you, if when you appear before the Emperor your Wrongs are not ſuch as may entitle you to have recourſe to him, it will moſt certainly coſt you your Life, to the End that every Man who would preſume to do as you have done, may be deterred from the ſame. Withdraw therefore immediately, and be gone about your Buſineſs. Now if the Party endeavoured to fly, he was chaſtiſed with fifty Strokes of the Bamboo, and was then ſent back to the Country whence he came; but if he perſiſted in his Demand of Redreſs, he was admitted to an Audience of the Emperor.

The *Chorassanian* ſtrenuouſly perſiſted in his Demand of Juſtice, and of Leave to be admitted to the Emperor, which was at Length granted him. The Interpreter aſking him his Buſineſs, he related what had befallen him with the Emperor's Officer, and how he had forced from him a Part of his Effects. This Thing was ſoon divulged and noiſed about at *Canſu*: In the mean time the Emperor commanded the Merchant to be caſt into Priſon, and that Care ſhould be there taken that he wanted not for either Victuals or Drink.

At the ſame Time he ordered his Prime Miniſter to write to the Governor of *Canſu*, charging him to inform himſelf concerning the Complaints of this Merchant, and to examine into the Grounds thereof; at the ſame Time alſo three principal Officers received the ſame Order. Theſe Officers are called of the Right, of the Left, and of the Midſt, according to their Rank, and have the Command of the Emperor's Forces under the Prime Miniſter. He truſts them with the Guard of his Perſon, and when he takes the Field for ſome military Enterprize, or on any other Account, each of them, according to his Rank, marches near him: Theſe three Officers wrote each apart what they had upon the ſtricteſt Enquiry diſcovered of the Matter, and aſſured the Emperor that the Merchant's Complaint was juſt and well founded.

Theſe firſt Informations were followed and confirmed by many more ſent to the Emperor from divers Parts, and the Eunuch was cited to appear. He no ſooner arrived than the Emperor ſeized on all his Effects, and deprived him of his Office as Treaſurer, and then ſaid to him, Death ought to be thy Doom for giving this Man, who is come from *Chorassan* on the Frontiers of my Kingdom, Cauſe of Complaint againſt me. He hath been in the Country of the *Arabs*, whence he came into the Kingdoms of the *Indies*, and at laſt to my City, ſeeking his Advantage by Trade, and thou wouldſt have had him return croſs theſe Kingdoms, and have ſaid to all the People in his Way, I have been abuſed in *China*, where they have ſtripped me of my Subſtance. I grant thee thy Life in Conſideration of thy former Services in the Rank thou heldeſt in my Houſe, but I will confer on thee a Command among the Dead, foraſmuch as thou haſt not been able to acquit thyſelf of thy Duty in that thou holdeſt over the Living, and he ordered him to be ſent to the Tombs of the Kings, to have the Cuſtody of them, and there to remain for [p] Life.

50. One thing moſt worthy Admiration in *China* before the late Commotions, was the good Order they obſerved in the Adminiſtration of Juſtice, and the Majeſty of their Tribunals; to fill them, they made Choice of ſuch Men as were perfectly verſed in their Laws, and ſuch conſequently as were never at a Loſs, when they were to paſs Judgment, Men of Sincerity, zealous in the Cauſe of Juſtice upon every Occaſion, not be biaſſed by what the Great could offer to embroil a Diſpute, ſo that Juſtice was always adminiſtred to him who had Right on his Side.

In a word, they made Choice of upright Men, of Men who neither oppreſſed the Poor, or accepted Preſents from the Rich. When they deſigned to promote any Man to the Office of principal Judge, they previouſly ſent him to all the chief Cities of the Empire, in each of which he ſtaid a Month or two. During this Space it was his Buſineſs moſt minutely to enquire into the Affairs of the People, into all that paſſed in the City, and into the various Cuſtoms. He informed himſelf of all ſuch as deſerved to be believed upon their Teſtimony, and this Knowledge was of Uſe to him in the Sequel, as Occaſion required. After he had gone through all the Cities in the Manner aforeſaid, and made a Stay of ſome Time in the moſt conſiderable of them, he repaired to the Imperial Court, where he was inveſted with the Dignity of Supreme Judge.

To him therefore the Emperor referred the Nomination of all the other Judges, and by him were they appointed, after he had acquainted the Emperor with thoſe who in his whole Dominions were moſt worthy of exerciſing Juriſdiction, each in his own City, or in others; for he knew who were commendable for their Underſtanding; and ſo no one was raiſed who poſſeſſed not adequate Endowments, or who bore not Teſtimony according to the Truth when he was interrogated. The Emperor allows none of his Judges to write to him upon any Affair when he is informed that he has done Injuſtice, and even deprives them of their Office. The ſupreme Judge cauſes Proclamation every Day to be made before his Gate by his Officers, and in his Name they cry out, If any Man hath been wronged by the Vice-King, or Governor, who is not to be ſeen of the People, or by any one of his Relations, or Officers, or by any one of the Body of the People, I will do him ample Juſtice, ſo ſoon as the Offender is put into my Hands, and that I have Charge of him. This Proclamation is thrice repeated.

It is an ancient Cuſtom with them never to degrade a Vice-King, or Governor of a City, but by virtue of Letters iſſued out of the Council or Divan of Kings; and this is commonly executed for ſome flagrant Malverſation, or when Judgment is ſuſpended or delayed: But when the Governor avoids theſe two things, it is ſeldom he is diſturbed with Letters of Revocation, which are never drawn up but on a legal Account. The Poſts of Judicature are conferred on none but Perſons of Probity, and Lovers of Juſtice, and ſo good Order is maintained in the Kingdom.

51. The Province of *Chorassan* is almoſt on the Borders of *China*. From *China* to *Sogd*, it is of about two Months Journey through almoſt impaſſable Deſarts, and through a Country all covered with Sand, where no Water is to be found. It is not refreſhed by any Rivers, nor is there any Habitation in this Province; and for this Reaſon it is that the *Chorassanians* can make no Irruptions into *China*. That Part of this Empire which lies fartheſt Weſtward, is the Province of *Medu*, which borders upon *Tibet*, ſo that on this Side the two Nations are at War with each other.

Among thoſe of our Time who have travelled into *China*, we were acquainted with one, who told us, he had ſeen a Man that had a Veſſel with Muſk in it on his Back, and had travelled on Foot from *Samare*, and to *Canſu*, the Port for all Merchants from *Siraf*. He had by Land travelled through all the Cities of *China* one after another; which he might eaſily do, becauſe the Provinces of *China* and *Tibet*, where the Creature that affords Muſk is met with, are contiguous. The *Chineſe* carry off as many of theſe Creatures as they can; and thoſe of *Tibet*, on their Part, do the ſame [q].

---

[p] This was a very extraordinary Act of Juſtice in the *Chineſe* Emperor, and very agreeable to the Maxims of that Empire, in which they are very fond, upon particular Occaſions, of doing Things of this Nature, eſpecially where Strangers are concerned; for two Reaſons: The firſt is, that theſe Stories may be blazed abroad and create an high Idea of the Equity of their Judgments, a Thing very agreeable to the natural Vanity of theſe People: The other, that it may have a good Effect at home, and ſerve to make even the greateſt and moſt powerful Perſons in *China* afraid of committing Exceſſes in their reſpective Offices.

[q] As to this Country of *Tibet*, it may not be amiſs to ſay ſomething of it here, becauſe it will occur in the ſubſequent Part of this Work. It makes at this Day a Part only of the great Kingdom of *Tangut*, which, according to the beſt Accounts that I have met with, is thus ſituated. It has the Empire of *China* on the Eaſt. The Kingdom of *Ava*, or of *Brama*, on the South. The Dominions of the Great Mogul on the Weſt, and thoſe of the Contaiſch, or Great Khan of the *Calmuc Tartars*, on the North. This Kingdom is divided into two Parts; that which lies to the North is the Kingdom of *Tangut* properly ſo called; and the South Part is the Country of *Tibet*. Both taken together, make the Patrimony of that famous Eccleſiaſtical Prince the Grand Lama, who is the Pope or Sovereign Pontiff of the *Tartars* that are not *Mohammedans*; but whether they or he ought to be eſteemed *Pagans* or *Chriſtians* is a Point that admits of much Diſpute, and ſhall therefore be diſcuſſed in another Place.

But the Muſk of *Tibet* is far preferable to that of *China* for two Reaſons; firſt, in *Tibet* this Creature feeds on Aromatic Paſtures, while in *China* he has nothing to ſubſiſt him but what is common; ſecondly, the Inhabitants of *Tibet* preſerve their Bladders or Cods of Muſk in the pure natural State, while the *Chineſe* adulterate all that come into their Hands. They dip them alſo into the Sea, or elſe expoſe them to the Dew; and having kept them ſome time, they take off the outward Membrane, and then cloſe them up; and this Muſk paſſes in the Country of the *Arabs* for Muſk of *Tibet*, becauſe of its Excellence.

The moſt exquiſite of all the ſorts of Muſk is what the Roebucks that yield it leave behind them when they rub themſelves againſt the Rocks on the Mountains; for the Humour whence it is generated, falling down towards the Navel of the Creature, it there gathers into a Quantity of turbid Blood exactly like Biles, and ſuch-like Tumours; when this Swelling is ripe, the Creature, ſenſible of a painful Itching, ſeeks out for Stones, and rubs himſelf againſt the ſame, till he opens his Sore, and the Contents run out. Now, as ſoon as this Matter falls from the Creature, it coagulates, the Wound cloſes, and the ſame kind of Humour gathers to a Head again as before.

In *Tibet* there are Men who make it their Buſineſs to collect this Muſk, and are very ready in knowing it; and having found it, they carefully collect it, and put it up in Bladders, and it is carried to their Kings. This Muſk is moſt exquiſite, when it has ripened in the Bladder of the Creature which bears it. It ſurpaſſes all others in Goodneſs, juſt as Fruit is better when it is gathered ripe from the Tree, than when it is pulled green.

There is ſtill another way of getting Muſk; they inſnare the Creature in Toils, and ſhoot him with Arrows; but it often happens, that the Hunters cut the Tumours of the Creature before the Muſk is elaborated; and in this Caſe it has at firſt an ill Scent, that prevails till the Matter is thickened, which ſometimes does not happen in a great while; but ſo ſoon as it coagulates, it turns to Muſk. This Muſk is a Creature like our Roebuck, his Skin and Colour the ſame, with ſlender Legs, a ſplit Horn, ſmooth, but ſomewhat bending withal; on each Side he has two ſmall white Teeth, which are ſtrait, and riſe above his Muzzle, each half a Finger, or ſomewhat leſs in Length, and in their Form not unlike the Teeth of the Elephant; and this is the Mark which diſtinguiſhes this Creature from other Roebucks[h].

53. The Emperors of *China* write to the Kings or Governors of Cities, to the Eunuchs, or Lieutenants, and their Letters are conveyed by Poſt-horſes, with a cut Tail, diſpoſed almoſt like the Poſts among the *Arabs*, in ſuch Order as every body knows.

Beſides what we have here related concerning the *Chineſe* Cuſtoms, it is uſual for the Princes, and even the People, to make water ſtanding. Perſons of Dignity, as the Vice Kings, and the principal Officers, have gilded Canes, a Cubit long, which are bored through; and theſe they uſe as often as they make Water, ſtanding upright all the time, and by this means the Tube carries the Water to a good Diſtance from them. They are of Opinion, that all Pains in the Kidneys, the Strangury, and even the Stone, are cauſed by making Water in a ſitting Poſture; and that the Reins cannot free themſelves abſolutely of theſe Humours, but by ſtanding to evacuate; and that thus this Poſture contributes exceedingly to the Preſervation of Health. They ſuffer their Hair to grow, for the Men will not round the Head of a Child when he comes into the World, as the *Arabs* do, for they ſay it cauſes a conſiderable Alteration in the Brain, and that their Senſes are very ſenſibly impaired thereby. They ſuffer the Head then to be all covered with Hair, which they carefully comb.

As for their Marriages, they obſerve the Degrees of Conſanguinity after this Manner: They are divided among themſelves into Families and Tribes, like the *Arabs*, and ſome other Nations; and they know each other by the Difference of their Deſcents. No Man ever marries in his own Tribe, juſt as the Children of *Thummim* among the *Arabs* take not to Wife a Daughter of the ſame Race of *Thummim*; and a Man of one Family eſpouſes not a Woman of the ſame. But, for Example, a Man of the Family of *Robayat* marries into that of *Modzar*; and in like manner a *Modzar* marries with a *Robayat*; they are of Opinion, that ſuch Alliances add to the Nobility of the Children, by increaſing their Alliances, and rendering their Families more powerful.

Here our Author makes, as it were, another Break in his Work, in order to paſs once more to the *Indians*, and their Cuſtoms. In ſpeaking of the Method purſued by the firſt Author, we obſerved, that the main Deſign of his Work was, by comparing the Manners of the *Indians* with thoſe of the *Chineſe*, to render them both better known to and more fully underſtood by his Countrymen. His Commentator therefore, with great Propriety, follows the ſame Track; and as he had conſulted both Books and Travellers to illuſtrate what had been ſaid of *China*, we ſhall find him as diligent in what regards *India*.

54. In the Kingdom of the *Balhara*, and in all the other Kingdoms of the *Indies*, there are certain Perſons who burn themſelves. This Cuſtom proceeds from their Notion of a Metempſychoſis or Tranſmigration, which they firmly believe as a Truth never to be diſputed. There are Kings, who upon their Acceſſion, obſerve the following Ceremony: They dreſs a great Quantity of Rice, and pour it upon Leaves of the Mouſa in Sight of the King; then three or four hundred Perſons come of their own Accord without the leaſt Conſtraint on the Part of the King, and preſent themſelves before him; after he has eaten ſome of this Rice, he gives a little of it to ſome of them as faſt as they come up to him one after another, and they eat it in his Preſence[i]. By eating of this Rice, they all engage to burn themſelves on the Day the King dies, or is ſlain; and they punctually fulfil their Promiſe, throwing themſelves into the Fire from the firſt to the laſt, ſo that not one of them is left behind.

When a Man is determined to burn himſelf, he firſt goes to the King's Palace to aſk Leave ſo to do, and having obtained it, he goes round the public Squares of the City, and proceeding afterwards to the Place where the Pile is heaped up with dry Wood, while round about it ſtand many Perſons who feed the Fire, ſo that it is very violent, and blazes prodigiouſly. At laſt the Perſon comes preceded by a Number of Inſtruments, and moves round the Place in the midſt of his Friends and Relations; during which ſome put upon his Head a Garland of Straw, or dry Herbs, which they fill with burning Coals, whereon they pour Sandarac, which catches Fire as ſtrongly as Naphtha; nevertheleſs, he continues the Proceſſion, although the Crown of his Head be all on Fire, and the Stench of his burnt Fleſh be ſmelt, not ſo much as changing Countenance in the leaſt, or betraying the ſmalleſt Senſe of Pain:

---

[h] We have formerly mentioned the Animal which produces Muſk, the Manner in which it is prepared, and the Value of that rich Perfume. At preſent we ſhall only remark, that the beſt Writers, ancient and modern, agree perfectly with our Author in Opinion, that the richeſt and higheſt flavoured Muſk is that of *Tibet*, or, as others call it, *Tumgage*; and this becauſe of the Aromatic Paſtures in that Land, ſuch as are no where elſe to be found. That the *Indian* Muſk comes next in degree of Fineneſs, if ſo we may term it, with what was brought to *Cabul*, and the other trading Towns of the *Indies* by Merchants, who carried it from *China* by Land, and diſpoſed of it throughout the Eaſt. That the *Chineſe* Muſk is worſt of all, not only becauſe the *Chineſe* adulterate it ſeveral ways, but alſo becauſe what is produced naturally in that Kingdom is not comparable to what is in *Thibet*. All this is confirmed by the Teſtimony of the learned *Golius*; and Father *Martini Teixeira* ſays, the Muſk that does not come from *China* is always the beſt; and that the Reaſon is, becauſe the *Chineſe* cannot find in their Hearts to let that or any thing elſe that paſſes through their Hands eſcape unadulterated. At preſent the Kingdom of *Boutan* is the greateſt Mart for Muſk; and thence it is, that the *Indian* Merchants fetch the beſt ſort of this Perfume, whether in the Cod, or out of it.

[i] This was a very old Cuſtom in other Parts of the World, as appears from what *Cæſar* tells us of the Ambacti amongſt the *Gauls*. In the *Indies* this Notion generally prevailed; for in the Iſland of *Ceylon* the King had always about him certain Noblemen, who ſtiled themſelves faithful to the King in this World, and in the next, and whoſe Cuſtom it was to burn themſelves when he died. *Barboſa* obſerves the ſame thing with reſpect to the *Naires*, a ſort of *Indian* Soldiers, who always periſhed with their Chief. In the Kingdom of *Tonquin*, when the King died, many of his Nobles deſired to be buried with him. In a Word, all the *Portugueſe* Writers confirm this, and give us many Inſtances in ſupport of it. The Term they make uſe of in their Writings, to expreſs this Act of devoting themſelves in ſuch a manner to a Monarch, is *Fazer ſe Amoucos*.

At laſt he comes to the Pile, throws himſelf into it, and is ſoon reduced to Aſhes[k].

55. A certain Perſon, to whom we give intire Credit, ſays, he beheld one of theſe *Indians* burn himſelf, and avers, that when he came near to the Pile, he drew out a Cangiar, and with it ripped down his Breaſt to the Rim of his Belly; and that this done, he with his left Hand pulled out a Flap of his Liver, and with the Cangiar cut a Piece of it, which he gave to one of his Brothers, talking all the time, and diſcovering an invincible Contempt of Death, and a wonderful Patience under his Torments, till at laſt he leaped into the Fire in his Paſſage to Hell.

56. The Perſon who affirmed this added, that in the Mountains of this Country there are *Indians*, who in Opinions and Manners differ but little from thoſe we call *Kaniſians* and *Jelidians*, and who are addicted to all manner of Superſtition and Vice. There is a great Emulation between theſe Mountaineers and the People on the Coaſt, the latter continually going up to the Mountains to dare the Inhabitants there to do as they do, and the Mountaineers on their Part as frequently coming down to the Coaſt with Defiances of the ſame Nature.

Among others, there once came down a Man on this Errand, and having gathered a Number of the Inhabitants of the Coaſt about him, who came as well out of Curioſity to ſee the Sight, as with Intent to imitate him, he told them to do what he was about to perform, or if they deſpaired of doing it, to acknowledge themſelves overcome. He ſat himſelf down then in a Place planted with Canes, and directed them to bend one of them down to the Ground. Theſe Canes are like our Sugar Canes, bend like them, and have a very large Stem; when they are pulled down they lie along, but when let go they riſe again with prodigious Violence. One of the largeſt of theſe he cauſed to be bowed down to his Height, and faſtened his Hair ſtrongly thereto, when taking in his Hand his Cangiar, which ſparkled like Fire, he ſaid to thoſe about him, I am going to cut off my Head with this Cangiar. As ſoon as it is ſevered from my Body, let go the Cane, and when it flies up with my Head, I will laugh, and you ſhall hear me. The People of the Coaſt had not Courage enough to imitate him. The Perſon who related theſe Things to us did it without Emotion or Wonder; and in our Times theſe Facts are very generally known, for this Part of the *Indies* is in the Neighbourhood of the Country of the *Arabs*, and we hear from thence every Day.

57. It is a cuſtomary Thing alſo for Men and Women of the *Indian* Blood, to deſire thoſe of their Family to throw them into the Fire, or drown them when they are grown old, or perceive themſelves ſink under the Weight of their Years, firmly believing that they are to return in other Bodies. They burn their Dead. It has often times happened in the Iſle of *Sarandib*, where there is a Mine of precious Stones in a Mountain, a Pearl Fiſhery, and other rare and extraordinary Things, that an *Indian* would come into the Buzar, or Market-place, with his Kris, as they call a kind of Cangiar they wear, made after a very particular Manner, and ſeize on the moſt wealthy Merchant there preſent, and holding his Kris to his Throat, leading him by the Veſt out of the City in the midſt of a Throng of People, while not a Soul of them dared attempt his Reſcue; for if any Attempt of this kind was made, the *Indian* was ſure to kill the Merchant, and make away with himſelf: When he had got him out of the City, he obliged him to redeem himſelf with a Sum of Money. This Outrage continuing, the Kings ordained that ſuch *Indians* ſhould be ſeized; but when they came to execute this Order, the *Indian* killed the Merchant firſt, and then himſelf: The ſame Misfortune befel many other Merchants; and after this Manner a Number both of *Arabs* and *Indians* periſhed: The Merchants therefore ſought after other Means to ſecure themſelves, and the *Indians* were no longer apprehended.

58. In the Mountain of *Sarandib* they find precious Stones of various Colours, red, green, and yellow, moſt of which are at certain Times forced out of Caverns and other Receſſes by Rains and Torrents. In theſe Places the King has his Officers to keep an Eye over thoſe who pick them up: Many Times alſo they are dug out of Mines in the ſame Manner as Metals; and they ſometimes find precious Stones in the Ore, which muſt be broken to get at them.

The King of this Iſland makes Laws, which are the Fundamentals of the Religion and Government of the Country; here are Doctors and Aſſemblies of learned Men, like thoſe of the *Hadithis* among the *Arabs*. The *Indians* repair to theſe Aſſemblies, and write down what they hear of the Lives of their Prophets, and the various Expoſitions of their Laws. Here is a very great Idol of the fineſt Gold, but concerning the Weight thereof Travellers are not agreed. Here alſo are Temples, where great Sums of Money are expended in Incenſe[l].

In this ſame Iſland there is a very great Multitude of *Jews*, as well as of many other Sects, even *Tanouis*, or *Manichees*, the King permitting the free Exerciſe of every Religion. At the End of this Iſland are Vallies of great Length and Breadth, which extend quite to the Sea. Here Travellers ſtay two Months and more in that called *Gab Sarandib*, allured by the Beauty of the Country, chequered with Groves and Plains, Water and Meads, and bleſſed with a wholeſome Air. This Valley opens upon the Sea called *Harkand*, and is tranſcendantly pleaſant. You there buy a Sheep for half a Dram, and for the ſame you purchaſe as much of their Drink as may ſuffice many Perſons. This Drink is made of Palm-honey, boiled and prepared with *Tari* (*Toddi*) or Juice, which runs from the Tree.

59. Gaming is the uſual Diverſion of the Inhabitants here; they play at Draughts, and their other principal Paſtime is fighting of Cocks, which are very large in this Country, and better provided with Spurs than Cocks commonly are; and, beſides this, the *Indians* arm them with Blades of Iron in the Form of Cangiars. Upon theſe Combats they bet Gold, Silver, Lands, and Farms, which are won by the Owner of the Cock that beats. They play alſo at Draughts, and venture great Sums upon this Game, but with ſuch Fury, that thoſe who have not wherewithal, Debauchees and deſperate People, often play away the Ends of their Fingers.

While they are at play, they have a Fire by them, and thereon a Pot of Walnut or Seaſame-oil (they have no Oil of Olives) and they place a little, but very ſharp Hatchet between them; when one of them has won a Game, the other lays his Hand upon a Stone, and the Winner cuts off the End of the Loſer's Finger with the Hatchet, and the Patient dips the injured Part into the boiling Oil to cauteriſe the Wound, and yet they cannot ſhake off this evil Habit of Gaming; on the contrary, they ſometimes perſiſt in it ſo obſtinately and ſo long, that before they part, they have all their Fingers thus mutilated. Some of them will take a Wick, and ſoaking it in Oil, apply it to ſome Member, ſet Fire to it, and let it burn, ſo that the Scent of the burnt Fleſh is ſmelt by thoſe who play with them, while the Parties themſelves betray not the leaſt Senſe of Pain.

There is much Debauchery in this Country, as well among the Women as among the Men, for they are laid under no Reſtraint. It runs ſo high, that ſometimes a foreign Merchant, juſt arrived from Sea, ſhall ſend for the Daughter of a King of the Country, and ſhe ſhall come to him to the fiſhing Grounds, with her Father's

---

[k] There are many modern Authors who atteſt every Circumſtance mentioned in this Account; but it muſt be acknowledged, few beſides Women burn themſelves; and that the *Bramins*, who were wont to behave with ſo much Conſtancy on ſuch Occaſions, are now content to die in the ſame way with other Men; and even the Women, generally ſpeaking, are far enough from that Spirit of Heroiſm for which they were ſo famous in former Ages. They burn themſelves, indeed, with the dead Bodies of their Huſbands, as in Times paſt, but not with ſo good a Will; nor would they do it at all, but that the Cuſtom of their Country, and the Power their Relations have over them, oblige them to it.

[l] It appears, that this Iſland, which is that of *Ceylon*, has been in all Ages famous for its immenſe Wealth and Riches. As to the Idol that our Author mentions, it is not impoſſible that the Prieſts of this Country might practiſe the ſame Art, which has been uſed at *Siam*, where they have a monſtrous Idol of Clay and Bricks, very artificially gilt, which was for many Ages ſuppoſed to be pure Gold; though it muſt be allowed, that there are few Countries where ſuch a golden Image might be looked for, with greater Probability, than in this Iſland, the People having been always equally remarkable for their Wealth and Superſtition.

Conſent and Privity; wherefore the *Mohammedan* Doctors of *Siraf* ſtrictly warn young People not to go that Way [m].

60. In the *Indies* there are heavy Rains, which the People of the Country call *Jaſara*; they laſt three whole Months during Summer, inceſſantly, Night and Day, and ſcarce does the Winter ſtop them. The *Indians*, to the beſt of their Abilities, prepare themſelves againſt theſe Rains ſome Time before they fall; and no ſooner do they come on, than they ſhut themſelves up in their Houſes, made of Wood and Cane, interwoven, and thatched with Leaves; they ſtir not out during all this Time, and no Soul is ſeen abroad, no, not even the Artificers, who now do their Work at Home; and during this Seaſon, they are ſubject to ſeveral Sorts of Ulcers in the Soles of their Feet, cauſed by the Damps. The Rains are the Life of the *Indians*; were they to fail, they would be reduced to the utmoſt Want, for their Fields, ſown with Rice, are watered only by Rains, and are rendered fruitful thereby; for if great Store of Water lie upon the Rice-grounds, they need no other Help either from Induſtry or Art; but when the Rains are plentifully poured down, the Rice flouriſhes abundantly, and even becomes much better in kind. It never Rains in this Country in the Winter.

61. The *Indians* have devout Men, or Doctors, known by the Name of *Bramins*. They have Poets alſo, who compoſe Verſes, ſtuffed with Flattery, in Praiſe of their Kings. They have alſo Aſtrologers, Philoſophers, Soothſayers, and Men who obſerve the Flight of Birds; and others who pretend to the Calculation of Nativities, particularly at *Kanuge*, a great City in the Kingdom of *Gozar* [n].

In the *Indies* there are certain Men called *Bicar* [o], who go all their Life-time naked, and ſuffer their Hair to grow till it hides their hinder Parts, and the reſt of their Body. They ſuffer alſo their Nails to grow ſo that they become pointed, and ſharp as Swords; nor do they ever cut them, but leave them to break and fall off as it happens; and this they obſerve as a religious Duty: Each of them has a String about his Neck, to which hangs an earthen Porringer, and when they are preſſed by Hunger, they ſtop at the Door of ſome *Indian* Houſe, and thoſe within immediately, and with much Satisfaction bring out Rice to them, believing there is great Merit in ſo doing, while they eat out of the Porringer and withdraw, never returning to make the ſame Requeſt, if not urged thereto by downright Want.

62. The *Indians* have many Laws and religious Precepts, by which they imagine they pleaſe God; of ſuch as theſe it is written in the Koran, *The Wicked are mighty in Pride.* One Part of their Devotion conſiſts in building of *Kans*, or Inns upon the Highways, for the Accommodation of Travellers, where alſo they ſet up a ſort of Pedlars, of whom the Paſſengers may purchaſe whatever they may happen to want [p].

They there alſo ſettle publick Women, ſuch as are in the *Indies*, who expoſe themſelves to Travellers; all which the *Indians* number among their meritorious Deeds. But they have beſides theſe in the *Indies*, publick Women called *Women of the Idol*, the Origin of whoſe Inſtitution is this; when a Woman has laid herſelf under a Vow, that ſhe may have Children, if it happens that ſhe brings forth a handſome Daughter, ſhe carries the Child to the *Bod* (ſo they call the Idol they worſhip) and there leaves her. When the Girl has attained a proper Age, ſhe takes an Apartment in this publick Place, and ſpreads a Curtain before the Door, and waits the Arrival of Strangers, as well *Indians*, or Men of other Sects, to whom this Debauchery is made lawful; ſhe proſtitutes herſelf at a certain Rate, and delivers her Gains into the Hands of the Idol's Prieſt, to be by him diſpoſed of for the Uſe and Support of the Temple [q]. We praiſe the almighty and glorious God, who hath choſen us to be free of the Sins which defile the Man involved in Infidelity!

Not very far from *Almanſin*, there is a famous Idol called *Multan*, whither they reſort in Pilgrimage from the remoteſt Parts, even from Diſtances of ſeveral Months Journey: Some of the Pilgrims bring with them ſome of the odoriferous Wood *Hud al Camruni*, ſo called from the City of *Camrun*; where they have an excellent Wood-Aloes, which they offer to this Idol, delivering it to the Prieſt of the Temple that he may burn it before his God. Some of this Wood is worth Two hundred *Dinars* the *Man* [r], and is commonly marked with a Seal to diſtinguiſh it from another Sort of the ſame Wood, but of leſs Value: It is uſual for Merchants to buy it of the Idolatrous Prieſts.

63. There are likewiſe among the *Indians* certain Men who make Profeſſion of Piety, and whoſe Devotion conſiſts in ſeeking after unknown Iſlands, or ſuch as are newly diſcovered, there to plant Cocoa-nut-trees, and to ſink Wells of Water for the Uſe of Ships that ſail to thoſe Parts. There are People at *Oman*, who croſs over to the Iſlands that produce Cocoa-nuts, carrying with them Carpenter's Tools, and having felled as much Wood as they want, they let it dry, and then ſtrip off the Leaves, and with the Bark of the Tree they ſpin a Yarn, wherewith they ſew the Planks together, and ſo build a Ship; of the ſame Wood they cut and round away a Maſt; of the Leaves they weave their Sails, and the Bark they work into Cordage: Having thus compleated their Veſſel, they load her with Cocoa-nuts, which they bring and ſell at *Oman*. Thus it is, that from this Tree alone ſo many Articles are derived, as ſuffice not only to build and rigg out the Veſſel, but to load her alſo when ſhe is compleated, and in a Trim fit to ſail [s].

64. The Country of the *Zinges* or *Negroes* is of vaſt Extent; they there commonly ſow Millet, which is the chief Food of the Negroes. Sugar Canes alſo they have, and other Sorts of Trees, but their Sugar is very black.

---

[m] This is very agreeable to that Severity of Manners, for which the *Mohammedans* were remarkable in theſe early Ages; and it ſhews how careful they were to preſerve the Morals of the younger ſort of People uncorrupted. It was upon the ſame Principle that the old *Spartans* did not admit of any Commerce at all, as deſiring rather to be known to Poſterity by the Fame of their Virtues than of their Wealth; and being more aſſiduous to tranſmit to their Deſcendants Freedom, and the Power of maintaining it, than fine Palaces; and that Ability of living luxuriouſly, which ends ſooner or later in abject Poverty.

[n] The Reader has been ſo fully informed of the State of the *Brachmans* among the ancient *Indians*, and of the Communities formed by them for the promoting of Science, that there is no Need of inſiſting long upon this Settlement of the *Bramins*, which, without doubt, was a Remnant of ſome ancient Univerſity in the ſame Place. Some of the *Arabian* Geographers aſſure us, that this City of the *Kanuge* lies between two Branches of the River *Ganges* in the Latitude of 27°, and in the Longitude of 131°. Other Eaſtern Writers inform us, that *Kanuge* is alſo a Royal City, the King of which is ſtiled the *Kanuge*, according to the common Cuſtom of the *Indies*. It is very difficult to ſay when or how this Kingdom and Univerſity was ruined; but at preſent it is very clear, that there is no ſuch Eſtabliſhment as in the Text is mentioned.

[o] Theſe are no other than the aſſociated *Bramins*, or *Indian* Pilgrims, or Penitents, mentioned by moſt Travellers, who relate very extraordinary Things with reſpect to the Auſterity of their Manners, and the Severity of their Penances, as the Reader will ſee in the ſubſequent Part of this Work.

[p] There are many Foundations of this ſort in the *Indies*, as well as in *Turky*, *Perſia*, and *Mogulistan*; not to mention the many Hoſpitals in the *Indies* for ſick Animals. *Thevenot* obſerves, that the Charity of the *Indians* of *Cabul* conſiſts in digging of Pits, or ſinking of Wells, and in erecting a Number of ſmall Receptacles on the Highways, for the Accommodation of Travellers.

[q] This infamous Practice is of old ſtanding in the Eaſt. *Herodotus* has a Story of this kind of the Women, who proſtituted themſelves in Honour of *Mylittia*, who, by the Analogy of the *Chaldee*, muſt be *Venus*; and the Tents or Tabernacles of theſe Women were much like thoſe deſcribed by our Author. In *Marco Polo* we read, that the People of the Province of *Cainda* did the ſame Thing, expoſing their Women in Honour of their Idols. *Tavernier* ſpeaks of a *Pagod* near *Cambaya*, whither moſt of the Courtezans of the *Indies* repair to make their Offerings, and adds, that old Women, who have ſcraped together a Sum of Money, buy young female Slaves, whom they train up to wanton Songs and Dances, and all the Allurements of their infamous Calling; and that when the Girls have attained their eleventh or twelfth Year, their Miſtreſs conducts them to this *Pagod*, under a Notion that it is a Happineſs for them to be offered and delivered up to the Idol.

[r] As this kind of Money is very often mentioned, both in the former Treatiſe and in this, it may not be amiſs to ſay ſomething of its Value: The Dinar is of very fine Gold, and according to the Proportion which that Metal bears now to Silver, that Coin ought to be reckoned at about nine Shillings; from whence we conceive at once the Value of the Copper Money of *China*, ſince a thouſand of theſe Copper Pieces were equal only to one Dinar; from whence it follows, that nine of theſe Pieces of Copper Money, called by the *Arabs* Falus, were worth about One Penny.

[s] This Paſſage is very ſingular, but the Facts contained therein are inconteſtably true; the Cocoa-Tree furniſhes every thing neceſſary for building and rigging ſuch Ships as are uſed in the *Indies*, and for a Cargo of conſiderable Value when built. The Body of the Tree furniſhes Plank, Maſts, Anchors,

Theſe People have a Number of Kings, who are always at War with each other. About their Kings they have certain Men called *Moheramin*, becauſe each of them bore their Noſe, and wear therein a Ring: They have Chains alſo faſtened about their Necks, and when they are at War and going to fight, they each take one End of his Companion's Chain, and paſs it thro' the Ring that hangs under his Noſe; two Men holds this Chain, and ſo prevent the reſt from advancing towards the Enemy till Deputies have been from Side to Side to negotiate a Peace; which if it is concluded, they take their Chains about their Necks again and retire without fighting: But when they once begin to unſheath the Sword, not one Soul of them quits his Poſt, but remains there 'till he is ſlain.

They have all of them a profound Veneration for the *Arabs*, and when they chance to ſee any of them they fall down before him, and cry, this Man comes from the Kingdom where flouriſhes the Date-bearing Palm, for they are very fond of Dates. Among theſe People there are Preachers who harangue them in their own Tongue, nor may the Catebs or Orators of any other Nation whatſoever be compared with them. Some of theſe profeſs a religious Life, and are covered with the Skin of a Leopard or Ape. One of theſe Men with a Staff in his Hand ſhall preſent himſelf before them, and having gathered a Multitude of People about him, preach all the Day long to them. He ſpeaks of God, and recites the Actions of their Countrymen who are gone before them. From this Country they bring the Leopard Skins called Zingiet, ſpotted with red and black, very great and broad.

65. In this ſame Sea is the Iſland of *Socotra*, whence come the *Socotrin* Aloes. This Iſle lies near the Land of *Zinges*, and near alſo to the Country of the *Arabs*, and moſt of its Inhabitants are Chriſtians, which is thus accounted for. When *Alexander* ſubdued the Kingdom of the *Perſians*, his Preceptor *Ariſtotle*, to whom he had by Letters communicated his Conqueſts, wrote back to him to deſire, that by all Means he would ſeek after the Iſland of *Socotra*, which afforded Aloes, an excellent Drug, and without which they could not make up the famous Medicament called *Hiera*: That the beſt Way would be to remove the Inhabitants thence, and inſtead of them plant a Colony of *Greeks*, that they might ſend Aloes into *Syria*, *Greece*, and *Egypt*. Accordingly *Alexander* gave the neceſſary Orders to diſpoſſeſs the Inhabitants, and to ſettle a Colony of *Greeks* in their ſtead. Then he commanded the Kings of the Nations who divided his Empire after he had ſlain the Great *Darius*, to execute the Orders he had iſſued out for the Preſervation of theſe *Greeks*: They remained then as a Garriſon upon this Iſland, till God ſent JESUS CHRIST into the World. When the *Greeks* of this ſame Iſle being informed thereof, embraced the Chriſtian Faith as the other *Greeks* had done before them, and in the Profeſſion of this Faith have they perſevered to this Day, as well as all the Inhabitants of the other Iſles.

In the former Book, no mention is made of the Sea which ſtretches away to the right, as Ships part from *Oman* and the Coaſt of *Arabia*, to launch into the Great Sea; but the Author deſcribes only the Sea on the Left, and in which is comprehended the Seas of *India* and *China*, which he ſeems to have particularly had in his Eye. In this Sea, which is as it were on the Right of the *Indies* as you leave *Oman*, in the Country of *Sibar* or *Shibr*, where Frankincenſe grows, and the other Countries poſſeſſed by the Nations of *Cedd*, *Hamyer*, *Joſham*, and *Theoteba*. The People in this Country have the Sonra in *Arabic* of very antient Date, but in many Things different from what is in the Hands of the *Arabs*, and containing many Traditions to us unknown: They have no Villages, and they lead a hard and a very miſerable Life [t].

The Country they inhabit extends almoſt as far as *Aden* and *Judda*, upon the Coaſt of *Yaman* or *Arabia the Happy*; from *Judda* it ſtretches up into the Continent as far as the Coaſt of *Syria*, and ends at *Kolzum*. The Seas in this Part divide by a Slip of Land, which God has fix'd as a Line of Separation between theſe two Seas, as it is written in the *Koran*: From *Kolzum* the Sea ſtretches along the Coaſt of the *Barbarians* to the Weſt Coaſts, which is oppoſite to *Yaman*, and then along the Coaſt of *Æthiopia*; from whence you have the Leopard Skins of *Barbary*, which are the beſt of all, and moſt ſkilfully dreſſed; and laſtly, along the Coaſt of *Zeilah*, whence you have Amber and Tortoiſe-Shell.

When the *Siraf* Ships arrive in this Sea, which is to the right of the Sea of *India*, they put into *Judda*, where they remain, for their Cargoe is thence tranſported to *Kehira* (or *Cairo*) by Ships of *Kolzum*, who are acquainted with the Navigation of the *Red Sea*, which thoſe of *Siraf* dare not attempt, becauſe of the extream Danger, and becauſe this Sea is full of Rocks at the Water's-Edge; becauſe alſo, upon the whole Coaſt there is no Kings, or ſcarce any inhabited Place; and, in fine, becauſe Ships are every Night obliged to put into ſome Place of Safety, for Fear of ſtriking upon the Rocks. They ſail in the Day-time only, and all the Night ride faſt at Anchor. This Sea moreover is ſubject to very thick Fogs, and to violent Gales of Wind, and ſo has nothing to recommend it either within or without.

66. It is not like the Sea of *India* or of *China*, whoſe Bottom is rich with Pearls and Amber-gris, whoſe Mountains of the Coaſt are ſtored with Gold and precious Stones, whoſe Gulphs breed Creatures that yield Ivory, and among the Plants of whoſe Shores are Ebony, Red-Wood, and the Wood of *Hairzan*, Aloes, Camphire, Nutmegs, Cloves, Sandal-Wood, and all other Spices and Aromatics; where Parrots and Peacocks are Birds of the Foreſt, and Muſk and Civet are collected upon the Lands: In ſhort, ſo productive are thoſe Shores of ineſtimable Things, that it is impoſſible to reckon them up [u].

Amber-gris which is thrown upon the Coaſt of this ſame Sea, is waſhed to Shore by the Swell: It begins to be found in the *Indian* Sea, but whence it comes is unknown. We only know that the beſt of it is thrown upon the *Barbary* Coaſt, or upon the Confines of the Land of *Negroes*, towards *Sibar*, and Places thereabouts: It is of a bluiſh-white, in round Lumps. The Inhabitants of this Country have Camels trained up to the Buſineſs which they mount, and go in ſearch of it by Moon-ſhine, and ride for that Purpoſe along Shore. Theſe Camels are broke to this, and as ſoon as they perceive a Piece of Amber-gris, they bend their Knees, and their Rider picks it up [w].

Anchors and Oars. That Subſtance like Thread, which covers the Nut, and which may be drawn out and ſpun, makes the moſt excellent Cordage in the World, inaſmuch as it never decays in the Water. The Anchors are not to be boaſted of, but they ſerve well enough for ſuch Veſſels. The Liquor in the Nut when fermented, becomes a kind of Wine; when ſour it is an excellent Vinegar, and diſtilled, it affords a ſoft, pleaſant Brandy. It is certain, that the Inhabitants of the *Maldives*, ſubſiſt chiefly on their Trade in Cocoa-nuts, Cocoa Plank, and the Cordage, made from this Tree; the Manufacture of which, they are better ſkilled in than any other People in the *Indies*.

[t] The *Arabs* beſides the *Koran*, have made Traditions relating to the *Mohammedan* Religion, which they received from the Companions of their Prophet and his Diſciples; from theſe Traditions and Stories, they form the Body of their Sonna, which therefore is very different in different Places; ſo that not only the Sonna of the *Perſians* differs from that of the *Arabians*, but that of the *Africans* varies from that of *Mecca*, and the *Arabians* of the Deſert: In a Word, the Sonna with reſpect to the *Mohammedans*, is pretty near the ſame Thing with the Talmud among the *Jews*; and it is owing to both, that there are ſo many different Sects, and ſuch a Variety of fabulous Notions amongſt the People of both Religions.

[u] This is at once a very magnificent, and a very juſt Account of the Wealth of the *Indies*, and it proves very plainly, that ſcarce any Part of its Riches were concealed from the *Arabs* at this Time; ſo that what ſome Writers report of the Deſigns formed by the Khaliffs and Sultans of *Egypt*, for making themſelves Maſters of the Coaſts of *India*, and even of its Iſlands, hath nothing in it abſurd or incredible.

[w] Amber-gris, or as it ought to be wrote Amber griſe, is a very rich Perfume, and it is certain that there is more of it, and in greater Perfection in the *Indian Sea*, than in any other of the whole World. How it is formed, or from whence it comes, is as great a Secret to us as it was to the *Arabs*. It is of different Colours, *viz.* dark-grey, light grey, black, and red; but the firſt is the moſt eſteemed, as having by far the richeſt Scent. What our Author reports of its being found in this Manner by Camels, is not very improbable; for the beſt Ambergris in the World is driven on the Shore of the iſland of Prince *Maurice*, and the *Dutch* aſſure us, that their Hogs ſmell it out at a great Diſtance, and run furiouſly to the Shore in order to devour it.

There is another ſort, which ſwim in great Lumps upon the Surface of the Sea, almoſt like the Body of an Ox, or a little leſs, and weigh a great deal. When a certain Fiſh of the Whale-kind, called *Tal*, ſees theſe floating Lumps, he ſwallows the ſame, and is killed thereby: Then they ſee the Whale floating upon the Surface, and inſtantly the Men who are accuſtomed to this kind of Fiſhery, and know when theſe Whales have ſwallowed Amber, go out to him in their Boats, and darting him with Iron Harpoons, they tow him to Shore, where they ſplit him down the Back and take out the Amber; what they find about the Belly of the Creature is commonly ſpoiled with the Wet, and contracts an unpleaſant Scent[x].

You may buy the Bones of this Fiſh of the Druggiſts of *Bagdat* and *Baſſora*. The Amber which has not been infected by the Ordure in the Belly of the Whale, is perfectly good: It is a uſual Thing to make Stools of the *Vertebræ* of the Back Bone of this Whale, called *Tal*. They ſay, that in a Village ten Leagues from *Siraf*, called *Tain*, there are old Houſes neatly enough built, the Lintels of whoſe Doors are of the Rib of this Whale. I have heard a Perſon ſay, that formerly one was thrown upon the Coaſt not very far from *Siraf*, and that going to view him, he ſaw People getting upon the Back of this Creature with Ladders, and that the Fiſhermen expoſed him to the Sun, ſliced away his Fleſh, and having digged a Pit, gathered up the Greaſe which was melted by the Sun, and that having drained off all the Oil, they ſold it to the Maſters of Ships. This Oil mixed up with another kind of Stuff, in uſe with Seamen, ſerves for calking of Ships to ſecure the Seams of the Planking, and to ſtop up Leaks. This Whale Oil is a valuable Commodity, and produces great Sums of Money.

67. Our Author propoſing next to ſpeak of Pearls, breaks out firſt, according to the Cuſtom of the *Arabs*, into the following pious Soliloquy, which I would not omit, becauſe it is a kind of Characteriſtick in their Manner of Writing, and may enable the Reader to account for ſuch Apoſtrophes in other Pieces of this Nature. Let us, before we ſpeak of PEARLS, and the Manner of their Formation, magnify the Great GOD, who in Wiſdom has created all Things out of Earth, and ſo faſhioned living Creatures, as that they produce their like. Wherefore for theſe Things which we know, and for many more which we know not, all Glory be unto the Almighty, and all Reverence paid unto his moſt holy and tremendous Name.

Pearls begin to formed of a Subſtance at firſt ſomewhat like the Plant called Anjedana, being in Size the ſame, in Colour and Figure pretty much alike, ſmall, thin, and tender, juſt like the Leaves of this Plant; at firſt it ſwims feebly on the Surface and ſticks to the Sides of Ships under Water, where in Time it hardens, grows and gets covered with a Shell. When theſe Oiſters become heavy, they fall down to the Bottom of the Sea, where they ſubſiſt after a Manner to us unknown. They appear no other than a Piece of red Fleſh, like the Tongue towards the Root, without Bones, Sinews, or Veins.

But there are various Opinions touching the Production of Pearls, for ſome ſay when it rains the Oiſters riſe up to the Surface, and that gaping, the Drops of Water they catch turn to Pearls. Others hold, they are generated in the Oiſters themſelves, which is moſt likely, and is confirmed by Experience; for moſt that are found in Oiſters are fixed, and move not. When they are looſe, the Merchants call them Seed Pearl: God alone knoweth how this Matter is.

68. Now this is the moſt wonderful Thing we have heard concerning the Subſiſtence of Oiſters. A certain *Arab* came formerly to *Baſſora*, and brought with him a Pearl worth a great Sum of Money; he ſhewed it to a Druggiſt of his Acquaintance, and, ignorant of the Value thereof, aſked him what he thought of it? The Merchant telling him it was a Pearl, the *Arab* aſked him what he thought it might be worth? and he valued it at a hundred Pieces of Silver. The *Arab* much aſtoniſhed at his Words, aſked if any Perſon would be willing to give him what he had ſaid it was worth: Upon which the Merchant counted him out a hundred Drams, and with this Money the *Arab* purchaſed Corn to carry back into his own Country. The Merchant on the other Hand brought the Pearl to *Bagdad*, and ſold it at a very high Rate, which enabled him afterwards to deal very conſiderably. This ſame Merchant declared that he had examined the *Arab* touching the Origin of Pearls, and that he delivered himſelf to the following Effect: "I was going along, ſaid he, by *Saman* in the Diſtrict of *Bahrein*, not very far diſtant from the Sea, and upon the Sand I ſaw a dead Fox, with ſomething at his Muzzle that held him faſt. I drew near, and ſaw a white glittering Shell, in which I found the Pearl I took. Hence he gathered, that the Oiſter was upon the Shore, driven thither by Tempeſt, which very often happens. The Fox paſſing by and leering at the Meat of the Oiſter, as the Shell ſtood open, jumped thereon, and thruſt in his Snout to ſeize the Fiſh, which in its Defence cloſing, locked him faſt, as has been ſaid; for it is a Property of theirs never to let go their Hold of any thing, except forcibly opened by an Iron Inſtrument at their Edges."

This is the Oiſter that breeds Pearls, which it as carefully keeps as a Mother her Child; when therefore it was ſenſible of the Fox, it withdrew, as to avoid an Enemy, and the Fox feeling himſelf ſqueezed, beat the Ground on each Hand till it was ſtifled, and ſo died. The *Arab* found the Pearl, and God would have it that he ſhould apply himſelf to the Merchant; a very happy Thing for him[y].

69. The Kings of the *Indies* wear Ear-rings of Stones ſet in precious Gold. They wear alſo Collars, of great Price, adorned with precious Stones of different Colours, but eſpecially Green and Red; yet Pearls are what they moſt eſteem, and their Value ſurpaſſes that of all other Jewels; they at preſent hoard them up in their Treaſures with their moſt precious Things. The Grandees of their Court, the great Officers and Captains wear the like Jewels in their Collars[z]; they dreſs in a half Veſt, and carry an Umbrella of Peacocks Feathers to ſhade them from the Sun, and are ſurrounded by thoſe of their Train.

There are certain *Indians* who never eat two out of the ſame Diſh, or upon the ſame Table, and would eſteem it a very great Sin if they ſhould. When they come to *Siraf*, and are invited by any of the conſiderable Merchants who are in that City, they muſt, though they are a hundred in Number, each have a ſeparate Diſh, and without the leaſt Communication with the reſt. The Kings and Perſons of high Quality have freſh Tables made for them every Day, together with little Diſhes and Plates wove of the Cocoa-nut Leaf, in which they eat what is prepared

[x] The Abbé *Renaudot*, in his Notes upon this Treatiſe, ſpeaks very ſlightly of this Story, and ſeems to think it fabulous. There is however no ſort of Cauſe for this Suſpicion; ſince this ſort of Whale is very often found in the *Weſt-Indian* Seas, and eſpecially on the Coaſt of *Bermudas*, and vaſt Quantities of Ambergris are taken out of its Guts. It is alſo very certain, that tho' the beſt of this Perfume is found in the *Indian-Seas*, yet Ambergris has been frequently found on the Shore even of our own Iſlands, as well as in ſome other Parts of *Europe*, and in *America* it is very common.

[y] I muſt confeſs this Story ſeems to me by far the meaneſt Paſſage in the whole Work, and all the Remarks upon Pearls are very low and trifling: But at the ſame time it muſt be allowed, that we know very little more about them than either the Ancients or the *Arabs*. What ſeems moſt probable is, that Pearls are not the natural Produce of any Oiſters; by which I mean, that they are an irregular and accidental Production, occaſioned by ſome Infirmity or Diſeaſe in the Fiſh. I am led to this Notion from two Reaſons: The firſt is, that when animal Subſtances begin to corrupt, they commonly ſhine, which perhaps may be the Effect of ſome inteſtine Motion; the other, that Pearl Oiſters are not eatable, but tough, taſteleſs, and very unwholſome.

[z] The Princes and the chief Inhabitants of theſe Countries were by this Time better acquainted with the Nature and Value of all ſorts of precious Stones than formerly they had been, and of theſe they had of all kinds from the Mines in the Iſland of *Ceylon*. It is remarkable that the *Arabs* have but one Word to ſignify coloured Stones, which is *Yacut*, or *Jacut*, which ſtrictly ſpeaking ſignifies a Jacinth; but to vary this, and to render it expreſſive of Rubies, Emeralds, and Saphires, they add the Name of the Colour to the Stone. It will be proper to make two Remarks upon this Subject before we leave it: The firſt is, that our Author is perfectly in the right in his Obſervation, that Pearls are more eſteemed in *India* than many other Parts of the World, and that they are more valued there in Proportion than any other kind of Jewels. Our ſecond Obſervation is, as to the carrying Emeralds thither from *Egypt*, which is a very plain Proof of the Truth of what we have often aſſerted, *viz.* that theſe Stones are not ſtrictly ſpeaking oriental, though they may, and indeed do, very often come to us from the Eaſt.

for their Subſiſtence; and their Meal once over, they throw the Table, the Diſhes and Plates into the Water, together with the Fragments they have left. Thus at every Meal they have a new Service. To the *Indies* they formerly carried the Dinars, called *Sindiat*, or Gold Pieces of the *Sind* and the *Dinar*, which there paſſed for three of ours and even more. Thither alſo are carried Emeralds from *Egypt*, which are ſet for Rings.

70. Theſe two authentick Pieces are of very great Uſe in filling up this Period of *Indian* Hiſtory, of which, till they appeared, we had no Memoirs at all. It is plain enough from the Account given us by the firſt Author, that Voyages from *Siraf* to *China* were not very frequent, till about his Time, for otherwiſe he would not have deſcribed that Navigation ſo particularly. But it appears no leſs clearly from the ſecond Treatiſe, that theſe long Voyages were grown into much greater Uſe between the Time the firſt Voyage was made, and this Commentary upon it was drawn up, for otherwiſe the ſecond Writer would have been but indifferently furniſhed with Materials, whereas we find that he ſtood in no ſort of Want of them, but was able to mention the Voyages and Travels of four or five different Perſons into *China* and the *Indies*, excluſive of the Author, whoſe Voyage gave Occaſion to this Diſcourſe.

The moſt remarkable of theſe was *Eben Wabab*, whoſe Adventures are equally ſingular and inſtructive, ſince from them it is very evident that the *Chineſe* Emperor, to whoſe Preſence he was admitted, had, as we obſerved, very perfect Intelligence as to the *Jewiſh*, *Chriſtian*, and *Mohammedan* Religions, and as to the Hiſtory of their Founders and Propagaters. We might indeed ſuſpect the Truth of this, if there were not ſome other Circumſtances in this Diſcourſe which render them not only probable but certain. I mean the Deſtruction of the Capital of *China* at that Time, which our Author calls the City of *Cumdan*, and which without Doubt was no other than *Nankin*, and *Canfu* or *Canton*, in which ſo many Thouſand *Jews*, *Chriſtians*, and *Mohammedans* were ſlain; a clear Demonſtration that Multitudes of all theſe Religions had been long before ſettled in that Empire, and conſequently the *Chineſe* Monarch had it fully in his Power to be well acquainted with all the Particulars beforementioned.

Neither does this Fact ſtand entirely upon the Credit of this Treatiſe, ſince an ancient Monument has been diſcovered in *China*, which plainly proves that Chriſtians from *Syria* were ſettled there in ancient Times[a], though none were to be found when the firſt Travellers from *Europe* went thither, which is as ſtrong a Confirmation of the Truth of what our Author relates, as in the Nature of Things can poſſibly be expected. The Miſſionaries alſo that were firſt ſent to *China* found there viſible Marks of Chriſtianity, though they found no Chriſtians. The *Jews* have been ſettled in that Empire for Time immemorial, and many of them for the Sake of Riches and Preferment have abjured their own Religion, and embraced the Opinions of the *Chineſe*, which is alſo an unqueſtionable Argument of the Truth of theſe Relations.

We may add to this the Conformity between the Accounts given by our Travellers and the beſt *Chineſe* Hiſtories, which never could have happened, if the former had not been in every Reſpect agreeable to Truth. All this is not only ſupported by our Knowledge of many of the Cuſtoms of theſe People, which remain to this Day the ſame with thoſe reported in theſe Relations, but they are ſtill more plainly verified by ſuch as are now no longer in Uſe, becauſe many *Chineſe* Writers, and Chriſtian Miſſionaries from them, take Notice of ſuch obſolete Cuſtoms, and inform us when they were laid aſide or began to grow into Diſuſe. On the whole therefore we may ſafely affirm, that theſe Treatiſes are free from all juſt Grounds of Suſpicion, and ought to be regarded as the earlieſt and beſt Accounts we have of this Empire and its Inhabitants.

They are, conſidered in this Light, of very great Uſe in many Reſpects, but more eſpecially in correcting thoſe Errors that have been introduced by Authors who depended more upon their own Conjectures than on any Light they received from Experience, endeavouring to impoſe upon their Readers their Notions of Things as Facts of undoubted Credit, of which it may not be amiſs to give a few Inſtances. Our Author is the oldeſt, and indeed almoſt the only *Arabian* Writer that mentions the *Chineſe* Drink, ſo univerſally uſed in our Days all over *Europe*, and known by the Name of *Tea*. He ſays, that it is an Herb or Shrub, more buſhy than the Pomegranate-tree, and of a more pleaſant Scent, but ſomewhat bitter to the Taſte. That the *Chineſe* boil Water and pour it in ſcalding hot upon this Leaf, and that this Infuſion preſerves them from all Diſtempers. This, to be ſure, is an imperfect Deſcription; but it is plain enough to evince, that nothing can be meant but the Plant we know by the Name of *Tea*; the ſame with the *Tcha Catyai*, or *Sini* of the Orientals.

The Tree which bears this Leaf is but ſmall, and ought to be reckoned among Shrubs. It has a pleaſant kind of violet Scent, is bitter to the Taſte, and it is common for them who are fond of it to imagine it doth them good, and preſerveth their Health. It is certain then, that Father *Trigaut*[b] is miſtaken, when he imagines it is but of late Date among the *Chineſe*, becauſe there is not, as he ſays, any Character in their Tongue to ſignify this Drink; for by the Teſtimony of the oldeſt of our Authors (who does not ſpeak of it as any new Thing, but as an Herb very much in Vogue with them; nay, to that Degree, that the Emperor thought fit to lay a Duty upon it) it appears, that the *Chineſe* have been addicted to it above eight hundred Years. Nor is it poſſible to believe with *Piſo*[c], that it grew a long Time wild and uncultivated, or that the *Chineſe*, or *Japoneſe*, have been but lately acquainted with its Virtues and the Manner of preparing it; which, he ſays, he was told by ſome *Dutch* Commander, who had been a long Time in the Country.

Father *Martini*, who has written more accurately of *China* than almoſt any other Perſon, ſays no ſuch Thing. He aſſures us, that it grows particularly in the Province of *Kiangnan*, or *Nankin*, where the beſt of it is. It is, adds he, a ſmall Leaf, perfectly like that of the *Rhus Coriarius*, or *Sumac* of the Curriers. It grows not wild, but is domeſtic, and cultivated; nor is it a Tree, but a Shrub, which ſpreads out in little Branches, with a Bloſſom very much like that of the Sumac, except that the former inclines more to a Yellow than the latter. It blows firſt in Summer, when it emits no great Scent; then it puts out a Berry, which is firſt green, and afterwards blackiſh. In the Spring it is when they gather the Leaf to make their *Tcha*, for then it is moſt ſucculent and tender. The Preparation of theſe Leaves conſiſts in gathering them, drying them by a ſmall Fire, rolling them upon a cotton Mattreſs, and packing them up in Tin-Cheſts or Boxes, for the ſake of preſerving them, and the Conveniency of tranſporting them. Such is the Account given us by this learned and accurate Writer, whoſe Work is ſtill deſervedly eſteemed, after ſo many later Accounts of *China*[d].

But as it is natural to ſuppoſe that every Man is the beſt Judge of what regards his own Profeſſion, I perſuade myſelf that my Readers will not be diſpleaſed at my inſerting here a very curious Paſſage from the Writings of the celebrated Doctor *Kæmpfer* [e], wherein he gives us a very entertaining Account of the Manner in which the Virtues of Tea were firſt diſcovered; neither is this at all foreign to my Subject, ſince it is an additional Proof of the Veracity of our Author, and clearly points out the Time when this Plant came firſt into Uſe among the *Chineſe*, and, at the ſame time, fully refutes the Objection that had been raiſed from this Herb's not having a proper Character aſſigned it by the Learned.

---

[a] This ancient Monument was firſt mentioned by the famous Jeſuit *Kircher*, who made many Miſtakes about it, and from thence there grew ſome Queſtions as to the Matter of Fact, which however upon Enquiry has been ſince clearly made out, and from thence it is evident, that the Chriſtian Religion was ſettled in *China* in *A. D.* 636. that is, upwards of two hundred Years before the Maſſacre at *Canton*, mentioned by the laſt of our Authors. We have no certain Accounts of the Chriſtians in *China* beyond the Tenth Century, and when the *Portugueze* came firſt to *Canton* under Don *Fernand Perez d' Andrada*, which was *A. D.* 1517, there was no ſort of Remembrance of Chriſtianity preſerved in that Empire; ſo that it is impoſſible to diſcover how this Religion was exterminated there, otherwiſe than for Want of Paſtors.

[b] *Lib.* 1. *p* 16. It is inconceivable how differently Writers have repreſented the Shrub that bears this Herb; for ſome ſay it is like a Roſe, others like a Currant-buſh.

[c] *Addit. ad Hiſt. Medicin. Bont.* 1. 6. Of like Credit, perhaps, is another Report current among the *Dutch*, as if they ſold the Sage of *Europe* to the *Japoneſe* at as high a Price as they gave for their Tea, and which has been received as an undoubted Truth by the Vulgar here.

[d] He reſided long in *China*, was a Man of great Fidelity and Candour, one who did not love to contradict others, or to impoſe his own Senſe of Things upon his Reader in a dogmatick Stile. His *Chineſe Atlas* is an admirable Performance, in which he has explained *Marco Polo*, corrected Father *Kircbir*, and informs us of a Multitude of Things relating to the Hiſtory of *China*, which, till the Publication of his Book, were utterly unknown.

" This Herb, *ſays he*, which the *Japoneſe* call *Tſjaa*, " has as yet no Character aſſigned it by the *Literati*, but " there are ſeveral in Uſe, ſome expreſſing only the Sound " of the Word, and others alluding to its Virtues. Among " the latter, that is to be accounted which gives it the " Likeneſs of the Eyelids of *Darma*, a holy Man, much " famed among them. There is ſomething very witty in " this Alluſion, and the Explanation of it deſerves the " greater Notice, becauſe it very plainly points out the " Time when this Herb firſt came into Uſe. Thus then " the Story is told.

" This *Darma* was the third Son of an *Indian* King, " whoſe Name was *Koojuwo*, and was the Head of a religious Order inſtituted by a famous *Indian* Saint, " called *Sjaka*, who flouriſhed in the Year before Chriſt " 1028, and to whom this *Darma* was the twenty eighth " Succeſſor in a regular Order. It ſo fell out, that in " *A. D.* 519, he was driven into *China*, where he applied " himſelf intirely to the teaching of Mankind the Knowledge of God, and, as he called it, of the only true Religion, and the ſole Means of acquiring Happineſs. He " was not content to enlighten the World only by his " Doctrine, but ſtudied to do it ſtill more by his Example, ſtriving by the Purity of his Life, the afflicting his " Body, and the bringing all his Paſſions under perfect " Subjection, to ſecure the Aſſiſtance of the Divine " Grace. He eat nothing but the wild Herbs of the " Field, and, which is eſteemed the very Perfection of " Holineſs in Man, ſpent his Nights without Sleep in " the Contemplation of the Supreme Being; for he conſidered it as the higheſt Degree of Piety to forego Eaſe " and Reſt, that his Thoughts might be wholly employed " in meditating upon God.

" It fell out, that after many Years watching, he was " ſo overcome as to fall faſt aſleep: His Vow thus violated, he was ſo afflicted when he awaked, that partly " to expiate his Crime, and partly to ſecure himſelf from " falling again into what he eſteemed ſo great a Weakneſs, " he cut off his Eyelids, as the Inſtruments of his Offence, and threw them in a Fit of holy Zeal upon the " Ground. The next Day coming to the Place where he " had inflicted this Puniſhment upon himſelf, he ſaw, with " Amazement, a moſt wonderful Transformation, for " behold each of his Eyelids had taken Root, and had " ſprung up into the Shrub called TEA, which hitherto " the World had never ſeen, or at leaſt Mankind were " unacquainted with its Virtues.

" By taking the Leaves of this Herb, but whether the " chewing them, or prepared by Infuſion, I cannot ſay, " he found a wonderful Chearfulneſs of Mind, and a Diſpoſition perfectly ſuited to his divine Meditations. As " he recommended the Uſe of this Herb to his Diſciples, " and as the Benefits derived therefrom were every- " where publiſhed, the Cuſtom of drinking Tea grew " quickly into Uſe among all ſorts of People; and the " mighty Virtues of this wonderful Herb became univerſally known and admired. Hence it is, that as hitherto no certain Character has been aſſigned for expreſſing the Herb *Tea*, and its Virtues, the Cuſtom of diſtinguiſhing it by the Figure of *Darma*'s *Eyelids* has " grown into Practice." So much ſays my Author for the Name of this Plant. The Story is plainly fabulous and extravagant [f]; but, like the Extravagancies of the Eaſt, full of Fire, and of that ſort of enthuſiaſtick Eloquence which conveys Ideas with ſuch Force as prevents their Impreſſions from ever wearing out of the Mind.

We learn likewiſe from the firſt of our Travellers, that at the Time he viſited their Country the *Chineſe* were perfectly well verſed in the Art of Pottery, and made a kind of Porcelain, as fine, as beautiful, and almoſt as tranſparent as Glaſs. It is certain, that for many Ages after this we had very dark and confuſed Accounts of this Matter; and the Stories we are told in almoſt all the Accounts we have of *China* upon this Subject have apparently the Air of Fables, and look as if they were impoſed upon their Authors by the *Chineſe*, on purpoſe to conceal from them the Truth. It is a Point now univerſally agreed, that the Porcelain formerly made in this Country was infinitely better than what has come from thence of late Years; but the *Chineſe* themſelves carry this much farther, and maintain, that the old China we ſo much admire is very far inferior to what was made in theſe early Ages.

Doctor *Kæmpfer* [g] tells us from the *Chineſe* Hiſtorians, that this moſt excellent Porcelain was made in a certain Iſland not far from *Formoſa*, or at leaſt of the Earth found in that Iſland, which, for the ſame Crimes in its Inhabitants, has long ago ſhared the Fate of *Sodom*, and lies now buried in the Sea. Yet it ſeems it is not ſunk ſo deep, but that their Fiſhermen and Divers frequently bring up Veſſels of this old Porcelain, which are ſold at a moſt extravagant Price in *China* and *Japan*, from a Perſuaſion that they not only keep Tea better, but even heighten its Qualities, and reſtore its Flavour when loſt by long keeping in other Veſſels.

I do not pretend to make myſelf anſwerable for the Truth of theſe Facts; but I mention them only to ſhew, that in the Opinion of theſe People, who are undoubtedly the beſt Judges of their own Manufactures, the Porcelain made at the Time our Author ſpeaks of was really ſuperior in Quality to any that has been made ſince. But if it ſhould be demanded, whether any Proof can be had of the Truth of this Fact, excluſive of what our Author delivers, I anſwer, there is. For in a Manuſcript preſerved in the *French* King's Library, the Credit of which cannot be doubted among the Articles of a noble Preſent ſent *Noureddin* by *Saladin*, ſoon after he became Maſter of *Egypt*, Mention is made of a Service of China-ware, conſiſting of forty Pieces of ſeveral kinds [h]. It is very true, that this Preſent was not ſent till the Year of the *Hegira* 567, which anſwers to the Year of our Lord 1171, which is ſome Ages after the Time in which our Author wrote; but then it is to be conſidered, that this China-ware had been long before brought to *Egypt*; and if it had not been much ſuperior in Beauty to what was brought from the ſame Country, even at that Time when the Trade to *Baſſora* was in a flouriſhing Condition, it would not have been thought worthy the Acceptance of ſo great a Prince; and therefore when thoroughly conſidered, this Objection proves, at leaſt in its neceſſary Conſequences, a Confirmation of the Fact.

---

[e] *Amænitat. Exotic. p.* 608. We ſhall have an Opportunity of inſerting this learned Writer's Travels to *Japan* in the ſecond Volume of this Work; but the Paſſage here cited is from another Work of his, which is excellent in its Kind, notwithſtanding what ſome *French* Critics have inſinuated to the contrary.

[f] Father *Charlevoix*, in his Hiſtory of *Japan*, blames Doctor *Kæmpfer* for inſerting this Story, which he calls a ridiculous Fable: but I beg Leave to ſay, that he had not well conſidered the Intention of the Parable, the Genius of the Eaſtern Nations, or the Eaſtern Languages; for if he had, he would probably have been of another Opinion. There is a wide Difference between Fables in Religion and Fables in Natural Philoſophy, eſpecially when they are known to be ſuch, and introduced with no other View than to convey uſeful Knowledge in an eaſy, familiar, and effectual Manner, all which were viſibly conſulted in the framing of this Story or Parable, which declares the Virtues of this Herb, by whom diſcovered, and when brought into Uſe.

[g] *Amænitat. Exotic. p.* 621. Our learned Author tells us, that the *Japoneſe* Name of this fine Porcelain is *Maats ubo*, and that the Iſland in which it was made was *Mauri ga Sima*. He aſſures us, that theſe Veſſels are of different Sizes, and conſequently of different Prices; the ſmalleſt are worth from twenty to one hundred Theils; but the largeſt and fineſt, which are generally bought for the Uſe of the Emperor of *Japan*, coſt three, four, or five thouſand Thiels or Thaels, of which there are about three in a Pound Sterling. This is very moderate in compariſon of what we are told by *Mandeſloe* in his Travels, *p.* 156, where he ſays, that the *Japoneſe* have Tea pots that coſt them between ſix and ſeven thouſand Pounds. There ſeem to be two Miſtakes in this; the firſt is as to the Veſſel, which was not a Tea-pot, but a Tea caniſter; the ſecond, as to the Sum, which was not Pounds, but Thaels.

[h] The Title of this *Arabian* Manuſcript is *Makrizi*, which was probably the Surname of its Author; but as to the particular Subject of the Book I can ſay nothing, the Paſſage I have mentioned from it being related by the Abbé *Renaudot*, in his Notes on our Authors, *p.* 200.

I have dwelt the longer upon theſe Inſtances, and have taken the more Pains to ſupport and confirm the Truth of them, becauſe I am perſuaded that an intire Credit is due to the Matters of Fact aſſerted by both of our Authors, and that conſequently we may abſolutely depend upon what they have delivered as to the State of *China* and the *Indies*, within this Period of Time; that is to ſay, from *A. D.* 833, to 950, or thereabouts. This being clearly eſtabliſhed, let us ſee what will follow from it. In the firſt place, it is moſt evident that theſe Eaſtern Countries were in a very happy and flouriſhing Condition, were governed by their own Princes, and knew not, generally ſpeaking, what it was to ſuffer by ſuch ſudden and violent Revolutions as have ſince happened in thoſe Parts. It muſt, however, be at the ſame time obſerved, that though their State was far better than it is now, yet both our Authors agree that it was beginning to decline, that the Dignity of their Princes began to ſink, the Severity of their Diſcipline to relax, and the Manners of their People to become much more corrupt than they had been.

In the next place, it is very evident, that in *China*, a Country ſtill more remote than the *Indies*, the People were in this Period very well acquainted with the Condition of their Neighbours, to whom they muſt alſo have been tolerably well known; and yet within the Space of two hundred Years, the Face of Things was ſo intirely changed, that the *Chineſe* loſt almoſt all Knowledge of us in *Europe*, and we of them, as from the ſubſequent Part of this Chapter will clearly appear.

Laſtly, we ought to conclude from the Conſideration of theſe Facts, from the State of Things in *China* and the *Indies*, and eſpecially from the Superiority of their Manufactures, that this Empire was in every reſpect in a much better Situation than in ſucceeding Times; that is to ſay, was better governed, more populous, the Induſtry of the People better conducted, and their Foreign Commerce far more extenſive than in the Ages immediately preceding the Diſcovery of the Paſſage thither from *Europe* by the *Cape of Good Hope*. The fixing all this firmly in the Reader's Mind, will contribute to his apprehending rightly all that follows, and will prevent his running into the oppoſite Vice of Incredulity, to avoid being thought credulous.

He will not be amazed when he hears of potent Princes that governed in the *Indies*, or in *China*, many hundred Years before we knew any thing with Certainty of thoſe Countries; he will not be aſtoniſhed at the Extent of their Territories, or what is reported of their prodigious Revenues; he will not be at a Loſs to account for the different Condition of Places, when firſt viſited by the *Europeans*, from that reported either by their own Hiſtories, or Traditions. On the contrary, he will plainly perceive, by comparing the Facts laid down in the ſeveral Sections of this Work, that all this is not only probable, but certain; and that the Notions which ſome great Critics have advanced to the contrary, were not ſo much founded in greater Learning, or ſuperior Abilities, as in ſtrong Prejudices in favour of their own Countries, and in high Conceits of their own Abilities.

In Things of this Nature, all abſtracted Reaſoning ought to be laid aſide, and we ought to draw our Concluſions from Facts only. If the *Indians* ſtopped the Progreſs of the *Aſſyrian*, *Perſian*, *Greek* and *Parthian* Empires, this is a ſtrong, or, to ſpeak fairly, an invincible Argument to prove, that their Government was then in its full Vigour. If we ſee the *Indians* now for the moſt part a broken, diſperſed, dejected, and deſpiſed People, preſerving, however, ſtill, in their Manners and Cuſtoms, viſible Marks of that Policy aſcribed to them by the *Greek* and *Roman*, as well as theſe *Arabian* Writers, we ought to conclude, that this Difference has been owing to mighty Revolutions in theſe Parts; after the Hiſtory of which we muſt enquire, and not pretend to take up with the Aſſurances given us by fanciful Men, that theſe People were never in a better Condition.

I do not however pretend by this to eſtabliſh by any means the Opinions entertained by ſome very great Men as to the Learning of the *Chineſe*; with regard to which our Travellers ſpeak very freely, and I think there is Reaſon to believe very truly, affirming, that in regard to the Sciences the *Chineſe* had very little Knowledge, that is, in compariſon of the *Arabs*, who at the time the laſt of our Authors wrote were very ſkilful in moſt Sciences; and though their famous Commander *Muſa*, who conquered *Spain*, was the firſt that delivered it in the Form of a Maxim, yet it is very probable that the *Arabians* had long before his Time thoſe Sentiments of the Progreſs of Science which he ſo happily expreſſed. *Wiſdom, ſaid he, deſcending from above, ſettled in the* Heads *of the* Greeks, *in the* Hands *of the* Chineſe, *and on the* Tongues *of the* Arabs. It plainly appears from hence, that what they moſt admired in *China* was the Induſtry of its Inhabitants, which was chiefly the Effect of their wiſe Government, derived to them, as indeed every thing of Conſequence they knew ſeems to have been, from the *Indies* [i]. All therefore that from the Authority of our Authors I infer is, that the political State of *China* was at leaſt as perfect anciently as it is at preſent in all its Branches; and not that they were better acquainted with Sciences than they are now.

71. The Reader, I perſuade myſelf, is by this time of the ſame Opinion with myſelf as to the Value of theſe ancient Writers, and would be very well pleaſed to proceed with as good Guides during the reſt of his Journey, which is, however, more than I can promiſe; but thus far I dare undertake, that he ſhall have as good Guides as are to be procured, and that the next Stage is the worſt in the whole Road. There is, however, a Neceſſity of going through it; for it is with Learning as it is in Travelling, there is no knowing of Things with Certainty by Reports. If we would be thoroughly ſatisfied, we muſt uſe our own Eyes; and to obtain a complete View of the *Indies*, we muſt be content to read Voyages and Travels in their natural Order. It is plain from what theſe Authors tell us, that the *Indies* in their Time were not much altered from what they were in the Days of the *Greeks* and *Romans*; whereas when the *Portugueze* came thither, they were quite in another Condition; we muſt therefore learn how this came to paſs. The Thing is difficult indeed, but it muſt be done, for otherwiſe we have hitherto been doing nothing; and to leave a large Gap in our Hiſtory in order to hurry on to modern Voyages, is to prefer Amuſement to Inſtruction, which is certainly what neither I nor the Reader aims at; and therefore I flatter myſelf that he will be very well pleaſed with the Revival of the Voyages and Travels that follow, and which have never hitherto appeared in an *Engliſh* Dreſs at all ſuitable to their Merit [k].

Hackluyt, our moſt ancient Collector, whoſe Pains can never be too much commended, gave ſuch as came to his Hands in the beſt manner he could, and was therefore very commendable in that reſpect. *Purchas*, who followed him, complains, however, with Reaſon, that theſe ancient Writers were ſtrangely diſfigured, and therefore he thought it neceſſary to reviſe and republiſh them, for which alſo he deſerves Praiſe; and there is no doubt he might have ſucceeded much better than he has done, if he had not followed the Humour of the Age in which he wrote, and affected, as he has done, to give a quaint and fanciful Turn to all that he tranſlated, inſtead of keeping cloſe to his Authors. This was chiefly owing to a Notion that then prevailed, that there were many Improbabilities and Abſurdities in their Writings; which, however, the Diligence of ſucceeding Times hath, in a great meaſure, diſcovered to have been a groundleſs and injurious Charge ariſing ſometimes from their having very bad Copies of the Authors they uſed, at other Times from the Ignorance of thoſe who undertook to tranſlate them either in the Languages in which they were wrote, or as to the Subjects which were handled in them.

---

[i] The Progreſs of Science from the *Indies* to *China*, and from thence to *Japan*, is very natural and agreeable to ancient Hiſtory; but it does not at all follow from thence, that the *Indians* received their Learning from the *Egyptians*. It is far more probable that they had it from the *Chaldeans*; for Mankind ſpread originally from that Country, as *Moſes* informs us, and as all ancient Hiſtory plainly proves. From *Chaldea* to the *Indies* theſe firſt Colonies might have eaſily proceeded by Land; whereas their own Writers allow, that the firſt Attempts by the *Egyptians* towards the Conqueſt of *India* were by Fleets fitted out by the *Red Sea*.

[k] We have very full Proof of the Truth of this Obſervation from what *Purchas* ſays in his Pilgrims, Vol. III. p. 65. of *M. Polo*, where he has theſe Words. "I found this Book tranſlated by Maſter *Hackluyt* out of the *Latin*. But where the Blind lead the Blind, both fall: As here the "corrupt *Latin* could not but yield a Corruption of Truth in *Engliſh*. *Ramuſio*, Secretary to the Decemviri (he means the Council of Ten) in "*Venice*, found a better Copy, and publiſhed the ſame; whence you have the Work in a manner new, ſo renewed, that I have found the Pro-"verb true, that it is better to pull down an old Houſe, and to build it anew, than to repair it; as I alſo ſhould have done, had I known that "which in the Event I found. The *Latine* is *Latten* (that is, a ſort of Tin) compared to *Ramuſio*'s Gold, and he which hath the *Latin* hath but "*Marco Polo*'s Carcaſe, or not ſo much, but a few Bones, yea, ſometimes Stones rather than Bones, Things diverſe, averſe, adverſe, perverted "in Manner, disjointed in Manner beyond Belief. I have ſeen ſome Authors maimed, but never any ſo mangled, and ſo mingled, ſo prefect, "and ſo abſent, as this vulgar *Latine* of *Marco Polo*; not ſo like himſelf as the three *Polos* were at their Return to *Venice*, where none knew "them, as in the Diſcourſe ye ſhall find, &c."

It deſerves alſo to be conſidered, that the firſt Voyagers into any remote Country muſt lie under great Diſadvantages, becauſe they report Things abſolutely unknown before, and which, for that Reaſon, appear monſtrous and incredible; whereas, in Proceſs of Time, and after various Perſons have viſited the ſame Place, the Publick begins to grow familiar with their Relations; and having received repeated Teſtimonies as to the Truth of ſtrange Facts, renounce the Prejudices that were conceived againſt them at the Beginning. It is for this Reaſon that many learned Men abroad, but particularly *Ramuſio* in *Italy*, and *Bergeron* in *France*, have taken ſo much Pains to examine, correct, and ſet forth in a moſt perfect Manner, many of theſe old Writers; which after the Care they have taken about them, appear to ſo great Advantage, that they ſcarce ſeem to be the ſame that were known to us formerly in ſo wretched a Condition [1].

But if ſuch Treatiſes are liable to a bad Reception at their firſt Appearance, their Credit increaſes with Poſterity, and there is very good Reaſon for recurring to the firſt Voyages, as we do to the firſt Editions of Books, to ſee how Things ſtood at the Beginning. Such Writers are, generally ſpeaking, the moſt curious and the moſt exact; for being extremely ſtruck with every thing they ſee and hear, they are more vigilant in their Searches, and more particular in their Relations, than thoſe that follow them, ſuch taking it for granted, that what is common in remote Countries has been already reported by others, and will not give themſelves the Trouble of ſetting down any thing that is not marvellous or extraordinary. We ought not, likewiſe, to forget that ſuch Travellers as are ſent to viſit diſtant Countries, or who go thither purely out of Curioſity, and from a Deſire of ſeeing what others have not ſeen before, are much more likely to record exactly whatever they meet with, than ſuch as go afterwards into theſe Countries purely on the Score of Trade; and on their Return, perhaps, are perſuaded to oblige the World with an Account of what they have met with, compiled at a conſiderable Diſtance of Time, and conſequently very liable to Miſtakes and other Imperfections.

We may add to all this, that the firſt Sort of Authors are, generally ſpeaking, Men of better Capacities, and more capable of ſetting forth their Diſcoveries, than the latter; ſo that on the Whole, if we mean to be thoroughly acquainted with Things, and with all the Circumſtances relating to them, we ſhall read ſuch original Writers with much greater Pleaſure than thoſe Collections which have appeared in later Times, and which are frequently no way comparable to them, either for the Importance of Facts, or the Accuracy with which they are related.

It fell out in the Eaſt, as it fell out before in the Weſt; that is to ſay, the northern Nations poured in upon them as a Deluge, and bore down all before them. It was this Inundation of the *Tartars* which overturned, and, in a great meaſure, effaced the whole Policy of the Eaſt; ſo that in the thirteenth Century, the Empire eſtabliſhed by the Great *Tartar* Monarch *Jenghiz-Khan*, extended as far as *China* on the one Side, and into *Europe* on the other. His Succeſſors augmented his Dominions, and that in ſuch a Manner as to reach as far as the *Nile* one Way, and to the *Danube* and *Viſtula* on the other. Such an Extent of Dominion muſt appear to a conſiderate Reader a more formidable Empire than any yet ſpoken of; and the ſhort Space of Time in which it was raiſed, muſt render it ſtill more amazing: To ſay the Truth, all the great Monarchies in this Part of the World, large and powerful as they are, ought, ſtrictly ſpeaking, to be conſidered as Fragments only of this enormous Sovereignty, and as the Remains and Ruins of this prodigious Structure. All the *Tartar* Principalities in *Europe* and *Aſia*, the noble Empire of *China*, with ſo much of *Tartary* as belongs to it, the wide Dominions of the Great Mogul, ſome of the Kingdoms eſtabliſhed in the *Indian* Iſlands, the Kingdom of *Perſia* as it ſtands at preſent, together with the beſt Part of the Grand Seignor's Territories, fall under this Deſcription, and were once but ſo many Parts of the *Tartar* Empire, and we may from thence eaſily diſcern how much it imports us to have a competent Knowledge of the Riſe, Progreſs, and Declenſion of this over-grown Power.

But that this, however expedient, however neceſſary, might not break in too much on the Series of our Voyages, I have taken Care to ſelect a few out of the many ancient Travels that may anſwer both Ends; that is to ſay, may preſerve the Chain of our Narrations, according to the natural Order of Time, and alſo fulfil what is requiſite with reſpect to explaining the Hiſtory of theſe People, ſo as to bring the Whole into a reaſonable Compaſs, without depriving the Reader of any thing that is neceſſary for his Information, or curtailing the Authors that are given him, ſo as to put it out of his Power to judge of the Value of each, or to know what the Writer himſelf relates, and what has been inſerted by his Editors.

The firſt of theſe ſhall be the earlieſt Traveller next to our *Arabs*; I mean the famous *Jewiſh* Writer *Benjamin* of *Tudela*, in the Kingdom of *Navarre*, who travelled through a great Part of *Europe*, *Aſia*, and *Africa*, in the twelfth Century, in which we have not one Voyage beſides; and though his chief Deſign, as plainly enough appears, was to aggrandize his own Nation, however diſperſed over the Face of the Earth, and to keep up the Hopes of his Brethren, by repreſenting them as a numerous, wealthy, and flouriſhing People, notwithſtanding their Diſperſion; yet, in doing this, he has collected ſo many curious Circumſtances with regard to the Eaſtern Nations, and interſperſed his Travels with ſuch a Variety of hiſtorical Paſſages, to be met with no where elſe, that whatever Faults may be found with him, he will be always thought an Author worthy of Notice; though, to avoid Prolixity, we have inſerted only ſo much of his Work in the next Section, as has relation to the Subject of which we are treating. It will from thence however appear, that what is ſuggeſted by *Purchas*, the only Author that has attempted to publiſh him in our Language, as to the Impoſſibility of making his Treatiſe clear and intelligible, is not over-well founded, but that with due Care and diligent Attention, his Travels might be publiſhed entire in ſuch a Manner as to ſatisfy the moſt critical and inquiſitive Reader.

The next of theſe ancient Travellers ſhall be *William de Rubruquis*, a Monk ſent by the *French* King St. *Lewis*, to the then *Khan* of the *Tartars*, whoſe Hiſtory of his Journey through ſeveral Countries, then in a Manner entirely, and even now, but very imperfectly known, is addreſſed to that Prince, and written with a Spirit of Humility and Modeſty, and with ſuch plain Evidence of their Author's Veracity, as very fully juſtifies the Eſteem that has been always had of his Work. The third is *Marco Polo*, the *Venetian*, who travelled as well as *Rubruquis* in the thirteenth Century, whoſe Work has ſtood the Teſt of Time and the ſevereſt Criticks, and riſen by ſlow Degrees from the loweſt into the higheſt Credit. There are indeed very few Books that have borne ſo many Editions, or have had ſo much Pains taken about them; and indeed hardly any have deſerved it better, ſince purged from the Errors that had crept into the old Copies, and into the ſeveral Tranſlations made into different Languages, it appears to be as well diſpoſed, as well written, as curious, as entertaining, and as correct a Performance as any of its kind: And yet, to avoid the Trouble of comparing ſo many Copies and Tranſlations, it has been wholly omitted in our modern Collections, though the peruſing it is in a Manner abſolutely neceſſary to the underſtanding the ſubſequent Voyages to the *Eaſt-Indies*.

---

[1] The Quotation in the preceding Note from *Purchas*, will fully prove the Truth of this to the intelligent Reader.

The laſt of theſe old Writers taken into our Collection, ſhall be Sir *John Mandeville*, our Countryman, who, notwithſtanding all the Objections made to his Relation, deſerves much better Uſage than he has met with. This great Traveller flouriſhed in the fourteenth Century, and ſpent no leſs than thirty-three Years in travelling through the *Levant*, *Syria*, *Tartary*, *India*, *Cathay*, *Egypt*, *Libya*, *Ethiopia*, and other Countries. He compoſed the Hiſtory of theſe Travels in *Latin*, *French*, and *Engliſh*, and yet we have never hitherto had his Work ſet in ſuch a Light as might bear reading with Pleaſure; I had almoſt ſaid, and it would be no more than Truth, with Patience; and at the ſame time it has been reſpected and well eſteemed abroad. There are indeed Abundance of ſtrange Stories and incredible Paſſages in his Work, which we do not pretend to juſtify or impoſe upon the Reader, but there are others worth knowing, and to be met with no where elſe.

The Trouble which neceſſarily attends freeing theſe Authors from the Rubbiſh under which they have been buried, and recovering ſo much of their perſonal Hiſtory as is requiſite to give Light and Life, Spirit and Intelligence to their ſeveral Labours, has been not a little; but when one conſiders how pious an Act it is to vindicate the Memory of great Men deceaſed, who thought no Pains too great for the Service of Poſterity; and how ready the preſent Age is to encourage all Attempts of this kind, a Man goes through his Taſk with Pleaſure. It is our Happineſs to live in Times more enlightened, in which all the Sciences are better underſtood than when thoſe Authors lived and wrote; but the Contemplation of our Advantages ought to diſpoſe us to a charitable Condeſcenſion, and a Diſpoſition to excuſe Infirmities, not ſo properly in them as in the Ages in which they flouriſhed, and from which therefore they could not be exempt, eſpecially when we reflect, that to their Attempts we owe the Splendor that has ſucceeded, and that without the Struggles made by them we muſt have been in the ſame Region of Darkneſs ſtill.

SECTION XIX.

The Travels of Rabbi Benjamin, *the Son of* Jonas *of* Tudela, *through* Europe, Aſia, *and* Africa, *from* Spain *to* China, *from the Year of our Lord* 1160 *to* 1173.

From the Latin *Verſions of* Benedict Arias Montanus, *and* Conſtantine l'Empereur, *compared with other Tranſlations into different Languages.*

1. *A ſuccinct Account of* Benjamin *of* Tudela, *the ſeveral Editions and Tranſlations of his Work, and the Reputation it has acquired.* 2. *The Objections that have been made to the Credit of our Author, and the true State of that Queſtion.* 3. *The Manner in which we propoſe to give the Subſtance of theſe Travels to the Reader.* 4. *The Deſcription of the City of* Conſtantinople, *the Court of the* Greek *Emperor, and other Things remarkable there, in the Words of* Benjamin *of* Tudela. 5. *A ſuccinct Account of his Travels from* Conſtantinople *to* Balſora *or* Baſſora. 6. *His Journey from thence to the Frontiers of* Perſia, *to the City of* Aria; *and his Account of the Tomb of the Prophet* Daniel. 7. *The Hiſtory of the celebrated* David El Roi, *a Native of* Aria, *who ſet up for the Meſſiah, induced the* Jews *to revolt from the King of* Perſia; *of the Miracles ſaid to be performed by him, and of his deplorable End.* 8. *The Route from* Aria, *and the Mountains of* Haphton *to the Mountains of* Niſbon *and the River* Oxus, *by* Hamadan *and* Iſpahan. 9. *Deſcription of the Mountains of* Niſbon, *or* Niſbor, *inhabited by the Tribes of* Dan, Zebulon, Aſhur, *and* Naphtali. *The Hiſtory of the War between the Copheral* Turks *and the* Perſians, *together with an Account of Rabbi* Moſes. 10 *Return to* Chuzeſtan, *Deſcription of the Iſland of* Nekrokis, *of the Pearl Fiſhery, of ſeveral Countries in the* Indies, *of the diabolical Practices of the Natives, and finally of the Frozen Sea, or the Sea of* China. 11. *Route from* Gingala *into* Ethiopia, *and from thence to* Grand Cairo. 12. *A large Deſcription of the City of* Mitzraim, *or* Grand Cairo, *the State of the* Jews *in that Country, of the overflowing of the* Nile, *of the famous Column for meaſuring the Riſe of that River, the Fertility of the Country of* Egypt, *the Mouths of the River* Nile, *and the Situation of the ancient City of* Memphis. 13. *An Account of many other Cities in* Egypt, *a large Deſcription of* Alexandria, *and the principal Things therein, with the State of its Commerce at the Time of our Author's being there.* 14. *A conciſe Account of his Return into* Europe, *and going back into his native Country of* Spain. 15. *Remarks and Obſervations on the foregoing Travels.*

1. THERE are few Authors better known to the learned World than our *Benjamin*, called from the Place of his Birth *Benjamin* of *Tudela*, a very pleaſant Town in *Navarre*, on the Confines of the Kingdoms of *Caſtile* and *Arragon*. The *Jews*, who boaſt very much of our Author's Work, inform us, that he was the Son of Rabbi *Jonas*, who was ſettled at *Tudela*; but they do not acquaint us with the Year in which our Author was born, of what Profeſſion he was, or what induced him to travel. In ſhort, all that at this Diſtance of Time can be diſcovered on the Subject, amounts to no more than this, that he began his Travels, *A. D.* 1160, and that he ended them in 1173, which was the very Year in which he died.

Theſe Travels of his have been always in great Credit amongſt his own Countrymen, who never cite them but with the greateſt Applauſe; neither have there been wanting ſeveral very learned Chriſtians, who have been of the ſame Opinion, to which probably it might be owing, that from *A. D.* 1543, when it was firſt printed at *Conſtantinople*, we have had of this Book no leſs than ſixteen different Editions, and ſome of them by the ableſt Criticks.

The firſt Verſion of it that appeared in *Latin* was in 1575, by *Benedict Arias Montanus*, a Man of great Learning, and in high Reputation, who in his Preface paid great Compliments to the *Spaniſh* Nation on account of the Diſcoveries made by them in the moſt diſtant Parts of the World.

This, however, did not hinder *Conſtantine l'Empereur* from making another Tranſlation in 1633, with the *Hebrew* Text in the Margin, and the Addition of very learned Notes; notwithſtanding which, many great Criticks have teſtified an earneſt Deſire to ſee another and ſtill correcter Verſion, ſince, to ſay the Truth, there are ſome apparent Errors in this as well as in the former Tranſlation, occaſioned, as I conceive, chiefly by the Miſtakes that have been made by Tranſcribers in the Text, where we have many Names of Countries, Cities, and Princes, that never were heard of in any other Author, and therefore are with great

Reaſon believed to have come by ſome ſuch Miſtake into this; the rather, becauſe on comparing ſeveral Editions, ſome of theſe Errors have been detected and amended, which afforded us room to hope that ſome time or other ſo judicious a Critick may ariſe, as will be able to correct them all, and give us this Author in his genuine Purity.

2. But, notwithſtanding the great Reputation of our Author, ſome very conſiderable Writers, and thoſe too extremely well verſed in *Hebrew* Learning, have attacked this Work of his with much Vivacity. M. *Wagenſeil* for inſtance, who wrote a very learned Defence of the Chriſtian Religion againſt the Cavils and Aſperſions of the *Jews*, is pleaſed to ſay of this Writer, that whenever he meets with any thing that makes for the Honour of his Nation, he is not only careful to report it in its full Extent, but even ventures ſometimes to exceed the Truth [a].

The famous *Hottinger* deals as freely, or rather more ſo, with *Benjamin*; his Voyage, ſays he, is puffed up with *Jewiſh* Pride, and the ſole Aim of it is to deceive and miſlead the Ignorant into an Opinion, that obſcure and unknown Places are full of the Glory of the *Jews*. He adds farther, that there are many Fables and Contradictions in the Book, and ſtill more Stories that are reported upon very ſlender Grounds: Yet after all, he concludes, that our Author has many things in him that are not to be found elſewhere [b].

The very learned *Spanheim* gives the true Character of the Work in a few Words: It is, ſays he, pretty highly ſeaſoned with Fables; but there are many good Things in it for all that [c]. This is preciſely the Caſe; the *Jews*, and ſuch as are fond Admirers of *Rabbinic* Learning, have cried it up much beyond its real Merit; and others again have, for a particular Reaſon, run it down beyond all Meaſure; nay, they have queſtioned whether our Author ever travelled at all, and would perſuade us that he made this Book without ſtirring out of *Spain*; but they would have done well to have ſhewn us how he came by the Materials, which I think a much harder Taſk than to anſwer all their Objections.

His Countrymen, it ſeems, frequently quote this Book of *Benjamin*'s, to ſhew, that the *Jews* are not yet totally deprived of Power, but that there is ſtill a kind of Sovereignty exerciſed by ſome of their Nation over their Brethren in certain Countries of the Eaſt; which being ſuppoſed to contradict the famous Prophecy relating to the coming of Chriſt, theſe Criticks will have to be a Fable. But if *Benjamin* had never wrote, the *Jews* would be able to prove the Truth of this in ſtronger Terms [d] than it is aſſerted by him, and yet without overthrowing the Application of that Prophecy to *Jeſus Chriſt*; and therefore this is no Reaſon to me for depreciating the Work at all. He has certainly exaggerated ſome Things, and miſtaken many more. What then? we find in him many Things curious and entertaining, which we can find no where elſe.

3. Our Author in his firſt Chapter gives us an Account of his Travels by Land from *Saragoſſa* to *Marſeilles*. In his ſecond Chapter, he tells us that he embarked for *Genoa*, and proceeded from thence to *Rome*, of which he gives us a Deſcription. He went from that City through the Kingdom of *Naples* to *Otranto*, and ſailed from thence to the Iſland of *Corfu*, and then paſſed by Land through *Greece* to *Conſtantinople*, and in his Paſſage traverſed the Country of *Walachia* [e]. This takes up his fourth Chapter, but as there is nothing very extraordinary in this Part of his Work, and as we have no Room to ſpare, I thought it better to omit theſe Chapters than to abridge them, becauſe I muſt have given the Senſe of the Author in my own Words, which would not have put it in the Reader's Power to form any Judgment of the Writer's Stile or Manner of Writing. In his fifth Chapter he gives a long Account of the City of *Conſtantinople*, of the Court of the *Greek* Emperor, and of the State that Things were in at the Time of his being there, with many other curious Particulars, and therefore I have given this Chapter at large, accompanied with ſuch explanatory Notes as were requiſite, that I might afford the Reader a proper Specimen of this Performance, without treſpaſſing too much on his Time or my own.

4. “ From thence we travelled three Days Journey to
“ *Abiro*, ſeated upon the Sea-Shore; and travelling five
“ Days Journey more among the Mountains, one comes to
“ *Conſtantinople*, an exceeding great City, and the Head
“ of the Kingdom of *Javanites* [f], or thoſe called *Greeks*.
“ This is the principal Seat of the Emperor *Emanuel* [g],
“ whoſe Command twelve Kings obey; for every one
“ whereof there are ſeveral Palaces at *Conſtantinople*, and
“ they have alſo Fortreſſes and Governments, and unto
“ theſe the whole Land is ſubject. The Principal and
“ Chiefeſt is called *Apripus*, the ſecond *Mega Domeſtikutz*,
“ the third *Dominot*, the fourth *Mackducus*, the fifth *Ik-*
“ *nomus Megli*, and the reſt have Names like unto theſe [h].
“ The Compaſs of the City of *Conſtantinople* containeth
“ eighteen Miles, one half of it ſtandeth upon the Sea,
“ but the other half on the Continent, and it is ſeated up-
“ on two Arms of the Sea, into one of which the Sea
“ flows out of *Ruſſia*, but into the other from *Spain*, and
“ it is frequented by many Traders from the Provinces
“ and Countries of *Babylon*, *Senaar*, *Media*, *Perſia*, and
“ all the Kingdom of *Egypt* and Land of *Canaan*, and
“ the Kingdoms of *Ruſſia*, *Hungary*, and *Pſianki*, *Buria*,
“ *Lombardy*, and *Spain*.

“ The City itſelf is exceſſively populous, unto which
“ Merchants reſort out of all Countries, travelling thither
“ both by Sea and Land. It hath none to compare with it
“ in the World, except *Bagdat*, that mighty City of the
“ *Iſmaelites*. Here is the moſt famous Temple of *St. So-*
“ *phia*, and the Patriarch of the *Grecians* dwelleth here,
“ nor do they agree in Doctrine with the Pope of *Rome*.
“ There are in it alſo as many Altars in Number as Days
“ in the Year; but it hath an exceeding great Treaſure,
“ almoſt beyond all Eſtimation, by the Offerings and
“ Riches, yearly brought from divers Countries, Iſlands,
“ Caſtles, Forts, and Palaces, ſo that the Wealth of no
“ Temple in the whole World can be compared with the
“ Riches thereof; and in the Midſt of the Temple there
“ are Pillars of Gold and Silver, huge Candleſticks, Lant-
“ horns, Lamps, and other Ornaments of theſe precious
“ Metals, more than any Man is able to reckon. Next
“ adjoining to the Walls of the Temple, there is a Place
“ built for the Emperor's Diverſion, called *Hippodromus*,
“ where yearly, upon the Birth-day of JESUS of *Na-*
“ *zareth*, great Spectacles are publickly preſented, and

---

[a] *Not. ad Lipmanni Carmen Nizzachon in Tel. ign. Sat. pag.* 374. This Writer is induced to cenſure our Author, for the Reaſons I have afterwards aſſigned; that is, becauſe he thinks what *Benjamin* has advanced derogatory from the famous Prophecy in the 49th Chapter of *Geneſis*.

[b] *Hiſt. Eccl. Sect.* XII. p. 241.

[c] *Introd. ad Hiſt. Eccl.* Part II. Sæcul. XII. Sect. XIV. p. 370.

[d] It appears evidently from the *Koran*, that there were Principalities of the *Jews* in *Arabia* at the Time that *Mohammed* ſet up for a Prophet, which is certainly as ſtrong as any thing advanced by our Author, and is, notwithſtanding, a Fact that cannot be diſputed.

[e] The Manner and Stile of this Voyage is a proper Specimen of all the *Jewiſh* Writers, who uſe exactly the ſame Terms in their Narrations; and by affecting to keep cloſe to the Names of Nations and Cities mentioned in the Holy Scriptures, render their own Writings very perplexed and obſcure.

[f] This Term is made uſe of by the *Jews* to ſignify the *Greeks*, becauſe they conceive them to be the Deſcendants of *Javan*; it is their Manner of Writing, and we muſt be contented with it. It is true we might have given all this a modern Dreſs, but then it would have been no longer the Travels of *Benjamin* of *Tudela*, which was what we promiſed.

[g] This Emperor *Emanuel* is *Manuel Comnenes*, who aſcended the Imperial Throne *A. D.* 1143, and died in 1180. He was famous for his Treachery to the Chriſtian Princes engaged in the Holy War, but it is very certain that the Time of his Reign agrees exactly with the Time of our Author's viſiting the City of *Conſtantinople*.

[h] There cannot well be any thing more confuſed than this Paſſage of our Author is at firſt Sight, and yet it is not impoſſible to make tolerable good Senſe of it. *Benjamin* thought that as *Manuel* was an Emperor, his Miniſters and Governors of Provinces ought to be conſidered as equal in State and Dignity to Kings. There is no doubt great Difficulty in tranſcribing *Greek* Words by *Hebrew* Characters, eſpecially where a Perſon is not fully Maſter of both Languages, which was certainly the Caſe of our Author; and perhaps the Errors of the Work have been heightened as well as multiplied by ſuch as have copied it. *Apripus* in the Text very probably means *Præpoſitus*, or *Prime Miniſter*. *Mega Domeſtikutz*, is plainly the Corruption of Μέγας Δομέστικος, or Great Chamberlain *Dominot* ſtands for *Dominus*. *Macaducas* is put for Μέγας Δούκας, or Great Duke, and the laſt is intended for Οἰκονόμος Μέγας, or Lord High Steward.

there all Sorts of Men in all manner of Habits of the whole World appear before the King and Queen. Lions alſo, and Bears, Leopards, and wild Aſſes, are brought forth into the Place where theſe Spectacles are to be ſeen, that they may fight together, and Birds alſo after the ſame manner: And my Opinion is that in no Country of the World ſuch princely Sports are to be ſeen.

“ But this King *Emanuel*, beſides that Palace left him by his Anceſtors, hath built him another upon the Sea Shore, which they call *Bilbernæ*, the Pillars and Walls whereof he hath overlaid with beaten Gold and Silver, whereon he hath engraved all the Wars made by him and his Anceſtors; and he hath prepared a Throne there for himſelf of Gold and precious Stones, and hath adorned it with a golden Crown hanging on high by Gold Chains; the Compoſure whereof is equal with the Throne itſelf, ſo enriched with precious Stones and Pearls, that the Price thereof no Man is able to value; of ſo great a Luſtre, that without the Aſſiſtance of Light they ſhine, and may be ſeen in the Night.

“ Moreover there are ſuch valuable Things in the ſame Place, as were incredible if told; and Tributes are yearly brought into that Palace, wherewith the Towers are filled with ſcarlet and purple Garments, and Gold; ſo that the like Example of Building and Riches can no where elſe be found in the World. And it is affirmed, that the Revenue only of this City itſelf, gathered from the Markets, Haven, and Tribute of Merchants, amounted to twenty thouſand Crowns a Day. Furthermore, the *Grecians* themſelves, Inhabitants of the Country, are exceeding rich in Gold, and have Abundance of precious Stones, and are dreſſed in moſt ſumptuous Apparel, their Garments being made of Crimſon intermingled with Gold, or embroidered with Needle-work, and are all carried upon Horſes, as if they were the Children of Kings. The Country itſelf being very large, abounds with all Sorts of Fruits, and hath great Plenty of Corn, Fleſh, and Wine; nor is there a finer Spot in the whole World to be found. They are alſo learned, and ſkilful in the Diſcipline of the *Grecians*; but giving themſelves wholly to Pleaſure, they eat and drink every one under his own Vine and under his own Fig-tree. Of all the Nations which they call *Barbarians*, they have Soldiers to fight with the *Soldan*, King of the Children of *Thogarma*, who are commonly called *Turks*, becauſe they themſelves, through Idleneſs and Luxury, are become quite unfit for the Wars, and ſeem unto me more like Women than Men, through their exceſſive Love of Pleaſure [i].

“ But no *Jews* dwell within the City, for they are excluded from thence by an Arm of the Sea of *Sophia*; they are not ſo much as permitted to come into the City but by Boats, and that for the ſake of Commerce; and here are about two thouſand *Jews Rabbanites*, beſides five hundred *Karaites* on the other Side. There is a Wall to ſeparate them from the *Rabbanites*, that are the Diſciples of wiſe Men; and among whom *Abtalion* the Great, and *R. Abdias*, and *Aaron Cuſpus*, and *Joſeph Starginus*, and *Eliakim* the Governor, have the chief Authority. Amongſt theſe ſome are Artificers of ſilken Garments; but there are many Merchants, and thoſe too very rich. No *Jew* is there permitted to be carried on Horſe-back, except *Solomon* the *Egyptian*, the King's Phyſician, through whoſe Intereſt the *Jews* are comforted and eaſed in their Captivity, which they feel to be grievous; for all the *Jews* are very much hated by the *Grecians*, without making any Difference between the good and evil: But they are worſt uſed by the Tanners, who, while they dreſs their Skins, pour out the filthy Water into the Streets before their Doors. They are general oppreſſed with a grievous Yoke, and are inſulted and beaten in the Streets, enduring from every Hand abundance of Injuries. But among the *Jews* themſelves, ſome are rich, as I have ſaid, and good Men, and merciful, and obſerve the Commandments, who patiently endure the Miſery of Captivity. The Place wherein they dwell is called *Pera*.”

5. Our Author continued his Journey from *Conſtantinople* to the City of *Tyre*, from thence to *Jeruſalem*, and from thence through the *Holy Land*, of which he gives a very particular Deſcription, to the City of *Damaſcus*; and from thence to *Balbeck*, which is in the Neighbourhood of the ancient *Palmyra*, which he calls by its old Name of *Tadmor*, and aſſures us, that there were in it, when he paſſed through, two thouſand *Jews*. He gives us next a copious Account of the City of *Bagdat*, of the Court of the Khaliff, and of the Condition of the *Jews* in that City. Then he carries us into the Country of *Thema*, where he places a whole Nation of *Jews*, about which there have been great Diſputes; and ſome would have us believe, that the Whole is a Forgery. However that Matter be, as it no way relates to my Subject, I did not think it requiſite to trouble the Reader therewith, eſpecially as there are Stories enough of the ſame kind in the reſt of the Book. In his fifteenth Chapter, he acquaints us, that he proceeded to *Botzra* on the River *Tigris*, which is plainly *Balſora*, or *Baſſora*, a Place frequently mentioned in the preceding Part of this Work; and from thence he continued his Journey through *Perſia*, as I ſhall acquaint the Reader in his own Words [k].

6. “ The River *Samoura* is eſteemed the Limits of the Kingdom of *Perſia*, and near it ſtands a City of the ſame Name, wherein dwell fifteen hundred *Jews*. There is the Sepulchre of *Eſdras* the Scribe and Prieſt, who died at this Place in his Return from *Jeruſalem* to the Court of *Artaxerxes*. Our People have built before this Sepulchre a great Synagogue; and on the other Side the *Iſhmaelites*, i. e. the *Arabians*, or *Mohammedans*, have built a Moſque; ſo great is their Eſteem for *Eſdras*, and their Reſpect for the *Iſraelites*. It is on this Score alſo that the *Iſhmaelites* reſort hither to pray.

“ It is four Miles from hence to *Chuzeſthan*, which is the ſame with *Elam*, that great City of old; but it is now in ſome meaſure ruined and uninhabited. At one End, but in the midſt of Ruins, is *Suſa*, a Caſtle, and formerly the Palace of *Ahaſuerus*; ſome Remains of which are yet ſtanding. There are here ſeven thouſand *Jews* and fourteen Synagogues, before one of which ſtands the Tomb of *Daniel*. The River *Tigris* [l] runs through the City, over which there is a Bridge. All the *Jews* that live on one Side are very rich, have Shops extremely well filled, and carry on a great Commerce. Thoſe on the other Side the River are all poor, having neither Markets, Shops, Gardens, nor Orchards. The Senſe of their Condition threw them once into an Inſurrection, from a Notion that all the Glory and Riches of thoſe on the other Side the River, ſprung from no other Cauſe than their having the Sepulchre of the Prophet *Daniel* on their Side.

“ They demanded therefore that his Tomb ſhould be transferred to their Side; but the others vehemently oppoſing this, a War began, of which both Sides growing weary, it was agreed, that the Coffin of *Daniel* ſhould remain one Year on one Side the River, and the next Year on the other. This Treaty was obſerved till ſuch

---

[i] However ſharp or ſevere this Character of the People at *Conſtantinople* may ſeem, yet it is beyond all Queſtion very juſt and well founded, fully ſupports what we have delivered upon this Subject in the ſixteenth Section, and is at once a Mark of Veracity in theſe Travels, and of the Author's Capacity in judging of what he ſaw.

[k] Our Author's Travels, with the Remarks neceſſary to explain them, would, if delivered entire, take up a great many Sheets; and for this Reaſon it is, and that we may keep the Subject as much within Bounds as poſſible, that we take this Method of acquainting the Reader with the Contents of his Work.

[l] Our Author is a little out here in his Geography, for the River *Tigris* does not come near this City; the River he means was anciently called *Eulæus*, and in the modern Maps we find it deſcribed under the Name of *Coron*. It is, in all Probability, the ſame as before mentioned, which ſome Criticks will have to be a River of our Author's making; but the Truth of the Matter is, that the River *Coron* takes its Riſe near a Town called *Samira*, from whence he might hear it called the River of *Samira*, and ſuch an Error, conſidering the Times in which he lived, is not very conſiderable.

“ time as *Sanigar Shah*, Son to the great *Shah* of *Per-* “ *ſia*, who rules over forty-five Princes, cancelled it. He “ is called in *Arabic* Sultan *Phars-Al-Chabir*, which is as “ much as to ſay, great Emperor of *Perſia*. His Empire “ extends from the Mouth of the River *Samoura* to the City “ of *Samarcand*, and to the River of *Gozan*, the Province of “ *Giſhor*, including the Cities of the *Medes*, the Mountains “ of *Haphton*, and ſo to the Province of *Thibet*; in the “ Foreſts of which Country are found the Animals that “ produce Muſk. His Empire is four Months and four “ Days Journey in Extent[m].

“ When therefore this great Monarch *Sanigar* King of “ *Perſia* came to *Elam*, and ſaw them tranſporting the Coffin “ of *Daniel* from one Side of the River to the other, with a “ great Croud of *Jews* and *Iſhmaelites* upon the Bridge, he “ demanded what they were doing, and the Reaſon of their “ doing it; and being informed of what has been before “ related, he decided the Point thus. It is by no means “ decent, ſaid he, that the Remains of *Daniel* ſhould be “ treated in this manner; meaſure therefore to a Place “ that is at an equal Diſtance from both Sides, and there “ let the Coffin of *Daniel* be ſuſpended in a Glaſs Caſe, “ faſtened to the Middle of the Bridge by Chains of Iron, “ and let there be a ſpacious Edifice built in the ſame Place “ in the Form of a Synagogue, open to all People, whether “ *Jews*, or of other Nations that incline to come thither “ to ſay their Prayers[n]. As a ſtill ſtronger Mark of his “ Eſteem, that Emperor likewiſe forbad, by an expreſs Edict, “ that any Man ſhould take Fiſh out of the River for one “ Mile below, and another above, for the Reverence and “ Honour of *Daniel*.”

From hence to *Robad-bar* are three Days Journey, where dwell twenty thouſand *Iſraelites*, among whom there are very many Diſciples of the wiſe-Men, and alſo ſome of them very rich; but theſe live under the Power and Authority of a ſtrange Prince. In two Days Journey from thence you come to the River *Vanth*, where are four thouſand *Jews*, or thereabouts; but four Days Journey from the River lieth the Country *Molhat*, the Inhabitants whereof believe not the Doctrine of the *Iſhmaelites*, but they dwell in very ſtrong Mountains, and they obey an Elder, whoſe Seat is in the Country *Alcheſiſin*; and among theſe there are four Colleges of the *Iſraelites*, and they go forth to the Wars with them; nor are they ſubject to the Dominion of the King of *Perſia*, but live in high Mountains, from whence deſcending they invade the bordering Countries, and drive away Booties, and return again, fearing no Man; but the *Jews*, who dwell among them, are the Diſciples of the wiſe Men, and obey the Head of the Captivity of *Babylon*.

You travel five Days Journey from hence to *Omaria*, where are five-and-twenty thouſand *Iſraelites*; and it is the Beginning of the Synagogues of the Inhabitants of the Mountains of *Haphton*, which are known to be more than an hundred in Number; and in theſe Places the Country of *Media* beginneth; and theſe are of the firſt Captivity carried away by King *Salmanaſar*; but they ſpeak the *Chaldee* Language, and among them are the Diſciples of the wiſe Men, and the chief City *Omaria*, pertaining to the Kingdom of *Perſia*, within one Day's Journey; but they are under the Dominion of the King of *Perſia*, to whom they pay Tribute; and the Tribute appointed in all the Kingdoms of the *Iſhmaelites*, is for Males above fifteen Years old, one Golden Amir, which is in Value one *Spaniſh* Morabetine Piece of Gold and an half, or half a Crown of our Money.

7. It is now twelve Years ſince a certain Man named *David Elroi* aroſe in the City of *Omaria*, who was the Diſciple of *Chaſdai*, the Head of the Captivity, and of *Jacob* the honourable Head of the Aſſembly of *Levi*, in the Metropolitan City of *Bagdat*; he became very learned in the Law of *Moſes*, and in the Books of Doctrine, and alſo in all Wiſdom; in the Language of the *Iſhmaelites*, and in the Books of the Magicians and Inchanters; he therefore took it in his Head that he would raiſe Arms againſt the King of *Perſia*, would gather together the *Jews* who dwelt in the Mountains of *Haphton*, would war againſt the whole World, and go to *Jeruſalem* and win it by Aſſault; and that he might perſuade the *Jews* thereto, he ſhewed them lying and deceitful Signs, affirming that he was ſent from God to *Jeruſalem*, and to free them from the Yoke of the Nations, ſo that with many of the *Jews* he procured Credit unto himſelf, and was owned by them for their Meſſiah[o].

The King of *Perſia* hearing the Report of this Inſurrection, ſent for him to talk with him, to whom he went without any Fear; and it being demanded whether he was the King of the *Jews*, he boldly anſwered, that he was; and he was thereupon apprehended and caſt into the Gaol in which State Priſoners are kept all their Lives. This Priſon is in the City *Dabaſtran*, nigh the great River *Gozan*. After three Days a Council of the Princes and Miniſters being called by the King, in which they conſulted as to this Inſurrection of the *Jews*, *David* was preſent there, being eſcaped out of Priſon, no Man knowing thereof. When the King ſaw him, he demanded, *Who hath brought thee hither, or delivered thee out of Priſon?* “ Mine own Wiſ- “ dom, anſwered he, for I am not afraid of thee, or thy “ Servants.” Then the King cried out to thoſe about him, *Seize him! lay Hands on him!* To whom the Princes and Servants anſwered, that his Voice was heard by all, but he was ſeen by none[p].

The King wondering at his Wiſdom, was aſtoniſhed. *David* then cried out aloud, *Lo, I take my Way*; and he began to go before, the King following him, and all the Nobility and their Servants followed the King. When they came to the Bank of the River, *David* ſpreading abroad his Handkerchief upon the Waters, paſſed over dry, and at that time was ſeen of all. They endeavoured to purſue and take him with little Boats, which they attempted in vain; and thence concluded, that no Inchanter in the World might be compared to him. As for *David* he travelled that Day ten Days Journey, coming to *Omaria*; through the Virtue of the ineffable Name[q], he declared what had befallen unto him to their great Amazement.

But the King of the *Perſians* ſending Meſſengers unto *Bagdat*, informed the great Khaliff of the *Iſhmaelites* of this Matter, and requeſted that he would cauſe *David Elroi* to be reſtrained from ſuch Enterprizes, by the Head of the Captivity, and the chief Rulers of the Aſſemblies, otherwiſe he threatened total Deſtruction to all the *Jews* living in the Kingdom of *Perſia*. All the Synagogues of the Kingdom of *Perſia* falling thereupon into great Fear of the

[m] This pompous Account of an Emperor commanding over forty-five Kings is very ſuitable to the Genius of a *Jewiſh* Traveller; but the Difficulty is to find out who he is of whom all this is ſaid. We read in *Elmacinus* of a Prince of this Name, who was the Son of a King of *Perſia*, and flouriſhed about this Time; and therefore it is very probable, that this Deciſion is to be aſcribed to him in the Life-time of his Father, though *Benjamin* ſeems to attribute it to the Shah, or Emperor himſelf.

[n] This Circumſtance is not in itſelf very conſiderable; but in ſo large a Collection as this it was neceſſary to have a Writer ſo much talked of as our Author, and the Reader cannot think his Time thrown away in acquiring by this Inſtance the Power of judging of ſuch a Performance; for, as I obſerved before, the *Jewiſh* Authors all write alike.

[o] This Story, as extravagant as it ſeems, is really a Matter of Fact, and as ſuch is recorded by two *Jewiſh* Hiſtorians, *viz. R. Selomo Ben Virga*, and *R. David Gantz*, who place it in *A. D.* 1135, which, as ſome Criticks have obſerved, does not agree with the Date aſſigned by our Author, who ſays, it happened twelve Years before he was there. This, however, is no great Miſtake, even if we ſhould admit that it is our Author's Miſtake, tho' for my part I ſhould ſuppoſe it as eaſy for the other Writers to err in this particular. The whole, however, may perhaps be ſolved, by ſuppoſing that *Benjamin* copied the Account that he has given us from ſome Hiſtory of this Impoſtor written twelve Years after this Inſurrection. However it be, the Thing is of no great Moment, any more than the Difference between the Name mentioned by our Author, and that of *David El David*, which is uſed in the other Hiſtories.

[p] There are ſome little Variations in the Manner in which theſe Facts are told by the other Hiſtorians; but they are of no great Conſequence, and therefore I ſhall not trouble the Reader with them neither ſhould I have mentioned theſe Writers at all, but to convince the Reader, that this is not a Tale invented by *Benjamin*, as he might otherwiſe very readily imagine.

[q] Both the *Latin* Tranſlators have miſſed the Senſe as to this Name, which the *Jews* call ineffable, becauſe they are perſuaded that the true Pronunciation of the Name of God is loſt, or unknown; and they pretend, that whoever has the Secret of pronouncing it right, is able thereby to work Miracles. They likewiſe aſſert, that by this Means our Saviour wrought his; and though this be a very idle Conceit, yet it is worth the knowing, becauſe it ſhews plainly, that the *Jews* do not pretend to deny the Matters of Fact, but are forced to have Recourſe to this Evaſion, in order to juſtify their Incredulity.

Matter, ſent Letters therefore unto the Heads of the Captivity, and to the Heads of all the Aſſemblies in *Bagdat* to this Purpoſe: *Why ſhould we die before your Eyes, as well we as all the Univerſities ſubject unto this Kingdom? Reſtrain this Man, we beſeech you, leſt innocent Blood be ſhed.* Therefore the Head of the Captivity, and the chief Rulers of the Aſſemblies, wrote Letters unto *David Elroi* to the following Effect: *We give you hereby to underſtand, that the Time of our Delivery is not yet come, and that our Signs, which ought to precede that Deliverance, are not yet ſeen, and a Man is not made ſtrong through Pride; wherefore we enjoin you to abſtain wholly from ſuch Enterprizes and Attempts, otherwiſe ye ſhall be excommunicated, and cut off from all* Iſrael.

They alſo by Meſſengers advertized *Zachai Hanaſſi*, who was in the Country of *Aſſur*, and *Joſeph*, ſurnamed the *Seer*, *Burhan Alpelech* living there, that *David Elroi* might be reſtrained by Letters written from them, which was diligently purſued by them, but all in vain; for he would not forſake that wicked way, but perſiſted till a certain King of the *Togarmim* called *Zinaldin*, ſubject to the King of *Perſia*, ſent ten thouſand Pieces of Gold unto the Father-in-Law of *David Elroi*, and perſuaded him to end theſe Troubles, by privately killing his Son-in-Law, which, when he had undertaken to perform, he thruſt *David* through with a Sword in his Bed as he ſlept; and this was the End of all his Subtilty and Deluſions [r]. But even when he was dead the Anger of the King of *Perſia* was not appeaſed towards thoſe People of the Mountains, and other *Jews* ſubject to him and ſettled in his Dominion; and therefore they deſired once more Help from the Head of the Captivity, who going to the King himſelf, appeaſed him by mild and wiſe Speeches; and having preſented him with one hundred Talents of Gold, he ſo mollified him, that there was ever afterwards great Quietneſs through the whole Country.

8. From theſe Mountains before deſcribed you travel ten Days Journey to *Hamadan*, the principal City of the Country of *Media*, in which City there are about fifty thouſand *Jews*; and in that City over-againſt one of the Synagogues are the Sepulchres of *Mordecai* and *Eſther*. *Dabreſtan* is four Days Journey diſtant from hence, where four thouſand *Jews* dwell, nigh unto the River *Gozan*; but from thence you travel ſeven Days Journey to *Iſpahan*, a very great City, the Capital of this Country, and twelve Miles in Compaſs, wherein there are about twelve thouſand *Iſraelites*, over whom *Shallum* is appointed by the Head of the Captivity, as alſo over the Reſt of the *Iſraelites* who dwell in the Cities of *Perſia*. After four Days Journey you come to *Siaphaz* [s], the moſt antient in this Country, called *Perſidis* of old, from whence the Name was given to the whole Province, in which there are almoſt ten thouſand *Jews*.

From *Siaphaz*, in ſeven Days Journey, you come to the City *Ginab*, ſeated nigh the River *Gozan*, to which there reſort Merchants of all Nations and Languages, and where are about eight thouſand *Jews*. The fartheſt City of this Kingdom is the famous *Samarcand*; and five Days Journey from *Ginab*, where are fifty thouſand *Iſraelites*, over whom *Obdias* ruleth; and among them are many wiſe and rich Men. In four Days Journey from hence you come to *Thibet*, a capital City of the Province of the ſame Name, in the Foreſts of which are the Animals found that produce Muſk.

9. About twenty-eight Days Journey from thence lie the Mountains of *Niſbor*, which are ſituated near the River *Gozan*; and ſome of the *Jews* that inhabit *Perſia* affirm, that in the Cities of *Niſbor* dwell the four Tribes of *Iſrael*, carried away in the firſt Captivity by *Salmanaſar* the King of the *Aſſyrians*, viz. *Dan*, *Zebulon*, *Aſſur*, and *Naphtali*, as it is written, *And he carried them away into Lechalach and Habor, the Mountains of Gozan*, and the *Mountains of Media*. Their Country is extended twenty Days Journey in Length, with many Cities and Caſtles inhabited, all mountainous, the River *Gozan* running on the one Side; but the Inhabitants are abſolutely free, and are ruled by a certain Governor, whoſe Name was at this Time *Joſeph Amraela*, a *Levite*, and among them are the Diſciples of wiſe Men: They ſow and reap, and are at War with the Children of *Chus*, who dwell in the Deſarts. They are in League with the *Copheral Turks*, Worſhippers of the Winds, a People who lead their Lives in the Deſarts, neither eat Bread nor drink Wine, but feed on the raw Fleſh of Beaſts, as well clean as unclean; and theſe either new killed, and yet trembling with Life-Blood, or dried in the Air, but unboiled. They devour alſo the Limbs torn from Beaſts yet alive. They ſeem to want Noſes; but inſtead thereof, they have two Holes in their Faces, through which they breathe. They are Friends to the *Iſraelites* [t].

It happened about fifteen Years ſince, that invading the Country of *Perſia* with a great Army, they vanquiſhed the metropolitan City *Rei*; and having made a mighty Slaughter afterwards, utterly waſted it, and ſpoiled the Houſes and Fields, and carried away a prodigious Plunder, returning through the Deſarts, a Calamity which for many Ages was never felt in *Perſia*. The King of *Perſia*, vehemently enraged, ſaid, In the Days of my Anceſtors, no Army ever came out of this Deſart, therefore will I go in Purſuit of them and deſtroy them from the Earth. He aſſembled accordingly an Army for War, and ſeeking ſome Guide to whom the Places of that Nation were known, a certain Man offered himſelf, who affirmed, that he was of that Nation, and knew their Dwellings; but being aſked what Proviſion was neceſſary for the Army, he anſwered Bread and Water for fifteen Days, which you muſt ſpend in paſſing through the Deſarts. When they had marched theſe fifteen Days, the Army found themſelves deſtitute of Subſiſtance for Men or Beaſts, without ſeeing any thing of the Place whither they intended to go, or the leaſt Signs of an inhabited Country. The Guide was aſked for by the King, who ſaid to him, You ſee how well you have kept your Word; tell us where are our Enemies that you aſſured us you could diſcover? The Guide ſaid by way of Excuſe, I have loſt my Way; and the King thereupon loſing all Patience, ordered him to be put to Death, commanding at the ſame Time by Proclamation, that whoever had any Proviſions in his Army, ſhould bring them forth, and divide them with his Companions [u].

They then ate up all that they had, even to the Beaſts that carried their Baggage; and in this diſtreſſed Condition they proſecuted their March for thirteen Days more, till at laſt they arrived at the Mountains of *Niſbor*, inhabited by the *Jews*. The *Perſians* encamped themſelves among the Gardens and Orchards by the Side of Canals drawn from the River *Gozan*. As it was then the Seaſon of ripe Fruits, they ate what they thought fit, and made free with all they found, no body coming out to oppoſe them: But at a Diſtance they diſcovered among the Mountains ſeveral Hamlets, and ſome Forts, that looked like Places of Strength. The King of *Perſia* being informed of all this, ſent two of his Servants to diſcover what Nation it was that had ſettled in theſe Mountains, and directed them for this Purpoſe to paſs the River either by Boats, if they found any, or if not, by ſwimming.

---

[r] The Authors we have before cited tell us the ſame Story as to the Death of this Impoſtor, but with a Circumſtance that *Benjamin* has omitted, which is, that the *Jews* themſelves were obliged to raiſe the ten thouſand Pieces of Gold that were given as a Bribe to the Father-in-Law of *David*, for killing him when he was aſleep.

[s] All the Tranſlators and Commentators on our Author have been at a Loſs to conceive what Place he could mean by this; and yet I think the Difficulty is not quite ſo great as they repreſent it; for to me it appears very plain that this City was *Schiraz*, which anſwers exactly his Deſcription. As for Confuſion in Names, I have already aſſigned the Cauſe of it, which was his expreſſing, in *Hebrew* Characters, Words that theſe Characters could not expreſs, and in expreſſing which Words he was entirely governed by their Sound.

[t] This, without doubt, is a very odd Deſcription of theſe People; and yet it is not very far wide of the Truth, for modern Travellers aſſure us, that the *Kalmuc Tartars* have Noſes ſo flat that they are ſcarce to be diſtinguiſhed but by the riſing of the Noſtrils; and as to their Manners, our Author is not much out of the Way. The City he ſpeaks of as ruined by the People, was the great City of *Rey*, which makes ſuch a Figure in all the Eaſtern Hiſtorians; the ſame that in the Book of *Tobit* is called *Rhages*, and of which we ſhall give an ample Account in the next Volume.

[u] This Expedition is among the Singularities which render theſe Travels valuable; for I do not know that there is any Account of it to be met with elſewhere; and our Author tells us very honeſtly how he came by it; neither do I think that the Dexterity with which his Countrymen the *Jews* made their Court to both Parties, is a Circumſtance that in the Opinion of ſuch as are acquainted with that Nation, will render it at all improbable.

Theſe Men had not proceeded far in their Journey before they met with a Bridge that was very well built, and had a good Barrier; and on the other Side of the Bridge they ſaw a very large City: They immediately called out, and the Town's People coming to the Gate, demanded who they were, and to whom they belonged; but as they underſtood not each other's Language, they were forced to wait till an Interpreter was called, who underſtood the *Perſian* Tongue; he having put the ſame Queſtion, they anſwered, We are Servants to the King of *Perſia*, and we come to know who you are, and who is your Lord. The Townſmen replied, We are *Jews*, and not ſubject to any King or Prince of the *Gentiles*, but we have a Prince of our own. The *Perſians* then informed themſelves as to the *Copheral Turks*, and the *Jews* told them, that they were their Allies, and that whoever were their Enemies, they muſt regard as Enemies to themſelves. Theſe two Men returning to the Camp, and having reported to the King what they had diſcovered, he was very much at a Loſs how to proceed. The *Jews* on the next Day collected their Forces, and the Day following offered them Battle.

The King declined fighting, and addreſſed himſelf to the *Jewiſh* Chiefs in the following Words; I do not come to make War againſt you, but only againſt the *Copheral Turks* my Enemies: But if you proceed to commit Hoſtilities againſt me, I will revenge myſelf by putting to death all the *Jews* in my Kingdom; for I know that, as Things ſtand here, you will be too hard for me: But let me adviſe you to prefer Peace to War: Suffer me to proceed in my Expedition againſt the *Copheral Turks* my Enemies, and ſupply me and my Army, for ready Money, with what we want. The *Jews* having conſidered this Propoſition among themſelves, reſolved, out of regard to their Brethren, to yield to the King of *Perſia*'s Propoſal. The King therefore being admitted with all his Army into their Country, ſpent fifteen Days there, being honourably entertained among then.

But in the mean time the *Jews* declared the whole Matter by Meſſengers and Letters unto their Confederates. The *Turks* thereupon gathering their Forces together expected the Enemy at the Paſſage of the Mountains, and in a convenient Place for that Purpoſe they attacked and gave the *Perſians* ſo mighty an Overthrow, that the King's Army being ruined, they compelled him to return into his own Country with a very ſmall Number.

But it happened that a *Jew* of this Province, named *Moſes*, being ſeduced by a certain *Perſian* Horſeman, followed the King of *Perſia*, and when they came into *Perſia*, he was made a Slave by the ſame Horſeman. But when at a Time of publick Diverſion they exerciſed their Bows in the Preſence of the King, this *Moſes* appeared the moſt excellent Archer in *Perſia*; he was thereupon examined by an Interpreter, and openly declared to the King the manner of his being ſeduced, and his Condition, whereon he was preſently infranchiſed, cloathed with purple and ſilk Garments, and enriched with Royal Gifts; and was offered likewiſe, if he would embrace their Religion, great Riches, and the Government of the King's Houſe; which, when he courteouſly denied to do, he was placed by the King with *R. Shallom*, the Prince of the Synagogue at *Iſpahan*, whoſe Daughter alſo he married by Conſent of the Father. This very *Moſes* it was who told me all that I have related.

10. When I departed out of theſe Countries I returned into *Chuzeſtan*, through which the River *Tygris* runs, falling from thence into *Hodu*, or the *Indian-Sea*; and in its Paſſage thither encompaſſes the Iſland *Nekrokis* [w], near the Mouth thereof, which Iſland is in Extent ſix Days Journey. There is in it only one Canal of freſh Water; and they drink no other than what is gathered from the Showers, which is the Reaſon that Land is neither ſowed nor tilled; and yet it is very famous through the Commerce of the *Indians* and Iſlands ſeated in the *Indian Sea*, and Merchants of the Country of *Senaar*, *Arabia the Happy*, and *Perſia*, bringing thither all ſorts of Silk and purple Manufactures, Hemp, Cotton, Flax, and *Indian* Cloth; Wheat, Barley, Millet, and Rice in great Plenty, which they barter and ſell among themſelves: But the *Indian* Merchants bring alſo exceeding great Plenty of Spices thither, and the Natives act as Factors and Interpreters; and by this they live: But in that Place there are not above five hundred *Jews*. Sailing thence with a proſperous Wind in ten Days, I was brought to *Kathipha*, where are five thouſand *Jews*.

In theſe Places Pearls are found, made by the wonderful Artifice of Nature; for on the four-and-twentieth Day of the Month *Niſan*, a certain Dew falleth into the Waters, which being ſucked in by the Oyſters, they immediately ſink to the Bottom of the Sea: Afterwards, about the Middle of the Month of *Tiſri*, Men deſcend to the Bottom of the Sea, and by the Help of Cords theſe Men bringing up the Oyſters in great Quantities from thence, open and take out of them the Pearls [x].

In ſeven Days Journey from thence I came to *Oulam*, which is the Entrance of their Kingdom, who worſhip the Sun, and are prone to the Study of Aſtrology, being the Children of *Chus*. They are Men of a dark Complexion, ſincere Tempers, and of very great Fidelity in all Reſpects. They have among them this Cuſtom, that ſuch as come to them from remote Countries, when received into the Haven, have their Names ſet down in Writing by three Secretaries, who carry their Liſts to the King, and afterwards bring the Merchants themſelves, whoſe Merchandiſe being received into his Protection, the King directs them to be landed, and left on the Shore, where they remain without any Watch to keep them. There is alſo a Magiſtrate unto whom all Things that are loſt, or caſually removed, are conſtantly brought, and of him they are eaſily received by the Owner, ſo that certain Tokens be ſhewed whereby the loſt Thing may be made known; and this ſtrict Fidelity and honeſt Dealing is common through all the Kingdom.

In this Country, from *Eaſter* to the Beginning of the ſucceeding Year, the Sun ſhines with outrageous Heat; and therefore, from the third Hour of the Day until the Evening, all Men remain ſhut up in their Houſes. But about that Time Lamps being lighted, and ſet in Order throughout all the Streets and Markets, they work and exerciſe their reſpective Arts and Callings all the Night; for, as I ſaid, they cannot do it in the Day-time by reaſon of the exceeding Heat. It is in this Country that Pepper grows upon Trees planted by the Inhabitants in the Fields belonging to every City, and their proper Gardens are particularly aſſigned and known. The Shrub itſelf is ſmall, and brings forth a white Seed, which being gathered, is put into Baſons ſteeped in hot Water, and is ſet forth in the Sun, that it may be dried and hardened, acquiring thereby a black Colour. Cinnamon and Ginger are likewiſe found there, as well as many other kind of Spices.

The Inhabitants of this Country do not bury their Dead, but having embalmed their Bodies with divers ſorts of Drugs and Spices, they place them in Niches, and cover them with Nets ſet in Order according to their ſeveral Families; but their Fleſh drieth with the Bones, and when grown ſtiff, they ſeem as if they were alive, and every one knows their

---

[w] There is no Paſſage in the Travels of *Benjamin* more perplexed than this Deſcription of the Iſland of *Nekrokis*, about which all his Commentators are divided in their Sentiments. That which hitherto has been thought moſt probable is, that he means the Iſland of *Ormuz*, which, without doubt, was once a Place of great Trade, and was always deſtitute of Water. It is however more credible that he means the City and Country of *Baſſora*, becauſe he places it at the Mouth of the River *Tigris*, makes it the Centre of the *Indian* Commerce, and mentions preciſely the Commodities of which that City was the Staple.

[x] This Deſcription has alſo graveled many of the Commentators. The Word uſed in the *Hebrew* is *Bdellia*; and from the Deſcription there is no ſort of doubt that our Author means Pearls. The Account he has given of their Formation, how wild and extravagant ſoever it may appear, is however that which is embraced by the moſt learned of his Countrymen. Their Opinion, in few Words, is this; they hold, that at a certain Seaſon of the Year there is an oily, ſpirituous, and briny Subſtance, floats on the Surface of the Sea, which being ſwallowed by the Oyſters, or rather ſucked in, as our Author expreſſes it, turns afterwards to a Pearl. Thus far, without doubt, they have Truth on their Side, that ſuch a Subſtance is ſometimes ſeen floating on this and other Seas, the Drops of which, at firſt Sight, reſemble liquid Pearl.

Anceſtors from many Deſcents[y]. But as to their Religion, or rather Superſtition, they worſhip the Sun, and have many and great Altars built along the Coaſt about half a Mile without the City. Early in the Morning therefore they go in Crouds to pay their Devotion to the Sun, to whom upon all the Altars there are Spheres conſecrated, made by Magic, reſembling the Circle of the Sun; and when the Sun riſes theſe Orbs ſeem to be inflamed, and turn round with a great Noiſe[z]. They have every one a Cenſer in their Hands, as well Women as Men, and all together offer Incenſe to the Sun; ſuch and ſo great is their Folly. But among theſe People the *Jews*, who are ſettled, at the moſt amount to a thouſand Families in all; they are of as black a Colour as the Inhabitants themſelves, yet are nevertheleſs good honeſt Men, and ſtrict Obſervers of the Commandments of the Law of *Moſes*; and are not altogether unſkilful in the Books of Doctrine and Cuſtoms commonly called the *Talmud*.

From this Country in two-and-twenty Days I ſailed unto the Iſlands *Cinrag*, the Inhabitants of which worſhip the Fire, and are called *Dogbiim*, among whom twenty-three thouſand *Jews* are ſettled. The *Dogbiim* have Prieſts in every Place to officiate in their Temples; and theſe Prieſts are the moſt ſkilful Sorcerers and Inchanters in the whole World. Before every Temple there is a large Pit, in which a mighty Fire is lighted every Day, which they call *Albuta*, and they make their Children paſs through this Fire to purge them, and alſo caſt their Dead into the midſt of this Fire to be there burned: Nay, there are ſome of the Nobility who ſolemnly devote themſelves to be conſumed in this Fire alive.

When a Man, who has taken this Reſolution, declares ſuch his intended Devotion to his Acquaintance and Kindred, they preſently ſalute him in theſe Words: Bleſſed art thou, and it ſhall be well with thee. On the Day the Vow is to be performed, having firſt given an Entertainment, he is carried, if rich, on Horſe-back; but if he be poor, he is brought on Foot, accompanied with a Multitude of his Friends and others unto the Brink of the Pit, from whence beginning his Career, he leaps into the Fire, at which all his Friends and Kindred rejoice exceedingly, and with all ſorts of Muſick and Dancing, celebrate the Feaſt, until he be wholly conſumed. But the ſtrangeſt Part of the Story is to come; for three Days after two of the Chief Prieſts going unto his Houſe, command the whole Family to prepare for the Reception of their Father, who is coming to viſit them the ſame Day, and declare to them what they are to do on this Occaſion: They call to them certain Perſons to be Witneſſes out of the City, and bring ſomething reſembling the Deceaſed, of whom the Wife and Children demandeth how it fareth with him in the other World, to whom he anſwers, I came unto my Companions, by whom I am not received until I diſcharge my Duty to my Friends and Kindred. He then diſtributes his Goods to his Children, and orders all the Debts to be paid to his Creditors, and whatever is owing to him to be demanded, the Witneſſes ſitting down in Writing all his Inſtructions, of whom, notwithſtanding, he is not ſeen; and then ſaying he will go his way again, he vaniſheth[a]. By theſe Arts (in which there is nothing but Juggling and Colluſion) the Prieſts govern all.

In the Space of forty Days one may travel from hence by Land to the Frontiers of *Tzin*, that is, to the Borders of *China*, which is the very Extremity of the Eaſt. Some hold that this Country is waſhed by the *Nikpha*, or coagulated Sea, which is liable to prodigious Storms, by which when Mariners are ſurprized, they are caſt frequently into ſuch Streights, that not being able to go out, they are, after expending all their Proviſions, miſerably ſtarved to Death[b].

At firſt Sight there is nothing in this Paſſage that will ſeem very extraordinary to the Reader, and yet after a little Reflection it will appear of conſiderable Uſe. This coagulated Sea is no other than the icy or frozen Sea on the Coaſt of *Tartary* and *Ruſſia* to the North of *China*, and through which the North-eaſt Paſſage, ſo often ſought to little Purpoſe, is ſuppoſed to lie. It appears clearly from hence, that before this Time ſome Attempts had been made on that Side, and that ſeveral Ships had been frozen, and their Crews periſhed; whence the Oriental Name of *Nikpha*, or congealed Sea, which *Benjamin* gives it. It muſt be confeſſed, that our Author has a very romantick Way of expreſſing even the plaineſt Facts; but at the ſame time we ought to conſider, that this was not only the Vice of all the Writers of his Country, but of the Age in general in which he flouriſhed, ſo that he is the more excuſable; and at the ſame time the Reader will be ſo juſt as to remember, that we do not inſert his Travels as the beſt, but as the only Travels we have in this Period of Time, which muſt acquit us in the Judgment of the Impartial from all Objections that might be otherwiſe made from the Contents of this Performance. But to proceed.

11. It is three Days Journey to *Gingala*, where there are about a thouſand *Iſraelites*: From thence in ſeven Days you ſail to *Coulan*, where there are none of our Countrymen. It is from thence twelve Days Journey to *Zabid*, where there are ſome few *Jews*. It is from thence eight Days Journey to the *Indies* on the oppoſite Coaſt (by which our Author means *Ethiopia*). In this Country there are very high Mountains inhabited by Multitudes of *Iſraelites*, who are not under the Yoke of the *Gentiles*, but have here great Cities, and ſtrong Fortreſſes. They deſcend from thence in Parties into the flat Countries of *Abyſſinia*, which are under the Dominion of the *Edomites* (which is the Name the *Jews* beſtow upon all *Chriſtians*) where having acquired as much as they can by Plunder, they return with their Booty into the Mountains, where they are abſolutely ſafe from all Purſuits. Many of theſe *Jews* travel on the ſcore of Commerce into *Perſia* and *Egypt*[c].

It is from thence to the Land of *Aſvan* twenty Days Journey through the Deſarts of *Saba*, which lie on the River *Phiſon*, which comes from the Country of *Chus*; the Inhabitants of which are ſubject to a Prince, who is ſtiled *Shab-Abaſch*, i. e. the King of *Abyſſinia*. Part of the Inhabitants of this Country live like Beaſts, they feed only on the Graſs and Herbs that grow along the River-ſide, are quite naked, and as if their Miſeries had deprived them of common Senſe, they propagate their Kind with their Siſters and neareſt Relations, without the leaſt Shame or Scruple. The Climate of this Country is exceſſively hot. When the People of *Aſvan* make their Expeditions into theſe Parts for the ſake of Plunder, and what they can carry away; they conſtantly take with them Bread, Rice, dried Raiſins, and Figs. Theſe they throw in large Quantities among the half-famiſhed Blacks, whom, while they ſcramble for them like Dogs, they ſeize and carry away Priſoners, and ſell them in *Egypt* and other Countries. Theſe are the Negroes, or Black Slaves, the Poſterity of *Ham*. It is twelve Days Journey from *Aſvan* to *Chelvan*, in which there are about three hundred *Jews*.

---

[y] It appears from this Account, that theſe People were *Perſees*, neither is there any thing in what he relates that is not very eaſily reconcilable to the Truth; for all Writers that pretend to give us any Account of the Religion of the antient *Perſians* agree, that they did not bury their Dead, but left them expoſed to the Elements, from this Principle, that the living Man being a Compound of all the Elements, it was but reaſonable, after he was dead, that each Element ſhould recover its own.

[z] This is another *Jewiſh* Notion agreeable to their Ignorance in thoſe Days, which made them aſcribe every thing they did not perfectly underſtand to Witchcraft. As to theſe Spheres they were really very wonderful things, being ſo contrived as to ſhew the Riſing and Setting of the Sun, and the Motions of the heavenly Bodies. They were made and kept by the Magi, who made uſe of them to ſtrike the Vulgar with Aſtoniſhment, and to inſtruct their Diſciples in the Science of Aſtronomy.

[a] This is pretty evident from the Manner in which *Benjamin* tells this Story, that he ſuſpected the Prieſts impoſed upon the People, as without doubt they did. The Witneſſes were Perſons in the Confederacy, and the Terror of the Family was probably ſo great, and their Prejudice ſo ſtrong, that with tolerable Management this Scene might be carried through, and little or nothing of the Fraud be diſcovered. Beſides, whoever had attempted to diſcloſe the Cheat, would have been conſidered as an impious Perſon, and a declared Enemy to the Religion of his Country. It would be no difficult Matter to ſhew from the Abſurdities that have paſſed upon other Nations the Poſſibility of tranſacting an Impoſture of this kind, as the intelligent Reader will eaſily conceive.

[b] Our Author has added a Story here concerning the Gryphons, ſo very ridiculous, and of ſuch an Extent, that I could not prevail upon myſelf to inſert it. It is plain enough from his Account, that he does not pretend to have travelled into *China*, but barely to relate what he had heard of it. The Extent of his Travels ſeems to have been Cape *Commorin*, or of ſome of the Countries near it, from whence he took Shipping for the oppoſite Coaſt of *Africa*.

[c] There is no doubt to be made from what *Benjamin* relates, that he followed the old Opinion, according to which *Ethiopia* was looked upon as Part of the *Indies*; and with regard to what he tells us of the *Jews* being ſettled in the Mountains there, it is fully juſtified both by the antient and modern Accounts of that Country, as is alſo the following Circumſtances in relation to the Paſſage of Caravans through the Deſarts, and the Accidents to which they are ſometimes ſubject in paſſing through them. His Readineſs to aſcribe the Slavery of the Negroes to the Curſe pronounced by *Noah* on *Ham* and his Poſterity, is very agreeable to the Divinity and Spirit of the *Jews*.

From *Chelvan* they go in Caravans fifty Days Journey through the Deſart called *Al Tſachra*, or *Zaara*, to the Province called *Zuila*, which is *Havilah*, in the Land of *Gana*, i. e. *Guiney*. In theſe Deſarts there are vaſt Mountains of Sand, which, being carried by the Force of violent Tempeſts, ſometimes overwhelm whole Caravans, and bury under them all the Paſſengers. Such of the Merchants as eſcape this perilous Journey bring with them from that Country, Iron, Copper, Salt, and all ſorts of Fruits and Pulſe; and they likewiſe bring Gold and precious Stones. This Country is Part of the Land of *Chus*, and lies to the Weſt of *Abyſſinia*. It is thirteen Days Journey from *Chelvan* to the City of *Kous*, which is the firſt in the Land of *Egypt*, where there are ſettled about thirty thouſand *Jews*. At the Diſtance of five Days Journey is *Phium*, anciently called *Pithom*. In the Neighbourhood of this City are ſtill to be ſeen the Ruins of thoſe ancient Structures that were built by our Anceſtors during their Captivity in *Egypt*.

12. Four Days Journey from thence ſtands the great City of *Miſraim*, or *Cairo*, ſituated on the Banks of the River *Nile*, in which there are ſettled about two thouſand *Jews*, who have in this City two fair Synagogues, one belonging to the *Jews* of *Paleſtine* and *Syria*, the other to thoſe of the Country of *Babylon*. Theſe two Sorts of *Jews* differ only in the Diviſion of the Law into Sections; for the *Babylonians* every Week read one Paraſcha after the Manner which is common throughout all *Spain*; and therefore once every Year they finiſh the Law: But the *Iſraelites* of *Syria* divide every Paraſcha into three Sedarim, or ſmaller Sections, and ſo they read over the Law only once in Three Years; and both theſe after a ſolemn Manner twice in the Year join in their Prayers together, *viz.* upon the Day of the rejoicing of the Law, and on the feſtival Day of the Law given. Over all theſe *Nathaniel* hath the chief Authority, being the greateſt of the Nobility, and Head of the Aſſembly, who rules all the Synagogues in *Egypt*, and appoints Maſters and Elders.

He is alſo the Miniſter of the great King, who reſides in the Palace of *Zoan* (which is a City of *Egypt*, wherein *Ali* the Son of *Abitaleb* was once *Commander* of the *Faithful*) whoſe Subjects are ſtiled *Rebels* by the other *Arabs*, becauſe they refuſe Obedience to the *Abiſſidian* Khaliff, whoſe Seat is *Bagdat*. There is an irreconcilable Enmity between theſe Princes. This Monarch appears in publick twice in the Year, *viz.* at the Time of their Feaſt of *Eaſter*, and when the River *Nile* overflows[c].

The Royal City itſelf is encompaſſed and fortified with Walls, but *Miſraim* is without Walls, ſurrounded by the River *Nile* on the one Side. This is a very large City, furniſhed with many Market-places and publick Buildings; and here are many rich *Jews*. The Country itſelf is never troubled with Rain, Ice, or Snow, but is often afflicted with outrageous Heat. It is watered by the *Nile*, which once every Year ſwelling in the Month *Elul* covers and overflows all the Land for fifteen Days Journey, the Waters continuing to riſe in the Months of *Elul* and *Tiſri*, and making the Earth fruitful: And the Policy and Diligence of the old *Egyptians* was ſuch, that in an Iſland which the River makes here, a Pillar was by them erected of fine Marble and excellent Workmanſhip, raiſed twelve Cubits above the Surface of the River. When therefore the Waters overflow and cover that Column, the Inhabitants are fully ſatisfied that the whole Extent of their Country for fifteen Days Journey is entirely overſpread. If the Water riſe but half the Height of the Pillar, they gather from thence that their Country is but half watered. There is a Man ſtands by the Pillar, and every Day at Noon proclaims in all Parts of the City the Height of the Water in this Form, *Be thankful to God, the River is riſen ſo many Cubits.*

If the Water riſes to the Top of the Column, it is a Sign that the Year will be fertile throughout all *Egypt*. At this Seaſon whoever has any Land, hires Workmen to cut a Trench through his Ground, into which as the Water riſes, the Fiſh are carried, and are left therein; when the River ſinks, then the Owners of the Lands take them out, and either ſpend them in their Families, or ſell them to ſuch as ſalt and export them. Theſe Fiſh are exceedingly large and fat, and the very beſt People in the Country make uſe of the Oil drawn from them to burn in their Lamps. If it falls out, as it frequently does, that People eat too much of theſe Fiſh, they have nothing more to do than to drink largely of the Water of the *Nile*, which immediately removes that Inconvenience. It has been an old Queſtion, and a great Diverſity of Opinions there has been concerning the Overflowing of the *Nile*, but the *Egyptians* ſuppoſe, that at the time when this River overflows, heavy Rains fall in the higher Countries, that is in the Land of *Hababs*, which we call *Havilah*; at the Time the River does not overflow, nothing is ſown in *Egypt*, and hereupon Sterility and Famine follow.

But uſually the Fields are ſowed in the Month of *September*, the *Nile* being then retired into its Channel; but Barley is reaped in the Month of *February*, and Wheat the next Month after; and in the ſame Month Cherries are ripe, as are alſo Almonds and Cucumbers, Gourds, Peaſecods and Beans, Lentils, *&c.* and divers kinds of Pot-herbs, as Purſlain, Aſparagus, and Lettice, Corianders, Succory, Coleworts, and Grapes; but the Gardens and Orchards throughout *Egypt* are watered, and Trenches filled with the Waters of the River[d].

This great River, after paſſing through the City *Miſraim* or *Cairo*, is divided into four Heads, one whereof runneth by *Damiata*, ſometime called *Caphtor*, nigh unto which it falleth into the Sea. The ſecond runneth down into the City *Raſir*, not far from *Alexandria*, and there diſchargeth itſelf into the Sea. The third paſſeth by *Aſmon*, a very great City on the Borders of *Egypt*, nigh which Heads of the River many Cities, Caſtles, and Towns, are ſeated on either Side, and People may travel to them all either by Boat or Land. No Country in the whole World can be compared to this for the Multitude of Inhabitants, and all the Country of *Egypt* is plain, fruitful, and well ſtored with good Things. *Old Miſraim* is two Leagues diſtant from the *New Miſraim*, but it is waſted and deſolate: Yet there are many Ruins of the Walls and Houſes, and not a few Monuments there of the Treaſuries and Storehouſes of *Joſeph* yet to be ſeen. In the ſame Place there is an artificial Pillar built by Art Magic, like which there is none in all the Land. Without the Compaſs of the City ſtands a Synagogue, which bears the Name of *Moſes* our Teacher, of ancient Date; to preſerve the Ruins that yet remain, a certain old Miniſter, a Diſciple of the wiſe Men, is there maintained, who from his Office is ſtiled *Sebech Albounetzar*, or *The Father of the Watch*. The Ruins of *Old Miſraim* take up a Space of about three Miles.

---

[c] There is not a Paſſage in all our Author's Work which has been more conteſted than this with regard to the Khaliff then reigning in *Egypt*; and ſome have gone ſo far as to produce it as a direct Proof of his never having travelled at all: But I cannot help ſaying, that tho' the Critics have a Right to amend what is amiſs in the Copies of any Author which they publiſh, yet I cannot conceive they have any Authority firſt of all to impoſe their own Senſe upon a Paſſage, and then produce it to the Prejudice of the Author, whoſe Credit they would deſtroy. We ſhall ſhew hereafter, that in the preſent Caſe there is no Ground for ſuch a Suggeſtion; but that what our Author has delivered may be well reconciled to the Current of Hiſtory, without any Alteration whatever.

[d] In the ſubſequent Part of this Work, we ſhall have more than once Occaſion to mention moſt of the Circumſtances that our Author hath recorded, and to compare the Reports of later Travellers with his. The Reaſon of this Note is, to take Notice of a Particular which our Author has omitted, and which however the Reader may be glad to know. It is this, The *Nile* is of ſo great Conſequence to the *Egyptians*, that they have always had a very ſuperſtitious Regard to it, inſomuch that they fancied the Riſe and Fall of this River not only portended the Fertility or Scarceneſs of the ſucceeding Year, but likewiſe great Revolutions of State. It is certain that it did not overflow in the tenth Year of the Reign of *Cleopatra*, which might ſeem to predict the Conqueſt of that Country by the *Romans*, that ſoon after followed; but then the ſame Accident happened in the Time of *Trajan*, when nothing remarkable followed it. Beſides, we read of no Scarcity in *Egypt* before the Conqueſt of it by the *Arabs*, or the Deſtruction of the Khaliffs of the Family of *Ali*, which was brought about by *Saladin*; ſo that this ought to be conſidered as an abſurd and ridiculous Opinion, as moſt of theſe Notions are.

13. The Land of *Goſhen* is no more than eight Leagues from hence, and therein ſtands *Belſir Salbis*, a great City, in which there are three thouſand *Jews*. From hence you travel half a Day's Journey to *Iſkaal Lein Al Sames*, which was anciently called *Rameſes*, where now are only the Ruins of a City, in which many Works are ſeen built by our Fathers, and among theſe certain huge Edifices like Towers made of Brick. From thence you make one whole Day's Journey to *Al-Buyg*, where are two hundred *Jews*; and from hence in half a Day's Journey you come to *Manziptha*, where are two hundred *Jews*, from which City *Ramira* is four Leagues diſtant, and in it there are ſeven hundred *Jews*, from whence it is five Days Journey to *Lambhala*, were are five hundred *Iſraelites*.

Two Days Journey more bring you to *Alexandria*, a City called after the Name of *Alexander* the *Macedonian*, at whoſe Command we read it was built and ſtrongly fortified, and adorned with Walls admirably finiſhed, Houſes uniformly built, and ſtately Palaces: Without the City a great and beautiful Building is yet to be ſeen, which is reported to have been the College of *Ariſtotle*, the Maſter of *Alexander*, wherein there are almoſt twenty Schools, which were frequented in former Times by the learned Men of the whole World, who aſſembled there to learn the Philoſophy of *Ariſtotle*; and his Academy had ſtately Porticoes of Marble Pillars[e]. The City itſelf is excellently built, as well from the Pavement of the Ground, as with Vaults and Arches under Ground, through the hidden Paſſages whereof Men may come into the Market-places and not be ſeen; of which ſome are a whole Mile in Length, as from the Gate *Reſid* unto the Gate leading to the Sea, from which Gate a Way was made and paved unto the very Haven of the City of *Alexandria*, which is extended one Mile within the Sea.

In this Place a very high Tower was built, which the Inhabitants call *Hemegarah*, but the *Arabians Magar Alexandria*, that is, the *Pharos* of *Alexandria*; on the Top of which Tower it is reported that *Alexander* ſet a curious Mirror, in which all warlike Ships ſailing either out of *Græcia* or from the Weſt unto *Egypt*, might be ſeen above the Space of five hundred Leagues off[f]. This continued for a long Time after the Death of *Alexander*. It fell out however that a Ship coming hither under the command of a certain *Greek* Captain, who had a great Knowledge in the Sciences, came and caſt Anchor in that Port; and having made Preſents to the King of Gold, Silver, and very rich Silks, he thereby obtained his Favour. While he lay in the Port, he took abundance of Pains to ingratiate himſelf with the Officer, who had the Charge of this Watch-tower and Mirror; and having frequently entertained him on board his Ship, contracted with him at laſt ſuch an Intimacy, that he was permitted to go into and ſtay in the Tower as long as he thought fit. One Day having feaſted the Captain and his Men very magnificently, he doſed them at laſt ſo plentifully with ſtrong Wine, that they all fell faſt aſleep. Having thus carried his Point, the Captain and his Crew firſt broke the Mirror to Pieces, and then weighed Anchor and ſailed away in the Night.

Since that time the *Edomites*, *i. e.* the Chriſtians, have infeſted the Coaſts of *Egypt* with their Ships of War and Privateers, and have deprived the Sovereigns of this Country of the two great Iſlands of *Crete* and *Cyprus*, which remain at this Day under the Power of the *Greeks*, from whom the preſent Poſſeſſors of *Egypt* have not been able to recover them. This Watch-tower is ſtill uſed as a Beacon for the Service of ſuch Ships as are bound to *Alexandria*; for they are able to diſcern it at the Diſtance of one hundred Miles by Day or Night, in conſequence of a vaſt Fire which is kept continually burning therein for that Purpoſe.

This Country enjoys a large Share of Trade, and is frequented by almoſt all Nations for the ſake of Commerce. The Port of *Alexandria* ſwarms with Veſſels from all Parts of *Idumæa*, *i. e.* Chriſtendom; *viz.* from *Valencia*, *Tuſcany*, *Lombardy*, *Apulia*, *Malfi*, and *Sicily*; others come from the moſt Northern and ſome Inland Parts of *Europe*, as from *Cracow*, *Cordova*, *Spain*, *Ruſſia*, *Germany*, *Sweden*, *Denmark*, *England*, *Flanders*, *Artois*, *Normandy*, *France*, *Poitou*, *Angiers*, *Gaſcony*, *Arragon*, and *Navarre*. There come alſo from the Weſtern Empire of the *Iſhmaelites*, *viz.* from *Andaluſia*, *Algarve*, *Africa*, and even *Arabia*, beſides what come by the *Indian* Ocean from *Havilah* and *Abyſſinia*, and the reſt of *Ethiopia*, not omitting the *Greeks* and *Turks*. Thither are brought the richeſt Merchandizes of the *Indies*, and all ſorts of Perfumes and Spices, which are bought by Chriſtian Merchants.

The City is extremely populous on account of its extenſive Trade; and for the greater Conveniency in the carrying on their Dealings, every Nation has its Factory by itſelf. There is near the Sea-ſide a Marble Tomb, on which are engraved the Figures of all ſorts of Birds and of Beaſts, with an Inſcription in Characters ſo old, that none now are able to read them; whence it is believed, with ſome Colour of Truth, that it belongs to an old King who governed that Country before the Deluge. The Length of this Sepulchre is fifteen, and the Breadth of it ſix Spans. To conclude, there are in *Alexandria* about three thouſand *Jews*.

14. It is not neceſſary to give at large the Remainder of our *Jew*'s Travels, and therefore I ſhall acquaint the Reader in few Words, That having made a Tour from *Damietta* in *Egypt* to Mount *Sinai*, he returned back to the firſt-mentioned Place, and thence ſailed to *Meſſina* in the Iſland of *Sicily*, from whence he went by Land to *Palermo*, and croſſing the Sea to *Italy*, continued his Journey to *Rome* and *Lucca*.

He afterwards croſſed the *Alps*, and paſſed through a great Part of *Germany*, from whence he takes Occaſion to mention what Multitudes of *Jews* were ſettled in the ſeveral great Cities of that extenſive Empire. He inſiſts at large on their Wealth, their Generoſity, and, above all, their Hoſpitality to their diſtreſſed Brethren, and gives us a very particular Detail of the Manner in which they receive them. He aſſures us, that at their Feaſts they encourage each other to perſiſt in hoping for the bleſſed Advent of their Meſſiah, when the Tribes of *Iſrael* ſhall be gathered together, and under his Conduct be led back into their own Land. Until this long-expected Time ſhall come, the *Iſraelites*, he ſays, hold it their Duty to perſevere in their Obedience to the Law of *Moſes*, to lament with Tears the Deſtruction of *Jeruſalem* and *Sion*, to beſeech the Almighty to pity them in their Affliction, and to reſtore them in his appointed Time[g].

He aſſerts, that his Countrymen are not only ſettled in all the Provinces of the Empire, but alſo through all the Northern Countries to the very Extremity of *Ruſſia*, which he deſcribes as a Country ſo exceſſively cold in Winter, that the Inhabitants are not able to ſtir out of Doors. He tells us next, that the Kingdom of *France*, which, he ſays, is called by their Rabbins the Land of *Tzorphat*, is likewiſe full of the Diſciples of the wiſe Men, that is, of the *Jewiſh* Doctors, who ſtudy the Law Day and Night, and are extremely kind and charitable to their diſtreſſed Brethren. He concludes with an earneſt Prayer to God, to remember his Promiſe to the Children of *Iſrael*, and to return and aſſemble them from all Nations, through which in his Wrath he has diſperſed them.

---

[e] Our Author had this Notion of the School of *Ariſtotle* from the *Mohammedans*, ſo that whether it be wrong or right, he is not anſwerable for it. But with regard to the Fact, it is certain, that it was not *Alexander* but *Ptolemy* that erected this famous School; in which however it is as certain that the Philoſophy of *Ariſtotle* was taught, and in which the moſt famous of his Commentators flouriſhed.

[f] It muſt be confeſſed that this Fact is abſolutely falſe, ſince, as the Reader has been before informed, the *Pharos* of *Alexandria* was built by *Ptolemy Philadelphus*, and not by *Alexander the Great*. As to this Mirror, it is mentioned by ſome other Writers as well as our *Benjamin*; but it is apparently a Fable, and a Fable ridiculous in all its Circumſtances. It is however of Uſe ſometimes to know ſuch Fables, and therefore I have preſerved it.

[g] It is very clear from hence, as well as from a Multitude of other Circumſtances, that our Author chiefly intended in this Work to celebrate his own Nation, to preſerve an Account of the different Places in which they were ſettled, and to do all in his Power to keep up their Spirits under their Captivity, by putting them in Mind of the Coming of the *Meſſiah*. I muſt confeſs, I conſider this in a different Light from moſt of the Critics, for I do not conceive that a Man's loving his Countrymen ought to prejudice him in the Opinion of his Readers; and though it may poſſibly beget ſome Doubts as to the Fidelity of his Relations with regard to the *Jews*, yet I do not ſee how this can with Juſtice be extended to the other Parts of his Book.

In the ſeveral Places he mentions, he reckons up in the whole 394687 *Jews*, from which if we ſubtract 740 *Caraites*, 1000 *Samaritans*, and 2000 other Schiſmatics, there will remain 390947, to which, if we add 350000 free *Iſraelites*, whom he found in the Kingdoms of *Thema* and *Chebar*, they will ſwell the Account of the *Rabbanites* he met with in his Travels to 740947, which, when duly conſidered, will not, perhaps, appear very improbable. Thus we have brought to a Concluſion the Travels of *Benjamin de Tudela*, which had never appeared ſo fully as we have give them in the *Engliſh* Language.

15 We have in the Introduction to this Section given ſo large an Account of our Author, of his Performance, and the Reaſon of our inſerting it, that we have not much to add here. That there may be, and indeed that there are, many Miſtakes in theſe Travels, is not to be denied, neither can we help confeſſing, that the Author was a very credulous Man, and far enough from deſerving the high Character beſtowed upon him by the *Jews*, who repreſent him as a Perſon ſkilled in all Sciences, and refer us to this Performance of his as a Proof of it. But granting that he did not merit theſe Praiſes, yet there is ſomething ſurely due to him for the Lights he has communicated to the World. It is from him, as from an impartial Perſon, that we learn the true State of Affairs at *Conſtantinople* within the Compaſs of this Period, the immenſe Wealth and Luxury of its Inhabitants, and their extenſive Commerce throughout the whole Eaſt.

His Travels from that City to *Baſſora* ſhew plainly, that the Communication was open, ſince otherwiſe it would have been impoſſible for a private Traveller to have proceeded through the whole Kingdom of *Perſia* in the Manner he did. Some Objections have been made to his Account of the *Jews* ſettled in the Mountains of *Niſbor*, which from his Relation appear to have been upon the Borders of the Kingdom of *Tibet*; yet if we reflect upon what our *Arabian* Travellers have told us of the Number of *Jews* ſettled in the Empire of *China* before this Time, and remember that the Emperor *Heraclius* had long before driven them out of all the *Greek* Empire, we ſhall ſee many Reaſons to think this Account of his probable enough. It is true, that *R. Moſes* and our Author may be ſuſpected of magnifying theſe Settlements, and of making this Colony of *Jews* more conſiderable than it really was; but that we ſhould regard the Whole as a Fiction, I muſt confeſs I ſee no juſt Grounds. It is very likely, though *Benjamin* does not ſay it, that he received from the ſame Perſon what he relates of *China*, and of the icy Sea to the North of that Country, which ſhews there had been a conſiderable Commerce carried on that Way, though *Benjamin* could give but a dark Account of it.

We are indebted to him likewiſe for a Piece of Hiſtory, which for any thing I know is not to be met with elſewhere, I mean the Settlement of the *Perſees*, who were the old *Perſians* or Worſhippers of Fire, in ſeveral Iſlands of the *Eaſt-Indies*, of which we ſhall make ſome Uſe in another Place. The Account he has given us of *Ethiopia*, and of the *Jewiſh* Colonies in that Country, is ſo conſiſtent with the ancient and modern Hiſtory of that Empire, that there is not the leaſt Reaſon to doubt the Truth of it, or of what he ſays as to the Paſſage of the Caravans through the Deſarts. It is evident from thence, that there was by this Means a large Commerce carried on between this Country and *Egypt*, in Slaves, Gold, Ivory, and perhaps alſo in ſome *Indian* Commodities; and it is likewiſe clear, that there was a great Trade between that Country and the oppoſite Coaſt of *Arabia*. If our Author had travelled as a Merchant, he might very poſſibly have given us many more curious Particulars on this Subject; but as he did not, we muſt be content with thoſe he has delivered occaſionally, and as they ſtruck him in his Paſſage.

There are great Exceptions taken at his ſhort Account of the Government of *Egypt*, when he was in it; and ſome of his Tranſlators have inclined to give him up in this Particular, though without any great Reaſon. It is plain enough from the reſt of his Work, that he did not ſet up for a great Politician, or pretend to deſcribe the Conſtitutions of the States through which he paſſed, but only to mention in general what he underſtood of ſuch Matters. It is alſo certain, that without changing his Words, we may give a clear and ſatisfactory Account of this Matter, which amounts to no more than this: That the then Maſters of *Egypt*, though they were *Mohammedans*, were yet treated as Heretics, or Rebels, on account of their diſowning the Khaliff at *Bagdat*, and that on this Account there was an inveterate Hatred between the Subjects of the Khaliff of *Babylon*, and the *Mohammedans* in *Egypt*, as to which there can be no doubt at all.

The ſingle Difficulty in this Caſe is our Author's calling the Commander of the Faithful in *Egypt Ali* the Son of *Abitalab*; from whence it is inferred, that he makes him the Monarch then reigning, which would have been a moſt notorious Abſurdity. But the Truth of the Matter is, our Author ſays no ſuch thing: He only mentions *Ali* the Son of *Abitalab* as having been once Commander of the Faithful in *Egypt*; and the Reaſon of his mentioning it is very plain, *viz.* in order to account for the Difference between the *Mohammedans* in *Aſia* and *Egypt*, and the latter being ſtiled Rebels by the former on account of their taking the Part of this *Ali*.

But the greateſt Difficulties that occur in our Author's Work, ſome of which, it muſt be owned, are not to be got over, ariſe from his uſing ſcriptural Names for the Countries and Places through which he paſſed; and theſe, according to the Notions of the Rabbins, for want of being thoroughly acquainted with which, it is impoſſible for any Tranſlator to be perfectly ſure as to his Meaning. But if we ſhould be ſomewhat miſtaken in the Names of the ſeveral Countries from which Ships came to *Alexandria*, yet we muſt be right in the main; and the Reader may reſt ſatisfied from thence, that at the Time of our Author's being there, the Port of *Alexandria* was the Centre of Commerce between *Chriſtendom* and the *Indies*. All the Fables that he relates about the magical Mirror there cannot prejudice this Truth; for though our Author might be, as to be ſure he was, a very indifferent Hiſtorian, a bad Mathematician, and a credulous Writer, yet he could not be miſtaken about Things he ſaw, or be induced to ſet down the Names of Nations never heard of at *Alexandria*. Beſides, he is remarkably accurate in this Account; and the Liſt he has given us is more methodical than any other Paſſage in his Book, which ſeems to have been owing to his making an Enquiry at *Alexandria*, as to the ſeveral Foreign Lodges or Factories eſtabliſhed there.

On the Whole, as theſe Travels plainly demonſtrate that it was both poſſible and practicable for a Perſon to travel in the midſt of the twelfth Century from *Spain* through *Italy* and *Greece* into the remote Parts of *Aſia*, and to return from thence through *Ethiopia* and *Egypt* into *Europe*, it was requiſite, that in a Collection of this kind, ſuch a Performance ſhould not be omitted; and if not omitted, it ought ſurely to appear in the beſt Dreſs we could poſſibly give it, which muſt be an Apology to the Reader for our having taken ſo much Pains therewith, and having dwelt upon it ſo long.

SECTION

SECTION XX.

The remarkable Travels of William de Rubruquis, *a Monk, ſent by* Louis IX. *King of* France, *commonly ſtiled* St. Louis, *Embaſſador into different Parts of the* Eaſt, *particularly into* Tartary *and* China, A. D. 1253, *containing abundance of curious Particulars relating to thoſe Countries.*

Written by the Embaſſador, and addreſſed to his Royal Maſter King *Louis.*

1. *A ſuccinct Account of the Empire of the* Tartars, *and particularly of the Princes to whom our Author was ſent.* 2. *The Character of* Louis IX. *of* France; *and a ſhort Hiſtory of his Expedition into* Syria *and* Egypt. 3. *The Occaſion and Deſign of his Embaſſy, together with the Character of our Author.* 4. *His dedicatory Epiſtle to the King his Maſter.* 5. *An Account of his Journey to* Conſtantinople. 6. *His Arrival at* Soldaia, *the firſt Town in* Tartary. 7. *An Account of the Habitations of the* Tartars. 8. *Of their Beds, Idols, and ſuperſtitious Ceremonies.* 9. *Of their Drinking and Merry-makings.* 10. *Of their Food and Manner of Eating.* 11. *Of a particular kind of Drink uſed by them, called* Coſmos. 12. *Of the Animals in their Country, their Rabbets, and their Manner of Hunting.* 13. *Of the Manner in which the Men ſhave themſelves, and of the Ornaments of their Women.* 14. *Of the Employments of the female* Tartars; *of their Way of Life, and of their Marriages.* 15. *The Manner of adminiſtering Juſtice among them, and of the Ceremonies uſed at their Funerals.* 16. *The Author reſumes the Account of his Voyage, and acquaints us with the Ingratitude and Brutality of the* Tartars 17. *Of the Court of* Zagatay, *and of their Adventures there.* 18. *Of the* Alans, *who came to viſit them there at the Feaſt of* Whitſuntide. 19. *An Account of a* Saracen *who deſired to be baptized, and of certain People that ſeem to be Lepers.* 20. *Of the great Hardſhips and Difficulties they went through in theſe Travels, and of the Burials of the* Comanians. 21. *Of the Country in which they found* Sartach *and his Subjects.* 22. *Of the Court of* Sartach, *and of its Splendor and Magnificence.* 23. *They are ordered to repair to* Baatu, *the Father of* Sartach. 24. *The Reſpect paid by* Sartach, Mangu-Khan, *and* Ken-Khan, *to Chriſtians, and of the Riſe and Progreſs of the* Tartar *Empire.* 25. *Of the* Ruſſians, Hungarians, Alans, *and of the* Caſpian-Sea. 26. *Of the Court of* Baatu, *and of their Reception there.* 27. *Their Journey from thence to the Court of* Mangu-Khan. 28. *Of the River* Jagag, *and of the Countries and People on that Side.* 29. *Of the Hunger, Thirſt, and other Inconveniencies by them ſuſtained in this Journey.* 30. *Of the Death of* Ban, *and of the* Germans *ſettled in that Country.* 31. *Of the ſtrange Mixture of Religions in this Country,* viz. Neſtorians, Mohammedans, *and* Idolaters. 32. *Of their Temples, Idols, and of their Manner of worſhipping their falſe Gods.* 33. *Of ſeveral Nations in thoſe Parts; and of thoſe whoſe Cuſtom it is to devour their Parents.* 34. *Of what happened to them at* Cailac, *in their Paſſage from thence to the Country of the* Naymans. 35. *A Deſcription of that Country, with an Account of the Death of* Ken-Khan, *the Princeſs, his Conſort, and their eldeſt Son.* 36. *Their Arrival at the Court of* Mangu-Khan. 37. *An Account of their meeting there with one* Sergius, *a* Neſtorian *Monk.* 38. *A Deſcription of their Audience, and what happened thereat.* 39. *They meet with a Woman of* Lorrain, *and a Goldſmith of* Paris *ſettled in theſe Countries.* 40. *An Account of ſeveral other Chriſtians they met with there.* 41. *Of a grand Feaſt given by* Mangu-Khan, *and of the Ceremonies of the* Neſtorians. 42. *Of the Faſt obſerved by thoſe People, and of a grand Proceſſion made to the Palace of the* Khan. 43. *An Account of a great Cure performed on a Lady by the Monk* Sergius. 44. *Deſcription of the Country under the Dominion of the* Khan, *and of the Cuſtoms and Manners of his Subjects.* 45. *Of the ſecond Faſt of the* Neſtorians, *which falls out in our* Lent. 46. *Of a noble Piece of Workmanſhip performed by the* French *Goldſmith, and of the Palace of the* Khan *at* Caracarum. 47. *Of ſeveral religious Ceremonies of the* Neſtorians. 48. *Of the Sickneſs of the* French *Goldſmith, and of* Jonas *the Prieſt.* 49. *A Deſcription of the City of* Caracarum, *and of* Mangu-Khan's *ſending his Brethren to make War againſt ſeveral Nations.* 50. *How our Author was ſeveral Times examined, and of ſeveral Conferences and Diſputes he had with the* Idolaters. 51. *Of our Author's being called before the* Khan *at* Whitſuntide, *and of the Confeſſion of Faith made by the* Tartars. 52. *Of the* Sorcerers *and* Conjurors *in this Country, and of the wicked Lives they lead.* 53. *The Letters written by the* Khan *to the King of* France, *by our Author, and the Reſolution taken by his Companion to remain in* Tartary. 54. *Of our Author's Departure from* Caracarum *for the Court of* Baatu, *and from thence for the City of* Saray. 55. *Of the Road from* Saray *by the Mountains of* Alania, *of the* Leſgies, Derbent, *and other Places.* 56. *The Remainder of their Journey to the River* Araxes, *the City of* Waxnam, *the Country of* Sahenna, *and other Places.* 57. *Of their Paſſage over the* Euphrates, *the Caſtle of* Samuth, *the Author's Arrival at* Cyprus, Antioch, *and* Tripoli. 58. *His Letter from thence to the King his Maſter, and other Particulars.* 59. *Remarks and Obſervations upon this Section.*

1. IT ſeems to be a Problem hitherto undiſcuſſed, how it came to paſs, that for the Space of ſo many Ages, the Inhabitants of the northern Parts of the World lay ſo ſtill and quiet, that Hiſtory ſcarce gives us any Account of them; and then of a ſudden burſt out on all Sides, and over-ran, as it were, the greateſt Part of the known World. At firſt Sight it ſhould ſeem from hence, that theſe northern Countries were firſt peopled; for otherwiſe it may appear difficult to account for their being ſo much more populous than any of the reſt. A little Attention, however, will clear this Point, and ſhew us plainly, that inſtead of contradicting, it is the ſtrongeſt Proof that can be of the World's being originally peopled from the Country of *Chaldea.* For whoever conſiders what an immenſe Tract of Land lies to the North of that original Seat of Mankind, will eaſily diſcern the Reaſon why it required a longer Space to people it throughly than the reſt of the World; and yet, at the ſame time, if he reflects on the Accounts given us by ancient Authors, of the Manners of the *Scythians,* he will eaſily perceive that

they retained the old Simplicity of living much longer than any other People, and were therefore celebrated by *Homer* and *Hippocrates*, as the juſteſt and moſt innocent of Mankind. But, in Proceſs of Time, even theſe vaſt Countries became over-peopled; and then being preſſed by each other, theſe barbarous Nations, as they were ſtiled by the *Greeks* and *Romans*, broke out like an Inundation, and ſwept all before them.

At preſent our Concern is with thoſe who broke out laſt; I mean the *Tartars*, who are generally ſaid to have derived their Name from a River ſo called; but that is a Miſtake. The original Name of this numerous Nation was *Turks*, which they derived from *Turk*, the eldeſt Son of *Japhet*. But *Alanza-Khan*, one of their ancient Princes, leaving his Dominions to his Sons, which were Twins, the one called *Tatar*, and the other *Mogul*, this gave riſe to the Diſtinction of thoſe two Nations, which hath ever ſince prevailed.

The great Conqueror *Jenghiz-Khan*, who in our old Writers is generally called *Zengis*, united both under his Dominion. He was born *A. D.* 1162, and was raiſed to the Command of his own ſmall Tribe at the Age of thirteen. He by degrees firſt eſtabliſhed his Power in his own Country, then attacked and conquered the northern Parts of *China*, but was never heard of in *Europe* till about the Year 1218, when he entered the *Great Bucharia*; he extended his Conqueſts afterwards over a great Part of *Aſia*, and died in the Year 1227, at the Age of ſixty-five, and after having held the Dignity of *Khan* twenty-five Years. His eldeſt Son *Zuzi* died ſix Months after him, and was ſucceeded by his eldeſt Son *Batu* or *Baatu*, as our Author calls him, who had a great Part of *Tartary* for his Share. *Zagatai*, Son to *Jenghiz-Khan*, had that Country which the Ancients call *Tranſoxiana*, which has been ſince called *Turkeſtan*, or the Country of the *Uſbeks*; but by the *Tartars* to this Day *Zagatai*. *Tuli*, another Son of this Conqueror, had for his Share *Choraſſan*, *Perſia*, and the *Indies*; and *Octai* all the reſt, with the Title of *Khan*. This Prince began his Reign in 1228, and died in 1241. So much as to the State of *Tartary*.

2. The Chriſtian Princes had been very often put upon the Recovery of the *Holy-Land* by the Popes; and *Louis* IX. King of *France*, called from thence St. *Louis*, took the Croſs, and engaged himſelf by a Vow to endeavour the Recovery of the City and Kingdom of *Jeruſalem* from the *Infidels*. It was with this View that he embarked at *Marſeilles*, *Auguſt* 23d. 1248, accompanied by his Queen and two Brothers. He ſailed from thence to the Iſland of *Cyprus*, where he ſpent the Winter in preparing for the War. There he received Ambaſſadors from the Khan of the *Tartars*, with an Account that he had embraced Chriſtianity, and was diſpoſed to attack the *Infidels* on one Side, while his Majeſty carried on the War on the other. This was an Affair of very great Importance to the King of *France*, who treated the Ambaſſadors with great Reſpect, and promiſed to ſend an Ambaſſador to conclude an Alliance with the Emperor their Maſter.

He was hindered however in the Proſecution of this Deſign by the unlucky Accidents of the War; for having invaded *Egypt* at firſt with great Succeſs, he was afterwards, in the Year 1250, taken Priſoner in the Battle of *Maſſora*, and remained for a long Time in the Hands of the *Infidels*, who treated him very ill, but at laſt ſet him at Liberty, upon his ſurrendering the City of *Damietta*, and paying them a Ranſom of 400,000 Livres. This cruel Reverſe of Fortune did not hinder the King from purſuing his Deſign: He paſſed immediately over into *Syria*, where he put the Affairs of the Chriſtians into as good a Condition as it was poſſible, and would very probably have accompliſhed all that he propoſed, if the Death of his Mother, whom he had left Regent of *France*, had not obliged him to return home, which he did in the Year 1254, and reigned very glorioufly for many Years, and then undertook a ſecond Expedition in the ſame Cauſe, of which we ſhall hereafter give ſome Account.

3. At preſent our Buſineſs is to obſerve, that while this Monarch was in *Syria*, and there concerted Meaſures for reducing the Power of the *Mohammedans*, he made Choice of our Author Friar *William Rubruquis* for his Embaſſador to the Khan of the *Tartars*, and that for theſe three Reaſons; firſt, becauſe he had engaged himſelf, while in *Cyprus*, to ſend ſuch an Embaſſy. Secondly, becauſe the Aſſiſtance of ſo powerful a Prince was a Matter of great Conſequence to all *Chriſtendom*. And, thirdly, that he might obtain a diſtinct and authentick Account of the Policy, Strength, and Intereſt of a Nation which, in the Space of fifty Years, had obtained an Empire of ſuch an Extent as hitherto the World had never ſeen.

The Reaſons which induced him to make Choice of our Author were many; but we ſhall content ourſelves with mentioning only a few. His Condition, as a religious Man, made him a fit Miniſter to a Prince lately converted to the Chriſtian Faith: It diſpenſed likewiſe with his having any Train of Attendance, with which ſuch an Embaſſy could not be incumbered; and it put it more into his Power to enquire into all Things that his Maſter deſired to know, than if he had gone with all that Pomp which is uſually annexed to a publick Character. But, above all, he depended on the Abilities of the Man, who was looked upon as a Perſon of admirable Parts, and great Diligence, and whoſe unaffected Piety and Probity were not to be diſputed. After his Return from this Embaſſy, he compiled this Account, which we now preſent to the Reader, and ſent it to the King. It has been always eſteemed the fulleſt and cleareſt, as well as the moſt faithful and exact Deſcription of the *Tartars* that ever was publiſhed, and therefore we have given it entire, and in the Author's own Words, together with his Dedication, which follows.

4. *To the moſt excellent and moſt Chriſtian Lord* Louis, *by the Grace of* GOD, *King of* France; *Brother* William de Rubruquis, *of the Order of* Friars Minors, *wiſhes Health, and that he may ever triumph in* JESUS CHRIST.

" It is written in the Book of *Eccleſiaſticus*, that the " wiſe Man ſhall paſs through Countries inhabited by " foreign Nations, and that he ſhall have his Share in all " Things good and evil. I have done all this, Sire, " and GOD grant that I have done it as a wiſe Man, " and not as a Fool; for many there are which do " thoſe Things which wiſe Men do, but not wiſely, " and much I fear that I am of that Number. However that Matter may be, you were pleaſed to com- " mand me, at the Time of my Departure, that I " ſhould write to you all I ſaw, and whatever I could " diſcover among the *Tartars*. You were likewiſe " pleaſed to add, that I ſhould not be afraid of writing " long Letters. I am now about to perform what " your Majeſty then gave me in Charge; yet not with- " out great Fear and Apprehenſion that the Simpleneſs " of my Thoughts, and the Homelineſs of my Stile, " may ſeem unworthy of being addreſſed unto your " Sovereign Majeſty."

5. May it pleaſe you then, Sire, to underſtand, that departing from *Conſtantinople*, on the ſeventh of *May*, *A. D.* 1253, we entered into the Sea of *Pontus*, now the *Black-Sea*, which the *Bulgarians* call the *Great-Sea*, and which, as I was informed by Merchants who have long traded there, extends in Length from Eaſt to Weſt one thouſand Miles, and is, as it were, divided into two Parts. About the Middle there are two Provinces, the one on the South, which is called *Sinople*, from a Fortreſs and Port of the ſame Name, which belongs to the Sultan of the *Turks*: The other towards the North, which the weſtern Chriſtians call *Gazaria*, now *Crimea*, or *Crim-Tartary*; but the *Greeks* who dwell therein *Caſſaria*, which I take to be the ſame as *Cæſaria*. In this Province there are two Promontories, or Capes, which run into the Sea towards the South, and the Country of *Sinople*; the Diſtance may be about three hundred Miles between *Sinople* and *Caſſaria*; ſo that theſe Points may be about ſeven hundred Miles from *Conſtantinople*, as well towards the South as towards the Eaſt, in which Quarter lies *Iberia*, which is a Province of the Country of *Georgia* or *Georgiana*.

We came then into the Country of *Gazaria*, which is in the Shape of a Triangle, having on the moſt Weſtern Point a City called *Kerſova*, where St. *Clement* Biſhop of *Ancyra* ſuffered Martyrdom; and paſſing in View of this City, we had ſight of an Iſland in which there is a Church ſaid to have been built by Angels. In the Middle, which is alſo the moſt Southern Part, ſtands the City of *Soldaia*, which is directly over-againſt *Sinople*, to which all the Merchants coming from *Turky* reſort in their Paſſage to Northern Countries, as do likewiſe ſuch as come from *Ruſſia* with Intent to go to *Turky*.

Theſe laſt bring Ermine and other rich Furs; the former deal in Cotton, Cloth, Silks of all ſorts, and Spices. Towards the Eaſt Part of this Country ſtands a City called *Matriga*, at the Mouth of the River *Tanais*, or the great River *Don*, where it falls into the Sea of *Pontus*, being there about twelve Miles over. This River, before it falls into the Sea, makes of itſelf a kind of Sea, which is near ſeven hundred Miles in Extent, but ſo ſhallow, that no Ships of Burthen can ſail therein. The Merchants of *Conſtantinople* however, when they arrive at the City of *Matriga*, ſend their Barks up the River *Tanais* to purchaſe dried Fiſh, ſuch as Sturgeons, Theoſes, Barbels, and many other ſorts of Fiſh. The Province of *Gazaria* beforementioned has the Sea on three Sides, *viz.* On the Weſt, where ſtands the City of *Kerſova*; on the South, where lies the City of *Soldaia*, or *Caffa*, where we landed; and on the Eaſt, where is the City of *Matriga*, at the Mouth of the River *Tanais*.

Beyond this Country lies *Zichia*, that is the Country about *Azoph*, which is not ſubject to the *Tartars*; to the Eaſt of which lie the Countries of the *Suevians* and *Iberians*, which likewiſe do not pay Obedience to the *Tartars*. Towards the South again ſtands the City of *Trebizond*, which belongs to its own Prince, whoſe Name is *Guido*, and he is deſcended of the Race of the Emperors of *Conſtantinople*, but is for all that ſubject to the *Tartars*. The City of *Sinople* ſtands next belonging to the Sultan of *Turky*, who is at preſent their Vaſſal likewiſe.

Beyond his Dominion lies the Country of *Vaſtacius*, the Son of whoſe King is called *Aſtar*, after his Grandfather by the Mother's Side, and he is not under their Subjection. All the Country from the Mouth of the *Tanais* Weſtward as far as the *Danube*, is at preſent under their Dominion, and even beyond the *Danube* towards *Conſtantinople*; all *Walachia*, which is alſo called the Country of *Aſſanus*, and the *Leſſer Bulgaria*, as far as *Solinia*, pay Tribute to them: And beſides this Tribute, they have of late Years impoſed a new Burthen on the Inhabitants; for they exact from every Family an Axe and a conſiderable Quantity of Corn.

This Introduction of our Author's is in itſelf very clear, and by adding the modern Names of Places, it is hoped it will be perfectly intelligible to every Reader.

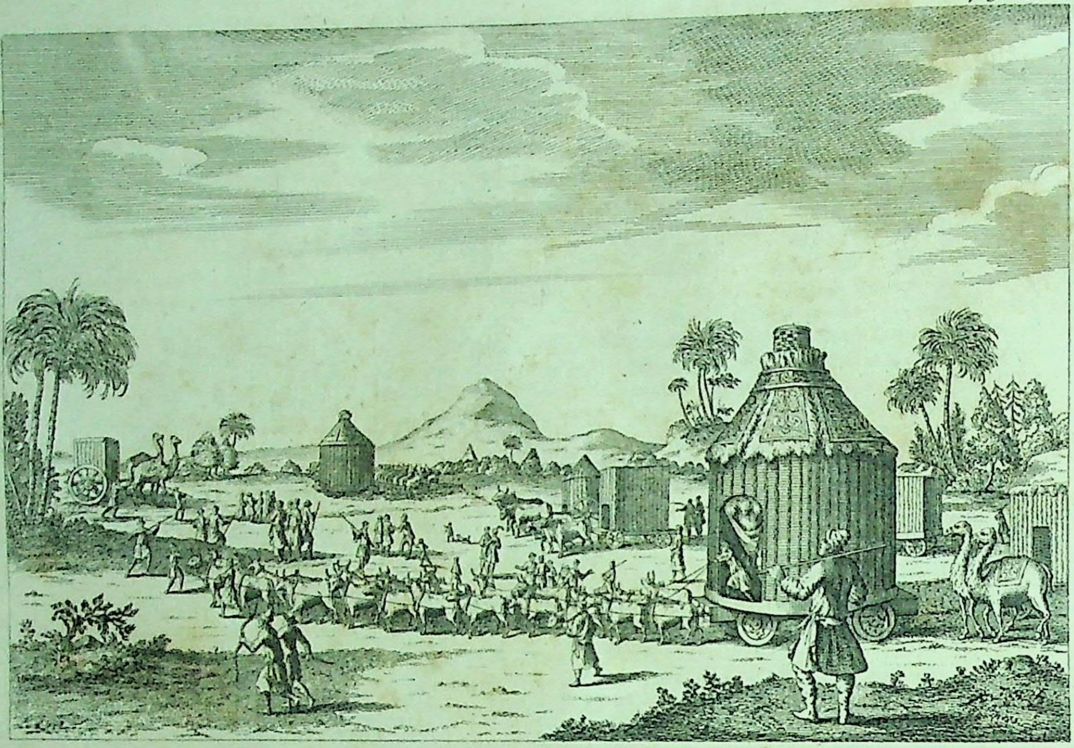
The Author intended it to explain the Situation and Condition of thoſe Countries at the Time he wrote, which was the more neceſſary, becauſe great Alterations had been occaſioned by the repeated Irruptions of the *Tartars*. In regard therefore to the Situation of Commerce at this Time, as well as the perfect comprehending his Route to the Camps of the *Tartar* Princes, this explanatory Diſcourſe was very expedient; and as this Writer begins very methodically, ſo his whole Work is conducted with ſuch Order and Eloquence, as is not uſual in the Writers of thoſe Times. His Stile is agreeable to his Matter, plain and expreſſive, without any Flouriſhes, or the leaſt Deſire of heightening the Wonders which he relates: On the contrary, he every where endeavours to avoid heightening Things beyond Credit, and delivers himſelf with ſuch viſible Sincerity, as gives an intrinſick Value to his Work that no Length of Time can ever take away. This in all Probability was in ſome meaſure owing to his Attention to the Inſtructions given him by his Maſter, who was a Prince of great Abilities, had himſelf travelled into the Eaſt, and was conſequently a better Judge of theſe Particulars than moſt other Princes, either of that or any other Age. It was for the ſame Reaſon, probably, that our Author thought proper, as the Reader will ſee, to inſert his Account of the *Tartars*, their Habitations, Cuſtoms, Manners, Laws, Government, and whatever elſe was neceſſary to give a juſt Idea of theſe People, before he proceeds to his Negotiations with them; which is a clear Proof that this Treatiſe was not compoſed in a Hurry, or written as Occaſion offered while he was actually on his Travels, but after his Return out of *Tartary*, when he had Time to recollect himſelf, to compare and digeſt the Notes he had taken during his Stay in that Country, and to bring every Thing into its proper Place. So that we have no Occaſion to interrupt his Diſcourſe with Remarks or Corrections, but are able to leave his Work as it ſtands to the Peruſal of the ingenious Reader, who will find therein abundant Proofs of what we have here advanced.

6. We arrived, continues he, at *Soldaia* the twenty-firſt of *May*, and ſeveral Merchants of *Conſtantinople* who arrived before us, reported that Ambaſſadors were coming thither from the Holy Land, who were to travel to *Sartach* I had however publickly given out on *Palm-Sunday*, in the Church of *Sancta Sophia*, That I was not your Ambaſſador, or the Ambaſſador of any other Prince, but that I travelled to thoſe Princes to preach the Goſpel to them according to the Rule of our Order; and being arrived, the ſaid Merchants admoniſhed me to be very cautious in what I ſpoke, becauſe they having reported me to be an Ambaſſador, if I ſhould ſay the contrary, I could not have free Paſſage granted unto me. Then I ſpoke to the Lieutenants of the Cities, becauſe the Governors themſelves were gone to pay Tribute unto *Baatu*, and were not as yet returned. "We
" heard of your Lord *Sartach* in the Holy Land that he
" was become a Chriſtian, of which the Chriſtians were
" exceedingly glad, and eſpecially the moſt Chriſtian
" King of *France*, who is there now in Pilgrimage, and
" fighteth againſt the *Saracens* to redeem the Holy Places
" out of their Hands. I am determined therefore to go
" to *Sartach*, and to deliver unto him the Letters of my
" Lord the King of *France*, wherein he admoniſheth him
" concerning the Welfare of all *Chriſtendom*."

On this they received us with Joy, and gave us Entertainment in the Cathedral Church, the Biſhop of which Church had been with *Sartach*, who told me many good Things concerning him, which afterwards I found untrue. They then gave us our Choice, whether we would have Carts and Oxen, or a Number of Horſes to tranſport our Baggage, and the Merchants of *Conſtantinople* adviſed me not to take Carts of the Citizens of *Soldaia*, but to buy covered Carts of my own (ſuch as the *Ruſſians* carry their Skins in) and to put all our Baggage into them, becauſe if I ſhould uſe Horſes, I muſt be conſtrained at every Bait to take down my Things and to lift them up; and beſide that, I ſhould ride a more gentle Pace in the Carts. Wherefore yielding unto their evil Counſel, I ſpent in travelling to *Sartach* two Months, which I could have done in one, if I had gone on Horſe-back. I brought with me from *Conſtantinople* pleaſant Fruits, *Muſkadell* Wine, and delicate Biſcuit Bread, to preſent unto the Governors of *Soldaia*, that I might obtain free Paſſage, becauſe they look favourably upon no Man, who comes with an empty Hand.

All theſe Things I packed in one of my Carts, and the Governors being abſent when we came, I ſtill carried them on; for they told me if I could bring them to *Sartach*, that they would be moſt acceptable unto him. We took our Journey therefore about the Beginning of *June*, with four covered Carts of our own, and with two others which we borrowed of them, wherein we carried our Bedding to reſt on in the Night, and they allowed us five Horſes to ride upon, there being juſt five Perſons in Company; I, Friar *Bartholomew* of *Cremona*, and *Goſſet* the Bearer of theſe Preſents, the Interpreter, and *Nicholas* my Servant, whom I bought at *Conſtantinople* with ſome of the Alms beſtowed upon me. They allowed us beſides two Men, which drove our Carts, and looked after our Oxen and Horſes. There are high Promontories on the Sea-ſhore, from *Kerſova* unto the Mouth of the *Tanais*. Alſo there are forty Caſtles at *Kerſova* and *Soldaia*, in every one of which almoſt they uſe different Languages, amongſt whom there were many *Goths* who ſpoke the *Dutch* Tongue.

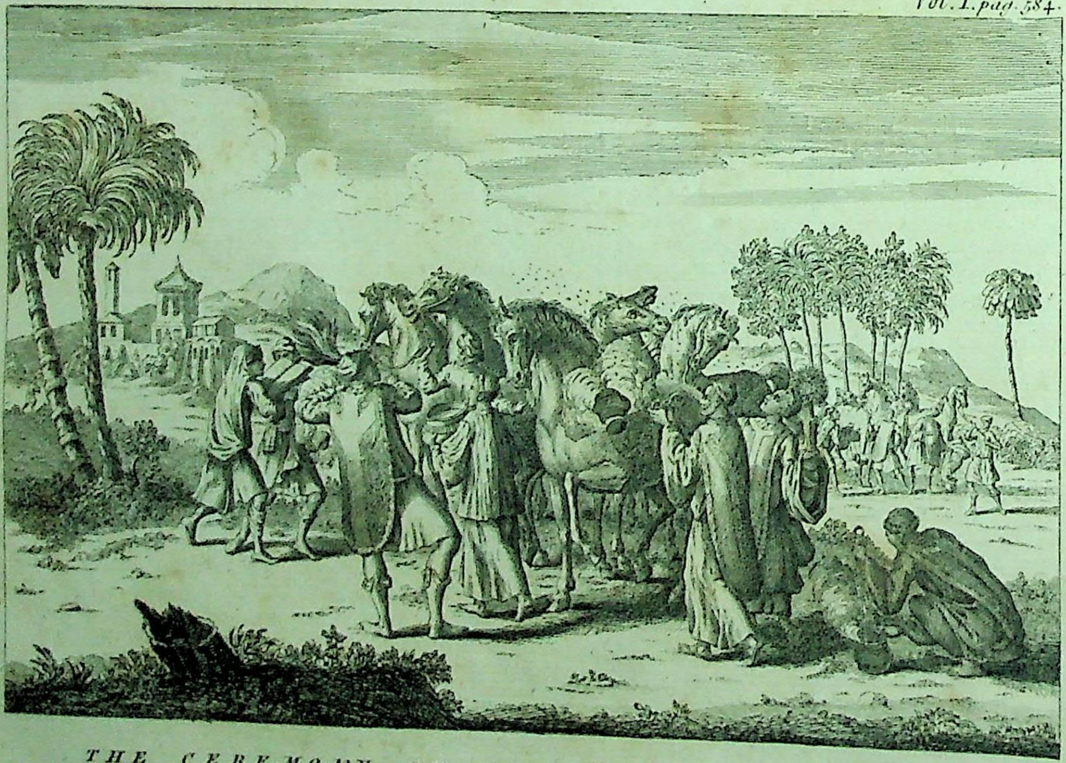
Vol. I. pag. 559.



A TARTAR CAMP IN MOTION.

The Tartars have never any fixed or setled Habitations, but move up and down the vast Plains they poſseſs, according to the different Seasons of the Year, travelling Northwards in the Summer, for the sake of Fruitfull Paſture; and in the Winter, towards the South, to avoid the extremity of the Cold Weather.

Vol. I. pag. 584.



THE CEREMONY OF BLESSING THE HORSES.

The Tartars are for nothing more remarkable, than their extraordinary, & indeed extravagant Affection for their Horſes, which induces them from their Principle of Indifference to all Religions, to procure this Bleſsing of their Horſes, to be performed, by the Prieſts of all the Faiths amongst them.

Beyond theſe Mountains, towards the North, there is a moſt beautiful Wood growing on a plain pleaſant Country, full of Springs and Rivulets. Beyond the Wood there is a mighty Plain, five Days Journey, unto the very Extremity of the Province Northward; and there is a narrow Iſthmus, a Neck of Land, having the Sea on the Eaſt and Weſt Sides, which enter the Land ſo far that there is a Canal made from one Sea unto the other. On this Plain before the *Tartars* the *Comanians* inhabited, who compelled the above-mentioned Cities and Caſtles to pay tribute unto them: But when the *Tartars* came upon them, the Multitude of *Comanians* fled all of them to the Sea-ſhore, being in ſuch extreme Famine, that they which were alive were conſtrained to eat up thoſe which were dead; and, as a Merchant reported to me who ſaw it with his own Eyes, living Men devoured and tore with their Teeth the raw Fleſh of the Dead, as Dogs would gnaw Carrion.

Towards the Borders of the ſaid Province there are a great many Lakes, upon the Banks whereof are Salt-Pits, the Water of which, ſo ſoon as it entereth into the Lake, becomes hard Salt like Ice; and out of theſe Salt-Pits *Baatu* and *Sartach* have great Revenues, for they repair thither out of all *Ruſſia* for Salt, and for each Cart Load they give two Webs of Cotton, amounting to the Value of half an Yperpera. There come alſo many Ships for Salt, which pay Tribute every one according to their Burthen. The third Day after we were departed out of theſe Precincts of *Soldaia*, we found the *Tartars*, amongſt whom being entered, methought I was come into a new World, whoſe Life and Manners I will deſcribe unto your Highneſs as well as I can.

7. They have no ſettled Habitation, neither know they To-day where they ſhall lodge To-morrow. They have all *Scythia* to themſelves, which ſtretcheth from the River *Danube*, to the utmoſt Extent of the Eaſt. Each of their Captains, according to the Number of his People, knows the Bounds of his Paſtures, and where he ought to feed his Cattle Winter and Summer, Spring and Autumn; for in the Winter they remove into warm Regions Southward, and in the Summer they go up into the cold Regions Northward. In Winter when Snow lies upon the Ground, they feed their Cattle in Paſtures where there is no Water, becauſe then they uſe Snow inſtead of Water. Their Houſes in which they ſleep, they raiſe upon a round Foundation of Wickers, artificially wrought and compacted together; the Roof conſiſting of Wickers alſo meeting above in one little Roundell, out of which there riſes upwards a Neck like a Chimney, which they cover with white Felt, and often they lay Morter or white Earth upon the Felt with the Powder of Bones, that it may ſhine and look white: Sometimes alſo they cover their Houſes with black Felt. This Cupola of their Houſe they adorn with Variety of Pictures.

Before the Door they hang a Felt curiouſly painted over, for they ſpend all their coloured Felt in painting Vines, Trees, Birds, and Beaſts thereupon. Theſe Houſes they make ſo large, that they contain thirty Feet in Breadth; for meaſuring once the Breadth between the Wheel-ruts of one of their Carts or Wains, I found it to be twenty Feet over, and when the Houſe was upon the Cart, it ſtretched over the Wheels on each Side five Feet at leaſt. I told two-and-twenty Oxen in one Draught drawing an Houſe upon a Cart, eleven in one Row according to the Breadth of the Cart, and eleven more on the other Side. The Axle-tree of the Cart was of an huge Bigneſs, like the Maſt of a Ship, and a Fellow ſtood in the Door of the Houſe upon the Foreſtall of the Cart driving the Oxen. They likewiſe make certain four-ſquare Baſkets of ſlender Twigs as big as great Cheſts, and afterwards from one Side to another they frame an hollow Lid or Cover of ſuch-like Twigs, and make a Door in it before. Then they cover the ſaid Cheſt or Houſe with black Felt, rubbed over with Tallow or Sheep's Milk, to keep the Rain from ſoaking through, which they likewiſe adorn with Painting or white Feathers. Into theſe Cheſts they put their whole Houſhold Stuff, or Treaſure, and bind them upon other Carts, which are drawn by Camels, that they may paſs through Rivers, neither do they ever take down theſe Cheſts from their Carts. When they take down their Dwelling-Houſes, they turn the Doors always to the South, and next they place the Carts laden with the Cheſts here and there within a Stone's Caſt of the Houſe, inſomuch that the Houſe ſtandeth between two Ranks of Carts, as it were between two Walls.

The Women make themſelves moſt beautiful Carts, which I am not able to deſcribe to your Majeſty but by Pictures only; I would willingly have painted all Things for you, had my Skill been great enough in that Art. A rich *Tartar* hath a hundred or two ſuch Carts with Cheſts. *Baatu* hath ſixteen Wives, every one of which hath one great Houſe, beſides other little Houſes, which they place behind the great one, being as it were Chambers for their Women to dwell in, and to each of the Houſes belong two hundred Carts. When they take their Houſes off the Carts, the principal Wife placeth her Court on the Weſt, and ſo all the reſt in order; ſo that the laſt Wife's Houſe is on the Eaſt Frontier, and the Court of each Wife is diſtant from another about a Stone's Caſt.

Hence it is, that the Court of a rich *Tartar* will appear like a very large Village, few Men being to be ſeen therein; one Woman will guide twenty or thirty Carts at once, for their Country is very flat, and they faſten the Carts with Camels or Oxen one behind another; a Wench ſits in the foremoſt Cart driving the Oxen, and all the reſt of themſelves follow a like Pace: When they come to a Place which is a bad Paſſage, they looſe them, and guide them one by one, for they go a ſlow Pace, and not much faſter than an Ox can walk.

8. When they have taken down their Houſes from their Carts, and turned the Doors Southward, they place the Bed of the Maſter of the Houſe at the North Part thereof; the Womens Place is always on the Eaſt, that is, on the left Hand of the Maſter of the Houſe, when ſitting upon his Bed with his Face to the South; but the Mens Place is to the Weſt, that is, at the right Hand of their Maſter. Men, when they enter into the Houſe, never hang their Quivers on the Womens Side. Over the Maſter's Head there is an Image made of Felt, which they call the Maſter's Brother, and another over the Head of the Miſtreſs, which they call her Brother, faſtened to the Wall, and a Bow between both of them. There is a little lean Idol, which is, as it were, the Guardian of the whole Houſe. The Miſtreſs of the Houſe places at the Feet of her Bed, on the right Hand, *the Skin of a Kid*, ſtuffed with Wool, and near that a little Image, looking towards the Apartment of the Woman. Next the Door, on the Womens Side, there is another Image, with a Cow's Udder, which is the Guardian of the Women that milk the Cattle, for that is the conſtant Employment of their Women. On the other Side of the Door next the Men, is another Image, with the Udder of a Mare, for the Guardian of thoſe who milk the Mares.

When they meet to make merry they ſprinkle Part of their Drink upon the Image which is over the Maſter's Head, and afterwards upon the other Images in their Order; then a Servant goes out of the Houſe with a Cup full of Drink, ſprinkling it thrice towards the South, and bowing his Knee every time; and this is done in Honour of the Fire. He performs the ſame Ceremony towards the Eaſt in Honour of the Air; and then to the Weſt, in Honour of the Water; and laſtly, to the North, in Behalf of the Dead. When the Maſter holds a Cup in his Hand to drink, before he taſtes he pours a Part of it upon the Ground: If he drinks ſitting on Horſeback, he pours out Part upon the Neck or Mane of the Horſe before he drinks. After the Servant has paid his Reverence to the four Quarters of the World, he returns to the Houſe, and two other Servants ſtand ready with two Cups, and two Baſons, to carry Drink to their Maſter and his Wife, who ſit together upon a Bed. If he has more Wives than one, ſhe with whom he ſlept the Night before, ſits by his Side the next Day, and all his other Wives muſt that Day reſort to her Houſe to drink, and there the Court is for that Day; the Gifts alſo which are preſented that Day are laid up in the Cheſts of that Wife. One Piece of Ceremony is conſtant in all Houſes, *viz.* a Bench, on which ſtands a Veſſel of Milk, or of other Drink, and Cups for drinking it.

9. They make in Winter an excellent Drink of Rice and of Honey, ſtrong, well-taſted, and high coloured like

Wine; they have alſo Wine brought to them from other Countries. In the Summer Time they care not for any Drink but Coſmos. This Liquor ſtands always at the Entrance of the Door, and next to it a Fidler. I ſaw there no ſuch Violins as ours; but many other muſical Inſtruments which are not uſed with us. When the Maſter of the Houſe begins to drink, one of his Servants crieth out with a loud Voice, Ha! and the Muſician plays upon his Fiddle.

When they make a ſolemn Feaſt, they all of them clap their Hands and dance to the Noiſe of Muſick, the Men before their Maſter, and the Women before their Miſtreſs; and when the Maſter has drunk, then his Servants cry, Ha! as before, and the Fidler ſtops; then they drink all round both Men and Women, and ſometimes they carouſe, eſpecially for Victory, till they are drunk. When they invite a Man to drink, they pull him by the Ears to the Veſſel, and ſo lug and draw him ſtrongly to ſtretch out his Throat, clapping their Hands, and dancing before him.

When they would do Honour to any Perſon at their ſolemn Feaſting and Rejoicing, one of the Company takes a full Cup, and two others ſtand, one on his right Hand, and the other on his left, and ſo they three come ſinging to the Man, who is to have the Cup preſented to him, ſtill ſinging and dancing before him; and when he ſtretches his Hand to receive the Cup, they leap ſuddenly back, returning again as they did before; and ſo having deluded him three or four Times by drawing back the Cup, until he is eager and very deſirous to drink, then they give him the Cup, ſinging and dancing, and ſtamping with their Feet, until he hath done drinking.

10. In reſpect to their Food, give me leave to inform your Highneſs, that without Difference or Diſtinction they eat all their Beaſts that die of Age or Sickneſs; and amongſt ſo many Drovers, there muſt ſome Cattle die in Summer. However, ſo long as their Coſmos, that is, their Mares Milk laſts, they care not much for any Food; and if they chance to have an Ox or an Horſe die, they dry the Fleſh, cutting it into thin Slices, and hanging it up againſt the Sun and the Wind, it is preſently dried without Salt, and without ill Savour or Corruption. They make better Puddings of their Horſes than their Hogs, which they eat as ſoon as made, the reſt of their Fleſh they reſerve till Winter. They make of their Ox Skins great Bags, which they dry in the Smoak; of the hinder Part of their Horſe Hides they make very fine Sandals. They give fifty or an hundred Men the Fleſh of one Ram to eat; for they mince it in a Bowl with Salt and Water, having no other Sauce, and then with the Point of a Knife, or little Fork, which reſembles ſuch as we uſe to take roaſted Pears or Apples out of Wine, they reach unto every one of the Company a Morſel or two, according to the Number of Gueſts. The Maſter of the Houſe, before the Ram's Fleſh is diſtributed, firſt takes of it what he pleaſes; if he giveth unto any of the Company a particular Service, the Receiver thereof muſt eat it alone, and not impart unto any other; or if he is not able to eat it up all, he carries it with him, and delivers it to his Boy, if he be preſent, to keep it; if not, he puts it up into his Saptarget, that is to ſay, his Satchel, or Knapſack, which they carry about with them for ſuch Purpoſes, and wherein they lay up their Bones, when they have not Time to pick them thoroughly, that they may ſcrape them at Leiſure, and ſo nothing be loſt.

11. Their common Drink Coſmos, which is Mares Milk, is prepared after this Manner; they faſten a long Line to two Poſts, ſtanding in the Ground, and to the ſame Line they tie the young Foals of thoſe Mares which they intend to milk; then come the Mares to ſtand by the Foals, ſuffering themſelves to be milked; and if any of them be rude, then one takes her Foal and puts it under her, letting it ſuck a little while, and preſently carrying it away again, there comes another Man to milk the Mare. When they have got a good Quantity of this Milk together, while it is new, they pour it into a great Bag, and they beat the Bag with a piece of Wood made for that Purpoſe, having a Knot at the lower End like a Man's Head, which is hollow within; and ſo ſoon as they beat it, it begins to boil like new Wine, and to be ſour, and of a ſharp Taſte; and they beat it in that manner till Butter comes; then they taſte it, and being indifferently ſharp, they drink it, for it bites ones Tongue like the Raſberry Wine. After a Man hath taken a Draught, it leaves a Taſte behind it like that of Almond Milk, going down very pleaſantly, and intoxicating weak Brains, for it is very heady and powerful.

As for their Caracoſmos, that is to ſay, Black Coſmos, which is for great Lords to drink, they make it thus; firſt, they beat the Milk ſo long that the thickeſt Part thereof deſcends down to the Bottom like the Lees of White Wine, and that which is thin and pure remains above like Whey, or White Muſt; the Lees and Dregs, being very white, are given to Servants, and will make them ſleep exceedingly. That which is thin and clear their Maſters drink; and indeed it is a wonderful ſweet and wholeſome Liquor. *Baatu* hath thirty Farms within a Day's Journey of his abiding Place, every one of which ſerves him daily with Caracoſmos of an hundred Mares Milk, and ſo all of them together every Day with the Milk of three thouſand Mares, beſides white Milk, which the reſt of his Subjects bring: For, as the Huſbandmen of *Syria* pay the third Part of their Fruits, and carry it unto the Courts of their Lords, ſo do they their Mares Milk every third Day.

Out of their Cow's Milk they firſt churn Butter; boiling which Butter unto a perfect Decoction, they put it into Rams Skins, which they reſerve for that Purpoſe; neither do they ſalt their Butter; and yet by this boiling it never putrefies, and they keep it for Winter; the Churn Milk, which remains of the Butter, they let alone till it be as ſour as poſſible; then they boil it, and in boiling it is turned all into Curds, which Curds they dry in the Sun, making them as hard as the Droſs of Iron; and this kind of Food alſo they preſerve in Satchels againſt Winter. In that Seaſon when Milk fails them, they put the Curds before-mentioned, which they call Gra-ut, into a Bladder, and pouring hot Water upon them, they beat it till they have diſſolved them, and it is thereby made exceeding ſour; and this they drink inſtead of Milk; for it ſeems a Rule with them never to drink fair Water by itſelf.

12. The great Lords of this Nation have all of them Farms in the South Part of their Country, from whence their Tenants bring them Millet and Meal againſt Winter. The poorer Sort provide themſelves with ſuch Neceſſaries, by the Exchange of Rams, and other Beaſts Skins. As for their Slaves, they are forced to be content with Water, and that thick and bad enough. The only ſort of Animals from which I have known them abſtain, are Mice and Rats. There is, however, a little Animal which they call Sogur, which in the Winter Time lie and ſleep twenty or thirty of them together in Caves for ſix Months, where the *Tartars* find them out, and eſteem them excellent Eating; and indeed they are very tender and fat. They have likewiſe great Plenty of a ſort of Rabbits with long Tails, the outſide Hair of which is black and white; other ſmall Creatures they have, on which they freely feed. I ſaw no Deer there, and but a few Hares, but a great Number of Roes.

I ſaw wild Aſſes in great Abundance, which are like Mules: I ſaw alſo another kind of Beaſt called Artack, reſembling in its Body a Ram, with crooked Horns, and are of ſuch Bigneſs, that I could ſcarce lift up a Pair of them with one Hand; and of theſe Horns they make drinking Cups. They have Falcons, and other Hawks in great Numbers, which they carry upon their right Hands, and they put always about their Falcons Necks a String of Leather, which hangs down to the midſt of their Gorges; by which String, when they caſt them off the Fiſt at the Game with the left Hand, they bow the Heads and Breaſts of the Hawks to prevent their being toſſed up and down in the Wind, or their ſoaring too high. Being expert in this Art, they gain a great Part of their Proviſion by Hunting and Hawking. In regard to their Attire, it may pleaſe your Majeſty to know, that out of *Cataya*, and other Regions of the Eaſt, out of *Perſia* alſo, and other Countries to the South, are brought to them Manufactures of Silks, Cloth of Gold, and Cotton Cloth, which they wear in time of Summer; but out of *Ruſſia*, *Moxell*, *Bulgaria*, *Hungaria*, and out of *Kerſis*, all which are Northern Regions, and full of Woods, and alſo out of many other Countries of the North, which are ſubject unto them, the Inhabitants bring them many rich and coſtly Skins of divers ſorts, ſuch as I never ſaw, wherewith they are cloathed in Winter, and againſt which Seaſon they make themſelves two Gowns, one with the Fur inward to their Skin, and another with the Fur outward, to defend them from Wind and Snow, which for the moſt part are made of Wolves Skins, or Foxes Skins.

When they ſit in the Houſe they have a finer Gown to wear: The poorer ſort make their Gowns of Dogs or of Cats Skins. When they go to hunt wild Beaſts they meet in a great Company, and ſurrounding the Place where they are ſure to find Game, by little and little they approach on all Sides, till they have got all the wild Beaſts into the midſt in a Circle, and then they diſcharge their Arrows at them. They make themſelves Breeches of Skins. The rich *Tartars* ſometimes fur their Gowns with Silk Shag, which is exceeding ſoft, light, and warm: The poorer ſort line their Cloaths with Cotton, or Cloth, which is made of the fineſt Wool they can pick out; and of the coarſer Part of the Wool they make Felt to cover their Houſes, and their Cheſts, and for their Bedding; alſo of the ſame Wool, being mixed with one-third Part of Horſe-Hair, they make all their Cordage. They make of this Felt likewiſe Covering for their Stools, and Caps to defend their Heads from the Weather; for all which they ſpend a great Quantity of their Wool.

13. The Men ſhave a four-ſquare Spot upon the Crowns of their Heads, and from the two Corners, they ſhave, as it were, two Seams down to their Temples. They ſhave alſo their Temples, and the hinder Part of their Head, to the Nape of the Neck. They likewiſe ſhave the Forepart down to their Fore heads, and upon their Foreheads they leave a Lock of Hair, reaching down to their Eyebrows; on the two hinder Corners of their Heads they have two Locks alſo, which they twine and braid into Knots, and ſo bind and knit them one under each Ear. The Garments of their Women differ not from the Mens, except that they are ſomewhat longer. But the Day after a Woman is married ſhe ſhaves from the midſt of her Head down to her Forehead, and wears a wide Garment like the Veil of a Nun; but larger and longer in all Parts than a Nun's Veil, being open before, and they girt them under the right Side. The *Tartars* differ from the *Turks*, becauſe the *Turks* faſten their Garments to their Bodies on the left Side; but the *Tartars* always on the right Side.

They have always an Ornament for their Heads, which they call *Botta*, which is made of the Bark of a Tree, or of ſome ſuch Subſtance as they can find, which by the Thickneſs and Roundneſs thereof, cannot be held but in both Hands together; and it hath a ſquare ſharp Spire riſing from the Top thereof, being almoſt two Feet in Length, and ſhaped like a Pinacle. This *Botta* they cover all over with a Piece of rich Silk, and it is hollow within; and upon the midſt of this ſame Spire they place a Bunch of Quills, or ſlender Canes, a Foot and a half long, or more, and the Bunch on the Top thereof they beautify with Peacocks Feathers; and round about they ſtick the Feathers of a Mallard's Tail, and adorn it with Precious Stones. Alſo great Ladies wear this kind of Ornament upon their Heads, binding it ſtrongly to a kind of Hat, or Coif, which hath a Pole in the Crown, fit for the Spire to come through; and under this Ornament they comb the Hair of their Heads, which they gather up round together, from the hinder Part thereof to the Crown, and ſo lap them up in a Knot or Bundle within the *Botta*, which afterwards they bind ſtrongly under their Throats.

It is on this Account, that when a great Company of ſuch Ladies ride together, and are ſeen at a Diſtance, they look like Soldiers with Helmets on their Heads, carrying their Lances upright, for the *Botta* appears like an Helmet with a Lance over it. All their Women ſit on Horſeback like Men, and they bind their Veils or Gowns about their Waiſts with a Sky-coloured or Silk Scarf, and with another Scarf they gird it about their Breaſts; and they alſo bind a Piece of white Silk like a Muffler, or Maſk, under their Eyes, reaching down to their Breaſts. Theſe Ladies are, generally ſpeaking, exceeding fat; and the leſs their Noſes, the handſomer they are eſteemed. They daub over their Face with Greaſe too moſt frightfully, and they never keep their Beds on account of their bringing forth Children.

14. As to the Employments of their Women, they drive Carts, lay their Houſes upon Carts, and take them down again, milk Cattle, make Butter and Griat, dreſs Skins, and ſew them, which they uſually do with Thread made of Sinews; for they divide Sinews into ſlender Threads, and then twine them into one large one. They make Sandals and Socks, and other kind of Apparel; but they never waſh any Cloaths, for they ſay that God is then angry, and that dreadful Thunder will enſue, if waſhed Garments be hung out to dry. Nay, they beat ſuch as waſh, and take their Garments from them. They are wonderfully afraid of Thunder; for in the Time of Thunder they force all Strangers out of their Houſes, and then wrapping themſelves in black Felt, lie hid therein till the Thunder be over. They never waſh their Diſhes, or Bowls; yet when the Fleſh is boiled they waſh their Platter, wherein it muſt be put, with ſcalding hot Broth out of the Pot, and then pour the Broth into the Pot again. They make Felt alſo, and cover the Houſes therewith.

The Men are employed to make Bows and Arrows, Stirrups, Bridles and Saddles, to build Houſes and Carts, to keep Horſes, to milk Mares, to churn Coſmos and Mares Milk, and to make Bags to put it in; they keep Camels alſo, and lay Burthens upon them. As for Sheep and Goats, they mind and milk them, both Men and Women. With Sheeps Milk thickened and ſalted they dreſs and tan their Hides. When they waſh their Hands and their Heads they fill their Mouths full of Water, and ſpouting it into their Hands by little and little, they ſprinkle their Hair, and waſh their Heads therewith. As to their Marriages, your Highneſs is to underſtand, that no Man can have a Wife among them till he hath bought her; therefore ſometimes their Maids are very ſtale before they are married, for their Parents always keep them till they can ſell them. They abſtain from the firſt and ſecond Degrees of Conſanguinity inviolably as we do; but they have no Regard to the Degrees of Affinity, for they will marry together, or by Succeſſion, two Siſters; their Widows never marry a ſecond time, for this Reaſon, becauſe they believe that all who have ſerved them in this Life, ſhall do them Service alſo in the Life to come. Whereupon they are perſuaded, that every Widow after Death ſhall return to her own Huſband; and hence ariſes an abominable and filthy Cuſtom amongſt them, namely, that the Son marrieth ſometimes all his Father's Wives, except his own Mother; for the Court, or Houſe of the Father or Mother, falleth by Inheritance always to the youngeſt Son, whereupon he is to provide for all his Father's Wives, becauſe they are Part of his Inheritance, as well as his Father's Poſſeſſions; and then, if he will, he uſeth them for his own Wives, for he thinks it no Injury or Diſparagement to himſelf, tho' they return unto his Father after Death. Therefore when any Man hath bargained with another for a Maid, the Father of the Damſel makes him a Feaſt; in the mean time ſhe flies away to ſome of her Kinsfolk to hide herſelf. Then her Father ſays to the Bridegroom, my Daughter is yours, take her whereſoever you can find her. Then he and his Friends ſeek her till they find her, and having found her, he takes her by Force, and carries her to his own Houſe.

15. In regard to their Laws, or their Execution of Juſtice, your Majeſty is to be advertiſed, that when two Men fight, no third Man dare intrude himſelf to part them: The Father dare not help his own Son: but he that happens to have the worſt, muſt appeal to the Court of his Lord, and whoever elſe offereth him any Violence after Appeal, is put to death; but he muſt be taken preſently without Delay. They puniſh no Man with Death, unleſs he be taken in the Commiſſion of the Fact, or elſe confeſs the ſame: But being accuſed, they put him to extreme Torture to make him confeſs the Truth. They puniſh Murder with Death, and even Fornication with any other beſides his own Women. By his own, I mean his Wife or his Maid-Servant; for every Man may uſe his Slave as he pleaſes. Heinous Theft alſo, or Felony, they puniſh with Death. For a light Theft, as for ſtealing of a Ram, the Criminal not apprehended in the Fact, but otherwiſe de-

tected, is cruelly beaten; and if the Excutioner lays on an hundred Strokes, he muſt have an hundred Rods, for ſuch as are beaten upon Sentence given in Court. Frauds likewiſe of every kind they puniſh with Death. Sacrilegious Perſons they uſe in like manner (of which kind of Malefactors your Majeſty ſhall be more fully informed hereafter) becauſe they eſteem ſuch to be Witches. When a Man dies they lament and howl moſt pitifully over him, and the Mourners are free from paying any Tribute for one whole Year after: Alſo whoever is preſent in the Houſe, where one of Mans's Eſtate lies dead, he muſt not enter into the Court of *Mangu-Khan*, till one whole Year be expired. If it was a Child deceaſed, he muſt not enter into the Court till the next Month after. Near the Grave of the Party deceaſed, they always leave one Cottage. If any of their Nobles, being of the Stock of *Zingis*, their firſt Lord dies, the Place of his Burial is not known. About theſe Places where they inter their Nobles, there is a Family left to keep the Sepulchre: I could not learn that they uſed to hide Treaſures in the Graves of their Dead.

The *Comanians* build a ſtately Tomb over their Dead, and erect the Image of the dead Man thereupon, with his Face towards the Eaſt, holding a Drinking-cup in his Hand before his Navel. They erect alſo upon the Monument of rich Men Pyramids; and in ſome Places I ſaw high Towers made of Brick; in other places Pyramids made of Stone, though there are no Stones to be found thereabouts. I ſaw one newly buried, in Honour of whom they hung up ſixteen Horſe-hides unto each Quarter of the World, four between certain high Poſts; and they ſet beſide his Grave *Coſmos* for him to drink, and Fleſh to eat; and yet they ſaid that he was baptized. We beheld other kind of Sepulchres alſo toward the Eaſt, *viz.* large Floors of Pavements, made of Stones, ſome round and ſome ſquare, and then four long Stones pitched upright about the Pavement towards the four Corners of the World. When any Man is ſick, he lieth in his Bed and cauſeth a Sign to be ſet up on his Houſe, to ſignify that there lies a ſick Perſon, that no Man may enter into the Houſe; for none are admitted there to ſick Perſons but a Servant only. When any one is ſick in their great Courts, they appoint Watchmen to ſtand round about the Court, who will not ſuffer any Perſon to enter the Precincts thereof; for ſuch is their Superſtition, that they are afraid that evil Spirits or Witches ſhould come together with the Parties that enter in.

16. On my Arrival among theſe barbarous People, I thought, as I before obſerved, that I was come into a new World, for they came flocking about us on Horſe-back, after they had made us wait for them in the Shade under the Black Carts. The firſt Queſtion they aſked was, whether we had ever been with them heretofore or not: And on our anſwering that we had not, they began impudently to beg our Victuals from us: We gave them ſome of our Biſcuit and Wine, which we had brought with us from the Town of *Soldai*; and having drank off one Flaggon of our Wine, they demanded another, telling us, that a Man does not go into the Houſe with one Foot; we gave them no more however, excuſing ourſelves that we had but little. Then they aſked us whence we came, and whither we were bound; I anſwered them in theſe Words; that we had heard concerning their Prince *Sartach*, that he was become a Chriſtian, and that unto him our Determination was to travel, having your Majeſty's Letters to deliver unto him. They were very inquiſitive to know whether I came of mine own accord, or whether I was ſent. I anſwered, that no Man compelled me to come, neither had I come unleſs I had been willing; and that therefore I was come according to my own Will, and to the Will of my Superior. I took the utmoſt Care never to ſay that I was your Majeſty's Embaſſador. Then they aſked what I had in my Carts, whether it were Gold, Silver, or rich Garments to carry to *Sartach*. I anſwered that *Sartach* ſhould ſee what we had brought when we were come unto him, that they had nothing to do to aſk ſuch Queſtions; but rather ought to conduct me unto their Captain, and that he, if he thought proper, ſhould cauſe me to be directed to *Sartach*, if not, that I would return; for there was in the ſame Province one of *Baatu*'s Kinſmen, called *Zagatai*, to whom the Emperor of *Conſtantinople* had written Letters to ſuffer me to paſs through his Territories.

With this Anſwer of ours they were ſatisfied, giving us Horſes and Oxen, and two Men to conduct us. But before they would allow us thoſe Neceſſaries, they made us wait a long while, begging our Bread for their Brats, wondering at all Things they ſaw about our Servants, as their Knives, Gloves, Purſes, and Points, and deſiring to have them. I excuſed myſelf, ſaying, we had a long Way to travel, and that we could not deprive ourſelves of Things neceſſary to finiſh ſo long a journey. Then they ſaid I was a niggardly Scoundrel. It is true, they took nothing by Force from me, but they will beg all they ſee very importunately; and if a Man beſtows any thing upon them, it is but loſt, for they are thankleſs Wretches. They eſteem themſelves Lords, and think that nothing ſhould be denied them by any Man: If a Man gives them nothing, and afterwards ſtands in Need of their Service, they will do nothing for him. They gave us of their Cows-milk to drink after the Butter was churned out of it, which was very ſour, which they call *Apram*; ſo we departed from them: And indeed it ſeemed to me that we were eſcaped out of the Hands of Devils. The next Day we were introduced to their Captain. From the Time wherein we departed from *Soldai*, till we arrived at the Court of *Sartach*, which was the Space of two Months, we never lay in Houſe or Tent, but always under the Canopy of Heaven, and in the open Air, or under our Carts; neither ſaw we any Village, or heard of any Building where any Village had been; but the Graves of the *Comanians* we ſaw in great abundance. The ſame Evening our Guide which had conducted us, gave us ſome Coſmos: After I had drank thereof, I ſweated extremely, which was owing, I believe, to the Novelty of it, becauſe I never drank of it before; notwithſtanding I thought it was very pleaſant and well taſted.

17. We met the Day following with the Carts of *Zagatai*, laden with Houſes; and I really thought that a great City came to meet me. I wondered at the Multitude of Droves of Oxen, and Horſes, and Droves of Sheep; I could ſee but a few Men that guided all theſe: Upon which I enquired how many Men he had under him, and they told me that he had not above five hundred in all, and that the one half of this Number were paſs'd, as they lay in another Lodging. Then the Servant which was our Guide, told me that I muſt preſent ſomewhat to *Zagatai*; and ſo he cauſed us to ſtay, going themſelves before to give Notice of our coming. By this Time it was paſt Three, and they unladed their Houſes near a River; and there came unto us his Interpreter, who being informed by us that we were never there before, demanded ſome of our Victuals, and we granted his Requeſt. He alſo required of us ſome Garment, for a Reward, becauſe he was to interpret our Meſſage to his Maſter: We excuſed ourſelves as well as we could. Then he aſked us what we would preſent to his Lord, and we took a Flaggon of Wine, and filled a Baſket with Biſcuit, and a Salver with Apples, and other Fruits; but he was not contented therewith, becauſe we brought him not ſome rich Garment.

We were, however, admitted into his Preſence with Fear and Baſhfulneſs. He ſat upon his Bed holding a muſical Inſtrument in his Hand, and his Wife ſat by him, who, in my Opinion, had cut and pared her Noſe between the Eyes, that ſhe might ſeem to be more flat-noſed; for ſhe had left herſelf no Noſe at all in that Place, having anointed the very Scar with black Ointment, as ſhe alſo did her Eye-brows; which Sight ſeemed to us moſt ugly. Then I repeated to him the ſame Words which I had ſpoken in other Places; for we were directed in this Circumſtance by ſome that had been amongſt the *Tartars*, that we ſhould never vary in our Tale. I beſought him that he would vouchſafe to accept this ſmall Gift at our Hands, excuſing myſelf that I was a Monk, and that it was againſt our Profeſſion to poſſeſs Gold, Silver, or precious Garments, and therefore that I had not any ſuch Thing to give him, unleſs he would receive ſome Part of our Victuals inſtead of a Bleſſing. He cauſed thereupon our

Preſent to be received, and immediately diſtributed the ſame amongſt his Men, who were met together for that Purpoſe, to drink and make merry. I delivered alſo to him the Emperor of *Conſtantinople*'s Letters, eight Days after the Feaſt of Aſcenſion, and he ſent them to *Soldai* to have them interpreted there; for they were written in *Greek*, and he had none about him that was ſkilled in the *Greek* Tongue.

He aſked us if we would drink any Coſmos, that is to ſay Mares Milk, for thoſe that are Chriſtians among them as the *Ruſſians*, *Grecians*, and *Alans*, who keep their own Law very ſtrictly, will not drink thereof, for they account themſelves no Chriſtians after they have once drank of it, and their Prieſts reconcile them unto the Church as if they had renounced the Chriſtian Faith. I anſwered, that we had as yet ſufficient of our own to drink, and that when it failed us we muſt be conſtrained to drink ſuch as ſhould be given us: He enquired alſo what was contained in the Letters which your Majeſty ſent to *Sartach*. I anſwered, that they were ſealed up, and that there was nothing contained in them but friendly Words. And he aſked what Words we would deliver unto *Sartach*? I anſwered, the Words of Chriſtian Faith. He aſked again what thoſe Words were? For he was very deſirous to hear them. Then I expounded unto him as well as I could by my Interpreter, who was a very ſorry one, the Apoſtles Creed, which after he had heard he ſhook his Head. Then he aſſigned us two Men to attend upon us, and our Horſes and our Oxen, and he cauſed us to ride in his Company, till the Meſſenger he had ſent for the Tranſlation of the Emperor's Letters arrived; ſo we travelled in his Company till the Day after *Whitſunday*.

18. There came to us on *Whitſun-Eve*, ſome of the People called *Alans*, who are the Chriſtians of the *Greek* Church, uſing *Greek* Books, and were Prieſts, but they are not Schiſmatics as the *Grecians* are, ſince without Exception of Perſons they honour all Chriſtians; and they brought unto us boiled Fleſh, requeſting us to eat of their Meat, and to pray for one of their Company who was dead. I anſwered, becauſe it was the Eve of ſo great a Feaſt, we would not eat any Fleſh; and I expounded to them the Solemnity of the Feaſt, for they were ignorant of all Things relating to the Chriſtian Religion, except the Name of Chriſt.

They and many other Chriſtians, both *Ruſſians* and *Hungarians*, demanded of us whether they might be ſaved or no, becauſe they were conſtrained to drink Coſmos, and to eat the dead Carcaſſes of Things ſlain by the Infidels, which even the *Greeks* and *Ruſſian* Prieſts alſo eſteemed as Things ſtrangled or offered to Idols, becauſe they were ignorant of the Times of Faſting, neither could they have obſerved them if they had known them. I inſtructed them as well as I could, and ſtrengthened them in the Faith; as for the Fleſh which they had brought, we reſerved it till the Feaſt-day, for there is nothing ſold among the *Tartars* for Gold and Silver, but for Cloth and Garments, of which we had none. When our Servants offered them any of their Coin, called by them Yperpera, they rubbed it with their Fingers and put it to their Noſes, to try by the Smell whether it were Copper or no. They did not allow for our Food any Subſiſtence but Cows Milk only, which was very ſour: One Thing moſt neceſſary was greatly wanting to us, for the Water was ſo foul and muddy by reaſon of their Horſes, that it was not fit to be drank; ſo that had it not been for ſome Biſcuit which by the Goodneſs of God was ſtill left us, we had undoubtedly periſhed.

19. On the Feaſt of *Pentecoſt* there came to us a *Mohammedan*, to whom, as he talked with us, we expounded the Chriſtian Faith, who (being informed of God's Goodneſs to Mankind in the Incarnation of our Saviour Chriſt, the Reſurrection of the Dead and the Judgment to come, and that Baptiſm was a waſhing away of Sins) ſaid that he would be baptized; but when we prepared to baptize him, he ſuddenly mounted on Horſeback, ſaying, that he would go Home and conſult with his Wife: And the next Day he told us that he durſt not receive Baptiſm, becauſe then he ſhould drink no more Coſmos; for the Chriſtians of that Place affirm, that no true Chriſtians ought to drink it, and that without it he could not live in that Deſart; from which Opinion I could not for my Life remove him. It is ſcarce credible, how many are reſtrained from becoming Chriſtians from this Opinion, broached and confirmed among them by the *Ruſſians*, of whom there are a great many ſettled here. The ſame Day *Zagatai* gave us one Man to conduct us to *Sartach*, and to guide us to the next Stage, which was five Days Journey for Oxen to travel. They gave us alſo a Goat for Victuals, and a great many Bladders of Cows Milk, and but a little Coſmos, becauſe they love it ſo much themſelves; and ſo taking our Journey directly towards the North, I thought we had paſſed through one of Hell-Gates.

The Servants who conducted us began to play the bold Thieves, ſeeing us take little heed to ourſelves; at length having loſt much by their Thievery, Suffering taught us Wiſdom. When we came to the Extremity of that Province, which is fortified with a Ditch from one Sea unto another, without which was their Place of Lodging, into which ſo ſoon as we had entered, it appeared to us as if all the Inhabitants were infected with Leproſy, for certain baſe Fellows were placed there to receive Tribute of ſuch as took Salt out of the Salt-Pits. From that Place they told us we muſt travel fifteen Days Journey before we ſhould find any other Place; with them we drank Coſmos, and gave to them a Baſket full of Fruits and of Biſcuit, and they gave unto us eight Oxen and one Goat to maintain us in ſuch a Journey, and I know not how many Bladders of Milk, and ſo changing our Oxen we proceeded for ten Days, arriving then at another Stage, neither found we any Water all that Way, but only in ſome Ditches made in the Vallies and in two Rivers. From the Time alſo that we departed out of the Province of *Gaſſaria*, we travelled directly Eaſtward, having the Sea on the South-ſide of us, and a vaſt Deſart on the North, which Deſart in ſome Places reaches twenty Days Journey in Breadth, without Tree, Mountain, or ſo much as a Stone therein, and is a moſt excellent Paſture. Here the *Comanians*, which were called *Copthai*, were wont to feed their Cattle, and were the ſame the *Germans* ſtiled *Walani*, and the Province itſelf *Walania*. But *Iſidore* calleth all the Tract of Land ſtretching from the River of *Tanais* to the Lake of *Meotis*, and ſo far as the *Danube*, the Country of the *Alani*. And the ſame Country extends in Length from the *Danube* to *Tanais* (which divides *Aſia* from *Europe*) for the Space of two Months Journey, and it was all inhabited by the *Comanians*, called *Copthai*, and beyond *Tanais* as far as the River of *Edil* or *Volga*, the Space between which two Rivers is a long Journey to be travelled in ten Days. To the North of the ſame Province lieth *Ruſſia*, which is full of Wood in all Places, and ſtretches from *Poland* and *Hungary* to the River of *Tanais*, and it likewiſe hath been waſted by the *Tartars*, and is ſtill waſted by them.

20. The *Tartars* have more Eſteem for the *Saracens* than the *Ruſſians*, becauſe the latter are Chriſtians, and when they are able to give them no more, they drive them and their Children, like Flocks of Sheep, into the Wilderneſs, conſtraining them to keep their Cattle there. Beyond *Ruſſia* lieth the Country of *Pruſſia*, which the *Teutonick* Knights of the Order of St. *Mary*'s Hoſpital of *Jeruſalem* have of late wholly ſubdued, and, indeed they might eaſily win *Ruſſia* if they would attempt it vigorouſly; for if the *Tartars* ſhould once know that the great Prieſt, for that is the Name they give to the Pope, had cauſed the Enſign of the Croſs to be diſplayed againſt them, they would fly into the Deſarts. But to proceed;

We went towards the Eaſtward, ſeeing nothing but the Sky and the Earth, and ſometimes the Sea on our right Hand, called the Sea of *Tanais*, and the Sepulchres of the *Comanians*, which appeared unto us two Leagues off, in which their Cuſtom was to bury their Dead altogether. While we were travelling through the Deſart it went reaſonably well with us, but I cannot ſufficiently expreſs the Irkſomeneſs of their Place of Abode, for our Guide would have us go to every Captain with a Preſent, which was an Expence our Circumſtances would not bear, for we were eight Perſons ſpending our own Proviſion, for the *Tartar* Servants would all of them eat of our Victuals.

The Fleſh which they gave us was not ſufficient for us, neither could we find any thing to be bought for our Money: And as we ſat under our Carts in the cool Shadow, on account of the extreme Heat, they would importunately and ſhamefully intrude themſelves into our Company, ſo that they would even tread upon us to ſee what we had; ſuch Slovens they were, that they would lay their Tails in our Preſence while they were yet talking with us: Many other Things they committed, which were moſt tedious and loathſome unto us.

But above all, it grieved me to the very Heart, that, when I would have ſpoken what might tend to their Edification, my fooliſh Interpreter would ſay, You ſhould not make me become a Preacher now; I tell you I cannot, I will not rehearſe any ſuch Words: And true it was which he ſaid, for I perceived afterwards, when I began to have a little Knowledge in the Language, that when I ſpoke one Thing he would ſay quite another; that is, whatſoever came next to his witleſs Tongue's End. Then ſeeing the Danger I might incur in ſpeaking by ſuch an Interpreter, I reſolved rather to hold my Peace; and thus we travelled with great Fatigue from Place to Place, till a few Days before the Feaſt of St. *Mary Magdalen*, we arrived at the Banks of the mighty River *Tanais*, which divides *Aſia* from *Europe*, even as the River *Nile* of *Egypt* ſeparates *Aſia* from *Africa*. At the Place where we arrived, *Baatu* and *Sartach* had cauſed Cottages to be built upon the Eaſtern Bank of the River, for a Company of *Ruſſians* to dwell in, that they might tranſport Ambaſſadors and Merchants in Ferry boats over that Part of the River; where firſt they ferried us over, and then our Carts, putting one Wheel into one, and the other into the other Lighter, firſt binding both the Lighters together, and ſo they rowed them over.

In this Place our Guide played the fool ſtrangely; for he imagining that the *Ruſſians* dwelling in the Cottage ſhould have provided us Horſes, ſent home the Beaſts we brought with us, in another Cart, that they might return to their own Maſters. But when we demanded ſome Beaſts of them, they anſwered, that they had a Privilege from *Baatu*, whereby they were bound to no other Service but to ferry Goers and Comers; and that they received great Sums from Merchants even for that. We ſtayed there by the River-ſide three Days. The firſt Day they gave us a great freſh Turbot: The ſecond Day they beſtowed Rye-bread and a little Fleſh upon us, which the Purveyor of the Village had taken up at every Houſe for us: And the third Day dried Fiſh, which they have there in abundance. The River was as broad in that Place as the River *Seine* is at *Paris*; and before we came there, we paſſed over many fine Waters all full of Fiſh, and yet the barbarous and rude *Tartars* know not how to take them; neither do they make any Reckoning of any Fiſh, except it be ſo great that they may eat the Fleſh of it as they do the Fleſh of a Ram.

This River is the Limit of the Eaſt Part of *Ruſſia*; it riſeth out of the Fens of *Mæotis*, which Fens extend quite to the northern Ocean. It runs ſouthward, and forms a Sea of ſeven hundred Miles in Extent before it falls into the *Pontus Euxinus*, or the *Black Sea*; and all the Rivers we paſſed over ran into the ſame. This River has alſo great ſtore of Wood growing on the Weſt Side thereof. The *Tartars* remove no farther towards the North: For about the firſt of *Auguſt* they begin to return back to the South; and therefore there is another Cottage ſomewhat lower, where Paſſengers are ferried over in Winter-time. And in this Place we were driven to great Extremity, becauſe we could get neither Horſes nor Oxen for Money; at length, after I had declared unto them, that my coming was for the common Good of all Chriſtians, they ſent us Oxen and Men, but we ourſelves were forced to travel on Foot. At this time they were reaping their Rye; as for Wheat, it grows not well in that Soil: They have Millet in great abundance.

The *Ruſſian* Women dreſs their Heads like our Women: They embroider their Gowns on the outſide, from their Feet unto the Knees, with party-coloured or grey Stuff. The *Ruſſian* Men wear Caps like the *Dutchmen*; alſo they wear upon their Heads certain ſharp and high-crown'd Hats made of Felt, much like a Sugar-loaf. We travelled thence three Days together without finding any People; and when ourſelves and our Oxen were exceeding weary and faint, not knowing how far it would be to any *Tartars*, on a ſudden there came two Horſes running towards us, which we caught with great Joy: Our Guide and our Interpreter mounted upon their Backs, to ſee how far off they could deſcry any People; and upon the fourth Day of our Journey, having found ſome Inhabitants, we rejoiced like Seamen who had eſcaped out of a dangerous Tempeſt, and had newly recovered the Haven. Then having taken freſh Horſes and Oxen, we paſſed on from Stage to Stage, till at laſt, the ſecond of *Auguſt*, we arrived at the Habitation of *Sartach*, the *Tartar* Prince.

21. All the Country lying beyond *Tanais* is a very beautiful and pleaſant Region, abounding with Rivers and Woods. Towards the North Part thereof there are large Foreſts inhabited by two ſorts of People, one of them is called *Moxel*, being mere *Pagans*, and without Law; they have neither Towns nor Cities, but only Cottages in the Woods. Their Lord, and a great Part of themſelves, were put to the Sword in *Germany*; whereupon they highly commend the brave Courage of the *Alanians*, hoping as yet to be delivered out of the Bondage of the *Tartars* by their Means. If any Merchant come among them, he muſt provide Things neceſſary for him with whom he is firſt entertained all the time of his Abode among them. If any lieth with another Man's Wife, her Huſband, unleſs he be an Eye-witneſs thereof, doth not regard it, for they are not jealous of their Wives. They have abundance of Hogs, and great Store of Honey and Wax, and various ſorts of rich and coſtly Skins, and Plenty of Falcons. .

The other People are called *Merclas*, which the *Latins* call *Mardui*, and they are *Mohammedans*. Beyond them is the River of *Etilia*, or *Volga*, which is the greateſt River that ever I ſaw, and it iſſues from the North Part of *Bulgaria the Greater*; and ſo trending along Southward, diſcharges itſelf into a certain Lake, containing in Circuit the Space of four Months Travel, of which I ſhall ſpeak hereafter. The two Rivers afore-mentioned, *Tanais* and *Etilia*, otherwiſe called *Volga*, in the Northern Regions, through which we travelled, are not diſtant above ten Days Journey; but Southward they are divided a great Space one from another, for *Tanais* deſcendeth into the Sea of *Pontus*. *Etilia* maketh the foreſaid Sea or Lake, with the Help of many other Rivers which fall into it out of *Perſia*, and we had to the South of us very high Mountains; upon the Side thereof towards the ſaid Deſart, the People called *Carges*, and the *Alani* or *Arcas* inhabit, who are as yet Chriſtians, and make War againſt the *Tartars*. Beyond them, next unto the Sea or Lake of *Etilia*, there are certain *Mohammedans* called *Leſgi*, who are in Subjection to the *Tartars*. Beyond this is *Porta-Ferrea*, or the Iron Gate, concerning the Situation of which your Majeſty ſhall be further informed towards the End of this Treatiſe, for I travelled in my Return by the very Place between theſe two Rivers; in the Regions through which we paſſed the *Comanians* formerly inhabited before they were over-run by the *Tartars*.

22. We found *Sartach* lying within three Days Journey of the River *Etilia*, whoſe Court ſeemed to us to be very great, for he himſelf had ſix Wives, and his eldeſt Son alſo had three Wives, every one of which Women hath a great Houſe, and each of them above two hundred Carts. Our Guide went unto a certain *Neſtorian* named *Coiat*, who is a Man of great Authority in *Sartach* Court; he made us go a long way to one *Janna*, for ſo they call him who has the Office of entertaining Ambaſſadors. In the Evening *Coiat* commanded us to come unto him. Then our Guide began to enquire what we would preſent him with, and was exceedingly offended when he ſaw we had nothing ready to preſent. We ſtood before him, and he ſat majeſtically, having Muſick and Dancing in his Preſence. Then I ſpoke unto him in the Words before recited, telling him for what Purpoſe I was come unto his Lord, and requeſting ſo much Favour at his Hands as to bring our Letters unto the Sight of his Lord. I excuſed myſelf alſo, that I was a Monk, not having, nor receiving nor uſing, any Gold or Silver, or other precious Thing, ſave our Books, and the Garments in which, as Prieſts, we ſerved God; and this was the

Cauſe why I brought no Preſent to him, or to his Lord; for having abandoned my own Goods, it could not be expected I ſhould become a Carrier for other Men. To all which he anſwered very courteouſly, that being a Monk, in ſo doing I did well, for ſo I ſhould obſerve my Vow; neither ſtood he in need of ought we had, but rather was ready to beſtow on us ſuch Things as we ſtood in need of; and having ſo ſaid, he cauſed us to ſit down, and to drink of his Milk, and preſently after he requeſted us to ſay our Devotions for him, and we did ſo.

He enquired alſo who was the greateſt Prince among the *Franks*, i. e. the Weſtern Chriſtians? and I ſaid the Emperor, if he could enjoy his own Dominions in Quiet. No, replied he, but the King of *France*, for he had heard of your Highneſs by Lord *Baldwin* of *Henalt*. I found there alſo one of the Kinghts Templars, who had been in *Cyprus*, and had made Report of all Things which he ſaw there. Then we returned to our Lodging and the next Morning we ſent him a Flaggon of Muſcadel Wine (which had kept very well in ſo long a Journey) and a Box full of Biſcuit, which was moſt acceptable unto him, and he detained our Servants for that Evening, and they were well entertained at his Tents. The next Morning he commanded me to come to Court, and to bring the King's Letters, and my Veſtments and Books with me, becauſe his Lord was deſirous to ſee them, which we did accordingly, lading one Cart with our Books and Veſtments, and another with Biſcuit, Wine, and Fruits; then he cauſed all our Books and Veſtments to be ſpread abroad, and there ſtood round about us many *Tartars*, *Chriſtians*, and *Saracens*, on Horſeback; at the Sight of which he demanded, whether I would beſtow all thoſe Things upon his Lord or no? Which ſaying made me tremble, and threw me into an exceſſive Fright. Diſſembling our Grief as well as we could, we gave him the following Anſwer: Sir, our humble Requeſt is, that our Lord, your Maſter, would vouchſafe to accept our Bread, Wine, and Fruits, not as a Preſent, becauſe it is too mean, but as a Benediction, leſt we ſhould come with an empty Hand before him, and he ſhall ſee the Letters of my Sovereign Lord the King, and by them he ſhall underſtand for what Cauſe we are come unto him, and then both ourſelves and all that we have are at his Pleaſure, but for our Veſtments they are holy, and it is unlawful for any but Prieſts to touch them.

Then he commanded us to dreſs ourſelves in the Garments, that we might go before his Lord, and we did ſo. Then putting on our moſt precious Ornaments, I took in my Arms a very fair Cuſhion, and the Bible which your Majeſty gave me, and a moſt beautiful Pſalter, which the Queen was pleaſed to beſtow upon me, wherein there were very fine Pictures. My Aſſociate took a Miſſal and a Croſs, and the Clerk having put on his Surplice, took a Cenſor in his Hand, and ſo we came to the Preſence of his Lord, and they lifted up the Felt hanging before his Door, that he might behold us.

Then they cauſed the Clerk and the Interpreter thrice to bow the Knee; but of us they required no ſuch Submiſſion, and they diligently admoniſhed to take care that in going in, and in coming out, we touched not the Threſhold of the Houſe, and requeſted us to ſing a Benediction for him. At length we entered ſinging *Salve Regina*; and in the Entrance of the Door ſtood a Bench with Coſmos, and Drinking-cups thereon, and all his Wives were there aſſembled; alſo the Moguls, or, as they pronounce, *Moals*, or rich *Tartars*, thruſt in, and preſſed hard upon us. Then *Coiat* carried to his Lord the Cenſor, with Incenſe, which he beheld very diligently, holding it in his Hand; afterwards he carried the Pſalter unto him, which he looked earneſtly upon, and his Wife alſo that ſat by him; after that he carried the Bible; then *Sartach* aſked, if the Goſpel were contained therein? Yes, ſaid I, and all the Holy Scriptures beſides.

He took the Croſs alſo in his Hand, and aſked, as to the Image, whether it were the Image of Chriſt or no? I ſaid it was. The *Neſtorians* and the *Armenians* never make the Figure of Chriſt upon their Croſſes. Wherefore, either they ſeem not to think well of this Paſſion, or elſe they are aſhamed of it. Then he cauſed them that ſtood about us to ſtand aſide, that he might more fully behold our Ornaments. Afterwards I delivered unto him your Majeſty's Letters; with the Tranſlation thereof in the *Arabick* and *Syriack* Languages, for I cauſed them to be tranſlated at *Acon* into the Character and Dialect of both the ſaid Tongues. There were certain *Armenian* Prieſts, who were verſed in the *Turkiſh* and *Arabian* Languages, and the Knight before mentioned alſo of the Order of the Temple had Knowledge in the *Syriac*, *Turkiſh*, and *Arabian* Tongues. Then we departed, and put off our Veſtments, and there came unto us ſome Secretaries of the Court, together with the *Coiat*, and cauſed our Letters to be interpreted, which Letters being heard, he cauſed our Bread, Wine, and Fruits, to be received; and he permitted us alſo to carry our Veſtments and Books unto our own Lodging.

23. We had the next Morning betimes a Viſit from a certain Prieſt, who was Brother to *Coiat*, requeſting to have our Box of Chriſm, becauſe *Sartach*, as he ſaid, was deſirous to ſee it, and ſo we gave it him. In the Evening *Coiat* ſent for us, ſaying, my Lord, your King, wrote Kind Words unto my Lord and Maſter *Sartach*. There are, however, certain Matters of Difficulty in them, concerning which he dare not determine without the Advice of his Father, and therefore you muſt depart unto him, leaving behind you the two Carts which you brought hither Yeſterday with Veſtments and Books in my Cuſtody, becauſe my Lord is deſirous to take a more diligent View of them. I preſently ſuſpecting what Miſchief might enſue from his Covetouſneſs, made him Anſwer; Sir, We will not only leave thoſe with you, but the two other Carts alſo, which we have in your Poſſeſſion. You ſhall not, ſaid he, leave thoſe behind you; but for the two Carts firſt named, we will ſatisfy your Requeſt: I ſaid, that this could not conveniently be done, but we muſt leave all with him. Then he aſked, whether we meant to remain in the Land? I anſwered, if you have read, and underſtand the Letters of my Lord the King, you know that we are ſo determined; then he replied, that he ought to be patient, and ſo we departed from him that Evening.

The next Morning he ſent a *Neſtorian* Prieſt for the Carts, and we cauſed all the four Carts to be delivered; then came the beforementioned Brother of *Coiat* to meet us, and ſeparated thoſe things, which we had brought the Day before to the Court from the reſt, *viz*. the Books and Veſtments, and took them away with him. *Coiat* had, however, commanded, that we ſhould carry theſe Veſtments with us, which we wore in the Preſence of *Sartach*, that we might put them on before *Baatu*, if he ſhould require it; but the Prieſt took them from us by Violence, uſing theſe Words: You brought them to *Sartach*, and would you carry them to *Baatu?* And when I would have ſhewn him the Reaſon, he anſwered, Come, don't be too talkative, but go your way. Then I ſaw there was no Remedy but Patience, for we could have no Acceſs unto *Sartach* himſelf, neither was there any that would do us Juſtice. I was afraid alſo of the Interpreter, that he had ſpoken other things than I directed him; for his Will was good, that we ſhould have given away all that we had. There was yet one Comfort left to me, for when I once perceived their covetous Intent, I conveyed from among our Books the Bible, and the Sentences, and other Books, which I valued moſt. I durſt not, however, take away the Pſalter of my ſovereign Lady the Queen, becauſe it was too well known, on account of the golden Pictures therein: So we returned with the two other Carts to our Lodging; then came he that was appointed to be our Guide to the Court of *Baatu*, bidding us provide for our Journey in all haſte, to whom I ſaid, that I would in no caſe have the Carts go with me, which he declared unto *Coiat*.

Then *Coiat* commanded that we ſhould leave them and our Servant with him, and we did as he directed, and ſo travelled directly Eaſtwards towards *Baatu*; the third Day we came to *Etilia*, or *Volga*, the Stream of which when I beheld I wondered from what Region of the North ſuch huge and mighty Waters ſhould deſcend. Before we were departed from *Sartach*, *Coiat*, with many other Scribes of the Court, ſaid unto us, Do not make Report that our Lord is a Chriſtian, but a *Moal*, becauſe the Name of a Chriſtian ſeemeth to them to be the Name of ſome Nation; and ſo great is their Pride, that though they believe, perhaps, ſome things concerning Chriſt, yet they will not be called Chriſtians, being deſirous that their own Name, that is to ſay, Mogul *Moal*, ſhould be exalted above all other Names: Neither will they be called by the Name of *Tartars*, for the *Tartars* were another Nation, as I was informed by them.

24. At the Time that the *Franks* made themſelves Maſters of the City of *Antioch*, which was about the Year 1097, there reigned in theſe Northern Parts a Prince whoſe Name was *Kon-Khan*, or *Ken-Khan*. *Kon or Ken* was his proper Name, and *Khan* his Stile of Power or Dignity; for it is to be underſtood, that the Word *Khan* ſtrictly taken, ſignifies a Diviner, a Man ſkilled in ſublime Sciences, or one who can foretel future Events; and from thence it is transferred to their Princes, as if they held them to be endowed with all theſe great Qualities. The *Turks*, at the Time of that Siege, demanded Succours of *Kon-Khan* againſt the Chriſtians, as coming themſelves originally out of theſe Countries. This *Kon-Khan* was ſtiled likewiſe *Khan*, or Prince of *Cara-Cathay*, which is as much as to ſay, the *Black Cathay*; for *Cara* in their Language ſignifies black, and *Cathay* is the Name of a certain Country, which, however, is to be diſtinguiſhed from that *Cathay* which lies farther towards the Eaſt, and is a maritime Country, of which I ſhall ſpeak hereafter.

As for this *Cara-Cathay*, it lies behind certain Mountains, over which I paſſed, as alſo through a plain Country, in which dwelt formerly a certain great *Neſtorian* Prieſt, who was the Sovereign of a Nation called *Naymans*, and who were all Chriſtians of the *Neſtorian* Sect. This *Kon-Khan* being dead, the *Neſtorian* Prieſt before mentioned took upon him the Stile and Office of a King, and thence the *Neſtorians* called him the King *Preſtre John*, i. e. *John* the Prieſt, and publiſhed mighty Things concerning him, and much beyond the Truth; for it is the Cuſtom of the *Neſtorians* coming from this Country to magnify every little thing into a great Matter, juſt as they ſpread a Report that *Sartach* was become a Chriſtian, and that *Mangu-Khan*, and *Ken-Khan*, had alſo embraced our Religion, only becauſe they were indulgent to thoſe of our Profeſſion, tho' nothing is more certain than that none of them are Chriſtians. So likewiſe there went abroad a great Report concerning this King and Prieſt *John*; notwithſtanding which, when I travelled through his Territories, there was no body that knew any thing of him, but a few *Neſtorians*. In his Paſtures or Territories dwelt *Ken-Khan*, at whoſe Court Friar *Andrew* was, and I myſelf paſſed by at my Return. This *John* had a Brother who was powerful alſo, and a Shepherd like himſelf called *Unc*, and he inhabited beyond the Mountains of *Cara-Cathay*, diſtant from his Brother *John* the Space of three Weeks Journey. He was Lord of a certain Village callad *Cara-Carum*, having People alſo for his Subjects named *Prit*, or *Merkit*, who were Chriſtians of the Sect of *Neſtorius*; but their Lord abandoning the Worſhip of Chriſt, embraced Idolatry, retaining with him Prieſts of the ſaid Idols, who all of them are Worſhipers of Devils, and are Sorcerers themſelves.

Beyond his Paſtures, about ten or fifteen Days Journey, are the Paſtures of *Moal*, who were a poor and beggarly Nation, without Governor and without Law, except their Soothſayings and their Divinations, unto which deteſtable Studies all in thoſe Parts apply their Minds. Near unto *Moal* were other poor People called *Tartars*. The aforeſaid King *John* died without Iſſue Male, his Brother *Unc* thereby was greatly inriched, and took himſelf the Stile of *Khan*, and his Cattle and Herds ranged to the Borders of *Moal*. About the ſame Time there was one *Zingis* a Farrier among the People of *Moal*; this *Zingis* ſtole as many Cattle from the *Khan* as he could poſſibly, ſo that the Shepherds of *Unc* complained unto their Lord; upon which he raiſed an Army, and marched up into the Country of *Moal* to ſeek for *Zingis*: But *Zingis* fled amongſt the *Tartars*, and hid himſelf among them; and *Unc* having taken ſome Spoils both from *Moal*, and alſo from the *Tartars*, returned home; then *Zingis* addreſſed himſelf to the *Tartars*, and to the People of *Moal*, "Behold Brethren, ſaid he, becauſe we are deſ-
"titute of a Governor and a Captain, you ſee how our
"Neighbour oppreſſes us;" on which the *Tartars* and *Moals* appointed him to be their Captain.

Then having ſecretly gathered together an Army, he broke in ſuddenly upon *Unc*, and overcame him, and *Unc* fled into *Catkaya*. At the ſame Time his Daughter was taken, which *Zignis* married unto one of his Sons, by whom ſhe conceived and brought forth the *Great Khan*, which now reigneth, called *Mangu-Khan*. Then *Zingis* ſent the *Tartars* before him in all Places where he came; and thereupon was their Name publiſhed and ſpread abroad; for in all Places the People call out, *The Tartars come, the Tartars come*. Yet through continual Wars, they are now all of them in a manner conſumed and brought to nought. Whereupon the *Moals* endeavour what they can to extinguiſh the Name of the *Tartars*, that they may exalt their own. The Country wherein they firſt inhabited, and where the Court of *Zingis-Khan* yet remaineth, is called *Mancherule*. But becauſe *Tartaria* is the Region out of which they have obtained their Conqueſts, they eſteem that the Seat of their Kingdom; and there alſo, for the moſt part, do they elect their *Great Khan*.

25. In reſpect to this *Sartach*, whether he believes in CHRIST or no, I know not; this I am ſure of, that he will not be called a Chriſtian: On the contrary, he ſeems to me to deride and ſcoff at Chriſtians His Country is in the Way of the *Chriſtians*, viz. of the *Ruſſians*, the *Walachians*, the *Bulgarians*, the *Soldaians* the *Kerchis*, and the *Alans*, who all of them paſs by him as they are going to the Court of his Father *Baatu* to carry Gifts; and therefore he is more in Friendſhip with them. If the *Saracens* however come and bring greater Gifts than they, they are diſpatched ſooner. He hath about him certain *Neſtorian* Prieſts, who tell their Beads and ſing their Devotions. There is alſo another under *Baatu*, called *Berta*, who feeds his Cattle towards the Iron-gate or *Derbent*, where lieth the Paſſage of all the *Saracens* which come out of *Perſia* and out of *Turky*, to go unto *Baatu*, and paſſing by they make him Preſents, and he profeſſeth himſelf to be a *Saracen*, and will not permit Swines Fleſh to be eaten in his Dominions. At the Time of our Return, *Baatu* commanded him to remove himſelf from that Place, and to inhabit upon the Eaſt Side of *Volga*, for he was not willing that the *Saracens* Embaſſadors ſhould paſs by the ſaid *Berta*, becauſe he ſaw it was not for his Profit.

For the Space of four Days, while we remained in the Court of *Sartach*, we had not any Victuals allowed us, except once a little Coſmos; and in our Journey between him and his Father, we travelled in great Fear; for certain *Ruſſians*, *Hungarians*, and *Alans*, being Servants to the *Tartars* (of whom they have great Multitudes among them) aſſembled themſelves twenty or thirty in a Company; and ſecretly in the Night conveying themſelves from Home, they take Bows and Arrows with them, and whoſoever they find in the Night Seaſon they put him to Death, hiding themſelves in the Day-time; and having tired their Horſes, they go in the Night to a Company of other Horſes feeding in ſome Paſture, and change them for new, taking with them alſo one or two Horſes beſides to eat them when they ſtand in need. Our Guide therefore was much afraid, leſt we ſhould have met with ſuch Companions.

In this Journey we had periſhed through Famine, had we not carried ſome of our Biſcuit with us: At length we came to the vaſt River *Etilia*, or the *Volga*, which is four Times greater than the River of *Sein*, and of a wonderful Depth, falling into that which of late they call the *Hircanian-Sea*, according to the name of a certain Country in *Perſia*, lying on the Shore thereof. *Iſidore* calleth it however the *Caſpian-Sea*, for it hath the *Caſpian-Mountains* and the Land of *Perſia* ſituate on the South Side thereof, and the Mountains of *Maſibet*; that is to ſay, of the People called *Aſſaſſini*, towards the Eaſt, which Mountains are joined unto the *Caſpian* Mountains; but on the North Side thereof, lieth the ſame Deſart, wherein the *Tartars* now inhabit; in which heretofore there dwelt a Nation called *Changle*; and on that Side it receives the *Etilia*, which River riſes in Summer-time like the River *Nile* in *Egypt*. On the Weſt Part thereof it hath the Mountains of *Alan*, and *Leſgi*, and *Derbent*, or the Iron-gate, and the Mountains of *Georgia*. This

Sea therefore is encompaſſed on three Sides, with Mountains; but on the North Side hath a fine flat Country. Friar *Andrew*, in his Journey, travelled round about two Sides thereof, namely the South and the Eaſt Sides, and I myſelf about the other two; that is to ſay, the North Side, in going from *Baatu* to *Mangu-Khan*, and in returning likewiſe; and on the Weſt Side, in coming home from *Baatu* into *Syria.* A Man may travel round about it in four Months; and it is not true which *Iſidore* reports, that this Sea is a Bay or Gulph coming out of the Ocean, for in no Part it communicates with the Ocean, but is environed on all Sides with the Land.

26. All the Regions extending from the Weſt Shore of this Sea, where *Alexander*'s Iron-gate, otherwiſe called the City of *Derbent*, is ſituate, and from the Montains *Alan*, all along by the Fences of *Mæotis*, into which the River of *Tanais* falls, and ſo to the North Ocean, was of old called *Albania*, of which Country *Iſidore* reporteth, that there are in it Dogs of ſuch huge Stature, and ſo fierce, that they are able, in Fight, to match Bulls, and to maſter Lions, which is true, as I was aſſured by ſeveral, who told me, that towards the North Ocean they make their Dogs draw in Carts like Oxen, on account of their Bigneſs and Strength. On that Part of *Etilia* where we arrived, there is a new Station built, wherein they have placed *Tartars* and *Ruſſians* together to ferry over and tranſport Meſſengers going and coming to and from the Court of *Baatu*, for *Baatu* keeps his Court upon the farther Side towards the Eaſt; neither aſcendeth he in the Summer-time more northward than the Place where we arrived, but was even then deſcending to the South. From *January* to *Auguſt*, he, and all other *Tartars* aſcend by the Banks of Rivers towards cold and northerly Regions, and in *Auguſt* they begin to return back again.

We paſſed down the Stream therefore in a Bark from the above-mentioned Station unto his Court, from the ſame Place unto a Village of *Bulgaria the Greater*, ſtanding towards the North; it is five days Journey. I wonder how the Devil carried the Religion of *Mohammed* thither; for, from *Derbent*, which is upon the extreme Borders of *Perſia*, it is above thirty Days Journey to paſs over the Deſart, and ſo aſcend to the Bank of *Etilia* into the Country of *Bulgaria*, in all which Way there is no City, only certain Cottages near unto that Place where *Etilia* falleth into the Sea. Theſe *Bulgarians* are more wicked *Mohammedans* than any other Nations whatever. When I beheld the Court of *Baatu*, I was aſtoniſhed at the firſt ſight thereof, for his Houſes or Tents are as though they had been ſome mighty City ſtretching out a great Way in Length, the People ranging up and down about it for the Space of ſome three or four Leagues; and even as the People of *Iſrael* knew every Man on one Side the Tabernacle to pitch his Tent, ſo every one of them knoweth very well toward which Side of the Court he ought to place his Houſe when he takes it from off the Cart. The Court is called therefore in their Language *Horda*, which ſignifies the Midſt, becauſe the Governor, or chief Captain among them, dwells always in the Midſt of his People, except only that directly towards the South no inferior Perſon places himſelf, becauſe, towards that Region the Court-gates are ſet open; but to the Right-hand and the Left-hand they place themſelves as far as they will, according to the Conveniency of Places, ſo that they erect not their Houſes directly oppoſite againſt the Court. At our Arrival we were conducted to a *Mohammedan*, who provided no Victuals for us at all. The Day following, we were brought to the Court, and *Baatu* cauſed a large Tent to be erected, becauſe his Houſe or Tent could not contain ſo many Men and Women as were aſſembled. Our Guide admoniſhed us not to ſpeak till *Baatu* had given us Commandment ſo to do, and that then we ſhould ſpeak our Minds briefly.

Then *Baatu* demanded whether your Majeſty had ſent Embaſſadors unto him or no? I anſwered, that your Majeſty had ſent Meſſengers to *Ken-Khan*, and that you would not have ſent Meſſengers or Letters to *Sartach*, had not your Highneſs been perſuaded that they were become Chriſtians, becauſe you ſent not unto them out of any Fear, but only for Congratulation and Courteſy-ſake, in regard that you heard they were converted to Chriſtianity. Then led he us unto his Pavilion, and we were charged not to touch the Cords of the Tent, about which they are as ſuſpicious as about the Threſhold of the Houſe. There we ſtood in our Habits bare-footed, and bare-headed, and were a great and ſtrange Spectacle in their Eyes. Indeed Friar *John Du Plano Carpini* had been there before my Coming; but becauſe he was the Pope's Embaſſador, he changed his Habit, that he might not be contemned. Then we were brought into the Midſt of the Tent, neither required they of us to do any Reverence, by bowing our Knees as they uſed to do of other Meſſengers; we ſtood therefore before him for the Space wherein a Man might have rehearſed the Pſalm *Miſerere mei Deus*, and there was a great Silence kept by all.

Baatu himſelf ſat upon a Seat long and broad, like a Bed gilt all over, with three Stairs to aſcend, and one of his Ladies ſat beſide him. The Men there aſſembled ſat down ſcattering, ſome on the Right-hand of the ſaid Lady, and ſome on the Left. Theſe Places on the one Side, which the Women filled not up (for there were only the Wives of *Baatu*) were ſupplied by the Men. Alſo at the very Entrance of the Tent ſtood a Bench furniſhed with Coſmos, and with ſtately Cups of Silver and Gold, richly ſet with precious Stones. *Baatu* beheld us earneſtly, and we him, and he ſeemed to reſemble in Perſonage Monſieur *John de Beaumont*, whoſe Soul reſteth in Peace; for, like him, he had a freſh ruddy Countenance.

At length, he commanded us to ſpeak. Then our Guide gave us Direction that we ſhould bow our Knees and ſpeak; on which I bowed one Knee, then he ſignified that I ſhould kneel upon both my knees; I did ſo, being loth to contend about ſuch Circumſtances; and again he commanded me to ſpeak. Then I thinking of a Prayer unto GOD, becauſe I kneeled on both my Knees, began to pray in theſe Words; “ Sir, we beſeech the “ Lord, from whom all good Things do proceed, and “ who hath given you theſe earthly Benefits, that it “ would pleaſe him hereafter to make you Partaker of his “ heavenly Bleſſings, becauſe the former, without theſe, “ are but vain and unprofitable: And, indeed, further be “ it known unto you of a certain, that you ſhall not obtain the Joys of Heaven, unleſs you become a Chriſtian; for GOD ſaith, *Whoſoever believeth and is baptized, ſhall be ſaved; but he that believeth ſhall be* “ *condemned.*”

At this he modeſtly ſmiled, but the other *Moals* began to clap their Hands and to deride us, and my ſilly Interpreter, of whom eſpecially I ſhould have received Comfort in Time of Need, was himſelf abaſhed, and utterly out of Countenance. Then after Silence made, I ſaid to him; “ I came to your Son, becauſe we heard that he “ was become a Chriſtian, and I brought to him Letters “ on the Behalf of my Sovereign Lord the King of “ *France*, and your Son ſent me hither unto you; the “ Cauſe of my coming therefore is beſt known unto your- “ ſelf.” Then he cauſed me to riſe up, and he enquired your Majeſty's Name, my Name, and the Name of my Aſſociate and Interpreter, and cauſed them all to be put down in Writing. He demanded alſo (becauſe he had been informed that you was departed out of your own Countries with an Army) againſt whom you waged War? I anſwered againſt the *Saracens*, who had defiled the Houſe of GOD at *Jeruſalem*. He aſked alſo whether your Highneſs had ever before that Time ſent any Embaſſador unto him or no? To you, Sir, ſaid I, never.

Then he cauſed us to ſit down, and gave us of his Milk to drink, which they account to be a great Favour, eſpecially when any Man is admitted to drink Coſmos with him in his own Houſe; and as I ſat looking down on the Ground, he commanded me to lift up my Countenance, being deſirous yet to take a more diligent View of us, or elſe perhaps for a kind of ſuperſtitious Obſervation; for they eſteem it a Sign of ill Luck, or a Prognoſtication of Evil unto them, when any Man ſits in their Preſence holding down his Head as if he were ſad, eſpecially when he leans his Cheek or Chin upon his Hand. Then we departed, and immediately after came our Guide to us, and conducting us to our Lodging, ſaid unto me; “ Your Ma-

" ſter the King, requeſteth that you may remain in this " Kingdom, which Requeſt *Baatu* cannot grant, with- " out the Knowledge and Conſent of *Mangu-Khan*; " wherefore you and your Interpreter muſt, of Neceſſity, " go to *Mangu-Khan*; but, nevertheleſs, your Aſſociate " and the other Man, ſhall return unto the Court of *Sar-* " *tach*, and ſtay there for you till you come back." Then began my Interpreter to lament, eſteeming himſelf but a dead Man; my Aſſociate alſo proteſted he would ſooner loſe his Head than withdraw out of my Company: I myſelf ſaid, that without my Aſſociate I could not go, and that we ſtood in Need of two Servants at leaſt, becauſe if one ſhould chance to fall ſick we would not be without another.

Upon this, returning unto the Court, he told this to *Baatu*, and *Baatu* anſwered, let the two Prieſts and the Interpreter go together, but let the Clerk return to *Sartach*; and coming again unto us, he told us ſo; and when I would have ſpoken for the Clerk to have had him with us, he ſaid, no more Words, for *Baatu* is reſolved that ſo it ſhall be, and therefore I dare not go to the Court any more. *Goſet*, the Clerk, had the Remainder of the Alms-Money beſtowed upon him, twenty-ſix *Yperperas*, and no more, ten whereof he kept for himſelf and the Lad, and ſixteen he gave unto the Interpreter for us; and thus were we parted with Tears, he returning unto the Court of *Sartach*, and ourſelves remaining ſtill in the ſame Place.

27. On the Eve of the Feaſt of *Aſſumption* our Clerk arrived at the Court of *Sartach*, and the next Day after the *Neſtorian* Prieſts were adorned with our Veſtments, in the Preſence of the ſaid *Sartach*. Then we ourſelves were conducted unto another Hoſt, who was appointed to provide us Houſe-room, Victuals, and Horſes; but becauſe we had not any thing to beſtow upon him, he did all things untowardly for us: Then we rode on forward with *Baatu*, deſcending along by the Bank of *Etilia*, or *Volga*, for the Space of five Weeks together. Sometimes my Aſſociate was ſo extremely hungry, that he would tell me in a manner weeping, that it fared with him as though he had never eaten any thing in all his Life before. There is a Fair or Market following the Court of *Baatu* at all times; but it was ſo far diſtant from us, that we could not have Recourſe thereto, for we were conſtrained to walk on Foot for want of Horſes. At length certain *Hungarians*, a ſort of Clergymen, found us out, and one of them could as yet ſing many Songs without Book, and was accounted of other *Hungarians* as Prieſt, and was ſent for unto the Funerals of his deceaſed Countrymen.

There was another of them alſo pretty well inſtructed in his Grammar, for he could underſtand the Meaning of any thing that we ſpoke, but could not anſwer us. Theſe *Hungarians* were a great Help to us, giving us Coſmos to drink and ſometimes Fleſh to eat alſo, who when they requeſted to have ſome Books of us, and I had not any to give them (for indeed we had none except a Bible and a Breviary) it grieved me exceedingly, and I ſaid to them bring me ſome Ink and Paper, and I will write for you ſo long as we ſhall remain here; and they did ſo, and I copied out for them the Hours of the bleſſed Virgin, and the Office of the Dead. One Day there was a *Comanian* that accompanied us, that ſaluted us, ſaying *Salve Domine*; wondering thereat, and ſaluting him again, I demanded of him who had taught him that kind of Salutation? He ſaid, that he was baptized in *Hungary* by our Friars, and that of them he learned it: He ſaid moreover, that *Baatu* had enquired many things of him concerning us, and that he told him the State of our Order. Afterwards I ſaw *Baatu* riding with his Company, and all his Subjects that were Maſters of Families riding with him, and in my Eſtimation there were more than five hundred Perſons in all.

At length, about the End of *Holy-rood*, there came a certain rich *Moal* unto us, whoſe Father was a Millanary, which is a great Office among them, and told us, I am the Man that muſt conduct you to *Mangu-Khan*, and we have thither a Journey of four Months to travel, and there is ſuch extreme Cold in thoſe Parts, that Stones and Trees burſt aſunder: Therefore I wiſh you would adviſe with yourſelves whether you be able to endure it or no? I anſwered, by God's Help I hope we ſhall be able to go gothro' that which other Men can endure. Then he ſaid, if you cannot endure it, I will forſake you by the way, and I anſwered, it were not juſt Dealings for you ſo to do, for we go not thither upon any Buſineſs of our own, but by reaſon that we are ſent thither by our Lord; wherefore ſince we are committed to your Charge, you ought in no wiſe to forſake us. Then he ſaid, all ſhall be well. He cauſed us to ſhew him our Garments, and whatſoever he deemed to be leſs needful for us, he bid us leave behind in the Cuſtody of our Hoſt. On the Morrow they brought unto each of us a furred Gown made all of Ram's Skins, with the Wool ſtill upon them, and Breeches of the ſame, Boots according to their Faſhion, Shoes made of Felt, and Hoods alſo made of Skins after their Manner. The ſecond Day after *Holy-rood* we began to ſet forward on our Journey, having three Guides to direct us, and we rode continually Eaſtward till the Feaſt of *All-Saints* throughout all that Region, and beyond alſo, were the People *Changles* Inhabitants, who were deſcended from the *Romans*. On the North Side of us we had *Bulgaria the Greater*, and on the South the *Caſpian* Sea.

28. When we had travelled twelve Days Journey from *Etilia* we found a mighty River called *Jagac*, which River iſſuing out of the North from the Land of *Paſcatir*, or of the *Hungarians*, which all is one, and they are all of them Shepherds, not having any Cities; and their Country bordereth upon *Bulgaria the Greater* on the Weſt Frontier; from the North-Eaſt Part of the Country there is no City at all. Out of the ſaid Region of *Paſcatir* proceeded the *Hunnes* of old, who afterwards were called *Hungarians*. Next unto it is *Bulgaria the Greater*. *Iſidore* reporteth concerning the People of this Nation, that with ſwift Horſes they traverſed the impregnable Walls and Bounds of *Alexander*, which together with the Rocks of *Caucaſus*, ſerve to reſtrain thoſe barbarous and blood-thirſty People from invading the Regions of the South, inſomuch as they had Tribute paid unto them as far as *Egypt*, and that they waſted all Countries, even unto *France*. If ſo they were more mighty than the *Tartars* as yet are, and unto them the *Blacians* and the *Bulgarians*, and the *Vandals*, joined themſelves; for out of *Bulgaria the Greater* came thoſe *Bulgarians*. As for them who inhabited beyond *Danubius*, near unto *Conſtantinople*, and not far from *Paſcatir*, are called *Ilac*, which (ſaving the Pronunciation) is all one with black, for the *Tartars* cannot pronounce the Letter *B*: From whom alſo deſcend the People which inhabit the Land of *Haſſan*, for they are called *Ilac* (both theſe and the other) in the Language of the *Ruſſians*, and *Polonians*, and the *Bohemians*.

The *Sclavonians* ſpoke one Language with the *Vandals*, all which confederate with the *Hunnes*, and now, for the moſt part, they unite themſelves to the *Tartars*, whom GOD hath raiſed up from the utmoſt Parts of the Earth, according to that which the Lord ſaith; *I will provoke them to Envy by a People which is no People, and by a fooliſh Nation will I anger them.* This Prophecy is fulfiled, according to the literal Senſe thereof, upon all Nations, which obſerve not the Law of GOD. All this which I have written concerning the Land of *Paſcatir*, was told me by certain Friars, who travelled thither before ever the *Tartars* came; and, from that Time, they were ſubdued unto their Neighbours the *Bulgarians*, being *Saracens*; for which Reaſon many of them proved *Saracens* alſo.

Other Matters concerning theſe People may be known out of Hiſtory; for it is manifeſt, that thoſe Provinces beyond *Conſtantinople*, which are now called *Bulgaria*, *Valachi*, and *Sclavonia*, were of old Provinces belonging to the *Greeks*; alſo *Hungary* was heretofore called *Panonia*, and we were riding over the Land of *Changle* from the Feaſt of *Holy-rood*, until the Feaſt of *All-Saints*, travelling almoſt every Day, according to my Account, as far as it is from *Paris* to *Orleans*, and ſometimes farther, according as we were provided with Poſt-Horſes; for ſome Days we had Change of Horſes twice or thrice in a Day, ſometimes we were two or three Days together, not finding any People, and then we were conſtrained not to ride ſo faſt. Of twenty or thirty Horſes we had always the worſt, becauſe we were Strangers, for every one took their Choice of the beſt Horſes before us. They provided me always a ſtrong Horſe, becauſe

I was corpulent and heavy; but whether he went a gentle Pace or no, I durſt not make any Queſtion, neither durſt I complain, although he trotted very hard; for every Man muſt here be contented with his Lot as it falls. We were often exceedingly troubled, becauſe our Horſes tired before we could come at any People, and then we were conſtrained to whip our Horſes, and to lay our Garments on other Horſes, and ſometimes two of us to ride upon one Horſe.

29. Of Hunger and Thirſt, Cold and Wearineſs, there was no End, for they gave us no Fleſh-meat, but in the Evening. In the Morning they uſed to give us a little Drink, or ſome boiled Millet; in the Evening they beſtowed Fleſh upon us, as a Shoulder and Breaſt of Ram's Mutton, and every Man a Quantity of Broth to drink. When we had ſufficient of the Fleſh Broth we were well refreſhed, and it ſeemed to me moſt pleaſant, and moſt nouriſhing Drink. Every *Saturday* I remained faſting until Night, without eating or drinking; and when Night came I was conſtrained, to my great Grief and Sorrow, to eat Fleſh: Sometimes we were compelled to eat Fleſh half ſodden, or almoſt raw, for want of Fuel to boil it, eſpecially when we lay in the Fields, or were benighted before we came to our Journey's End, becauſe we then could not conveniently gather together the Dung of Horſes and Oxen, for other Fuel we found but ſeldom, except, perhaps, a few Thorns in ſome Places. Upon the Banks of ſome Rivers there are Woods growing here and there, but they are very rare: In the Beginning our Guide highly diſdained us, and it was tedious unto him to conduct ſuch baſe Fellows. Afterwards, when he began to know us ſomewhat better, he directed us on our Way by the Courts of rich *Moals*, and we were requeſted to pray for them: Wherefore had I carried a good Interpreter with me, I ſhould have had Opportunities to have done much Good.

The before-mentioned *Zingis*, who was the firſt great Khan or Emperor of the *Tartars*, had four Sons, of whom proceeded by natural Deſcent many Children, every one of which doth at this Day enjoy great Poſſeſſions, and they are daily multiplied and diſperſed over that huge and vaſt Deſart, which is in Dimenſions like the Ocean. Our Guide therefore directed us, as we were going on our Journey, to many of their Habitations; and they marvelled exceedingly, that we would not receive either Gold or Silver, or precious and coſtly Garments at their Hands. They enquired alſo concerning the Great Pope, whether he was of ſo laſting an Age as they had heard; for there had gone a Report among them, that he was five hundred Years old. They enquired alſo after our Countries, whether there was abundance of Sheep, Oxen, and Horſes, or no? Concerning the Ocean, they could not conceive of it, becauſe it was without Limits or Banks. Upon the Eve of the Feaſt of *All Saints* we altered our Courſe, which hitherto pointed Eaſt, becauſe the People were now deſcended very much South, and we went on our Journey by certain Mountains directly Southward for the Space of eight Days together. In the Deſart I ſaw many Aſſes, which they call *Colan*, being rather Mules; theſe did our Guide and his Companions chaſe very eagerly, though they did but loſe their Labour, for the Beaſts were too ſwift for them.

Upon the ſeventh Day there appeared to the South of us very high Mountains; and we entered into a Place which was well watered, and freſh as a Garden, and found Land tilled and manured. The eighth Day after the Feaſt of *All Saints* we arrived at a Town of the *Saracens* named *Kenchat*, the Governor whereof met our Guide at the Town's End, with Ale and Cups; for it is their Cuſtom, at all Towns and Villages ſubject to them, to meet the Meſſengers of *Baatu* and *Mangu-Khan*, with Meat and Drink; at this Time of the Year they went upon the Ice in that Country, and before the Feaſt of Saint *Michael* they had Froſt in the Deſart. I enquired the Name of this Province, but being now in a ſtrange Territory, they could not tell me the Name thereof, but only the Name of a ſmall City in the ſame Province; and that there deſcended a great River down from the Mountains, which watered the whole Region, according as the Inhabitants would give it Paſſage, by making divers Chanels and Sluices; neither did the River diſcharge itſelf into any Sea, but was ſwallowed up by a Gulph into the Bowels of the Earth, and it cauſed many Fens or Lakes: Alſo I ſaw many Vines, and drank of the Wine made from them.

30. The Day following we came unto another Cottage near the Mountains, and I enquired what Mountains they were, which I underſtood to be the Mountains of *Caucaſus*, which are ſtretched forth and continued on both Sides to the Sea from the Weſt unto the Eaſt; and on the Weſt they are bordering to the *Caſpian* Sea, into which the River *Volga* diſcharges its Streams. I enquired alſo of the City of *Talas*, wherein were certain *Germans*, Servants unto one *Buri*, of whom Friar *Andrew* makes mention, concerning whom alſo I enquired very diligently in the Courts of *Sartach* and *Baatu*. I could get no Intelligence of them, but only that their Lord and Maſter *Ban* was put to Death upon the Occaſion following. This *Ban* was not ſettled in good and fertile Paſtures; and upon a certain Day being drunk, he ſpoke thus to his Men: *Am not I of the Stock and Kindred of* Zingis Khan *as well as* Baatu? (for indeed he was very nearly related to *Baatu*) *Why then do I not paſs and repaſs upon the Bank of* Etilia, *to feed my Cattle there as freely as* Baatu *himſelf doth?* which Speech of his was reported unto *Baatu*; whereupon *Baatu* wrote to his Servants to bring their Lord bound unto him, and they did ſo.

Then *Baatu* demanded of him whether he had ſpoken any ſuch Words? and he confeſſed that he had. But becauſe it is the Manner of the *Tartars* to pardon drunken Men, he excuſed himſelf by ſaying, *that he was drunk at the Time.* How durſt you, ſaid *Baatu*, once name me in thy Drunkenneſs; and having ſaid this, he cauſed his Head to be chopped off.

Concerning the aforeſaid *Germans*, I could not learn any thing till I was come to the Court of *Mangu-Khan*, and there I was informed that *Mangu-Khan* had removed them out of the Juriſdiction of *Baatu* for the Space of a Month's Journey from *Talas* Eaſtward to a certain Village called *Bolac*, where they are ſet to dig Gold, and to make Armour, ſo that I could neither go nor come by them. I paſſed very near the ſaid City in going, that is, within three Days Journey; but I was ignorant that I did ſo, neither could I have turned out of my Way, if I had known ſo much. From the aforeſaid Cottage, we went directly Eaſtward by the Mountains, and from that time we travelled among the People of *Mangu-Khan*, who in all Places ſang and danced before our Guide, becauſe he was the Meſſenger of *Baatu*; for this Courteſy they do to each other, namely, the People of *Mangu-Khan* receiving the Meſſengers of *Baatu*, and ſo likewiſe the People of *Baatu* entertaining the People of *Mangu-Khan*, notwithſtanding the People of *Baatu* are more ſurly, and ſhew not ſo much Courteſy to the Subjects of *Mangu-Khan*, as in their Turn they do to them.

A few Days after we entered upon thoſe Mountains where the *Cara-Cathayans* were wont to inhabit, and there we found a mighty River, inſomuch that we were conſtrained to embark ourſelves, and to ſail over it. Afterwards we came into a Valley, where I ſaw a Caſtle deſtroyed, the Walls whereof were only of Mud, and in that Place the Ground was tilled alſo; and there we found a certain Village named *Equius*, wherein were *Mohammedans* ſpeaking the *Perſian* Language; but they dwelt a great Way off *Perſia*. The Day following, having paſſed over the great Mountains Southward, we entered into a moſt beautiful Plain, having high Mountains on our right Hand, and on the left Hand of us a certain Sea or Lake, fifteen Days Journey in Circuit. All the Plain is moſt commodiouſly watered by Trenches diſtilling from the ſaid Mountains; all which fall into the Lake in Summer Time. We returned by the North Side of the Lake, and there were great Mountains on that Side alſo. Upon this Plain there uſed to be formerly many Villages; but for the moſt Part they were all waſted in regard of the fertile Paſtures, that the *Tartars* might feed their Cattle there.

We found one great City there named *Cailac*, which was a Market, and great Numbers of Merchants frequented it. In this City we remained fifteen Days, ſtaying for a certain Scribe or Secretary of *Baatu*, who ought to have accompanied our Guide for the diſpatching of certain Affairs in the Court of *Mangu*. All this Country was wont to be called *Organum*, and the People thereof had their proper Language, and their peculiar kind of Writing: But it was now inhabited by the People called *Contomans*. The *Neſtorians* likewiſe in thoſe Parts uſe the very ſame kind of Language and Writing; they are called *Organa*, becauſe they were wont to be moſt ſkilful in playing upon Organs, as was reported unto me. Here did I firſt ſee Worſhippers of Idols; concerning whom, let me obſerve to your Majeſty, that there be many Sects of them in theſe Eaſtern Countries.

31. The firſt ſort of theſe Idolaters are called *Jugures*, whoſe Country borders upon the Land of *Organum*, within the ſaid Mountains Eaſtward; and in all their Cities *Neſtorians* inhabit, and they are diſperſed likewiſe towards *Perſia* in the Cities of the *Saracens*. The Citizens of the aforeſaid City of *Cailac* had three Idol Temples, and I entered into two of them, and beheld their fooliſh Superſtitions. In the firſt I found a Man, having a Croſs painted with Ink upon his Hand; whereupon I ſuppoſed him to be a Chriſtian, for he anſwered like a Chriſtian unto all Queſtions which I demanded of him; and I aſked him, Why therefore have you not the Croſs with the Image of Jesus Chriſt thereupon? and he anſwered, We have no ſuch Cuſtom.

I thereupon conjectured, that they were indeed Chriſtians, but that for lack of Inſtruction they omitted the aforeſaid Ceremony; for I ſaw there behind a certain Cheſt, which was unto them inſtead of an Altar, whereon they ſet Candles and Oblations, an Image having Wings like unto the Image of St. *Michael*, and other Images alſo, holding their Fingers as if they would bleſs ſomebody. That Evening I could not find any thing elſe, for the *Saracens* only invite Men thither, but will not have them ſpeak of their Religion, and therefore when I required of the *Saracens* concerning ſuch Ceremonies, they were offended thereat.

On the next Day after was the New Moon, and the *Saracens* Feaſt of Paſſover, and changing my Inn or Lodging the ſame Day, I took my Abode near another Idol Temple; for the Citizens of the ſaid City of *Cailac* courteouſly invite, and lovingly entertain, all Meſſengers, every Man of them according to his Ability and Station; and entering into the Temple, I found the Prieſts of the ſaid Idols there, for always at the New Moons they ſet open their Temples, and the Prieſts adorn themſelves, and offer up the People's Oblations of Bread and Fruits. Firſt, therefore, I will deſcribe to you thoſe Rites and Ceremonies which are common unto all their Idol Temples, and then the Superſtitions of the aforeſaid *Jugures*, which are, as it were, a Sect diſtinguiſhed from the reſt. They all of them worſhip towards the North, clapping their Hands together, and proſtrating themſelves on their Knees on the Earth, holding alſo their Foreheads in their Hands: Whereupon the *Neſtorians* in thoſe Parts will in no caſe join their Hands together in the Time of Prayer, but they pray, diſplaying their Hands before their Breaſts.

They extend their Temples in Length Eaſt and Weſt, and on the North Side they build a Chamber in the Manner of a Veſtry, for themſelves to go into, or ſometimes it is otherwiſe. If it be a Four-ſquare Temple, in the midſt of the Temple towards the North Side thereof, they take in one Chamber in that Place where the Choir ſhould ſtand, and in the ſaid Chamber they place a Cheſt long and broad like a Table, and behind the ſaid Cheſt towards the South, ſtands their principal Idol, which I ſaw at *Caracarum*, and it was as big as the Idol of Saint *Chriſtopher*; alſo a certain *Neſtorian* Prieſt, which had been in *Cathay*, ſaid, that in that Country there is an Idol of ſuch Bigneſs, that it may be ſeen two Days Journey before a Man came at it; and ſo they place other Idols round about the principal Idol, being all of them finely gilt over with pure Gold, and upon the Cheſt, which is in a manner a Table, they ſet Candles and Oblations. The Doors of their Temple are always open towards the South, contrary to the Cuſtom of *Saracens*: They have alſo great Bells like us, and that is the Cauſe, as I think, why the Chriſtians of the Eaſt will in no caſe uſe great Bells, notwithſtanding they are common among the *Ruſſians* and *Grecians* of *Gaſaria*.

32. All their Prieſts had their Heads and Beards ſhaven quite over, and they are clad in ſaffron-coloured Garments; and being once ſhaven, they lead an unmarried Life from that Time forward, and they live an hundred or two hundred of them together in one Cloiſter. Upon theſe Days, when they enter into their Temples, they place two long Forms therein, and ſo ſitting upon the ſaid Forms, like Singing-men in a Choir, one half of them directly over-againſt the other, they have certain Books in their Hand, which ſometimes they lay down by them upon the Forms, and their Heads are bare ſo long as they remain in the Temple, and there they read ſoftly to themſelves, not uttering any Voice at all. On my coming in among them at the Time of their ſuperſtitious Devotions, and finding them all ſitting mute in a manner, I attempted ſeveral Ways to provoke them unto Speech, and yet could not by any Means poſſibly. They have with them alſo, whitherſoever they go, a certain String with an hundred or two hundred Nut-ſhells thereupon, much like to our Beads which we carry about with us; and they do always utter theſe Words, *Ou mam hactavi*; *God, thou knoweſt*, as one of them expounded it unto me. And ſo often do they expect a Reward at God's Hands as they pronounce theſe Words in Remembrance of God.

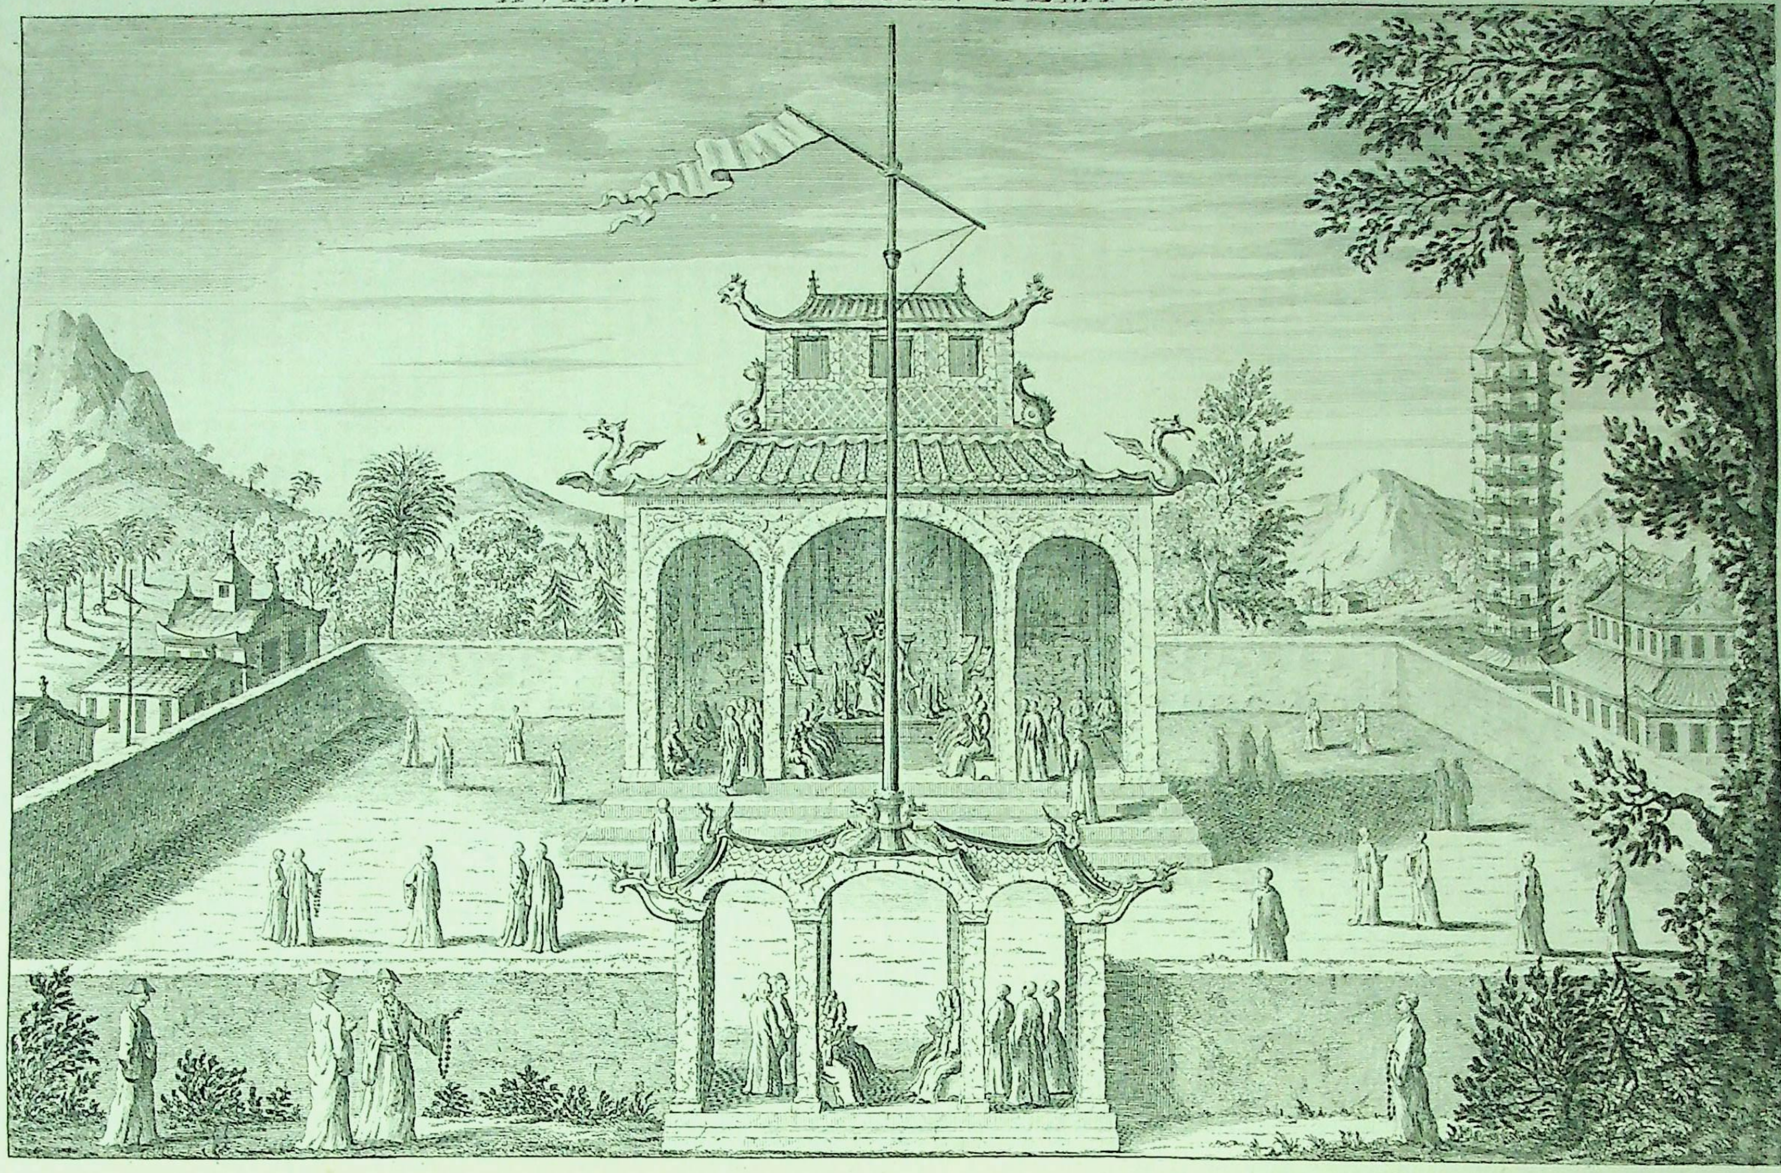
Round about their Temple they always make a fair Court like a Church-yard, which they environ with a good Wall; and upon the South Part thereof, they build a great Portico, wherein they ſit and confer together: And upon the Top of the ſaid Portico, they pitch a long Pole upright, exalting it if they can, above all the Buildings in the Town; and by the View of the ſame Pole, People may know that there ſtands a Temple of the Idols. Theſe Rites and Ceremonies are common to all Idolaters in thoſe Parts. Once I made a Viſit to this Idol-temple, and found certain Prieſts ſitting in the outward Portico, and thoſe which I ſaw ſeemed, by their ſhaven Beards, as if they had been our Countrymen. They wore certain Ornaments upon their Heads like Mitres, made of Paper. The Prieſts of the *Jugures* above-mentioned uſe thoſe Ornaments where-ever they go. They go always in their ſaffron-coloured Jackets, which are very ſtraight laced or buttoned, from the Boſom downwards, after the *French* Faſhion: and they have a Cloak upon their Left-ſhoulder deſcending under their Right-arm, like a Deacon carrying the Collector's Box in time of *Lent*. Their Letters or Writings, the *Tartars* uſe as well as they. They begin to write at the Top of their Paper, drawing their Lines right down, and ſo they read and multiply their Lines from the Left-hand to the Right. They uſe certain little Papers and uncouth Characters in their magical Practices, and their Temples are full of ſuch ſhort Scrolls hanging round about them.

Mangu-Khan hath ſent Letters unto your Majeſty, written in the Language of the *Moals* or *Tartars*; but in the Characters theſe *Jugures*, they burn the Dead, according to the ancient Cuſtom, and lay up their Aſhes on the Top of a Pyramid. After I had ſat a while with theſe Prieſts, and entered into their Temple, and ſeen many of their Images both great and ſmall, I demanded of them, *What they believed concerning God?* They anſwered, *We believe that there is only one God*; Whether do you believe that he is a Spirit or ſome bodily Subſtance? They ſaid, *We believe that he is a Spirit*. Then ſaid I, do you believe that God ever took Man's Nature upon him? They anſwered, *No*. Again, I ſaid, ſince you believe that he is a Spirit, to what end do you make ſo many bodily Images to repreſent him, ſince alſo you believe that he was not made Man? Why do you rather repreſent him by the Image of a Man than of any other Creature? Then they anſwered, *We frame not theſe Images to repreſent God; but when any rich Man amongſt us, or his Son, or his Wife, or any of his Friends dieth, he cauſeth the Image of the dead Perſon to be made, and to be placed here, and we, in Remembrance of him, do Reverence thereunto.* I replied then, Do you theſe Things only for Friendſhip and out of Flattery to Men? *No*, ſaid they, *but out of regard to their Memories.*

Then they demanded of me, in Scorn and Diſdain, where is God? To whom I anſwered, Where is your Soul? They ſaid in our Bodies: Then ſaid I, is it not in every Part of our Body, ruling and guiding the whole Body, and yet, notwithſtanding, it is not perceived?

Even

A VIEW OF A PAGAN TEMPLE. Vol.I.p.570.



Even ſo God is every-where, and rules all Things, and yet he is inviſible, being Underſtanding and Wiſdom itſelf. I was very deſirous to have had ſome farther Conference with them, but on account that my Interpreter was weary and not able to expreſs my Meaning, I was conſtrained to keep Silence. The *Moals*, or *Tartars*, are in this regard of their Sect, that is to ſay, they believe there is but one God, yet they make Images of Felt, in Remembrance of their deceaſed Friends, covering them with five moſt rich and coſtly Garments, and putting them into one or two Carts, which Carts no Man dare touch; and theſe are in the Cuſtody of their Soothſayers, who are their Prieſts, concerning whom I will give your Highneſs an Account more at large hereafter.

Theſe Soothſayers, or Diviners, always attend upon the Court of *Mangu*, and of other great Perſonages; as for the poorer, or meaner Sort, they have them not, except ſuch only as are of the Kindred of *Zingis*; and when they are to remove, or take any Journey, the ſaid Diviners go before them, as the cloudy Pillar went before the Children of *Iſrael*, and they appoint Ground where the Tents muſt be pitched; and, firſt of all, they take down their own Houſes, and after them the whole Court does the like. Alſo on their feſtival Days, or new Moons, they take out theſe Images, and place them in Order circle-wiſe within the Houſe; then come the *Moals* or *Tartars* into the ſame Houſe, bowing themſelves before the Images, and worſhip them. It is not lawful for any Stranger to enter the Houſe. And, on a certain Time, I myſelf would have gone in, but was very rudely turned out, and obliged to remove, ſo that I never after attempted to pry any further into this Matter.

32. But it is my Opinion, that theſe *Jugures*, who live among the Chriſtians and *Saracens*, by frequent Diſputes with them, have been brought to believe that there is but one God; and they dwell in certain Cities, which were brought into Subjection to *Zingis-Khan*, and he gave his Daughter in Marriage unto their King: Alſo the City of *Caracarum* itſelf is in a manner within their Territories; and the whole Country of King or Preſbyter *John*, and of his Brother *Unc*, lieth near to their Dominions, except that they inhabit in certain Paſtures Northward, and the ſaid *Jugures* between the Mountains towards the South.

The *Moals* received their Letters or Characters from them; and they are the *Tartars* principal Scribes, and all the *Neſtorians* almoſt can read their Letters. Next unto them, between the aforeſaid Mountains Eaſtward, inhabiteth the Nation *Tangut*, who are moſt valiant People, and took *Zingis* in Battle; but after the Concluſion of a Peace he was ſet at Liberty by them, and afterwards ſubdued them. Theſe People of *Tangut* have Oxen of great Strength, with Tails like Horſes, and with long, ſharp Hair upon the Backs and Bellies. Their Legs are larger than thoſe of other Oxen, and they are exceeding fierce; theſe Oxen draw the Houſes of the *Moals*; and their Horns are ſlender, long, ſtreight, and very ſharp-pointed, inſomuch that the Owners are obliged to cut off the Ends of them. A Cow will not ſuffer herſelf to be coupled to one of them, unleſs they whiſtle or ſing unto her. They have alſo the Qualities of a Buffalo, for if they ſee a Perſon cloathed in Red, they run upon him immediately to kill him.

Next to this Nation are the People of *Tibet*; Men, who had formerly a Cuſtom to eat the Bodies of their deceaſed Parents, that they might make no other Sepulchre for them than their own Bowels. But of late they have left off this Cuſtom, becauſe thereby they became odious to all other Nations; notwithſtanding which, at this Day, they make fine Cups of the Skulls of their Parents, to this end, that when they drink out of them, they may, in the Midſt of all their Jollities and Delights, call their dead Parents to Remembrance: This was told me by one that ſaw it. The ſaid People of *Tibet* have vaſt Plenty of Gold in their Land; whoſoever therefore wants Gold digs till he hath found ſome, and then taking ſo much thereof as will ſerve his Turn, he lays up the Remainder in the Earth, becauſe, if he ſhould put it into his Cheſt, or Storehouſe, he is of Opinion that God would with-hold from him all other Gold.

I ſaw ſome of theſe People, being very deformed Creatures. In *Tangut* I ſaw luſty, tall Men, but brown and ſwarthy in Colour. The *Jugures* are of a middle Stature, like *Frenchmen*. The Language of the *Jugures* is the Original and Root of the *Turkiſh* and *Comanian* Languages. Next to *Tibet* are the People of *Langa* and *Solanga*, whoſe Ambaſſadors I ſaw in the *Tartars* Court; and they brought ten great Carts with them, every one of which was drawn by ſix Oxen. They are little brown Men, like *Spaniards*. Theſe People wear Jackets, like the upper Veſtment of a Deacon, ſaving that the Sleeves are ſomewhat ſtreighter, and they have Mitres upon their Heads like Biſhops; but the Fore-part of their Mitre is not ſo hollow within as the hinder Part, neither is it ſharp-pointed, nor cornered at the Top; but there hang down certain ſquare Laps, compacted of a kind of Straw, which is made rough through extreme Heat, and is ſo trimmed, that it glittereth in the Sun-beams like a Glaſs, or an Helmet well burniſhed. On their Brows they have long Bands of the ſame Manufacture faſtened to their Mitres, which hover in the Wind as if two long Horns grew out of their Heads; and when the Wind toſſes them up and down too much, they tie them over the Midſt of their Mitre, from one Temple to another, and ſo they lie acroſs their Heads. Their principal Embaſſador to the *Tartar's* Court, had a Table of Elephants Teeth about him, of a Cubit in Length, and a Handful in Breadth, very ſmooth; and whenſoever he ſpoke to the Emperor himſelf, or to any other great Perſonage, he always looked on that Table, as if he had found therein thoſe Things which he ſpake; neither did he caſt his Eyes to the Right-hand or to the Left of thoſe with whom he talked.

Beyond them, as I was certainly informed, there are other People called *Muc*, having Villages, but no one Man of them appropriates any Cattle to himſelf, notwithſtanding there are many Flocks and Droves of Cattle in their Country, and nobody appointed to keep them; but when any of them want a Beaſt, he goes up upon a Hill, and there makes a Shout, and all the Cattle which are within hearing of the Noiſe, come flocking about him, and ſuffer themſelves to be taken as if they were tame. And when any Meſſenger, or Stranger, cometh into their Country, they ſhut him up in an Houſe, allowing him Things neceſſary, till his Buſineſs be diſpatched; for if any Stranger ſhould travel through that Country, the Cattle would fly away at the very Scent of him, and ſo become wild. Beyond *Muc* is the grand *Cathaya*, the Inhabitants of which, as I ſuppoſe, were of old called *Seres*, for from them are brought moſt excellent Stuffs and Silk; and this People are called *Seres* of a certain Town in the ſame Country. I was credibly informed, that in the ſaid Country there is a Town having Walls of Silver, and Bulwarks of Gold. There are many Provinces in that Land, the greater Part of which are not as yet ſubdued by the *Tartars*, and the Sea lieth between them and *India*. Theſe *Cathayans* are Men of little Stature, ſpeaking much through the Noſe.

This is a general Remark, that all the People of the Eaſt have ſmall Eyes. They are excellent Workmen in every Art, and their Phyſicians are well ſkilled in the Virtue of Herbs, and judge very exactly of the Pulſe, but know not any thing concerning Urine. Some of them I ſaw, for there are many at *Caracarum*, and they always bring up their Children in the ſame Trade of their Father, and therefore they pay ſo much Tribute; for they give the *Moals*, or *Moguls*, every Day, one thouſand five hundred Caſſino's, or Jaſcots (Jaſcot is a Piece of Silver weighing ten Marks) that is to ſay, every Day, fifty thouſand Marks, beſides Silks, and a certain Quantity of Victuals, and other Services which they do them. All theſe Nations are between the Mountains of *Caucaſus*; on the North Side of thoſe Mountains to the Eaſt Sea, on the South Part of *Scythia*, which the Shepherds of *Moal* inhabit, all are tributary unto them, and all given to Idolatry, and report many Fables of a Multitude of Gods, and certain deified Men, and make a Pedigree of the Gods, as our Poets do.

The *Neſtorians* are intermixed with them as Strangers, ſo are the *Saracens* as far as *Cathay*. The *Neſtorians* inhabit fifteen Cities of *Cathay*, and have a Biſhop there in a

City

a City called *Segin*; but if you proceed further, they are mere Idolaters: The Prieſts of the Idols of thoſe Nations have all broad yellow Hoods. There are alſo among them certain Hermits, living in the Woods and Mountains, of an auſtere and ſtrange Life. The *Neſtorians* there know nothing, for they ſay their Service, and have holy Books in the *Syrian* Tongue, which they know not; ſo that they ſing as our Monks do, who are ignorant of Grammar; and hence it cometh that they are wholly corrupted. They are great Uſurers and Drunkards, and ſome of them alſo, who live among the *Tartars*, have many Wives in the ſame manner as the *Tartars* have.

When they enter into the Church, they waſh their lower Parts, as the *Saracens* do; they eat no Fleſh on *Friday*, and hold their Feaſts on that Day, after the manner of the *Saracens*. The Biſhops come ſeldom into the Countries, perhaps once in fifty Years; then they cauſe all their little Children to be made Prieſts, even in the Cradle, ſo that all their Men almoſt are Prieſts, and, after this, they marry Wives, which is directly againſt the Decrees of the Fathers. They are alſo Bigamiſts, for their Prieſts themſelves, when their Wife is dead, marry another. They are all *Simoniſts*, for they give no holy Thing freely. They are very careful of their Wives and Children, wherefore they apply themſelves to Gain, and not to the ſpreading of the Faith; whence it comes to paſs, while ſome of them bring up the Nobility's Children of *Moal*, although they teach them the Goſpel, and the Articles of the Faith, yet by their evil Life and Covetouſneſs, they drive them further from Chriſtianity, becauſe the Life of the *Moals*, or *Moguls*, and *Tuinians*, who are downright Idolaters, is more juſt and upright than theirs.

34. We departed from the City *Cailac* on Saint *Andrew*'s Day, and within three Leagues found a Village of *Neſtorians*. Entering into the Church, we ſang *Salve Regina*, &c. with Joy, becauſe it was long ſince we had ſeen a Church. Departing thence, in three Days we came to the Entrance of that Province, not far from the Sea before-mentioned, which ſeemed to us as tempeſtuous as the Ocean, and therein we ſaw a great Iſland. My Companions drew near the Shore, and wet a linen Cloth therein, to taſte the Water, which was ſomewhat ſalt, but however might be drank. There was a Valley over-againſt it, between the great Mountains South and Eaſt, and between the Hills was another ſalt Lake or Sea; and there ran a River through that Valley from the other Sea into this, and there came ſuch a continual Wind through the Valley, that Men paſs along the Road with great Danger, fearing the Wind ſhould carry them into the Sea.

Therefore we left the Valley, and went towards the North, to the hilly Countries, covered with deep Snow, which then lay upon the Earth, ſo that upon Saint *Nicholas*'s Day we began to haſten our Journey, and becauſe we found no People but the *Jani*, or Men appointed from Day's Journey to Day's Journey, to conduct the Meſſengers; for in many Places in the hilly Countries the Way is narrow, and there are but few Fields; ſo that between Day and Night we met with two *Jani*, and therefore of two Days Journey we made one, and travelled more by Night than by Day: It was extremely cold there, ſo that they lent us their Goat-Skins, turning the Hair outward. On the ſeventh of *December* in the Evening, we paſſed by a certain Place, between very terrible Rocks, and our Guide ſent unto me, intreating me to pray to God, which I did. Then we ſang with loud Voice, *Credo in Deum*, &c. and by the Grace of God, we paſſed through unhurt.

After that, they began to intreat me that I would write them Papers, and I told them I would teach them Words which they ſhould carry in their Hearts, whereby their Souls and Bodies ſhould be ſaved; but when I ſought to teach them, I wanted an Interpreter, yet I wrote them the Creed and Lord's-Prayer, ſaying, "Here is written
"whatſoever a Man ought to believe concerning God;
"here alſo is that Prayer wherein we beg of God whatſo-
"ever is needful for a Man; now therefore believe firmly
"what is written here, although you cannot underſtand it,
"and aſk God to do that for you which is contained in this
"written Prayer, becauſe with his own Mouth he taught
"it his Friends, and I hope he will ſave you." I could not do any thing elſe, becauſe it was dangerous to ſpeak by ſuch an Interpreter, nay, almoſt impoſſible, becauſe he was ignorant.

35. After this, we entered into the Country where the Court of *Kon Khan* was, which was formerly called the Country of *Naymans*, who were the peculiar Subjects of *Preſtre*, that is, *Preſbyter John*, but I ſaw not that Court till my Return; yet here I ſhall briefly mention what befel his Son and Wives. *Kon Khan* being dead, *Baatu* deſired that *Mangu* ſhould be *Khan*, but I could not well underſtand in what manner happened the Death of *Khan*. Friar *Andrew* ſaid, that he died by a certain Medicine given him, and it was ſuſpected that *Baatu* cauſed it to be adminiſtred: Yet I heard it otherwiſe, for he ſummoned *Baatu* to come and do him Homage, and *Baatu* took his Journey with great Pomp and Splendor, but he and his Servants were much afraid, and he ſent one of his Brothers before called *Stichin*, who, when he came to *Kon*, and ought to have preſented him with his Cup, high Words aroſe between them, inſomuch that they ſlew one another. The Widow of *Stichin* kept us a whole Day, that we might go to her Houſe, and bleſs her, or pray for her.

Kon being dead, *Mangu* was choſen by the Conſent of *Baatu*, and was then choſen while Friar *Andrew* was there. *Kon* had among others a Brother called *Siremon*, who by the Counſel of *Kon*'s Wife, and her Vaſſals, went with a great Train towards *Mangu*, as if he went to do him Homage, and yet in reality he purpoſed to kill him, and deſtroy his whole Court; and when he was near *Mangu*, and within one or two Days Journey, one of his Waggons happened to break in the Way; while the Waggoner endeavoured to mend it, came one of the Servants of *Mangu* who helped him; he was ſo inquiſitive of their Journey, that the Waggoner revealed unto him what *Siremon* purpoſed to do. Then turning out of the Way, as if he lightly regarded it, he went unto the Herd of Horſes, and took the beſt Horſe he could, and poſting Night and Day, came ſpeedily to the Court of *Mangu*, reporting what he had heard.

The Plot being thus diſcovered, *Mangu* quickly aſſembled all his Forces, cauſed four Lines of armed Men to encompaſs his Court, that none might go in or out, and ſent the reſt againſt *Siremon*, who took him, and brought him to the Court, with all his Followers, who, when *Mangu* laid the Matter to his Charge, confeſſed it immediately. Then he and his eldeſt Son *Kon Khan* were ſlain, and three hundred of the Nobility of the *Tartars* with them. The noble Women alſo were ſent for, who were all beaten with burning Firebrands, to make them confeſs, and, having confeſſed, were put to Death. His youngeſt Son *Kon*, who was not capable of entering into the Conſpiracy, was left alive, and his Father's Palace was left him with all belonging unto it, and we paſſed by it in our Return, nor durſt my Guide turn in unto it, either going or coming: *For, the Lady of the Nations ſat there in Heavineſs, and there was none to comfort her.*

36. We now went up again into the high Countries, ſteering always towards the North. At length, on Saint *Stephen*'s Day, we entered into a great Plain, where there was not ſo much as a Mole-hill; and the next Day, on the Feaſt of Saint *John* the Evangeliſt, we came unto the Palace of that great Lord: But when we were near it, that is to ſay, within five Days Journey, our Hoſt where we lay, would have directed us much about, ſo that we ſhould have travelled more than fifteen Days; and this was the Reaſon, as I underſtood, that we might go by *Onam Kerule*, their proper Country where the Court of *Zingbis Khan* is. Others ſaid, that he did it for this Purpoſe, that he might make the Way longer, and might ſhew their Power the more, for ſo they are wont to deal with Men coming from Countries not ſubject to them; and our Guide obtained with great Difficulty, that we might go the right Way, for they held us debating this from the Morning till Three o'Clock.

By the Way alſo the Secretary told me, that it was contained in the Letters which *Baatu* ſent to *Mangu-Khan*, that we required an Army and Aid of *Sartach* againſt the *Saracens*. Then I began to wonder much, and to be greatly troubled, for I knew the Contents of the Letters, and that no mention of any Army was made therein, only you adviſed him to be a Friend to all Chriſtians, and that he ſhould exalt the Croſs; and bear Enmity to all the Enemies of the Croſs; and becauſe alſo the Interpreters were *Armenians*, of the greater *Armenia*, who greatly hated the *Saracens*, leſt perhaps they had interpreted any thing in evil Part, to make the *Saracens* more odious and hateful at their Pleaſure. I therefore held my Peace, not ſpeaking a Word for them, or againſt them; for I feared to gainſay the Words of *Baatu*, leſt I ſhould incur ſome falſe Accuſation, and without reaſonable Cauſe.

We came therefore the Day after into the ſaid Court, our Guide had a great Houſe appointed him, and we three a little Cottage, wherein we could ſcarce lay our Baggage, make our Beds, and have a little Fire. Many came to viſit our Guide and brought him drink made of Rice, in long ſtrait-mouthed Bottles, in which I could diſcern no Difference from the beſt Wine, except that it had not the Scent of Wine. We were called ſoon after, and moſt ſtrictly examined upon what Buſineſs we came; “I anſwered, that we having heard *Sartach* was a Chriſtian, “we came therefore unto him. The King our Maſter “ſent him a Packet by us, he ſent us to *Baatu* his Father, and his Father ſent us hither, he ſhould have written the Cauſe.” Whereupon they demanded, whether we would make Peace with them? I anſwered, “He had “ſent Letters unto *Sartach* as a Chriſtian, and if he had “known he were not a Chriſtian, he would never have “ſent him Letters. That as to a Treaty of Peace, there “was no Ground for it, ſince he has done you no wrong; “If he had not done any, why ſhould you war upon him “or his People? He willingly (as a juſt Man) would reform himſelf and deſire Peace. If ye without Cauſe “will make War with him or his Nation, we hope that “God (who is juſt) will help them.” At this they wondered, always repeating, *why came ye not to make Peace*. For they are now ſo puffed-up with Pride, that they think the whole World ſhould deſire to make Peace with them; whereas, if I might be ſuffered, I would preach War againſt them to the utmoſt of my Power. But I would not plainly deliver the Cauſe of my Coming, leſt I ſhould ſpeak any thing againſt that which *Baatu* commanded; I told them therefore the ſole Cauſe of my coming thither was, becauſe he ſent me.

The Day following we were brought to the Court, and I thought I could go barefoot, as I did in our Country, and therefore I laid aſide my Shoes; but ſuch as come to the Court, alight far from the Houſe, where the great *Khan* is, as it were a Bow-ſhot off, where the Horſes remain, and a Boy to keep them. When we alighted there, and our Guide went with us to the Houſe, a *Hungarian* Boy was preſent there, who knew our Order; and when the Men came about us, and ſtared at us as Monſters, eſpecially becauſe we were barefooted, and demanded whether we did not need our Feet, becauſe they ſuppoſed we ſhould by Cold have loſt them, that *Hungarian* told them the Reaſon, ſhewing them the Rules and Practice of our Order. Then the chief Secretary, who was a *Neſtorian*, and a Chriſtian, by whoſe Council and Advice almoſt all is done, came to us to ſee us, looked earneſty upon us, and called the *Hungarian*, of whom he aſked many Queſtions. Then we were directed to return to our Lodging.

37. When we returned, at the End of the Court, towards the Eaſt, as far from the Court as a Croſs-bow could ſhoot at twice, I ſaw a Houſe, upon which there was a little Croſs, at which I rejoiced much, ſuppoſing there was ſome Chriſtian there, and I went in boldly, and found an Altar there, very well furniſhed; for there, in a golden Cloth, were the Images of *Chriſt*, the Bleſſed Virgin, and Saint *John Baptiſt*, and two Angels; the Lineaments of their Bodies and Garments diſtinguiſhed with Pearl, and a great ſilver Croſs with precious Stones in the Corners, and the Middle thereof, and many other Embroiderings, and a Lamp burning with Oil before the Altar, having eight Lights; and there ſat an *Armenian* Monk, ſomewhat black and lean, clad with a rough hairy Coat to the Mid-leg having upon it a Black Cloak of Briſtles, furred with ſpotted Skins, girt with Iron under his Hair-cloth.

Preſently after we entered in; before we ſaluted the Monk, falling flat upon the Ground, we ſang *Ave Regina Cœlorum*, &c. and he riſing, prayed with us; then ſaluting him, we ſat by him, having a little Fire before him in a Pan; therefore we told him the Cauſe of our coming, and he began to comfort us, ſaying, that we ſhould boldly ſpeak, becauſe we were the Meſſengers of God, who is greater than all Men. Afterwards he told us of his Coming, ſaying, he came thither a Month before us, and that he was a Hermit of the Territories of *Jeruſalem*, and that the Lord appeared unto him three Times, commanding him to go to the Prince of the *Tartars*; and when he deferred to go the third Time, God threatened him, and over-threw him upon the Ground, ſaying, he ſhould die, unleſs he went; and that he told *Mangu-Khan*, that if he would become a Chriſtian, the whole World ſhould be obedient to him. Then I anſwered, “Brother, I will willingly perſuade him to become a Chriſtian; I will promiſe him alſo that the *French* and the Pope will much “rejoice thereat, and account him a Brother and a Friend; “but I will never promiſe that they ſhall become his Servants, and pay him Tribute, as theſe other Nations, “becauſe in ſo doing, I ſhould ſpeak againſt my Conſcience.” On which he held his Peace. We afterwards went together to our Lodging, which I found a cold Habitation.

We had eaten nothing that Day; ſo we boiled a little Fleſh and Millet, of which we made Broth for our Suppers. Our Guide and his Companions were drunk at the Court, and little Care was had of us. At that Time the Meſſengers of *Veſtace* were there, hard by us, which we knew not, and the Men of the Court made us riſe in great Haſte at the Dawning of the Day. I went barefoot with them a little way unto the Houſe of the ſaid Meſſengers, and they demanded of them whether they knew us. Then that *Grecian* Soldier calling our Order, and my Companion to remembrance, becauſe he had ſeen him in the Court of *Veſtace*, with Friar *Thomas*, our Miniſter, and all his Fellows, gave great Teſtimony of us. Then they demanded whether we had Peace or War with *Veſtace*? We have, ſaid I, neither War nor Peace; and they demanded how that might be? Becauſe, ſaid I, their Countries are far from each other, and meddle not together. Then the Ambaſſador of *Veſtace* ſaid, we had Peace, giving me a Caution; ſo I held my Tongue. That Morning my Toes Ends were ſo frozen, that I could no longer go barefoot; for in theſe Countries the Cold is extreme ſharp, and from the Time when it beginneth to freeze, it never ceaſes till *May*: Nay, in the Month of *May* it froze every Morning, but in the Day-time it thawed, through the Heat of the Sun; but in Winter it never thaws, but the Ice continues with every Wind. And if there were any Wind there in Winter, as there is with us, nothing could live there; but it is always mild Weather till *April*, and then the Winds riſe; and at that Time when we were there (about *Eaſter*) the Cold riſing with the Wind, killed Multitudes of living Creatures.

In the Winter little Snow fell there; but about *Eaſter*, which was in the latter End of *April*, there fell ſo great a Snow, that all the Streets of *Caracarum* were full; ſo that they were forced to carry it out with their Carts. Then they firſt brought us (from the Court) Ram-ſkin Coats, and Breeches of the ſame, and Shoes, which my Companion and Interpreter received; but I thought I had no need of them, becauſe I ſuppoſed my furred Garment, which I brought from *Baatu*, was ſufficient for me. On the 5th of *January* we were brought to the Court, and there came *Neſtorian* Prieſts to me, whom I knew not to be Chriſtians, demanding which Way we worſhipped? I ſaid, to the Eaſt; and this they demanded, becauſe we had ſhaven our Beards, by the Advice of our Guide, that we might appear before the *Khan* according to the Faſhion of our Country, whereupon they thought we had been *Tuinians*, or Idolaters: They made us alſo expound out of the Bible. Then they demanded what Reverence we would pay to the *Khan*, whether after our own Faſhion or theirs? To whom I made Anſwer, “We are Prieſts dedicated to the “Service of God; Noblemen in our Country will not ſuf-

“ fer Prieſts to bow their Knees before them for the Ho-
“ nour of G O D: Nevertheleſs we will humble ourſelves
“ to all Men for the Lord's ſake. We came from a far
“ Country, if ye pleaſe we will firſt ſing Praiſes unto GOD,
“ who hath brought us ſafe hither from afar, and after-
“ wards we will do whatſoever pleaſeth this Lord, with
“ this Exception, that he command us nothing which may
“ be againſt the Worſhip and Honour of G O D.” Then
they entring into the Houſe, delivered what we had ſaid; ſo their Lord was contented, and they ſet us before the Entrance of the Houſe, lifting up the Felt which hung before the Gate, and becauſe it was *Chriſtmas* we began to ſing, *A Solis ortus cardine*, &c.

38. When we had ſung this Hymn, they ſearched our Boſoms to ſee we had no Knives about us. They made our Interpreter ungird himſelf, and leave his Girdle and his Knife without, in the Cuſtody of a Door-keeper. When we came in, there ſtood in the Entrance a Bench with Coſmos, by which they made our Interpreter ſtand, and cauſed us to ſit upon a Form before the Ladies; the whole Houſe was hung with Cloth of Gold, and on a Hearth, in the Middle of the Houſe, there was a Fire made of Thorns and Wormwood Roots (which grow there very big) and Ox Dung. The *Khan* ſat upon a Bed covered with a ſpotted Skin, or Fur, bright and ſhining like a Seal's Skin: He was a flat noſed Man, of a middle Stature, about the Age of five and forty. and a little pretty young Woman his Wife ſat by him, and one of his Daughters, whoſe Name was *Cerina*, a hard-favoured young Woman, with other Children that were younger, ſat next unto them upon a Bed; for that was the Houſe of a certain Chriſtian Lady he loved, by whom he had this Daughter, and he married the young Wife afterwards; yet the Daughter was Miſtreſs of all that Court which was her Mother's.

Then he made them aſk us what we would drink, whether Wine, or Caracina, that is, Drink made of Rice, or Caracoſmus, that is, clear Cow's Milk, or Ball, that is, Mead made of Honey; for they uſe theſe four kinds of Liquor in the Winter? Then I anſwered, Sir, we are not Men who take Pleaſure in Drink, what pleaſeth you ſhall content us. Then he commanded Drink of Rice to be given us, clear and good as White-wine; whereof I taſted a little for Reverence of him, and our Interpreter, to our Misfortune, ſtood by the Butlers who gave him much Drink, ſo that he was quickly drunk; then the *Khan* cauſed Falcons and other Birds to be brought unto him, which he took upon his Fiſt, and looked upon them, and after a long time he commanded us to ſpeak. We were then to bow the Knee; and he had his Interpreter, a certain *Neſtorian*, whom I knew not to be a Chriſtian; and we had our Interpreter, ſuch a one as he was, who by this Time was drunk. Then I ſaid, “ We firſt give Thanks and Praiſe to G O D,
“ who hath brought us from ſo remote Parts of the World
“ to ſee *Mangu-Khan*, to whom G O D hath given ſo great
“ Power upon Earth; and we beſeech our Lord, by whoſe
“ Command we live and die, that he would grant him a
“ long and a proſperoos Life,” (for this they deſire, that
Men pray for their Lives) then I told him, “ Sir, We have
“ heard of *Sartach*, that he was a Chriſtian, and the Chri-
“ ſtians who heard it, but eſpecially the *French* King, re-
“ joiced; wherefore we come unto him, and our Lord and
“ King hath ſent him Letters by us, wherein were Words
“ of Peace, and amongſt other things he teſtifieth of us
“ whoſe Servants we are, and entreated him to ſuffer us to
“ abide in his Country; for it is our Office to teach Men
“ to live according to the Law of G O D, and he ſent us to
“ *Baatu* his Father, and *Baatu* hath ſent us hither unto
“ you; you are they to whom G O D hath given great
“ Dominions upon Earth, we therefore intreat your High-
“ neſs to give us Leave to continue in your Country to do
“ the Service of G O D for you, your Wives, and Chil-
“ dren. We have neither Gold, nor Silver, nor Precious
“ Stones, to preſent unto you, but ourſelves, whom we
“ preſent to ſerve and pray unto G O D for you: At leaſt
“ give us leave to continue while the Cold be paſt. My
“ Companion is ſo weak, that he cannot by any means
“ travel on Horſeback without Hazard of his Life;” for
my Companion begged me and adjured me to crave leave to ſtay. Then he began to anſwer, Even as the Sun ſpreads his Beams every where, ſo our Power and *Baatu*'s ſhews itſelf every where, ſo that we have no need of your Silver and Gold.

Hitherto I underſtood my Interpreter, but farther I could not perceive any perfect Sentence, whereby I eaſily found he was drunk; and *Mangu-Khan* himſelf was drunk too, at leaſt I thought ſo; yet he was diſpleaſed that we came firſt to *Sartach*, before we came to him. Then ſeeing the Defect of my Interpreter, I held my Peace, this only excepted; I entreated his Highneſs not to be diſpleaſed for that which I ſpake of Gold and Silver, becauſe I ſpoke it, not that he had need of ſuch things, or deſired them, but becauſe we would willingly honour him with ſpiritual things. Then he made us riſe, and ſit down again, and after ſome few Words, and paying our Duty to him, we went out, and his Secretaries, and that Interpreter of his (who had the bringing up of one of his Daughters) went with us. They began to be very inquiſitive concerning the Kingdom of *France*, whether there were many Rams, Oxen, and Horſes there, as if preſently they ſhould enter and take all? And oftentimes I was fain to bridle myſelf much in diſſembling Anger and Indignation. I anſwered, however, there are many good things there which ye ſhall ſee if you happen to come thither. Then they appointed us one who ſhould have Care of us, and we went to the Monk; and when we came out again ready to go to our Lodging, the Interpreter came to us, ſaying, *Mangu-Khan* hath Compaſſion on you, and gives you two Months Time to ſtay, then the extream Cold will be paſt; and he offers to ſend you ten Days Journey, where is a good City called *Caracarum*; if you will go thither he will cauſe neceſſary Things to be given you, but if ye will ſtay here ye may have Neceſſaries; yet it will be a troubleſome thing for you to follow the Court.

I ſaid the Lord preſerve *Mangu-Khan*, and grant him a good and long Life. We have found this Monk here, who we think to be a holy Man, and that by the good Pleaſure of G O D he came into theſe Parts; wherefore we would willingly ſtay with him, and we will pray together for the Life of *Khan*. Then he held his Peace, and departed, and we went to our Houſe, which we found very cold, and without any Fuel, as yet faſting, thought it was Night. Then he to whom we were recommended, provided us Fuel, and a little Meat. Our Guide was now to return to *Baatu*, who deſired a Carpet of us, which we left in the Court of *Baatu*, which we gave him, and he peaceably departed; ſo kiſſing our right Hand, and confeſſing his Fault, if he ſuffered us to endure Hunger and Thirſt upon the Way, we pardoned him, craving Pardon of him and his whole Family, if we had given them any evil Example.

39. A certain Woman of *Metz* in *Lorraine*, called *Paſcha*, found us, who made us good Cheer, according to her Power, who belonged to the Court of that Lady who was a Chriſtian, of whom I ſpoke before, who told us of her ſtrange Poverty which ſhe endured before ſhe came to the Court; but now ſhe was well to live, for ſhe had a young Huſband, a *Rutenian* (by whom ſhe had three very fair Children) who was ſkilful in Building, which amongſt them is an excellent Art. She told us farther, that at *Caracarum* there was a certain Goldſmith called *William*, born at *Paris*, whoſe Surname was *Bouchier*, and his Father's Name *Lawrence Bouchier*, and ſhe believed he hath a Brother yet living upon the Great Bridge, called *Roger Bouchier*; and ſhe told me that he hath a certain young Man which he brought up, whom he accounted as his Son, who was an excellent Interpreter; but *Mangu Khan* delivered to the aforeſaid Goldſmith three hundred Jaſcots, that is, three thouſand Marks, and fifty Workmen, to make a Piece of Work, ſo that ſhe feared he could not ſend his Son to me; for ſhe heard ſome ſay in that Court, the Men which came from your Country are good Men, and *Mangu-Khan* would willingly ſpeak unto them, but their Interpreter is good for nothing; therefore ſhe was careful for an Interpreter.

Then I wrote unto the Goldſmith, certifying him of my coming hither, and requeſting him, that if he could he would ſend me his Son, and he wrote me Anſwer, that he could not that Moon; but the next his Work ſhould be perfected, and then he would ſend him unto me. We ſtayed therefore with other Embaſſadors, and it is otherwiſe with Embaſſadors in *Baatu*'s Court than in the Court of *Mangu-Khan*: for in the Court of *Baatu* there is one *Jani* on the Eaſt Side, who receiveth all ſuch as come from the Weſt, and ſo of other Countries of the World; but in the Court of *Mangu* they are all together under one *Jani*, and they may ſee and viſit one another. In *Baatu*'s Court they know not one another, or whether a Man be a Meſſenger or no, becauſe they know not one another's Lodging, nor ſee one another, but in the Court; and when one is called by Accident, another is not, for they go not to Court unleſs they be ſent for. We found there a certain Chriſtian in *Damaſcus*, who ſaid he came in the Behalf of the Soldan of *Mons Regalis*, and of *Crax*, who deſired to become Friend and Tributary to the *Tartars*.

40. The Year before I came thither there was a certain Clerk of *Acon* or *Ptolemais*, in *Syria*, who called himſelf *Raimund*, but his true Name was *Theodolus*, and he took his Journey from *Cyprus* with Friar *Andrew*, and went with him into *Perſia*, and procured certain Inſtruments of *Amoricus*, then in *Perſia*, who remained after Friar *Andrew*. Friar *Andrew* returning, he went forward with his Inſtruments, and came to *Mangu-Khan*, and being demanded upon what Account he came, ſaid, “ That he was with a certain “ holy Biſhop, to whom the Lord ſent Letters from Hea“ ven, written in Golden Characters, and commanded him “ to ſend them to the Emperor of the *Tartars*, becauſe “ he ſhould be Lord of the whole Earth, and that he ſhould “ perſuade Men to make Peace with him.” Then *Mangu* ſaid unto him, If thou hadſt brought theſe Letters which come from Heaven, and the Letters of thy Lord, thou hadſt been welcome. He anſwered, that he brought Letters, but they were with other Things of his on a wild and pampered Gelding, which eſcaping, fled from him through the Woods and Mountains, ſo that he had loſt all.

Then *Mangu* demanded the Name of the Biſhop; he ſaid he was called *Odo* of *Damaſcus*, and informed him alſo of Maſter *William*, who was Clerk of the Lord Legat. The *Khan* demanded, in whoſe Kingdom it was? To whom he made Anſwer, that it was under a certain King of the *Franks*, called *Moles*; for he had heard of that that happened at *Maſſora*, and he would have ſaid, that they were of your Servants. He alſo told the *Khan*, that the *Saracens* were between the *Franks* and him, who hindered his Way; but if the Way had been open, he would have ſent Embaſſadors, and willingly have made Peace with him. Then *Mangu Khan* aſked him, if he would bring his Meſſengers to that King, and that Biſhop? He told him he would, and alſo to the Pope.

Then *Mangu* cauſed an exceeding ſtrong Bow to be made, which two Men could ſcarce bend, and two Arrows of Silver, whoſe Heads were full of Holes, which ſung, when they are ſhot, like a Whiſtle; and he choſe a *Moal*, whom he ſhould ſend with the ſaid *Theodolus*, and to whom he ſaid, “ Thou ſhalt go to the King of the “ *Franks*, to whom this Man ſhall bring thee, and pre“ ſent him with theſe on my Behalf; and if he will have “ Peace with us, we will win the Country from the *Saracens*, “ even home to him, and will grant him the reſt of the “ Country unto the Weſt; if otherwiſe, bring back the “ Bow and Arrows unto us, and tell him we ſhoot far and “ ſtrongly with ſuch Bows.” Then he cauſed *Theodolus* to go forth, whoſe Interpreter Maſter *William*'s Son was, and in his Hearing, he ſaid unto the *Moal*, “ Thou ſhalt “ go with this Man, mark well the Ways, the Countries, “ and their Caſtles, Men and Mountains.” For this Reaſon the young Man blamed *Theodolus*, ſaying, he had done ill in conducting the Meſſengers of the *Tartars* with him, for they went for no other Cauſe but to ſpy.

He anſwered, that he would ſet them on the Sea, that they ſhould not know which Way to return. *Mangu* gave alſo unto *Moal* his golden Bull or Tablet, to wit, a Plate of Gold of an Hand breadth and half a Cubit long, wherein his Orders are engraven: Whoſo carrieth that, may command what he will and it is done without Delay. So then *Theodolus* came to *Veſtacius*, determining to paſs over to the Pope, that he might deceive the Pope, as he had deceived *Mangu-Khan*. Then *Veſtacius* demanded of him, whether he had Letters to the Pope, becauſe he was a Meſſenger, and ſhould conduct the Meſſengers of the *Tartars*; but not being able to ſhew the Letters, he took him and ſpoiled him of all that he had got, and caſt him in Priſon, and the *Moal* fell ſick and died there.

But *Veſtacius* ſent back the golden Tablet to *Mangu-Khan* by the Servants of the *Moal*, whom I met at *Aſſron* in the Entrance into *Turky*, who told me what had happened to *Theodolus*. Such Sharpers run through the World, whom the *Tartars* kill when they can take them. Now the Epiphany was at hand; and that *Armenian* Monk, *Sergius* by Name, told me that he ſhould baptize *Mangu-Khan* upon that holy Day. I entreated him to labour, by all means, that I might be preſent, that I might bear Witneſs that I ſaw it; and he promiſed me he would.

41. When this feſtival Day came, the Monk called me not, but at ſix of the Clock I was ſent for to Court, and I ſaw the Monk with the Prieſts returning from the Court with his Croſs, and the Prieſts with the Cenſor, and the Goſpel for that Day. *Mangu-Khan* made a Feaſt, and his Cuſtom is, that on ſuch Days as his Soothſayers appoint him, or the *Neſtorian* Prieſts make holy Days, he held his Court; and on theſe Days the Chriſtians come firſt, with their Furniture, and pray for him and bleſs his Cup; then they departing, the *Saracen* Prieſts come and do the like: Next after them come the idolatrous Prieſts, and do the ſame. The Monk told me, that he only believes the Chriſtians, yet will have all to pray for him; but in this he lied, for he believes none; yet all follow his Court as Flies do Honey. He giveth to all, and all Men think they are his Familiars, and all propheſy Proſperity to him. Then we ſat before the Court a long Space, and they brought us Fleſh to eat; to whom I made Anſwer, that we would not eat there, but if they would provide us Meat, they ſhould provide it for us at our Houſe; to which they anſwered, Get home to your Houſe, you were invited here for nothing elſe but to eat: Therefore we returned to the Monk, who bluſhed at the Lye he had told me, and therefore would not ſpeak a Word of the Matter; yet ſome of the *Neſtorians* affirmed, that he was baptized; to whom I ſaid, that I would never believe it, nor report it to others, ſeeing I ſaw it not.

We came at laſt to our old and empty Houſe, where they provided us Bedding and Coverlids; they brought us alſo Fuel, and gave us three the Carcaſs of one little lean Ram, as Meat for ſix Days, and every Day a little Platerfull of Millet, and lent us a Caldron, and a Trivet to boil our Fleſh, which being boiled, we boiled our Millet in the Broth of the Fleſh. This was our Meat, and it had well ſufficed us, if they had ſuffered us to eat in Peace; but there were ſo many ſtarved Fellows, who were not provided with Meat, that as ſoon as they ſaw us dreſs ours, they thruſt in upon us, and would eat with us. The Cold began then to prevail, and *Mangu-Khan* ſent us three Fur-coats with the Hair outwards, which we thankfully received: They demanded alſo how we were provided with neceſſary Food; to whom I anſwered, that little Meat ſufficed us, but we have not an Houſe wherein to pray for *Mangu-Khan*; for our Cottage was ſo little, that we could ſcarce ſtand upright in it, nor open our Books for Smoak after the Fire was lighted. Of this they gave him an Account, and he ſent to the Monk, to know if he would be pleaſed with our Company, who gladly anſwered that he would. From that Time we were provided with a better Houſe, and we went down with the Monk before the Court, where none lodged but we and their Soothſayers; but they lodged nearer before the Palace of the greateſt Lady, and we at the fartheſt End towards the Eaſt, before the Palace of the laſt Lady; and that was on the Thirteenth of *January*.

On the next Morning, all the *Neſtorian* Prieſts came together before Day at the Chapel, and ſmote upon a Board inſtead of ringing a Bell, and ſang Matins ſolemnly, and put on their Ornaments, preparing the Cenſor and the Incenſe; and while they were waiting thus, behold, in the Morning the principal Wife, *Cotata-Caten* by Name (*Caten* is of the ſame Import as Lady, and *Cotata* is her proper Name) came into the Chapel with many other Ladies, and with her her eldeſt Son called *Baltu*, and other Children, and they caſt themſelves down upon the Earth, ducking after the Manner of the *Neſtorians*; and after this, they touched all the Images with their Right-hands, always kiſſing their Hands after they had touched; and after that they gave their Right-hands to all that ſtood by them in the Church, for this is the Cuſtom of the *Neſtorians* when they come into the Church; then the Prieſts ſang many Things, giving the Lady Incenſe in her Hand, and ſhe put it upon the Fire; then they perfumed her: After this, when the Day was clear, ſhe began to put off the Ornament from her Head, which is called *Bacca*, and I ſaw her bare Head; then ſhe commanded us to go forth, and as I went out I ſaw a Silver Baſon brought, whether they baptized her or no, I know not; but I know they celebrate not Maſs in a Tent, but in a ſtanding Church; and at the Feaſt of *Eaſter* I ſaw them baptize and conſecrate a Font with great Solemnity, which now they did not.

While we went into our Houſe, *Mangu-Khan* himſelf came and went into the Church or Oratory, and a golden Bed was brought, on which he ſat by his Queen, overagainſt the Altar; then we were ſent for, who knew not then that *Mangu* was come, and the Door-keeper ſearched us, leſt we ſhould have Knives about us; but coming into the Oratory, having a Bible and a Breviary in my Boſom, I firſt bowed down to the Altar, and after to *Mangu-Khan*, and ſo paſſing by we ſtood between the Monk and the Altar; then they made us ſing a Pſalm after our Manner, and chant it; but we ſang *Veni Sancte Spiritus*, &c. and *Khan* cauſed our Books to be brought unto him, the Bible and the Breviary, and diligently enquired concerning the Images, what they ſignified; the *Neſtorians* anſwered him at their Pleaſure, becauſe our Interpreter came not in with us; and when I was firſt before him, I had the Bible in my Boſom, which he commanded to be brought unto him, and he looked earneſtly on it; then he departed, and his Lady remained there, and diſtributed Gifts to all the Chriſtians there; ſhe gave the Monk a Jaſcot, and to the Arch-Deacon of the Prieſts another; ſhe cauſed a Naſſic to be ſpread before us, that is, a Piece of Cloth as broad as a Coverlid of a Bed, very large, and a Buckram, which, when I would not receive, they ſent them to my Interpreter, who had them to himſelf. He brought the Naſſic to *Cyprus*, which he ſold for eighteen Sultanines of *Cyprus*, but it was much the worſe for the Carriage. Then Drink was brought us, *viz.* Drink made of Rice and Red-wine, like a Wine of *Rochelle*, and Coſmos; then the Lady holding the Cup full in her Hand, deſired a Bleſſing upon her Knees, and all the Prieſts ſung with a loud Voice, and ſhe drank it up, and I and my Companion were obliged to ſing.

Another Time, when all of them were almoſt drunk, there was brought the Carcaſs of one Ram, which was preſently devoured, and after that great Fiſhes, which are like our Carp, without Salt or Bread, whereof I eat a little, ſo they paſſed the Day till the Evening; and when the Lady herſelf was drunk, ſhe took her Chariot, the Prieſts ſinging, and went her Way. The next *Sunday*, which was the Twenty-third of *January*, the *Khan*'s Son came (whoſe Mother was a Chriſtian) and did the like, but not with ſo great Solemnity, for he gave no Gifts, but made the Prieſts drink, and gave them parched Millet to eat. Before the firſt *Sunday* in *Lent*, the *Neſtorians* faſt three Days, which they call the Faſt of *Jonas*, when he preached to the *Ninevites*. And the *Armenians* faſt five Days, which they call the Faſt of St. *Lorkis*, who is the greateſt Saint among them. The *Neſtorians* begin their Faſt on *Tueſday*, and end it on *Thurſday*; ſo that on *Friday* they eat Fleſh: And all that Time I ſaw the Chancellor, who is there called *Bulgai*, give them ſmall Pieces of Fleſh upon the *Friday*, and they bleſſed the Fleſh with great Solemnity, as the Paſchal Lamb is bleſſed, but he eat none with them; and this I learned of the *French* Goldſmith, who was his very familiar Friend.

The Monk ſent to *Mangu* to faſt that Week, which he did; ſo that on the *Eaſter* of the *Armenians* we went in Proceſſion to the Houſe of the *Mangu*, and the Monk and we too went in with the Prieſts before him; and while we went in, one of the Servants went out, carrying out the Shoulder Bones of Rams burnt as black as Coals. I wondered at this greatly, as not knowing what it ſhould mean; but after I had enquired, I underſtood, that the *Khan* never does any thing before he has conſulted theſe Bones, which kind of Divination is thus performed: When the *Khan* undertakes any thing, or rather before he undertakes it, he cauſes three of theſe Bones to be brought to him unburnt, and holding them, he conſiders in his Mind the thing he conſults about, and whether he ſhall do it or not, and then delivers the Bones to be burnt; and there are always two little Rooms by the Houſe where he lies, where theſe Bones are burnt, which are diligently ſought for every Day thro' all the Leſkar or Camp of the *Tartars*. When they are burnt black, they bring them to him; then he looks upon them, whether the Bones, by the Heat of the Fire, be cleft Lengthways, for then he may do it; but if the Bones are cracked athwart, or round Pieces fly out of them, then he doth it not; for the Bones are always cleft in the Fire or the thin Skin which covers the Bone; and if one be cleft downright, he proceeds in his Deſign, be it what it will.

When therefore we went in before him, having a Caution to avoid touching the Threſhold, the *Neſtorian* Prieſts brought him Incenſe, and he put it upon the Cenſor, and they perfumed him; then they ſung, bleſſing his Cup; after them the Monk pronounced his Bleſſing, and we bleſſed laſt: And when he ſaw us holding up the Bible towards our Breaſts, he cauſed it to be brought to him that he might ſee it, which he earneſtly looked upon; then after he had drunk, and the chief Prieſt had waited on his Cup, they gave the Prieſts Drink, but we went out; but my Companion ſtaying laſt, when we were gone, turned his Face to the *Khan*, bowing himſelf to him, and then haſtily following us, he ſtumbled at the Threſhold of the Houſe, while we went in Haſte towards the Houſe of *Baltu*, the *Khan*'s eldeſt Son. They that obſerved the Threſhold ſeized my Companion and made him ſtay, calling one, and commanding him to be carried to the *Bulgai*, who is the Chancellor, or Secretary of the Court, who judgeth thoſe that are arraigned of Life and Death, but I knew it not; yet, when I looked back, and did not ſee him coming, I thought they kept him to give him ſome lighter Garments, for he was weak, and ſo laden with Felt-Garments that he could ſcarce go.

Then they called our Interpreter, and made him ſit with him, but we went to the *Khan's* eldeſt Son's Houſe, who had two Wives, and was lodged at the right Side of his Father's Court; who, as ſoon as he ſaw us coming, leaping from his Bed whereon he ſat, caſt himſelf upon the Earth, ſmiting his Forehead againſt the Ground, where kiſſing the Croſs, and then ariſing, cauſed it to be laid upon a new Cloth, in an high Place by him, very honourably: He hath a Schoolmaſter, a *Neſtorian* Prieſt called *David*, a Drunkard, who inſtructs him. Then he made us ſit, and gave the Prieſts Drink, and he alſo drank, receiving the Bleſſing from them; then we went to the Court of the ſecond Lady, which was called *Cota*, who followed Idolaters, whom we found lying ſick a-bed; then the Monk made her riſe out of her Bed, and worſhip the Croſs, bowing her Knees thrice, and bowing towards the Ground, he ſtanding with the Croſs at the Weſt Side of the Houſe, and ſhe on the Eaſt; this being done, they changed Places, and the Monk went with the Croſs unto the Eaſt, and ſhe unto the Weſt, and he boldly commanded her, tho' ſhe was ſo weak that ſhe could ſcarce ſtand upon her Feet, that ſhe ſhould caſt herſelf down thrice, and worſhip the Croſs, towards the Eaſt, after the Manner of the Chriſtians, which ſhe did, and he taught her to make the Sign of the Croſs upon her Forehead, after ſhe laid down upon her Bed; and praying for her, we went unto the third Houſe, where a Chriſtian Lady uſed to be, who being dead, a young Woman ſucceeded her, who, together with the Daughter of her Lord, joyfully received us; and all that whole Houſe reverently worſhipped the Croſs, and he ſet it upon a Velvet Cloth, in an high Place, and ſhe ordered Meat to be brought, which being ſet before the Lady, ſhe cauſed it to be diſtributed to the Prieſts; but I and the Monk were very weary of the Meat and Drink, for the Meat being eaten, and much Drink drunk, we were to go to the young Lady *Cerina*, who lodged behind that great Houſe, which was her Mother's, who, at the coming-in of the Croſs, caſt herſelf down upon the Earth, and worſhipped it very devoutly, becauſe ſhe had been taught ſo to do, and ſhe ſet it in a high Place, upon a Piece of Silk, and all thoſe Cloths whereon the Croſs was ſet, were given to the Monks.

A certain *Armenian* brought his Croſs, who came with the Monk as he ſaid, from *Jeruſalem*, and it was of Silver, weighing about ſome four marks, and it had four precious Stones in the Corners, and one in the Middle. It had not the Image of our Saviour, and he had preſented it to *Mangu-Khan*, and *Mangu* demanded of him what he deſired? To whom he anſwered, that he was the Son of an *Armenian* Prieſt, whoſe Church the *Saracens* had deſtroyed, and craved his Help for the Building again that Church. Then he aſked him for how much it might be built again? He anſwered, for two hundred Jaſcots, that is, for two thouſand Marks; and he commanded Letters to be given him, to him who received the Tribute in *Perſia* and *Armenia* the Greater, that they ſhould pay him the ſaid Sum in Silver. This Croſs the Monk carried with him every where, and the Prieſts ſeeing the Gain he made thereof, began to envy him. We were therefore in the Houſe of the young Lady, and ſhe gave the Prieſts much Drink; from hence we went up into the fourth Houſe, which was the laſt, for he uſed not to come often unto that Lady, and her Houſe was very old, and herſelf not over gracious; but after *Eaſter*, the *Khan* made her a new Houſe, and new Chariots. She likewiſe, as well as the Second, knew little or nothing of Chriſtianity, but followed Soothſayers and Idolaters; yet at our coming in, ſhe worſhipped the Croſs as the Monk and the Prieſt taught her. There alſo the Prieſts drank again, and from this Place we returned to our Oratory, which was not far from thence, the Prieſts accompanying us with great Howling and Outcries in their Drunkenneſs, which is not conſidered there as blameable, either in Man or Woman. A little after, my Companion was brought home, and the Monk ſharply rebuked him, becauſe he touched the Threſhold. The next Day *Bulgai* came (who was a Juſtice) and diligently enquired whether any had warned us to take Heed of touching the Threſhold; and I anſwered, Sir, We had not our Interpreter with us, and if they did, how could we underſtand? Then he pardoned him, but would never after ſuffer him to come into any of the Houſes of *Mangu-Khan*.

43. Sometime afterwards, it happened that the Lady *Cota* was ſick, almoſt to Death, and the Divination by Lot of the Idolaters did her no good at all; then *Mangu* ſent unto the Monk, demanding of him what might be done for her, and the Monk indiſcreetly anſwered, that if ſhe were not cured, he ſhould cut off his Head. Having made that anſwer, the Monk called us, declaring the Matter unto us with Tears, intreating us to watch with him that Night in Prayer, which we did; and he had a certain Root, which is called Rhubarb, and he beat it almoſt to Powder, and put it in Water, with a little Crucifix which he had, whereon the Image of our Saviour was advanced, whereof he reported, that by it he knew whether the Sick would recover or die; for if they ſhould eſcape, it ſtuck to the Breaſt of the Sick, as if it were glued; if otherwiſe, it ſtuck not all; and I ſtill thought that Rhubarb had been ſome holy Relick, which he had brought from the Holy Land of *Jeruſalem*. And he gave all ſick Perſons of that Water to drink, ſo that it could not be, but their Bowels ſhould be griped with ſo bitter a Potion; which Alteration in their Bowels they accounted a Miracle. Then I told him, he ſhould prepare ſome of that Holy Water which is made in the Church of *Rome*, which hath great Virtue to expel Devils, becauſe I underſtood ſhe was vexed of a Devil; and at his Requeſt, we made him ſome Holy Water, and he mingled Rhubarb, and put his Crucifix all the Night long in the Water to temper it. I ſaid, moreover, that if he were a Prieſt, that the Order of Prieſthood had great Power to expel Devils; and he ſaid, it was very true, and yet he lied, becauſe he had no Order, nor knew any one Letter; but was a Weaver, as I underſtood after, in his Country, when I returned.

The next Morning therefore, I and the Monk, and two *Neſtorian* Prieſts, went unto the Lady, and ſhe was in a little Houſe, behind her greater Houſe. When we came in, ſhe ſat in her Bed, and worſhipped the Croſs, and ſet it honourably by her, upon a Cloth of Silk, and drank of the Bleſſed Water with Rhubarb, and waſhed her Breaſt, and the Monk requeſted me to read a Goſpel over her; ſo I read the Paſſion of our Lord according to *John*; at length ſhe was cheared, and felt herſelf better, and ſhe cauſed four Jaſcots to be brought, which ſhe firſt laid at the Feet of the Croſs, and after gave them to the Monk, and reached me one, which I would not receive; then the Monk ſtretched forth his Hand, took it, and gave each of the Prieſts one; ſo that at that Time ſhe gave forty Marks. Then ſhe cauſed Wine to be brought, and gave it the Prieſts to drink, and I was forced to drink thrice from her Hand, in Honour of the Trinity: She began alſo to teach me the Language, jeſting with me, becauſe I was ſilent, as not having any Interpreter.

The next Day again *Mangu-Khan*, hearing that we came that Way, made us come in to him, becauſe he underſtood, that the Lady was ſomewhat better; and we found him with a few Servants, taking a ſort of Meat made of Paſte, for comforting the Head, and the burnt Shoulder-blades of a Ram lay before him, and he took the Croſs in his Hand, but that he worſhipped it, I ſaw not; he looked upon it indeed, and aſked ſome Queſtions, but I know not what. Then the Monk craved Leave to carry the Croſs aloft, upon a Lance, becauſe I had ſpoken to the Monk before concerning this, and *Mangu* anſwered, carry it as you think beſt; then paying our Duty to him, we went unto the Lady, and we found her ſtrong and chearful, and ſhe ſtill drank of the Holy Water, and we read the Paſſion over her, and thoſe miſerable Prieſts never taught her the Faith, nor adviſed her to be baptized; but I ſat there mute, not able to ſpeak any thing, yet ſhe ſtill taught me the Language, the Prieſts found no fault with any kind of Sorcery; for there I ſaw four Swords half drawn out of the Sheath, one at the Head of the Lady's Bed, another at the Feet, and two other, on either Side of the Door one. I ſaw alſo there one Silver Chalice, of our Chalices, which very probably was taken out of ſome Church in *Hungary*, and it hung againſt the Walls full of Aſhes, and upon thoſe Aſhes there was a black Stone, and concerning ſuch things, the Prieſts never teach them that they are evil; nay, they themſelves do teach ſuch things. We viſited her three Days, ſo that ſhe was reſtored to perfect Health; after that, the Monk made a Banner full of Croſſes, and got a Cane as long as a Lance, and we carried the Croſs aloft.

I honoured him as my Biſhop, becauſe he could ſpeak the Language, yet he did many things that did not pleaſe me; for he cauſed a Chair, which may be folded, to be made for him, ſuch as Biſhops uſed to have, and Gloves, and a Cap of Peacocks Feathers, and upon it a little Croſs of Gold; I was well pleaſed with the Croſs. He had ſcabbed Feet, which he endeavourd to palliate with Ointments, and was very preſumptuous in Speech; the *Neſtorians* alſo repeated certain Verſes of the Pſalter upon two Rods, which were joined together, being held by two Men. The Monk was preſent at ſuch Things, and many other Vanities appeared in him, which diſpleaſed me, yet we joined ourſelves to his Society for the Honour of the Croſs, for we carried the Croſs advanced through all the Tents, ſinging, *Vexilla Regis prodeunt*, &c. Whereupon the *Mohammedans* were much dejected.

44. From the Time we came to the Court of *Mangu-Khan* he rode but two Journeys towards the South, and from that time he began to return towards the North which was towards *Caracarum*; whereon I noted all the Way a thing of which Maſter *Baldwin* of *Hannonia* had ſpoken to me at *Conſtantinople*, that he had ſeen this only wonderful, that he always aſcended in going, and never deſcended; for all Rivers came from the Eaſt to the Weſt, either directly or indirectly, bending towards the South, or the North, and I enquired of the Prieſts which came from *Cathaya*, who teſtified the ſame. From the Place where I found *Mangu Khan* to *Cathaya* were twenty Days Journey; going towards the South and Eaſt to *Oman Kerule*, which is the proper Country of *Moall*, where the Court of *Zingis* is, were ten Days Journey right Eaſt; and in thoſe Parts of the Eaſt there was no City, yet there were People which are called *Su-Moall*, that is to ſay, *Moall* of the Waters,

for *Su* is Water. Theſe People live upon Fiſh and Hunting, having neither Flocks or Herds. Towards the North likewiſe there is no City, but a poor People feeding Cattle, who are called *Kerkis*; the *Orangin* are alſo there, who bind ſmooth filed Bones under their Feet, and thruſt themſelves forward upon the congealed Snow and Ice with ſuch Swiftneſs, that they take Birds and Beaſts; and many other poor People there are on the North-ſide, ſo far as they may ſpread themſelves for the Cold; and they join on the Weſt with the Country of *Paſcatir*, which is *Hungary the Greater*, whereof I have ſpoken before. The Bound or Summit of the North Corner is not known for the Extremity of the Cold; for in that Place there are continual Mountains of Snow.

I was inquiſitive of the Monſters, or monſtrous Men, whereof *Iſidorus* and *Solinus* make report; they told me they never ſaw any ſuch, and I therefore doubt whether it be true or no. All theſe Nations are poor, yet they muſt ſerve in ſome Trade, for it was the Commandment of *Zingis*, that none ſhould be free from Service, till he were ſo old, that he could labour no longer by any means. Once I remember a certain Prieſt of *Cathaya* ſat with me cloathed in a red coloured Cloth, and I demanded of him whence he had ſuch a Colour, and he told me, that in the Eaſt Parts of *Cathaya* there were high craggy Rocks, wherein certain Creatures dwell, having in all Parts the Shape of Men; but that they bow not the Knees, but leap inſtead of walking, which are not above one Cubit long, and their whole Body is covered with Hair, who have their Abode in Caves, which no Man can come unto, and they who hunt them, go to them, and carry ſtrong Drink with them, and make Pits in the Rocks like Wells, which they fill with that ſtrong Drink; for *Cathaya* hitherto has had no Wine, tho' now they begin to plant Vineyards; but the ſtrong Liquor before-mentioned is made of Rice. The Hunters hide themſelves, and then theſe Creatures come out of their Holes and taſte the Drink, and cry, Chin-Chin; on this they come together in great Multitudes, and drink till they are made drunk, ſo that they ſleep there. Then the Hunters come and bind them Hand and Feet, while they are ſleeping, and afterwards open the Veins in their Neck, and draw forth three or four Drops of Blood from every one, and let them go free, and that Blood, as he told me, is the moſt precious Purple.

He told us alſo as a Truth (which, however, I do not believe) that there is a Province beyond *Cathaya*, into which, at whatever Age a Man enters, he continueth in the ſame Age wherein he entered. *Cathaya* is on the Ocean, and the Goldſmith ſo often mentioned told me, that there arrived Meſſengers from a certain People which are called *Tante* and *Manſe*, who inhabit Iſlands, the Sea of which is frozen in the Winter, ſo that the *Tartars* may invade them, who offered two thouſand Tuemen or Jaſcots yearly, ſo they would let them live in Peace. Tuemen is a Piece of Money containing ten Marks. The common Money of *Cathaya* is Paper made like Paſteboard, the Breadth and Length of an Hand, upon which they imprint Lines like the Seal of *Mangu*; they write with a Pencil, like that with which Painters paint, and in one Figure they make many Letters comprehending one Word. The People of *Thibet* write as we do, and they have Characters very like ours. They of *Tangut* write from the right Hand to the left, as the *Arabians* do, and multiply the Line aſcending upwards; the *Jugures*, as I ſaid before, from above to the Bottom of the Line. The common Money of the *Rutenians* are little ſpotted and griſled Skins. When we came with the Monk, he charitably admoniſhed us to abſtain from Fleſh, and that our Servants ſhould eat Fleſh with his Servants; but he would promiſe us Meal, and Oil, or Butter, which we did, though it much grieved my Companion by reaſon of his Weakneſs; wherefore our Food was Millet and Butter, or Paſte boiled in Water, with Butter, or ſour Milk, and unleavened Bread baked on Ox-dung, or Horſe-dung.

45. When our *Quinquageſima* came, which is the *Lent* Time of all the People of the Eaſt, the great Lady *Cota*, with all her Company, faſted that Week, who came every Day to our Oratory, and gave Meat to the Prieſts, and other Chriſtians, of whom a great Multitude flocked thither the firſt Week to hear their Duty, and ſhe gave me and my Companion each a Coat and Breeches of grey Samito, furred with coarſe Hair, becauſe my Companion complained much of the Weight of his Skins, which I received for his ſake, excuſing myſelf nevertheleſs, that I would not wear ſuch Cloaths; I gave to my Interpreter what belonged to me. Then the Porters of the Court ſeeing that ſuch a Multitude came daily to the Church, which was within the Bounds of the Keepers of the Court, they ſent one of their Attendants to the Monk, to let him know, that they would not have ſuch a Multitude come within the Precincts of the Court; to this the Monk roughly anſwered, that he would know whether they commanded this from *Mangu-Khan*, and he added certain Speeches, as if he would accuſe them to *Mangu-Khan*; but they preventing him, accuſed him before *Mangu*, that he was too full of Words, and that he gathered together too great a Multitude to hear him ſpeak.

Afterwards being called to the Court, we came in before the *Khan* himſelf, who having the burnt Shoulder blade of a Ram in his Hand, looked upon it, as it were reading it, began to reprove the Monk ſeverely, telling him, that ſeeing he was a holy Man, he ſhould pray unto God, and aſked why he ſpoke ſo much with Men? but I ſtood behind with my Head bare. Then the *Khan* ſaid to him, Why doſt thou not put off thy Cap when thou comeſt before me, as that *Frank* doth? and commanded me to be called nearer; then the Monk being much abaſed, put off his Cap contrary to the Cuſtom of the *Greeks* and *Armenians*, and when *Khan* himſelf had ſpoken ſharply to him, we went out; the Monk then delivered me the Croſs to bear to the Oratory, becauſe he could not carry it for Shame. After a few Days he was reconciled to him, promiſing that he would go to the Pope, and that he would bring all the Nations of the Weſt to his Obedience. Whereupon he returning to the Oratory, after that Conference had with the *Khan*, began to enquire of me touching the Pope, if I believed he would ſee him, if he came unto him in the Behalf of *Mangu*, and if he would furniſh him with Horſes unto *Saint James* in *Galicia*. He demanded alſo of your Majeſty, if I thought you would ſend your Son unto *Mangu*? Then I counſelled him, that he ſhould take heed that he did not promiſe Falſhoods to *Mangu*, becauſe the laſt Error would be worſe than the firſt, and that God needeth not our Lies, or that we ſhould ſpeak deceitfully for him.

At that time there aroſe a certain Queſtion between the Monk and a Prieſt, a learned Man, whoſe Father was an Archdeacon, and the other Prieſts accounted him an Archdeacon. For the Monk ſaid, that Man was created before Paradiſe, and that the Scripture ſaid ſo; then was I called to be an Arbitrator of the Queſtion, but I being ignorant that they contended about this, anſwered, that Paradiſe was made upon *Tueſday*, when the other Trees were made, and that Man was made the ſixth Day. Then the Monk began to ſay, did not the Devil bring Earth the firſt Day from the four Parts of the World, and making Clay, made the Body of Man therewith, and God inſpired his Soul? Then hearing this Hereſy of the Monk, and that he ſo publickly and ſhamefully recited it, I reproved him ſharply, ſaying, he ſhould put his Finger upon his Mouth, becauſe he knew not the Scriptures, and that he ſhould take heed what he ſaid; and he began to ſcorn me, becauſe I was ignorant of the Language.

I departed therefore from him, going to our Houſe; it fell out afterwards, that he and the Prieſts went in Proceſſion to the Court without calling me, becauſe the Monk would no longer ſpeak to me as he was wont; when therefore they came before *Mangu*, he earneſtly demanded where I was, and why I came not with them? The Prieſts being afraid, excuſed themſelves, but, returning, they told me the Words of *Mangu*, and murmured at the Monk. After this, the Monk was reconciled to me, and I to him, intreating him, that he would help me with his Language, and I would help him in the Holy Scripture: *For a Brother that is holpen of a Brother, is as a ſtrong City*. After the firſt Week of Faſting, the Lady ceaſed to come unto the Oratory, and to give Meat and Drink, which we were wont to have; for the Monk ſuffered it not to be brought, ſaying, that Mutton-fat, or Suet, was put in the Sauce; and ſhe gave no Oil, but very ſeldom; ſo that we had nothing but brown Bread and Paſte, boiled in Water, though we had no Water but of diſſolved Snow, or Ice, which was exceeding bad. My Companion began to be much grieved; ſo I acquainted *David*, the Schoolmaſter of the Khan's eldeſt Son, with our Neceſſity, who made Report thereof to the Khan, and he commanded to give us Wine, Flour, and Oil.

Neither the *Neſtorians* or *Armenians* eat Fiſh by any means in *Lent*; but the Monk had a Cheſt by him under the Altar, with Almonds and Raiſins, and dried Prunes, and many other Fruits, which he eat all the Day, whenever he was alone. We eat once a Day, and that in great Affliction; for as ſoon as they knew that *Mangu* had given us Wine, moſt impudently they came in upon us like Dogs, both the *Neſtorian* Prieſts, who were drunk all the Day in the Court, and the *Moals* alſo, and the Servants of the Monk. The Monk alſo, when any came unto him to whom he would give Drink, he ſent to us for Wine; ſo that the Wine cauſed us more Trouble than Comfort, becauſe we could not deny it without Offence. If we gave, we wanted ourſelves; nor durſt we, that being ſpent, deſire any more from the Court.

4. About the Middle of *Lent* the *French* Goldſmith's Son came, bringing with him a Silver Croſs made after the *French* Faſhion, having the Image of Chriſt all of Silver faſtened upon it at the Top, which the Monks and Prieſts ſeeing, put it away. This Croſs he was to preſent in the Behalf of his Maſter to *Bulgai*, who was the chief Secretary of the Court, which when I heard I was offended. The ſame young Man alſo declared to *Mangu Khan*, that the Work, which he had commanded to be made, was finiſhed, which Work I deſcribed unto you. *Mangu* hath at *Caracarum* a great Court hard by the Walls of the City, incloſed with a Brick Wall, as the Priories of Monks are incloſed with us. In that Court there is a great Palace, wherein he held his Feaſts twice a Year, once in *Eaſter*, when he paſſeth that Way, and once in Summer, when he returneth; but the latter is the greater, becauſe then all the Nobles meet together at his Court, and then he gives unto them Garments, and ſhews all his Magnificence. There are many other Houſes there as large as our Farms, wherein his Victuals and Treaſures are ſtored. In the Entrance of that great Place, becauſe it was indecent to have Flaggons going about, as in a Tavern, *William* the Goldſmith made him a great Silver Tree, at the Root whereof were four Silver Lions, having one Pipe ſending forth pure Cows Milk; and the four Pipes were conveyed within the Tree unto the Top thereof, whoſe Top ſpread back again downward, and upon every one of them was a Golden Serpent, whoſe Tails twined about the Tree; and one of theſe Pipes run with Wine; another with Caracoſmos, that is, clarified Whey; another with Ball, that is, Drink made of Honey; another with Drink made of Rice, called *Teracina*; and every Drink had a Veſſel prepared of Silver at the Foot of the Tree to receive it. Between theſe four Pipes, at the Top, he made an Angel holding a Trumpet; and under the Tree he made an hollow Vault, wherein a Man might be hid, and a Pipe aſcending up the Heart of the Tree unto the Angel. He firſt made Bellows, but they gave not Wind enough. Without the Palace there is a Chamber, wherein the Liquors were laid, and there were Servants ready to pour it out when they heard the Angel ſounding the Trumpet; and the Boughs of the Tree are of Silver, and ſo are the Leaves and Pears that are on it; when therefore they want Drink, the Butler commands the Angel to ſound the Trumpet; he who is hid in the Vault, hearing, blows the Pipe ſtrongly, which aſcending to the Angel, he ſets his Trumpet to his Mouth, and the Trumpet ſoundeth very ſhrill; then the Servants hearing, which are in the Chamber, pour Liquor into the proper Pipe, and the Pipes pour it from above, and they are received below into Veſſels prepared for that Purpoſe. Then the Butlers draw them, and carry them through the Palace to Men and Women.

The Palace is like a Church, having the middle Iſle and the two Sides beyond two Rows of Pillars, and three Gates on the South; before the middle Gate ſtands the Tree, and the *Khan* himſelf ſits in the North Front on an high Place, that he may be ſeen of all; and there are two Flights of Steps aſcending to him; by one he that carries the Cup goes unto him; and by the other he comes down. The Space which is in the Middle, between the Tree and the Steps by which they aſcend, is void; for there ſtands he that waits on his Cup, and the Meſſengers which bring Preſents, the *Khan* ſitting there above like a God. On the right Side, towards the Weſt, are the Men; on the left, Women; for the Palace ſtretched out in Length from North to South: On the right Side are Places full of Seats, on which his Sons and Brethren ſit; on the left Side are the like, where his Wives and Daughters ſit, one Woman only ſits above by him, but not ſo high as he. When therefore he had heard that the Work was finiſhed, he commanded the chief Workman to ſet it up in its Place, and make it fit.

About *Paſſion Sunday*, he went before with his ſmall Houſes, leaving his greater Houſes behind; and the Monk and we followed him; and he ſent us another Bottle of Wine. The *Khan*, in his March, paſſed between the hilly Countries, where there was great Wind, and extreme Cold, and there fell a great Snow; whereupon he ſent abut Midnight to the Monk and us, entreating us to pray unto God, that he would mitigate the Wind and Cold, becauſe all the Beaſts which were in the Train were in Jeopardy; eſpecially becauſe all that Time they were with Young, and ready to bring forth. Then the Monk ſent him Incenſe, requiring him to put it upon the Coals, and offer it to God; which whether he did, I know not; but the Tempeſt ceaſed, which had continued two Days.

On *Palm Sunday* we were near *Caracarum* in the Dawning of the Day we bleſſed the Willow-boughs, whereon as yet there appeared no Bud; and about Nine we entered the City, carrying the Croſs aloft, with the Banner, paſſing through the Middle of the Street of the *Saracens*, where the Market and Fair are, to the Church, and the *Neſtorians* met us in Proceſſion; and, entering into the Church, we found them prepared to celebrate the Maſs; which being celebrated, they all communicated; and they aſked me whether I would communicate? I anſwered, that I had drank before, and the Sacrament ſhould not be received but faſting. Maſs being ſaid, it was Evening, and Maſter *William* the Goldſmith brought us with Joy to his Inn to ſup with him. He had a Wife who was the Daughter of *Mohammedan* Parents, though born in *Hungary* herſelf, who could ſpeak *French*, and the Language of *Comania*. We found alſo there one other Man, called *Baſſilius*, the Son of an *Engliſhman*, born in *Hungary*, who alſo was ſkilful in the ſame Languages. Supper being ended, they brought us to our Cottage, which the *Tartars* had appointed in a certain Plat of Ground near the Church, with the Oratory of the Monk.

On the next Morning the *Khan* himſelf entered into his Palace, and the Monk and I and the Prieſts went to him; they ſuffered not my Companion to go, becauſe he ſtumbled on the Threſhold. I much deliberated with myſelf what I ſhould do, whether I ſhould go or no; and, fearing Offence, if I ſhould depart from other Chriſtians, and becauſe it pleaſed him, and fearing leſt that Good might be hindered, which I hoped to obtain, I choſe rather to go, though I ſaw their Actions full of Idolatry and Sorcery; nor did I any other Thing there but pray for the whole Church with a loud Voice, and alſo for the *Khan* himſelf, that GOD would direct him to the Way of eternal Salvation. We therefore went into the Court, which was very neat, for in the Summer Rivers are coveyed into every Place, whereby it is watered. After this we entered into the Palace full of Men and Women, and ſtood before the *Khan*, having the aforeſaid Tree at our Backs, which, with the Veſſels thereof, took up a great Part of the Palace. The Prieſts brought two little Loaves and Fruit in an earthen Diſh, which they preſented unto him, bleſſing them; and the Butler brought them to him, ſitting above on a very high Place, and he preſently began to eat one of the Loaves, and ſent the other to his Son and a younger Brother of his, who was brought up by a *Neſtorian*, and knew the Goſpel, who alſo ſent for my Bible, that he might ſee it. After the Prieſts, the Monk ſaid his Prayer, and I after the Monk; then he promiſed that the next Day he would come unto the Church, which is great enough and fair, and all the Cieling above was covered with Silk wrought with Gold: The next Day he departed, deſiring the Prieſts to excuſe him, that he durſt not come to the Church, becauſe he underſtood the Dead were carried thither: But we and the Monk remained at *Caracarum* with the other Prieſts of the Court, that we might celebrate *Eaſter* there.

47. The Feaſt of *Eaſter* was now drawing near, and we had not our Veſtments; and I likewiſe conſidered the Manner how the *Neſtorians* made the Sacramental Bread, and was much troubled what I ſhould do, whether I ſhould receive the Sacrament from them, or ſhould celebrate in their Veſtments and Chalice, and upon their Altar, or ſhould altogether abſtain from the Sacrament. There was a great Multitude of *Chriſtians*; *Hungarians*, *Alans*, *Rutenians*, *Georgians*, and *Armenians*, all which had not ſeen the Sacrament ſince they were taken Priſoners, becauſe the *Neſtorians* would not admit them into their Church, unleſs they were baptized by them, as they ſaid; yet they made no Mention of that to us, and they offered their Sacrament freely to us, and made me ſtand in the Door of the Choir, that I might ſee their Manner of Conſecration. On the Vigil of *Eaſter* I ſtood by the Fount, that I might ſee their Manner of baptizing. They ſay they have of the Ointment wherewith *Mary Magdalen* anointed the Feet of our LORD; and they pour in as much as they think fit of that Oil, with which they knead their Bread; for all the People of the Eaſt put Fat in their Bread inſtead of Leaven, which Fat is Butter, or Suet out of a Sheep's Tail, or Oil.

They ſay alſo, they have of the Flour of which the Bread was made which the LORD conſecrated, and always add as much freſh as the Quantity of the Flour they lay aſide; and they have a Chamber, hard by their Choir, and an Oven, where they bake their Bread, which they next conſecrate with great Reverence. They therefore make one Loaf of an Hand's-breadth, with the before-mentioned Oil, which they firſt break into twelve Pieces, according to the Number of the Apoſtles, and after divide thoſe Pieces according to the Multitude of the People, and the Prieſts give the Body of CHRIST to every one in his Hand; and then every one taketh it out of the Palm of his Hand with Reverence, and ſtretcheth his Hand to the Top of his Head. The Chriſtians I mentioned before, and the Monks, very earneſtly entreated us, for God's Sake, that we would celebrate. Then I made them be confeſſed by an Interpreter as I could, reckoning the ten Commandments, and the ſeven deadly Sins, and other Things, for which every Man ought to be penitent and confeſſed; all of them publickly excuſed themſelves, concerning Theft, ſaying, that without Theft they could not live, becauſe their Maſters provided them neither Food nor Raiment. Then conſidering that they had taken away their Perſons and their Subſtance without juſt Cauſe, I ſaid unto them, that they might lawfully take Neceſſaries of the Goods of their Maſters, and I was ready to maintain it to the Face of *Mangu-Khan*.

Some of them alſo were Soldiers, who excuſed themſelves, that they muſt go to the Wars, or elſe they ſhould be ſlain: I forbad them to go againſt the Chriſtians, and that they ſhould not hurt them, and that they ſhould rather ſuffer themſelves to be ſlain, for ſo they ſhould become Martyrs. And I ſaid, that if any would accuſe me of this Doctrine before *Mangu-Khan*, I would be ready to preach the ſame in his Hearing; for the *Neſtorians* themſelves of the Court were preſent when I taught this, of whom I was ſuſpicious they might report ill of us. Then Maſter *William*, the Goldſmith, cauſed an Iron to be made for us to make Hoſts; and he had certain Veſtments which he had made for himſelf, for he had ſome Knowledge in Learning, and officiated as a Clerk. He cauſed the Image of the Bleſſed Virgin *Mary* to be graven after the *French* Faſhion, and engraved the Hiſtory of the Goſpel very fair; and made a ſilver Box to lay up the Body of CHRIST, and the Relicks in certain little Holes curiouſly wrought in the Side of the Box.

He made alſo a certain Oratory upon a Chariot, very fairly painted with Scripture Hiſtories; I therefore took his Veſtments and bleſſed them; and we made Hoſts after our Manner, very fair: And the *Neſtorians* aſſigned me their Fount for Baptiſm. And their Patriarch ſent them from *Baldach* a ſquare Hide like a portable Altar, made with Chriſm, which they uſe inſtead of conſecrated Stone; therefore I celebrated on the Day of the Lord's Supper, in their ſilver Chalice and Diſh, which were very great Veſſels. I did the like alſo on *Eaſter-day*, and we communicated the People with the Bleſſing of God, as I hope; but they baptized in the Vigil of *Eaſter* more than threeſcore Perſons very orderly. There was great joy for this generally among all Chriſtians.

48. After this, it happened that Maſter *William* the Goldſmith was grievouſly ſick, and when he was upon recovery, the Monk viſiting him, gave him Rhubarb to drink, ſo that he had almoſt killed him. Then viſiting him when I found him ſo ill, I aſked him what he had eat or drank? And he told me the Monk had given him the Potion, and he drunk two little Diſhes full, thinking it had been Holy Water. Then I went to the Monk, and ſaid to him, either go as an Apoſtle, doing Miracles indeed by Virtue of Prayer and the Holy Ghoſt, or as a Phyſician, according to the Art of Medicine; you give a ſtrong Potion of Phyſick to drink to Men not prepared, as if it were an innocent Thing; for which you will incur a foul Scandal, if it come to the Knowlege of Men. From that Time he began to fear and to be weary of him.

It happened at that Time, that the Prieſt too was ſick, who was as it were the Archdeacon of the reſt, and his Friends ſent for a certain *Saracen*, who was a Soothſayer, who ſaid unto them, a certain lean Man, who neither eateth or drinketh, nor ſleeps in a Bed, is angry with him; if he can obtain his Bleſſing, he may recover; then they underſtood it was the Monk, and about Midnight the Prieſt's Wife, his Siſter, and his Son came, intreating that he would come and bleſs him; they alſo raiſed us up to intercede with the Monk, who anſwered us upon this Occaſion, Let him alone, becauſe he, with three others, who likewiſe took evil Courſes, conſulted to go to the Court, to procure *Mangu-Khan*, that I and you ſhould be expelled from theſe Parts; for there aroſe a Contention among them, becauſe *Mangu* and his Wives ſent four Jaſcots, and Pieces of Silk, upon *Eaſter* Eve, to the Monk and Prieſts, to diſtribute among them; and the Monk had kept unto himſelf one Jaſcot for his Part, and of the other three one was counterfeit, for it was Copper. The Prieſts thought therefore that the Monk had kept too great a Share to himſelf, whence (it might be) that they had ſome Words among themſelves, which were reported to the Monk.

When Day came, I went to the Prieſt, who had extreme Pain in his Side, and ſpit Blood, whence I thought it was an Impoſtume; then I adviſed him, that if he had any thing that was another's, to reſtore it; he ſaid he had nothing. I ſpoke unto him alſo of the Sacrament of Extreme Unction; who anſwered, we have no ſuch Cuſtom, neither do our Prieſts know how to do it; I intreat you, that you would do it for me, as you know beſt. I adviſed him alſo, concerning Confeſſion, which they frequent not; and he ſpake a little in the Ear of a certain Prieſt, one of his Companions. After this, he grew better, and intreated me to go for the Monk; ſo I went, but the Monk would not come at firſt; but when he heard he was ſomewhat better, he went with his Croſs, and I alſo went, and carried the Body of Chriſt, which I had reſerved upon *Eaſter* Day, at the Intreaty of Maſter *William*; then the Monk began to kick him with his Feet, and he moſt humbly embraced his Feet; then I ſaid unto him, it is the Cuſtom of the Church of *Rome*, that the Sick ſhould receive the Body of Chriſt, as it is the beſt Proviſion for their Journey, and a Defence againſt all the Deceits of the Enemy; turning next to the ſick Man, I ſaid, *Behold the Body of Chriſt, which I conſecrated on* Eaſter Day, *you muſt be confeſſed, and deſire it.* Then ſaid he, with a great Faith, *I deſire it with all my Heart*; which when I had offered to him, he with great Affection ſaid, *I believe that this is my Creator, and my Saviour, who gave me Life, and will reſtore it again unto me after Death in the general Reſurrection*; and ſo took the Body of Chriſt (from my Hand) made after the Manner of the

Church of *Rome* ; the Monk then ſtayed with him, and gave him, in my Abſence, I know not what Potions.

The next Day he began to have the Pangs of Death upon him ; then taking their Oil which they ſaid was holy, I anointed him according to the Manner of the Church of *Rome*, as they entreated me. I had none of our Oil, becauſe the Prieſts of *Sartach* kept it all. When we ſhould have ſung a Dirge, and I would have been preſent at his End, the Monk ſent to me, bidding me depart, becauſe, if I were preſent, I could not come into the Houſe of *Mangu-Khan* for one whole Year ; which, when I had told his Friends, they ſaid it was true, and deſired me to depart, leſt I might be hindered in that Good which I might promote. As ſoon as he was dead, the Monk ſaid unto me, *Never mind it, I have killed him with my Prayers ; this Man only was learned, and oppoſed himſelf againſt us, the reſt know nothing : Henceforth* Mangu-Khan *himſelf, and they all will couch at our Feet.* Then he declared unto me the before-mentioned Anſwer of the Soothſayer ; which, not believing it, I enquired of the Prieſts who were Friends of the Deceaſed, whether it were true or no, who ſaid it was ; but whether he was pre-inſtructed or not, that they knew not.

Afterwards I found that the Monk called the Soothſayer and his Wife into his Chapel, and cauſed Duſt to be ſifted for him to divine to him, for he had a certain *Rutenian* Deacon who divined to him ; which, when I underſtood, I was amazed at his Fooliſhneſs, and ſaid to him, Brother, a Man full of the Holy Ghoſt, which teacheth all Things, ſhould not demand Anſwers or Counſels from Soothſayers, ſeeing all ſuch Things are forbidden, and they are excommunicated who follow ſuch Things. Then he began to excuſe himſelf, that it was not true that he ſought after ſuch Things ; but I would not depart from him, becauſe I was placed there by the Commandment of the *Khan* himſelf, nor could I remove without his ſpecial Command.

49. As to the City of *Caracarum*, your Highneſs may be pleaſed to know this ; that, excluding the Palace of the *Khan* himſelf, it is not ſo good as the Caſtle of *St. Dennis*, and the Monaſtery of *St. Dennis* is worth ten Times that Palace, and more too. There are two Streets there, one of the *Saracens* or *Mohammedans*, where the Fairs are kept, and many Merchants reſort thither, by reaſon of the Court which is always near, and for the Number of Embaſſors. There is another of the *Cathayans*, who are all Artificers. Without thoſe Streets there are great Palaces, which are the Courts of the *Secretaries* ; there are there twelve Kinds of Idolaters of divers Nations, two Moſques, where the Law of *Mohammed* is proclaimed, and one Church of the Chriſtians at the End of the Town. The Town is incloſed with a Mud Wall, and hath four Gates ; on the Eaſt Part Millet and other Grain is ſold, which, as yet, is ſeldom brought thither ; on the Weſt Sheep and Goats, on the South Oxen and Waggons are ſold ; and on the North Horſes.

Following the Court, we came thither on the *Sunday* before the *Aſcenſion* ; the next Day after we were called before *Bulgai*, who is their Juſtice and chief Secretary ; both the Monk and all his Family, and we and all the Meſſengers and Strangers likewiſe who frequented the Houſe of the Monk, and were called before *Bulgai* ſeverally, firſt the Monk, and after us, and they began diligently to enquire whence we were, and for what Purpoſe we came, and what our Errand was ? and this Enquiry was made becauſe it was told *Mangu-Khan*, that four hundred Aſſaſſins or ſecret Murderers were gone forth in divers Habits to kill him. About that Time the *Khan*'s Lady was reſtored to Health, and ſhe ſent for the Monk, and he not willing to go, anſwered, She hath ſent for Idolaters about her, let them cure her if they can, I will go no more.

Upon *Aſcenſion* Eve, we were all in the Houſe of *Mangu-Khan :* And I ſaw as often as he was to drink, they caſt Coſmos to their Idols of Felt ; then I ſaid to the Monk, *What Fellowſhip hath Chriſt with* Belial ? *What Part hath our Croſs with theſe Idols ? Mangu-Khan* hath eight Brethren, three by the Mother, and five by the Father. One of them, of his Mother's Side, he ſent into the Country of *Aſſaſſines*, who are called by them *Mulibet*, and he commanded him to kill them all. Another went to *Perſia*, and is now entered therein to go, as is thought, into *Turky*, from thence to ſend Armies to *Baldach* and *Vaſtacius*. One of the others he ſent into *Cathaia* againſt ſome that rebelled : His youngeſt Brother of the ſame Venter, he kept himſelf, whoſe Name was *Arabucha*, who holds his Mother's Court, who was a Chriſtian, whoſe Servant Maſter *William* is ; for one of the Brothers on the Father's Side took him in a certain City called *Belgrade*, where there was a *Norman* Biſhop, of *Belle Ville* near *Roan*, with a Nephew of the Biſhop's, whom I ſaw there at *Caracarum*, and he gave Maſter *William* to *Mangu*'s Mother, becauſe ſhe was deſirous to have him. But when ſhe was dead, Maſter *William* came back again to *Arabucha*, with all Things elſe pertaining to the Court of his Mother ; and from him he came to the Knowledge of *Mangu-Khan*, who, on finiſhing of the aforeſaid Work, gave unto Maſter *William* one hundred Jaſeots, that is, a thouſand Marks.

On the Eve of the *Aſcenſion*, *Mangu Khan* ſaid, he would go to his Mother's Court and viſit her, and the Monk ſaid he would go with him, and give his Bleſſing to his Mother, with which *Khan* was well contented. In the Evening of the Day of the *Aſcenſion*, the aforeſaid Lady was very ill, and the Chief of the Soothſayers ſent to the Monk, commanding him that the Table ſhould not be ſmitten. On the Morrow, when the whole Court removed, the Court of the Lady remained ſtill : and when we came to the Place where the Court ſhould ſtay, the Monk was commanded to depart farther from the Court than he was wont, which he did ; then *Arabucha* met his Brother the *Khan :* So the Monk and we, ſeeing that he was to paſs by us, met him with the Croſs ; and he calling us to Mind, becauſe ſometimes he had been at our Oratory, ſtretching forth his Hand made a Croſs unto us like a Biſhop ; then the Monk taking Horſe followed him, bearing certain Fruits ; but he alighted before his Brother's Court, waiting while he came from hunting : The Monk alighted there alſo, and offered him the Fruit, which he received ; and hard by him ſat two *Saracens* of the Nobility of the Court of *Khan* ; but *Arabucha* underſtanding of the Contention between the Chriſtians and the *Saracens*, enquired of the Monk if he knew theſe *Saracens*, and he anſwered, *I know they are Dogs, why have you them ſo near you?* But they replied, Why, ſay they, do you Wrong to us, when we do none to you? To whom the Monk ſaid, I ſpeak the Truth, and ye and your *Mohammed* are vile Dogs : Then they began to blaſpheme CHRIST, but *Arabucha* forbad them, ſaying, Speak not ſo blaſphemouſly, for we know that the MESSIAH is GOD. That very Hour there aroſe a great Wind over all the Street, and after a while there came a Rumour that the Lady was dead.

The next Morning the *Khan* returned towards the Court another Way ; for this is a Rule amongſt them, that they never return the ſame Way they come. While the Court remained here, none dare paſs that Way (neither Horſe-man nor Foot-man) where the Court ſtayed, ſo long as any Shew of the Fire made there remaineth. That Day certain *Saracens* kept Company with the Monk, upon the Way, provoking him, and diſputing with him ; and when he could not defend himſelf with Argument, and they made light of him, he would have laſhed them with the Whip which he held in his Hand, and he went ſo far that his Words were reported at the Court, and we were commanded to depart to the ſame Place with other Meſſengers, and not to abide before the Court as we were wont. I hitherto always hoped the King of *Armenia* would come. There came ſome about *Eaſter* from *Bolac*, where thoſe *Germans* are, for whoſe Sake chiefly I went thither, who told me, that the *Dutch* Prieſt ſhould come to Court ; therefore I moved no Queſtions to *Mangu* concerning our Stay or Departure ; for at the Beginning he gave us Leave to ſtay two Months, and now five Months were paſt. This was done about the End of *May*, and we had continued there all *February*, *March*, *April*, and *May* ; but hearing no News of the King or the ſaid Prieſt, and fearing leſt we ſhould return in the Winter, the Sharpneſs of which we had experienced, I cauſed it to be demanded of *Mangu-Khan*, what his Pleaſure was concerning us, becauſe we would ſtay there, if ſo he pleaſed, or if we muſt return, it were eaſier for us to return in Summer, than in the Winter.

He preſently ſent to me, commanding that I ſhould not go far off, becauſe his Pleaſure was to ſpeak with me the next Day: To which I anſwered, if he would ſpeak with me, he ſhould ſend for Maſter *William*'s Son, for my Interpreter was not ſufficient, and he that brought this Meſſage to me was a *Saracen*, who had been a Meſſenger to *Vaſtacius*, and, blinded with Rewards, counſelled *Vaſtacius* to ſend Embaſſadors to *Mangu-Khan*, and the mean while the Time paſſed, for *Vaſtacius* thought he would preſently enter their Country, ſo he ſent, and after he knew them, he little regarded them, nor made a Peace with them; neither did they yet enter his Country, nor will they be able ſo long as they dare defend themſelves; nor did they ever take any Country by Force, but by Deceit; and becauſe Men make Peace with them, under Colour of that Peace they circumvent them, and overthrow them. Then he began to be very inquiſitive of the Pope, and of the King of the *Franks*, and of the Way to go to them; but the Monks hearing this, adviſed me ſecretly not to anſwer him, becauſe he would procure that an Embaſſador ſhould be ſent. I therefore held my Peace, not willing to anſwer him; and he ſpake to me I know not what injurious Words, for which the *Neſtorian* Prieſts would have accuſed him, ſo that he had either been ſlain or beaten, but I would not agree to it.

50. The very next Day they brought me to the Court, and the chief Secretaries of the Court came to me, one of them a *Moal*, who waiteth upon the *Khan*'s Cup, and the reſt *Saracens*, enquiring on the Behalf of the *Khan*, wherefore I came? Then I told him in the very ſame Words I did before, how I came to *Sartach*, and from *Sartach* to *Baatu*, and how *Baatu* ſent me thither. Whereupon I ſaid unto him, I have nothing to ſpeak on the Behalf of any Man, unleſs I ſhould ſpeak the Words of God unto him, if he would hear them, for the *Khan* ſhould beſt know what *Baatu* hath written unto him. They ſtuck upon this, demanding what Words of God I would ſpeak unto him; thinking I would propheſy unto him ſome proſperous Thing, as many uſe to do.

To whom I anſwered, if ye will that I ſpeak the Words of God unto him, get me an Interpreter, who ſaid we have ſent for him, yet ſpeak by this Interpreter as you may, we ſhall underſtand you well, and they urged me much to ſpeak. Then I ſaid, “This is the Word of God. To whom more is committed, more is required at his Hands. Another alſo, to whom more is forgiven, he ought to love more. Out of theſe true Words of God, I ſaid to the *Mangu* himſelf, that God hath given him much: For the Power and Riches which he hath, the Idols of the *Tuinians* hath not given him, but the Omnipotent God, who hath made Heaven and Earth, in whoſe Hands all Kingdoms are, and he tranſlateth them from Nation to Nation for the Sins of Men, wherefore if he love him, it ſhall go well with him; if otherwiſe, let him know that God will require all theſe things at his Hands, even to the uttermoſt Farthing.” Then ſaid one of the *Saracens*, Is there any Man that loveth not God? I anſwered, “God ſaith, if any Man love me, he will keep my Commandments; therefore he that keepeth not the Commandments of God, loveth not God.” Then ſaid he, have ye been in Heaven, that ye might know the Commandments of God? “No, ſaid I, but he hath given them from Heaven to holy Men, and at the laſt himſelf deſcended from Heaven, teaching us, and we have theſe Things in the Scriptures, and we ſee by the Works of Men whether they keep them or no.”

Whereupon he replied, Will ye then ſay that *Mangu-Khan* keeps not the Commandments of God? To whom I ſaid your Interpreter will come as ye ſay. Then before *Mangu-Khan*, if it pleaſe him, I will recite the Commandments of God, and he ſhall be his own Judge, whether he keep them or not; ſo they departed and told him, that I ſaid he was an Idolater, or a *Tuinian*, and kept not the Commandments of God. The next Day he ſent his Secretaries unto me, ſaying, our Lord ſends us unto you, ſaying, ye are here, *Chriſtians*, *Saracens*, and *Tuinians*, and every of you ſaith his Law is better, and his Books are true: Wherefore he would that ye all come together, and make Compariſon that every one write his Words, that he may know the Truth. Then I ſaid, “Bleſſed be God, that hath put this in the Heart of *Khan*; but our Scripture ſaith, the Servant of God muſt not be contentious, but meek unto all. Wherefore I am ready without Strife and Contention to render an Account of the Faith and Hope of Chriſtians to every one that ſhall require it.” Then they wrote my Words, and brought them unto him.

Then the *Neſtorians* were commanded to provide themſelves, and write what they would ſpeak, and the *Saracens* likewiſe, and the *Tuinians* alſo. On the next Morning he ſent the Secretaries again, ſaying, *Mangu-Khan* would know wherefore ye came to theſe Parts? To whom I ſaid, he may know by the Letters of *Baatu*: To this they anſwered, *Baatu*'s Letters are loſt, and he hath forgotten what *Baatu* hath wrote to him. Wherefore he would know of you.

At this ſomewhat emboldened, I ſaid, “The Duty or Office of our Religion is to preach the Goſpel unto all. Whereupon when I heard of the Fame of the People of *Moal*, I had a Deſire to come unto them, and while I was thus minded we heard of *Sartach* that he was a Chriſtian; then I directed my Journey unto him, and my Sovereign Lord the King of the *Franks* ſent him Letters containing good Words, and other Words beſides which teſtify of us unto him what Men we are, when he made Requeſt that he would ſuffer us to remain with the People of *Moal*; then he ſent us to *Baatu*, and *Baatu* to *Mangu-Khan*; whereupon we intreated, and yet intreat him to ſuffer us to ſtay.” They wrote all, and made Relation thereof unto him. On the Morrow he ſent to me again, ſaying, the *Khan* knows well enough that ye have no Meſſage unto him, but ye came to pray for him as many other Prieſts do; but he demandeth whether ever any of your Embaſſadors were with him, or ours with you. Then I declared all unto them concerning *David* and Friar *Andrew*, ſo they putting all in Writing, reported the ſame to him.

Then he ſent again unto me, ſaying, our Lord *Khan* ſaith ye have ſtaid long here; his Pleaſure is, that ye return unto your own Country, and he further demands, whether ye would conduct his Embaſſadors with you? To whom I made Anſwer, that I durſt not carry his Embaſſadors beyond his own Country, becauſe there is a warlike Nation between us and you, and the Sea and Mountains, and I am a poor Monk, and therefore dare not take upon me to be their Guide; ſo they having ſet down all in Writing, returned, and reported it to the *Khan*. When *Whitſun-Eve* came the *Neſtorians* wrote Chronicles from the Creation of the World to the Paſſion of Chriſt; and, paſſing over the Paſſion, they ſpake of the Reſurrection of the Dead, and of the Aſcenſion and of the Coming of Judgment, wherein many Things were to be reprehended, which I told them; and we likewiſe wrote the Symbol or Creed, *Credo unum Deum*. Then I demanded of them how they would proceed? They ſaid they would firſt diſpute with the *Saracens*; I ſhewed them this was not the proper Method, for the *Saracens* in this agree with us, that they affirm there is but one God, and therefore you may have them to help you againſt the *Tuinians*, ſo they were contented. Then I aſked them, if they knew how Idolatry had its firſt Original in the World, and they could not tell? I told them, and they ſaid you ſhall clear theſe things to them, and then let us ſpeak, for it is hard to ſpeak by an Interpreter; to whom I ſaid, try how you can behave yourſelves againſt them, I will take the *Tuinians* Part, and you the Chriſtians.

Suppoſe I am of that Sect that ſay there is no God, prove ye there is a God; for there is a Sect there which ſaith, that every Virtue, in what thing ſoever, is the God thereof, and that otherwiſe there is no God. Then the *Neſtorians* knew not how to prove any thing, but only that which their Writing declareth: I ſaid they believe not the Scriptures, if ye ſhew one, they will ſhew another. Then I directed them to let me firſt talk with them, becauſe if I ſhould be overcome, they might ſtill have Liberty of Speech; whereas if they ſhould be overcome, I ſhould have no hearing: They agreed unto it.

We therefore gathered together at our Oratory, and *Mangu-Khan* ſent three Writers to be Judges, one *Chriſtian*, one *Saracen*, and one *Tuinian*, and it was firſt proclaimed, “ This is the Commandment of *Mangu-Khan*, and none “ dare ſay that the Commandment of God is otherwiſe. “ He commandeth that none ſpeak contentious or injuri- “ ous Words to another, or make any Tumult, whereby “ this Buſineſs may be hindered, upon Pain of his Head.” Then all were ſilent, and there was a great Aſſembly there, for every Party invited the wiſeſt of their Nation, and many others came flocking thither. Then the Chriſtians ſet me in the Middle of them, willing the *Tuinians* to ſpeak with me. Then they began to murmur againſt *Mangu-Khan*, becauſe never any Khan attempted thus to ſearch into their Secrets. Then they oppoſed one to me, who came from *Cathaya*, having his Interpreter, and I had Maſter *William*'s Son. And he firſt ſaid to me, Friend, if thou be brought to a Nonplus, who muſt ſeek a wiſer than yourſelf? But I held my Peace.

Then he demanded whereof I would diſpute, either *how the World was made, or what becomes of the Souls after Death?* To whom I anſwered, “ Friend, this ſhould not “ be the beginning of our Speech. All things are of God, “ and he is the Fountain and Head of all, and therefore “ we ought to ſpeak firſt of God, of whom ye think other- “ wiſe than ye ought to do, and *Mangu* deſires to know “ who believes better?” Then the Arbitrators allowed this to be reaſonable, they would willingly have begun with the following Queſtions; becauſe they hold them for the ſtrongeſt, for they are all of the Hereſy of the *Manichees*, believing two Principles, the one bad, and the other good; and concerning Souls they all think they paſs from Body to Body, inſomuch that one of the wiſeſt of the *Neſtorian* Prieſts demanded of me concerning the Souls of brute Beaſts, whether they could fly to any Place where they ſhould not be compelled to labour after Death? For Confirmation alſo thereof, as the Goldſmith told me a certain Child was brought from *Cathaya*, who by the Size of his Body appeared to be three Years old, yet was capable of any Reaſon, who affirmed of himſelf, that he had been three times in ſeveral Bodies, and knew Letters, and how to write.

I ſaid to the aforeſaid *Tuinian, we firmly believe with the Heart, and confeſs with the Mouth, that there is a God, and there is but one God, and one in perfect Unity, what believe you?* He ſaid, Fools ſay there is but one God, but wiſe Men ſay there are many. Are not there great Lords in your Country, and here is a greater Lord, *Mangu-Khan?* ſo it is of the Gods, becauſe in divers Countries there are diverſe. To whom I ſaid, you make a bad Compariſon of Men with God; for ſo every mighty Man in his own Country may be called a God. And when I would have diſſolved the Similitude, he prevented me, enquiring what Manner of God is yours, whereof you ſpeak? that he is but one, I anſwered, “ Our God, beſide whom there is no “ other, is Omnipotent, and therefore needeth not the “ Help of another. Nay, all we have need of his Help, it “ is not ſo with Men; no Man can do all things, and “ therefore there muſt be many Lords in the Earth, becauſe “ no one can ſupport all. Again, he knows all things, “ therefore he needs not a Counſellor: Nay, all Wiſdom “ is from him; moreover he is perfectly good, and needeth “ not our Good. Nay, in him we live, move, and have “ our Being: Such is our God, and therefore you muſt “ not hold that there is any other.” It is not ſo, ſaith he. Nay, there is one higheſt in the Heavens, whoſe Generation we know not yet, and ten are under him, and under them there is one inferior, and in the Earth there are infinite. Then he would have added other Fables: So I aſked him of that higheſt God, whether he thought him Omnipotent? or of any other God? and fearing to anſwer, he demanded, if your God be ſuch as you ſay, why made he the half of things evil? It is falſe, ſaid I, whoſo maketh any Evil is no God, and all things whatſoever are good. At this Word all the *Tuinians* marvelled, and ſet it down in Writing, as falſe, or impoſſible. Then he began to aſk, Whence therefore cometh Evil? You aſk amiſs, ſaid I; for firſt you ſhould demand what Evil is before you aſk whence it is. But to return unto the firſt Queſtion, whether do you believe that any God is omnipotent? and after I will anſwer you to whatſoever you demand. Then he ſat a long time and would not anſwer, inſomuch that the Writers on the Behalf of the Khan were forced to command him to anſwer. At length he anſwered, that no God was Omnipotent. Then all the *Saracens* broke out into a great Laughter. Silence being made, I ſaid therefore none of your Gods can ſave you in all Dangers, becauſe ſuch a Chance may happen wherein he hath no Power. Again, no man can ſerve two Maſters. How then can you ſerve ſo many Lords in Heaven and in Earth? The Auditory decreed him to anſwer, but he held his Peace.

Then when I was about to alledge Reaſons to prove the Truth of Divine Eſſence, and the Trinity, in every Man's Hearing, the *Neſtorians* of the Country ſaid, that it was enough, becauſe they meant to ſpeak; ſo I gave them place; and when they would have diſputed with the *Saracens*, they anſwered, we grant that your Law is true, and whatſoever is in the Goſpel is Truth, wherefore we will not diſpute with you in any thing, and they confeſſed, that they beg at the Hands of God in their Prayers, that they may die the Death of the Chriſtians. There was there a certain old Prieſt of the Sect of *Jugures*, who confeſs One God, yet they make Idols, with whom they talked much, ſhewing all till the Coming of Chriſt to Judgment, declaring the Trinity to him, and the *Saracens* by Similitudes; all of them hearkened without any Contradiction, yet none of them ſaid, I believe, and will become a Chriſtian: The Conference ended, the *Neſtorians* and *Saracens* ſang together with a loud Voice, the *Tuinians* holding their Peace, and after that, they all drank moſt plentifully.

51. On *Whitſunday*, *Mangu-Khan* called me before him, and the *Tuinian*, with whom I diſputed; and before I went in, Maſter *William*'s Son, my Interpreter, ſaid to me, that we muſt return to our Country, and that I ſhould ſpeak nothing againſt it, becauſe he underſtood it for a thing determined. When I came before him, I kneel'd, and the *Tuinian* by me, with his Interpreter. Then he ſaid unto me, tell me the Truth, whether you ſaid, when I ſent my Writers unto you, that I was a *Tuinian?* Then I anſwered, My Lord, I ſaid not ſo; but if it pleaſe Your Highneſs, I will tell you the Words I ſpake; then I recited what I had ſpoken, and he anſwered, I thought well you ſaid not ſo, for it was a Word which you ſhould not ſpeak, but your Interpreter hath ill interpreted it. So he reached forth his Staff towards me whereon he leaned, ſaying, fear not. I ſmiling, ſaid ſoftly, if I had feared, I had not come hither; then he demanded of the Interpreter what I ſaid? So he repeated my Words unto him: Afterwards he began to confeſs his Faith unto me.

“ We, *Moalians*, ſaid he, believe that there is but “ One God, through whom we live and die, and we have “ an upright Heart towards him;” then ſaid I, God grant you this, for without his Gift it cannot be, and he demanded what I ſaid, ſo the Interpreter told him; then he added further, *that God who hath given to the Hand diverſe Fingers, ſo he hath given many Ways to Men: God hath given the Scriptures to you, and the Chriſtians keep them not: ye find it not in the Scriptures, that one of you ſhall diſpraiſe another: Do you find it, ſaid he?* No, ſaid I; but I ſignified unto you from the Beginning, that I would not contend with any; I ſpeak it not, ſaid he, touching you. In like manner ye find it not that for Money a Man ought to decline from Juſtice. No, Sir, ſaid I, and truly neither came I into theſe Parts to get Money, nay, I refuſed that which was given me; and there was a Scribe preſent there, who gave Teſtimony that I had refuſed a Jaſcot, and certain Pieces of Silk. I ſpeak it not, ſaid he, for that, God hath given you the Scriptures, and ye keep them not; but he hath given us Soothſayers, and we do that which they bid us, and we live in Peace. He drank four times, as I think, before he diſcloſed theſe things; and while I hearkened attentively, whether he would confeſs any thing elſe concerning this Faith, he began to ſpeak of my Return, ſaying, you have ſtaid a long time here, my Pleaſure is therefore that you return: You ſaid, you durſt not carry my Ambaſſadors with you, will you carry my Meſſenger, or my Letters? And from that time I could neither have Place nor Time to ſhew him the Catholick

Faith; for a Man cannot ſpeak before him, ſave what he pleaſeth, unleſs he were an Ambaſſador, but an Ambaſſador may ſpeak what he will, and they always demand, whether he have any thing elſe to ſay.

But he ſuffered me to ſpeak no more; but I muſt hear him, and anſwer as to Interrogatories. Then I anſwered, that if he would make me underſtand his Words, and that they were ſet down in Writing, I would willingly carry them to my Power. Then he aſked me, if I would have Gold or Silver, or coſtly Garments? I anſwered, we receive no ſuch things; but we have not wherewith to bear our Expences, and without your Help, we cannot get out of your Country. Then ſaid he, I will provide you all Neceſſaries throughout my Country, will you have any thing more? I anſwered, it ſufficeth me. Then he demanded how far will you be brought? I ſaid let our Paſs bring me to the *Armenian* Country; if I were there, it were enough. He anſwered, I will cauſe you to be conveyed thither, and after look to yourſelf; and he added, there are two Eyes in one Head, and though they be two, yet there is one Object to both; and whither the one directeth the Sight, the other doth: You came from *Baatu*, and therefore you muſt return by him. When he had thus ſaid, I craved Leave to ſpeak; ſpeak on, ſaid he; then ſaid I, "Sir, we are not Men of War; we deſire that they have Dominion of the World, who would moſt juſtly govern it according to the Will of God; our Office is to teach Men to live according to the Will of God; for this Purpoſe came we into theſe Parts, and would willingly have remained here, if it had pleaſed you; but ſeeing it is your Pleaſure that we return, it muſt be ſo; I will return, and carry your Letters according to my Power, as ye have commanded. I would requeſt your Magnificence, that when I have carried your Letters, it may be lawful for me to return to you, with your good Liking, chiefly becauſe you have poor Servants of yours at *Balac*, who are of our Language, and they want a Prieſt to teach them and their Children their Law, and I would willingly ſtay with them." To this he anſwered, Know you whether your Lords would ſend you back to me? I anſwered, "Sir, I know not the Purpoſe of my Lords; but I have Licence from them to go whither I will, where it is needful to preach the Word of God; and it ſeems to me, as if it were very neceſſary in thoſe Parts: Whereupon, whether they ſend Ambaſſadors or no, if it pleaſe you, I will return." Then he held his Peace, and ſat a long Space, as it were in a Muſe; and my Interpreter deſired me to ſpeak no more, and I carefully expected what he would anſwer.

At length, he ſaid, you have a long Way to go, make yourſelf ſtrong with Food, that you may come luſty into your Country, and he cauſed them to give me Drink; then I departed from his Preſence, and returned not again. If I had been endowed with Power to do Wonders, as *Moſes* did, peradventure he had humbled himſelf.

52. The Soothſayers therefore, as he confeſſed, are their Prieſts, and whatſoever they command to be done, is performed without Delay; whoſe Office I ſhall deſcribe unto you, as I could learn of Maſter *William*, and others, who reported unto me Things like to be true. They are many, and they have always one Head, or chief Prieſt, who always places his Houſe before the great Houſe of *Mangu-Khan*, within a Stone's Caſt; under his Study are the Chariots which bear their Idols, the others are behind the Court, in Places appointed for them, and they who have any Confidence in that Art, come unto them from divers Parts of the World. Some of them are ſkilful in Aſtronomy, and eſpecially the Chief of them, and they foretel to them the Eclipſes of the Sun and Moon. And when they are to come to paſs; all the People prepare them Food, ſo that they need not go out of the Door of their Houſe; and when there is an Eclipſe, they play upon their Timbrels and Organs, and make a great Noiſe, and ſet up loud Shouts. When the Eclipſe is paſt, they give themſelves to Feaſting and Drinking, and make great Chear. They foretel fortunate and unlucky Days for all Buſineſs; therefore they never levy an Army, or undertake War, without their Direction: and they had long ſince returned into *Hungary*, but that their Soothſayers will not ſuffer them: They make all things that are ſent to the Court paſs between Fires, and have a due Portion of them.

They alſo purify the houſhold Stuff of the Dead, drawing them between theſe Fires; for when any one dieth, all things whatſoever which appertain to him are ſeparated, and not mingled with other things of the Court, till all be purged by the Fire; ſo did I ſee it done to the Court of the Lady who died while we were there; whereupon there was a double Reaſon why Friar *Andrew* and his Fellows ſhould go between the Fires, both becauſe they brought Preſents, and alſo for that they belonged to him who was dead, to wit, *Khon-Khan*; no ſuch thing was required of me, becauſe I brought nothing. If any living Creature, or any thing elſe, fall to the Ground while they thus make them paſs between the Fires, that is theirs; they alſo on the ninth Day of the Month of *May*, gather together all white Mares of the Herd and conſecrate them. The Chriſtian Prieſts alſo muſt come together with their Cenſors; then they caſt new Coſmos upon the Ground, and make a great Feaſt that Day, becauſe then they think they drink Coſmos firſt, as it is the Faſhion, in ſome Places with us, as for Wine, on the Feaſt of Saint *Bartholomew*, or *Sixtus*; and for Fruits, on the Feaſt of St. *James* and *Chriſtopher*.

They alſo are invited when any Child is born, to foretel his Deſtiny. They are ſent for alſo when any is ſick, to uſe their Charms, and they tell whether it be a natural Infirmity, or by Sorcery; in regard to which, that good Woman of *Metz* I mentioned before, told me a wonderful thing. On a certain time, very coſtly Furs were preſented, which were laid down at the Court of her Lady, who was a Chriſtian, as I ſaid before, and the Soothſayers drew them through between the Fires, and took more of them than was their Due, and a certain Woman under whoſe Cuſtody the Treaſure of her Lady was, accuſed them thereof unto her Lady, whereupon the Lady herſelf reproved them. It fell out after this, that this Lady herſelf began to be ſick, and to ſuffer certain ſudden Pains in divers Parts of her Body; the Soothſayers were called, and they ſitting far off, commanded one of thoſe Maidens to put her Hand upon the Place where the Grief was, and if ſhe found any thing, ſhe ſhould ſnatch it away; then ſhe ariſing, did ſo, and ſhe found a Piece of Felt in her Hand, or of ſome other thing: Then they commanded her to put it upon the Ground, which being laid down, it began to creep, as if it had been ſome living Creature; then they put it into the Water, and it was turned as it were into a Horſe-leech; and they ſaid ſome Witch hath hurt you thus with her Sorceries, and they accuſed her that had accuſed them of the Furs, who was brought without the Tents into the Fields, and received the Baſtinado ſeven Days together there, and was afterwards tormented with other Puniſhments to make her confeſs; and in the mean-time her Lady died, which ſhe underſtanding, ſaid unto them, I know my Lady is dead, kill me, that I may go after her, for I never did her hurt; and when ſhe confeſſed nothing, *Mangu-Khan* commanded ſhe ſhould live.

Then the Sorcerers accuſed the Lady's Daughter's Nurſe, of whom I ſpake before, who was a Chriſtian, and her Huſband was the chief among all the *Neſtorian* Prieſts; ſo ſhe was brought to Puniſhment, with a Maid of hers, to make her confeſs, and the Maid confeſs'd, that her Miſtreſs ſent her to ſpeak with a certain Horſe to demand Anſwers. The Woman alſo herſelf confeſs'd ſomething ſhe did, to be beloved by her Lady, that ſhe might do her Good, but ſhe did nothing that might hurt her. She was demanded alſo whether her Huſband were privy to it; ſhe excuſed him, for that he had burnt the Characters and Letters which ſhe had made. Then ſhe was put to Death, and *Mangu-Khan* ſent the Prieſt her Huſband to the Biſhop, who was in *Cathaya*, to be judged, although he was not found culpable.

In the mean time it fell out, that the principal Wife of *Mangu-Khan* brought forth a Son, and the Soothſayers were called to foretel the Deſtiny of the Child, who all propheſied Proſperity, and ſaid, he ſhould live long, and be a great Lord. After a few Days it happened that the Child died; then the Mother enraged, called the Soothſayers, ſaying, you ſaid my Son ſhould live, and he is dead. Then they ſaid, Madam, behold, we ſee that Sorcereſs,

cereſs; the Nurſe of *Chrinia*, who the other Day was put to Death, ſhe hath killed your Son, and behold we ſee ſhe carries him away. Now there remained one Son and a Daughter of that Woman, grown to full Age, in the Tents; and the Lady ſent preſently for them in a Rage, and cauſed the young Man to be ſlain by a Man, and the Maid by a Woman, in Revenge of her Son, whom the Soothſayers affirmed to be killed by their Mother. Not long after, *Mangu-Khan* dreamed of theſe Children, and demanded in the Morning what was become of them? His Servant was afraid to tell him, and he being troubled, the more demanded where they were, becauſe they had appeared to him in a Viſion by Night: then they told him; after which he, preſently ſending for his Wife, demanded whence ſhe learned that a Woman ſhould give Sentence of Death, without the Privity of her Huſband? And he cauſed her to be ſhut up ſeven Days, commanding to give her no Meat; but the Man (who ſlew the young Man) he cauſed to be beheaded, and the Head to be hung about the Woman's Neck, who had killed the Maid, and ordered her to be cudgelled with burning Firebrands through all the Tents, and after to be put to Death: He had alſo put his Wife to Death, but for the Children he had by her; and he went out of his Court, and returned not till after one Moon.

The Sorcerers alſo trouble the Air with their Charms; and when the Cold is ſo great naturally, that they cannot apply any Remedy, then they ſearch out ſome in the Camp, whom they accuſe that the Cold comes through their Means; ſo they are put to Death without Inquiry or Delay. A little before I departed from thence, one of the Concubines was ſick, and languiſhed long, and they mumbled their Charms over a certain *German* Slave of hers, who ſlept three Days, who, when ſhe came to herſelf, they demanded what ſhe had ſeen, and ſhe had ſeen many Perſons, of all which ſhe judged they ſhould ſhortly die; and becauſe ſhe ſaw not her Miſtreſs there, they judged ſhe ſhould not die of that Sickneſs. I ſaw the Maid, while her Head was yet aching, by reaſon of that Sleep. Some of them alſo call upon Devils, and gather them together (who will have Anſwers from the Devil) in the Night, unto their Houſe; and they put boiled Fleſh in the Midſt, and that *Khan* who invoketh, beginneth to ſay his Charms, and having a Timbrel, ſmites it ſtrongly againſt the Ground; at length he begins to rave, and cauſeth himſelf to be bound; then the Devil comes in the Dark, and gives him Fleſh to eat, and makes him Anſwer. Once at ſuch a time, (as Maſter *William* told me) a certain *Hungarian* hid himſelf with them, and the Devil being upon the Houſe, cried, that he could not come in, becauſe a certain Chriſtian was with them; he hearing this, fled with Haſte, becauſe they began to ſearch for him. Theſe things, and many other they do, which are too long for me to repeat.

53. After the Feaſt of Pentecoſt, they began to prepare their Letters, which they intend to ſend unto your Majeſty; in the mean time, the *Khan* returned to *Caracarum*, and held a great Feaſt about the fifteenth of *June*, and he deſired that all the Ambaſſadors ſhould be preſent. The laſt Day he ſent for us, but I went to Church to baptize three Children of a certain poor *German*, who we found there. Maſter *William* was chief Butler at that Feaſt, becauſe he made the Tree which poured the Drink, and all the Poor and Rich ſung and danced, and clapped their Hands before the *Khan*. Then he began to make an Oration unto them, ſaying, "I have ſent my Brethren far off, " and have ſent them into Danger, into foreign Nations: " now it ſhall appear what you will do, when I ſhall ſend " you, that our Commonwealth may be enlarged." Every Day, in thoſe four Days, he changed Garments, which he gave them, all of one Colour, every Day, from the Shoes to the Ornament of the Head. At that time I ſaw the Embaſſador of the *Khans* of *Bagdad*, who cauſed himſelf to be carried upon a Horſe-litter, between two Mules, to the Court, of whom ſome ſaid that he made Peace with them, on Condition that they ſhould give him ten thouſand Horſes for his Army; others ſaid, that *Mangu* declared he would not make Peace with them, unleſs they would deſtroy all their Ammunition; and the Embaſſador anſwered, when you will pluck off your Horſe's Hoofs, we will deſtroy our Ammunition.

I ſaw alſo there the Embaſſadors of a *Soldan* of *India*, who brought with him eight Leopards, and ten Harehounds, taught to ſit upon the Horſe's Buttocks as Leopards do. When I enquired of *India*, which Way it lay from that Place, they ſhewed me towards the Weſt, and theſe Embaſſadors travelled with me almoſt three Weeks together, always Weſtward. I ſaw alſo the Embaſſador of the *Soldan* of *Turky*, who brought him rich Preſents; and he anſwered, as I heard, he needed neither Gold nor Silver, but Men, wherefore he required of him an Army. On the Feaſt of St. *John*, he held a great Feaſt, and I cauſed one hundred and five Carts, and ninety Horſes to be numbered, all laden with Cows-milk; and on the Feaſts of the Apoſtles St. *Peter* and St. *Paul*, in like manner. At length, the Letters being diſpatched which he ſent to you, they called me, and interpreted them, the Subſtance whereof I wrote, as I could underſtand them by my Interpreter, which is this: "The Commandment of " the Eternal GOD is this: There is but one Eternal " GOD in Heaven, upon Earth let there be but one " Lord, *Zengis Khan*, Son of GOD and *Mangu-Tingij*, " that is to ſay, the Sound of Iron. This is the Word " which is ſpoken to you; whatſoever *Moals* we are, whatſoever *Namans*, whatſoever *Markets*, whatſoever *Muſſulmen*, wherefoever Ears may hear, whereſoever Horſe may " go, cauſe it to be heard and underſtood; that ſuch as " have heard my Commandment, and would not believe " it, and would levy an Army againſt us, ſhall be as having Eyes and not ſeeing; and when they would hold " any thing they ſhall be without Hands; and when they " would walk they ſhall be without Feet. This is the " Commandment of the Eternal GOD, by the Virtue of " the Eternal GOD, by the great Monarch of the *Moals*, " the Commandment of *Mangu-Khan* is given to the " *French* King, King *Lodowick*, and all other Lords and " Prieſts, and to the great World of the *Franks*, that " they underſtand my Words, and the Commandment " of the Eternal GOD, made to *Zengis-Khan*; neither but from *Zengis-Khan*, ever came this Commandment unto you. A certain Man called *David* " came unto you as an Embaſſador of the *Moals*, he was " a Liar; and with him you ſent your Embaſſador to " *Khen-Khan*. After *Khen Khan* was dead, your Embaſſador came to his Court; *Charmis*, his Wife, ſent you " Cloth, called Naſſick. But to know Matters appertaining " to War and Peace, and to ſettle the great World in Quiet, " and to ſee to do good, that wicked Woman, more vile " than a Dog, how could ſhe know how to do it? Thoſe " two Monks which came from you unto *Sartach*, *Sartach* ſent them to *Baatu*; but *Baatu*, becauſe *Mangu-Khan* is the greateſt over the World of the *Moals*, ſent " them unto us. But now, that the great World, and " the Prieſts, and the Monks, might live in Peace and " enjoy their Goods, that the Commandment of GOD " might be heard among you, we would have ſent our " Embaſſadors of *Moal* with your Prieſts; but they anſwered, that betwixt us and you there was a warlike " Nation, and many bad Men and troubleſome Ways, ſo " as they were afraid they could not bring our Embaſſadors " ſafe unto you. But if we would deliver unto them our " Letters, containing our Commandments to their King " *Lodowick*, they would carry them. For this Cauſe we " ſent not our Embaſſadors with them; but we have ſent " the Commandment of the Eternal GOD by your ſaid " Prieſts. It is the Commandment of the Eternal GOD " which we have given you to underſtand; and when you " ſhall hear and believe it, if you will, obey us; ſend your " Embaſſadors unto us, ſo ſhall we be ſatisfied whether you " will have Peace with us or War. When by the Power " of the Eternal GOD, the whole World ſhall be in " Unity, Joy, and Peace, from the riſing of the Sun " unto the going down of the ſame, then ſhall it appear " what we will do. But if ye ſhall ſee and hear the Commandment of the Eternal GOD, and will not hearken to it, or believe it, ſaying, our Country is far off, " our Hills are ſtrong, our Sea is great; and in this Confidence ſhall lead an Army againſt us to know what

“ we can do; he that made that which was hard eaſy, and “ that which was far off near, the Eternal G O D himſelf “ knows that alone.” And as they called us your Embaſſadors in the Letters, I ſaid unto them, call us not Embaſſadors, for I ſaid to the *Khan* that we were not the Embaſſadors of the King *Louis*: Then they went unto him and told him; but when they returned, they ſaid unto me that he held it much for our good, and that he commanded them to write as I ſhould direct them: Then I told them they ſhould leave out the Name of Embaſſadors, and call us Monks and Prieſts. In the mean time, while thoſe Things were doing, my Companion hearing that we muſt return by the Wilderneſs to *Baatu*, and that a Man of *Moal* ſhould be our Guide, he ran, without my Knowledge, to *Bulgai*, the chief Scribe, ſignifying to him by Signs, that he ſhould die if he went that Way; and when the Day came wherein we ſhould have our Paſs, *viz.* a Fortnight after the Feaſt of *St. John*, when we were called to the Court, the Scribe ſaid unto my Companion, *Mangu*'s Pleaſure is, that your Companion return by *Baatu*; and you ſay you are ſick, and it appeareth ſo: *Mangu* therefore grants, if you will go with your Companion, go, but let it be your own Fault, becauſe, it is poſſible, you may remain with ſome *Jani* that will not provide for you, and it will be a Hinerance to your Companion; but if you will ſtay here, we will provide Neceſſaries for you, till ſome Embaſſadors come, with whom you may return more eaſily, and by a Way where there are Villages.

The Friar anſwered, G O D grant the *Khan* a proſperous Life; I will ſtay: Then I ſaid to my Companion, Brother, be adviſed what you do, I will not leave you. You leave not me, ſaid he, but I leave you, becauſe, if I go with you, I ſee the Death of my Body and Soul, becauſe I have no Patience under intolerable Labour. Then they brought us three Garments, or Coats, and ſaid unto us, ye will not receive Gold or Silver, and yet ye have ſtayed long here, and prayed for the *Khan*; he entreats you, that, at the leaſt, every one of you will receive a ſingle Garment, that ye depart not empty from him. Then we were forced to receive them for Reverence of him, for they account it a very evil Thing when their Gifts are contemned. Firſt he cauſed us to be aſked what we would have? and we always anſwered the ſame thing; ſo that the Chriſtians inſulted over the Idolaters, who ſeek nothing but Gifts; and they anſwered that we were Fools, becauſe, if he would give them his whole Court, they would willingly take it, and would do wiſely too; receiving therefore the Garments, they entreated us to make our Prayers for the *Khan*, which we did, and afterwards we went to *Caracarum*.

But it happened, while we were with the Monks, far from the Court with other Embaſſadors, that the Monk cauſed the Table to be ſtruck ſo hard, that *Mangu-Khan* heard it, and demanded what it was; then they told him. Upon which he aſked why he was removed ſo far from the Court; they told him, becauſe it was troubleſome to bring him Horſes and Oxen every Day to the Court; and ſaid further, that it were better that he ſhould ſtay at *Caracarum*. Then the *Khan* ſent unto him, ſaying, if he would go to *Caracarum*, and ſtay there near about the Church, he would give him all Things neceſſary: But the Monk anſwered, I came from the Holy Land of *Jeruſalem* hither by the Command of G O D, and left that City, wherein are a thouſand better Churches than that of *Caracarum*; if he pleaſe that I ſtay here, and pray for him as G O D commanded me, I will ſtay; if not I will return to the Place from whence I came. So that every Evening Oxen were brought him yoked to the Carts, and in the Morning he was brought to the Place where he uſed to be before the Court; and a little before we departed thence, a certain *Neſtorian* came, who ſeemed to be a wiſe Man; *Bulgai*, the chief Secretary, placed him before the Court, to whom the *Khan* ſet his Children that he ſhould bleſs them.

54. We came therefore to *Caracarum*, and while we were in Maſter *William* the Goldſmith's Houſe, my Guide came to me and brought me ten Jaſcots, five of which he left in Maſter *William*'s Hands, commanding him to ſpend them on the Behalf of the Khan, for the Friar's Uſe while he remained there; he alſo left the other five in the Hands of my Interpreter, commanding him to ſpend them in the Way, for my Subſiſtence; for Maſter *William* had given them ſuch Inſtructions without our Knowledge. I preſently changed one into ſmall Money, and diſtributed it to the poor Chriſtians which were there, for all their Eyes were fixed upon us. We ſpent another in buying things neceſſary for us, as Garments and other things, which we wanted. With the third my Interpreter himſelf bought ſome things, by which he gained ſomewhat. We ſpent the reſt, becauſe after we came into *Perſia* ſufficient Neceſſaries were no where given us, nor yet among the *Tartars*, amongſt whom we ſeldom found any thing to be ſold.

Maſter *William*, your Majeſty's Citizen and Subject, ſends you a certain Girdle ſet with a precious Stone, which they uſed to wear againſt Thunder and Lightening, and moſt humby ſalutes you, always commending you to God in his Prayers. We baptized there in all ſix Souls. When we departed from each other, it was with Tears, my Companion remaining with Maſter *William*, and I returning with my Interpreter, my Guide, and one Servant, who had Directions to take one Mutton in four Days for us four. We came therefore in two Months and ten Days from *Caracarum* to *Baatu*, and never ſaw a Town, nor ſo much as the Appearance of any Houſe, but Graves, except one Village, wherein we did not ſo much as eat Bread, nor did we ever reſt in theſe two Months and ten Days, ſave one Day, becauſe we could not get Horſes. We returned for the moſt part by the ſame kind of People, and yet through other Countries, for we went in the Winter, and returned in the Summer, and by the higher Parts of the North, except that fifteen Days Journey we were obliged to go and return by a certain River between the Mountains, where there is no Lodging but by the River Side. We went two Days, and ſometimes three, without taking any other Food but Coſmos. Once we were in great Danger, not being able to find any People, our Proviſion failing us, and our Horſes tired.

When I had travelled twenty Days, I heard that the King of *Armenia* had paſſed by. In the End of *Auguſt* I met with *Sartach*, who went to *Mangu-Khan* with Flocks and Herds, and with his Wives and Children, yet the Bulk of his Families remained between *Tanais* and *Etilia*. I ſent my Duty to him, ſaying, I would willingly ſtay in his Country, but *Mangu-Khan* would have me return and carry his Letters. He anſwered, that I muſt perform the Will of *Mangu-Khan*. Then I aſked *Coiac* for the Children? He anſwered, they were in the Court of *Baatu*, carefully provided for. I alſo aſked him for our Cloaths and Books again? He anſwered, did ye not bring them to *Sartach*? I ſaid I brought them unto *Sartach*, but I did not give them to him, as you know; and I put him in mind what Anſwer I made when he demanded whether I would give them to *Sartach*? Then he anſwered, you ſay Truth, and none can reſiſt Truth. I left your Goods with my Father, who remaineth near *Sarai*, which is a new Town *Baatu* hath made upon *Etilia* on the Eaſt Shore; but our Prieſts have ſome of the Veſtments. If any thing pleaſe you, ſaid I, keep it, ſo my Books be reſtored.

Then he told me he would report my Words to *Sartach*. I muſt have Letters, ſaid I, to your Father, to reſtore me all. But he was ready to be gone, and ſaid unto me, the Train of the Ladies followeth us near at Hand, ye ſhall alight there, and I will ſend you *Sartach's* Anſwer by this Man. I was very careful he ſhould not deceive me, yet I dare not contend with him: Late in the Evening the Man came unto me, and brought two Coats with him, which I thought had been all of Silk, and he ſaith unto me, behold two Garments, the one *Sartach* hath ſent unto you, and the other, if ſo it pleaſe you, you ſhall preſent to the King on his Behalf; to whom I anſwered, I wear no ſuch Garments; I will preſent them both to my King, in honour of your Lord. Then ſaid he, do with them what you pleaſe; now it pleaſed me to ſend them both unto you, and I ſend them to you by the Bearer of theſe Preſents. He delivered me Letters alſo to the Father of *Coiac* to reſtore me all which appertained unto me, becauſe he had no need of any thing which was mine, ſo we came to the Court of *Baatu*, the ſame Day I departed thence a Year before, *viz.* the ſecond Day after the Exaltation of the bleſſed Croſs, and I found our young Men in Health, yet much afflicted with Poverty, as *Goſſet* told me; and if the King of *Armenia* had not comforted them, and recommended them to *Sartach*, they had periſhed, for they thought I had been dead. The *Tartars* alſo demanded of them, if they could keep Oxen, or milk Mares; for if I had not returned, they had been brought into Servitude by thoſe People.

After this *Baatu* ordered me to come to him, and made the Letters which *Mangu Khan* ſends unto you to be interpreted unto me; for ſo *Mangu* wrote unto him, that if it pleaſed him to add any thing, or leave out, or change, he ſhould do it. Then ſaid he, ye ſhall carry theſe Letters, and cauſe them to be underſtood. He demanded alſo what Way I would go, whether by Sea or Land? I ſaid, the Sea was froze, becauſe it was Winter, and I muſt go by Land, for I thought you had been ſtill in *Syria*, ſo I directed my Journey towards *Perſia*, for if I had thought you had paſſed into *France*, I would have gone into *Hungary*; for I ſhould ſooner have come into *France*, and by a more eaſy Way than through *Syria*; then we travelled a Month with him before we could obtain a Guide; at length they appointed me a certain *Jugure*, who underſtanding I would give him nothing, and that I would go forthwith into *Armenia*, cauſed Letters to be made to conduct me to the Soldan of *Turky*, hoping he ſhould receive Gifts of the Soldan, and that he ſhould gain more that Way; then we took our Journey ſpeedily fifteen Days before the Feaſt of *All Saints* towards *Sarai*, going directly Southward, deſcending near to *Etilia*, which is there divided into Three Arms, every one whereof is almoſt twice as big as the Branch of the River of *Nile* at *Damieta*.

It divides afterwards into four leſſer Arms, ſo that we paſſed the River in ſeven Places by Boats. Upon the middle Branch is the Village called *Sumerkant*, without a Wall; but when the River overflows, it is compaſſed with Water. The *Tartars* were eight Years about it before they could take it, and the *Alani* and the *Saracens* were nine. There we found one *German* with his Wife, a very good Man, with whom *Goſſet* ſtayed in the Winter; for *Sartach* ſent him thither to eaſe his Court. About theſe Parts was *Baatu* on the one Side of the River, and *Sartach* on the other about *Chriſtmas*, and they go no farther down; and when it happens that all the River is frozen, they paſs over. Here is great Store of Graſs; and there among the Caves, Thieves hide themſelves till the Ice melt. *Cotac*'s Father receiving *Sartach*'s Letters, reſtored my Veſtments unto me, except my Albs, and an Almic trimmed with fine Silk, a Stole, a Girdle, and a Tualia, adorned with Golden Embroidery, and a Surplice. He reſtored alſo to me all the Silver Plate, except the Cenſer, and the little Box where the Chriſm was, all which the Prieſt which was with *Sartach* had. He returned my Books, except our Lady's Pſalter, which he kept with my Leave, becauſe I could not deny it him; for he ſaid *Sartach* took much Delight in it. He alſo requeſted me, that if it happen that I return unto thoſe Parts again, I would bring them a Man that knew how to make Parchment, for he had built a great Church by the Command of *Sartach* upon the Weſt Side of the River, as he ſaid, and a new Town; yet I knew that *Sartach* meant no ſuch Matter. *Sarai* and the Palace of *Baatu* are upon the Eaſt Side of the River, and the Valley through which the Arms of the River are ſpread abroad containeth more than ſeven Leagues in Breadth. There is great Store of Fiſh there, a Bible alſo in Verſe, and a certain Book in the *Arabian* Language worth thirty Sultalnes, and many other Things I never recovered.

65. After our Departure from him on the Feaſt of *All Saints*, going towards the South until the Feaſt of Saint *Martin*, we came to the Mountains of the *Alani*, between *Baatu* and *Sarai*. In fifteen Days, we found no People but one of his Sons, who went before him with Falcons and his Falconers, who were many, at one little Village; from the Feaſt of *All Saints* for five Days we met not with ſo much as a Man, and we were in great Danger by reaſon of Thirſt, one whole Day and a Night, finding no Water, till about Three of the Clock the next Day. The *Alani* in ſome Mountains yet hold out, ſo that of ten of the Subjects of *Sartach* two muſt come and guard the narrow Paſſages of the Hills, leſt they come forth of the Mountains, and carry away the Cattle in the Plain. Between the *Alani* and *Porta Ferrea*, which is two Days Journey from thence, where the Plain of the *Alani* beginneth, between the *Caſpian* Sea and the Mountains, there are certain *Saracens*, called *Leſgi*, inhabiting the Mountains, who likewiſe are free; ſo that thoſe *Tartars* who dwell at the Foot of the Mountains of the *Alani* were obliged to give us twenty Men to bring us beyond the Iron Gate, or *Porta Ferrea*; and I was glad, becauſe I hoped to ſee them armed, for I could never ſee their Armour, though I had been very deſirous of ſeeing it; and when we came to this dangerous Paſſage of the whole twenty, there were but two who had Harbergions, and I demanded of whom they had them? They ſaid, they had them of the *Alani*, who are able Workmen in ſuch Things, and excellent Smiths. I think they have ſmall Store of Armour, but Quivers and Bows, and Leather Jackets; I ſaw them preſented with Iron Plates, and Iron Skull caps out of *Perſia*, and ſaw two alſo who preſented themſelves to *Mangu*, armed with Coats made of Hogs ſkins, bent inward, of rough Leather, which were very clumſy and unweildy.

Before we came to *Porta Ferrea*, we found one Caſtle of the *Alans*, which was *Mangu Khan*'s, for he had ſubdued that Country. There we firſt found Vineyards and drunk Wine; the Day following we came to *Porta Ferrea*, or the Iron-Gate, which *Alexander* the *Macedonian* King made, and it is a City whoſe Eaſt End is upon the Sea Shore: And there is a little Plain between the Sea and the Mountains, through which the City extends in Length to the Top of the Mountain, which bordereth upon it on the Weſt, ſo that there is no Way above for the Ruggedneſs of the Mountains, nor below for the Sea, but immediately through the Midſt of the City, where there is an Iron-Gate, from whence the City hath its Name. This City is more than a Mile long, and on the Top of a Hill is a ſtrong Caſtle; and it is as much in Breadth as a Stone's Caſt. It hath very ſtrong Walls, without Trenches and Turrets, of large poliſhed Stones. But the *Tartars* have deſtroyed the Tops of the Turrets and the Bulwarks of the Walls, laying the Turrets even with the Wall. Below that City, the Country was formerly like a Paradiſe. Two Days Journey from hence we found another City called *Samaron*, wherein there were many *Jews*, and when we paſſed it we ſaw Walls deſcending from the Mountains to the Sea; and leaving the Way by the Sea by thoſe Walls, becauſe it turns towards the Eaſt, we went up into the high Countries towards the South.

The next Day we paſſed through a certain Valley, wherein the Foundations of Walls appeared from one Mountain to another, and there was no Way through the Tops of the Mountains. Theſe were in times paſt the Incloſures, or Walls erected by *Alexander* for reſtraining the fierce Nations, the Shepherds of the Wilderneſs, that they could not invade the inhabited Countries and Cities. There are alſo other Walls and Incloſures where *Jews* are. The next Day we came to a certain great City called *Samacb*, and after this we entered into a great Plain called *Moan*, through which the River *Cur* or *Cyrus* runs, from which the *Curgi* or *Curdi* have their Names, whom we call *Georgians*; and it runneth through the Middle of *Teffis*, which is the Metropolis of the *Curgines*, and comes directly from the Weſt, running to the Eaſt into the *Caſpian* Sea, and in it are excellent Salmon. In that Plain we found *Tartars* again. Alſo by that Plain runs the River *Araxes*, which cometh from the *Greater Armenia*, from betwixt the South and Weſt, from which it is called the Land of *Ararat*. Whereupon in the Book of the *Kings* it is ſaid of the Sons of *Senacherib*, that having ſlain their Father, they fled into the Land of the *Armenians*. And in *Iſaiah* it is ſaid, that they fled into the Land of *Ararat*. To the Weſt then of that moſt beautiful Plain is *Curgia*. In that Plain the *Croſmini* were ſettled formerly. And there is a great City in the Entrance of the Mountains called *Ganges*, which was their Metropolis, ſtopping the *Georgians*, that they could not come down into the Plain. Then we came to the Bridge of Boats, which was faſtened together with a great Iron Chain, ſtretched forth croſs the River, wherein *Cur* and the *Araxes* met together, but the *Cur* loſeth its Name there.

66.

56. We proceeded thence, till travelling up the *Araxes*, of which it is ſaid, *Pontem indignatus Araxis*, *Araxes* diſdains a Bridge, leaving *Perſia* and the *Caſpian* Mountains on the left Hand towards the South, having on the right Hand *Curgia* and the Great Sea towards the Weſt; going all the Way Southward, we paſſed through the Meadows of *Bacchu*, who is General of that Army which is there within the River *Araxes*; he has likewiſe made the *Curgi*, and *Turks*, and *Perſians*, ſubject to him. There is likewiſe another Governor in *Perſia*, at *Tauris*, over the Tribute called *Argon*, both which *Mangu-Khan* hath called home to give Place to his Brother, who is going into thoſe Countries. The Country which I have deſcribed to you is not properly *Perſia*, but was ſometimes called *Hyrcania*. I was in *Bacchu*'s Houſe, and he gave us Wine to drink, and he himſelf drank Coſmos, which I would willingly have drank if he had given it me; yet it was the beſt new Wine, but Coſmos is more wholſome for a half-ſtarved Man as I was. We went up therefore by the River *Araxes* from the Eve of *St. Clement* until the ſecond *Sunday* in *Lent*, till we came to the Head of the River, and beyond the Mountains where it riſeth there is a good City called *Arſorum*, which belongs to the *Soldan* of *Turky*, and near thereabouts *Euphrates* riſes towards the North, at the Foot of the Mountains of *Curgia*, to whoſe Spring I had gone, but the Snow was ſo great that no Man could go out of the common Path, and on the other Side of the Mountains of *Caucaſus* towards the South riſeth the *Tigris*.

When we departed from *Bacchu* my Guide went to *Tauris* to ſpeak with *Argon*, carrying my Interpreter with him; but *Bacchu* cauſed me to be brought to a certain City called *Naxuam*, which heretofore was the Head or Capital of a great Kingdom, and the greateſt and faireſt City in thoſe Parts, but the *Tartars* have made it a Wilderneſs; and there were anciently eight hundred Churches of the *Armenians* there; now there are but two little ones, for the *Saracens* have deſtroyed them; in one of which I held the Feaſt of *Chriſtmas* as I could with our Clerk, and the next Day following the Prieſt of the Church died, to whoſe Burial came a certain Biſhop with twelve Monks from the high Countries; for all the Biſhops of the *Armenians* are Monks, and of the *Greeks* likewiſe for the moſt part. The Biſhop told me that there was a Church near this Place where St. *Bartholomew*, and likewiſe St. *Judas Thaddæus* were martyred, but there was no Way open for Snow. He told me alſo that they had two Prophets, the firſt or chief *Methodius* the Martyr, who was of their Country, and plainly propheſied of the *Iſmaelites*, which Prophecy is fulfilled in the *Saracens*. The other Prophet is called *Acacron*, who, when he died, propheſied of a Nation of Archers that ſhould come from the North, saying, "That they ſhould conquer all the Countries of the Eaſt, "and ſhould ſpare the Kingdoms of the Eaſt, to aſſiſt "them in obtaining the Kingdoms of the Weſt; and "they ſhall poſſeſs the Countries from North to South, "and ſhall come to *Conſtantinople*, and ſhall take the Gate "of *Conſtantinople*, and one of them who ſhall be called a "wiſe Man, ſhall enter the City, and ſeeing the Churches "and Rites of the *Franks*, ſhall cauſe himſelf to be "baptized, and ſhall counſel the *Franks* how they may "kill the Emperor of the *Tartars*, and there they ſhall "be confounded. Hearing this, the *Franks* which ſhall "be in the Middle of the Land, *viz.* at *Jeruſalem*, ſhall "ſet upon the *Tartars* who ſhall border upon them, and "with the Help of our Nation, that is, the *Armenians*, "ſhall purſue them; ſo that the *French* King ſhall place "his royal Throne at *Taurinum* in *Perſia*, and then all the "Eaſt Countries and all the unbelieving Nations ſhall be "converted to the Faith of Chriſt; and there ſhall be ſo "great Peace in the World, that the Living ſhall ſay to "the Dead, Wo be unto you Wretches! that lived not "until theſe Times." And I read this Prophecy brought to *Conſtantinople* by the *Armenians* which remain there, but I made light of it. Yet when I ſpake with the Biſhop, calling it to Mind, I regarded it ſomewhat the more. But throughout all *Armenia* they as firmly believe this Prophecy as they do the Goſpel.

He ſaid to us alſo, even as the Souls in *Limbo* expect the Coming of Chriſt for their Delivery, ſo do we look for your Coming, that we may be freed from this Slavery wherein we have ſo long lived. Near the City *Naxuam* there are Mountains on which they ſay the Ark of *Noah* reſted; and there are two, one greater than the other, and *Araxes* running at the Foot of them; and there is a little Town there called *Comanium*, which is in their Language Eight; for they ſay it was ſo called of the eight Perſons which came forth of the Ark and built it. Many have attempted to climb the great Hills, and could not; and the Biſhop told me that a certain Monk being very much troubled thereat, an Angel appeared to him and brought him a Piece of the Wood of the Ark, bidding him to trouble himſelf no more. That Piece of Wood they had in their Church as he told me, neither is the Hill ſo high in Appearance but the Men might well get up it: A certain old Man gave me however this worthy Reaſon why no one ſhould climb it. They call that Mountain *Maſſis*; and as this Word is of the *Feminine* Gender in their Tongue, no Man, ſaid he, muſt climb up *Maſſis*, becauſe it is the Mother of the World.

In the City of *Naxuam*, Friar *Barnard*, a *Catalan*, of the Order of the Preaching Friars, found me, who lives in *Georgia*, with a certain Friar of the Sepulchre, who poſſeſſeth great Lands there, and he had learned ſomewhat of the *Tartar* Language; he formerly went with a certain *Hungarian* Friar, who returned with me to *Teffis*, with one Servant; but Friar *Barnard* remained at *Tauris*, with a certain Lay Friar, whoſe Language he underſtood not. We went out of the City of *Naxuam*, about the *Epiphany*, for we had ſtayed long there, by reaſon of the Snow; we came therefore in four Days to the Country of *Sabenſa*, a *Curdiſh* Prince, heretofore mighty, but now tributary to the *Tartars*, who deſtroyed all his Ammunition, whoſe Father *Zacharias* poſſeſſed himſelf of the Country of the *Armenians*, having delivered them from the Hands of the *Saracens*; and there are many fair Villages of true Chriſtians, having Churches like the *Franks*; and every *Armenian* hath in his Houſe, in an honourable Place, a wooden Hand, holding a Croſs, and ſets a burning Lamp before it; and that which we do with holy Water, ſprinkling it to drive away wicked Spirits, they do with Frankincenſe; for every Evening they burn Frankincenſe, carrying it through all the Corners of the Houſe, to rid them of all kind of Enemies. I eat with *Sabenſa*, and he did me great Reverence, both he and his Wife, and his Son *Zachary*, a very comely and wiſe young Man, who demanded of me, whether if he ſhould come to you, you would entertain him; for he is ſo uneaſy under the Dominion of the *Tartars*, that though he hath a Plenty of all Things, he had rather travel into a ſtrange Country, than endure their violent Exactions. They ſaid further, that they were true Sons of the Church of *Rome*, and if the Pope would ſend them any Aid, they would bring all the bordering Nations unto the Subjection of the Church of *Rome*.

From that Town of his, in fifteen Days, we entered the Country of the *Soldan* of *Turky*, on the firſt *Sunday* in *Lent*; and the firſt Caſtle we found is called *Marſeugen*; all in the Caſtle were Chriſtians, *Armenians*, *Curgines*, and *Greeks*: The *Saracens* only have the Dominion. There the Captain of the Caſtle ſaid, he had received Commandment, that no Victuals ſhould be given to any *Franks*, or to the Ambaſſador of the King of *Armenia*, or of *Viſtacius*; ſo that from the Place where we were the firſt *Sunday* in *Lent*, quite to *Cyprus*, whither I came, eight Days before the Feaſt of Saint *John* the Baptiſt, we were forced to buy our own Proviſion. He who was my Guide procured me Horſes, and took Money for the Victuals, and put it in his Purſe. When he came into the Fields, ſeeing a Flock, away he went, and without more to do, took one Sheep, and gave it to his Family to eat, and wondered I would not take Part of his Robbery. In the Purification, I was in a certain City called *Aym*, which was *Sabenſa*'s, whoſe Situation is ſtrong; and there are an hundred *Armenian* Churches, and two Moſques of the *Saracens*: The *Tartars* place an Officer there.

At this Place five Preaching Friars met me, whereof four came from *Provence* in *France*, and the fifth joined himſelf to them in *Syria*. They had but one ſick Boy, who could ſpeak the *Turkiſh* Language, and a little *French*; and they had the Pope's Letters to *Sartach*, and to *Mangu-Khan*, and to *Buri*, ſuch as your Highneſs gave me Letters of Requeſt, that they would ſuffer them to continue in their Country, and preach the Word of God, *&c.* But when I told them what I had ſeen, and how they ſent me back again, they directed their Journey to *Teſſis*, where there are Friars of their Order, to conſult what they ſhould do; I anſwered them, they might well paſs by thoſe Letters if they would; but they ſhould be well aſſured, to endure much Labour, and render an Account of their Coming; for ſeeing they had no other Meſſage but the Office of Preaching, they would care but little for them, and chiefly becauſe they had no Interpreter: What they did after, I know not, and cannot therefore report.

58. On the ſecond *Sunday* in *Lent* we came to the Head of *Araxes*, and paſſing beyond the Top of the Mountain, we came to *Euphrates*, by which we deſcended eight Days going to the Weſt a certain Caſtle called *Camath*; where *Euphrates* bends to the South towards *Halapia.* But we paſſing the River went through very high mountainous Countries, and through the deepeſt Snow to the Weſt. There was ſo great an Earthquake there that Year, that in one City called *Arſengan*, ten thouſand Perſons, according to their Regiſter, periſhed, beſide poor Men, of whom there was no Notice taken. Riding three Days together, we ſaw the gaping of the Earth, as it was cleft by the Earthquake, and the Heaps of Earth that came from the Mountains, and filled the Vallies, ſo that if but a little more of the Earth had been moved, that which *Iſaiah* ſpeaketh had been literally fulfilled, *Every Valley ſhall be filled, and every Mountain and little Hill ſhall be humbled.* We paſſed through the Valley where the *Soldan* of *Turky* was vanquiſhed by the *Tartars.* It were too long to write how he was overcome; but a certain Servant of my Guide's who was with the *Tartars* ſaid, that the *Tartars* were not above ten thouſand in the whole; and a certain *Curd* of the *Soldan's*, ſaid that there were two hundred thouſand with the *Soldan's* all Horſe-men. In that Plain where the Battle was, there broke out a great Lake at the Time of the Earthquake; and it came into my Mind, that all the Earth opened her Mouth to receive yet more Blood of the *Saracens.* We were in *Sebaſta* a Town of the *Leſſer Armenia* in *Eaſter* Week; here we viſited the Tombs of forty Martyrs; there the Church of *St. Blaſe* ſtandeth, but I could not go thither, becauſe it was above in the Caſtle.

On the ſucceeding *Sunday* we came to *Cæſaria* of *Cappadocia*, where there is a Church of *St. Baſil the Great.* About fifteen Days after, we came to *Iconium*, making ſmall Journies, and reſting in many Places, becauſe we could not readily procure Horſes, and my Guide did this on purpoſe, taking upon him to ſolicit his own Buſineſs three Days in every Town, at which I was much diſſatisfied, but durſt not ſpeak, becauſe he might have ſold or ſlain me and our Servants, and there was none to hinder it. I found many *Franks* at *Inconium*, and a certain Merchant called *Nicholas de Sancto Syrio*, who with a Companion of his, a *Venetian*, called *Boniface de Molandino*, carried all the Allum out of *Turky*, ſo that the *Soldan* could not ſell any but to thoſe two; and they made it ſo dear, that what was worth but fifteen Bizantines, is now ſold for forty. My Guide preſented me to *Soldan*; the *Soldan* ſaid he would willingly cauſe me to be conveyed to the Sea of *Armenia*, or *Cilicia*, though the above-mentioned Merchant, knowing that the *Saracens* made little account of me, and that I was much burthened with the Company of my Guide, cauſed me to be conveyed to *Curruma*, a Port belonging to the King of *Armenia.* I came thither before the *Aſcenſion*, and ſtayed till the Day after *Pentecoſt*; then I heard that Embaſſadors came from the King to his Father; then I went ſpeedily to the King's Father to demand whether he had heard any News from his Son, and I found him ſet with all his Sons, one excepted, called *Barum Uſin*, who reſided in a certain Caſtle, and he received News from his Son that he was returned, and that *Mangu-Khan* had much eaſed his Tribute, and had given him a Privilege that no Embaſſador ſhould come into his County; whereupon the old Man himſelf, with all his Sons, made a Banquet, and he cauſed me to be conveyed to the Sea, to the Heaven called *Aijax*; and thence I paſſed over into *Cyprus*; and at *Nicoſia* I found our Provincial, who the ſame Day carried me with him to *Antiochia*, which is in a very weak State. We were there on the Feaſt of *St. Peter* and *Paul*, and from thence we came to *Tripolis*, where our Chapter was held on the Aſſumption of the Bleſſed Virgin.

59. Our Provincial being determined that I ſhould have my Reſidence in our Covnent at *Acon*, would not ſuffer me to come to you; but commanding me to write unto you what I would by the Bearer of theſe Preſents; and not daring to reſiſt contrary to my Obedience, I did, according to my Power and Underſtanding, craving Pardon of your Clemency for my Superfluities or Wants, or for any thing that ſhall be indiſcreetly or fooliſhly ſpoken, as for a Man of little Uunderſtanding, not accuſtomed to write long Hiſtories. The Peace of God which paſſeth all Underſtanding preſerve your Heart and fortify your Mind. I would willingly ſee your Highneſs, and certain ſpiritual Friends, which I have in your Kingdom. Wherefore if it ſhould not be contrary to your Majeſty's liking, I would beſeech you to write to our Provincial, that he would let me come unto you and return ſhortly again into the Holy Land. Concerning *Turky*, your Majeſty ſhall underſtand, that the tenth Man there is not a *Mohammedan*, nay, they are all *Armenians* and *Greeks*, and Children rule over them; for the *Soldan*, who was conquered by the *Tartars*, had a lawful Wife of *Iberia*, by whom he had one feeble Son, concerning whom he charged that he ſhould be the *Soldan.* He had another of a *Greek* Concubine, whom he committed to a certain great Admiral. The third he had by a *Turk*, to whom many *Turks* and *Turcomans* being gathered together, they purpoſed to have ſlain all the Sons of the Chriſtians. They had determined alſo, as I underſtood, that after they had got the Victory, they would deſtroy all the Churches, and kill as many as would not become *Mohammedans*; but he was overcome in Battle, and many of his Men ſlain. He recruited his Army however, a ſecond Time, and then was taken, and is ſtill in Priſon. *Paceſter* the Son of the *Greek* Concubine, procured ſoon after that he might be *Soldan*, becauſe the other was weak whom they ſent to the *Tartars*; whereupon his Kindred on the Mother's Side, ſuch as the *Iberians* and the *Curds*, were angry; ſo that, at preſent, a Child ruleth in *Turky*, having no Treaſure, few Soldiers, and many Enemies. The Son of *Veſtacius* is weak, and at War with the Son of *Aſſau*, who likewiſe was a Child, and worn out with the Servitude of the *Tartars.* If therefore an Army of the Church ſhould come to the Holy Land, it were a very eaſy Thing to ſubdue all theſe Countries, or to paſs through them.

The King of *Hungary* hath not above thirty thouſand Soldiers. From *Cologne* to *Conſtantinople*, are not above threeſcore Days Journey by Waggons; from *Conſtantinople* are not ſo many Days Journey to the Country of the King of *Armenia.* In old Time, valiant Men paſſed through thoſe Countries and proſpered; yet they had moſt valiant Opponents, whom God hath now deſtroyed out of the Earth, and we need not be in Danger of the Sea, or the Mercy of Sailors; and the Price which we ſhould give for Freight were ſufficient for Expences by Land. I ſpeak it confidently, if our Countrymen would go as the King of the *Tartars* go, and be contented with ſuch Victuals, they might win the whole World. It ſeemeth not expedient, as I think, that any Friar ſhould go to the *Tartars* any more, as I did, or as the Preaching Friars do; but if our Lord the Pope would ſend a Biſhop in an honourable Manner and anſwer their Follies, about which they have thrice writ to the *Franks*, once to Pope *Innocent* the Fourth, of ſacred Memory, and twice to your Majeſty, once by *David*, who deceived you, and now by me, he might ſpeak unto them what he would, and alſo cauſe them to put theſe Things in Writing, for they hear whatſoever an Embaſſador will ſpeak, and always demand if he will ſay any more; but he muſt have a good Interpreter; nay, many Interpreters, and be at large Expences.

60. Such is the Relation of the Monk *Rubruquis*, who had the beſt Opportunity that any Man had to that Time, of looking into the Affairs of the *Tartars*, of examining their Force, of enquiring into the Form of their Government, and making himſelf perfectly acquainted with their Manners and Cuſtoms, of which he has given ſo large, ſo curious, and ſo accurate an Account. Before we proceed to our Remarks thereon, it may not be amiſs to clear up a few Difficulties that occur in this Relation, and which, for want of being clearly reſolved, may occaſion ſome Doubts in the Mind of our inquiſitive Reader; and this is the more neceſſary, becauſe hitherto nothing of this kind has been done, at leaſt in our Language; but the Relation has been left naked and unſupported to the Cenſure of the Peruſer, without the leaſt Notice taken of thoſe Facts that muſt neceſſarily embarraſs him, and in a great Meaſure affect the Credit of the Author. I am very ſenſible, that many of my Readers may be of Opinion, that I might ſpare myſelf ſome part of the Trouble I take in illuſtrating thoſe old Writers; but I beg leave to obſerve once for all, that it is not either for their Intereſt or mine, that I ſhould do ſo. If I had not been thoroughly ſatisfied that theſe Travels were the beſt in their kind, I ſhould not have inſerted them; but with reſpect to the World, this is not enough; for though I have it in my Power to give them what ſeems to be moſt proper for ſuch a Collection, yet I owe it to them, and to myſelf, to make it as evident as it is poſſible, that I diſcharge this Truſt as I ought, and that I give them nothing which is not truly worthy of their Peruſal; and this can no otherwiſe be done, than by obviating every Difficulty that may poſſibly incline them to differ from me in Sentiment, and therefore I hope this will juſtify me in the Pains I am ſtill to take with regard to this Author, who, as he was a Writer of great Candour and Sincerity, ſo he has mentioned many Particulars, which, tho' they were well known in his Time, and more eſpecially to the Prince, to whom this Work was addreſſed, yet are ſo imperfectly known to us, that without a ſtrict Search into the Hiſtories of thoſe Times, it is not eaſy to conceive, how they can be reconciled to the reſt of his Narration.

We will ſtate theſe plainly, and then the Truth of my Obſervation will be manifeſt. In the firſt Place, it ſeems extraordinary that the King of *France* ſhould be ſo much deceived with reſpect to the Embaſſy that was ſent him from the *Tartars*, which occaſioned the whole of this Tranſaction; but with reſpect to this, it appears clearly from the Hiſtorians that have written the Reign of Saint *Louis*, that theſe Embaſſadors came from a *Tartar* Prince called *Ercalthay*, and brought with them Letters which are ſtill extant, and which poſitively aſſert, that it was the Deſign of the *Khan* to co-operate with the Chriſtians, in order to reduce the Power of the *Mohammedans*. At the Head of this Embaſſy was one *David*, who is named in the Letters as one to whom the King of *France* might give entire Credit, to which his Majeſty might be more inclined, becauſe he had in his Company Friar *Andrew de Lontumal*, whom the Pope had formerly ſent into *Tartary*, and who aſſured the King, that he had known *David* there in a Poſt of Diſtinction. This Embaſſador it was, that poſitively aſſerted, that the *Khan* was become a Chriſtian, and that there was no Difficulty in procuring a cloſe Alliance between him and the Chriſtians. Upon this, the King firſt ſent Friar *Andrew* with a conſiderable Number of Perſons in his Train, back with the *Tartar* Ambaſſadors, in the beginning of the Year 1250; but as to the Succeſs of this Negociation, we have no Account. There is another thing a little dark in our Author's Account, and that is with reſpect to his Character; for tho' it appears plainly, that he was ſent by the King his Maſter with Letters to *Sartach*, yet he frequently tells us, that he did not affect to be thought an Embaſſador, but deſired rather to be conſidered as a Monk, who viſited *Tartary* from his Zeal for the Chriſtian Religion.

His Reaſon for acting thus, was to preſerve the Honour of the King, from ſuffering thro' any ill Treatment that he might meet with, to which he was induced by many Reaſons, but particularly by theſe two. In the firſt place, he was perfectly ſatisfied, that what had been reported as to the Converſion of *Sartach* was falſe; and next, becauſe he was aware the *Tartars* were informed, that the King his Maſter had been beat in *Egypt*, and taken Priſoner there by the Infidels; whence he concluded, that he ſhould not meet with a very good Reception. He therefore takes great Care to inform the King, that whatever Uſage he received, could reflect no Diſhonour upon his Majeſty, becauſe of the Precaution he had taken to aſſume no higher Character than that of a Monk, who came to preach the Chriſtian Religion to the *Tartars*. But the Readers may very probably wonder why the *Tartar* Prince *Ercalthay*, ſhould take ſuch a Step as this, in order to miſlead ſo great a Monarch, and yet, if he adverts to the Account our Author has given of the Genius and Diſpoſitions of the *Tartars*, he will eaſily perceive, that this was a Stroke of their Policy, and no very bad one. They had a Mind to be perfectly acquainted with the Deſign of the *Franks*, their Forces, and the Manner in which they intended to carry on the War againſt the *Saracens*; nor could they fall upon a Way more proper than this for accompliſhing their Ends. The Character afforded, by our Author to the *Tartars*, is juſtified by all Writers, both antient and modern; for their Policy with reſpect to foreign Countries conſiſts entirely in Cunning and Subtilty; for not having the Advantages that other Nations have of free Commerce and conſtant Intercourſe with the Inhabitants of diſtant Countries, they ſupply themſelves with Intelligence by ſuch Artifices as theſe. Some petty *Tartar* Prince takes upon him to ſend Miniſters to foreign Courts, whoſe Buſineſs it is, under Colour of a Negotiation, to get the beſt Accounts they can of the Regions in which they reſide, in order to ſerve their Countrymen whenever Occaſion offers as Harbingers or Guides; and as they depend on theſe Arts in Time of Peace, ſo they place all their Confidence in War in the Quickneſs of their Motion, and in that Rapidity with which they over-run even great Countries, before the Inhabitants have Time to take proper Meaſures for their Defence.

It was for theſe Reaſons, and to ſave the Honour of the King his Maſter, that our Author denied that any Embaſſadors had been ſent to *Mangu-Khan*, for he conſidered Friar *Andrew* as ſent only to the Prince, who wrote to the King his Maſter, and not to the great Khan, of whom it does not appear that the *French* had any juſt Ideas, till they were derived to them by this Relation. We may add to all this, that our Author was ſomething diffident as to the Character which *David* aſſumed, by his giving us to underſtand, that in thoſe Days there were a certain bad ſort of People, who in theſe remote Parts of the World, made a Practice of giving themſelves out for the Miniſters of Princes they ſcarce knew, and made a Livelihood by ſuch ſtrange Exploits. He likewiſe ſeems to be fully ſatisfied, that the Eaſtern Chriſtians in general were Men of great Vivacity, and ſo fertile in their Imaginations, that every thing they ſaw or heard appeared to them in the Light of a Wonder, and as ſuch they reported it wherever they came, to ſerve their own Purpoſes.

Upon theſe Principles he grounds the political Part of his Work, in which he ſeems to labour with all his Force to eſtabliſh theſe two Maxims. The firſt, that it was not either ſafe or honourable to aim at making Alliances with the *Tartars*, who were in his Sentiments a fierce intractable ſort of People, very proud of their extraordinary Succeſſes, and who underſtood all Applications made to them as proceeding from Fear. The ſecond, that their Power was nothing near ſo great as it had been repreſented, ſo that there was far leſs Danger like to accrue from the regarding them as Enemies, than from treating with them as Friends, into which Notion he was led by obſerving, that their Diſcipline was not exact, that they were utterly unacquainted with the regular Art of War, and no way capable of carrying it on againſt ſuch as ſtood upon their Guard, and were prepared to meet them in the Field with well diſciplined Armies. That which ſeems to be the leaſt defenceable Part of his Work, is his ſtrong Attachment to the Pope, and his high Notions of his Power, both of which, however, are in ſome meaſure excuſable, conſidering the Age in which he lived, and the Conduct of the Popes in thoſe Times, who took upon them to excommunicate and depoſe the greateſt Princes in Chriſtendom, as the Caſe then was with the Emperor, or to ſend them into the moſt diſtant Parts of the World, under Pretences of Religion, as appears from the Expeditions undertaken by his Maſter King *Louis*, which were as unfortunate in their Event, as ill founded in their Principles.

But it is now Time to add a few Obſervations with reſpect to the Uſefulneſs of this Work, as it ſtands in this Collection, and to ſhew how far the Travels of *Rubruquis* contributed to make the Weſtern Parts of the World acquainted with the Paſſages into the Eaſt, as well as with what was doing there, and the Force of the ſeveral Monarchs that were in Poſſeſſion of thoſe Countries at the Time he viſited them.

61. The Travels of *Rubruquis* are equally aſtoniſhing in whatever Light they are conſidered. Take them with reſpect to Length, and they extend to upwards of five thouſand Miles one Way, and to near ſix thouſand another. I mean from *Conſtantinople* in his going out, and to *Acon* or *Ptolemais* in his Return, which is ſuch a Space of Ground as it will not be eaſy to find any Man that has traverſed, and left us ſo diſtinct an Account of what he has ſeen. But if Travels are not ſo conſiderable from their Length as from the Nature of the Countries that are travelled through, then here again is a new Proof of the Value of this Performance, ſince it is certain no *European*, except *John Carpin*, ever travelled ſo far before, neither have we any Accounts of Travels of the ſame kind ſince, that, only excepted, which follows in the next Section, and from which we have received here in *Europe* the firſt certain Accounts of *China*, and the firſt Notice we had of there being in the World ſuch a Country as *Japan*. We ſhall apprehend this Matter better, if we take a ſhort View of the Countries through which our Monk paſſed by the Names they are known to us at preſent. It is plain, that from *Conſtantinople* he ſailed croſs the *Black-Sea* to the Port of *Caffa*; from thence he travelled by Land all the reſt of the Way, this is to ſay, firſt through *Crim Tartary*, then croſſing the great Rivers *Tanais* and *Volga*, he came in the Country of *Bolgar*, and to the Camp of *Baatu*, thence through the vaſt Country of the *Calmukes*, and ſo North-Eaſtward to the Court of *Mangu-Khan*, which, according to his Deſcription, muſt have lain in the Latitude of fifty Degrees North, or ſomewhat more, and conſiderably higher than what is now called the *Chineſe Tartary*. In his Return he paſſed through all the vaſt Deſarts of *Great Tartary*, through the Country of the *Moguls*, and ſo by the Head of the *Caſpian-Sea*, and then along the Weſt Side of it through the Countries of *Georgia*, *Armenia*, *Curdiſtan*, *Diarbeck*, and ſo into *Syria*; all which Countries then were, and moſt of them are ſtill, in the Hands of the *Tartars*, of whom he has given us ſuch an Account as is not only very conſiſtent with itſelf, and carries therein the ſtrongeſt Marks of Veracity, but is very agreeable alſo to the beſt Accounts we have ſince received of thoſe Countries.

As our Author was not acquainted with the Language of the *Tartars*, and did not remain long enough amongſt them to acquire it in that Degree of Perfection which was neceſſary to read and to underſtand their Hiſtories, we need not at all wonder at ſome ſmall Errors that have eſcaped him in Points of no great Conſequence. As for Inſtance, in what he tells us of *Zingis-Khan*, who he makes a Farrier, as other Writers have done a Blackſmith. I ſhall not trouble the Reader with Remarks of the right ſpelling of this Word *Zingis*, which I have already given them as it ought to be ſpelt, and have ſince conformed to our Author's Manner of writing it, that the Reader might find leſs Difficulty in comparing this with other Books of the ſame kind. I ſay, I ſhall not inſiſt on ſuch Trifles, but ſhall content myſelf with obſerving, that *Zingis*, however ſpelt, is an Adjective, and ſignifies properly the glittering or ſhining of Steel; whence ſprung the Notion, that this Prince was originally of ſome Trade in which Iron or Steel was employed, becauſe all the *Tartars* repreſented him as a Man who from low Beginnings had raiſed himſelf to univerſal Empire, and aſperſed him at the ſame Time from the Conſideration of his having deprived them of their Freedom and Independency; but among the *Tartars* themſelves, this Appellation was taken in an honourable Senſe, *Zingis* ſignifying with them illuſtrious, and *Zingis-Khan* ſignifies litterally, the moſt illuſtrious Monarch.

As to the Religion of this Prince, it was undoubtedly that of his Country, concerning which we have a great deal in *Rubruquis* agreeable to what he ſaw or heard, but not ſo clearly expreſſed, as that we ſhould be able to ſay preciſely what is the Faith of the *Tartars*. Our Author is certainly in the Wrong as to Preſbyter *John*, of whom ſuch a Noiſe has been made in the World, and about whom ſo little can ſtill be ſaid with any Certainty. What led him into the Miſtake was this; *Tujan* was the Khan of the *Naymans*, defeated and killed by *Zingis-Khan*, and it was from the Likeneſs of his Name to *John*, that our Author took it for granted he was that *John* the Prieſt ſo well known to the World. But after all, the Preſbyter *John* is ſtill in being, and is no other than the grand Lama, or Supreme Pontiff of the *Tartars*, who reſides, as we have before obſerved, in the Kingdom of *Tangut*, and is in the Opinion of the whole *Tartar* Nation, immortal. The Truth of the Matter is that he is an Eccleſiaſtical Prince, whoſe Fame and Credit is very extenſive, tho' his Power be very reſtrained. He reſides in a Monaſtery ſurrounded by his Monks, who, whenever he dies, ſupply his Place from among themſelves, and keep this Secret ſo religiouſly that all the *Tartars* are as firmly perſuaded that their grand Lama lives for ever, as that the Sun always ſhines. This ſerves to explain another Circumſtance, that at firſt Sight might ſeem very idle and ridiculous to the Reader, I mean the Queſtion put to *Rubruquis*, whether the Pope was not four or five hundred Years old. It is very plain from hence, that they conſidered the Pope as the grand Lama of the Weſt, and having heard the *Romiſh* Prieſts inſiſt much on the Perpetuity of the Church, they referred all this to the Perſon of the Pope, and ſuppoſed this ſpiritual Monarch to be immortal like their own.

If I durſt avow my own Sentiments plainly, I ſhould ſay, that there is no better Evidence of the Idolatry of the *Tartars*, than of the *Papiſts*; and this without intending any high Reflection on the Members of the *Romiſh* Church; for both have Images or Idols, both ſeem to worſhip them, and yet both when charged with it abſolutely deny the Fact. Our Author plainly owns, that *Mangu-Khan* told him expreſsly he worſhipped but one God, and that the *Tartar* Prieſts, whom he charges very freely with Idolatry, diſowned it themſelves, and affirmed that they reverence their Images only, and did not worſhip them. But after all, it plainly appears, that they kept the Secret of their Religion ſo well, that our Author never ſo much as heard of the Grand Lama, and conſequently could know nothing at all of the Grounds of their Religion, which, to deal plainly with the Reader, remains full as great a Myſtery to this Day.

It is a Point that the *Tartars* will never be brought to explain in any manner whatever; and after all the Pains that I have been able to take in order to obtain ſome ſort of Certantity on this Head, I am able to ſay no more of it than this, that what Doctrines the Lamas or Prieſts teach publickly, are reſtrained to theſe three Points: I. That there is one God the Fountain of Being, the Creator of all things, the Ruler of all things, and the ſole Object of Divine Worſhip. II. That all Men in general are his Creatures, and therefore ought to conſider each other as Brethren deſcended from one common Parent, and alike entitled to all the Bleſſings he beſtows, and that therefore it is great Impiety to abuſe thoſe Bleſſings, or to injure each other. III. That inaſmuch as the common Reaſon of Mankind hath taught them to eſtabliſh Property, it is neceſſary that it ſhould be preſerved, and that it is therefore the Duty of every Man to be content with his own, and to be juſt to his Neighbours. This Religion theſe Prieſts not only teach, but practiſe with irreproachable Exactneſs; and therefore *Rubruquis* very fairly owns, that the Regularity of their Manners hindered the Progreſs of the Chriſtian Religion, not becauſe the Doctrines of the latter were at all inferior in Sanctity to thoſe of the former, but becauſe in point of Purity of Manners the *Neſtorians* and other Chriſtians were very deficient.

After ſetting this Subject in the beſt Light we are able, the Reader will not find it at all difficult to apprehend a thing that extremely puzzled, not only our Author, but all who have wrote of the Affairs of the *Tartars*, and it is this; that they are abſolutely indifferent as to other Religions, entertaining all with equal Reſpect, whether *Chriſtians*, *Mohammedans*, or *Jews*, which proceeds from their finding the fundamental Principles of their own Religion taught by them all, and practiſed by none that come amongſt them better than by themſelves, or by their Prieſts.

We find in *Rubruquis*, ſome mention made of a Nation called *Albaſiſin*, of whom it will be requiſite to give the Reader ſome Account; they are the ſame that are mentioned by our antient Hiſtorians, under the ſeveral Names of *Haſſeſſins*, *Aſſeſins*, *Aſſaſins*, *Aſſanites*, and *Chaſians*, and were in Truth as odd a Sort of People as ever exiſted. They poſſeſſed a Tract of Country which contained twelve Caſtles and Villages in the Neighbourhood of *Tyre*, were a mix'd Race of Men, and for a long Time made no Profeſſion of any Religion, but practiſed a looſe Kind of *Mohammediſm*, and were Tributaries, firſt to the Knights Templars, and then to the Chriſtian Earls of *Tripoly*. In the eleventh Century, they would have declared themſelves Chriſtians, if they might have been releaſed from that Tribute; but this was refuſed, and they grew thenceforward the moſt bitter Enemies the Chriſtians had.

Theſe People were governed by a Prince ſtiled by our old Hiſtorians, the old Man of the Mountain, who finding himſelf ſurrounded by States much more powerful than his own, deviſed a new and ſtrange Way of making himſelf equally dreadful to his Neighbours and to Strangers. He gave out, that he only was the true Vicar of *Mohammed*, and that he had the Keys of Paradiſe in his Hands: To ſupport which Notion, he cauſed a fine Garden to be laid out, in a Valley, near his Palace, adorned in every reſpect, ſo as to reſemble the Paradiſe of that Prophet; he likewiſe provided a ſort of Opiate, and whenever he ſaw a young Man of a daring and reſolute Temper, he ſent for him, and promiſed him the perpetual Enjoyment of all ſenſual Delights, if he would execute boldly whatever he commanded; and by way of earneſt, having given him the Opiate to drink, cauſed him to be carried while aſleep into his Garden, where, when he awoke, he found every thing he could wiſh for, and many beautiful Women to attend him; when he had remained there a certain time, the Opiate was again adminiſtred, and he was conveyed back when aſleep, to the Palace, where the old Man of the Mountain promiſed him, that provided he fulfilled all his Commands during Life, he ſhould dwell after Death perpetually in that Garden.

By this Artifice, he eſtabliſhed an Order of Men ready to venture on whatever he commanded, and when any Prince made War upon him, he diſpatched three or four of theſe young Villains to this Court, or Camp, with Inſtructions to murder him, which they never failed to perform. It was by their Hands that *Louis* of *Bavaria* was killed in the Year 1231, and in 1251, he diſpatched four of them with the like Commiſſion to the Court of *Louis* IX. but ſuddenly altering his Mind, he diſpatched four more with counter Orders, who made ſuch Haſte, that they arrived at the *French* Court before the former, and diſcovering themſelves to King *Louis*, remained always near his Perſon, to preſerve him from their Companions, whom they likewiſe diſcovered at their Arrival, and for this Service, the *French* Monarch ſent them back to their Maſter, loaded with Preſents. By this Means the old Man of the Mountain became terrible, even to the moſt powerful Monarchs; and from the Practice of his deſperate Bravos, we have the Word Aſſaſſins, and the Phraſe of Aſſaſſination, for Murders of this Nature. This Practice was continued to the Time of which our Author ſpeaks, a little after which, the whole Nation was extirpated by the *Tartars*.

Theſe are all the Facts mentioned in his Writings, that ſeem to ſtand in need of Explanation, unleſs we except what he has delivered concerning the Witchcraft and Sorceries of the *Tartars*. As to theſe, we can only ſay, that they are ſtill much addicted to ſuch Superſtitions, and are thereby expoſed, as he has ſhewn us, to many Impoſtures, and abundance of Miſchiefs that attend them. But in one Particular he is miſtaken, which is in confounding the *Sorcerers* with the Lamas, or *Tartar* Prieſts, whereas they are quite different Perſons. What he relates of the Divination by the Blade-bones, is confirmed by all other Travellers, and is a Sort of Folly practiſed by the *Laplanders* and other northern Nations. A Folly ridiculous and abſurd indeed, but not more ſo than the other Arts of Divination, which have prevailed in politer Countries, and which are not perhaps wholly extinguiſhed at this Day. What he ſays in relation to the ſprinkling of Aſhes on the Floor, relates to another ſuperſtitious Cuſtom of the ſame kind, which gave Birth to that kind of Fortune-telling called Geomancy, which was transferred to *Europe*; and about which ſeveral Treatiſes have been written, and one particularly in our Tongue, not many Years ago, which I mention to ſhew not only the Probability of what *Rubruquis* has related, but likewiſe to demonſtrate, that the giving into ſuch fooliſh Practices is not peculiar to ſuch Nations as we eſteem barbarous; though I ſhall readily allow, that it is a Mark of Stupidity and Barbarity where-ever it appears.

We have no certain Account how this Relation of *Rubruquis* was received by the King his Maſter, but in all Probability it was very agreeable to him, ſince, though that Prince, after his Return to *France*, took all imaginable Pains to ſet the Affairs of his Kingdom in Order, and to reform the Abuſes that had crept into it during his Abſence, yet he ſtill retained a ſtrong Deſire of repairing alſo the Diſgrace he had ſuſtained in his former Expedition, by renewing the War againſt the Infidels, which determined him to make another Expedition againſt them, and this, notwithſtanding all the Oppoſition that could be made to it, he undertook in the Spring of the Year 1270. He tranſported on this Occaſion a numerous Army into *Africa*, reſolving to begin the Opperations of the War with reducing the Kingdom and City of *Tunis*, to which he laid Siege. But before he had made any great Progreſs towards taking the Place, the Plague broke out in his Army, and the King being infected therewith, died on the Twenty-fifth of *Auguſt* the ſame Year.

The beſt *French* Hiſtorians, as well as thoſe of other Nations, condemn theſe Kinds of Expeditions, as idle and romantick; and yet it cannot be denied, that if this Spirit of making War againſt the Infidels had not been raiſed at that Time, it is more than probable, that the *Mohammedans* would have over-run the beſt Part of *Europe*; whereas in conſequence of this Spirit, they were driven out of *Portugal* and *Spain*, to which I muſt crave Leave to add, that the Travels of *Rubruquis*, and others into different Parts of the Eaſt, firſt inſpired that Paſſion for Diſcoveries, which has ſince produced ſuch mighty Effects. Before that Time, we knew little or nothing in this Part of the World of the Situation of diſtant Countries; and thoſe who affected to be thought great Wits, laboured to diſcredit whatever was delivered in Relations of this Kind, which prevailed in ſome Places; and if it had prevailed in all, we had been, at this Day, as ignorant, as poor, and as much Slaves as our Anceſtors were before that Spirit of Commerce aroſe, that has not only diſcovered both the *Indies*, but has taught Men of Courage, that the whole World is their Country; and that he who improves uſeful Knowledge, if not properly encouraged at home, will be a welcome Gueſt where-ever he goes.

SECTION XXI.

The curious and remarkable Voyages and Travels of Marco Polo, *a Gentleman of* Venice, *who in the Middle of the XIIIth Century paſſed through a great Part of* Aſia, *all the Dominions of the* Tartars, *and returned home by Sea through the Iſlands of the* Eaſt-Indies.

Taken chiefly from the accurate Edition of *Ramuſio*, compared with an original Manuſcript in his *Pruſſian* Majeſty's Library, and with moſt of the Tranſlations hitherto publiſhed.

1. *A ſuccinct Introduction to this Work.* 2. *An Account of the Author from* Ramuſio *and other Writers.* 3. *The ſeveral Editions and principal Tranſlations that have been publiſhed of theſe Travels.* 4. *An Account of the Objections that have been raiſed againſt them.* 5. *The Characters given of this Performance by ſeveral eminent Criticks.* 6. *The Author's introductory Account, containing an Abridgment of his Travels to the Time of his Return to* Venice. 7. *A Deſcription of* Armenia the Leſſer, *of the Country of the* Turks, *of* Armenia the Greater, *of the Province of* Zorzania, *the Kingdom of* Moſul, *of the City of* Baldach, *or* Bagdat, *of the City of* Tauris, *with an Account of a remarkable Earthquake.* 8. *Of the Country of* Perſia, *the City of* Jaſdi, *the City of* Cermam, *of the Town of* Camandu, *and of the Country where Rhubarb grows.* 9. *Of ſeveral other Countries, and the principal Curioſities in them.* 10. *The Hiſtory of the Aſſaſſins, and of the Manner in which their Prince was killed, together with the Deſcription of many other Countries.* 11. *Of the City of* Samarcand, *the Town of* Lop, *and of the great Deſert in its Neighbourhood, with other remarkable Paſſages.* 12. *Of the Province of* Camul, *and ſeveral other Countries to the City of* Ezina, *and another great Deſart.* 13. *Of the City of* Caracarum, *and of the* Tartars, *with a compleat Hiſtory of that Nation, and of their Monarchs.* 14. *Of the vaſt Countries to the Northward of* Tartary, *and many other curious Particulars.* 15. *Of the great Power of* Cublai Khan, *of his Government, Family, Dominions, &c.* 16. *Of his Palace in the City of* Cambalu, *a particular Deſcription of that City, and other remarkable Obſervations.* 17. *Of the Magnificence of the Court of the Grand Khan, and of the Manners and Cuſtoms of his Subjects.* 18. *A copious Account of the Countries between the Place of his Reſidence, and the Country of* Thibet. 19. *A large Deſcription of the laſt mentioned Province, and of many others, with an Account of the Obſervations made by the Author in his Progreſs through them.* 20. *Of the Province of* Mangi, *and of the Manner in which it was reduced under the Power of the* Tartars, *together with an Account of the Provinces and Cities afterwards reduced under their Dominion.* 21. *Of the noble City of* Quinſai, *and of the vaſt Revenues drawn from thence by the Emperor of the* Tartars. 22. *Of the Iſland of* Zipangri, *and of the Attempts made by the* Tartars *to conquer it, and their Miſcarriage in them.* 23. *A large Account of various Countries, Provinces, Cities, and Iſlands in the* Eaſt Indies. 24. *Of the great Iſland of* Ceylon, *of the Kingdom of* Malabar, *and the State of other Countries viſited by the Author.* 25. *Of the Kingdom of* Murſili, *the Diamond Mines there, and other Countries adjacent.* 26. *Of the Iſland of* Madagaſcar, *the Country of* Ethiopia, *and other Parts of* Africa. 27. *Of the Province of* Aden, *and of ſeveral Countries reputed to be inacceſſible.* 28. *Many obſcure Paſſages in this Performance explained.* 29. *Remarks and Obſervations.*

1. IT is with ancient Writers as with ancient Coins, ſuch as underſtand them value them above meaſure, while ſuch as will not be at ſufficient Pains to examine them, not only deſpiſe them, but alſo ſuch as admire them. Thus none are more governed by Prejudice than thoſe who declaim againſt it, and none greater Bigots than ſuch as are attached to their own Opinions, from a Notion that they think freely. Yet this Zeal for Freedom of Thought ought to be amended rather than diſcouraged, as being in itſelf commendable, though ſometimes dangerous, by being miſapplied. It may, and to ſay the Truth, to many it does ſeem a tedious and diſagreeable Labour to look ſo far back as the firſt Springs and Dawnings of Knowledge; yet, however they may colour this with Pretences to refined Taſte, it is in fact no better than an Excuſe for Idleneſs, and a Diſlike to the taking thoſe Pains which are requiſite to ſucceed in ſuch Enquiries.

The Travels of *Marco Polo* are indeed very old, and are come into our Hands with conſiderable Defects, but they are very valuable for all that, and very well worthy of our Attention. He was the *Columbus* of the *Eaſt-Indies*, the firſt that gave a certain and diſtinct Account of the Sea beyond *China*, and of the free Paſſage thereby through all the Iſlands of the *Eaſt-Indies*, back into thoſe Countries that are very well known. It is true, that a great Part of what he related, though delivered with much Solemnity, and confirmed by the ſtrongeſt Aſſeverations, was much called in Queſtion, and thought in ſome meaſure beyond all Belief. But ſubſequent Diſcoveries have baniſhed this Incredulity, and what were once eſteemed Fables have been ſince found true Relations; and the Diſcourſes of *Marco Polo*, that were rejected by the ſupercilious Wits of his own Time, have been raked out of the Duſt of old Libraries, decyphered in a manner from the barbarous *Latin* of Monkiſh Tranſlators, and brought into the Form we now have them by the indefatigable Pains of the learned *Ramuſio*; a Man whoſe Countenance alone might be ſufficient to give Credit to this, or any other Work; though from the Notes we have added, it will appear that there are intrinſick Marks of its Value in the Performance itſelf: Yet we owe to *Ramuſio* the being able to diſcover theſe, and therefore to him we willingly aſcribe all the Glory that reſults from the Vindication of this curious Piece, and the Honour of its illuſtrious Author. To the ſame excellent Perſon is due the Account we have received of ſeveral Particulars relating to the perſonal Hiſtory of *Marco Polo* and his Family, of which in as few Words as poſſible we ſhall give the Reader a Relation; which, though not abſolutely neceſſary to the underſtanding of the Book, will be found uſeful and entertaining.

2. Signior *Nicolo Polo*, the Father of our Author, and his Brother Signior *Maffio*, began their Travels from *Conſtantinople* in the Year 1250, and having proceeded to the Court of the Grand Khan of *Tartary*, reſided there for many Years, and returned, as the Reader will ſee, to *Venice* about the Year 1269, where they found the Wife of Signior *Nicolo* deceaſed, and her Son, of whom ſhe was left big at the Time of their Departure, a well accompliſhed Youth, of nineteen Years of Age. Him they carried back with them to the Court of the Khan, and after having ſpent

twenty-ſix Years more without any News being heard of them by their Friends at *Venice*, returned ſafely thither in the Year 1295. On their Arrival at their own Houſe in *St. John Chryſiſtom*'s Street, they found themſelves in a ſtrange Situation, being not only worn entirely out of the Memory of their Family and Acquaintance, but having loſt in a manner the very Tokens of their Country, being become *Tartars* in their Speech as well as their Habit, and therefore under a Neceſſity of taking ſome extraordinary Steps to recover the Reſpect and Reverence due to them, by convincing the World that they were really noble *Venetians*, and the individual Perſons who had been ſo long loſt to their Country and Friends.

It was with this View that they gave a magnificent Entertainment to their Relations, at which they all three came forth in rich Suits of crimſon Satin; of which, when the Gueſts were ſeated, they ſtripped themſelves, and gave them to the Servants; appearing next in crimſon Damaſk, theſe alſo they put off at the laſt Service, and beſtowed likewiſe on the Servants, being then dreſſed in crimſon Velvet. When Dinner was over, and all who waited withdrawn, *Marco Polo* brought out their Coats of *Tartarian* Cloth or Felt, and out of their Foldings produced an incredible Quantity of rich Jewels, among which there were ſome well known to thoſe preſent, and which indiſputably proved theſe Strangers of the *Polo* Family. Signior *Matlio Polo* became a worthy Magiſtrate of *Venice*, and lived and died in Peace.

As for our Author Signior *Marco*, a few Months after his Return, the *Genoeſe* Admiral *Lampa Doria* coming with a Fleet of ſeventy Gallies to the Iſland of *Curzola*, they fitted out from *Venice*, under the Command of *Andrea Dondalo*, a great naval Force, in which he had the Command of a Galley, and was ſo unlucky as to be taken Priſoner and carried to *Genoa*, where he remained in ſpite of all the Offers that were made for his Ranſom ſeveral Years; ſo that his Father deſpairing of his Return, and deſirous that his own Offspring might inherit his Riches, married a ſecond Time, and had three Children. In the Time of this Impriſonment all the young Nobility of *Genoa* reſorted to our *Marco* to hear the Recital of his Voyages and Adventures, which gave them ſo great Satisfaction, that one of them prevailed upon him to ſend for his Notes from *Venice*; and when thus aſſiſted, wrote from his own Mouth the following Hiſtory in *Latin*; from whence it was tranſlated into *Italian*; and this *Italian* was again tranſlated into *Latin*, and abridged; whence grew that prodigious Corruption ſo juſtly complained of in the firſt printed Copies. This Work of *Marco*'s was ſupported by the Teſtimony of his Father, and by that of his Uncle on his Death-bed. At laſt *Marco* himſelf obtained his Liberty, returned to *Venice*, married, and had two Daughters, *Moretta* and *Fautina*, but had no male Iſſue. He died as he lived, beloved and admired by all who knew or converſed with him; for with the Advantages of Birth and Fortune he was humble, and made no other Uſe of his great Intereſt in the State than to do good.

3. We have already ſhewn, that this Work was originally written in *Latin*, and if not by the Author's Hand, at leaſt from his Mouth; but after the *Italian* Verſion that was made of it, the Copies of the *Latin* Manuſcript became extremely rare, inſomuch that the *Italian* Tranſlation was taken for the Original. One *Francis Pepin*, a Monk, tranſlated it into *Latin*, and abridged it at the Command of his Superiors; and it is a Copy of this Manuſcript that is in the Library of the King of *Pruſſia*. It was printed at *Baſil* by the Care of the celebrated *Reinecius*, and afterwards in other Places. It was from one of theſe Copies that it was tranſlated by *Hakluit*, of which *Purchas* ſo heavily, and at the ſame Time ſo juſtly complains. *Ramuſio* took a great deal of Pains, as well in reſtoring the Senſe of the Text of our Author, as in juſtifying his Character, and ſupporting the Credit of his Work by his learned Diſcourſes. He was aſſiſted therein by a Copy of the original *Latin* Manuſcript, which was lent him by his Friend Signior *Chiſi*, without which it had been impoſſible for him to have brought it into ſo good Order as we now ſee it.

There has been, beſides the Tranſlations already mentioned, at leaſt two in the *German* Language. It was printed in *Portugueſe* at *Liſbon* is 1502, and it has been ſeveral times tranſlated into *Dutch*. I have been the more particular in the Account of theſe Additions and Tranſlations, becauſe they differ very much from each other; ſo that the only Way to come at a compleat View of the Author, is by collecting and comparing theſe; a Work of infinite Pains and Labour, in which however we have the Aſſiſtance of *Andrew Muller*, a learned *German* Critick, and of *Peter Bergeron*, a *Frenchman*, who, next to *Ramuſio*, was, of all others, the moſt capable of ſuch an Undertaking, and has ſucceeded in it the beſt.

There was, however, one Thing wanting, which was the juſtifying the Dates, verifying the Facts, and explaining the obſcure Names of Places which occur in theſe Travels; and this we have done to the beſt of our Ability in this Tranſlation, ſo that the Reader may be ſatisfied that he has the Work of this ancient Writer as intire, and in as good Condition as it was in our Power to give it him.

4. There have been Abundance of Objections raiſed againſt the Credit and Authority of this Writer, many of which, as they were founded on the Errors of Tranſcribers and Tranſlators, are taken away by reſtoring our Author's genuine Senſe, and therefore we need not mention them particularly; but there are others which deſerve more Regard. It is ſaid, that our Author mentioned ſome Countries and many Places that were never heard of before or ſince. A ſhrewd Objection this, inaſmuch as it ſeems to repreſent all the Pains that has been taken about his Writings, as entirely thrown away. In anſwer to this we muſt obſerve, that he wrote according to the Lights he received, and thoſe Lights were chiefly from the *Tartars*; whence it might very well happen that the Names of Places mentioned by him ſhould appear ſtrange and uncouth in this Part of the World. But it ſo happens, that we have ſince received ſuch Helps as enable us to get pretty well clear of this Difficulty; for though we have retained in the Text the Names uſed by our Author, yet we have afforded, from the Aſſiſtance given us by oriental Writers, ſuch Explanations as remove, in every reſpect, theſe geographical Obſcurities, ſo as to leave no ſort of Doubt either as to the Capacity or the Veracity of *Marco Polo*.

Another Charge againſt him is, that he does not agree with other Writers, or rather that other Writers do not agree with him; but when examined to the Bottom, this Charge will not be found to have any great Weight, as having chiefly ariſen from the Miſtakes made as to the true Senſe of what this Writer delivered; ſo that very often, what was imputed as Ignorance to him, was, in Fact, no more than Temerity in thoſe who pretended to find fault with them. The laſt, and indeed the greateſt Objection is, that he has related many Things that are abſurd, ſome that are incredible, and not a few that are impoſſible. Againſt this Charge we cannot pretend to vindicate him, though much may be ſaid to excuſe him. The Facts he tells us of his own Knowledge are ſurpriſingly verified by authentick and indiſputable Evidence; and grant that he might be impoſed upon in what he gives us on the Authority of others, we muſt be content, the rather becauſe it is our Happineſs to live in an Age when Men are leſs liable to be cheated and miſled; therefore this ought to make us the more ready to bear with Failings in one who wanted this Advantage, who lived in a Time of Darkneſs and Obſcurity, when Credulity paſſed for Faith, and when conſequently Errors of this ſort were rather a Man's Miſfortune than his Fault.

5. In ſpite however of all theſe Charges, there have been ſome great Men in all Ages who have done Juſtice to our Author's Merit. Among theſe we may reckon the famous *Voſſius*, in his Account of the *Latin* Hiſtorians, the great Geographer *Sebaſtian Munſter*, the learned Naturaliſt *Conrad Geſner*, the accurate Hiſtorian *Leunclavius*, the celebrated *Joſeph Scaliger*, and many others. The learned *German* Critick *William Schickard*, in his Hiſtory of the Kings of *Perſia*, gives our Author this Character; " *Marco Polo*, the *Venetian*, ſays he, is a very " good Writer, and thoſe things which he reports, and " were heretofore thought incredible, are now verified " daily by later Diſcoveries." But of all who have undertaken the Cauſe of our Author, none has done it with greater Capacity, with more Good-will, or better Succeſs,

than Father *Martini*, to whom we owe the beſt Deſcription of *China*, and who was conſequently a better Judge than any other of the Merit or Demerit of this Work. He aſſures us, that there is not the leaſt Reaſon to doubt the Truth of our Author's Relations on Account of the Obſcurity of the Names of Places; for, ſays he, he wrote them after the *Tartar* Pronunciation, whereas later Writers ſtudy to imitate as well as they are able the Pronunciation of the *Chineſe*.

I will add to theſe but one Teſtimony more, which is that of an Author very able to have detected him, if he had caught him in Untruths, and who was far enough from being tender of Mens Reputations if he thought them to blame. The Author I mean is *Athanaſius Kircher*, who in his Account of *China* confeſſes, that none of the old Authors have more fully or more accurately deſcribed the remoteſt Countries of the Eaſt than *Marco Polo* has done; yet he readily admits, that there are many things in him ſo very dark, that they may be in a manner ſtiled inexplicable; but then, with great good Senſe and Candour, he attributes this to the Author's Want of Skill in Geography and Aſtronomy; and if we conſider how young he was when his Father carried him into *Tartary*, and how little Opportunity he had of acquiring that ſort of Knowledge that was moſt neceſſary for preventing thoſe Miſtakes, we may eaſily concur in Opinion with ſo many eminent and learned Writers, that in Conſideration of the many curious and uſeful Paſſages in his Writings, theſe Blemiſhes, eſpecially as they were in a manner unavoidable, may very well be forgiven. After having thus cleared the Way, we will no longer detain the Reader from the Peruſal of theſe Travels, which their Author has thus digeſted. He firſt gives a ſuccinct Account of his Father's and Uncle's Peregrinations, and then of his own; after which, he enters into a more particular Deſcription of the Countries and Places through which they paſſed, and relates alſo ſuch remarkable Things as he was informed of in the Courſe of his Voyages.

6. At the time that *Baldwin* was Emperor of *Conſtantinople*, in the Year of our Lord 1250, two Gentlemen of the moſt illuſtrious Family of *Paolo* or *Polo*, at *Venice*, embarked on board a Veſſel freighted with various kinds of Merchandize on their own Account; and having traverſed the *Mediterranean* and the *Boſphorus*, they came with a fair Wind, and the Bleſſing of God, to *Conſtantinople*. There they continued for ſome Time to repoſe themſelves, and then croſſing the *Pontus Euxinus*, arrived at a certain Port called *Soldadia*, from whence they went to the Court of a great *Tartar* Prince called *Barba*, to whom they ſhewed the fine Jewels they had brought, and preſented him with ſome of the moſt valuable. That Monarch was far from being ungrateful; he kindly accepted their Preſents, and in return gave them others of greater Value. They remained a full Year at his Court, and then diſpoſed all things for their Return to *Venice*. But before they had an Opportunity of departing, there broke out a War between this Prince *Barba* and another *Tartar* King, whoſe name was *Alan*; and this Diſpute being decided by a Battle, the Army of *Barba* was defeated. This unlucky Accident exceedingly embarraſſed the *Venetians*, who knew not what Meaſures to take, or how to get ſafely back into their own Country. At length, however, they took a Reſolution of eſcaping, as well as they could, out of the Country where they were, and by ſeveral By-roads eſcaped to a City called *Gu[illegible]cam*, ſeated on the River *Tygris*. They continued their Journey from hence through a great Deſart, where there were neither Inhabitants nor Villages, till at laſt they arrived at *Bochara*, a conſiderable City in the Confines of *Perſia*. It was, at the Time of their Arrival, the Reſidence of a Prince called *Barach*, in whoſe Court meeting with a good Reception, and not knowing how otherwiſe to diſpoſe of themſelves, they remained three Years. At that Time a certain Perſon of Diſtinction was ſent Embaſſador from the ſaid Prince *Alan* to the Great Khan, who is the ſuperior Monarch of all the *Tartars*, reſiding in the remoteſt Countries of the Earth, betwixt the North-Eaſt and the Eaſt, called *Cublai Khan*; who coming to *Bochara*, and finding there theſe two Brethren, who were now well verſed in the *Tartarian* Language, he rejoiced exceedingly, and perſuaded theſe Men to go with him to the great Emperor of the *Tartars*, knowing that he ſhould gratify him in this, and that they alſo ſhould be entertained with great Honour, and rewarded with large Gifts, eſpecially ſeeing, through the Conference had with them, he perceived their pleaſing Behaviour. Theſe Men therefore, conſidering that they could not eaſily return home without Danger, conſulting together, agreed to go with the ſaid Embaſſador, and accompany him to the Emperor of the *Tartars*, having certain other Chriſtians in their Company, whom they brought with them from *Venice*, and departing towards the North-Eaſt and the North, were a whole Year in going to the ſaid Court of the ſaid King.

The Cauſe of their long Time ſpent in this Journey, was the Snows and Waters being much increaſed, ſo that they were forced in their Travel to ſtay the waſting of the Snow, and decreaſing of the Floods. Being therefore brought before the Preſence of the Great Khan, they were moſt courteouſly received by him. He queſtioned them concerning many things; as of the Countries of the Weſt, the Roman Emperor, and other Kings and Princes, how they carried themſelves in Government, and in warlike Affairs; how Peace, Juſtice, and Concord continued among them; alſo what Manner of Life and Cuſtoms were obſerved among the *Latins*, and eſpecially of the Pope, of the Chriſtians, of the Church, and of the Religion of the Chriſtian Faith; and M. *Nicholo*, and M. *Maffio*, as wiſe Men, told him the Truth, always ſpeaking well to him, and orderly, in the *Tartarian* Tongue; inſomuch that he often commanded they ſhould be brought to his Preſence, and they were very acceptable in his Sight; having well underſtood the Affairs of the *Latins*, and reſting ſatisfied with their Anſwers.

The Great Khan intending to ſend them his Embaſſadors to the Pope, firſt conſulted with his great Lords, and then calling to him the two Brethren, deſired them to go to the Pope of the *Romans*, with one of his Barons called *Chogatal*, to pray him to ſend an hundred Men learned in the Chriſtian Religion unto him, who might ſhew his wiſe Men that the Faith of the Chriſtians was to be preferred before all other Sects, and was the only Way of Salvation, and that the Gods of the *Tartars* were Devils, and that they, and others, the People of the Eaſt, were deceived in the Worſhip of their Gods. He gave them alſo in charge, to bring, in their Return from *Jeruſalem*, of the Oil of the Lamp which burneth before the Sepulchre of our Lord Jeſus Chriſt, towards whom he had great Devotion, and held him to be the true God; they therefore yielded due Reverence to the Great Khan, promiſed that they would faithfully execute the Charge committed unto them, and preſent the Letters which they received from him, written in the *Tartarian* Tongue, according to his Command, unto the Biſhop of *Rome*.

He, according to the Cuſtom of the Kingdom, commanded a golden Tablet to be given them, engraven and ſigned with the King's Mark; carrying which with them, throughout his whole Empire, inſtead of a Paſſport, they might be every where ſafely conveyed through dangerous Places, by the Governors of Provinces and Cities, and receive their Expences from them; and laſtly, how long ſoever they would ſtay in any Place, whatſoever they needed, for them or theirs, ſhould be furniſhed them. Taking their Leave therefore of the Emperor, they took their Journey, carrying the Letters and golden Tablet with them; and when they had rid twenty Days Journey, the Lord who was aſſociated with them, began to fall grievouſly ſick; whereupon conſulting, and leaving him there, they proſecuted their intended Journey, being every where courteouſly received, by reaſon of the Emperor's Tablet; yet in many Places they were compelled to ſtay, occaſioned by the Over-flowings of the Rivers, ſo that they ſpent three Years before they came unto the Port of the Country of the *Armenians*, named *Giazza*; from *Giazza* they went to *Acre*, about the Year of our Lord 1269, in the Month of *April*.

But having entered into the City of *Acre*, they heard that Pope *Clement* the Fourth was lately dead, and that no other was ſubſtituted in his Place, for which they were not a little grieved. At that Time there was a certain Legate of the Apoſtolic See at *Acre*, *viz.* Maſter *Tibaldo Niſconti di Piacenza*, to whom they declared all they had in Commiſſion from the Great Khan, and he adviſed them to expect the Creation of a new Pope: In the mean ſpace therefore departing to *Venice* to viſit their Friends, Maſter *Nicolo* found that his Wife was dead, whom at his Departure he had left with Child, but had left a Son named *Marco*, who was now nineteen Years of Age. This is that *Marco* who compoſed this Book, who will manifeſt therein all thoſe things that he hath ſeen. The Election of the Pope of *Rome* was deferred two Years. They fearing the Diſcontent of the Emperor of the *Tartars*, who expected their Return, went back again to *Acre*, to the Legate, carrying with them *Marco* aforeſaid, and having gone to *Jeruſalem*, and fetched the Oil with the Legate's Letter, teſtifying their Fidelity to the great Khan, and that a Pope was not yet choſen, they went again towards *Giazza*.

In the mean time Meſſengers came from the Cardinals to the Legate, declaring to him that he was choſen Pope, and he called himſelf *Gregory*. Hearing this, he preſently ſent Meſſengers to call back the *Venetians*, and admoniſhing them not to depart, prepared other Letters for them, which they ſhould preſent to the Great Khan of the *Tartars*, with whom he alſo joined two preaching Friars, Men famous for their honeſt Converſation and Learning. The one was called Friar *Nicholo Davicenza*, the other Friar *Gulielmo de Tripoli*: To theſe he gave Letters and Privileges, and Authority to ordain Prieſts and Biſhops, and of Abſolution in all Caſes, as if himſelf were preſent, with Preſents alſo of great Value, to preſent to the Great Khan, together with his Benediction. They came to *Giazza*, a Sea-port in *Armenia*, and becauſe *Bentiochdas* and the Sultan of *Babylon*, leading a great Army, then invaded the *Armenians*, the two Friars above-mentioned began to be afraid of themſelves, and delivering the Letters and Preſents to Signiors *Nicolo*, *Maffio*, and *Marco*, deſiring to avoid the Danger of the Ways and Peril of Wars, remained with the Maſter of the Temple, and returned with him.

But the three *Venetians* expoſing themſelves to all Danger, with many Labours, and much Difficulty, travelled many Days always towards the North-Eaſt and North, till they after three Years and a half came to the Emperor of the *Tartars* great City of *Clemeniſu*; for in the Winter Time their Journey had often long Hindrances by reaſon of the Snow and extreme Cold, with Inundations of Waters. However, King *Cublai* hearing of their coming, though they were yet very far off, ſent Meſſengers forty Days Journey to meet them, who ſhould conduct them, and furniſh all Neceſſaries for their Journey. Going therefore to the King's Court, and being brought to his Preſence, they fell down before him on their Faces, yielding the accuſtomed Reverence; of whom being courteouſly received, they were ordered to riſe, and he commanded them to declare how they paſſed the many Dangers of the Ways, and what they had treated with the Biſhop of *Rome*; then they related it diſtinctly and at large, and gave the Emperor the Pôpe's Letters and Preſents, which they brought; at which the Khan wonderfully rejoicing, commended their faithful Cares. The Oil alſo brought from the Lord's Sepulchre, and offered unto him, he reverently received, commanded it ſhould be honourably preſerved, and aſking of *Marco*, who he was? Maſter *Nicolo* anſwered, that he was his Majeſty's Servant, and his Son; he entertained him with a friendly Countenance, and taught him to write among other of his honourable Courtiers; whereupon he was much eſteemed of all the Court, and in a little Space learned the Cuſtoms of all the *Tartars*, and four different Languages, being able to write and read them all.

The Great Khan, to make his Wiſdom more apparent, committed an Ambaſſage unto him to be performed in a City called *Caracban*, unto which he could ſcarcely travel in ſix Months Space; but he carrying himſelf wiſely in all things, diſcharged what he had in Commiſſion with the Commendation and Favour of the Prince, and knowing the Emperor would be delighted with Novelties in the Places which he paſſed through, he diligently ſearched the Cuſtoms and Manners of Men, and the Conditions of the Countries, making a Memorial of all that he knew and ſaw to divert the Great Khan; and in ſix-and-twenty Years which he continued one of his Court, he was ſo acceptable to him, that he was continually ſent through all his Realms and Signiories for the Affairs of the Great Khan, and ſometimes for his own, but by the Khan's Order; and this is the true Reaſon that the ſaid Maſter *Marco* learned and ſaw ſo many Particulars relating to the Eaſt, which follow in Order in theſe Memoirs; but theſe *Venetians* having ſtayed in that Court many Years, and grown very rich in Jewels of great Value, were inſpired with Deſire to viſit their Country, fearing, that if the Khan (now old) ſhould die, they ſhould not be able to return. One Day Maſter *Nicolo*, ſeeing the Khan merry, craved Licence to depart in the Name of all the three; whereat he was moved, and aſked why they would put themſelves on ſo dangerous a Journey, and if they wanted Riches, he would give them twice as much as they had, and out of pure Affection would not permit their Departure.

Yet not long after it happened, that a King of the *Indians*, named *Argon*, ſent three of his Counſellors unto the Court of the great *Cublai*, whoſe Names were *Ullatai*, *Apuſea*, and *Coza*, to treat with him, that he would deliver him a Wife; for his Wife, named *Bolgana*, being lately dead, begged this Favour of the King at the Point of Death, and left in her Will, that he ſhould not marry a Wife of another Family than her own, which was of *Catha*. King *Cublai* therefore yielding to his Requeſt, cauſed to be ſought out for them a fair young Maiden of ſeventeen Years of Age, named *Cogalin*, deſcended of the former Queen's Family, to be the Wife of *Argon*. Thoſe Embaſſadors departing, rode eight Months the ſame Way they came, but found bloody Wars among the *Tartars*, ſo that they were conſtrained to return, and acquaint the Great Khan with their Proceedings. In the mean time Maſter *Marco* had returned from thoſe Parts of *India*, where he had been employed with certain Ships, and declared to the Khan the Singularities of the Places, and the Security of thoſe Seas; which reaching the Ears of the Embaſſadors, they conferred with the *Venetians*, and agreed, that they with the Queen ſhould go to the Great Khan, and deſire Leave to return by Sea, and to have the three *Latins*, Men ſkilled in Sea Affairs, with them, to the Country of King *Argon*. The Great Khan was much diſpleaſed with their Requeſt, yet upon their Petition granted it, and cauſed *Nicolo*, *Maffio*, and *Marco* to come into his Preſence, and after much Demonſtration of his Love, would have them promiſe to return to him after they had ſpent ſome time in *Chriſtendom*, and in their own Houſe; and he cauſed to be given them a Tablet of Gold, in which was written his Command for their Liberty and Security through all his Dominions, and that Expences ſhould be given them and theirs, and a Guide or Convoy for ſafe Paſſage, ordering alſo that they ſhould be his Embaſſadors to the Pope, the Kings of *France* and *Spain*, and other Chriſtian Princes.

He cauſed fourteen Ships to be prepared, each having four Maſts, and able to bear nine Sails in ſailing, the Form of which is too long here to be related; four or five of them had from two-hundred-and-fifty to two-hundred-and-ſixty Mariners in each of them. In theſe Ships the Embaſſadors, the Queen, with *Nicolo*, *Maffio*, and *Marco*, ſet ſail, having firſt taken Leave of the Great Khan, who gave them many Rubies, and other precious Stones, and their Expences for two Years. After three Months they came unto a certain Iſland called *Java*, and from thence ſailing through the *Indian* Sea, after eighteen Months they came into the Country of King *Argon*: Six hundred Men of the Mariners, and others, and but one of the Women, died in the Paſſage; but only *Coza* of the three Embaſſadors ſurvived. When they came to the Country of King *Argon*, they found that he was dead, and that one *Chiacato* governed the Kingdom for his Son, who was under Age; they ſent to acquaint him with their Buſineſs, who anſwered, that they ſhould give her to *Caſan* the King's Son, then in the Parts of *Arbor Secco*, in the Confines of *Perſia*, with ſixty thouſand Perſons for the Guard of certain Paſſages againſt the Enemy. Having done ſo, *Nicolo*, *Maffio*, and *Marco*, returned to *Chiacato*, and ſtaid there nine Months.

After this, taking Leave, *Chiacato* give them four Tables of Gold, each a Cubit long, and five Fingers broad, of the Weight of three or four Marks, in which were written, that in the Power of the eternal God the Name of the Great Khan ſhould be honoured and praiſed many Years, and every one who ſhould not obey ſhould be put to Death, and his Goods confiſcated. In them were further contained, that theſe three Embaſſadors ſhould be honoured, and Service done them in all Lands and Countries as to his own Perſon, and that Horſes, Convoys, Expences and Neceſſaries, ſhould be given them; all which was ſo duly put in Execution, that ſometimes they had two hundred Horſes for their Safe-guard. In this their Travel, they heard that the Great Khan was dead, which took from them all Deſire of returning thither.

They rode till they came to *Trebizond*, and from thence to *Conſtantinople*, and after to *Negropont*, and at laſt came with great Riches ſafe to *Venice*, A. D. 1295.

Here ends the Hiſtorical Introduction of our Author, which ſhews us how he came to be qualified for writing the following Deſcription of the remoteſt Countries in the Eaſt. The Reader will naturally obſerve, that our Author wrote under very particular Circumſtances, as having no other Knowledge than what he acquired amongſt the *Tartars*; and therefore though the harſh and uncouth Names that occur in the ſubſequent Relation of his Travels may both diſfigure and perplex them, yet they very plainly prove the Sincerity and Authority of our Author's Writings, ſince taking Things as he has ſtated them, it was ſimply impoſſible that he ſhould have written them any otherwiſe than as they ſtand; for it was his hard Lot to travel with the *Tartars*, and to pen the Hiſtory of his Travels in a Priſon, ſo that their Imperfections ought not to be aſcribed to the Man, but to his Circumſtances.

7. There are two *Armenia's*, the *Greater* and the *Leſs*. In the *Leſſer Armenia* the King reſides, in a City called *Sebaſte*, and in all his Country is obſerved Juſtice and good Government. The Kingdom itſelf hath many Cities, Fortreſſes, and Caſtles; the Soil alſo is fertile, and the Country abounds with every thing neceſſary, nor is there any want of Game, or Wild-Fowl; the Air indeed is not very good. The Gentlemen of *Armenia*, in Times paſt, were ſtout Men, and good Soldiers, but are become now effeminate and nice, giving themſelves up to Drunkenneſs and Riot. There is a certain City in this Kingdom ſeated near the Sea, which is called *Giazza*, having an excellent Haven, whither Merchants reſort from divers Countries, and even from *Venice* and *Genoa*, on account of ſeveral ſorts of Merchandize brought thither, eſpecially Spices of ſundry Kinds, and abundance of other valuable Goods brought thither out of the Eaſt Countries; for this Place is, as it were, the ſettled Mart of all the Eaſt[a].

In *Turcomania* are three Sorts of Nations, *viz.* the *Turcomans* or *Turkmen*, who obſerve the Law of *Mohammed*: They are Men illiterate, rude, and ſavage, inhabiting the Mountains, and inacceſſible Places, where they can find Paſtures; for they live only by their Cattle. There are good Horſes in this Country, which are called *Turkiſh* Horſes: Mules are alſo in that Country of great Eſtimation. The other Nations are *Grecians* and *Armenians*, who poſſeſs the Cities and Towns, and beſtow their Labour on Merchandize and Arts. They make the beſt Carpets in the World, and they have many Cities, the chief whereof are *Cogno*, or *Iconium*, *Cæſarea*, and *Sebaſte*, where St. *Baſil* ſuffered Martyrdom for Chriſt, and they acknowledged one of the Khans, Kings of the *Tartars*, for their Lord.

Armenia the Greater is a very large Province, tributary to the *Tartars*, and hath many Cities and Towns, the chief City whereof is called *Arzugia*, and the beſt Buckram in the World is made there. Moſt wholeſome hot Waters alſo ſpring there for the waſhing and curing of Mens Bodies; and the other more famous Cities next to the Metropolis are *Argiron* and *Darziz*. In the Summer Time many *Tartars* reſort there with their Flocks and Herds, drawn thither by the Fatneſs of their Paſtures; and again in the Winter depart for a certain Time, by reaſon of the abundance of Snow. The Ark of *Noah* remained in the Mountains of this *Armenia*.

This Country hath the Province of *Moxul* and *Meridin* bordering on the Eaſt; but on the North is *Zorzania*, in the Confines of which a Fountain is found, from which a Liquor like Oil flows, and though unprofitable for the ſeaſoning of Meat, yet is very fit for the ſupplying of Lamps, and to anoint other Things; and this natural Oil flows conſtantly, and that in Plenty enough to lade Camels. In *Zorzania* is a King called *David Melic*, or King *David*; one Part of the Province is ſubject unto him, the other pays Tribute to a Khan of the *Tartars*; the Woods there are of Box trees. The Country extends to the two Seas, *Marmaggiore*, or the *Euxine*, and that of *Baccu*, or the *Caſpian*, which containeth in Circuit 2800 Miles, and is like a Lake, having no Communication with other Seas. In it are many Iſlands, Cities, and Caſtles, ſome of which are inhabited by thoſe that fled from the *Tartars* out of *Perſia*[b].

The People of *Zorzania* are Chriſtians, obſerving the ſame Rites with other Chriſtians. They keep their Hair ſhort like the Weſtern Clergy; the Inhabitants have many Cities, and their Country abounds with Silk, of which they make very fine Manufactures. *Moxul* is a Province in which there are many Sorts of People, ſome called *Arabians*, are *Mohammedans*, others are *Chriſtians*, ſome *Neſtorians*, others *Jacobites*, and others *Armenians*; and they have a Patriarch called *Jacolet*, who ordains Archbiſhops, Biſhops, and Abbots, and ſends them through all Parts of *India*, and to *Cairo* and *Baldach*, or *Bagdat*, and where-ever *Chriſtians* dwell, as is done by the Pope of *Rome*; and all the Stuffs of Gold and Silk called Muſleims are wrought in *Moxul*.

But in the Mountains of this Kingdom dwell the People called *Curdi*, of whom ſome are *Neſtorians*, others *Jacobites*, and ſome Followers of *Mohammed*; they are wicked Men, and rob Merchants. Near to them is another Province called *Mus*, or *Meridin*, wherein grow great Quantities of Cotton, whereof they make Buckrams, and other Works; they are ſubject to the *Tartars*. *Baldach*, or *Bagdat*, is a great City, in which reſided the great Khaliff, that is the Pope of all the *Saracens*; a River runs through it, from whence to the Sea is accounted ſeventeen Days Journey. They ſail by a City called *Chiſi*; but before they reach the Sea they come to *Balſora*, about which grow the beſt Dates in the World. In *Baldach*, or *Bagdat*, are many Manufactures of Gold and Silk. There are wrought Damaſks and Velvets, with Figures of various Creatures: All the Pearls in Chriſtendom come from thence. In that City is an Univerſity, where is ſtudied the Law of *Mohammed*, Phyſic, Aſtronomy, and Geomancy. It is the chief City in thoſe Parts.

When the *Tartars* began to extend their Conqueſts, there were four Brethren, the eldeſt of which, *Mangu*, reigned in *Sedia*. Theſe purpoſing to ſubdue the World, went one to the Eaſt; another to the North; to the South a third, which was *Ulan*; and the other to the Weſt. In the Year of our Lord 1250, *Ulan* having a great Army of one hundred thouſand Horſe, beſides Foot, uſed Policy, and having hid a great Part of his Men, brought, by pretending Flight, the Khaliff into his Ambuſcade, and took him and the City, in which he found infinite Store of Treaſure, inſomuch that he was amazed. He ſent for the Khaliff, and reproved him, that in that War he had not provided himſelf with Soldiers for Defence, and commanded that he ſhould be incloſed in that Tower where his Treaſure was, without other Suſtenance[c].

This ſeemed a juſt Judgment from our Lord *Jeſus Chriſt* on him; for in the Year 1225, ſeeking to convert the *Chriſtians* to the *Mohammedan* Religion, and taking Advantage from that Place of the Goſpel, *That he which*

---

[a] There is nothing obſcure in this Deſcription of *Armenia the Leſs*; and I added this Note only to put the Reader in Mind, that our Author ſhews that a great Part of the Trade from *Europe* to the *Indies* was carried on this Way by the *Venetians* and *Genoeſe*.

[b] *Zorzania* is indeed a Name not to be met with in any other Author; but the Account given us by *Marco* is ſo clear and exact, that there can be no doubt about it.

[c] There is nothing gives ſo much Credit to our Author's Relation as theſe hiſtorical Facts, which are capable of being verified by other Authors. The Prince he mentions was *Halaku Khan*, who was Brother to *Mangu-Khan*; he entered theſe Countries *A. D.* 1255, with an Army of *Tartars*, and in 1251, put an end to the Empire of the *Abyſſinian* Khaliffs, by taking *Bagdat*, as our Author relates it.

hath Faith, as the Grain of Muſtard-ſeed, ſhall be able to remove Mountains. He ſummoned all the *Chriſtians*, *Neſtorians*, and *Jacobites*, and propounded to them in ten Days to remove a certain Mountain, or turn *Mohammedans*, or be ſlain, as not having one Man amongſt them which had the leaſt Faith. They therefore continued eight Days in Prayer; after which a certain Shoemaker, in conſequence of a Revelation made to a certain Biſhop, was fixed upon to perform it. This Shoemaker, once tempted to Luſt by Sight of a young Woman, in putting on her Shoe, zealouſly had fulfilled that of the Goſpel, and literally had put out his right Eye. He now on the Day appointed with other Chriſtians followed the Croſs, and lifting his Hands to Heaven, prayed to God to have Mercy on his People, and then with a loud Voice commanded the Mountain in the Name of the Holy Trinity to remove; which preſently, with great Terror to the Khaliff and all his People, was effected, and that Day is ſince kept holy by faſting alſo on the Evening before it.

8. *Tauris* is a great City in the Province of *Hircania*, and is a moſt populous Place. The Inhabitants live by the Exerciſe of Arts and Merchandize, they make Stuffs of Gold and Silk; foreign Merchants reſiding there make very great Gain, but the Inhabitants are generally Poor. They are a mixed People of *Neſtorians*, *Armenians*, *Jacobites*, *Georgians*, *Perſians*, and *Mohammedans*: Theſe laſt are perfidious and treacherous, thinking all well gotten which they ſteal from Men of other Religions; and this Wickedneſs of the *Saracens* had converted may *Tartars* thereto. If the Chriſtians kill them in their Robbery, they are reputed Martyrs. From *Tauris* into *Perſia* are twelve Days Journey. In the Confines is the Monaſtery of Saint *Baraſam*, the Monks whereof are like *Carmelites*; they make Girdles, which they lay on the Altar, and give to their Friends, who devoutly eſteem them. *Perſia* containeth eight Kingdoms, whereof the firſt is called *Caſbin*, the ſecond *Curdiſtan*, the third *Lor*, the forth *Suſiſtan*, the fifth *Spahan*. the ſixth *Shiras*, the ſeventh *Soncara*, the eighth *Timochaim*, which is near *Arboreſecco* towards the North. They have fine Horſes here, whence they are ſold into *India*; there are alſo very excellent Aſſes ſold dearer than the Horſes, becauſe they eat little, carry much, and travel far. They have Camels, but not ſo ſwift. Theſe are neceſſary in thoſe Countries, which ſometimes for a long Way yield no Graſs[d].

The People of thoſe Countries are very wicked, covetous, Thieves, and Murderers, profeſſing the Faith of *Mohammed*. Merchants are every where ſlain by thoſe Thieves, unleſs they travel in Caravans. There are excellent Artificers in the Cities, who make wonderful Things in Gold, Silk, and Embroidery. The Countries abound with Silkworms, Wheat Barley, Millet, and other Kinds of Corn, and Plenty of Wine and Fruits; and though their Law forbids Wine, yet they have a Gloſs to correct or corrupt the Text, that if they boil it, then it changeth the Taſte, and therefore the Name alſo, of Wine, and may be drank. *Jaſdi* is a great City in the Confines of *Perſia*, where there is great Trade; it hath alſo many Manufactures in Silk. *Chiaman* is a Kingdom in the Confines of *Perſia* to the Eaſt, ſubject to the *Tartars*. In Veins of the Mountains Stones are found, commonly called Turquoiſes, and other Jewels. There alſo are made all ſorts of Arms and Ammunition for War, and by the Women excellent Needleworks in Silks, with all ſorts of Creatures very admirably wrought therein. There are the beſt Falcons in the World, very ſwift of Flight, red-breaſted, and under the Train leſs than thoſe of other Countries. Proceeding further, you go through a great Plain, and having ended eight Days Journey, you come to a certain Deſcent. In the Plain are many Caſtles and Towns, but in that ſteep Deſcent are many Trees, and thoſe fruitful, but no Habitation, except a few Shepherds Huts. This Country in Winter Time is intolerably cold. After this you come into a large open Plain, where a certain City is ſeated, which is called *Camandu*, heretofore large and populous, but now deſtroyed by the *Tartars*, and the Country is called *Reobarle*. There grow Pomegranates, Quinces, Peaches, and other Fruits, which grow not in our cold Countries. It hath alſo very great Oxen, all white, thin haired, with thick, ſhort, blunt Horns, with a Camel's Bunch on the Back, accuſtomed to bear great Burthens; and when the Pack-Saddles are ſet upon the Bunch, they bow the Knee like Camels, and having received the Burthen, riſe again, being ſo taught. The Sheep of that Country are as big as Aſſes, having ſo long and broad Tails, that they weigh thirty Pounds Weight. They are very fair, and fat, and good Meat.

Moreover, in the Plain of this Country are many Cities and Towns, with high Walls of Earth to defend them from the *Caraons*, that is, *Meſtizos*, that is, a mixed ſort of People between *Indian* Women and *Tartars*, Ten thouſand of which are commanded by one *Nugódar*, the Nephew of *Zagathai*, who formerly ruled in *Turkeſtan*. This *Nugodar*, hearing of the *Malabars* ſubject to *Soldan Aſiden*, without his Uncle's Knowledge, went and took *Dely* with other Cities, erected a new Seigniory, and mixing with the *Indian* Women, raiſed theſe *Caraons*, which go up and down to rob and ſpoil in *Roobarle*, and other Countries. The Plain whereof I now ſpeak is five Days Journey, extended towards the South; but at the End thereof the Way begins by little and little to deſcend for twenty Miles together, and the Road itſelf is very bad, and not without Danger, by reaſon of Thieves. At length you come to very good Plains, which extend themſelves two Days Journey in Length, and the Place itſelf is called *Ormus*.

That Country abounds with Rivers and Palm-Trees; there is alſo Plenty of divers Fowls, eſpecially Poppin-Jays, which are not like ours. From hence you come unto the Ocean, wherein an Iſland is ſeated called *Ormus*, to which many Merchants reſort, bringing Spices, Pearls, precious Stones, Cloth of Gold and Silver, Elephants Teeth, and all other precious Things from *India*. That City is a great Mart, having Cities and Caſtles under it, and is Head of the Kingdom of *Chermain*. The King is called *Ruchined Ben Achomach*, who yields Obedience to the King of *Chermain*. He makes himſelf Heir, if any Merchant dies there. In Summer, by reaſon of the Heat, they betake themſelves to their Summer-Houſes, built in the Waters; and from Nine till Noon there blows a Wind with ſuch extreme Heat from the Sands, that it ſwallows a Man's Breath, and ſtifleth him, which makes them lie in the Water. The King of *Chermain* ſent an Army of ſixteen hundred Horſe, and five thouſand Foot, againſt the Lord of *Ormus*, for not paying his Tribute, which were all ſurprized, and ſtifled with that Wind. The Inhabitants of the Place eat no Bread made of Corn, or Fleſh, but feed upon Dates, ſalt Fiſh and Onions. They have not very ſtout Ships, for they do not faſten them with iron Nails, by reaſon the Wood is brittle, and would cleave; but with wooden Pins, with certain Threads made of the Shells of *Indian* Nuts. Theſe Shells are dreſſed after the Manner of Leather, out of which Threads are cut, of which Threads exceeding ſtrong Cords are made, which are able to endure the Force and Violence of the Waters, and are not eaſily corrupted thereby. Thoſe Ships have one Maſt, one Sail, one Beam, and are covered but with one Deck. They are not calked with Pitch, but with the Oil and Fat of Fiſhes; and when they croſs the Sea to *India*, carrying Horſes and other Freight with them, they loſe many Ships, becauſe that Sea is very tempeſtuous, and the Ships are not ſtrengthened with Iron[e]. The Inhabitants of that Country are black, and have embraced the Law of *Mohammed*. It is the Cuſtom of this Country, when any Maſter of a Family dies, that the Wife left behind him ſhould mourn for him four Years, once a Day. They have Women which profeſs the Practice of Mourning, and are therefore hired to mourn daily for their Dead. Returning from *Ormus* to

---

[d] In the ſeveral Copies of this Work, there are great Variations in the Names of theſe eight Parts, into which the Kingdom of *Perſia* is divided; but as it is very apparent that they are Corruptions only of the Cities, and Provinces of that Kingdom, it is not neceſſary to trouble the Reader with a long Explanation of them.

[e] It is very evident from this Account, that our Author extends the Name of *Ormus* to the Coaſt oppoſite to the Iſland ſo called; and as to the other Country he ſpeaks of, it is plainly the Province of *Kherman*.

Chermain, is a fertile Plain, but the Bread made there cannot be eaten, but by ſuch as are accuſtomed thereto, it is ſo bitter, by reaſon of the Water put therein: Here are excellent hot Baths, which cure many Diſeaſes.

9. From *Chermain*, in three Days riding, you come to a Deſart, which extends to *Cobinham*, ſeven Days Journey from thence. In the firſt three Days you have no Water, ſave a few Ponds, and thoſe ſalt and bitter, of a green Colour in ſhew, as if it were the Juice of Herbs; and whoever taſteth but a little thereof cannot eſcape a Looſeneſs; the like alſo happeneth if any taſte the Salt made of the Water: It is therefore neceſſary that Travellers carry ſome Water with them, if they would eſcape the Inconvenience of Thirſt; the Beaſts alſo which are compelled to drink that Water eſcape not without ſcouring: In the fourth Day they find a freſh River under-ground; the three laſt Days are as the firſt. *Cobinham* is a great City, inhabited by *Mohammedans*, where great Looking-glaſſes of Steel are made. Tutia, or Tutty alſo, which cureth the Eyes, and Spodio, is prepared after this Manner. That Country hath Mines, out of which they dig Earth, which they boil, caſting it into a Furnace, an Iron Gate receiving the aſcending Vapour from above, in which the conglutinated and clammy Vapour becometh Tutia, but the groſſer Matter remaining in the Fire is called Spodio. Leaving the City of *Cobinham*, you meet with another Deſart, eight Days Journey in Length, and grievouſly barren; it hath not either Trees or Fruits, or Water, except what is very bitter, ſo that the very Beaſts refuſe to drink it, except they mix Meal therewith, and Travellers carry Water with them.

But having paſſed over this Deſart, you come to the Kingdom of *Timochaim*, in the North Confines of *Perſia*, where are many Cities and ſtrong Caſtles. There is a great Plain, in which a great Tree grows, called the Tree of the Sun, which the Chriſtians call the dry Tree. This Tree is very thick, and hath Leaves which on the one Side are white, and on the other Side green. It produceth prickly huſky Shells, like thoſe of Cheſnuts, but nothing in them. The Wood is ſolid and ſtrong, in Colour yellow, like Box. There is no Tree within one hundred Miles, except on one Side, on which are Trees within ten Miles. In this Place the Inhabitants ſay, that *Alexander* the Great fought with *Darius*. The Cities are plentifully furniſhed with good Things; the Air is temperate, the People are handſome, but eſpecially Women, the moſt beautiful in my Judgment in the World.

10. *Mulehet*, in the *Saracen* Language, is as much as to ſay, a Place of Hereticks, and of this Place they call the Men *Mulehetici*, that is, Hereticks in their Law, as with us Patarines. As I have ſpoken of the Country, the Prince of it, who is called the old Man of the Mountain, ſhall be next ſpoken of, concerning whom *Marco* heard much from many. His Name was *Aloadine*, and he was a *Mohammedan*. He had, in a lovely Valley, betwixt two Mountains, which were very high and inacceſſible, cauſed a pleaſant Garden to be laid out, furniſhed with the beſt Trees and Fruits he could find, adorned with divers Palaces and Houſes of Pleaſure, beautified with gilded Bowers, Pictures, and Tapeſtries of Silk. Through this Place, by Pipes to different Parts of theſe Palaces, run Wine, Milk, Honey, and clear Water; in them he had placed beautiful Damſels, ſkilful in Songs and Inſtruments of Muſic and Dancing, and to make Sports and Delights unto Men whatſoever they could imagine. They were alſo richly dreſſed in Gold and Sik, and were ſeen continually ſporting in the Garden and Palaces. He made this Palace, becauſe *Mohammed* had promiſed ſuch a ſenſual Paradiſe to his devout Followers. No Man could enter it; for at the Mouth of the Valley was a ſtrong Caſtle, and the Entrance was by a ſecret Paſſage. *Aloadine* had certain Youths, from twelve to twenty Years of Age, ſuch as ſeemed of a bold and dauntleſs Diſpoſition, whom he inſtructed daily as to the Delights in *Mohammed*'s Paradiſe, and how he could bring Men thither; and when he thought proper, he cauſed a certain Drink to be given to ten or twelve of them, which caſt them into a dead Sleep, and then he cauſed them to be carried into ſeveral Chambers of the ſaid Palaces, where they ſaw things as aforeſaid; as ſoon as they awaked, each of them had thoſe Damſels to ſupply them with Meats and excellent Wines, and yield all Varieties of Pleaſures to them; inſomuch that the Fools thought themſelves in Paradiſe indeed.

When they had enjoyed theſe Pleaſures four or five Days, they were caſt into a Sleep, and carried forth again; after which he cauſed them to be brought into his Preſence, and queſtioned them where they had been? Who anſwered, by your Grace, in Paradiſe; and recounted before all what hath been before-mentioned. Then the old Man anſwered, this is the Commandment of our Prophet, that whoſoever defends his Lord, he allows him to enter Paradiſe; and if thou wilt be obedient to me, thou ſhalt have this Grace; and having thus animated them, he was thought happy whom the old Man would command, though it coſt him his Life; ſo that other Lords, and his Enemies, were ſlain by theſe Aſſaſſins, who expoſed themſelves to all Dangers, and contemned their Lives. Hereupon he was eſteemed a Tyrant, feared in all thoſe Parts, and had two Vicars, one in the Parts of *Damaſcus*, and another in *Curdiſtan*, which obſerved the ſame Order with the young Men. He uſed alſo to rob all which paſſed that Way. *Ulan*, in the Year 1262, ſent and beſieged his Caſtle, which after three Years Siege they took, ſlew him, and undermined his Paradiſe, not being able for want of Proviſions to hold out longer [f].

Departing from the aforeſaid Place you come unto a Country pleaſant enough, diverſified by Hills, Plains, and excellent Paſture, in which are Fruits in great Plenty, the Soil being very fruitful: This continues ſix Days, and then you enter a Deſart of forty or fifty Miles, without Water; after this you come to the City *Sapurgan*, where Plenty of Proviſions are found, but eſpecially Melons, the beſt in the World, ſweet like Honey. Paſſing from hence we came to a certain City called *Batach*, which formerly was large and famous, having ſumptuous marble Palaces, but now overthrown by the *Tartars*.

In this City they report that *Alexander* took the Daughter of King *Darius* to Wiſe. To this City on the Eaſt and North-Eaſt continue the Confines of *Perſia*; but if you go from hence, and proceed between the Eaſt and the North-Eaſt, you cannot find any Habitation for two Days Journey, becauſe the Inhabitants of that Place having endured many great Grievances by Thieves, are compelled to fly unto the Mountains, to Places of more Safety. Many Rivers are found there, and much Game. Lions alſo are found there; and becauſe Travellers find no Food in that Journey, they carry as much Victuals with them as is neceſſary for two Days. The Two Days Journey ended, we met with a Caſtle called *Thaican*, where is great Plenty of Corn, and very pleaſant Fields; the Mountains alſo on the South are high, ſome of which are of white and hard Salt; and the Inhabitants for thirty Days Journey about fetch it from thence, being the beſt in the World, and ſo hard that they muſt break it with iron Inſtruments, ſo much that the whole World might have a ſufficient Quantity of Salt from thence. The other Mountains have Store of Almonds and Piſtaches.

Going between the Eaſt and North-Eaſt from hence, the Country is fruitful; but the Inhabitants are Murderers, perfidious *Mohammedans*, and Drunkards. Their Wine is boiled, and truly excellent. They go bare-headed, ſave that the Men bind up their Heads with a certain String of ten Handfuls long; but they make Clothing of the Skins of the wild Beaſts, ſuch as Breeches and Shoes, and uſe no other Garments. After three Days Journey is the City *Seaſſom*, ſeated in a Plain, and there are many

---

[f] It is neceſſary to obſerve, that thoſe People inhabited ſeveral mountainous Countries in the Eaſt, and had much the ſame Cuſtoms in all the Countries where they were ſettled. At the Cloſe of the former Section, I gave ſome Account of this Nation, and ſhall only add here, that the Prince was called the old Man of the Mountains, becauſe they generally made choice of the oldeſt Man amongſt them for their Chief, who had his Reſidence on a Mountain, the ſtrongeſt and beſt fortified in the Country. They pretended to be the Deſcendants of the Royal Family of *Arſaces*, and from thence affected to be called *Arſacides*, from whence came the Word *Aſſaſſins*. The laſt of their Princes was called [illegible], and he and his Subjects were entirely deſtroyed by the before mentioned *Halaku-Khan*.

Caſtles in the Mountains round about it: A certain great River alſo flows through the Middle thereof. There are many Porcupines in that Country, which they hunt with Dogs, and they contracting themſelves with great Fury, caſt their prickly Quills at Men and Dogs, and wound them. That Nation hath a particular Language, and the Shepherds abide in the Mountains, having made Caves for their Habitations. You go hence three Days Journey, without meeting any Inhabitants, to the Province of *Balaxiam*, which is inhabited by *Mohammedans*, who have a peculiar Language. Their Kings, who ſucceed each other hereditarily, are reported to have derived their Deſcent from *Alexander* the Great, and from the Daughter of *Darius*, and are called *Dulcarlen*, that is to ſay, *Alexandrians*. There are found the Ballaſſas, and other precious Stones, of great Value.

No Man, on pain of Death, dare either dig ſuch Stones, or carry them out of the Country, but with the Licence and Conſent of the King; for all thoſe Stones are the King's, and he only ſends them to whom he pleaſes, either as Preſents, or in Payment of Tribute: He exchanges alſo many for Gold and Silver; and this he doth leſt the Stone, whereof there is ſo much Plenty, ſhould become too common and cheap. Other Mountains alſo in this Province yield Stones, called *Lapis Lazuli*, whereof the beſt Azure is made, the like is not found in the World. Theſe Mines alſo yield Silver, Braſs, and Lead. The Country itſelf is very cold: There are many Horſes, and thoſe excellent, large, ſtrong, and ſwift, which have ſo hard and tough Hoofs, that they need no Iron-ſhoes, although they run over Rocks. It is ſaid, that not many Years ago, there were Horſes of the Race of *Alexander*'s *Bucephalus*, which had the ſame forehead Mark as he had, in the Poſſeſſion only of the King's Uncle, who was killed for refuſing the King to have ſome of them; whereupon his Widow, in ſpite, deſtroyed the whole Race. There are alſo excellent Falcons. The Soil of this Country bears excellent Wheat and Barley without Huſk, and Oil made of Nuts, and Muſtard, which is like Flax-ſeed, but more ſavoury than other Oil. There are ſtraight Paſſages and difficult Places. The Men are good Archers and Huntſmen, cloathed in Beaſts Skins. The Hills are ſteep and high, large Plains, fine Rivers; and if any have an Ague, by living two or three Days on the Hills he recovers, which *Marco* experienced himſelf after a Year's Sickneſs. The Women, in the Skirts of their Garments put ſixty or eighty Yards of Cotton; the burlier a Women looks ſhe is in their Eyes the handſomer.

The Province of *Baſcia* is ten Days Journey towards the South from the Country of *Balexiam*. The Country itſelf is very hot, which is the Reaſon the People are brown. They have a Language of their own, and wear gold and ſilver Ear-rings, with Pearls and other Stones artificially wrought in them; they eat Fiſh and Rice, and are Idolaters, crafty and cruel. The Province of *Cheſmur* is ſeven Days Journey diſtant from *Baſcia*, the Inhabitants whereof have alſo their own Language, and are Idolaters beyond all others, cunning Inchanters, forcing their Idols to ſpeak, and darkening the Day. From hence you may go to the *Indian-Sea*. The Men and Women are brown, not wholly black; the Heat being ſomewhat tempered. Their Food is Fleſh and Rice, yet are they exceeding lean: There are many Cities and Towns in this Country; their King is tributary to none. There are certain Hermits in this Province, who in Monaſteries and Cells worſhip Idols, honouring their Gods with great Abſtinence of Meat and Drink, and obſerve great Chaſtity, are very cautious not to offend their Idols, and live long; of theſe are many reputed Saints, and the People ſhew them great Reverence. The Men of this Province kill no living Creature, and ſhed no Blood; and if they eat Fleſh, it is neceſſary that the *Saracens*, who live amongſt them, kill the Creature. Coral is here ſold dearer than any where. We will leave the Way to *India* now, and return to *Balaxiam*, and direct our Way towards *Cathay*, betwixt the Eaſt and North-Eaſt. Beyond *Balaxiam* is a certain River, whereon ſtand many Caſtles and Villages belonging to the King of *Balaxiam*'s Brother; and after three Days Journey is the Province *Vachan*, having in Length and Breadth three Days Journey, the Inhabitants whereof have a peculiar Language, and worſhip *Mohammed*. They are however ſtout Warriors and good Hunters, for the Country abounds with wild Beaſts.

If you depart thence betwixt the North-Eaſt and the Eaſt, you muſt aſcend for three whole Days together, until you come to an exceeding high Mountain, than which there is ſaid to be none higher in the World. There alſo between two Mountains is a great Lake, and through a Plain runs a very fine River, near which are excellent Paſtures, ſo that in them a lean Horſe or an Ox may be fat in ten Days. There is alſo Plenty of wild Beaſts, eſpecially exceeding great wild Sheep, having Horns, ſome of them ſix Spans long, of which they make divers kinds of Veſſels. The Plain contains twelve Days Journey in Length, and is called *Pamer*; nor is there any Habitation there; and Travellers muſt carry Victuals with them: No Bird alſo appears there, by reaſon of the Cold; and it is reported, that if Fire be kindled there it is not ſo bright nor ſo effectual to boil any thing as in other Places. From hence the Way leadeth forty Days Journey further between the Eaſt and the North-Eaſt, through the Mountains, Hills, and Valleys, in which many Rivers are found, but no Village or Herbs, and the Country itſelf is called *Palow*, and ſome Huts and Cottages of Men are ſeen on the Tops of thoſe high Mountains, but ſuch as are ſavage and wicked Idolaters, who live by hunting, and are clothed by the Skins of the Beaſts they kill. After this you come to the Province of *Chaſchar*, which is tributary to the Great Khan, and the People are *Mohammedans*. In it are Vines, pleaſant Gardens, fruitful Trees, Cotton, Flax, and Hemp, and a fertile Soil. The Inhabitants have a particular Language, and are Merchants and Artificers, ſo covetous, that they eat that which is bad, and drink worſe. Some *Neſtorian* Chriſtians are found there, who alſo have their Churches. The Country extends itſelf five Days Journey.

11. *Samarcand* is a great and famous City in that Country, where are lovely Gardens, and a fertile Plain. It is ſubject to the Nephew of the Great Khan; in it the Chriſtians dwell with the *Saracens*, whence little Agreement is betwixt them. It is reported, that on this Account a Miracle happened; the Brother of the Great Khan, named *Zagatai*, who governed that Country about an hundred Years ago, being perſuaded to become a Chriſtian, the Chriſtians, through his Favour, built a Church in Honour of *St. John* the Baptiſt, with ſuch Cunning that the whole Roof thereof was ſuported by one Pillar in the midſt, under which was ſet a ſquare Stone, which, by Favour of their Lord, was taken from a Building of the *Saracens*. *Zagatai*'s Son ſucceeded after his Death in the Kingdom, but not in the Faith, from whom the *Saracens* obtained that the Chriſtians ſhould be compelled to reſtore that Stone; and when they offered a ſufficient Price, the *Saracens* refuſed to receive any other Compoſition than the Stone; whereupon the Pillar lifted up itſelf, that the *Saracens* might take away their Stone, and ſo continued.

Departing again from this City, you come into the Province *Charahan*, about five Days Journey in Length. This Province hath Plenty of Proviſions, being ſubject to the Dominion of the Nephew of the Great Khan. The Inhabitants worſhip *Mohammed*, yet among them certain *Neſtorian* Chriſtians dwell. They are great Artificers, and have moſt of them ſwelled Legs, and a great Wen or Bunch in their Throat, by reaſon of the Waters which they drink. The Province *Cotam* follows between the Eaſt and the North-Eaſt. It is ſubject to the Dominion of the Nephew of the Great Khan, and hath many Cities and Towns. The chief City thereof is called *Cotam*. The Province extends eight Days Journey in Length. There is no Want there of any thing needful to the Maintenance of Life. It hath Plenty of Cotton, Flax, Hemp, Corn and Wine; but the People are not warlike, yet good Artificers in various Manufactures and Merchandize. They acknowledge *Mohammed* for their Prophet.

Proceeding farther through the ſame Country, you come to the Province *Peim*, extending four Days Journey in Length; it is ſubject to the Great Khan, and hath many Cities and Caſtles; the chief City thereof is called *Piem*, near which runs a River wherein precious Stones are found, ſuch as Jaſpers and Chalcedons. The Inhabitants of the Country follow the Law of *Mohammed*, and are Artificers and Merchants. There is a Cuſtom in this Province, that when any married Man goeth into another Place and returneth not home in twenty Days, it becomes lawful for the Wife to marry another Huſband; and the Men alſo, whenſoever the Women go away for the ſame time, do the like. All thoſe Provinces, *viz. Caſcha*, *Cotem*, *Piem*, to the City of *Lop*, are in the Bounds of *Turkeſtan*.

Ciaſcian is ſubject to the *Tartars*; the Name of the Province and chief City is the ſame: It hath many Cities and Caſtles; many precious Stones are found there in the Rivers, eſpecially Jaſpers and Chalcedons, which Merchants carry quite to *Oucbach* to ſell and make great Gain. From *Piem* to this Province, and quite through it alſo, is a ſandy Soil, with many bad Waters, and few good. When an Army paſſes through this Province, all the Inhabitants thereof, with their Wives, Children, Cattle, and all their Houſhold-ſtuff, fly two Days Journey into the Sands, where they know that good Waters are, and ſtay there, and carry their Corn thither alſo to hide it in the Sands, after Harveſt, from the like Fears. The Wind doth ſo deface their Steps in the Sand, that their Enemies cannot find their Way. Departing from this Province, you are to travel five Days Journey through the Sands, where no other Water almoſt than that which is bitter is any where to be found, until you come to the City called *Lop*, which is a great City, from whence is the Entrance of a great Deſart, called alſo the *Wilderneſs of Lop*, ſeated between the Eaſt and the North-Eaſt. The Inhabitants are *Mohammedans*, ſubject to the Great Khan.

In the City of *Lop*, Merchants who deſire to paſs over the Deſart, cauſe all Neceſſaries to be provided for them; and when Victuals begin to fail in the Deſart, they kill their Aſſes and Camels, and eat them. They make it moſtly their Choice to uſe Camels, becauſe they are ſuſtained with little Meat, and bear great Burthens. They muſt provide Victuals for a Month to croſs it only, for to go thro' it lengthways would require a Year's Time. They go through the Sands and barren Mountains, and daily find Water; yet it is ſometimes ſo little that it will hardly ſuffice fifty or a hundred Men with their Beaſts; and in three or four Places the Water is ſalt and bitter. The reſt of the Road, for eight and twenty Days, is very good. In it there are not either Beaſts or Birds; they ſay, that there dwell many Spirits in this Wilderneſs, which cauſe great and marvellous Illuſions to Travellers, and make them periſh; for if any ſtay behind, and cannot ſee his Company, he ſhall be called by his Name, and ſo going out of the Way is loſt. In the Night they hear as it were the Noiſe of a Company; which taking to be theirs, they periſh likewiſe. Concerts of muſical Inſtruments are ſometimes heard in the Air; likewiſe Drums, and Noiſes of Armies. They go therefore cloſe together, hang Bells on their Beaſts Necks, and ſet Marks, if any ſtay [z].

Having paſſed over the Deſart, you come into the City *Sachion*, betwixt the Eaſt and North-Eaſt, ſubject to the Great Khan, in the Province of *Tangut*, where, amongſt the Worſhippers of *Mohammed*, a few *Neſtorian* Chriſtians are found; many Idolaters are alſo there, who have their proper Language. The Inhabitants of this City live not by Merchandize, but on the Fruits of the Earth. The City hath many Monaſteries, conſecrated to divers Idols, in which many Sacrifices are offered with great Reverence: And when a Son is born to a Man, he preſently commendeth him to ſome Idol, and in honour thereof nouriſheth a Sheep that Year in his Houſe, which he preſenteth before it, together with his Son, the next Feſtival Day of that Idol, with many Ceremonies, and great Reverence. Afterwards the Fleſh of the Sheep is boiled, and left ſo long before the Idol till their Prayers are finiſhed, which they make for the Conſervation of their Son; and the Idol hath, as they ſuppoſe, ſucked the Savour of the Meat; after which, all his Kindred being gathered together, eat the Fleſh at home with great Devotion and Joy, but religiouſly keep the Bones in certain Veſſels. The Prieſts have the Feet, Head, Inwards, Skin, and ſome Part of the Fleſh, for their Share.

In celebrating the Funerals of ſuch as were Men in Eſteem, the dead Bodies are buried after this Manner; the Kindred ſend for the Aſtrologers, and tell them what Year, Month, Day, and Hour he who died was born, who, having conſidered the Conſtellation, aſſign the Day when he is to be buried; ſo that when the Planet ſuits not, they preſerve the dead Body ſometimes ſeven Days, and ſometimes ſix Months, preparing a Cheſt for it at home, and joining the Sides together with ſuch Art, that no noiſome Smells iſſue forth. They alſo embalm the Body itſelf with Spices, and cover the Cheſt, fairly painted, with embroidered Cloth; and every Day that the dead Corpſe is kept at home, at the Hour of Dinner a Table is ſpread near the Cheſt, Wine and Meat ſet thereon, for the Space in which one might eat a Meal's Meat, ſuppoſing that the Soul of the dead feedeth on the Savour thereof. The Aſtrologers ſometimes forbid to carry it out of the chief Gate, pretending ſome diſaſtrous Star, and cauſe them to carry it out another Way, and ſometimes break the Wall which is oppoſite to that Place, which the Planet makes more lucky; for otherwiſe the Spirits departed would be offended, and hurt thoſe of the Houſe; and if any ſuch Evil happen, they aſcribe it to the Dead thus wronged. When the Body is carried through the City to be buried without, wooden Cottages are erected in the Way, with a Porch covered with Silk, in which they place the Body, and ſet before it Bread, Fleſh, and delicate Meats, ſuppoſing the Spirit to be refreſhed therewith, which is held to be conſtantly preſent at the burying of the Body; and when they come to the Place where the Body is to be buried, they diligently and curiouſly paint upon Papers made of the Bark of Trees the Images of Men and Women, Horſes, Camels, Money, and Garments, all the Inſtruments of the City founding, which are burned together with the dead Body; for they ſay, that dead Men ſhall have ſo many Men-ſervants, and Maid-ſervants, Cattle, and Money in another Life, as Pictures were burned with him, and ſhall perpetually live in that Honour and Riches.

12. The Province of *Camul* lieth in the wide Country of *Tangut*, ſubject to the Great Khan, having many Cities and Towns; the chief City is called *Camul*. This Province is bounded by two Deſarts, *viz.* the Great Deſart, of which we have ſpoken before, and another that is leſs, of three Days Journey. It abounds with all Things for the convenient Support of Life. The Inhabitants are Idolaters, have a peculiar Language, and ſeem to be born for no other Purpoſe but to apply themſelves to ſporting, ſinging, dancing, writing and reading, after their Faſhion, playing on Inſtruments, and giving themſelves unto Pleaſure. When any Traveller paſſing by goes into any Man's Houſe for Entertainment, the Maſter of the Family receives him with great Joy, and commands his Wife, and all the Family, that as long as he will abide with them, they obey him in all things. In the mean time he departs, and returns not ſo long as the Gueſt remains at his Houſe; and during all this Space the Stranger lies with the Wife, Daughter, and the reſt, as with his own Wives. The Women of the Country are beautiful, and ready to obey all theſe Commandments of their Huſbands, who are ſo beſotted with this Folly, that they think it a glorious thing for them, and believe it ſo acceptable to their Idols, that, through their Favour thus obtained, they proſper, and enjoy Plenty of all things. *Mangu Khan* having heard of this Folly, commanded them not to obſerve this deteſtable Cuſtom any longer, and accordingly they forbore it for about three Years; and then not ſeeing their wonted Fertility, and troubled with ſome domeſtic Croſſes, they ſent Embaſſadors to

---

[z] This Deſart mentioned by our Author, ſtill retains the ſame Name in the moſt modern Maps. His Deſcriptions of this and other Wilderneſſes are very exact; and the Hardſhips he mention in paſſing through them are not at all exaggerated. It is for this Reaſon that it is ſo extremely difficult to paſs from any Part of the Dominions of the Great Mogul to *China*, without taking a prodigious Compaſs to avoid theſe Deſarts. It is not above forty Years ago ſince a certain Rajah who had incurred the Mogul's Diſpleaſure, attempted, with a Train of thirty Followers, to paſs through theſe Deſarts, in which they all periſhed by Hunger and Thirſt, except the Nobleman himſelf, and four of his Attendants, who reached the Province of *Chinſi*, where he and one of his Men died of the Fatigue a few Days after.

the Khan, and earneſtly intreated that he would revoke ſo grievous an Edict, and not aboliſh that ancient Cuſtom which they had received from their Anceſtors. The Khan anſwered, Since you deſire your Reproach and Shame, let it be granted you; go and do herein after your Wont. The Meſſengers returning with this Anſwer, brought great Joy to all the People; and this Cuſtom is obſerved by the whole Nation to this Day.

After the Province of *Camul*, a Traveller entered the Province of *Chinchintalas*, which on the North is bounded by the Deſart, and is ſixteen Days Journey in Length, ſubject to the Great Khan. It hath large Cities, and many Caſtles; the People are divided into three Sects; ſome few acknowledge Chriſt, and theſe are *Neſtorians*; others worſhip *Mohammed*; and the third Sort adore Idols. In this Province there is a Mountain, wherein are Mines of Steel, and Andanicum, and alſo, as was reported, Salamanders, of the Wool of which Cloth was made, which if caſt into the Fire, cannot be burned; but that Cloth is in reality made of Stone, in this manner, as one of my Companions, a *Turk*, named *Curiſar*, a Man indued with ſingular Induſtry, informed me, who had the Charge of the Minerals in that Province. A certain Mineral is found in that Mountain, which yields Thread not unlike to Wool; and theſe being dried in the Sun, are bruiſed in a brazen Mortar, and afterwards waſhed, and whatſoever earthy Subſtance ſticks to them is taken away. Laſtly, theſe Threads, ſo cleanſed, are ſpun like other Wool, and woven into Cloth; and when they would whiten thoſe Cloths, they caſt them into the Fire for an Hour, and then take them out unhurt whiter than Snow; after the ſame manner they cleanſe them when they have taken any Spots; for no other Waſhing is uſed to them, beſides the Fire. But with regard to the Salamander, or the Serpent, which is reported to live in the Fire, I could find nothing of ſuch a Creature in the Eaſt Countries. They ſay there is a certain Napkin at *Rome* woven of Salamander-Wool, wherein the Handkerchief of the Lord is kept wrapped up, which a certain King of the *Tartars* ſent to the Biſhop of *Rome* [h].

After you are paſt this Province, you travel on betwixt the Eaſt and North-Eaſt ten Days Journey, in which few Habitations or Things remarkable are found, and then you come to the Province *Succir*, in which are many Villages and Towns; the chief City is called *Succir*. In this Province, among many Idolaters, a few Chriſtians are found; they are ſubject to the Great Khan. They do not addict themſelves to Merchandize, but live on the Fruits of the Earth. The beſt Rhubarb is found in this Province in great Quantities, which is carried thence by Merchants to divers Parts of the World. Strangers dare not go to the Mountains where it grows, by reaſon of venomous Herbs, which if their Beaſts ſhould eat, they would loſe their Hoofs; but thoſe of that Country know and avoid them.

The general Name of this Province, and of the two following, is *Tangut*: *Campion* is a great City, the Principal in the Country of *Tangut*. In it are Chriſtians, which have three great and fair Churches; *Mohammedans* and Idolaters. The Idolaters have many Monaſteries, where they worſhip their Idols. Thoſe Idols are made either of Stone, Wood, or Clay, ſome of which are inlaid with Gold, and very artificially wrought. Some are ſo great, that they contain ten Paces in Length; faſtened to the Earth, as if they lay upright; near which little Idols are placed, which ſeem to give Reverence to the greater, and both are much worſhipped. The religious Men ſeem to live more honeſtly than other Idolaters, abſtaining from Whoredom, and other baſe things; yet Wantonneſs is not held there any grievous Sin; for they ſay, if a Woman ſues to a Man, he may uſe her without Sin; but not if he firſt ſues to her. They reckon the whole Compaſs of the Year by Moons. In the Moons they obſerve in ſome five, in others four or three Days, wherein they kill no Beaſt, or Bird, nor eat Fleſh. The Laymen marry twenty or thirty Wives, or as many as they are able to maintain; yet the firſt is accounted more worthy, and more legitimate. The Huſband receives no Dowry from the Wife, but he himſelf aſſigns ſufficient Dowry in Cattle, Servants, or Money, according to his Ability. If the Wife becomes hateful to the Huſband, it is lawful for him to divorce her from him when he pleaſes. They take for Wives, without Scruple, their Kinſwomen, or Mothers-in-Law. Our Author, together with his Father and Uncle, remained a Year in this City for the Diſpatch of certain Affairs. From the City *Campion* you proceed twelve Days Journey to the City *Ezina*, bordering on a ſandy Deſart towards the North, being ſtill in the Province or Kingdom of *Tangut*. Many Camels are there, and many other Beaſts and Animals of ſeveral kinds. The Inhabitants are Idolaters, living on the Fruits of the Earth, neglecting Merchandize, or manual Labour, other than Huſbandry. All the Provinces and Cities aforeſaid, *Sachion*, *Camul*, *Chinchintalas*, *Succair*, *Camion*, and *Ezina*, are comprehended in *Tangut*.

13. Having paſſed over the aforeſaid Deſart, you come unto the City *Careoran*, or *Caracarum*, a large Place, which is in Compaſs three Miles, ſtrongly fortified with Earth, for Stone they have none. Near it is a great Caſtle, and in it the Governor's fair Palace. This was a Place, near which in old Times the *Tartars* aſſembled themſelves, and here therefore we will declare how they began to reign. They dwelt in the North Parts, *viz.* in *Curza* and *Bargu*, where are many vaſt Plains, without Cities and Towns, but abounding in Paſtures, Rivers, and Lakes. They had not a Prince of their Nation, but paid Tribute to a certain great King, named, as I have heard in their Language, *Umcan*, which, in ſome Mens Opinion, in our Language ſignifieth *Preſbyter*, or *Prieſt John*. To him the *Tartars* gave yearly the Tenths of all their Beaſts. In Proceſs of Time the *Tartars* ſo increaſed in Multitudes, that *Umcan* was afraid of them, and thought to diſperſe them into ſeveral Parts of the World, and therefore when any of them rebelled, he ſent three or four hundred *Tartars* into thoſe Parts, ſo diminiſhing their Power; and the like he did on other Occaſions, deputing ſome of their Nobility for that Purpoſe. They ſeeing their Ruin intended, and loth to be ſeparated one from another, went from the Places where they dwelt to the Deſart towards the North, where they might be ſafe, and denied *Umcan* their accuſtomed Tribute.

It happened, that about the Year *A. D.* 1162, the *Tartars* having continued for ſome time in thoſe Parts, choſe a King among themſelves, a wiſe and valiant Man, named *Zingis-Khan*; he began to reign with ſuch Juſtice, that he was beloved and feared of all as a God rather than a Prince, inſomuch that his Fame brought all the *Tartars* in all Parts to his Subjection, and he ſeeing himſelf Lord over ſo many valiant Men, determined to leave theſe Deſarts, and commanding them to provide Bows and other Weapons, began to ſubdue Cities and Provinces, in which Conqueſts he placed ſuch juſt Governors, that the People were not diſpleaſed. The chief of them he carried along with him, beſtowing on them Proviſions and Gifts. Seeing therefore that he was advanced to ſo great Glory and Power, he ſent Embaſſadors politickly to *Umcan*, to entreat that he would beſtow his Daughter upon him to be his Wife, which he taking in very evil Part, anſwered with Indignation, and rejecting the Embaſſadors of *Zingis*, ſaid, "Doth my Servant demand my Daughter? Get ye out of my Sight, and tell your Maſter, if he ever make ſuch Demand again, I will make him die a miſerable Death."

But King *Zingis* levying a great Army, marched boldly, and encamped in a certain great Plain named *Tanduc*, ſending unto the King, and ſignifying unto him, that he ſhould defend himſelf; but he commanding a mighty Army, deſcended to the Plains, and pitched his Tent within ten Miles of the Camp of the *Tartars*. Then *Zingis* commanded his Aſtrologers to ſhew him what Event and Succeſs the Battle ſhould have. They cutting a Reed length-wiſe, in two Parts, ſtuck the Pieces by themſelves into the Ground, and wrote upon the one *Zingis*, and the other *Umcan*, and ſaid to the King, In the mean Space while we read, it ſhall come to paſs, by the Idol's Power, that theſe two Parts of the Reed ſhall fight together, and whoſe Part ſhall fall on the other, the King ſhall obtain Victory in the Battle. The Multitude therefore running together to behold that Spectacle, the Aſtrologers began to mumble their Prayers, and read their Inchantments; when preſently the Parts of the Reed being moved, fought together, until the Part of *Zingis* aſcended upon the Part of *Umcan*; which being ſeen by the *Tartars*, aſſured of the future Victory, they were encouraged to the Battle, and *Umcan* being ſlain, the Victory and Kingdom, and *Umcan's* Daughter, remained to *Zingis*.

---

[h] It appears from hence, that our Author was not quite ſo credulous as ſome other Writers, who have told us very ſtrange Stories of the Salamander: But notwithſtanding what is aſſerted of that Creature's living in the Fire is equally falſe and fabulous, yet as it is a Fable generally known in all Parts of the World, we need not wonder that in the Eaſt, where the People are ſo fond of figurative Expreſſions, they ſhould beſtow the Name of Salamander's Wool on Cloth capable of reſiſting the Fire. This is plainly the ſame kind of Manufacture with what the *Greeks* call *Aſbeſtos*, of which there all ſmall Quantities ſtill found in ſeveral Countries, and of late Years, particularly in the Iſland of *Angleſey*, as I have been informed by a very curious and intelligent Gentleman, who has made ſeveral Experiments on it.

Zingis reigned ſix Years after this, in which he conquered many Provinces; and laſtly, when he endeavoured to win a certain Caſtle called *Thaigin*, and came ſomewhat too near, being ſhot in the Knee by an Arrow, he died, and was buried in the Mountain *Altai*. The firſt King of the *Tartars* was called *Zingis*, the ſecond *Khen-Khan*, the third *Bathyn-Khan*, the fourth *Eſu-Khan*, the fifth *Mangu-Khan*, the ſixth *Kublai-Khan*, whoſe Power is greater than all his Predeceſſors, having inherited theirs, and adding by Conqueſt in a manner the reſt of the World; for he lived near ſixty Years in his Government. The Name *Khan* ſignifieth Emperor. All the great *Khans* and Princes of the Blood of *Zingis* are carried to the Mountain of *Altai* to be buried, whereſoever they die, altho' one hundred Days Journey from it; and they which carry the Corpſe to the Burial kill all thoſe that they meet in the Way, ſaying, Go and ſerve our Lord the King in another Life; they kill alſo the beſt Horſes. When the Body of the Great *Khan-Mangu*, the Predeceſſor of *Khan-Kublai*, was brought unto the Mountain *Altai* to be buried, the Soldiers accompanying the Funeral are reported to have ſlain above ten thouſand Men upon the aforeſaid Occaſion[1].

The *Tartarian* Women are moſt faithful to their Huſbands. Adultery is the greateſt Shame amongſt them; yet it is accounted lawful and honeſt that every one may marry as many Wives as he is able to maintain, altho' the firſt be looked upon as principal, and more honourable than the reſt. Theſe live together in one Houſe, without one ill Word, in admirable Concord, make their Merchandizes, buy and ſell, and procure all things neceſſary to their Huſbands and Houſhold, the Men meddling with nothing but their Hunting, Hawking, and things pertaining to Arms. They have the beſt Falcons in the World, and alſo Dogs; they live only on Fleſh and Milk, and what they take in Hunting. They eat Horſes, Camels, Dogs, if fat; and drink Mares Milk, called Coſmos, ſo managed, that it is like white Wine. If the Father dies, the Son may have all his Wives, except his own Mother and Siſters; ſo the Brother being dead, it is lawful for the Brother who remaineth alive to marry the Widow of his deceaſed Brother. The Huſbands receive no Dowry of the Wives, but they themſelves aſſign Dowry to the Wives and their Mothers. Through the Multitude of their Wives, the *Tartars* have many Children; nor is this Multitude of Wives very burthenſome, ſeeing they gain much through their Labour; beſides they are very careful for the Government of the Family, and the Preparation of their Food, and with no leſs Care execute the other Duties of the Houſe; but the Men apply themſelves wholly to Hunting, Fowling, and the Exerciſe of Arms.

The *Tartars* feed many Herds of Oxen, Flocks of Sheep, and other Beaſts and Cattle, and remain with them in Places of Paſture, in the Summer Time, in the Mountains, and colder Places, where they find Paſture and Wood; but in the Winter, they remove to the hotter Countries, where they find Paſture for their Cattle, marching forwards two or three Months together. Their Houſes are covered with Sticks and Felts, and are commonly round, which they carry with them in Carts or Waggons, with four Wheels; for they can fold and extend them, ſet them up and take them down; and they turn whereſoever they go the Door of theſe moveable Houſes always to the South. They have alſo neat Carts of two Wheels, covered with Felt ſo cloſe that the Rain cannot pierce thro' them, drawn by Oxen and Camels, wherein they carry their Wives, Children, and neceſſary houſhold Stuff with them, and defend them from the Injury of foul Weather and Rain.

The *Tartars*, if they be rich, are cloathed in Sables, Ermins, and Cloth of Gold, and all their Furniture is coſtly. Their Arms are Bows, Swords, Pole-axes, and ſome Lances; but they can beſt uſe their Bows, to which they are uſed from their Childhood: They are hardy, active, brave, but ſomewhat cruel, will continue two Days and Nights on Horſeback armed, exceeding patient, and obedient to their Lords; their Cattle alſo are ſtrong and hardy. The Law and Faith of the *Tartars* is this, they ſay, that there is one Great God, Supreme in Heaven, of whom with daily Incenſe, they deſire good Underſtanding and Health. They have another which they call *Natigay*, which is a little Image covered with Felt, or ſome other thing, which every one hath in his Houſe. To this God they make a Wife and Children, placing the Wife's Image at the Left-hand, and the Repreſentations of the Children before his Face. This they call the God of earthly things, which keeps their Children, and their Beaſts, and Corn, and give it great Reverence. Before they eat themſelves, they anoint the Mouths of the Images with Fat of the ſodden Fleſh; and they caſt the Broth out of Doors, in Honour of other Spirits, ſaying, that now their God with his Family has had their Part; and after they eat and drink at Pleaſure.

If the Son of a *Tartar* die before he has been married, and the Daughter of another die alſo unmarried, the Parents of the deceaſed meet together, and celebrate a Marriage between the Dead, and making a Draught in Writing of that Contract, they paint Men and Women for Servants, Horſes, and other Creatures, with Cloaths of all Sorts, and Monies in Paper, and burn them together with the Contract; by the Smoak whereof they ſay that all theſe things are carried to their Children in another World, where they are married; and the Fathers and Mothers conceive they are joined together in ſuch a Bond of Affinity, as if theſe Marriages had been celebrated while the married Couple were ſtill living.

When the *Tartars* go to War, their Prince conducts about a hundred thouſand Horſe, appointing Heads over Tens, Hundreds, Thouſands, and ten Thouſands, by which Subordination, Commands are eaſily maintained; every Hundred is called a *Tuc*, every Ten a *Toman*: When they begin their March, they ſend out Men every Way as Scouts, that no Enemy aſſault them unprovided. Of Horſes and Mares every Man has about eighteen. They carry alſo their Felt-houſes, under which they ſhelter themſelves in Times of Rain. When there falls out ſome important Employment, they will ride ten Days together without Victuals dry or boiled, and live on the Blood of their Horſes, cutting a Vein, and ſucking it. They have Milk dried like Paſte, which they make by boiling the Milk, and ſkimming the Cream, which ſwims on the Top, into another Veſſel, and make Butter; afterwards they ſet the Milk in the Sun, and dry it, and when they go to the Army, carry with them about ten Pounds thereof, and every Morning a Man takes about half a Pound, and puts it in a

---

[1] Our Author has been charged with many Miſtakes in this Liſt of the Princes who ſucceeded *Zingis-Khan*, but he has been charged by thoſe who knew much leſs of the Matter than he did; and therefore to ſet this Matter right, we will give a ſhort Account of that Succeſſion, from the authentick Work of *Abulgaſi-Bayadur-Khan*. Two Years after the Death of *Zingis-Khan*, the *Tartar* Princes, in Compliance with the Emperor's Will, would have exalted *Ugadai-Khan* to that Dignity, which he abſolutely refuſed, becauſe he had an Uncle and two elder Brothers living. This Diſpute laſted forty Days, when at a great Council his elder and younger Brother roſe up and ſaid, You have heard our Father's Will, your Modeſty ſhall not render us guilty of Impiety, we will execute his Will, if you will not; and ſo taking him, one by one Arm, and the other by the other, they forced him into the Imperial Chair againſt his Conſent, *A. D.* 1230. This Prince died ſuddenly in 1245. He was ſucceeded by his Son *Kajuk-Khan*, whom our Author ſtiles *Khen Khan*, who died in the Year 1247, and was ſucceeded by *Mangu-Khan*, who held the Empire to the Year 1257, when he was ſucceeded by *Koplai-Khan*, the ſame with whom our Author lived, and whom he calls *Kublai Khan*. He reigned in all thirty-five Years, and died in the Year 1292, which agrees very well with *Marco Polo's* Relation.

Flaſk, or Leather Bottle, with as much Water as he pleaſes, which while he rides, mixes together, and this is his Dinner.

When they encounter with their Enemies, they ride here and there ſhooting, and ſometimes make a Shew of Flight, ſhooting as they fly; and finding the Enemy broken, rejoin their Forces, and purſue the Victory, having their Horſes ſo at command, as with a Sign to turn any Way. But now the *Tartars* are mixed and confounded, and ſo are their Faſhions. They puniſh Malefactors after this Manner; if any ſteal a Thing of ſmall Value, and is not to be deprived of Life, he is ſeven Times beaten with a Cudgel, or ſeventeen, or ſeven-and-twenty, or thirty-and-ſeven, or forty-ſeven, giving the Strokes according to the Meaſure and Quality of the Offence, and that unto an hundred: Some die through theſe Strokes. But if any have ſtolen an Horſe, or other Thing, for the which he deſerves to die, he is cut aſunder with a Sword in the Middle; but if he will redeem his Life he may, by reſtoring the Theft nine-fold. Such as have Horſes, Oxen, or Camels, brand them with their Marks, and ſend them to feed in the Paſtures without a Keeper. Leaving the City of *Caracarum* and the Mountain *Altai*, we come unto the champaign Country of *Bargu*, which extends itſelf northwards about ſixty Days Journey in Length. The Inhabitants of theſe Places are called *Medites*, and they are ſubject to the Great Khan, and in Manners like the *Tartars*; they are a ſort of ſavage Men, and eat the Fleſh of Beaſts which they take by hunting, eſpecially Stags of which they have Plenty, and they make them ſo tame that they can ride them; they have no Corn or Wine. In the Summer they chiefly practiſe hunting of wild Beaſts and Fowls, on the Fleſh whereof they may live in the Winter; for in Winter Fowls as well as other living Things fly from thence on account of the Extremity of the Cold.

14. After forty Days Journey you come to the Ocean, near which is a Mountain, where Storks and fine Falcons breed, which are carried thence unto the Court of the Great Khan. Here we muſt return unto the City *Campion*; if therefore you proceed farther five Days Journey from the City *Campion* towards the Eaſt, you come to the Kingdom of *Erginul*, in the Province of *Tangut*, ſubject to the Great Khan. In this Kingdom are many Idolaters; there are ſome *Neſtorian* Chriſtians and *Turks*; as alſo many Cities and Caſtles, of which *Erginul* is chief. From hence, if you proceed farther to the South-Eaſt, you may go to the Parts of *Cathay*. Going South-Eaſt towards *Cathay*, there is a certain famous City named *Cinguy*, the Name alſo of the Province, tributary unto the Great Khan contained in *Tangut*; the People are ſome Chriſtians, ſome *Mohammedans*, and others Idolaters. There are alſo found wild Oxen, very near as big as Elephants, very fair, having white and black Hair, ſhort in other Parts, and on the Shoulder three Palms long, fine, white, and in many Reſpects beyond Silk, of which Hair our Author brought ſome to *Venice* as a rare Thing. Many alſo of theſe Oxen are tamed, and made to couple with tame Kine, and the Breed of them are fitter for Buſineſs than any other Creatures, bear great Burthens, are yoked to the Plough, and do twice as much Service as others.

The beſt Muſk in the World is found in this Province, and is taken from a Beaſt of the Bigneſs of a Goat, having Hair like a Stag, Feet and Tail like a Gazell, but without Horns. It hath four Teeth, two above and two beneath, of the Length of three Fingers, as white as Ivory, and is a very beautiful Creature. When the Moon is at full, near the Navel, under the Belly, there grows to this Beaſt an Impoſtume or Bladder, full of Blood, and at the Full Moon they go to hunt them, and take away that Swelling, which is dried in the Sun, and is the beſt Muſk; the Fleſh is alſo good to eat: Maſter *Marco* brought to *Venice* the Head and Feet of this Beaſt dried. The Men live by Merchandize and Arts, and have Abundance of Corn. They are Idolaters, of a fat Body and little Noſe, black Hair, having no Beard but four Hairs on their Chin. The Women are wonderfully fair, and when the Men deſire to marry Wives, they rather make Choice of the Beautiful than the Noble or Rich. It often happens from hence, that a great Nobleman marries a poor Wife, if beautiful, aſſigning a Dowry to her Mother. This Province extends itſelf five-and-twenty Days Journey in Length, and is very fertile; in it are exceeding large Pheaſants, having Trains eight or ten Handfuls long; many other Kinds of Birds are alſo found there, which have very beautiful Feathers of various excellent Colours [k].

After eight Days Journey further Eaſt, you meet with the Province *Egrigaia*, in the which are many Cities and Caſtles; all but this lies ſtill in *Tangut*. The principal City is called *Calacia*, the Inhabitants thereof are Idolaters; there are three Churches of *Neſtorian* Chriſtians, who are ſubject to the Great Khan. In this City Camblets are made, woven with white Wool, and the Hair of Camels, than which there are ſcarce any better in the World. Eaſt from this Province of *Egrigaia*, lies that of *Tandach*, in which are many Cities and Caſtles, and here Preſbyter *John* reſides, who now pays Tribute to the Great Khan. The King of that Nation is called *George*, and is a Prieſt and a Chriſtian, and moſt of the People are Chriſtians. All the Great Khans after his Death (who was ſlain in Battle by *Zingis*) give their Daughters to thoſe Kings to Wife. This King *George* holds not all that the Prieſt *John* before held, and is the Fourth of that Family [l]. There is a Nation there called *Argons*, more ſightly Men, and fitter for Merchandize than the reſt, deſcended of Idolaters and *Mohammedans*. There are alſo two Regions, where they dwell, which in thoſe Parts are called *Og* and *Magog*; but they which dwell there call them *Ung* and *Mongul*; in *Ung* are *Gog*, and in *Mongul* the *Tartars*. Riding Eaſt ſeven Days towards *Cathay* are many Cities peopled with Idolaters, *Mohammedans*, and *Neſtorians*. There is one City called *Sindicin*, where very excellent Arms are made of divers ſorts fit for Armies. In the Mountains of this Province are great Mines of Silver, and much Game, and the Country of the Mountains is called *Idifa*.

Three Days Journey from the City laſt mentioned ſtands another City *Jangamur*, that is, *The White Lake*, where there is a Palace, in which the Great Khan delights, becauſe there are many Lakes and Rivers, many Swans, and in the Plains, Cranes, Pheaſants, Partridges, and other Fowls. There are five Sorts of Cranes there, ſome have black Wings like Crows, others are white and bright, having their Feathers full of Eyes like Peacocks, but of a golden Colour, the Neck black and white, very beautiful; a third ſort for Bigneſs not unlike ours; a fourth little, and very fair, intermingled with red and blue Colours; the fifth of a grizzle, or grey Colour, having red and black Heads, and theſe are very large; and near to this City lies a Valley, where are many Cottages, in which a great Number of Partridges are maintained, which are kept againſt the King's coming to lodge there for ſome Time. Three Days Journey North-Eaſtward, is the City *Ciandu*, which the Great Khan *Kublay* now reigning built, erecting therein a marvellous Palace of Marble, and other Stones, which extends to the Wall on the one Side, and the Middle of the City on the other. He included ſixteen Miles within the Circuit of the Wall on that Side where the Palace joins the City Wall, into which none can enter but by the Palace. In this Incloſure or Park are pleaſant Meadows, Springs, Rivers, red and fallow Deer, Fawns carried thither for the Hawks, of which are mewed there about two hundred Ger-Falcons, which he goes once a week to ſee; and he often uſeth one Leopard or more, ſitting on Horſes, with which he hunts the Stag and Deer, and having taken the beſt, gives it to the Ger-Falcons, and in beholding this

---

[k] This Account of the Muſk Animal is very exact, and contains nothing in it liable to Exception, which ſhews that where our Author relates Things of his own Knowledge, and which fall within the Compaſs of his Underſtanding, he may very well be relied on.

[l] There is the ſame Miſtake here, as in the Relation of *Rubruquis*. The People in *Europe* were extremely deſirous of learning ſome News of this Chriſtian Monarch, as they would needs have him to be; and therefore when our Author heard that this Prince was a *Neſtorian*, he took it for granted that he muſt be Preſbyter *John*; but as we have already ſet that Matter in a clear Light, we ſhall not trouble the Reader any further with it at preſent.

Spectacle, he takes much Delight. In the midſt of a fair Wood he hath built a Royal Houſe on Pillars gilded and varniſhed, on every one of which is a Dragon all gilt, which winds his Tail about the Pillar, with his Head bearing up the Roof, as alſo with his Wings diſplayed on both Sides; the Cover alſo is of Reeds gilt and varniſhed, ſo that the Rain can do it no Injury, the Reeds being three Handfuls thick, and ten Yards long, ſplit from Knot to Knot; the Houſe itſelf alſo may be pulled in Pieces, and taken down like a Tent, and erected again; for it is ſuſtained, when it is ſet up, with two hundred ſilken Cords. The Great Khan uſeth to dwell there three Months in the Year, *viz. June*, *July*, and *Auguſt*. On the twenty-eighth Day of *Auguſt* he departeth to make a ſolemn Sacrifice. He hath an Herd of white Horſes and white Mares, about ten thouſand, of the Milk whereof none may drink, except he be of the Imperial Race of *Zingis-Khan*, and except one Family called *Boriat*, who had this granted by *Zingis* for their Valour; and theſe Beaſts, as they go up and down feeding, are much reverenced, nor dare any go before them, or hinder them in their Way.

The Aſtrologers or Sorcerers tell the Khan, that on the twentieth of the Moon of *Auguſt*, he ſhall diſperſe that Milk here and there for the Honour of all Spirits, and his Idols, that they may be careful Preſervers of all Things which he poſſeſſes. There are two ſorts of Idolaters called *Chebeth* and *Cheſmu*, which in the midſt of Storms aſcend the Palace, and ſuffer no Rain to fall thereon, which they make the People believe comes to paſs by their Sanctity, and therefore they go ſlovenly and negligent of their Perſons, never waſhing nor combing themſelves. They alſo have a horrible Cuſtom to dreſs and eat ſuch as are condemned to Death, but not thoſe which die naturally. They are called alſo *Backſi*, which is the Name of their Order, as Friars Predicants or Minors with us; they ſeem by Magick to do what they liſt. When the Great Khan in his Hall ſits at his Table, it is raiſed eight Yards high; and in the midſt of the Hall, a good Diſtance from the Table, is a great Cupboard of Plate, from whence theſe Sorcerers cauſe Wine or Milk to fill the Goblets, without any Hand touching them; this they do in the Preſence of any Man, whenever their Lord commands it. Theſe *Bachſi* alſo, when they have a mind to make Feaſts to their Idols, go to the Khan, and addreſs him thus, "Sir, You are to know that if our Idols be not honoured with Sacrifices, they will bring Plagues on Corn and Beaſts, and therefore we intreat you to give us the Fleſh of ſo many Sheep, with black Heads, and ſo many Pounds of Incenſe, and Lignum Aloes, that we may make them due Sacrifice and Honour." This they ſpake not to him themſelves, but by certain Lords deputed to that Office, who ſpeak to the Khan, and obtain it. On the Feaſt-day they ſacrifice theſe Beaſts, and ſprinkle the Broth before the Idols.

They have great Monaſteries, ſome of the Bigneſs of a City, in ſeveral of which are about two thouſand Monks, who ſerve an Idol ſequeſtrated from the Laity, as appears by their Shaving and Garments; for they ſhave their Heads and Beards, and wear a religious Garment. Theſe, in the Solemnities of their Idols, ſing with ſolemn Songs, and Lights; ſome of them may marry. There are ſome who obſerve ſtrict Abſtinence, called *Senſim*, leading an auſtere Life; for they eat nothing but Meal mingled with Water, till all the Flour be gone, and eat the Bran without any Savour. Theſe worſhip the Fire; and the Men of other Rules ſay, that theſe, which are ſo auſtere, are Hereticks againſt their Law, becauſe they worſhip not Idols as they do; and there are great Differences between them, and theſe marry not at all. They ſhave their Head and Beard, wear black hempen Garments, or of a bright yellow. They ſleep on thick Mats, and live the ſevereſt Life in the World

15. In this Book I purpoſe to write all the great and marvellous Acts of the preſent *Khan* called *Cublai-Khan*, which is, if expreſſed in our Tongue, Lord of Lords, the greateſt Prince in People, Cities, and Treaſures, that ever was in the World, he being deſcended from the Progeny of *Zingis*, the firſt Prince of the *Tartars*, the ſixth Emperor of that Country, beginning to reign in the Year of our Lord 1256, being *twenty-ſeven Years old*[m], and ruling the People with great Wiſdom and Gravity. He is a valiant Man, exerciſed in Arms, ſtrong of Body, and of a lofty Mind, for the Performance of Matters before he attained to the Dignity of the Empire, which by his Wiſdom he did, againſt the Will of his Brethren. He often ſhewed himſelf a valiant Soldier in the Wars, and carried himſelf like a wiſer and bolder Captain than ever the *Tartars* had; yet ſince he ſwayed the Kingdom, he went but once into the Field, and ſends his Sons and other Captains on Expeditions.

In the Year of our Lord 1286, his Uncle, whoſe Name was *Naiam*, being thirty Years of Age, and having the Command of many People and Countries, ſo that he was able eaſily to bring together four hundred thouſand Horſe, being puffed up through youthful Vanity, would no longer be ſubject, but would needs take away the Kingdom from his Lord *Cublai*, and ſent to another great Lord named *Caydu*, Lord of the Parts towards Great *Turky*, who was Nephew of the Emperor *Cublai*, yet hated him, who yielding to his Motion for Rebellion, promiſed to come in Perſon with an hundred thouſand Horſe.

Both of them began to gather Forces, which could not be done ſo ſecretly but *Cublai* heard of it, and preſently took order to ſet Guards on the Ways, that no Intelligence might paſs, and then aſſembled all the Forces, within ten Days Journey of *Cambalu*, with great Speed, ſo that in twenty Days were gathered together three hundred and ſixty thouſand Horſe, and one hundred thouſand Foot, a great Part of them Falconers, and Men of his Houſhold; with theſe he made Haſte Day and Night towards *Naiam*'s Country, where, at the End of twenty-five Days he arrived, altogether unlooked for, and reſted his Men two Days; then he called his Aſtrologers, and cauſed them, before all the Army, to divine who ſhould have Victory; a thing they uſe to encourage their Men, and they promiſed it to *Cublai*. One Morning whilſt *Naiam* was ſleeping negligently in his Tent, having not ſo much as ſent out any Scouts to gain Intelligence, *Cublai* made ſhew of his Army upon a Hill, himſelf ſat in a certain Caſtle of Wood, full of Archers and Croſs-bow Men, borne by four Elephants, on the Top whereof was the royal Standard, with the Images of the Sun and Moon. He divided his Army into three Bodies, of which he ſent that on the Right-hand, and the other on the Left againſt *Naiam*'s Army. To every ten thouſand Horſe were aſſigned five hundred Foot, with Lances, taught to leap up behind the Horſemen, if any Occaſion of Flight happened, and ſuddenly, on Advantage, to light and kill the Enemies Horſes with their Lances: *Caydu* was not yet come.

The Battles joined, and made a cruel Fight, which continued from Morning till Noon, and then was *Naiam* taken and brought before *Cublai*, who commanded that he ſhould be ſewed betwixt two Carpets, which ſhould be toſſed up and down till the Breath was out of his Body, that ſo the Imperial Blood might not be expoſed to the Sun or to the Air. The Remainder of his People ſware Obedience to *Cublai*, which were four Nations, *Ciazza*, *Carli*, *Barſcol*, and *Sitinqui*. *Naiam* was ſecretly baptized, and by Profeſſion a Chriſtian, but no Follower of the Works of Faith, yet he ſigned his principal Enſign with the

---

[m] The Year of this Emperor's Age, at the Time of his Acceſſion, is put in a different Character, becauſe none of the MSS. have it at all, and it is alſo omitted in ſeveral of the printed Editions; we cannot therefore fairly charge the Author with the Miſtake in it, which conſiſts of ten Years, that Prince at the Time of his Acceſſion being thirty-ſeven Years old, or rather in the thirty eighth Year of his Age. There ſeems alſo to be an Error in the Year of his Reign, but that is eaſily corrected, ſince, as that Prince was raiſed to the Imperial Dignity in the Month of *January*, *Marco Polo*, who reckons according to the *Tartar* Year, places it in 1256, whereas we, computing from the beginning of the Month of *January*, make it 1257. The genealogical Hiſtory of the *Tartars* informs us of the breaking-out of a civil War upon the Election of this Emperor, though it gives us ſomewhat a different Account of the Concluſion of it, in which our Author might be eaſily miſtaken, ſince he owns what he delivers was from Hearſay. However, the Exactneſs as to Dates is truly wonderful, ſince in the Compaſs of one hundred Years after theſe Travels were publiſhed, we had no authentic Hiſtory of the *Tartars* in *Europe*, and conſequently neither *Marco Polo*, nor his Editors, could have any Opportunity of correcting their Accounts, ſo as to make them correſpond with the genealogical Hiſtory before-mentioned. This Remark is an invincible Proof of our Author's Veracity, and of the Value of his Work.

Sign of the Croſs, having with him infinite Numbers of Chriſtians, who were all ſlain.

The *Jews* and *Saracens* that were in the Army of *Cublai*, began to upbraid the Chriſtians with this Diſaſter of the Croſs, who complained of it to *Cublai*; he ſharply reproved the *Jews* and *Saracens* for this Behaviour, and then turning to the Chriſtians, he ſaid, "Surely, your God and " his Croſs would not give any Aid to *Naiam*; but be " not you therefore aſhamed, becauſe God being good " and juſt ought not to defend Injuſtice or Iniquity. " *Naiam* was a Traitor to his Lord, and contrary to " all Equity raiſed Rebellion, and ſought the Help of " your God in his miſchievous Purpoſe; but he, as a " good and upright God, would not favour his Deſigns."

He returned after this with great Triumph to *Cambalu*, and ſtaid there till *Eaſter*. On that Day he called the Chriſtians before him, and kiſſed their Goſpels, and made his Barons do the ſame. He does the like on the great Feaſts of the *Saracens*, *Jews*, and *Heathens*, that *Sego-mamber-Khan*, the God of the Idols, *Mohammed*, *Moſes*, or whoſoever is greateſt in Heaven, might help him; yet he made beſt ſhew of liking to the Chriſtian Faith, but pretended the Ignorance of the *Neſtorian* Prieſts, and the mighty Acts of the Sorcerers, hindered his profeſſing it.

For the better rewarding his Soldiers he kept twelve Barons or Counſellors, who gave him Notice of each Captain's Merit; and accordingly he raiſed them from the command of one hundred to a thouſand, and from one thouſand to ten thouſand, and ſo on, giving them Veſſels of Plate and Tablets. The Captain of one hundred hath a Tablet of Silver; and the Captain of a thouſand, of Gold or Silver gilded; the Captain of ten thouſand has a Tablet of Gold, and a Lyon's Head on it. The Weight of the Tablets differs alſo according to the Dignity. On the ſaid Tablet is written a Command in this Manner: "By the Strength " and Power of the Great God, and by the Grace which " he hath given to our Empire, the Name of Khan be " bleſſed, and let them all die and be deſtroyed which " will not obey him." All Officers who have theſe Tablets have Privileges in Writing of all things, which they are to do and demand; and the Generals when they ride in publick, have a Cloth borne over their Heads, and when they ſit, it is on a Chair of Silver. Their Tablet is of three hundred Sagi, which is equal to fifty Ounces of Gold, with the Images of the Sun and Moon; ſuch as have a Tablet with a Ger-Falcon thereon, may take with them for their Guard the whole Army of a great Commander. *Cublai* is a comely handſome Man, of middle Stature, of a very freſh Complexion, black and bright Eyes, well-faſhioned Noſe, and all the Lineaments of his Body conſiſting of due Proportion. He has four Wives, who are eſteemed lawful, and the firſt born of them is to ſucceed him in the Kingdom, and every one of them is called Empreſs, and holdeth a peculiar Court, and that in a magnificent Palace, having about three hundred Women to attend her, and many Eunuchs Servants, and at leaſt ten thouſand Perſons in their Families.

The Grand Khan hath alſo many Concubines. There is likewiſe a Nation of fair People among the *Tartars* called *Virgut*, where every ſecond Year he ſends Embaſſadors to make ſearch for the faireſt young Women for him; who returning, bring him four or five hundred more or leſs, as they ſee Cauſe. There are Examiners appointed to take a View of all their Beauties, examining Eyes, Noſe, Mouth, *&c.* apart, and ſet a Price on them at ſixteen, ſeventeen, eighteen, nineteen, twenty, or more Carats, and they bring thoſe of that Rate which their Commiſſion appoints; theſe he cauſes to be received by other Examiners, and of ſo many perhaps chuſes thirty of the chief for his Chamber, which he puts to ſome of his Barons Wives to ſee if they ſnore not in their Sleep, if in Smell or Behaviour they be not offenſive; thoſe which are approved are by Fives divided, each fifth Part waiting three Days and Nights in his Chamber by courſe, the other in the next Lodgings preparing whatſoever theſe command them. The leſs prized are put to Cookery and other Offices; and ſometimes the Khan beſtows them on Gentlemen, with great Portions. The Men of that Country eſteem it a Grace and Credit to have Daughters worthy his Liking; and think themſelves born under an ill Planet if they are not kept when ſent to Court.

Cublai had two-and-twenty Sons by his four legitimate Wives, and the Firſt-born of his firſt Wife was called *Zingis*, who would have ſucceeded him in the Empire if he had not died before his Father. He left a Son named *Timur*, a valiant Man, wiſe, and experienced in Arms, who is to ſucceed his Grandfather in the Empire, inſtead of his deceaſed Father; but by his Concubines he hath five-and-twenty Sons, all which are daily exerciſed in Feats of Arms, and are great Lords; ſeven of his Sons by his Wives are Kings of great Provinces, and maintain their States with great Reputation.

16. Three Months of the Year, that is, *December*, *January*, and *February*, *Cublai* reſides ordinarily in *Cambalu* [a], which is at the North-Eaſt Border of *Cathay*; and there, on the South Part by the new City, is ſeated a great Palace; firſt there is a great Wall, each Square being eight Miles, with a deep Ditch environing, and a Gate in the Middle of each; after which is the Space of a Mile in Circuit, where Soldiers ſtand; after this is another Court of ſix Miles ſquare, with three Gates on the South-ſquare, and three on the North; that which is in the midſt being in both the greater, and kept ſhut, except when the Khan paſſeth that Way; the other is always open to others; in each Corner of this Wall, and in the midſt is a fair Palace, eight in all, very large, in which are kept the Khan's Ammunitions, and Furniture of all Sorts; Horſes in one; in another Bows and Shooting Artillery; in a third, Caſtlets, Cuiraſſes, and Leather Armour; and ſo in the reſt.

Within this Circuit is another Walk like the former, very thick and ten Paces high, all the Battlements white, the Walls ſquare, each Square a Mile in Length, with ſix Gates as the former, and eight Palaces alſo very large, wherein are the Khan's Proviſions; between theſe two laſt Walls are alſo many fair Trees and Meadows, in which are Deer with other Game, and Store of Graſs, the Paths being raiſed two Cubits to ſpare it; no Dirt or Puddles of Water being therein. Within this laſt Wall is the Palace of the Great Khan, the greateſt that hath been ſeen, extending to the Wall on the North and South, and open where the Barons and Soldiers paſs. It hath no Cieling, but a very high Roof; the Foundation of the Pavement ten Palms high, with a Wall of Marble round about it two Paces wide, as it were a Walk. At the End of the Wall without, is a fair Turret with Pillars. In the Walls of the Halls and Chambers are carved Dragons, Soldiers, Birds, Beaſts of divers kinds, Hiſtories of Wars gilded; the Roof is ſo made that nothing is ſeen but Gold and Imagery; in every Square of the Palace is a great Hall, capable of holding a Multitude of People; the Chambers are diſpoſed the beſt that may be deviſed: The Roof is red, green, azure, and of all Colours. Behind the Palace are great Rooms and private Store-houſes for his Treaſure and Jewels, for his Women, and other private Purpoſes.

Over-againſt the ſaid Palace of the Khan is another for *Zingis* his Son, whoſe Court was in all Things like his Father's. Near this Palace towards the North is a Mount made by Hand, a Mile in Compaſs, one hundred Paces high, adorned with Trees that are always green; unto this Mountain the King commands all the Trees to be brought from remote Parts, lading Elephants with them, for they are taken up with the Roots, and are tranſplanted in this Mountain; and becauſe this Mountain is always green, it is called the *Green Mountain*: And where the Earth of the Mount was taken away, are two Lakes anſwering each other, with a ſmall River ſupplying them with ſtored Fiſh, and ſo grated that the Fiſh cannot get out.

---

[a] There have been large Diſſertations written upon this Deſcription of our Author, and great Diſputes about the City here deſcribed; ſome will have it one Place, ſome another, becauſe it is a *Tartar* Appellation; and modern Writers ſpeak of this City by another Name. We have not either Time or Room to waſte in this Controverſy; and therefore we ſhall cut it ſhort. *Marco Polo* wrote by the Ear chiefly, and therefore ſet down *Cambalu* for *Khan-balick*, i. e. the Imperial City; and it is allowed, that *Khan-balick*, is the City of *Peking*, the preſent Metropolis of *China*, of which we ſhall hereafter have Occaſion to ſpeak at large in another Place; and ſhall therein take an Opportunity of juſtifying the Accounts given us in the Text by *Marco Polo*.

The City of *Cambalu* in the Province of *Cathay*, ſeated on a great River, was famous, and the Royal Seat in ancient Times; and this Name *Cambalu* ſignifies the City of the Lord or Prince. This City the Great Khan removed to the other Side of the River where the Palaces are, for he underſtood by the Aſtrologers that it would rebel againſt the Empire. This new-built City is called *Taidu*, and he commanded all the *Cathayans* to go out of the Old City into the New; which contains in Compaſs four-and-twenty Miles, every Side of the Square containing ſix Miles. It hath Walls of Earth ten Paces thick at the Bottom, and at the Top but three, as growing by little and little thinner. The Battlements are white; every Square of the Wall hath three principal Gates, which are twelve in all, having ſumptuous Palaces built over them. There are alſo certain Pavilions in the Angles of the Walls where the Arms of the Garriſon, which are one thouſand at each Gate, are kept. The Buildings are ſquared, and the Streets laid very ſtrait by Line throughout the City; ſo that from one Gate a free Proſpect opens throughout the City to the oppoſite Gate; having very ſtately Houſes built on both Sides like Palaces, with Gardens and Courts, divided according to the Heads of Families: In the midſt of the City is a certain noble Building, wherein hangeth a very great Bell; after the tolling whereof in the Night, no Man muſt go out of his Houſe until the Beginning of the Day following, except it be for ſome extraordinary Cauſe, as for a Woman in Travail, and then they are compelled to carry Lights with them.

Without the City of *Cambalu* are twelve large Suburbs three or four Miles long, adjoining to each of the twelve Gates, more inhabiting in the Suburbs than in the City; here Merchants and Strangers live, each Nation having ſeveral Store-houſes, or Burſes, in which they lodge. No dead Corpſe of any Man is burned within this City, but the Bodies of Idolaters are burned without the Suburbs, where the dead Bodies of other Sects are buried; and becauſe an huge Multitude of *Saracens* inhabit there they have above twenty-five thouſand Harlots in the Suburbs and in the City; and theſe have a chief Captain appointed over every hundred and thouſand, and one General, whoſe Office is, that when Embaſſadors come, or ſuch as have Buſineſs with the Khan, whoſe Charges he defrays, then this Captain giveth every Embaſſador, and every Man of his Family, a Change of Women every Night at Free-coſt, for this is their Tribute. The Guards, every Night, carry ſuch to Priſon whom they find walking late; and if they be found guilty, they are beaten with Cudgels, for the *Bachſi* tell them, that it is not good to ſhed Man's Blood; but many die of theſe Beatings. The Great Khan hath in his Court twelve thouſand Horſe-men, which they call *Caſitan*, faithful Soldiers of their Lord, who guard his Perſon, more for State than Fear; and four Captains have the Charge of theſe, whereof every one commandeth three thouſand. When one Captain, with three thouſand Soldiers within the Palace, hath guarded the King for three Days and Nights, another Captain with his Soldiers ſucceeds; and ſo, throughout the Year, this Courſe of watching by Turns is obſerved [o].

When on account of any feſtival Day he keeps a ſolemn Court, his Table, which is higher than the reſt of the Tables, is ſet at the North Part of the Hall, his Face is to the South, having the firſt Queen on his Left-hand, that is, his principal Wife; and his Sons and Nephews, and thoſe of the Royal Blood, on his Right; yet their Table is in a lower Place, ſo that they ſcarce touch the King's Feet with their Heads, the Seat of the eldeſt being higher than the reſt; the Princes ſit in a lower Place than that; their Wives alſo obſerve the like Order: Firſt, the Khan's Sons Wives and his Kinſmen ſit lower on the Left-hand, and after thoſe of the Lords, and of every Captain and Nobleman, each in their Degree and Order; and the Emperor himſelf, while he ſits at his Table, may caſt his Eyes upon all that feaſt with him in that Hall. There are not Tables for them all to ſit; but the greateſt Part of the Soldiers and Barons eat on Carpets. At all the Doors ſtand two gigantick Fellows with Cudgels, to ſee that none touch the Threſhold, which, if he does, they take his Garments away, which he muſt redeem by receiving ſo many Blows as ſhall be appointed, or elſe loſe them. They who ſerve the King, and thoſe ſitting at the Table, all of them cover their Mouths with Silk, leſt their breathing ſhould by any means touch the King's Meat or Drink: And when he hath a Mind to drink, the Damſel who giveth it goes back three Paces and kneels down, and then the Barons and all the People kneel, and the Muſicians ſound their Inſtruments. There is no Cauſe, ſince I would avoid Prolixity, why I ſhould write any thing concerning the Meats which are brought to the Table, how dainty and delicate they are, and with what Magnificence and Pomp they are ſerved in.

All the *Tartars* obſerve this Cuſtom, to celebrate the Birth-day of their Lord moſt honourably. The Birth-day of *Cublai* is kept the twenty-eighth of *September*, and this Day he accounteth more ſolemn than any in the whole Year, except the firſt of *February*, on which they begin the Year. The King therefore, on his Birth-day, is clothed in a moſt precious Garment of Gold, and about two thouſand Barons and Soldiers are clothed in the ſame Colour of Gold, though of Silk Stuff, and a Girdle wrought in Gold and Silver, which is given them, with a Pair of Shoes. Some wear Pearls and Garments of great Price, who are next to the Khan; and theſe Garments are not worn but on thirteen ſolemn Feaſts, according to the thirteen Moons of the Year; all are then clothed like Kings. This Cuſtom is alſo obſerved by the *Tartars*, that on the Birth-day of the Great Khan, all the Kings, Princes, and Nobles, who are ſubject to his Dominions, ſhould ſend Preſents unto him, as to their Emperor; and they who deſire to attain any Place of Dignity or Office of him, offer their Petitions unto twelve Barons appointed for that Purpoſe; and what they decree is all one as if the Emperor himſelf had anſwered them. All People alſo, of what Faith or Sect ſoever, whether *Chriſtians* or *Jews*, *Saracens* or *Tartars*, and *Pagans*, are bound ſolemnly to call upon their Gods, for the Life, Safety, and Proſperity of the Great Khan [p].

On the Firſt of *February*, which is the Beginning of the *Tartar* Year, the Great Khan, and all the *Tartars*, whereſoever they are, celebrate a very ſolemn Feaſt, and all, as well Men as Women, deſire to be clothed in white Garments as a Token of good Luck; therefore, that Fortune may favour them all the Year, they wear white at the Beginning thereof. The Rulers of Cities, and Governors of Provinces, mindful of their Duty, ſend unto their Emperor this Day Preſents of Gold and Silver, Pearls and precious Stones, many white Cloths, and other white Things, and many Horſes of a white Colour. The reſt of the *Tartars*, at the Beginning of the Year, ſend white Preſents one to another. It is the Cuſtom of thoſe who bring Preſents, if they can, of each to preſent nine Times nine; as, if they ſend Horſes, to preſent nine Nines, that is eighty-one; and ſo of Gold, of Cloths, and other Things; that ſometimes he hath, by this Reckoning, one hundred thouſand Horſes. Alſo, at this happy Seaſon, all the Elephants which the Emperor hath (five thouſand in Number) are brought unto the Court, covered with Tapeſtry, the Similitudes of divers Beaſts and Fowls being pourtrayed thereon, carrying upon their Shoulders Cheſts full of Gold and Silver Veſſels; many Camels are alſo brought, covered with fine ſilken Cloths, which bring other Things neceſſary for the Court.

---

[o] This Method of poſting Guards and relieving them, was extremely ancient in the Eaſt, as appears from the Accounts given us by the *Greek* Writers of the Oeconomy in this reſpect of the *Perſian* Emperors; and it is ſtill practiſed by almoſt all the *Tartar* Princes, and particularly by the Great Mogul, as we ſhall have Occaſion to ſhew in the ſecond Volume.

[p] This Account agrees exactly with what is related from Authors of good Credit in Dr. *Hyde*'s moſt learned Treatiſe of the Religion of the ancient *Perſians*, with reſpect to the Ceremonies obſerved on the Birth-day of the Emperor, and at the Beginning of the new Year. Indeed the Conformity is ſo great, that one might be tempted to believe there is a nearer Relation between the *Tartars* and the ancient *Perſians* than is commonly imagined; and I muſt confeſs, that I cannot, for my own Part, help thinking that the Religion of the *Tartars* is very nearly the ſame with that of the old *Perſians*, that is to ſay, I apprehend the Lamas of the one correſpond with the Magi among the others.

On this Day, in the Morning, all the King's Captains, Barons, Soldiers, Phyſicians, Aſtrologers, and Governors of Provinces and Armies, and other Officers of the Empire, aſſemble in the great Hall before the King, and they who happen to have no Place there, for the Multitude ſtand in another Place, where they may ſee them, all being placed in their Order and Degree. One riſeth, who is amongſt their Clergy as a Prelate, and crieth with a loud Voice, *Bow down and adore*, and preſently all do Reverence, bending down their Foreheads to the Earth; then he ſaith, *God preſerve our Lord with long Life and Joy*; and all anſwer, *God grant*; then he ſaith, *God increaſe and advance his Empire, and preſerve his Subjects in Peace, Concord, and Proſperity*; and all anſwer, *God grant*; and this they do four Times; then the Adoration being finiſhed, the ſame Prelate goes to an Altar, richly adorned, on which is a red Table, whereon is written the Name of the Khan; and taking a Cenſer, and putting Spices therein, they perfume the Table and the Altar with great Reverence, in Honour of the Great Khan, and ſo return to their Places; after which are offered the Gifts of which we have ſpoken; and then the Tables are prepared, and a moſt ſolemn Dinner held, eating and drinking with great Joy with their Wives, in manner before deſcribed. And laſtly a tame Lion is brought to the King, which, lying at his Feet like a gentle Whelp, acknowledgeth and careſſes his Lord.

In thoſe three Months in which we ſaid before the Emperor reſides in the City of *Cambalu*, *viz.* in *December*, *January*, and *February*, all the Hunters which the Emperor hath in all his Provinces round about the Province of *Cathay*, apply themſelves to hunting, and bring all the larger wild Beaſts, ſuch as Stags, Bears, Roe-Bucks, Wild Boars, and Deer, to their Governors; who if they be diſtant from the Emperor's Court leſs than thirty Days Journey, ſend ſuch Beaſts as are taken by Waggons or Ships to the Emperor; having firſt bowelled them: But ſuch as are forty Days diſtant from his Court, ſend only the Skins, which are neceſſary for making of Armour. He hath many Leopards and Wolves for hunting, and many Lions alſo greater than thoſe which are in *Babylon*, in the Hair whereof certain little Beams appear of divers Colours, *viz.* white, black, and red, and they are bred to catch Bears, Boars, Stags, Roe-Bucks, wild Aſſes, and wild Oxen, and it is marvellous to ſee the Lion's Fierceneſs and Dexterity in this ſort of Hunting; two Lions are commonly carried in one Waggon when they go to hunt, and with them a Dog, with which they are tamed; and they carry them in this Faſhion becauſe of their Fury and Unrulineſs; and they muſt carry them contrary to the Wind, for elſe the Beaſts would ſcent them and flee. He hath alſo many tame Eagles, which are ſo taught, that they take Hares, Roe-Bucks, Deer, and Foxes; among which ſome of them fear not to ſeize upon Wolves, and vex them ſo grievouſly, that without Labour and Danger they may be taken by them.

The Khan hath in his Court two which are Brethren, one called *Boyan*, the other *Mingan*; called in the *Tartar* Language *Ciurco*, that is, Maſters of the Game; each of them hath the Command of ten thouſand Men: They which are under one of them are cloathed in Red; the others in Sky Colour; when they hunt, theſe keep diverſe Sorts of Dogs, to the Number of five thouſand Maſtiffs and others. In hunting they go with their People one on the Right-hand, and the other on the Left; and the King and they take up ſo great a Length of the Plain, that from one End to the other is a Day's Journey, ſo that no Beaſt can eſcape them; and it is great Pleaſure when the Khan goes in the midſt to ſee the Dogs follow Hares, Bears, and all other wild Beaſts. Theſe Brethren are bound by Covenant from the Beginning of *October* to the End of *March* to bring to the Court one thouſand Head of Beaſts and Birds, beſides Quails and Fiſhes, the beſt they can, in ſuch Proportion.

17. The Month of *March* coming in the Great Khan departeth from the City of *Cambalu*, and proceedeth North-eaſtward towards the Ocean, diſtant thence two Days Journey, bringing with him about ten thouſand Falconers, who have Falcons, Hawks, Ger-Falcons, and other kind of Fowls of Prey, fit for Hawking. Theſe Falcons diſperſe themſelves by an hundred or two hundred in a Company, and the Birds that are taken for the moſt Part are brought unto the King, who by reaſon of his Gout, ſitteth in a wooden Houſe, which two Elephants carry, covered with the Skins of Lions, and within hung with Cloth of Gold, having with him for his Recreation twelve choice Hawks, and twelve Courtiers; many Noblemen and Soldiers ride by, who guard the King's Perſon, who when they ſee Pheaſants or Cranes, or other Birds flying in the Air, ſpeak to the Falconers, who are near the King, and they ſignify the ſame unto the King, uncover the King's Houſe, and let their Falcons and Hawks fly, and the King ſitting on his Bed beholds the Paſtime of the Birds. Other ten thouſand Men go alſo with the King, who in that Hawking run hither and thither by two and two, and mark whither the Falcon and Hawks fly that are caſt from the Fiſt, that if need be they may help them, and theſe in the *Tartar* Language are called *Toſcaol*, that is to ſay, Watchmen, or Markſmen, being ſkilful in a certain kind of Whiſtle, wherewith they call in the Hawks that are flown; nor is it needful that the Falconer, who let the Hawks fly, ſhould follow them, ſeeing thoſe of whom I now ſpeak are buſily employed in taking up the Hawks, and are careful that by no means they are hurt or loſt; and every flying Hawk carrieth a little Table of Silver on her Foot, ſigned with the Mark of her Maſter, or Falconer, that if ſhe be loſt ſhe may be reſtored to her Owner[q].

But if the Mark cannot be known the Hawk is delivered to a certain Baron, who for this Cauſe is called *Bulangazi*, to whom are brought all loſt Things (otherwiſe the Finder would be puniſhed as a Thief) and to him Loſers reſort to enquire of Things loſt. He hath a moſt eminent Place noted by his Enſign, that in ſo great an Aſſembly of People he may always be known. While they are thus buſied in Sporting and Hawking they come into a certain great Plain called *Carzarmodin*, where the Tents of the King, and all the Courtiers are prepared, about ten thouſand in Number.

The firſt is the Khan's Pavilion, under which ten thouſand Soldiers ſtand, beſides Barons and Noblemen, with the Door to the South, ſuſtained by three Pillars, wrought with curious and excellent carved Work, and covered with the Skins of Lions, and other wild Beaſts, which keep out Rain; But within the Walls of the Pavilion are covered with moſt coſtly Skins of Ermines and Sables, although in thoſe Countries theſe Skins are accounted moſt precious, ſo that ſometimes Skins worth two thouſand Sultanines of Gold are ſcarce ſufficient for one Pair of Veſts. The *Tartars* call the Sable the *Queen* of *Furs*; the Cords wherewith theſe Pavilions are ſupported are of Silk. There are alſo other Pavilions erected, wherein the Wives, Sons, and Concubines of the King remain. Further alſo the Falcons, Hawks, Ger-Falcons, and other Birds, which ſerve for Hawking, have their Tents; for there is ſo great a Multitude of Tents, that to them that come thither it ſeems at a Diſtance as if a famous City was built there.

The King remains all *March* in that Plain, and takes innumerable Beaſts, and infinite Multitudes of Fowl; for no Man may in this time hunt in all the Provinces of that Kingdom, at the leaſt within five Days Journey one Way, ten another, and fifteen a third Way, of the Khan's Court, nor keep an hunting Dog or an Hawk from the Beginning of *March* until the Month of *October*. No Man is permitted to uſe any Device or Engine whatſoever to take Stags, Deer, Roe-Bucks, or Hares, leſt he ſhould hinder their Breed; and hence it is, that there is ſuch Plenty of Game. It is incredible what Multitudes of People, Merchants, and Merchandizes of all ſorts are ſeen in *Cambalu.* The Money of the Great Khan is not made of Gold, or Silver, or other Metal; but they take the middle Bark from the Mulberry tree, and this they make firm, and cut into divers round Pieces, great and little, and imprint the King's Mark thereon; of this Paper-Money therefore the Emperor cauſeth an huge Maſs to be made in the City of *Cambalu*, which ſufficeth for the whole Empire, and no Man under Pain of Death may coin any other, or ſpend any other Money, or refuſe it in all his Kingdoms and Countries, nor any coming from another Kingdom dare ſpend any other Money in the Empire of the Great Khan. Hence it follows, that Merchants often coming from remote Countries unto the City of *Cambalu*, bring with them Gold, Silver, Pearl, and Precious Stones, and receive the King's Money for them; and becauſe this Money is not received in their Country, they change it again, in the Empire of the Great Khan, for Merchandize, which they carry away with them. He alſo payeth Stipends to his Officers, and Army, in the above-mentioned Money. And laſtly, whatever thing he needs in his Court, he buyeth with this Money. Wherefore there is not a King to be found in the World, who exceedeth him in Treaſure, not expended on the Mint, as elſewhere.

---

[q] It may not be amiſs to remind the Reader, that this Paſſage of our Author confirms what we have before met with in the Accounts of the *Arabian* Travels, and in the Relation of the Monk *Rubruquis*. It is alſo clear from the Whole of this Account, that the Notions generally received of the Barbarity, Stupidity, and want of Genius among the *Tartars*, are not extremely well founded, but are rather to be ranked among thoſe Prejudices which are the Effects of ſpeaking or thinking without juſt Motives, or, in plain *Engliſh*, are the Effects of Ignorance.

The Great Khan hath twelve Barons, as is ſaid, before which are the Council of War, who diſpoſe of martial Affairs, and the exalting or diſgracing of Captains and Soldiers. Their Office is called *Thai*, that is, the High Court, becauſe they have none above them but the Khan. Other twelve Barons are appointed Counſellors for the four-and-thirty Provinces, which have a fair Palace in *Cambalu*, in which is for every Province a Judge, and many Notaries. Theſe have Power to chuſe Governors of the ſaid Provinces, and preſent their Names to the Khan, who confirms them. Theſe alſo have the Charge of the Treaſure to collect and diſpenſe the ſame; their Office is called *Singh*, that is, the ſecond Court, ſubject to none but the Khan, yet reputed leſs noble than the former, that being a military Eſtabliſhment.

There are many publick Roads from the City of *Cambalu*, which conduct to the neighbouring Provinces, and in every one of them, at the End of five-and-twenty or thirty Miles, are Lodgings or Inns built called *Lambs*, that is Poſt-houſes, with large and fair Courts, Chambers furniſhed with Beds, and other Proviſions, every way fit to entertain great Men, nay, even to lodge a King. The Proviſions are laid in from the Country adjacent; there are about four hundred Horſes, which are in Readineſs for Meſſengers and Embaſſadors, who there leave their tired Horſes, and take freſh; and in mountainous Places, where are no Villages, he ſends People to inhabit, about ten thouſand at a Place, where theſe Lambs or Poſt-houſes are built, and they cultivating the Ground for their Proviſions. Theſe excellent Regulations continue unto the utmoſt Limits of the Empire, ſo that in the publick Ways throughout the whole Empire, about ten thouſand of the King's Inns are found; and the Number of the Horſes appointed for the Service of the Meſſengers in thoſe Inns are more than two hundred thouſand, a thing almoſt incredible; hence it is that in a little while, with Change of Men and Horſe, Intelligence comes without Stop to the Court; and if any wonder how ſo many Men and Beaſts ſhould be provided for, he muſt conſider, that the *Moors* and *Gentiles* have many Women, and by them abundance of Children, ſome having thirty Sons, which follow them, armed; and for Victuals, they ſow three kinds of Seeds, Rice, Panike, and Millet, which yield an hundred Fold. They make no Bread, but boil theſe with Milk, or Fleſh. Wheat will not ſo increaſe with them, nor ſuffer they any Ground, which will bear, to lie untilled; and the Cattle continually increaſe, ſo that each of them carries with him ſix, eight, or more Horſes into the Field, for his own Perſon. The Horſes are employed by Turns, ſo that of the four hundred, two hundred are in the Stables ready, the other two hundred at Graſs, each a Month at a time. Their Cities alſo that are adjoining to Rivers or Lakes are appointed to have Ferry-boats in Readineſs for the Poſts, and Cities on the Borders of Deſarts are directed to have Horſes and Proviſions for the Uſe of ſuch as paſs through thoſe Deſarts; but have a reaſonable Allowance for this Service of the Khan. In Caſes of great Conſequence, the Poſt rides with a Ger-Falcon Table, and is equipped ſo, that he will ride two hundred Miles in a Day, or two hundred and fifty ſometimes; alſo they ride all Night, Foot-Poſts running by them with Lights, if the Moon does not ſhine.

They ſound a Horn, that the freſh Horſes may be brought forth for them to mount preſently, and having their Bellies and Heads girded, they run as faſt as the Horſe can go; and thoſe which are able to endure this exceſſive Riding, are on that Account in great Reputation among them, who admire nothing ſo much as Horſemanſhip. There are alſo between theſe Inns other Habitations, three or four Miles diſtant one from another, in which there are a few Houſes, where Foot-Poſts live, having each of them his Girdle hung full of ſhrill ſounding Bells. Theſe keep themſelves always ready, and as often as the Khan's Letters are ſent to them, convey them ſpeedily to the Poſts at the next Village, who, hearing the Sound of the Foot-Poſt coming, when at a Diſtance, expect him, and receive his Letters, preſently carry them to the next Watch; and ſo the Letters paſſing through ſeveral Hands, are conveyed, without Delay, to the Place whither they ought to come: And it often happens, that the King by this learns News, or receives new Fruits, from a Place Ten Days Journey Diſtance, in two Days. As for inſtance, Fruits growing at *Cambalu*, in the Morning, by the next Day at Night are at *Xandu*; but all the before-mentioned Poſts are free from all Tribute, and receive a great Recompence for their Labours from the King's Rent-gatherers beſides. Some alſo are appointed to examine theſe Poſts Monthly, and to puniſh their Faults, if they are fairly convicted.

He ſends yearly to the divers Provinces of his Empire, to enquire whether any Prejudice be done to the Corn by Tempeſts, Locuſts, Worms, or any other Means; and when he hath Notice given him, that any Province or City hath ſuſtained any Damage, he remits his Tribute to that People for that Year, and ſends Grain for Victual and for Seed out of his own Granaries; for in a Time of great Plenty the King buys abundance of Corn, and keeps it with great Care by his Officers, three or four Years in Granaries, that when there happens to be a Scarcity of Corn in one Country, that Defect may be ſupplied out of the King's Storehouſes in another. He ſelleth his Grain for a fourth Part of the common Price, and always provides that his Storehouſes are kept fully ſupplied. Likewiſe when any Murrain lights among Cattle, he ſends them other Cattle, which he has for Tenths in other Provinces; and if a Thunderbolt has ſtricken any Beaſt of any Herd or Flock, he receives no Tribute from it for three Years, let the Herd be ever ſo great; neither will he receive any Cuſtom of a Thunder-ſtricken Sheep, as thinking God is angry with them that are ſo ſtricken.

Likewiſe that Travellers may diſcern all Places able to bear Trees, he hath cauſed Trees to be planted, at a convenient Diſtance one from another, near the principal Roads, and in the ſandy and deſart Places he hath cauſed Stones and Pillars to be erected for that Purpoſe, and Officers are appointed to look to theſe Things. He plants Trees the rather, becauſe his Aſtrologers tell him, that planting Trees lengthens the Life of Man. They make excellent Drink, in the Province of *Cathay*, of Rice and divers Spices, which in the Taſte thereof excels the Flavour even of Wine; and they who drink more greedily thereof than is fit, or the Nature of the Drinker can bear, become ſooner intoxicated than if they had drank Wine.

Through the whole Province of *Cathay*, certain black Stones are dug out of the Mountains, which put into the Fire, burn like Wood, and, being kindled, preſerve Fire a long time, and, if they be kindled in the Evening, they keep Fire all the Night[*]; and many uſe thoſe Stones, becauſe that though they have plenty of Wood, yet is there ſuch frequent Uſe of Stones and Laths, that the Wood would not ſerve.

---

[*] The Reader will eaſily diſcern, that what our Author ſpeaks of here with ſo much Wonder, is, in truth, nothing more than a Coal-mine, which might appear very ſtrange to him, who very probably had never ſeen or heard of any ſuch thing; but ſome of the Miſſionaries ſeem to be inexcuſable, who have dreſſed up this Matter with ſuch pompous Expreſſions, as might induce unwary Readers to believe that the *Chineſe* dug Fire out of the Earth, and that they laid it up in Cellars or Vaults; whereas after all, there is nothing ſtranger in their digging and keeping Coals there, than what we ſee practiſed every Day in our own Country, and very probably, if we were to examine other Wonders that are told us, as cloſely and ſeverely as they deſerve, we might be able to diſcover that they were rather rendered marvellous by the Ignorance of Relators, than by any thing ſupernatural in themſelves.

It is not amiſs, having ſpoken of his Proviſion abroad, to mention his Care for the Poor of *Cambalu*. When he hears of any honourable Family decayed by Miſfortune, or of any which cannot work, and have no Subſiſtence, he gives to ſuch Families the whole Year's Expences, each Head of ſuch Families going to the Officer for that Purpoſe, and ſhewing their Bill of Allowance, receive Proviſions accordingly. There is a Place ſet apart for thoſe Officers; they are provided alſo with Garments for Winter and for Summer. The *Khan* having the Tenths of all Wool, Silk, and Hemp, which he cauſes to be made into Cloaths, in a Houſe for that Purpoſe appointed; for all Trades are bound one Day in the Week to work for him. He provides alſo Apparel for his Armies, and in every City cauſes Cloth to be made of his Tythe Wool. You muſt underſtand, that the *Tartars*, according to their antient Cuſtoms, beſtowed no Alms, but rather upbraided thoſe that were in Neceſſity, as hated of God; but the Idolaters, eſpecially thoſe *Bachſi*, have propounded it as a good Work acceptable unto God, and have taught him to be thus bountiful; ſo that in his Court, Bread is never denied to any who aſk it, and there is no Day in which are not given away twenty thouſand Crowns in Rice, Millet, and Panike; whence he is eſteemed as a God by his Subjects.

There are in *Cambalu*, *Chriſtians*, *Saracens*, and *Catayans*, about five thouſand Aſtrologers and Diviners, which the Great *Khan* provideth yearly in Food and Raiment, as he doth thoſe Poor aboveſaid. Theſe have an Aſtrolabe, in which are marked the Signs of the Planets, the Hours and Points of all the Year. Herein all thoſe Aſtrologers, each Religion apart, view the Courſe of the Year according to every Moon, obſerving the Diſpoſition of the Weather, referring always to God to do more or leſs after his own Pleaſure. They write alſo upon certain Squares they call *Tacuini*, the Things which are to come that Year, which they ſell to thoſe that will buy them, and ſuch as ſpeak moſt Truth are moſt honoured. If any intend any great Work, or to go a far Journey, and will know the Event beforehand, he has recourſe to theſe Aſtrologers, to ſee it with their Eyes in the Heavens, which they pretend to do, comparing the preſent Conſtellation with that of his Birth, which they demand of him; ſo foretelling him the Good or Evil. The *Tartars* reckon the Computation of their Years by Twelves, the firſt ſignified by a Lion, the ſecond by an Ox, the third by a Dragon, the fourth by a Dog, and ſo through the whole Twelve; ſo that if it be demanded of a Man when he was born, he will anſwer, ſuch a Point of ſuch an Hour of ſuch a Day, in the Year Lion. This their Fathers exactly ſet down in a Book, and when the Twelve is complete, they go over the ſame again[a].

Of their Religion, we have ſaid, that they are Idolaters; and for their Gods, have a Table ſet aloft in the Wall of their Chamber, on which is written a Name repreſenting the High God of Heaven, and there every Day with a Cenſer of Incenſe they adore it in this Manner; they lift up their Hands aloft, and ſtrike their Teeth thrice, praying it to give them a good Underſtanding and Health, and deſire thereof nothing elſe. Beſides, on the Ground they have another Statue called *Natigai*, the God of earthly Things, with his Wife and Children, whom likewiſe they worſhip with Incenſe, ſtriking or gnaſhing the Teeth, and lifting up their Hands, and deſire thereof Temperature of the Air, Fruits of the Earth, Children, and the like. They hold the Soul to be immortal, and that when a Man dies, it enters into another Body, better or worſe, according to the Merits of the former Life; as of a poor Man to become a Gentleman, and after, a Prince or Lord, and ſo higher, till it be abſorbed in God; and if it have ill deſerved, to be a poorer Man, after a Dog, always deſcending to the loweſt Rank of Baſeneſs. They have a comely Speech, ſalute chearfully and honeſtly, have a graceful Carriage, and feed cleanly. They bear great Reverence to their Parents, and if any be undutiful, or regardleſs of their Neceſſity, there is a publick Tribunal aſſigned for this Particular to puniſh ungrateful or diſobedient Children: Priſoners are releaſed at three Years End, and marked in the Cheek, that they may be known for Malefactors.

The Barons and People which go to the Grand *Khan*, obſerve theſe Rights, firſt, within half a Mile of the Place where the *Khan* is, all is ſtill and quiet, without Noiſe or any loud Speech; that every Baron carries continually a little Veſſel to ſpit in, after which he covers it, none daring to ſpit in the Hall: They have fur Buſkins of white Leather, which they put on when they enter the Hall, putting off the former, and giving them to the Servants, leſt they ſhould foul the Carpets.

18. Ten Miles off *Cambalu* is a certain great River named *Puliſangan*, emptying itſelf into the Ocean, by which many Ships with much Merchandize aſcend; and in that Place there is a very fair Bridge, all of ſerpentine Stone, curiouſly wrought, containing three hundred Paces in Length, and eight in Breadth, ſo broad that ten Men may ride abreaſt; on each Side, it is ſecured with a Wall of Marble, and Pillars ſet in a Row, and in the Height of this Aſcent is a great and high Pillar, at the Feet whereof is a great Lion, and on the Top another, and ſo quite through the Bridge: One Pace and a half Diſtance are Pillars with Lions on the Top, and a fair Wall with wrought marble Work betwixt, to keep Men from falling. Having paſſed over the River and Bridge, and proceeding thirty Miles weſtward (in which Palaces are continually ſeen, with Vineyards and fertile Fields) you come to the City *Gouza*, both fair and great, having many Monaſteries of Idols. Cloth of Gold and Silk are made there, and the pureſt and fineſt Cambricks or Lawns; and many common Inns for Strangers or Travellers are found in that City. The Citizens are Artificers and Merchants. A Mile without this City the Way parteth, one leading Weſt, the other South-Eaſt; that to the Weſt leadeth through the Province of *Cathay*, but the other towards the Country of *Mangi*, from the City of *Gouza* to the Kingdom of *Tainfu*[b].

You ride ten Days through *Cathay*, always finding many fair Cities, well furniſhed with Vineyards, and tilled Fields, from whence Wine is carried to *Cathay*, where there is none: There are many Mulberry-trees for Silk-worms, the People civil, and Cities very numerous and populous. *Tainfu* is the Name of the Kingdom, and of the chief City, which is great and fair, hath much Trade, with Store of Ammunition fit for the Khan's Armies. The Wine about this City ſerveth the whole Province. Seven Days further weſtward is a pleaſant Country, beautified with many Caſtles and Cities, in which alſo there is great Trade in different Merchandize carried on. After which you come to a City very great, named *Pianfu*, in which there is vaſt abundance of Silk and much Trade. Weſtward from *Pianfu* ſtands a very pleaſant Caſtle, named *Thaigin*, anciently built by a King called *Dor*; in it is a ſpacious Palace, wherein is a fine Hall, in which are painted all the famous Kings which have reigned there, and it is a fair Spectacle. Of this King *Dor*, they ſay, he was potent, and was attended only by young Damſels, of which he had many in his Court. Theſe alſo, when he had a Mind to take his Pleaſure, carried him in a ſmall light Chariot through the Caſtle, which was ſo fortified by Art and Nature, that the Governor thereof feared none, no not *Umcan* his Lord, againſt whom he rebelled.

But ſeven Men, profeſſing Fidelity and Service to *Dor*, took him at a Diſadvantage in hunting, and brought him

---

[a] The *Tartarian* Cycle was a very good Contrivance, and, as ſuch, has been not only preſerved amongſt them, but ſpread itſelf alſo into other Countries; we ſhall hereafter have Occaſion to explain it more at large; at preſent it ſhall ſuffice to obſerve, that ſomething of the ſame kind was antiently uſed in the northern Nations of *Europe*, and is ſtill practiſed among the Savages in ſome Parts of *America*.

[b] It muſt be acknowledged, that the Deſcription here given by our Author is a little dark and perplexed, and that at the ſame time it is no eaſy Matter to ſettle the Places he mentions; but on the other hand it muſt be conſidered, that this is the firſt Account that was received here in *Europe* of the great Country of *China*, and that this Account was written by a Man little, if at all, acquainted with the Sciences, and who aimed at nothing more than tranſcribing from his Note-book the Names of Places and Provinces, their Diſtances from each other, with ſuch other Circumſtances relating to them as at ſo great a Diſtance of Time he was able to recollect.

Priſoner to Preſbyter *John*, or *Umcan*, who put him on vile Cloaths, and appointed him to keep his Cattle, and ſet over him a ſtrong Guard, till two Years were ended; after which he commanded him to be brought before him, and being dreſſed in princely Apparel, he giving him his Pardon, after a ſharp Admonition, ſent him well attended to the Repoſſeſſion of his Kingdom. About twenty Miles beyond the Caſtle *Thaigin* is the River *Caramaran*, which by reaſon of the exceeding Breadth and Depth thereof, hath no Bridge over it in all the Space from thence, till it floweth to the Ocean. On the Shore thereof are many Cities and Caſtles built, wherein great Trade is carried on. This Country abounds with Ginger, Silk, and Fowl, eſpecially Pheaſants, ſo that three of them are bought for a *Venetian* Groat. There grow Reeds in vaſt Plenty, ſo thick that ſome are a Foot, and others a Foot and a half in Compaſs, which are applied to many Uſes. Paſſing this River, after two Days Journey, is the famous City called *Carianſu*, where many Cloths of Gold and Silk are made. Here grow Ginger, Galingale Spike, and many Spices. The People are Idolaters.

Proceeding ſeven Days Journey weſtward, many Cities and Towns, lovely Fields and Gardens are found, and every where Mulberries for Silk-worms. As for the People, they are moſtly Idolaters; but there are alſo *Chriſtians*, *Turks*, *Neſtorians*, and ſome *Saracens*. There is a vaſt Abundance here of wild Beaſts and Fowl. If you proceed ſeven Days Journey farther, you ſhall come to a certain great City, named *Quenſanſu*, which is the chief City of the Kingdom, in which have reigned many famous Kings; and, at this Day, the Son of the Great Khan, called *Mangalu*, hath the Command thereof. That Country yields great Plenty of Silk, Cloth of Gold, and all other Things neceſſary for furniſhing an Army, and for the Preſervation of Man's Life. The Inhabitants worſhip Idols, and there are ſome *Chriſtians*, *Turks*, and *Saracens*. Five Miles without this City ſtandeth the Palace of *Mangalu*, ſeated in a Plain, where are many Springs, Rivulets, and Places of Game. There is a high Wall encompaſſing a Park of five Miles, where are all Sorts of wild Beaſts and Fowls. In the Midſt is an excellent Palace, having many Halls and Chambers, great and fair, all painted with Gold and Azure, and numberleſs Statues adorning it. The King, with his Courtiers, delights himſelf in hunting the wild Beaſts, and taking of Fowl, and following his Father's Examples in Juſtice and Equity, is much beloved of his People.

Proceeding three Days Journey weſtward from the ſaid Palace, through a very beautiful Plain, where many Cities and Caſtles are, which abound with ſilk Merchandize and Manufactures, you come to a Country, where in the Mountains and Vallies are frequent Habitations, and many Villages of the Province of *Chunchian*. The Inhabitants, as to Religion, are Idolaters; and as to Employment, Huſbandmen. Alſo in that Country they hunt Lions, Bears, Stags, Roe-bucks, Deer, and Wolves. The Plain is two Days Journey over, and the Country is about twenty Days Journey weſtward, well inhabited, being finely diverſified into Mountains, Vallies, and Woods. After theſe twenty Days, towards the Weſt, there lies a Province called *Achbaluch Mangi*, that is, the *White City*, on the Borders of *Mangi*, which is well peopled. This Province, for two Days Journey, hath a Plain, in which are an infinite Number of Villages: Beyond theſe lie Mountains, Vallies, and Woods, all well inhabited. It hath Plenty of wild Beaſts, and of thoſe Creatures that yield Muſk. In this Province Ginger grows in great Plenty, as alſo Corn and Rice.

After twenty Days Journey through thoſe Hills is a Plain, and a Province in the Confines of *Mangi*, named *Sindinſu*. The chief City hath the ſame Name, and is very great, and exceeding rich, being twenty Miles in Circuit. It hath had many rich and mighty Kings; but an old King dying, left three Sons Succeſſors in the Kingdom, who divided the City into three Parts, compaſſing every Part with their proper Walls; all which, notwithſtanding, were contained within the former Wall; but the Great Khan ſubjected nevertheleſs that City and Kingdom. Thro' this City run many Rivers, and many Places round about, ſome half a Mile over, ſome two hundred Paces, very deep; on them are many Bridges of Stone, very fair, eight Paces broad, ſet on both Sides with Marble Pillars, which bear up a Timber Frame that covers the Bridge, each Bridge having Streets and Shops thereupon. When the Rivers have paſſed through the City, they become one great River, called *Quian*, which runs one hundred Days Journey hence to the Ocean. Near theſe Rivers are many Cities and Caſtles, and on them innumerable Ships for Merchandize. Proceeding four Days Journey farther, thro' a very fine Plain, many Cities, Caſtles, and Villages are found, in which five Lawns extend in beautiful Order. There are alſo many Wild Beaſts there. Beyond the Plain, which we have now mentioned, is the wide Province of *Thebet*, which the Great Khan vanquiſhed and waſted; for in it lie many Cities deſtroyed, and Caſtles overthrown, by the Space of twenty Days Journey; and becauſe it is become a Wilderneſs, wanting Inhabitants, wild Beaſts and Lions are there increaſed exceſſively, and it is requiſite therefore that Travellers carry Victuals with them. Very large Cane grows in this Country, ten Paces in Length, and three Palms in Thickneſs, and as much from Knot to Knot. When Travellers therefore will reſt at Night ſecure from Beaſts, they take great Bundles of the greener Reeds, and putting Fire under, kindle them, which make ſuch a Crackling, and ſo great a Noiſe, that it may be heard two Miles off; which terrible Sound the Wild Beaſts hearing, flee away, but it has ſometimes happened, that Horſes and other Beaſts, which Merchants uſe for their Journey, hearing this Noiſe, and Cracking, have grown alſo much afraid, and betaking themſelves to Flight have eſcaped from their Maſters; and therefore wiſer Travellers binding their Feet together, detain them in their proper Places.

19. Theſe twenty Days Journey ended, having paſſed over the Province of *Thebet*, we met with Cities, and many Villages, in which, through the Blindneſs of Idolatry, a wicked Cuſtom is uſed; for no Man there marrieth a Wife that is a Virgin; whereupon, when Travellers and Strangers, coming from other Places, paſs through this Country, and pitch their Pavilions, the Women of that Place having marriageable Daughters, bring them unto Strangers, deſiring them to take them, and enjoy their Company as long as they remain there. Thus the handſomeſt are choſen, and the reſt return home ſorrowful, and when they depart, they are not ſuffered to carry any away with them, but faithfully reſtore them to their Parents. The Maiden alſo requireth ſome Toy, or ſmall Preſent, of him who hath deflowered her, which ſhe may ſhew, as an Argument and Proof of her Condition; and ſhe that hath been loved and abuſed of moſt Men, and ſhall have many ſuch Favours and Toys to ſhew to her Wooers, is accounted more noble, and may on that Account be advantageouſly married; and when ſhe would appear moſt honourably dreſſed, ſhe hangs all her Lover's Favours about her Neck, and the more acceptable ſhe was to many, ſo much the more Honour ſhe receives from her Countrymen. But when they are once married, they are no more ſuffered to converſe with ſtrange Men, and the Men of this Country are very cautious never to offend one another in this Matter. They are Idolaters, and cruel, thinking it no Sin if they rob and exerciſe Theft. They live by Hunting and the Fruits of the Earth: Many Beaſts alſo are found with them, yielding Muſk, called in this Country Gadderi. They have a Language of their own, and have no Money, not ſo much as the Paper-Money of the Khan, but uſe Corals for Money, and are cloathed with the Skin of Beaſts, or coarſe Hemp. This Country belongs to the Province of *Thebet*, for *Thebet* is a very large Province, and has been ſome time divided into eight Kingdoms, having many Cities and Towns, with Mountains, Lakes, and Rivers, where Gold is found. The Women wear Coral about their Necks, and hang it about the Necks of their Idols, as a precious thing. In this Country there are very large Dogs, as big as Aſſes, which take wild Beaſts, eſpecially wild Oxen, called *Beyamini*.

There are in this Province many ſorts of Spices, which are never brought into theſe Parts. This *Thebet* is (as all the former Provinces) ſubject to the Khan. On the Weſt of the Province of *Thebet* bordereth the Province of *Caindu*, which was formerly governed by her own King, now by the Governors of the Khan. By the Weſt, you muſt not underſtand that the Countries are in the Weſt; but that we, departing from thoſe Parts which are betwixt the Eaſt and North-eaſt, came hither Weſtward, and therefore reckon them Weſtward. The People are Idolaters, have many Cities, the chief called by the Name of the Province, *Caindu*, built on the Frontiers of the Province. There is a large Salt Lake, in which are abundance of Pearls, white, but not round, ſo many, that in point of Price they would become little Worth, if they were ſuffered to be carried away at Mens Pleaſures. It is therefore provided, upon Pain of Death, that none ſhould preſume to fiſh for Pearl in this Lake, without the Licence of the Great Khan. There is alſo a Mountain, in which is found a Mine of Turquoiſe Stones, the digging of which is reſtrained by the like Licence. Many Gadderi are alſo in this Province, which yield Muſk. That Lake alſo, which breeds Pearl in ſuch Plenty, abounds with Fiſh, and the whole Country is full of wild Beaſts, that is to ſay, of Lions, Bears, Stags, Deer, Ounces, Roe-bucks, and divers kinds of Birds. Cloves are found there in great Plenty, which are gathered from ſmall Trees, which have Boughs and Leaves like the Bay-tree, but ſomewhat longer, and ſtraiter, white Flowers, and brittle, as are the Cloves, and when they are ripe they are black and duſky. Ginger, Cinamon, and ſeveral other Spices, grow there in great Plenty, which are not brought into our Countries. Wine, however, though plentiful with us, groweth not in it, but inſtead thereof they make a moſt excellent Drink of Corn, Rice, and divers Spices.

The Inhabitants of this Country worſhip Idols, to which they are ſo beſotted, that they think they deſerve their Favours, if they proſtitute their Wives, Siſters and Daughters, to be abuſed by Travellers; for when any Stranger cometh amongſt them, every Maſter of a Houſe ſeeketh to give him Entertainment, and leaving the Females and Houſe to the Strangers, will not return until they depart, which he doth for the Glory of his Idols, hoping they will be more gracious to him. Certain Sprigs of Gold are their Money, uſing Weights, and according to the Weight of the Sprig, is the Value of the Money, and this Money is their larger ſort of Money without Stamp. They have alſo a leſſer, which they make after this manner. They boil Salt in a Caldron for about an Hour, and of this, being congealed, they make little Lumps like Two-penny Loaves, which being ſolid, is ſigned with the Prince's Stamp, and they make vaſt Profit thereof in Places remote from Cities, which have Store of Muſk, and Gold, and want Chapmen. Theſe barter their Gold for Salt, to uſe with their Meats.

Leaving this Province, they proceed fifteen Days Journey further, and in that Space meet with Caſtles, and many Villages, whoſe Inhabitants have the ſame Cuſtoms that the Province of *Caindu* hath, and at length they come unto a River called *Brius*, by which the Province of *Caindu* is bounded. In this River Gold is found in great Plenty, which they call *Di Paiola*, waſhed in Veſſels to cleanſe it from the Sand and Earth. On the Banks thereof Cinamon grows in great Abundance. This River falls directly into the Ocean. Having paſſed over the River *Brius*, they come Weſtward to the Province *Caraian*, which contains ſeven Kingdoms. It is ſubject to the Great Khan, whoſe Son, named *Sentemur*, is made Vice-King of that Kingdom, and is a young Prince, rich, wiſe, and juſt.

The Inhabitants thereof are Idolaters; you ride five Days Journey through it, and find it all well peopled: They live on their Beaſts and Fruits. The Country breeds excellent Horſes, and it hath a peculiar and difficult Language. Having finiſhed theſe five Days Journey, you come to the chief City called *Jaci*, which is both great and famous, hath in it many Merchants and Artificers, and many ſorts of People, Idolaters, *Chriſtians*, *Neſtorians*, and *Saracens*; but the greateſt Part of the Inhabitants are Idolaters. It hath Corn and Rice, notwithſtanding which they eat no Bread of Corn, becauſe it is not wholeſome, but they make Bread of Rice; they make Drink alſo of it, and ſeveral Spices, which is very pleaſant; they uſe white Porcelane inſtead of Money, and for Ornaments, Shells which are found at Sea. Much Salt is made in this City of the Water of Salt Wells, from whence the Vice-King hath great Profit. The Men of this Country care not if any Man come to their Wives, ſo they give their Conſent. There is alſo a Lake there very full of Fiſh, containing an hundred Miles in Compaſs. Theſe Men eat raw Fleſh of Hens, Beef, Mutton, and Buffaloes, but prepared after this Manner: They firſt cut it into ſmall Pieces, and after ſeaſon it with excellent Spices; but the poorer ſort ſhred it, and lay it in Garlick Sauce, and eat it as we do boiled Meat. Departing from the City of *Jaci*, having travelled ten Days Journey Weſtward, we came to the Province called, as the chief City, *Carazan*, which *Cogatin*, Son of *Cublai*, governeth. The Rivers there yield great Quantities of waſhed Gold, and alſo that which is ſolid, and on the Mountains they find Gold in the Vein, and they give one Pound of Gold for ſix of Silver. They ſpend Porcelane for Money brought thither from *India*.

The Inhabitants are Idolaters; very great Serpents are bred in this Country, ſome of which are ten Paces in Length, and in Thickneſs ten Spans. They have two little Feet before near the Head, with three Talons or Claws like Lions, and the Eyes bigger than a Loaf, ſhining very bright. They have their Mouths and Jaws ſo very wide, that they are able to ſwallow a Man, great and ſharp Teeth; nor is there any Man, or other living Creature, which can behold theſe Serpents without Terror. There are alſo ſome leſs, of eight, or ſix, ſome of five Paces long, which are taken after this Manner: In the Day-time they uſe to lie hid, by reaſon of the Heat, in Holes, out of which they go by Night to ſeek their Prey, and devour whatſoever they get, Lions, Wolves, as well as other Beaſts, and then go to ſeek Water, leaving ſuch a Track thro' their Weight in the Sands, as if a Piece of Timber had been drawn there; whereupon the Hunters faſten under the Sands great Iron Spikes, in their uſual Tracks, whereby they are wounded and ſlain. The Crows preſently proclaim the Serpent's Fate, and by their Cries, invite the Hunters, which come and flea him, taking out his Gall, which is uſed for divers Medicines, amongſt other things, for the biting of mad Dogs, a Penny-weight given in Wine; and for Women in Travail, for Carbuncles, and other Diſtempers, and they ſell the Fleſh dear, as being exceeding delicate.

There are ſtout Horſes bred in this Province, which by their Merchants are carried into *India*. They commonly take one Bone out of the Tail, leſt he ſhould bend his Tail hither and thither, and eſteem it more comely, that it hang downright. They uſe long Stirrups as the *French*, which the *Tartars* and other Nations, for their Shooting, uſe ſhort, becauſe when they ſhoot they riſe up. They uſe Targets and Armour in the Wars, made of the Hides of Buffaloes; they have Lancets and Croſs-bows, and poiſon all their Arrows. Some of them, who are Villains, are ſaid to carry Poiſon about them continually, that if they be taken they may ſuddenly ſwallow it, and ſo dying at once, prevent Torture; for which Cauſe the great Lords have Dogs Dung ready, which they force them to ſwallow, and that makes them vomit the Poiſon. Before the Great Khan ſubjected them, they uſed, when any Stranger which ſeemed of good Preſence and Parts lodged with them, to kill him by Night, ſuppoſing that thoſe good Parts of that Man would abide afterwards in that Houſe; and this ſilly Notion has proved the Death of many.

Travelling forwards from the Province of *Carazan*, after five Days Journey Weſtward, is the Province of *Cardandan*, which alſo is ſubject to the Great Khan: The chief City thereof is called *Vociam*, the Inhabitants whereof uſe Porcelane, and weighed Pieces of Gold inſtead of Money; for in that Country, and many others lying round about, Silver Mines are not found, and they give an Ounce of Gold for five Ounces of Silver, and according to this Exchange great Gain is made. The Men and Women in that Country cover their Teeth with thin Plates of Gold, which they ſo fit to them, that the Teeth themſelves ſeem, as they were, ſet in thoſe Plates. The Men about their Arms and Legs make Liſts, pricking the Places with Needles, and putting therein a black indelible Tincture; and theſe Liſts or Marks are eſteemed with them as a Mark of great Galantry. They give their Minds to nothing but Riding, Hunting, Hawking, and the Exerciſe of Arms, leaving the Houſhold

Cares to the Women, who are aſſiſted therein by Slaves, which they buy, or take in War. When a Woman is once delivered, ſhe forſakes the Bed, waſhes the Child, and dreſſes it, and then the Huſband lieth down, and keeps the Child with him forty Days, not ſuffering it to depart; is viſited all that Time by Friends and Neighbours, to chear and comfort him. The Woman looks to the Houſe, and carries the Huſband his Broths to the Bed, and gives Suck to the Child by him. Their Wine is made of Rice and Spice; their ordinary Food is Rice, and raw Fleſh, dreſſed as before mentioned. In this Province there are no other Idols, ſave that every Family adoreth the oldeſt Man in the Houſe, of whom they ſay, come themſelves and all they have; they dwell for the moſt part in wild and mountainous Places, but Foreigners come not to thoſe Mountains, becauſe the Air would kill them, being in Summer very corrupt.

They have no Letters, but make their Contracts and Obligations by Tallies of Wood, one half whereof one keepeth, and the other the other, which being afterwards paid, the Tally is deſtroyed. There are no Phyſicians in this Province, nor in *Caindu*, *Vociam*, and *Caraian*; but when any is ſick, they call the Magicians or Idol Prieſts together, and the ſick Perſon declares his Diſeaſe unto them; then the Magicians dance, and ſound certain Inſtruments, and bellow forth Songs, in Honour of their Gods, till at length the Devil entereth into one of them, ſkipping and playing in the Dance. Then leaving the Dance, they conſult with him that is poſſeſſed, for what Cauſe that Diſeaſe happened unto him, and what is to be done for his Recovery. The Devil anſwereth by him, becauſe he hath done this or that, or becauſe he hath offended this or that God, therefore he fell into this Diſeaſe. Then the Magicians intreat that God to pardon him this Offence, promiſing, that if the ſick Perſon recovers, he ſhall offer a Sacrifice of his own Blood; but if the Devil, or the Prieſt, think the Patient to be ſick of ſuch a Diſeaſe that he cannot be freed from the ſame, he uſeth to anſwer; This Man hath ſo grievouſly offended that God, that he cannot by any Sacrifices be appeaſed; but if he think he ſhall recover, he commandeth to offer ſo many Rams, having black Heads, and to prepare ſo many Magicians with their Wives, by them to offer Sacrifices, and that God may then be appeaſed towards him; which being heard, his Kinſmen quickly cauſe thoſe things to be done which the Devil commanded. They kill Rams, and ſprinkle their Blood in the Air, and the Magicians aſſembled, light great Candles, and perfume the whole Houſe with Incenſe, making great Smoke of Lignum Aloes, and ſprinkle the Broth of the Fleſh in the Air, with the Potion made of Spices; all which being duly performed, they ſkip about again, and dance in Honour of that Idol, which is ſuppoſed to have been favourable to the Sick, ſinging and making a horrible Noiſe with their Voices. Theſe Things being performed, they aſk the poſſeſſed again, whether the Idol be pleaſed? And if he anſwer, no, they preſently prepare themſelves to fulfil any other Command of his; but if he anſwer that he is ſatisfied, they ſit down at the Table, and eat the Fleſh offered to the Idol with great Joy, and drink the Liquors; and Dinner being ended, and the Magicians paid, every one returns to his own Home; and when the Sick hath thus eſcaped the Diſeaſe, thro' the Providence of God, and hath been reſtored to Health, they attribute it to the Idol, to whom they ſacrificed; but if he die, then they ſay, the Idol was defrauded, and that ſome of the Sacrificers taſted thereof firſt: This is not done to all, but by the richer, the Devil, or his Prieſts in his Name, impoſing on their Blindneſs.

The Great Khan, *A. D.* 1272, ſent an Army into the Kingdom of *Vociam* and *Gurazan*, to reduce it, his Forces being to the Number of twelve thouſand veteran Troops, under the Conduct of a *Neſtorian*, an experienced Officer. As ſoon as the King of *Mein* and King of *Bengala* heard of their coming, aſſembling their Forces, they joined Horſe and Foot together about threeſcore thouſand, and about a thouſand Elephants bearing Caſtles, and in every Caſtle twelve or ſixteen armed Men were placed; with this Army the King of *Mein* marched ſpeedily towards the City of *Vociam*, where the Army of the *Tartars* lay encamped. *Neſtardin*, however, marched forth with invincible Courage to fight the Enemy, and drawing near them, encamped near a certain great Wood, knowing that the Elephants with their Towers on their Backs were not able to enter the Wood. Then the King of *Mein* ſeeing this, reſolved to meet them; but the *Tartarian* Horſe perceiving the Elephants which were placed in the Front of the Battle were terrified, ſo that they could not by any Means be brought to charge the Elephants; the *Tartars* therefore were compelled to alight from their Horſes, and tying them to the Trees, they came to fight on Foot againſt thoſe Beaſts, and very wiſely ſhot a Multitude of Arrows againſt the Elephants, which not able to endure the Wounds received by the Arrows, betook themſelves to flight, and went all to the next Wood, broke their Caſtles, and overthrew the armed Men ſitting in them; which the *Tartars* ſeeing, run to their Horſes, and getting upon them, furiouſly fell upon the King's Army with great Violence, and many of either Army fell. At length the King of *Mein* being put to Flight, left the Victory to the *Tartars*, who haſtened to the Wood, and taking many Captives, uſed their Help to ſeize two hundred of theſe Elephants, and ever ſince the Great Khan hath uſed Elephants in his Army, to which before he was not accuſtomed: Hereupon alſo he vanquiſhed the Countries of the King of *Mein* and *Bengala*, and ſubjected them to his Empire[1].

Departing from the Province of *Caraiam*, there is a great Deſart, which continueth two Days and a half, nor is there any Habitation there, but a very large Plain, in which three Days in the Week Multitudes meet together for Trading. Many deſcend from the great Mountains of that Country, bringing Gold with them to change for Silver, that is, giving an Ounce of Gold for five Ounces of Silver, and therefore many Merchants from foreign Nations come thither, who bring Silver and carry Gold away, and bring thither Merchandize to ſell to theſe People; for to thoſe high Mountains in which they who gather Gold in the Country dwell, no Stranger can come, becauſe the Way is intricate and unpaſſable. When you are paſt that Plain, going toward the South, *Mein* bordereth upon *India*, and the Diſtance is about fifteen Days Journey through Places uninhabited and woody, in which innumerable Elephants, Unicorns, and other wild Beaſts wander.

After that fifteen Days Journey, you come to *Mein*, a great and noble City, the Head of the Kingdom, and ſubject to the Great Khan. The Inhabitants thereof have a peculiar Language, and are Idolaters. In this City there was a King, who being ready to die, commanded that near to his Sepulchre there ſhould be erected two Towers in the Form of Pyramids, one at the Head, the other at the Feet, both of Marble, of the Height of ten Fathom. On the Top was placed a round Ball; he cauſed one to be covered all over with Gold, a Finger thick, and the other with Silver; and upon the Top, round about the Balls, many little gold and ſilver Bells were hanged, which at the blowing of the Wind, gave a certain ſhrill and pleaſant Sound. The Monument or Sepulchre was alſo covered with Plates, partly of Gold, partly of Silver. He commanded this to be made in Honour of his Soul, and that his Memory ſhould never die among Men. And when the Great Khan undertook to ſubdue this City, he ſent a valiant Captain, and the greateſt Part of his Army were Cavalry, of which the better Part of his Troops conſiſts; theſe winning the City would not demoliſh that Monument without the Khan's Knowledge; who hearing that the deceaſed had erected it for the Honour of his Soul, would not ſuffer it to be injured; for the Manner of the *Tartars* is not to violate the things which belong to the Dead. In this Province are many Elephants, wild Oxen, great and fair Stags, and Deer, and other wild Beaſts of divers Kinds.

---

[1] The great Conqueſts made by the *Tartars* in the Eaſt, have ſo overturned all Monuments of Antiquity among the Nations they have ſubdued, that if it were not for theſe Travels of *Marco Polo*, we ſhould be at a Loſs for any of the Particulars relating to them. The *Chineſe* Hiſtorians indeed, very fully confirm the Truth of what he has delivered, but in general Terms only; ſo that they add nothing circumſtantial, or capable of giving us a clearer or more diſtinct Idea of what he has laid down, in reſpect to which it is ſufficient for us to obſerve, that moſt of the Facts he mentions either happened at the Time when he was actually preſent in the Court of the Great Khan, or a very little before it; ſo that he could not but be well informed as to the Truth of what he aſſerts. Strange indeed to us, who live at ſo great a Diſtance from theſe Countries, and are ſo little acquainted with the Manners of their Inhabitants, but at the ſame Time very agreeable to the beſt Accounts that have been afforded us of theſe Countries by modern Travellers, and more eſpecially by the Miſſionaries, who have been at great Pains to collect and reduce into Order ſuch Paſſages as they have met with in *Chineſe* and other Oriental Writers.

The Province *Bengala* bordereth upon *India* towards the South, which the Great Khan ſubdued when *Marco Polo* lived in this Country. This Country has its own proper King and Language, the Inhabitants whereof are all Idolaters; they have Maſters which keep Schools, and teach Idolatries and Enchantments, a thing common to all the great Men of that Country. They eat Fleſh, Rice, and Milk; they have Cotton in great Plenty, and by the Manufacture thereof, much Trade is there carried on. They abound alſo with Spike, Galingal, Ginger, Sugar, and diverſe other Spices; huge Oxen alſo are there, comparable unto Elephants in Height, but not in Bulk. Many Eunuchs are made in this Province, which are afterwards ſold to Merchants. This Province continueth thirty Days Journey, in the End whereof, going Eaſtward, is the Province of *Cangigu*, which is a Country having alſo its proper King and peculiar Language, the Inhabitants whereof worſhip Idols, and are tributary to the Great Khan; their King hath about three hundred Wives; much Gold is found in this Province, and many Spices, but they cannot eaſily be tranſported, becauſe that Country is far diſtant from the Sea: There are alſo many Elephants in it, and much Game. The Inhabitants live on Milk, Fleſh, and Rice; they have no Wine, but they make very good Drink of Rice and Spices. As well the Men as the Women uſe to embroider their Faces, Necks, Hands, Bellies, and Legs, making the Images of Lions, Dragons, and Birds, and ſo firmly imprint them, that they cannot eaſily be put out; and the more ſuch Images any one has upon his Body, ſo much he is eſteemed the finer and the more gallant. And there are alſo in this Country Profeſſors of this fooliſh Art of Fleſh-Embroidery, which uſe no other Trade but this Needlwork and dying of Fools Skins.

Amu lies to the Eaſt of that Province, and is ſubject to the Great Khan, whoſe Inhabitants worſhip Idols, and have to themſelves a peculiar Language. They abound with Herds of Cattle, and have Plenty of Victuals, and many Horſes, and theſe excellent, which Merchants carry for Sale into *India*. They have alſo many Buffaloes and Oxen, becauſe there are delicate Paſtures there. As well Men as Women wear Bracelets of Gold and Silver, of great Value, on their Arms, as alſo the like on their Legs; but thoſe of the Women are moſt valuable: From *Amu* to *Cangigu* are above five-and-twenty Days Journey. The Province of *Tholoman*, is ſtill eight Days Journey farther diſtant to the Eaſt from *Amu*, ſubject to the Great Khan, having a peculiar Language, and worſhipping Idols. The Men and Women in this Country are tall, well ſhaped, and of a brown Complexion. The Country is very well inhabited, having many and ſtrong Caſtles and Cities. The Men are practiſed in Arms, and accuſtomed to War; they burn the Bodies of their Dead, and incloſing the Relicks of their Bones in a Cheſt, hide them in the Caves of the Mountains, that they cannot be touched either by Man or Beaſt. Gold is found in great Plenty there, and inſtead of Money, they uſe Porcelane brought from *India*, as alſo in *Cangigu* and *Amu*. From the Province of *Tholoman*, the high Road leads towards the Eaſt, by a River, on the Bank of which are many Cities and Caſtles, and at the End of twelve Days you come to the great City *Cintiqui*. The Country is ſubject to the Great Khan, and the Inhabitants therefore addicted to Idolatry. Excellent Cloths are made in this Country of the Bark of Trees, with which they are cloathed in the Summer. Many Lions are there, ſo that for fear of them, none dare ſleep without Doors by Night; the Veſſels which ſail up and down the River, for fear of theſe Lions, are not faſtened to the Bank. There are great Dogs in the ſame Country, ſo hardy and ſtrong, that they fear not to attack the Lion; and it often happeneth, that two Dogs, and one Archer, kill a Lion: For the Dogs, ſet on by the Man, give the Onſet, and the Lion's Nature is preſently to take Shelter from ſome Tree, that the Dogs may not come behind him, neither will his great Heart ſuffer him to run from the Dogs, leſt he ſhould ſeem afraid; but he holds his ſtately Pace, the Man mean while ſhooting, and the Dogs faſtening on his hinder Parts, but with ſuch Agility, that when the Lion turns on them, they are gone; and then this magnanimous Beaſt holds on his Way again, to ſeek a Tree for Succour, till what with Bitings and Arrows, he ſometimes comes ſhort, and, with Expence of Blood, dieth by the Way. This Country abounds with Silk, which by Merchants is carried to diverſe Provinces by the River; they live therefore chiefly by their Merchandize: Their Money is Paper; and they are valiant in Arms.

At the End of ten Days is the City of *Sidinfu*, and twenty Days from thence is *Gingui*, and four Days thence is *Palanfu*, towards the South, and is in *Cathay*, returning by the other Side of the Province. The People are Idolaters, and burn their Dead; there are alſo certain Chriſtians which have a Church, are all under the Khan, and uſe Paper Money. They make Cloths of Gold and Silk, and Lawns, very fine. By this City, which has many Cities under it, runs a great River, which carries Store of Merchandize to *Cambalu*, made by many Channels to paſs thither; but we will leave this Place, and proceeding three Days Journey, ſpeak of *Ciangu*, a great City towards the South, of the Province of *Cathay*, ſubject to the Khan. The Inhabitants are Idolaters, and burn their Dead. Their Money is the (Mulberry) Paper-Coin of the Khan. In this City, and the Territories that depend upon it, they make large Quantities of Salt, for the Earth abounds therewith, and out of it they get Salt after this Manner; they heap up the Earth in the Manner of an Hill, and pour Water upon it, which draws the Saltneſs of the Earth into it, and then runs into certain Conduits, and is boiled in Pans, till it be congealed to Salt, fair and white, to the great Gain of the People, and of the Great Khan, being carried into other Countries to ſell. There are large Peaches, high flavoured, and weigh two Pounds a-piece. Five Days Journey beyond the City *Ciangu*, in *Cathay*, Southward, ſtandeth another City named *Ciangli*, in which Road are many Cities and Caſtles, ſubject to the Khan, through the midſt of which runs a great River, very convenient for Shipping laden with Merchandize.

Six Days Journey hence to the South, is the noble Kingdom and great City of *Tudinfu*, which had formerly its proper King, before it was ſubdued by the Great Khan, *A. D.* 1272, and hath eleven royal Cities famous for Traffick under the Juriſdiction thereof. It is very pleaſantly ſeated for Gardens and Fruits, rich in Silks; their Khan ſent to be Governor thereof one of his Barons named *Lucanſer*, with eight thouſand Horſe, who rebelled againſt this Lord, but was reduced and ſlain by an Army of one hundred thouſand Horſe, under two other Barons, ſent againſt him, and the Country reduced to Obedience. Seven Days off towards the South, is the famous City named *Singuimatu*, to which on the South a great River runs, which being divided by the Inhabitants of the Place into two Rivers, flows one Branch to the Eaſt towards *Cathay*, and the other to the Weſt toward *Mangi*; by theſe Rivers innumerable Veſſels, and incredible for their Size and Wealth, bring Neceſſaries to both Provinces. If you proceed ſixteen Days Journey towards the South from *Singuimatu*, you will meet with Cities and Towns where prodigious Trading is exerciſed. The Inhabitants of theſe Countries are Idolaters, ſubject to the Great Khan. After that, ſixteen Days, you come unto a great River named *Caramoran*, which is ſaid to take its Riſe in the Kingdom of *Uncan*, or Preſbyter *John*, in the North. It is very deep, and carries Ships of great Burthen; it is alſo well ſtocked with Fiſh, within one Day's Journey of the Sea. There are in this River fifteen thouſand Sail, each of which carries fifteen Horſes, and twenty Men, beſides Victuals and Mariners. This is the *Khan's* Fleet, kept there in Readineſs to carry an Army to any of the Iſlands, if they ſhould rebel, or to any remote Region. Near the Bank of the River, where theſe Ships are kept, is *Coiganzu*, and over-againſt it *Quanzu*, one a great City, the other a ſmall one. After you are paſt that River, you enter into the noble Kingdom of *Mangi*; but you muſt not think that we have handled in Order the whole Province of *Cathay*, having not ſpoken of the twentieth Part; for *Marco Polo* paſſing by the ſaid Province, hath only deſcribed the Cities in his Way, leaving thoſe on both Hands, and thoſe betwixt theſe, to prevent Tediousneſs, and to avoid writing from Hear-ſay.

20. The Province of *Mangi* is the richeſt and moſt famous that is founded in the Eaſt; and in *An. Dom.* 1269, was governed by a certain King, called *Fanfur*, who was richer and mightier than any which had reigned there in an hundred Years, but a Man peaceable and charitable, ſo beloved of his Subjects, that thereby, and by the Strength of the Country, he ſeemed invincible. It was from a Perſuaſion of this that the King, as well as the People, loſt the Uſe and Exerciſe of War and Arms. All the City was encompaſſed with Ditches full of Water. He held in Pay no Horſes, becauſe he feared Nobody; and, in Proceſs of Time, the King, betaking himſelf to Pleaſure more than was fit, employed his whole Time in Delights. He maintained about a thouſand Concubines, with whom he paſſed his Time in Pleaſure. He maintained Juſtice, and preſerved Peace; no Man durſt offend his Neighbour and diſturb the Peace, for Fear of ſevere and impartial Puniſhment; ſo that Artificers would often leave their Shops full of Wares open by Night, and yet none would preſume to go into them. Travellers and Strangers ſafely walked Day and Night through that whole Kingdom, fearing no Man. The King himſelf was alſo merciful towards the Poor, and did not overlook them that were oppreſſed with Neceſſity, or puniſhed with Penury. Beſides, every Year he took up twenty thouſand young Infants, caſt off by their Mothers, who, through Poverty, were not able to keep them, which he brought up, and put them, when they were grown up, to ſome Trade, marrying the young Men with the Maids, which he had in like manner ſo educated [a].

Cublai-Khan was of a different Diſpoſition from *Fanfur*, and delighted only in Wars and Conqueſts; and to make himſelf great, he levied an Army of Horſe and Foot, and made one, named *Chinſan-Baian*, *i. e.* an hundred Eyes, General thereof, he therefore coming with his Army and a Fleet to the Province of *Mangi*, firſt ſummoned the City *Coiganzu* to yield Obedience to his Emperor, who refuſed the ſame; he departed without any Aſſault given to the City, and required the ſame of the ſecond City, which likewiſe refuſing, he marched forwards to the third and fourth, and received the like Anſwer of them all; but he aſſaulted the next with great Courage, and vanquiſhed the ſame by Force, and ſlew every Creature of what Sex or Age ſoever therein, which ſo frighted and terrified the reſt, that they all preſently yielded. The Great Khan ſent out another great Army after the former, with both which Armies he marched againſt the chief City *Quinſai*, where the King of *Mangi* reſided, who being mightily terrified, as never having ſeen any War, fled with his Wealth on board the Ships he had prepared, to certain impregnable Iſlands in the Ocean, where he afterwards died, committing the Cuſtody of the City of *Quinſai* to his Wife, bidding her to defend it as well as ſhe could; for being a Woman, ſhe needed not fear Death if ſhe was taken.

It is to be obſerved, that King *Fanfur* had been told by his Diviners, that his Kingdom would never be taken from him but by one who had an hundred Eyes, which the Queen knew, and therefore was ſtill in Hopes not to loſe the City however ſtraitened, thinking it impoſſible for one Man to have an hundred Eyes; but one Day ſhe heard the Commander of the *Tartars* was called *Baian Chinſan*, that is to ſay, an hundred Eyes, and was much terrified; wherefore, calling for the Commander of the *Tartar* Army, thinking him to be the Man which the Aſtrologers ſpoke of, ſhe delivered the City unto him, which, being heard, the Citizens and Inhabitants of the whole Province yielded to the Obedience of the Great Khan. The Queen was ſent unto the Court of the Great Khan, and was moſt honourably received by him, and maintained like a Queen. And now we will ſpeak of the Cities in the Country of *Mangi*. *Coiganzu* is a very fair and rich City ſituate towards the South-Eaſt and Eaſt, in the Entrance of the Province of *Mangi*, where are always great Numbers of Ships, being ſeated on the River *Carama*, and a great Quantity of Merchandize is carried thither; Salt is alſo made there in Abundance. Proceeding from *Coiganzu*, you ride towards the South-Eaſt one Day's Journey on a Stone Cauſeway, on both Sides whereof are great Fences, with deep Waters, through which they may paſs with proper Veſſels; neither is there any Entrance into *Mangi* but by Shipping, excepting this Cauſeway.

At the End of that Day's Journey is a City called *Paughin*, large and fair; the People make Stuffs of Gold and Silk, are Merchants, and Idolaters. The Paper-Money of the Great Khan is received throughout the whole Country. It is plentiful in all Neceſſaries of Life. To the City *Caim* is from *Paughin* one Day's Journey South-Eaſt; and this is alſo a famous City. The Country thereabouts abounding with Fiſh, Beaſts, and Fowl, eſpecially Pheaſants, are found in exceeding great Plenty, as large as Peacocks, of which you may have three for a *Venetian* Groat. Proceeding farther from hence one Day's Journey, you come through a well manured, moſt fruitful and well peopled Country, to the City *Tingui*, which, tho' it be not over large, yet hath in it exceeding great Plenty of Victuals. They are Merchants, and have a vaſt Reſort of Ships: There is Plenty of Beaſts and Fowls. It is ſeated to the South-Eaſt, and on the Left-hand towards the Eaſt, three Days Journey off the Ocean, and in the Country between, are very many Salt-pits, and they make great Quantities of Salt. After this is *Cingui*, a great City, whence the Country is furniſhed with Salt, whereof the Khan makes immenſe Profit, almoſt beyond Belief: They are Idolaters, and have Paper-Money. From *Cingui*, riding towards the South-Eaſt, you meet with the noble City *Jangui*, under the Government whereof are other Cities, ſeven-and-twenty in Number; and in that City reſides one of the twelve Barons, which are Governors of Provinces, choſen by that Great Khan; they are Idolaters, and live on Merchandize. They make Arms and Harneſs for War, and Maſter *Marco* had the ſole Government thereof, by Commiſſion, from the Great Khan, three Years together, inſtead of one of theſe Barons. *Naughin* is a Province to the Weſt; one of the greateſt and nobleſt of *Mangi*; a Place of great Merchandize; they are Idolaters, have none but Paper-Money, have vaſt Quantities of Beaſts and Fowl, wild and tame. They make Cloths of Gold and Silver, and are rich Merchants, and the Country is very advantageous to the Khan, eſpecially by Cuſtom of Merchandize; there is likewiſe great Plenty of Corn.

Sianfu is a noble and great City in the Province of *Mangi*, and hath twelve rich and great Cities under her Juriſdiction. They make great Quantities of Silks, and Cloths of Gold, have Plenty of Game, Fowl, and all Things pertaining to a City of Note; ſo ſtrong that it was three Years beſieged, and could not be vanquiſhed by the Army of the *Tartars*, when the Province of *Mangi* was ſubdued, for it is encompaſſed on every Side with Lakes, that there was no Way to it but on the North; ſo that Ships came and went, continually bringing Plenty of Victuals, which not a little afflicted the Great Khan. The two Brethren, Maſter *Nicolo*, and Maſter *Maffio*, then in his Court, hearing thereof, went to him, and offered him their Service, to deviſe certain Engines, after the Manner of the Weſt, able to ſhoot a Stone of three hundred Weight, thereby to kill Men and ruin Houſes. The Khan appointed Carpenters, which were *Neſtorian* Chriſtians, who made three of theſe Engines in a ſhort Space, which were proved before him, and by Ships ſent to his Army. Planting them therefore againſt the City *Sianfu*, they began to caſt great Stones into the City; and the firſt, falling upon a certain Houſe, broke the moſt part of it with the Violence thereof, which the beſiged Inhabitants ſeeing, were very much aſtoniſhed, and yielded themſelves, and became ſubject to the Great Khan, on the ſame Conditions with the reſt of *Mangi*, to the great Repute of the two *Venetian* Brethren, the one the Author's Father, and the other his Uncle.

---

[a] The *Chineſe* Hiſtories agree exactly, as to the Character of this Prince, with what we find delivered concerning him by our Author; but they differ widely with reſpect to the Name; ſince, according to them, he was called *Tu*, and from the Name of his Family *Tſong*. He was the fifteenth Emperor of the nineteeth Dynaſty, and ſucceeded to the Throne in the Year 1264. It was to his Indolence, Debauchery, and exceſſive Love of Pleaſure, that the *Chineſe* attribute the Deſtruction of their Country, and the total Conqueſt of it by the *Tartars*. This Monarch died in the Midſt of his Misfortunes, and left three young Children under the Tutelage of the Empreſs their Mother. Theſe Hiſtorians give us a great Character of the *Tartar* General, mentioned by our Author; but then they give him quite another Name, *viz.* *Pe Yen*; but what the Signification of that is, I cannot inform the Reader. He is ſaid to have commanded an Army of two hundred thouſand Men, with the ſame Eaſe as if it had been only a ſmall Body of Troops, and to have ſhewn ſo great Modeſty in the Midſt of his Conqueſts, as never once to have valued himſelf on the many and great Services he rendered to his Maſter.

From the City of *Sianfu* to a certain City called *Singui*, are accounted fifteen Miles South-eaſtward, which, atho' it is not very large, yet has a prodigious Number of Ships, being ſeated upon the greateſt River in the World, called *Quian*, the Breadth of which in ſome Places is ten Miles, in others eight, and in many ſix; but the Length thereof extendeth above an hundred Days Journey from the Source of it to the Sea. Innumerable other Rivers flow into it, which run through divers Regions, and are navigable; and theſe make it ſo great, that incredible Quantities of Merchandize are brought by this River. There are alſo many other Cities, in Number about two hundred, which participate of the Advantages of this River, for it runs through the Bounds of ſixteen Provinces. The greateſt Commodity is Salt, wherewith all the Cities which communicate by theſe Waters are ſupplied. Maſter *Marco* ſaw at one time at *Singui* five thouſand Veſſels, and yet other Cities on the River have more; all theſe Ships are covered, and have but one Maſt, and one Sail, and uſually carry four thouſand, and ſo upwards, ſome of them twelve thouſand *Venetia Cantari*; neither do they uſe Cordage of Hemp, except for the Maſt and Sail, but have Canes fifteen Paces long, which they ſplit into thin Parts from one End to the other, and binding the cut Parts together, and wreathing them, make very long Ropes, ſo that ſome of them contain three hundred Fathom in Length; and thoſe Ropes are as ſtrong as Hemp, and ſerve for Halſes and Cables to draw their Ships up and down the River, each Veſſel having ten or twelve Horſes for that Purpoſe.

On that River, in many Places, are rocky Hillocks, on which are built Monaſteries to their Idols, and all the way are Vallies and Places inhabited. *Cayngi* is a little City upon the ſame River South-eaſtward, where every Year is brought Plenty of Corn and Rice, carried for the moſt part to *Cambalu*; for they paſs thither by Lakes and Rivers, and by one large Canal, which the Khan cauſed to be made for a Paſſage from one River to another, and from *Mangi* to *Cambalu*, without going to Sea; which Work is beautiful and wonderful for the Sight and Length, and more for the Profit which accrues thereby to the Cities. He hath made alſo great Cauſeways to go on Land by theſe Waters commodiouſly. In the midſt of the ſaid River is an Iſland, or Rock, on which is erected a great Temple and Monaſtery, in which are two hundred idolatrous Monks. *Cingbianfu* is a City of *Mangi*, rich in Merchandize, plentiful of Game, having all kind of wild Beaſts and Fowl, and of Victual. In it are two Churches of *Neſtorian* Chriſtians, built *A. D.* 1274, when the Great Khan ſent a Governor thither, *Marſacbis*, a *Neſtorian*, who built them. From the City *Cingbianfu*, in three Days Journey South-eaſtward, you find many Cities and Caſtles, all Idolaters, and at laſt come to *Tinguigui*, a great and fair City, abounding with all kind of Proviſions [y].

When *Baian Chinſan*, General of the Army of the *Tartars*, conquered the Province of *Mangi*, he ſent many Chriſtians called *Alani* againſt the City, which was double walled; into the inner they retired, into the other the *Alans* entered, and found there Abundance of Wine, whereof, after a bad Journey, they began to drink ſo largely, that they were all drunk, and the Citizens in their Sleep, ſuddenly falling upon them, ſlew them all, not one eſcaping; but *Baian* hearing this, ſent another great Army againſt thoſe Citizens, which in a ſhort Space of Time vanquiſhing the City, in Revenge, put them all to the Sword, leaving none alive. The great and excellent City *Singui* contains in Circuit twenty Miles: Multitudes of People are in it, it hath many rich Merchants and induſtrious Artificers, and it hath alſo very many Phyſicians and Magicians, and wiſe Men, or Philoſophers. In the Mountains of this City, Rhubarb and Ginger grow in great Plenty. This City hath ſixteen Cities under the Juriſdiction thereof, in each of which much Trade is carried on, and many curious Arts are exerciſed, many ſorts of Silk are made there. The Word *Singui* ſignifies the City of the Earth: Alſo they have another City which they call *Quinſai*, that is to ſay, the City of Heaven. From *Singui*, at the Diſtance of one Day's Journey, is *Vagiu*, where is alſo Abundance of Silk, and able Artificers, with many other Merchants, as there are in general in all the Cities in this Country.

21. In a Journey of three Days, you find Cities, Caſtles, and Villages, well peopled, and rich. The People are Idolaters, under the Dominion of the Great Khan. At the End of theſe Days you come to *Quinſai*, *i. e.* the City of Heaven, which for the Excellency thereof hath that Name; for in the World there is not the like, or a Place in which are found ſo many Pleaſures, that a Man would think he were in Paradiſe. In this City our Author *Marco Polo* hath often been, and conſidered the ſame with great Diligence, obſerving the whole State thereof, ſetting down the ſame in his Memorials, as here from them ſhall be declared briefly. This City, by common Report, is an hundred Miles in Circuit. The Streets and Lanes are very long, and very wide; there are Market-places exceeding large; on the one Side a clear Lake of freſh Water, on the other a great River, which enters in many Places, and carries away all the Filth of the City, and ſo runneth into that Lake, thence continuing its Courſe into the Ocean. This Courſe of Water cauſeth a good Air, and commodious Paſſage both by Land and by thoſe Canals. There may go both Carts and Barks to carry Neceſſaries; and the Report is, that there are twelve thouſand Bridges, great and ſmall, and thoſe on the chief Channels are ſo high, that a Ship without her Maſts may paſs under, and at the ſame time Chariots and Horſes paſs over it. On the other Side the City is a large Canal forty Miles long, which encloſes it on that Side, large and full of Water, from the River made by the ancient Kings of that Province, both to receive the overflowing of the Water, and beſides that to fortify the City, the Earth which was taken out being laid within as a Bank or Hill encompaſſing it [z].

There are ten great Market-places, beſides others in the great Streets, which are ſquare, half a Mile in each Square; and from the Great Entrance is a principal Street, forty Paces wide, running right from one End of the City to the other, with many Bridges croſſing it, and every four Miles is found ſuch a Market-Place, two Miles, as is ſaid, in Compaſs. There is alſo one large Canal, which runs againſt the ſaid Street behind the Market-places, on the next Bank whereof are erected great Store-houſes of Stone, where the Merchants from *India*, and other Parts, lay up their Merchandize, being at Hand, and commodious for the Market-places. In each of theſe Market-places the People meet three Days in a Week, to the Number of between forty and fifty thouſand, who bring thither all things that can be deſired for Man's Life, Beaſts, Game, and Fowls, that Lake yielding ſuch Advantages for bringing them up, that for a *Venetian* Groat you may have two Geeſe, and four Ducks for the ſame. Then follow the Butcher-rows, of Veal, Beef, Kid, and Lamb, which the great and rich Men eat; for the Poor eat all the Offal, and unclean Meats, without reſpect. There are all ſorts of Herbs and Fruits continually, and amongſt the reſt huge Pears, weighing ten Pounds apiece, white within like Paſte, and very fragrant. Peaches yellow and white, very delicate. Grapes grow not there, but are brought from other Places dried; very good Wine alſo, but it is not eſteemed in thoſe Parts as with us, that of Rice and Spices contenting them. Every Day from the Ocean are brought up the River, which is the Space of five-and-twenty Miles, great Quantities of Fiſh, beſides that of the Lake, ſo much that a Man would think would never be bought, and yet in a few Hours all is gone. All theſe Market-places are encompaſſed with high Houſes, and underneath are Shops for Artificers, and all ſorts of Merchandize, as Spice, Jewels, Pearls, and in ſome only Rice-Wine. Many Streets anſwer one to another in the ſaid Market-places; in ſome of them are many cold Baths, accommodated with Attendants of both Sexes, a thing to which from Children they uſe themſelves. There are Chambers alſo in the ſame Baths, with hot Waters for Strangers, which are not accuſtomed to the cold Waters; they waſh every Day, neither do they eat before they have waſhed.

---

[y] This happened the Year before the Death of the Emperor *Tou Tſong*, and in about four Years more all his Children, who ſucceeded one after the other to the Empire, periſhed. The firſt was taken Priſoner by the *Tartars*, and ſent by them into their own Country, where he died in Captivity. The ſecond was driven to *Canton*, where he died of a Conſumption at the Age of eleven Years. The third, whoſe Name was *Ti Ping*, having loſt all his Country, was obliged to take Refuge on Board the Fleet, which was purſued, and forced to an Engagement by that of the *Tartars*. When the *Chineſe* Lord, who had the Care of the Emperor's Perſon, found his Veſſel ſurrounded, he took the young Prince in his Arms, and jumped with him into the Sea. The Empreſs ſeeing the laſt of her Sons thus unhappily deſtroyed, followed his Fate, and threw herſelf alſo into the Sea. One whole Squadron of the *Chineſe* Fleet forced a Paſſage through that of the *Tartars*, but was afterwards deſtroyed by a Tempeſt, ſo that not a Veſſel or a Man eſcaped of the whole Navy; and the *Chineſe* Writers ſay, that there periſhed in the whole a hundred thouſand Men. The Loſs of this Battle put an End to the *Chineſe* Empire, and left the *Tartars* totally Maſters of the whole Country.

[z] This Deſcription of the City of *Quinſay* has occaſioned many Reflections upon our Author, as if writing of Countries at ſo great a Diſtance, he took the Liberty of impoſing on his Readers the Fictions of his Imaginations for the Facts which he had ſeen. Under this Imputation he for a long time laboured, eſpecially with ſuch as were deſirous of maintaining the Reputation of ſagacious and penetrating People; but by degrees the Credit of our Author has got the better of all ſuch Inſinuations, and the Relations given by the *Portugueze*, and other *Europeans*, who went thither after the Diſcovery of the Paſſage by the *Cape of Good Hope*, have put it out of doubt that he did not invent any Part of his Relation, but repreſented things fairly as they appeared to him, though certainly with fewer Circumſtances, and leſs Accuracy, than ſucceeding Travellers, who had more Time to examine, and greater Capacities for deſcribing what they ſaw.

In other Streets are mercenary Proſtitutes, in ſuch Numbers, that I dare not report it, and not only near the Market places, where they have their Places appointed, but through all the City; they ſtand pompouſly adorned with rich Perfumes, many Servants, and their Houſes finely furniſhed. Theſe are very ſkilful in making Sports and Dalliances, and contriving Pleaſures for raviſhing Men out of themſelves. In other Streets are the Phyſicians, the Aſtrologers, they which teach to read and write, and infinite other Trades. At each end of every Market-place is a Palace, where Lords and Governors are appointed by the King to determine Difficulties which happen betwixt Merchants and others, as alſo to look to the Guards on the Bridges, puniſhing ſuch as are negligent. Along the principal Street on both Sides are great Palaces with Gardens, and near them Houſes of Artificers, and ſuch Multitudes of People conſtantly going to and fro, that a Man would wonder whence ſuch Multitudes could be provided with Victuals; and Maſter *Marco* learned of an Officer of the Cuſtom-houſe in *Quinſay*, that by a very accurate Computation, it appeared, the daily Expence of Pepper in *Quinſay* was three-and-forty Soma, and every Soma is two hundred and twenty-three Pounds. Hence may be gueſſed the Quantity of Victuals, Fleſh, Wine, and Spices, were there ſpent. The Inhabitants are Idolaters, uſe none but Paper-Money, are of a very fair Complexion, apparelled for the moſt part in Silk, which grows in all that Territory abundantly, beſides that which is brought from other Places. There are twelve principal Companies or Corporations, each of which have one thouſand Shops, and in each Shop or Standing are ten, fifteen, or twenty Men at Work, and in ſome forty under one Maſter.

The rich Tradeſmen do not work with their Hands, but ſtand in their Shops, well, or rather pompouſly dreſſed, eſpecially their Wives, with Jewels invaluable. And altho' their old Kings ordained, that the Child ſhould be of the Father's Trade, yet the Rich are permitted not to work at it, but to keep Shop, and M[illegible] working in the ſame Trade. Their Houſes are well built, and very richly furniſhed with Pictures and other Ornaments of immenſe Price. The Natives are peaceable, know not how to manage Arms, nor keep them in their Houſes, neither is ther Strife and Debate among them. They exerciſe their Trades with great Sincerity. They live in ſuch Amity, that one Street ſeems as one Houſe, without Jealouſy among their Wives, which they hold in great Reſpect, and it would be reputed a great Diſgrace to ſpeak a diſhoneſt Word to a married Woman. They entertain foreign Merchants kindly, both in their Houſes, and with beſt Advice for their Affairs; but they are not over fond of the Soldiers, and Guards of the grand Khan, becauſe by them deprived of their natural Lords and Kings. About the Lake are very fair Buildings, and great Palaces of the principal Men, and Temples of their Idols, with Monaſteries of many Monks. In the midſt of the Lake are two Iſlands, upon each of which is a Palace, with incredible Numbers of Rooms, whither they reſort upon Occaſion of Marriages, or other Feaſts, where Proviſions of Veſſels, Linen, and other things are maintained in common, for ſuch Purpoſes, one Hundred ſometimes accommodated at once, in ſeveral Rooms. In the Lake alſo are Boats and Barges for Pleaſure, adorned with fair Seats and Tables, and other Proviſions for a Banquet, covered above, and flat, upon which Men ſtand with Poles to puſh the Boat on, the Lake being but ſhallow: Within they are painted, without are Windows to open and ſhut at Pleaſure; nor can any thing in the World ſeem more pleaſant than in this Lake to have ſuch various Objects, the City ſo fully preſenting itſelf to the Eye, with ſo many Temples, Monaſteries, Palaces, Gardens, with high Trees, and on the Water Barges and People; for their Cuſtom is to work one Part of the Day, and to ſpend ſome Part in this Diverſion with their Friends, or with Women on the Lake, or elſe in Chariots, riding through the City, which is alſo another of the *Quinſay* Pleaſures; for all the Streets are paved with Stone, as alſo are all the Highways, in the Province of *Mangi* only for the Foot; Poſts are left on the Side a Space unpaved: The principal Street of *Quinſay* is paved ten paces on each Hand, and in the midſt it is full of Gravel, with Paſſages for the Water, which keep it always clean.

In this Street are innumerable long cloſe Chariots, accommodated with Cloths and Cuſhions of Silk for ſix Perſons, who divert themſelves in the Street, or go to the Gardens, and there paſs the Time in Bowers, fine Walks, *&c.* which are kept for that Purpoſe, and return at Night in the ſame Chariots. When a Child is born, the Father ſets down the exact Point of Time, and with that Note goes to the Aſtrologer, to conſult of his future Fortunes; of theſe Aſtrologers are a great Number in every Market-Place. Theſe People will not celebrate a Marriage without ſuch Conſultation. When one dies that is of Note, the Kindred cloath themſelves in Canvas, and ſo both Men and Women accompany him to the Burying-Place, playing on Inſtruments, and ſinging all the Way Prayers to their Idols, and being come to that Place, caſt into the Fire many Papers of Cotton, whereon are painted Slaves, Horſes, Camels, Stuffs of Gold, and Silk, and Monies, which they think he ſhall really poſſeſs in another World, and make a grand Concert of Muſick, in Conceit of the Joy wherewith the Idols there receive his Soul, where he beginneth, as they fancy, to live anew. In every Street are Towers of Stone, to which, when in Danger of Fire, they uſe to carry their Gods, their Timber-Houſes being very ſubject to ſuch Caſualties. The Khan hath ordered, that on the moſt of the Bridges, Day and Night, there ſtand under a Covert, ten Soldiers, five by Day, and five by Night, and in every Guard-room is a Tabernacle of Wood, with a great Baſon, whereby they know the Hours of the Day and Night, which at every Hour's End the Warders ſtrike, to ſignify what Hour, One, Two, *&c.* beginning at the Sun-riſing; and then again, at the Beginning of the Night. They walk up and down, and if any have a Light or Fire after the appointed Time, they cauſe him to anſwer it before the Juſtices, or Governors aforeſaid, or if any walk later.

If any be not able to work, they carry him to ſome Hoſpital, of which are exceeding many, founded by the old Kings, with great Revenues, through the City: When they are well again, they are compelled to work. If a Fire happen, theſe from divers Places come to and quench it, and to carry the Goods to the Iſlands, or thoſe Towers;

for in the Night none of the Citizens dare go out, but thoſe who are in Danger. The Khan always keeps here a Body of his beſt and moſt faithful Soldiery, as being the beſt and richeſt Place in the World. Within a Mile of each other, are built Ramparts of Wood, where the ſame Precautions are uſed for like Purpoſes. When the Khan had reduced all *Mangi* to his Obedience, he divided it, being before but one Kingdom, into nine Parts, and ſet them a Vice-King over each, who there adminiſters Juſtice. Every Year they give Account to the Khan's Officers of the Revenues, and other Accidents, and every third Year are changed, as all other Officers are. One of theſe Deputy Kings is reſident at *Quinſay*, who is Governor of above one hundred and forty Cities, all rich and great: Nor let this be eſteemed a Wonder, ſeeing in *Mangi* there are twelve thouſand Cities, all inhabited by rich and induſtrious People, in one of which the Khan maintaineth a Garriſon, proportionable to the Greatneſs and Occaſions, one thouſand, ten, or twenty thouſand, not all *Tartars*, but *Cathayans*; for the *Tartars* are Horſemen, and keep in ſuch Places as may be fit to exerciſe their Horſes. Into *Cathay* he ſends thoſe of *Mangi*, and *Cathayans* hither, ſuch as are fit for Arms, of which he makes choice every third Year, and ſends them for four or five Years together, into Places twenty Days Journey from their own Country, and then ſuffers them to return Home, a freſh Body ſucceeding; and moſt Part of the Khan's Revenues are this Way expended, and if any City rebel, he ſuddenly from the next Garriſon compoſes an Army to reduce or deſtroy them. The City of *Quinſay* hath in conſtant Garriſon thirty thouſand Soldiers, and that which hath leaſt, hath one thouſand regular Troops, Horſe and Foot in Garriſon [b].

I come next to ſpeak of the Palace of King *Fanfur*. His Predeceſſors cauſed to be incloſed a Place of ten Miles Circuit, with high Walls, and divided it into three Parts. That in the midſt was entered by one Gate on the one Side, and on the other were great and large Galleries, the Roof ſuſtained by Pillars, painted and wrought in pure Gold, and fine Azure. Theſe were ſmaller at the Entry, and the further the greater, the faireſt at the End; the Roof richly adorned with Gold, and on the Walls were painted the Stories of the former Kings, done very elegantly. Every Year, on certain Idol Holidays, *Fanfur* keeps his Court, and feaſts his principal Lords, the great Merchants, and rich Artificers of *Quinſay*. Ten thouſand are at a Time under theſe Terraces. This feaſting endured ten or twelve Days with incredible Magnificence, every Gueſt endeavouring to preſent himſelf in greateſt Pomp. Behind this marble Building was a Wall, which divided the Palace, in which were, as it were, a Cloiſter with Pillars, ſuſtaining the Terrace round about the Cloiſter, wherein were Chambers for the King and Queen, curiouſly wrought. From this Cloiſter was an Entrance into a Gallery ſix Paces wide, extending in Length to the Lake, all covered. On each Side of this Gallery were ten Courts, anſwering to each other like Cloiſters, each Court having fifty Chambers, with their Gardens, and in them one thouſand Concubines abode, which the King kept for his Service, who, ſometimes with the Queen, ſometimes with them, went in his Royal Barge on the Lake, for Recreation, or to viſit his Idol Temples. The other two Parts of the Seraglio were divided into Groves, Lakes, and Gardens, planted with Trees, in which were incloſed all Sorts of Beaſts, Roe-Bucks, Stags, Hares, Conies, and there the King diverted himſelf with his Damſels in Chariots, or on Horſeback, no Man entering there. There the Ladies hunted with his Dogs, and when weary, they went into thoſe Groves, which anſwered one another over the Lake, and there leaving their Garments, came forth naked, and fell to ſwimming in the King's Preſence. Sometimes he would eat a Banquet in thoſe Groves, being ſerved by thoſe Damſels, without once thinking of Arms, which ſweet Meat coſt him the four Sauce ye have heard. All this was told me by a rich old Merchant of *Quinſay*, while I was there, one who had been familiar with King *Fanfur*, and knew all his Life, and had ſeen that Palace flouriſhing, into which he would needs bring me.

The Viceroy now reſides there, and the firſt Galleries remain as they were, but the Damſels Chambers are ruined. The Walls alſo which encompaſſed the Woods and Gardens are fallen to the Ground, the Beaſts and Trees being gone, and all the other Ornaments deſtroyed. Twenty-five Miles from *Quinſay* is the Ocean, between the Eaſt and North-Eaſt, near which is a City called *Gampu*, an excellent Port, where arrive the *Indian* Ships with Merchandize. While *Marco Polo* was in *Quinſay*, Account being given to the grand Khan of the Revenues, and the Number of Inhabitants, he hath ſeen that there have been inrolled one-hundred-and-ſixty Toman of Fires, reckoning for a Fire the Family dwelling in one Houſe; every Toman contains ten thouſand, which makes ſixteen hundred thouſand Families, of all which there is but one Church of Chriſtians, and thoſe *Neſtorians*. Every Houſholder is bound to have written over his Door the Names of his whole Houſhold, Males and Females; alſo the Number of Horſes, the Names added or blotted out as the Family increaſeth or decreaſeth; and this is obſerved in all the Cities of *Mangi* and *Cathay*. Thoſe alſo that keep Inns write in a Book the Names of their Gueſts, and the Day and Hour of their Departure, which Books they ſend daily to the Lords, or Magiſtrates, who preſide at the Market-places. In *Mangi*, the Poor which are not able to bring up their Children, ſell them to the Rich. The Revenues which accrue to the Khan from *Quinſay*, and the other Cities pertaining thereto, being the Ninth Part of the Kingdom of *Mangi*, are firſt of Salt, every Year, eight Tomans of Gold, every Toman is eighty thouſand Sazzi's of Gold, and every Sazzi is more than one Florin of Gold, which will amount to ſix Millions and four-hundred-thouſand Ducats. The Cauſe is, that that Province being nigh the Sea, there are many Lakes, where the Water in Summer is coagulated into Salt, wherewith five other Kingdoms in that Country are ſerved. There is plenty of Sugar growing, which pay, as likewiſe all Spices do, three Parts, and a third in the Hundred: The like of Rice-Wine. Alſo thoſe twelve Companies, which we ſaid had twelve thouſand Shops, and the Merchants which bring Goods hither, or carry any hence by Sea, pay the ſame Price. They which come from remote Countries and Regions, as for example, from the *Indies*, pay ten *per Cent*. Likewiſe all things there breeding, as Beaſts, and growing out of the Earth, and Silk, pay Tithe to the King, and the Computation being made in the Preſence of Maſter *Marco*, beſides Salt before-mentioned, yearly amounts to two-hundred-and-ten Tomans, which will be ſixteen million eight-hundred-thouſand Ducats in Gold [c].

A Day's Journey from *Quinſay* to the South-eaſt, are all the Way Houſes, Villages, fair Gardens, and Plenty of Victuals; at the End whereof is *Tapinzu*, a fine City, in the Juriſdiction of *Quinſay*. Three Days thence, South-Eaſt, is *Uguiu*, and two Days farther you may ſtill ride that Way, finding Caſtles, Cities, and well cultivated Places, in ſuch a Neighbourhood that they ſeem to Travellers all one City, and are all in the Juriſdiction of *Quinſay*; there are great Canes fifteen Paces long and four Palms thick. Two Days Journey farther is the City *Congui*, fair and large; and travelling farther South-Eaſt, are

---

[b] The *Tartars* viſibly depended upon a military Force for the Preſervation of their Empire in *China*, which whether it was an Effect of their own Policy, or a Part of the *Chineſe* Syſtem of Government, which they adopted, is uncertain; but it is moſt probable that it was the latter. However it was far enough from anſwering the End, for the *Tartar* Forces becoming a meer ſtanding Army, and having nothing to do but to make a lazy Livelihood of that Profeſſion, the Soul of which is an active State; they ſoon degenerated, and became as ſoft and effeminate as the *Chineſe*; while the latter, humbled by the *Tartar* Conqueſt, impoveriſhed by enduring the Burthen of ſuch a numerous Army, and, above all, taught the Value of Liberty by the Loſs of it, began to form Deſigns for bringing about a new Revolution, which at laſt they were ſo lucky as to effect.

[c] Theſe Particulars might very well appear (as indeed they did) abſolutely incredible, at a Time when there was not ſo much as an Idea of a well peopled and regularly ſettled Country beyond the Limits of *Perſia*, received among the *Europeans*. As the *Chineſe* were amazed, and knew not what to think of our Manners, when we came firſt among them, ſo the firſt News of ſuch an Empire as *China*, ſo extenſive, ſo well peopled, ſo admirably governed, and in ſo flouriſhing a Condition, muſt needs aſtoniſh us not a little. According to the lateſt Account of this Empire, its Revenues amount to fifty Millions Sterling annually.

Places full of People and Trades; and in this Part of *Mangi* are no Sheep, but Beavers, Buffaloes, Goats, and Swine in great Plenty. At the End of four Days Journey farther is the City *Zengian*, built on a Hill in the Midſt of a River, which, dividing into two Branches, encompaſſes it, and then runs one to the South-Eaſt, the other to the North-Weſt. This City is in the Juriſdiction of *Quinſay*, and its Inhabitants are Merchants alſo and Idolaters; this Country abounds with all Sorts of Game. Three Days Journey from thence, through a moſt pleaſant Country, exceeding well inhabited, ſtands *Gieza*, a great City, which is the laſt of the *Quinſay* Kingdom; after which you enter into another Kingdom of *Mangi*, called *Concha*; the principal City thereof is *Fugiu*, by which you travel ſix Days Journey South-Eaſt, through Hills and Dales, always finding Places inhabited, and Plenty of Game, of Beaſts and Fowl; they are Idolaters, Merchants ſubject to the Khan. There are ſtout Lions: and here grow Ginger and Galingale in great plenty, with other Sorts of Spices; eight Pounds of Ginger are ſold for a *Venetian* Groat. There is an Herb, whoſe Fruit hath the Effect, and gives the Colour and Smell of Saffron, but is not Saffron, which is uſed in their Meats. They commonly eat Man's Fleſh, if the Perſons die not of Sickneſs, as better taſted than others. When they go into the Field they ſhave to the Ears, and paint their Faces with Azure: they ſerve on Foot, except the Captain, who rides, and uſes a Sword and Lance; they are very cruel, and when they kill an Enemy preſently drink his Blood, and afterwards eat his Fleſh.

After ſix Days Journey is *Quelinfu*, a great City, with three Bridges, each eight Paces broad, and above an hundred long: Thhe Women fair and delicately ſhaped. They have abundance of Silk and Cotton, are great Merchants, have Plenty of Ginger and Galingale. I was told, but ſaw them not, that they have Hens without Feathers, hairy like Cats, which yet lay Eggs, and are good to eat. Here are many Lions, which make the Way very dangerous. After three Days Journey, you arrive in a populous Country, inhabited by Idolaters, who make abundance of ſilk Manufacturies, the chief City is *Unguem*, where is great Plenty of Sugar, ſent thence to *Cambalu*, which they knew not how to make good till they became ſubject to the Khan, in whoſe Court were *Babylonians*, which taught them to refine it with Aſhes of certain Trees, they only boiling it before into a black Paſte. Fifteen Miles farther lies *Cangiu*, ſtill in the Realm of *Concha*, and here the Khan keeps an Army in Readineſs for a Guard of the Country. Through this City paſſes a River a Mile broad, fairly built on both ſides, and abounding with Ships carrying Sugar and other Lading. This River diſembogues from hence five Days Journey South-Eaſt at *Zaitum*, a Seaport, from which the rich Ships of *India* come to this pleaſant City, as is all the Country betwixt, in which are Trees and Shrubs of Camphire. *Zaitum* is a famous Port, where all the Ships arrive with Merchandize, thence diſperſed through all *India*. There is here ſuch a Quantity of Pepper, that what comes by *Alexandria* to the Weſt is little to it, and, as it were, one of a hundred. The Concourſe of Merchants is incredible, it being one of the moſt commodious Ports in the World, exceeding profitable to the Khan, who receives Cuſtom at the rate of ten in the Hundred of all Merchandize. They pay ſo much for Hire of Ships alſo, that there is not above one half of their Merchandize remaining entire to themſelves, and yet that Moiety yields vaſt Profit to them. The Citizens are idolatrous, given to Pleaſure; in it are many Artificers on embroidered and Arras Work. The River is great, very wide, and ſwift, and one Arm of it runs to *Quinſay*, at the parting of which is *Tringui* ſituated, where *Porcelane* Diſhes are made. I was told of a certain Earth, which they caſt up in Hills, and ſo let lie expoſed to all Weathers for thirty or forty Years without ſtirring; after which, refining by Time, they make Diſhes, paint them, and then put them in the Furnace. You may there have eight Diſhes for one *Venetian* Groat. In this Kingdom of *Concha*, the Khan has as great a Revenue almoſt as that of the Kingdom of *Quinſay*. In theſe two Maſter *Marco* was, and in none of the other nine Kingdoms of *Mangi*, in all which one Language is uſed, with Variety of Dialect, and but one Sort of Writing; and therefore we will ſpeak no more of them, but in the next Book diſcourſe of *India* the Greater, the Middle and the Leſs, in which he was both in the Service of the Khan, and alſo in his Return with the Queen to *Argon*.

22. We will now enter into the Affairs of *India*, and begin with their Ships, which are made of Fir, with one Deck, on which are twenty Cabins, more or leſs, according to the Bigneſs of the Ships, each for one Merchant. They have a good Rudder, and four Maſts with four Sails, and ſome two Maſts, which they either raiſe or take down at Pleaſure. Some greater Ships have thirteen Diviſions on the Inſide, made with Boards inchaſed, ſo that if by a Blow of a Whale, or Touch of a Rock, Water gets in, it can go no farther than that Diviſion, and the Leak being found, is ſoon ſtopped. They are double, that is, have two Courſes of Boards, one within the other, and are well calked with Oakum, and nailed with Iron, but not pitched, for they have no Pitch, but anointed with an Oil of a certain Tree mixed with Lime and Hemp, beaten ſmall, which binds faſter than Pitch or Lime. The greater Ships have three hundred Mariners, the others two hundred, or one-hundred-and-fifty, as they are in Bigneſs and in Burthen, from five to ſix thouſand Bags of Pepper [d]; and they were wont to be larger than now they are, the Sea having broken into Parts and Iſlands, that the Defect of Water in ſome Places cauſeth them to build leſs. They uſe alſo Oars in theſe Ships, four Men to one Oar; and the greater Ships have with them two or three leſs Ships, able to carry a thouſand Bags of Pepper, having ſixty Mariners, or upwards, on board; which ſmall Ships ſerve ſometimes to tow the greater. They have alſo with them ten ſmall Boats for fiſhing and other Services, faſtened to the Sides of the larger Ships, and let down when they pleaſe to uſe them. They ſheath their Ships alſo after a Year's Uſage, ſo that then they have three Courſes of Boards, and they proceed in this Manner ſometimes till there be ſix Courſes, after which they break them up. Having ſpoken of the Ships, we will ſpeak of *India*, and firſt, of certain Iſlands.

Zipangu, i. e. Japan, is an Iſland on the Eaſt, one thouſand five hundred Miles diſtant from the Shores of *Mangi*, very great, the People of white Complexion, of gentle Behaviour, in Religion Idolaters, and have a King of their own. They have Gold in great Plenty, for few Merchants come thither, and the King permits no Exportation of it; and they which have carried on Commerce there, ſpeak of the King's Houſe covered with Gold, as Churches here with Lead, gilded Windows, Floors of Gold. There are alſo many Pearls. Once the Fame of theſe Riches made *Cublai-Khan* to ſend to conquer it two of his Barons, with a great Fleet of Ships, one named *Abbaca*, and the other *Venſanſin*, who going from *Zaitum* and *Quinſay*, arrived there, but falling out between themſelves, could take but one City, and there beheaded all they took, except eight Perſons, which, by an inchanted precious Stone, incloſed in the Right-arm between the Skin and Fleſh, could not be wounded with Iron; whereupon, with wooden Clubs, at the Command of the two Barons, they were ſlain. It happened one Day, that a northern Wind blew hard, which was dangerous to the Ships riding there, ſo that ſome were loſt, ſome put out farther to Sea, and others, with the two Leaders and a few principal Perſons, returned home. Out of many broken Ships ſome eſcaped by Boards and ſwimming to an Iſland not inhabited, four Miles off *Zipangu*, and were about thirty thouſand, without Proviſions or Arms, againſt whom the *Zipanguaners*, after the Tempeſt was calmed, ſent out a Fleet of Ships, and an Army. Theſe coming on Land to ſeek the wrecked *Tartars* without Order, gave Occaſion to the *Tartars* to wheel about, the Iſland being high in the Midſt, and to get unſeen to their Ships, which were left unmanned, with the Streamers diſplayed, and in them they ſailed to the chief City of *Zipangu*, where they were admitted without Suſpicion, and found few others but Women. The King of *Zipangu* beſieged them ſix Months, and they having no Relief, yielded themſelves, and their Lives were ſaved. This happened *A. D.* 1264[e].

---

[d] This Account of the Ships uſed in the Trade of the *Eaſt-Indies*, agrees exactly with the modern Relations; and though, without doubt, they fall very far ſhort of our Ships for many Purpoſes, yet for ſome, the Nature of thoſe Seas conſidered, they may be, and very probably are, more convenient.

The Khan, for the ill Conduct of his two Commanders, cut off the Head of one, and ſent the other to a deſart Iſland called *Zerga*, where he cauſed Offenders to die, by ſewing them, their Hands bound in a new flay'd Hide of a Buffaloe, which drying, ſhrinketh ſo, as it puts them to vaſt Tortures, which lead to a miſerable Death. The Idols in this and the adjoining Iſlands are made with Heads of Kine, Swine, Dogs, and in other Faſhions more monſtrous, as with Faces on their Shoulders, with four, ten, or even an hundred Hands; and to theſe they aſcribe moſt Power, and do moſt Reverence, and ſay, that ſo they learned of their Progenitors. They ſometimes eat their Enemies which they take, with great Joy, and for great Dainties; at leaſt ſo it is reported of them. The Sea, in which this Iſland lies, is called the Sea of *Cin*, or *Chin*, that is, the Sea againſt *Mangi*, and in the Language of that Iſland *Mangi* is called *Chin*, or *Chint*, which Sea is ſo large, that the Mariners and expert Pilots, who frequent it, ſay, that there are ſeven thouſand four hundred and forty Iſlands therein, the moſt Part of them inhabited; that there grow no Tree which yields not a good Smell, and that there grows many Spices of divers Kinds, eſpecially Lignum Aloes, and Pepper black and white. The Ships of *Zaitum* are a Year in their Voyage, for they go in Winter, and return in Summer, having Winds of two ſorts, which keep their Seaſons, and this Country is far from *India*; but I will leave them, for I never was there, nor are they ſubject to the Khan, and return to *Zaitum*; from hence ſailing South-weſtward one thouſand five hundred Miles, paſſing a Gulph called *Cheinan*, which continues two Months ſailing to the Northward, ſtill confining on the South-eaſt of *Mangi*, and elſewhere with *Ania* and *Toloman*, and other Provinces before named. Within it are infinite Iſlands all in a manner inhabited: In them is found abundance of Gold, and they trade one with another.

22. This Gulph ſeems like another World; and after one thouſand and five hundred Miles, ſailing acroſs this Gulph, is the County *Ziambar*, rich and great, having a King and a Language of their own, Idolaters, and paying Tribute to the Grand Khan of twenty Elephants, and Lignum Aloes in great Quantities yearly. *A D.* 1268, the Khan hearing of the Riches of this Iſland, ſent thither *Sagatu* with an Army to invade it. *Acambate* the King thereof was old, and made his Compoſition by paying the Tribute, which has been mentioned. There are many Woods of black Ebony there, which are of infinite Value. Sailing thence betwixt the South and South-eaſt one thouſand five hundred Miles is *Java*, at preſent ſuppoſed by Mariners the greateſt Iſland in the World, being above three thouſand Miles in Circuit, under a King who payeth Tribute to none, the Khan not offering to ſubject it, becauſe of the Length and Danger of the Voyage. The Merchants of *Zaitum* and *Mangi* fetch thence abundance of Gold and Spices. South and South-weſt ward ſix hundred Miles from *Java*, are two Iſlands, one *Sondur*, which is the greater, the other *Condur*, leſs, both deſolate.

Fifty Miles South-eaſt from them is a Province, or firm Land, very rich and great, named *Locbae*, the People Idolaters, having a Language of their own, as well as a King. There grows Braſil Wood in great Plenty, much Gold, Elephants, wild Beaſts, and Fowl, a Fruit called *Bercias*, large as Lemons, very good; the Place is mountainous and ſavage, and the King permits not any to come thither, leſt they ſhould know his Country, and attempt to conquer it. There are abundance of Porcelain Shells for Money tranſported to other Places. Five hundred Miles Southward from *Locbae* is the Iſle *Pentan*, a ſavage Place, which produceth in all the Woods ſweet Trees; ſixty Miles in the Way, the Sea is in many Places but four Fathom, after which ſailing to the South-eaſt thirty Miles further, is the Iſland and Kingdom of *Malaiur*, which hath a peculiar King and Language to itſelf, and here a great Trade is carried on in Spices from *Pentan*. One hundred Miles South-eaſt is *Java the Leſs*, in Compaſs about two thouſand Miles, and hath in it eight Kingdoms, and the People as many Languages; they are Idolaters, have abundance of Treaſure, Spices, Ebony, and Braſil, and are ſo far to the South, that the North Star cannot there be ſeen. Maſter *Marco* was in ſix of thoſe Kingdoms, of which he gives the following Account, leaving the other two which he ſaw not.

One of theſe eight Kingdoms is *Felech*, where the Idolaters, by frequent Trade with *Saracens*, are converted to the Law of *Mohammed*. In the Cities the Mountaineers are very beaſtly, eating Man's Fleſh, and all kinds of impure Food, and worſhip all Day what they firſt ſee in the Morning: Next to that is *Baſma*, which hath a Language by itſelf; they live without Law like Beaſts, and ſometimes ſend Hawks to the Khan, who lays claim to all the Iſland. For ſavage Beaſts they have wild Elephants, and Unicorns much leſs than Elephants, like the Buffaloe in Hair; their Feet are like Elephant's Feet, they have one Horn in the midſt of the Forehead, and hurt none therewith, but with the Tongue and Knee; for on their Tongue are certain long Prickles, and ſharp, and when they hurt any, they trample on him, and preſs him down with their Knees, and then tear him to Pieces with their Tongue. The Head is like a wild Boar's, which he carries downwards to the Ground. They love to ſtand in the Mire, and are filthy Beaſts, and not ſuch Unicorns are ſaid to be in our Parts, which ſuffer themſelves to be taken by Maids, but quite contrary. They have many Apes, and of ſeveral Kinds; they have Goſ-hawks black as Ravens, great, and good for Prey. There are certain ſmall Apes, in their Faces like Men, which they put in Boxes, and preſerve with Spices, and ſell them to Merchants, who carry them through the World, ſhewing them for Pigmies, or little Men.

Samare is the next Kingdom, where Maſter *Marco* ſtaid five Months againſt his Will, forced by ill Weather. There none of the Stars of *Charles*'s *Wain* are ſeen. He once went on Shore with two thouſand People, and there fortified for thoſe five Months, for fear of thoſe brutiſh Men-eaters, and traded mean while with them for Victuals. They have excellent Fiſh, Wine of the Date-Tree, very wholeſome for Phthiſick, Dropſy, Diſeaſes of the Spleen; ſome white, ſome red, and *Indian* Nuts as big as a Man's Head, the middle whereof is full of a pleaſant Liquor better than Wine; they eat of all ſorts of Fleſh without any Difference. *Dragoian* is another of theſe Kingdoms claimed by the Khan, having a King and Language of their own I was told of an abominable Cuſtom, that when one is ſick, they ſend to enquire of the Sorcerers whether he ſhall eſcape? If the Devils anſwer no, the Kindred ſend for ſome, whoſe Office it is to ſtrangle the ſick Party; after which they cut him in Pieces, and the Kindred eat him with great Jollity, even to the Marrow of the Bones; for, ſay they, if any Subſtance of him ſhould remain, Worms would breed thereof, which would want Food, and ſo die, to the great Torture of the Soul of the Deceaſed. The Bones they afterwards take and carry into ſome Caves in the Hills, that no Beaſt may touch them. If they take any Stranger, they eat him in the ſame manner

Lambrai is the fifth Kingdom of *Java*, in which is great Plenty of Braſil, of the Seeds whereof Maſter *Marco* brought to *Venice*, and ſowed them, but in vain, the Soil being too cold. They have Unicorns in great abundance, and Choice of Beaſts and Fowls. *Fanfur*, the ſixth Kingdom, hath the beſt Camphire, which is ſold Weight for Weight with Gold. In that Province they make Meal out of great and long Trees, as thick as two Men can fathom; whence paring off the thin Bark and Wood about three Fingers thick, the Pith within is Meal, which they put in Water, and ſtir it very well, the lighteſt Droſs ſwimming, and the fineſt ſettling to the Bottom, and then the Water being caſt away, they make Paſte, of which Maſter *Marco* brought ſome to *Venice*, taſting not much unlike Barley-Bread. The

---

[e] This Attempt made by the *Tartars* to conquer *Japan*, is a very curious Circumſtance, and of great Conſequence to the Hiſtory of this Country, becauſe mentioned by no other Author, which is the Reaſon that Father *Martini* refers us hither on that Head, in his moſt accurate Work of the Empire of *China*.

Wood of this Tree thrown into the Water ſinks like Iron, of which they make Lancets, but ſhort, for if long, they would be too heavy to bear. Theſe they ſharpen, and burn at the Tops, with which ſo prepared, they will pierce through Armour ſooner than if they were made of Iron. About one hundred and fifty Miles from *Lambri*, ſailing Northwards, are two Iſlands, one called *Nocueran*, in which the Inhabitants live like Beaſts, go all naked, both Men and Women, and worſhip Idols, have excellent Trees, Cloves, Sanders white and red, *Indian* Nuts, Braſil, and other Spices; the other *Angaman*, ſavage as the former, and where I was told they had Dogs Heads and Teeth.

24. Sailing hence one thouſand Miles to the Weſt, and a little to the North-weſt, is *Zeilan*, two thouſand and four hundred Miles in Circuit, and anciently three thouſand and ſix hundred Miles, as is ſeen in the Maps of the Mariners of thoſe Places; but the North Winds have made a great Part of it Sea. It is the fineſt Iſland in the World; the King is called *Sendernaz*. The Men and Women are Idolaters, go naked, ſave that they cover their Privities with a Cloth, have no Corn, but Rice and Oil of *Seſamino*, Milk, Fleſh, Wine of Trees, abundance of Braſil, the beſt Rubies in the World, Sapphires, Topazes, Amethiſts, and other Gems: The King is ſaid to have the very fineſt Ruby that was ever ſeen, as long as one's Hand, and as big as a Man's Arm, without Spot, ſhining like a Fire, not to be bought for Money. *Cublai-Khan* ſent and offered the Value of a City for it; but the King anſwered, he would not give it for the Treaſure of the World, nor part with it, becauſe it had been his Anceſtors. The Men are unfit for Soldiers, and hire others when they have Occaſion. From *Zeilan*, ſailing ſixty Miles to the Weſt, lies the great Province of *Malabar*, which is not an Iſland, but firm Continent, called *India the Greater*, the richeſt Province in the World: There are in it four Kings, the chief of which is *Sinder Candi*, in whoſe Kingdom they fiſh for Pearls, *viz.* betwixt *Malabar* and *Zeilan*, in a Bay where the Sea is not above ten or twelve Fathom; in which Divers deſcend, and in Bags or Nets tied to their Bodies, bring up the Oiſters, in which are the Pearls: And becauſe there are ſome great Fiſh which kill the Fiſhermen, they hire certain Bramins to charm them, and theſe have the twentieth, and the King the tenth. Theſe Oiſters are found through the whole Month of *April*, and till the Middle of *May*, and not at any time elſe. In *September* they find them in a Place above three hundred Miles off, and till the Midſt of *October*. The Khan goes as naked as the reſt, ſave that he wears ſome honourable Enſigns, as a Collar of precious Stones about his Neck, and a Thread of Silk to his Breaſt, with one hundred and four fair Pearls ſtrung thereon to count his Prayers by, of which he muſt daily ſay ſo many to his Idols. A ſort of Bracelets he weareth on three Places on his Arms, and likewiſe on his Legs, on his Fingers, and on his Toes. The Prayers which he ſays are *Pacauca, Pacauca, Pacauca*, one hundred and four times. This King hath one thouſand Concubines, and if any pleaſe him, he takes her as once he did from his Brother, whence Wars had followed; but the Mother threatening to cut off her Breaſts, which had nouriſhed them, if they proceeded, the Quarrel was compoſed. He hath many Horſemen for his Guard, which always accompany him, who, when the King dies, throw themſelves voluntarily into the Fire when he is burnt, to do him Service in the next World.

This Prince and his Brethren, the Kings of *Malabar*, buy their Horſes from *Ormus*, and other Parts; the Country breeds none; and if it ſometimes falls out that it does, yet are they there bred ill-favoured and naught. Condemned Perſons will offer themſelves to die in Honour of ſuch an Idol, which is performed with twelve Knives, and twelve Wounds in divers Parts of the Body, at every Blow, ſaying, *I kill myſelf in Honour of that Idol*; and the laſt he thruſts in his Heart, and is then burnt by his Kindred. The Wives alſo caſt themſelves into the Fire with their Huſbands, Diſrepute following thoſe who refuſe it. They worſhip Idols, and moſt of them adore Cows, and would not eat ſo holy Fleſh as Beef for all the World. There are ſome called *Gaui*, who eat ſuch Oxen as die of themſelves, but may not kill them, and dawb over their Houſes with Ox-dung. Theſe *Gaui* are of the Poſterity of thoſe which ſlew *St. Thomas*, and cannot enter the Place where his Body is. They ſit on Carpets on the Ground in this Kingdom: They have no Corn but Rice; are not a martial People; kill no Beaſts, but when they will eat any, get the *Saracens* to do it, or other People; waſh twice a-day, Morning and Evening, both Men and Women, and will not otherwiſe eat, which they who obſerve not are accounted Hereticks. They touch not their Meat with their Left hand, but uſe that Hand only to wipe, and for other unclean Uſes. They drink each in his own Pot, and will not touch another Man's Pot, nor ſuffer their own to touch their Mouth, but hold it over, and poor it in. To Strangers who have no Pot they pour Drink into his Hands, and oblige him to drink with them. Juſtice is ſeverely adminiſtered for Crimes, and a Creditor may in ſome Caſes encompaſs his Debtor with a Circle, which he dares not paſs till he hath paid the Debt, or given Security; if he does, he is to be put to Death; and Maſter *Marco* once ſaw the King himſelf on Horſeback thus encircled by a Merchant, whom he had long delayed and put off; neither would the King go out of the Circle which the Merchant had drawn, till he had ſatisfied him, the People applauding the King's Juſtice. They are very ſcrupulous of drinking Wine made of the Grape, and they which do it are not thought worthy or honeſt Men, or admitted to be Witneſſes, a Thing denied alſo to him who ſails by Sea, for they ſay ſuch Men are deſperate. They think Lechery no Sin. It is very hot, and they have no Rain but in *June*, *July*, and *Auguſt*; without which Refreſhing of the Air they could not live. They have many Phyſiognomers and Soothſayers, which obſerve Beaſts and Birds, and have an unlucky Hour every Day in the Week, called *Choiach*, as on *Monday*, betwixt two and three, on *Tueſday* the third Hour, and on *Wedneſday* the ninth, &c. through all the Year, ſet down in their Books. They curiouſly obſerve Nativities. At thirteen Years old they put their Boys to get their own Livings, who run up and down to buy and ſell, having a ſmall Stock given them to begin, and in Pearl Seaſon they buy a few Pearls, and ſell them again to the Merchants, which cannot well endure the Sun, for little Gain; what they get they bring to their Mothers to dreſs for them, for they may not eat at their Fathers Coſt. They have Idols, male and female, to whom they offer their Daughters, who, when the Monks or Prieſts appoint, ſing and dance to the Idols, and very often ſet Victuals before them, ſaying that they eat, leaving it the Space of a Meal, ſinging all the while, and then they fall to eating in earneſt; after which they return home. The Cauſe of theſe Sacrifices is the Houſhold Quarrels betwixt the God and Goddeſs, which, if they ſhould appeaſe, they ſhould loſe their Bleſſing. The great Men have Litters made of large Canes, which they faſten artificially to ſome upper Place to prevent Tarantulas biting, and alſo Fleas and other Vermin, and for freſh Air.

The Place of *St. Thomas*'s Sepulchre is a ſmall City, not much frequented by Merchants, but very much by Chriſtians and *Saracens* for Devotion. The *Saracens* hold him a great Prophet, and call him *Ananias*, that is, a holy Man. The Chriſtians take of the Earth where he was ſlain, which is red, and carry it with them with great Reverence, and give it, mixed with Water, to the Sick. *A. D.* 1288, a great Prince, having more Rice than Room to lay it in, made bold with *St. Thomas*'s Church, in the Room where Pilgrims were received; but by a Viſion of *St. Thomas* in the Night, was ſo terrified that he quickly left the Place. The Inhabitants are black, not ſo born, but became ſo by often anointing themſelves with Jeſſamine Oil, to obtain that Beauty. They paint the Devil white, and their Idols black. The Cow-worſhippers carry with them to Battle ſome of the Hair of a wild Ox, as a Preſervation againſt Dangers, and therefore ſuch Hairs are ſold at a high Price.

25. *Murſili*, or *Monſul*, is northward from *Malabar* five hundred Miles; the Inhabitants are Idolaters. They have Diamonds in their Hills, which they ſearch for after great Rains. Weſtward from *St. Thomas* is *Lac*, whence the *Bramins* have their Original, who are the honeſteſt Merchants in the World, and will not lye for any thing,

and faithfully keep any thing committed to their Cuſtody, or as Brokers ſell or barter Merchandize for others. They are known by a Cotton Thread, which they wear over the Shoulders, tied under the Arm croſſing the Breaſt. They have but one Wife, are great Aſtrologers, of great Abſtinence, and long Life; obſerve their own Shadow in the Sun, when they are to buy, and thence conjecture according to the Rules of their Art. They conſtantly chew a certain Herb, which makes their Teeth good, and helps Digeſtion. There are ſome Religious among them, called *Tangui*, who go altogether naked, live auſterely, worſhip Cows, of which they have little braſs Images on their Foreheads, and of the Ox Bones Aſhes make an Ointment, wherewith they anoint their Bodies in divers Places with great Reverence. They neither kill or eat any live Creature, nor Herb green, or Root before it is dried, eſteeming every Thing to have a Soul. They uſe no Diſhes, but lay their Victuals on dry Leaves of Apples of Paradiſe. They eaſe themſelves in the Sands, and then diſperſe it hither and thither, leſt it ſhould breed Worms, which muſt die for want of Food. Some of them live to one hundred and fifty Years, and their Bodies, after Death, are burnt.

In *Zeilan* I had forgot to mention a high Mountain, which none can aſcend but by Iron Chains, as I was told, in the Top whereof the *Saracens* ſay is *Adam*'s Sepulchre; the Idolaters ſay it is the Body of *Sogomon Barchan*, the firſt Idol-Founder, Son to the King of that Iſland, who betook himſelf to a ſolitary Life on the Top of this Hill, from whence no Pleaſures nor Perſuaſions could draw him; his Father made an Image after his Death to repreſent him, all of Gold, adorned with Garments, and commanded all the Iſlanders to worſhip it: And hence, as they ſay, began Idolatry. Hither they come from remote Places in Pilgrimage, and there his ſore Teeth, and a Diſh of his are reſerved, and as holy Relicks ſolemnly ſhewed. The *Saracens*, ſay they, are of *Adam*, which Report cauſed the Khan, *A. D.* 1281, to ſend Embaſſadors thither, who obtained two Teeth and a Diſh, and ſome of his Hairs, by Grant, from the King of *Zeilan*, which he cauſed to be received by the whole People of *Cambalu* without the City, and brought to his Preſence with great Honour.

Cael is a great City, governed by *Aſter*, one of the four Brethren, who is very rich, alſo very kind to Merchants; he hath three hundred Concubines. All the People have a Cuſtom to be continually chewing in their Mouths a Leaf called *Tembul*, with Spices and Lime. *Coulam* is five hundred Miles South-weſt from *Malabar*; they are Idolaters. There are alſo Chriſtians and *Jews*, who have a Speech by themſelves. They have Pepper, Braſil, Indico, Lions all black, Parrots of divers Sorts, all white as Snow, others azure, others red, and ſome ſmall Peacocks and Peahens, very different from ours, and larger, as are their Fruits; they are lecherous, and marry their Siſters and near Kindred: There are many Aſtrologers and Phyſicians. In *Camari* are Apes ſo large, that they ſeem to be Men: And here we had a Sight of the North-ſtar. *Delai* hath a King, and the Inhabitants have their own Language: The People are Idolaters, and have Plenty of Spices; the Ships of *Mangi* come thither. *Malabar* is a Kingdom in the Weſt, in which, and in *Guzerat*, are many Pirates, who ſometimes put to Sea with above an Hundred Sail, and rob Merchants. They bring with them their Wives and Children, and there remain all Summer. In *Guzerat* is abundance of Cotton, the Trees ſix Fathoms high, and laſt twenty Years; the Cotton of theſe Trees is not fit to ſpin, after they are above twelve Years old, but for Quilts: There are many Rhinoceros's. In *Canbau* is Store of Frankincenſe. It is a great City, where is great Trade for Horſes. In *Cambaia* is much Indico, Buckram, and Cotton. *Semenath* is a Kingdom of a peculiar Language, they are Idolaters, Merchants, and a good People. *Reſmacoran* is a great Kingdom of Idolaters and *Saracens*. The laſt Province of the *Greater India*, towards the North-weſt, is five hundred Miles, near which are ſaid to be two Iſlands, one of Men and the other of Women, thoſe coming to theſe, and there ſtay in *March*, *April*, and *May*. The Women keep their Sons till twelve Years, and then ſend them to their Fathers. It ſeems the Air of that Country admits no other Courſe: They are Chriſtians, and have their Biſhop, ſubject to the Biſhop of *Socotora*; they are good Fiſhermen, and have Store of Amber. *Socotora* hath an Archbiſhop, not ſubject to the Pope, but to one *Zatulia*, who reſides at *Baldach*, who chooſeth him. The *Socotorans* are Inchanters, as great as any in the World, though excommunicated therefore by their Prelate, and raiſe Winds to bring back ſuch Ships as have wronged them, till they obtain Satisfaction.

26. A thouſand Miles thence Southward is *Magaſter*, one of the greateſt and richeſt Iſles in the World, three thouſand Miles in Circuit, inhabited by *Saracens*, governed by four old Men; the People live by Merchandize, and ſell vaſt Quantities of Elephants Teeth. The Currents in theſe Parts are of exceeding Force. They report ſtrange Stories of Fowls, called *Ruch*, like an Eagle, but of incomparable Bigneſs. *Zenſibar* alſo is ſaid to be of great Length, *&c.* There are Elephants, Giraffas, and Sheep, very unlike to ours; the Men and Women very deformed. I have heard Mariners and ſkilful Pilots of thoſe Parts report, and have ſeen in their Writings, which have compaſſed the Sea of *India*, that there are in it twelve thouſand and ſeven hundred Iſlands inhabited and deſert. In *India Major*, which is from *Malabar* to *Cheſmacoran*, are thirteen Kingdoms.

India Minor is from *Ziambi* to *Murfili*, in which are eight Kingdoms, beſides many Iſlands. The ſecond, or *Middle India*, is called *Abaſcia*, the chief King a Chriſtian. There are ſix other Kings, three Chriſtians, and three *Saracens*, ſubject to him; there are alſo *Jews*. St. *Thomas* having preached in *Nubia*, came to *Abaſcia*, and there did the like, and went afterwards to *Malabar*. They are very valiant Soldiers, always in Arms againſt the Soldan of *Aden*, and the People of *Nubia*. I heard that *A. D.* 1288, the Great Emperor of the *Abiſſines* would have viſited *Jeruſalem*, but being diſſuaded by reaſon of the *Saracen* Kingdoms in the Way, he ſent a Biſhop of holy Life to perform his Devotions, who in his Return was taken by the Soldan of *Aden*, and circumciſed by Force; whereupon the *Abiſſine* Monarch raiſed an Army, diſcomfited the Soldan, with two other *Mohammedan* Kings, took and ſpoiled *Aden*. *Abaſcia* is rich in Gold; *Eſcier* is ſubject to *Aden*, forty Miles diſtant South-Eaſt, where is plenty of white Frankincenſe, very good, which drops from ſmall Trees by Inciſion of the Bark, a rich Merchandize, *&c.* Some in that Country, for Want of Corn, make Biſcuit of Fiſh, of which they have great Plenty: They alſo feed their Beaſts with Fiſh. They take them in *March*, *April*, and *May*.

27. After having ſpoken of the Provinces on the Coaſt, I will now return to ſome Provinces more to the North, where many *Tartars* dwell, which have a King called *Caidu*, of the Race of *Zingis-Khan*, but ſubject to none. Theſe obſerve the Cuſtoms of their Anceſtors, dwell not in Cities, Caſtles, or Fortreſſes, but dwell with their King in the Fields, Plains, Vallies, and Foreſts, and are eſteemed true *Tartars*. They have no ſort of Corn, but live on Fleſh and Milk, in great Peace. They have Multitudes of Horſes, Kine, Sheep, and other Beaſts. There are found great white Bears, twenty Palms long, black Foxes, very large, wild Aſſes, and little Beaſts called *Rondes*, which bear the Sable Furs, and Variarcolini, and thoſe which are called *Pharaoh*'s Rats, which the *Tartars* are ſkilful in taking. The great Lakes which are frozen, except for a few Months in the Year, are the Cauſe that in the Summer it is ſcarce to be travelled for Mire, and therefore the Merchants in going to buy their Furs, for fourteen Days Journey through the Deſart, have ſet up for each Day a Houſe of Wood, where they barter with the Inhabitants, and in Winter they uſe Sledges without Wheels, and plain on the Bottom, riſing with a Semicircle at the Top, or End, which are drawn on the Ice, by Beaſts like great Dogs, by Couples, the Sledge-Man only with his Merchant and Furs ſitting therein.

At the Extremity of the Region of theſe *Tartars* is a Country reaching to the fartheſt North, called the obſcure Land, becauſe the moſt Part of the Winter Months the Sun appears not, and the Air is thick and darkiſh, as betimes in the Morning with us. The Men there are pale and ſquat, have no Prince, and live like Beaſts. The *Tartars* often rob them of their Cattle in thoſe dark Months, and leſt they ſhould loſe their Way, they ride on Mares which have Colts ſucking, which they leave with a Guard at the Entrance of that Country, where the Light beginneth to fail, and when they have taken their Prey, give Reins to the Mares, which haſten to their Colts. In their long continued Summer, they take many of the fineſt Furs (on Occaſion of the *Tartars* going to rob them) of which I have heard ſome are brought into *Ruſſia*. *Ruſſia* is a great Country near that Northern Darkneſs. The People are *Greek* Chriſtians, the Men and Women fair, and pay Tribute to the King of the *Tartars* of the Weſt, on whom they border. On the Eaſt there is plenty of Furs, Wax, and Mines of Silver; it reaches, as I was told, to the Ocean Sea, in which are Iſlands that abound in Ger-Falcons and Falcons.

28. We are now arrived at the Cloſe of this Author's Writings, and therefore are the more capable of judging of the Particulars they contain, which was the Reaſon that I left ſome Points to be conſidered here, which I ſhould otherwiſe have thrown under the Head of Objections. Some critical Readers have affected to doubt, whether our Author, or rather his Performance, deſerves Credit, from the Account that is given of the Manner in which it was wrote, and from the different Stories that we have told of the Original. We have already accounted for the Miſtakes that have been made on this Head, and ſhall here only take Notice, that *Francis Pipin*, of the Order of Preachers, who made a *Latin* Tranſlation of our Author's Work, tells us in his Preface, that from the Report of his Domeſticks, he was ſatisfied that *Marco Polo* was a Man of great Prudence, remarkably honeſt, and one who had the faireſt Character that could be. It is not very eaſy to conceive, that ſuch a Man ſhould expoſe that Credit which he had been at ſo much Pains to eſtabliſh, by ſending into the World an indigeſted Heap of Fictions and Romances. But the ſame Perſon informs us farther, that Signior *Nicolo Polo*, the Father of our Author, was the moſt eſteemed and beſt beloved Man of his Time, and that he conſtantly reported the very ſame Facts, during his whole Life, which his Son publiſhed in his Works; and as for his Uncle Signior *Maffio*, who enjoyed ſome of the principal Offices in the Government at *Venice*, and diſtinguiſhed himſelf by his Wiſdom and Integrity, when he was upon his Death-Bed he took particular Care to aſſure his Confeſſor, that he had reviewed his Nephew's Work, and that he was fully ſatisfied that there was nothing in it that was not ſtrictly true, and this he gave him Leave to declare for the Satisfaction of the World. Here then are three credible Witneſſes to the ſame Facts, and therefore, according to all the Laws of Evidence, they ought to be looked upon as thoroughly eſtabliſhed.

We muſt however diſtinguiſh between ſuch Facts as our Author reports from his own Knowledge, and thoſe which are grounded only on Hear-ſay and Information. We may accuſe an Author of Credulity or Imprudence, who inſerts ſtrange and improbable Things in his Writings, but we cannot with Juſtice charge him with Infidelity or Falſhood on that Head, and we ought alſo to make ſome Allowance for the Genius of the Time in which he wrote, becauſe it cannot be preſumed, that even the wiſeſt and moſt prudent Man can be totally free from the Errors of the Age in which he flouriſhed: It may not be amiſs to give a few Inſtances with regard to our Author.

In the twenty-fifth Chapter there is an Account of Diamond Mines, in the Kingdom of *Murſili*, where we have omitted a Paſſage that is to be met with in moſt of of the Editions of our Author, becauſe it is reported on the Credit of the Inhabitants, and we were willing to examine it by itſelf, that the Reader might perceive we had no Intention to impoſe upon him thoſe Improbabilities which had been impoſed upon our Author himſelf. After having told us that Diamonds are found there at the Bottom of the rocky Mountains, after the rainy Seaſon is over, he proceeds thus: "They alſo in the Summer-Time aſcend theſe Mountains, though with great Difficulty, becauſe of the Vehemence of the Heat, and find abundance of thoſe precious Stones among the Gravel. In this they "are likewiſe much expoſed to Danger from the vaſt Number of Serpents of enormous Size, which ſhelter themſelves in the Holes and Caverns of theſe Rocks, where, nevertheleſs, they find Diamonds in the greateſt Abundance. Among other Methods of obtaining them, they make uſe of this: There are abundance of white Eagles that reſt in the upper Part of thoſe Rocks, for the ſake of feeding on the Serpents, and in the deep Vallies and Precipices, where Men are afraid to venture themſelves, they throw Pieces of raw Meat, which the Eagles perceiving, immediately ſtoop and ſeize it, with all the little Stones and Gravel that adhere to theſe moiſt Pieces of Meat. Such as ſearch for Diamonds, watch the Eagles Neſts, and when they leave them, pick up ſuch little Stones, and ſearch likewiſe for Diamonds among the Eagles Dung. The Kings and great Men in this Country keep the faireſt and fineſt of theſe Stones to themſelves, and ſuffer the Merchants to ſell the reſt."

The famous *Julius Cæſar Scaliger* was extremely offended with this Relation, which he treats with the utmoſt Contempt, and ſeems to wonder at the Aſſurance of a Writer that expects Stories of this kind ſhould gain Credit: Yet, after all, I do not ſee that there is any great Harm in our Author's relating this Tale, however improbable it may ſeem, ſince without doubt he received it from the Inhabitants, and what Motives they had to tell him ſuch a Story is not very difficult to gueſs. The native *Indians*, in all the Revolutions that have happened in the Countries where they live, have preſerved this Trade in their own Hands, and by Fables of one ſort or other kept Strangers from attempting to interfere with them. Our Author was very probably the firſt *European* that was ever at the Diamond Mines, and therefore we have the leſs Reaſon to be ſurprized at his being impoſed upon in an Affair of which he could not be a competent Judge.

But to make the Reader ſome Amends for ſo imperfect a Relation of the manner in which this valuable Trade is carried on, I ſhall take this Opportunity of inſerting the beſt Account of the Matter that I believe has been hitherto given by one who was an Eye-witneſs of it in the Year 1680, and that too in the very Country known to our Author by the Name of the Kingdom of *Murſili*. "The Diamonds are ſo ſcattered and diſperſed in the Earth, and lie ſo thin, that in the moſt plentiful Mines it is rare to find one in digging, or till they have prepared the Stuff, and ſearched purpoſely for them: They are alſo frequently encloſed in Clods; and ſome of thoſe of *Molwilleed*, and the new Mines in the Kingdom of *Golconda*, have the Earth ſo fixed about them, that till they grind them on a rough Stone with Sand, they cannot move it ſufficiently to diſcover they are tranſparent, or were it not for their Shapes, to know them from other Stones. At the firſt opening of the Mine, the unſkilful Labourers ſometimes, to try what they have found, lay them on a great Stone, and ſtriking on them with another, to their coſtly Experience diſcover they have broken a Diamond. One I know who had an excellent Stone of eight Mangellans, that is, thirty-two Grains, ſerved ſo by ignorant Miners he employed. Near the Place where they dig they raiſe a Wall, with ſuch rugged Stones as they find at hand, whereof all the Mines afford Plenty, of about two Feet high, and ſix Feet over, flooring it well with the ſame; for the laying of which they have no other Morter than the Earth tempered with Water. To ſtrengthen and make it tight they throw up a Bank againſt the Side of it, in one Part whereof they leave a ſmall Vent about two Inches from the Bottom, by which it empties itſelf into a little Pit made in the Earth to receive ſmall Stones, if by chance any ſhould run through. The Vent being ſtopp'd, they fill the Ciſtern they have made with Water, ſoaking therein as much of the Earth they dig out of the Mine as it can conveniently receive at a time, breaking the Clods, picking out the great Stones, and ſtirring it with Shovels till the Water is all muddy, the gravelly Stuff falling to the Bottom; then they open the Vent, letting out the foul Water, and ſupply it with clean, till all the earthy Subſtance be waſhed away, and none but a gravelly one remains at the Bottom. Thus they continue waſhing till about Ten of the Clock before Noon, when

“ they take the gravelly Stuff they have waſhed, and ſpread it on a Place made plain and ſmooth for that Purpoſe near the Ciſtern, which being ſo dried by the Heat of the Sun at that Time of the Day, they very curiouſly look it over, that the ſmalleſt Bit of a Stone can hardly eſcape them. They never examine the Stuff they have waſhed, but between the Hours of Ten and Three, leſt any Cloud, by interpoſing, intercept the briſk Beams of the Sun, which they hold very neceſſary to aſſiſt them in their Search, the Diamonds conſtantly reflecting them when they ſhine on them, rendering themſelves thereby the more conſpicuous.

“ Some of the experteſt Labourers are employed in ſearching, he that ſets them at work uſually ſitting by, and over-looking; but it is hardly poſſible, eſpecially where many are employed, to watch them ſo narrowly, but that they may ſteal part of what they find, as many times ſome of them do, and ſelling it privately, convert it to their own Uſe. If they find a large Stone, they carry it not preſently to their Employer, but keep on looking, having an Eye on him, till they obſerve he takes notice of it, when with the Turn of their Hand they give him a Glimpſe of it, but deliver it not till they have done Work, and then very privately, it being the general Endeavour to conceal what they find, leſt it ſhould come to the Knowledge of the Governor of the Place, and he requires a Share, which in the Kingdom of *Golconda* is uſually practiſed, without any Reſpect to the Agreement made with them. The Miners, thoſe that employ them, and the Merchants that buy the Stones of them, are uſually *Pagans*, not a Muſleman, that ever I heard of, followed the Employment. Theſe Labourers, and their Employers, are *Tellingas*, commonly Natives of or near the Place. The Merchants are the *Banians* of *Guzerat*, who for ſome Generations have forſaken their own Country to take up this Trade in which they have had ſuch Succeſs, that it is now ſolely engroſſed by them, who, correſponding with their Countrymen in *Surat*, *Goa*, *Golconda*, *Viſiapore*, *Agra*, and *Dilu*, and other Places in *India*, furniſh them all with Diamonds.

“ The Governors of the Mines are alſo Idolaters. In the King of *Golconda*'s Dominions a *Tellenga Brammee* rents moſt of them, whoſe Agreement with the Adventurer is, that all the Stones found under a *Pagoda* Weight are to be their own; all of that Weight and above is to be his, for the King's Uſe. But although this Agreement be ſigned and ſealed, he minds not at all the Performance thereof, but endeavours to engroſs all the Profit to himſelf, by tyrannically ſqueezing both Merchants and Miners, who he not only taxes very high, but maintaineth Spies among them of their own People. On the leaſt Suſpicion that they have been any ways fortunate, he immediately makes a Demand on them, and raiſes their Tax; elſe on a falſe Pretence they have found a great Stone, drubs them till they ſurrender what they have, to redeem their Bodies from Torture.

“ Beſides, the Exciſe is ſo high on all ſorts of Proviſions, Beetle, and Tobacco, which with them are eſteemed Neceſſaries, that the Price of all Things is doubled; by which Courſe there is hardly a Man to be found worth five hundred Pounds amongſt them, moſt of them dealing by Monies taken up at Intereſt of Uſurers, who reſide there purpoſely to furniſh them, who with the Governor eat up their Gains, ſo that one would wonder any of them ſhould ſtay, and not betake themſelves to Places where they might have better Uſage, as there are many in other Governments, and ſome few that have the Senſe to remove; but many their Debts, others Hopes of a great Hit, detains. Both Merchant and Miner go generally naked, only a poor Cloth about their Middle, and their Saſh on their Heads; they dare not wear a Coat, leſt the Governor ſhould ſay they have thriven much, and are rich, and ſo enlarge his Demands on them. The wiſeſt, when they find a great Stone, conceal it till they have an Opportunity, and then with Wife and Children run all away into the *Viſiapore* Country, where they are ſecure. The Government in the *Viſiapore* Country is better: Their Agreements obſerved, Taxes eaſier, and no ſuch Impoſitions on Proviſions; the Merchants go handſomely clad, among whom are ſeveral Perſons of conſiderable Eſtates, which they are permited to enjoy peaceably, by reaſon whereof their Mines are much more populous, and better employed than thoſe of *Golconda*.”

It is for the ſame Reaſon that I have omitted another improbable Story of a Bird called a *Ruc*, of ſuch a monſtrous Size as to be able to carry an Elephant into the Air; which Abſurdities our Author was probably induced to believe, by the ſtrange Things he daily ſaw in theſe Parts of the World, and of which the People in *Europe* had not ſo much as the leaſt Idea. Theſe Omiſſions I thought requiſite for keeping the Work within Bounds, as having no Inclination to try the Patience of my Readers, by inſerting any more of theſe old Travels than ſeem abſolutely neceſſary for connecting the ſeveral Parts of this Diſcourſe, and ſhewing how, in what Manner, and by whom thoſe great Diſcoveries were made, which enabled the different Nations in *Europe* to carry on ſo great a Trade as they do to all Parts of the *Eaſt-Indies*. This, without doubt, was originally owing to this Work of *Marco Polo*, who, though no Geographer or Seamen himſelf, yet left ſuch clear and evident Proofs of the Poſſibility of reaching the moſt diſtant Parts of *Aſia* by Sea, that his Work was more eſteemed in *Portugal*, where the firſt Spirit of Diſcovery appeared, than in *Italy* itſelf. It remains, in this Place, to give a ſhort Account of the Names by which he has diſtinguiſhed the Countries he viſited, and particularly to anſwer the great Objection raiſed againſt his Work, from his not making any Mention of the famous Wall in *China* for keeping out the *Tartars*, which ſhall be done in as few Words as poſſible.

Our Author following exactly the Sentiments of the *Tartars*, diſtinguiſhes all this great Country into two Parts, *viz.* *Cathay* and *Mangi*, about which many Doubts have been raiſed, and many Diſputes ſet on Foot without any juſt Grounds, ſince it is very plain, that under the Denomination of *Cathay*, *Marco Polo* comprehends the ſix Northern Provinces of *China*; and under that of *Mangi* the nine Southern Provinces, which are ſeparated from the former by the great River *Kiang*; and when we come hereafter to treat of the preſent State of the Empire of *China*, we ſhall take Occaſion to ſhew, that this Deſcription of his agrees very well with the beſt Accounts of that Empire. This will be the more intelligible to the Reader, when he is informed, that the *Tartars* ſtill preſerve theſe very Forms of Speech, that is to ſay, give the Name of *Cathay* to the Northern Parts, and that of *Mangi* to the Southern Provinces of *China*. As to this latter, it is a Name of Contempt, for *Mangi*, in the *Tartar* Tongue, implies *Barbarians*, and ſo they eſteemed the *Chineſe* to be, not from the Brutality of their Manners, but from their extravagant Haughtineſs and Pride, and eſpecially from that intolerable Hatred and Contempt with which they treated the *Tartars* themſelves. The plain Reaſon why our Author did not mention the famous Wall in *China* was, becauſe he entered it by the Southern Provinces; and as he confines himſelf to the Places he ſaw, or to ſuch as were in their Neighbourhood, and proſecutes his Deſcription from the Weſtern Parts of *China* to the Sea, it was impoſſible he ſhould take Notice of it; ſo that when we conſider this Matter attentively, it is very plain, that this Circumſtance, inſtead of leſſening the Credit of *Marco Polo*, ought, in Truth, to ſtrengthen it very much, ſince it is a convincing Proof of the Truth of what he has aſſerted in relation to his own Travels, and his Deſcriptions of the Countries through which he paſſed; and evidently ſhews he did not amuſe himſelf with Accounts of Countries and Provinces of which he could ſay nothing but from Report, to which, if he had liſtened, his Relation muſt have been much more obſcure and perplexed than we find it at preſent. But it is now Time to proceed to the Concluſion of this Section, by ſhewing the Advantages that may be obtained by the Peruſal of *Marco Polo*'s Travels, in order to the thorough Underſtanding of our Subject. And this we ſhall perform as conciſely as poſſible, and in ſuch a Manner as may diſengage us from the Neceſſity of looking into any more of theſe old Writers for the future.

29. As the Inhabitants of *Europe* received the firſt diſtinct Accounts of the vaſt Country of *China* from our induſtrious *Venetians*, ſo from them likewiſe they had the cleareſt and beſt Account of the Revolutions that had happened in that Empire by the Power of the *Tartars*; a Thing of ſuch Conſequence to the right underſtanding what ſubſequent Travellers have related, that I will be bold to ſay all the Difficulties and Diſcouragements that have been thrown in our Way, and have ſo long hindered our making a right Uſe of the many Collections of Travels already publiſhed, have ariſen in part from a Humour that for ſome time prevailed, of treating *Marco Polo*'s Relation as a Romance, and partly through the Miſtakes made by thoſe, who, for want of having ſufficient Lights, and the Materials that were requiſite, undertook to explain the Hiſtory of the Irruptions of the *Tartars* into *China*, and endeavoured to make the Dates and Facts mentioned in theſe Travels, fall in with their Accounts, accuſing, at every Turn, the Author of Errors and Faults, of which themſelves only were guilty. To remedy theſe Diſorders, and to make the Way plainer for the future, we ſhall, without running into a long Diſcuſſion of what other Writers have advanced, obſerve, that there have been three diſtinct Conqueſts of *China* made by the *Tartars*, of each of which we ſhall give a clear and diſtinct Account in very few Words. The firſt of theſe was by the Eaſtern *Tartars*, who, before the Time of *Zingis-Khan*, made themſelves Maſters of the Northern Provinces of *China*, and fixed the Seat of their Empire at *Khanbalick*, *Cambalu*, or *Pekin*; and this, as I conceive, gave Riſe to what is called the Empire of *Cathay*; concerning which, all our ancient Writers in general deliver themſelves with ſo much Confuſion, ſometimes repreſenting *Cathay* as a Part of *Tartary*, ſometimes again comprehending under that Name the whole Empire of *China*; and at others, diſtinguiſhing it from both. But from this Diſtinction, it clearly appears, that though the ancient Empire of *Cathay* was ſituated in *China*, yet it was an Empire raiſed by the *Tartars*; and that from want of attending to this, ſo many Miſtakes have been introduced.

The Prince who governed *Cathay* in the Time of *Zingis-Khan* was *Altan-Khan*, againſt whom that great Conqueror made his firſt Attempt, in the Year 1206, and that with ſuch Succeſs as to oblige this Monarch, after various Defeats, to ſhut himſelf up in the City of *Cambalu*, and to ſue for a Peace, which, with much Difficulty, he obtained; for the Confirmation of which he gave his Daughter in Marriage to *Zingis-Khan*. This Peace was but of very ſhort Continuance; for *Altan-Khan*, having a Jealouſy that ſome of his Nobility held Intelligence with his Enemy, he put many of them to Death; and finding the northern Parts of his Dominions in a manner waſted and depopulated by the late Invaſion, he retired to the City of *Nankin*, which his Father had fortified with three Walls, the laſt of which was forty Leagues in Circuit, and left his Son in Poſſeſſion of *Khanbalick* and of the adjacent Countries. The reſt of the Nobility, enraged at the Inſtances of Severity before-mentioned, and at the ſame time doubting their own Safety, had immediate Recourſe to *Zingis-Khan*, and drew him a ſecond Time into *Cathay*, where he made himſelf Maſter of the Imperial City of *Cambalu*; the News of which Accident affected *Altan-Khan* to ſuch a Degree, that he poiſoned himſelf. This happened about the Year 1210; and thus the *Tartars* became Maſters of the northern Parts of *China*. They continued their Conqueſts under the Reign of the Succeſſors of *Zingis-Khan*, till the Emperor, who reigned when our Author was in theſe Parts, *viz. Coplai-Khan*, who in the Year 1278 completed the Conqueſt of *Mangi*, or the ſouthern Parts of *China*.

The Bounds of *Zingis-Khan*'s Conqueſts on this Side, was the River *Hoang*; but his Succeſſors annexed all the Country between that River and the River of *Kiang*. All the reſt were ſubdued by *Coplai-Khan*, and his General *Pe Yen*. This was the ſecond Conqueſt made by the *Tartars*, who not only deſtroyed the Empire formerly eſtabliſhed by their Countrymen in *Cathay*, but alſo that of the native *Chineſe*, which had ſubſiſted for ſo many Ages. This ſhort Recapitulation ſets this Affair in its true Light, and not only explains what *Marco Polo* has told us, and reconciles his Accounts with thoſe of later Authors, but alſo connects his Relation with that of *Rubruquis*, and even thoſe of the *Arabian* Travellers; ſo that taking the Whole together, we have a clear and ſatisfactory View of the Affairs of *China*, to that which I call the ſecond Conqueſt by the *Tartars*; but as the Affairs of this Country were entirely changed again before the Arrival of the *Portugueſe* by the Way of the *Cape of Good Hope*, I think it will be for the Reader's Eaſe and Advantage to have this Hiſtory conducted to its Cloſe before we enter upon the Diſcoveries and Conqueſts of the *Portugueſe*; becauſe otherwiſe, when we come to ſpeak of the *Chineſe* as again in the Poſſeſſion of their Country, and again driven out and conquered by the *Tartars*, it muſt neceſſarily introduce infinite Confuſion. It is from the *Chineſe* Writers that we have the Reigns of the *Tartar* Emperors who ſucceeded *Coplai-Khan*, and of whom there is very little Mention made in the Hiſtories of the *Tartars*.

The *Chineſe*, as I before obſerved, called this new Imperial Family *Yuen*, and beſtowed the Name of *Chi-Tſou* upon *Copli-Khan*, of whom their Hiſtories ſpeak with the utmoſt Reverence, and whom they celebrate, for his having opened the great Canal mentioned by our Author, and which has been ever ſince juſtly conſidered as one of the Wonders of *China*. It is three hundred Leagues in Length, and nine thouſand Imperial Barks are conſtantly employed thereon, in tranſporting the Tributes of the ſouthern Provinces to *Cambalu* or *Pekin*, and in other Services. Theſe Writers place the Death of this Emperor ſomewhat lower than the *Tartar* Hiſtorians; for the former ſay, that he lived to the Age of fourſcore, and died *A. D.* 1295, whereas the latter place that Event in 1292. He was ſucceeded in the Empire by his Grandſon, whom our Author calls *Timur*, but in the *Chineſe* Chronicles he is ſtiled *Tching-Tſong*; and as his Grandfather excelled in Power, ſo he diſtinguiſhed himſelf by his Clemency and the Love of his Subjects. After him reigned ſeven other Princes of his Family, all of whom were no leſs illuſtrious on the ſcore of their perſonal Virtues, than glorious from their poſſeſſing ſo large an Empire: And it is very remarkable, that the *Chineſe* Hiſtory renders ſo great Juſtice to this foreign Race of Princes, as to ſtile the Period in which they ruled over *China*, the *wiſe Adminiſtration.* The laſt of them was *Chun-ti*, a Prince of great natural Endowments, but who unfortunately gave himſelf up to Prieſts and Women, leaving the Management of the Affairs of the Empire entirely to his Prime Miniſter. The *Tartar* Soldiers, through ſo long a Peace, had loſt their original Diſcipline, and were become ſlothful and effeminate, which ſo raiſed the Courage of the *Chineſe*, that they began to ſhew a Diſpoſition to revolt; and one *Tchou*, an obſcure Perſon, who had been no better than a Footman, having put himſelf at the Head of a Body of Malecontents, reduced many of the great Cities in the Empire; and became, by Degrees, ſo powerful, that he twice defeated the Imperial Army, and at laſt forced the *Tartars* to abandon *China*, after they had been poſſeſſed of it ninety-nine Years. This Revolution happened in 1370; and *Tchou* having by his Succeſs in this War raiſed himſelf to the Imperial Throne, aſſumed the Name of *Tai Tſou*, and fixed his Imperial Reſidence in the City of *Nankin*. And thus it was that the *Chineſe*, having expelled their Conquerors, recovered the Dominion of their own Country.

As for the Emperor *Chun-ti*, he retired with his *Tartar* Subjects northwards, and died of Grief and Vexation about two Years after this Revolution happened. The *Tartars* that were thus expelled, having a ſtrong Tincture of the *Chineſe* Cuſtoms, did not join with the reſt of the *Moguls*, but ſettled themſelves in the Country of *Leaoton*, and were, from this Time forward, ſtiled the *Nieuchen Moguls*, or *Moguls of the Eaſt*, to diſtinguiſh them from the other *Moguls*, who were called *Moguls of the Weſt*.

This deſart Country they cultivated with the utmoſt Care, built therein ſeveral conſiderable Cities, and practiſed that Induſtry which they had learned by converſing ſo long with the *Chineſe*; yet, in ſome reſpects, they ſtill retained a Tincture of their ancient Manners; for, inſtead of remaining firm and united, which ſeemed to be the only Means left for recovering again the Dominions they had loſt, they ſplit themſelves into ſeveral little Principalities, under ſo many Khans; who, though their Territories were not very wide, maintained nevertheleſs their Independency. Among the moſt conſiderable of thoſe Cities which they erected, were *Kirin*, *Ula*, and *Kinkrita*, all three of them ſeated on the Weſt Bank of the River *Sangoro*, which falls into the great River *Amur* about twelve Days Journey above its Mouth. The City of *Kirin* is diſtant from the Province of *Leaoton* about three hundred and ſixty Miles. The City of *Ula* is in Latitude 44° 20′ N. and was conſidered as the Capital of the *Nieuchen Moguls*. The Khan of *Ula* however was far from being a conſiderable Prince, had no ſort of Superiority over the reſt of the Khans of the Eaſtern *Tartars*, was without Allies or Reſources beyond the Power of his own Subjects; and yet, as we ſhall ſhew hereafter, it was this Khan *Ula*, that had the Courage to undertake, and the good Fortune to accompliſh the third Conqueſt of *China* [g]: But at preſent we will leave the *Tartars* cultivating their Deſarts, and return to the new-founded Empire of *Tchou*, and his Deſcendants.

The Dynaſty, founded by this Prince, was called *Ming*, and the Emperor, who, as I have ſaid before, aſſumed the Name of *Tai Tſou*, reigned thirty-one Years with great Glory, and left the Empire to his Grandſon, who periſhed in a Civil War, and was ſucceeded by his Uncle, who, having been formerly King of *Peking*, transferred the Seat of the Empire thither. The ſixth Emperor of this Family was *Yng Tſong*, under whoſe Reign the *Tartars* made new Incurſions into *China*; to oppoſe them, the Emperor marched at the Head of a great Army, and purſuing them conſiderably beyond the famous Wall, they ſuddenly faced about, attacked and defeated the *Chineſe*, making the Emperor Priſoner. His Son, who was but two Years old, was advanced to the Empire, and the Brother of the captive Emperor, whoſe Name was *King Ti*, declared Protector, which Promotion gave him an Opportunity of ſeizing the Empire. The *Tartars*, ſome time after, releaſed *Yng Tſong*, who choſe however to lead a private Life, and leave his Brother in Poſſeſſion of the Empire, which he enjoyed to his Death; and then the old Emperor was again ſeated on the Throne.

The eleventh Emperor of this Race was *Chi Tſong*, who had the good Fortune to defeat the *Tartars* in ſeveral Battles; and it was under his Reign that the famous *Francis Xavier* preached the Chriſtian Religion in the Eaſt, where he died in 1552. The Emperor *Chi Tſong* reigned forty-five Years, in the latter Part of which the Government began to decline very ſenſibly, as it continued to do under all his Succeſſors, down to *Hoai Tſong*, who was the ſixteenth and laſt Emperor of the Family of *Ming*. It was under his Reign that *Zungt-hy*, who was Khan of *Ula*, formed the Deſign of making himſelf Maſter of *China*, notwithſtanding that all the Force he was able to raiſe did not exceed fifteen thouſand Horſe. He began with entering into private Intrigues with ſome of the *Chineſe* Mandarins, who were exiled into the Province of *Leaoton*, by whoſe Aſſiſtance he ſoon became Maſter of a great Part of that Province. The Emperor ſent againſt him an Army more than ſufficient to have forced him back into his own Country; but he had ſo much Addreſs, as to prevent the principal Officers of this Army from doing their Duty; ſo that by degrees he maſtered all the reſt of that Province, and at laſt took Poſſeſſion of its Capital [h].

While this Scene was tranſacted in the Eaſt, and the whole Force of the *Chineſe* Empire employed there to ſo little Purpoſe, new Troubles aroſe in the Weſtern Provinces, where ſeveral Bands of Thieves and Highwaymen committed the moſt extravagant Outrages; and, at laſt, under the Command of one *Lycoungz*, an obſcure and infamous Fellow, plundered ſeveral Cities, and even whole Provinces, which increaſing the Number of their Forces, the Rebel had at laſt ſufficient Power to attempt the Subverſion of the Empire. It was with this View that he marched directly to *Pekin*, where in three Days he became Maſter of the Place, and the Emperor finding himſelf abandoned, hanged himſelf on a Tree in his Garden. *Lycoungz* immediately took the Title of Emperor, and endeavoured, by all the Methods he could deviſe, to bring over to his Intereſt *Ou-ſan-guei*, who was General of the Army ſent againſt the *Tartars*, and the only Perſon capable of diſputing with him the Poſſeſſion of *China*. That General however rejected all his Offers with Contempt, which obliged *Lycoungz* to take the Field once again, and to march againſt him with his numerous Army: *Ou-ſan-guei*, who ſaw that it was ſimply impoſſible for him to think of making head at once againſt the Uſurper and the *Tartars*, reſolved to make Terms with the fairer Enemy of the two, and thereupon invited *Zungt-hy* to come to his Aſſiſtance [i].

This was preciſely what the *Tartar* Prince deſired, and therefore he made no Difficulty of complying with his Demand. He left five thouſand of his own Troops in the Province of *Leaoton*, and then marched with ten thouſand *Tartars*, and twenty thouſand of the Inhabitants of that Country to the Relief of the *Chineſe* General, who received him with great Joy. They marched together directly towards the Uſurper, and when they were upon the Point of giving him Battle, *Zungt-hy* obſerved, in a Conference he had with the *Chineſe* General, that, as the beſt Part of the Forces of the Empire, and eſpecially thoſe of the Southern and Weſtern Provinces, were extremely afraid of the *Tartars*, it would be very expedient for him to cut the Tails of his Horſes after their Manner; by which Means the Army of the Uſurper would take them all for *Tartars*. *Ou-ſan-guei* following the Advice of the Khan, it had ſo good an Effect, that the Rebels were totally defeated, and *Lycoungz* obliged to fly with the Remainder of his Army towards *Pekin*. The victorious Allies continued their Purſuit without the leaſt Intermiſſion; and on their drawing near the City, the *Chineſe* General made Proclamation, that all ſuch as did not take Part with the Uſurper, ſhould trim their Horſes after the Manner of the *Tartars*, that they might the more eaſily diſtinguiſh them on all Occaſions. This Stratagem had as great an Effect as a ſecond Victory: Such Multitudes declared themſelves againſt the Uſurper, that finding it abſolutely impoſſible to maintain his Ground, he firſt plundered the Imperial City, and then retired with his Army loaded with Booty. When the Allies were in Poſſeſſion of *Pekin*, it was agreed that *Zungt-hy*, with his Forces, ſhould remain there for the Security of the Place, and that *Ou-ſan guei*, with his Army, ſhould purſue the Uſurper till ſuch time as an End could be put to the War.

The ſame Arts, or rather the ſame Virtues by which the *Tartar* Prince had gained the Affections of the People of *Leaoton*, produced the like Conſequences amongſt the Inhabitants of *Pekin*; and as, on the one Hand, they were weary of living without the Support and Protection of a Governor, ſo they flattered themſelves, on the other, with enjoying all imaginable Happineſs under a Prince of ſo much Humanity and ſo great Abilities as *Zungt-hy*, and therefore, almoſt of their own Accord, they declared him Emperor in the Abſence of the *Chineſe* General, who had himſelf Views upon the Throne, in which he had very probably ſucceeded, if he had not been thus out-witted by the *Tartar Zungt-hy*, who foreſeeing how different a thing it might prove for him to maintain himſelf in Poſſeſſion of ſo great an Empire, with ſuch a handful of Forces, was no ſooner ſeated on the Imperial Throne, than he inſtantly diſpatched Advice of his good Fortune to the Khans of *Eaſt Tartary*, who were Princes of his own Family, inviting them to come, and ſhare with him in ſo rich a Conqueſt. This was certainly a good Expedient for ſecuring himſelf againſt the Fickleneſs or Infidelity of the *Chineſe*; but at the ſame Time it viſibly expoſed the new Emperor to the Danger of being undone by his Auxiliaries; for the Khans of the *Tartars*, who on the firſt Summons haſtened to his Aſſiſtance, had certainly in View the dividing the *Chineſe* Empire amongſt them; but *Zungt-hy* was a Prince of ſuch Wiſdom and Penetration, that he immediately diſcovered the Danger to which he ſtood expoſed, and provided againſt it with a Sagacity equal to his Penetration. He divided theſe Corps of *Tartars* as ſoon as they entered his Dominions, ſent for ſeveral of their Princes to *Pekin*, and in a ſhort Time ſo ſeparated them from each other, that they became abſolutely his Subjects, and were unable to act otherwiſe than was conducive to his Service. In the Conqueſt and Settlement of *China*, this *Tartar* Prince ſhewed all the Courage and Capacity of *Julius*, all the Policy and Conduct of *Auguſtus Cæſar*, by which he thoroughly accompliſhed the third Conqueſt of *China* by the *Tartars*, which happened in one thouſand ſix hundred forty and four, after the *Chineſe* had preſerved their Freedom for two hundred ſixty-ſix Years[k].

---

[g] At preſent all the Eaſtern *Tartary* is ſubject to the *Chineſe* Emperors, and is divided into two Parts; the firſt contains what may be called the hereditary Dominions of the Family now reigning in *China*. It is divided into three Governments, and the Inhabitants are diſtinguiſhed by the Name of *Mantcheoux*. The Capital of this Country is called by the Inhabitants themſelves *Mougden*, but by the *Chineſe Chin Yang*, which at this Day is a well-peopled and well fortified City, where there is a ſovereign Tribunal for deciding all Affairs that relate to the Dominions of *Tartary*. The other Part of this Country is ſtill under the Dominion of its own Princes, who have the Title of Khans, which they receive from, and are Vaſſals to, the Emperor of *China*. The Inhabitants are called ſimply *Mongols*, or *Mongous*, and the Country paſſes alſo under the ſame Denomination.

[h] As it is not my Intention to give the Reader here a Hiſtory of *China*, but barely to mention ſuch Facts as may be neceſſary to explain what has been related before, and may occur in ſucceeding Voyages, I did not think myſelf obliged to mention all the Emperors of this Family, and therefore have touched only on the Reigns of ſuch as might beſt anſwer my Purpoſe.

[i] Theſe Facts are ſomewhat differently related by different Hiſtorians; but I have given them the Reader from the Collection of a Perſon who has taken great Pains to make himſelf Maſter of the *Chineſe* Hiſtory, which he may probably be prevailed upon to publiſh when he thinks it perfect enough to bear the Inſpection of the Criticks.

pro.

This new Race of *Tartar* Princes, which ſtill continue to reign in *China*, for the twenty-ſecond Dynaſty of their Monarchs, is diſtinguiſhed by the Name of *Tſing*; it is however very remarkable, that *Zungt-hy* is not accounted the firſt of thoſe Emperors, becauſe he died almoſt as ſoon as he was ſeated on his Throne, and before he was entirely poſſeſſed of *China*, leaving the Empire to his Son *Chun-Tchi*, who was then no more than ſix Years Years old, and to whom his dying Father aſſigned his Brother *Ama-Van* for his Guardian. So early a Minority, one would have imagined, muſt have been fatal to the new raiſed Empire; but *Ama-Van*, during the Non-Age of his Nephew, conducted all things with ſo much Wiſdom and Fidelity, that when the young Emperor came to take the Reins of Government into his own Hands, he found himſelf in as full Poſſeſſion of his Dominions, as if they had deſcended to him from a long Line of Anceſtors. The Emperor *Chun-Tchi* was himſelf a Perſon of extraordinary Abilities, eaſy and affable amongſt his Soldiers, wiſe and prudent in his Councils, and ſo refined a Politician, that under Colour of executing the Laws with Exactneſs, he took off all the great Men in *China* that were capable of giving him either Jealouſy or Diſturbance, ſo that after a Reign of ſeventeen Years, he left the Empire perfectly ſettled to his Son, who was but eight Years old.

The Name of this Prince was *Cang-hi*, he was raiſed to the Throne in the Year 1662, and, during his Minority, the Empire was governed by four great Miniſters, who executed their Offices with the greateſt Wiſdom and Integrity, ſo that this ſecond Minority proved not in the leaſt dangerous to the Empire. It is true, that the famous *Chineſe* General *Ouſanguei* took the Advantage of it, and endeavoured to ſhake off the Yoke of the *Tartars*, of whom with equal Wit and Wiſdom, he ſaid, that he had called in Lions to aſſiſt him in hunting Dogs. He had ſome Succeſs at the Beginning, and might probably have ſecured at leaſt ſome Part of the Empire for himſelf and his Poſterity, if he had not been very old at the Time of his Revolt, and died not long after, which gave the Emperor's Miniſters an Opportunity of taking ſuch Meaſures, as put it out of the Power of the *Chineſe* to rebel for the future. *Cang hi* fell nothing ſhort, either of his Father or his Grandfather, ſo that it may be reckoned an extraordinary Felicity in this Family, that for three Generations there were as great Princes of it as perhaps of any other in the World. This Emperor was extreamly careful with regard to two Points, the encouraging and diſtinguiſhing his *Tartar* Subjects, and behaving with the utmoſt Juſtice and Moderation towards the *Chineſe*.

In the Beginning of his Reign, indeed, he committed ſome neceſſary Acts of Severity, but when he found that he had by this Means abſolutely broken the mutinous Spirit of the People of *China*, he changed his Conduct entirely, and applied himſelf wholly to the putting every thing in the beſt Order poſſible, for the Benefit of all his Subjects. It was with this View that he obliged the Viceroys and other Governors of Provinces to adminiſter Juſtice with Impartiality and Mildneſs, taking from them the Power of puniſhing capitally, and obliging them to ſend all ſuch Sentences to the ſupreme Tribunal of the Empire. In order to take away all Diſtinctions, and to render his *Tartar* and *Chineſe* Subjects but one People, he eſtabliſhed this Regulation; he obliged the *Tartars* to wear the *Chineſe* Habit and obliged the *Chineſe* to cut their Hair, after the Mode of the *Tartars*, and this upon Pain of Death. It may ſeem ſtrange, but it is nevertheleſs true, that many refuſed to comply with this Order, and choſe rather to part with their Lives than their Hair, and that many more abandoned their native Country, to fly into Places where they might wear their Hair as long as they were wont. But the Emperor's Edict had notwithſtanding the deſired Effect, that is to ſay, freed him from ſuch mutinous Spirits as might have diſturbed the Tranquillity of his Reign.

The moſt important Employments, and the moſt honourable Offices in the Government, he gave only to the *Tartars*; but then he made a Law, by which the Children of *Tartars* by *Chineſe* Women, or of *Chineſe* by *Tartarian* Women, who were bred up in the Cuſtoms, and were taught to ſpeak the Language of the *Tartars*, were declared capable of the higheſt Offices in the Empire. He was not more careful of the Domeſtick than of the Foreign Affairs of his Empire, which almoſt all his Predeceſſors had neglected to a great Degree; for he not only reduced all the Eaſtern *Tartars* intirely under his Obedience, but made two Journeys into that Country, where he admitted all Ranks of People freely to his Preſence, and thereby gained the Love of the *Moguls* in the higheſt Degree. As for the *Tartars* of the Weſt, he forced them to have reſource to his Protection, and not only drove the *Calmucks* from his Frontiers, but entering their Country alſo in his Turn, took from them the Provinces of *Chamil* and *Tarſan*, which ſerve as an excellent Barrier on that Side for the *Chineſe* Empire[l].

In his Perſon, and in his Manners, he had nothing of the *Tartar*, and was ſo perfectly acquainted with every Government in *Europe*, that he diſcourſed of them in a manner that ſurpriſed even the *Europeans* themſelves. The late Czar *Peter* the Firſt ſent M. *d'Iſmailoff* with the Character of his Embaſſador to the *Chineſe* Court, whom the Emperor not only received with all imaginable Politeneſs, but at the firſt Audience preſented his Excellency, a Nobleman who accompanied him, and his Secretary, each with a Gold Cup full of Mead, by which they plainly perceived that he was informed of the Czar's Cuſtom, who when he had a mind to diſtinguiſh any Foreigner, was wont to preſent him with a Glaſs of Wine with his own Hand. This Emperor *Cang-hi* reigned with great Glory ſixty-one Years, and died on the 20th of *Dec.* 1722. He left behind him ſeventeen Sons, the fourth of which he declared his Succeſſor, who at his Acceſſion to the Imperial Dignity, aſſumed the Name of *Yong-Tching*, *i. e.* Peace undiſturbed. This Prince, who is ſaid to inherit the Virtues as well as Dominions of his Anceſtors, was in quiet Poſſeſſion of the Empire in the Year 1735, ſince which we have not had any certain, or at leaſt very important Accounts from *China*.

---

[k] The *Chineſe* Hiſtorians themſelves agree, that this Race of Emperors were far inferior to the *Tartars*, as giving themſelves up too much to a ſort of Studies that were by no Means ſuitable to their Dignities. Some of them were carried away by a vain Deſire of finding the Water of Life; that is, a Kind of Liquor, by drinking of which a Man might become immortal; but with ſo little Succeſs, that the Emperor *Chi-Tſong* died immediately after he drank of this pretended Water of Life, at the Age of Fifty-eight. Others were poſſeſſed with a violent Deſire of finding the Philoſopher's Stone, which induced them to ſpend too much of their Time in chimical Experiments. The Fate of theſe Monarchs ſufficiently ſhew, that the *Art* of *Government* is the only Science worthy of the Attention of Princes.

[l] This Prince took care to ſecure the Moguls of the Eaſt from the ambitious Deſigns of the *Ruſſians*, and for that Purpoſe made a very wiſe and honourable Treaty with the Czar *Peter* the Firſt, for ſettling the Limits of their reſpective Empires, in conſequence of which the Town and Fortreſs of *Albaſinſkoy* was demoliſhed.

By this Deduction of the *Chineſe* Hiſtory we learn a Multitude of things neceſſary for the underſtanding ſuch of the ſubſequent Voyages as mention that Country, which was the Reaſon that I inſiſted upon it ſo long; and we likewiſe diſcover the Uſefulneſs of this ſort of Knowledge, with reſpect to the Voyages that have gone before. We ſee that the *Chineſe*, with whom our *Arabian* Travellers converſed, were quite another ſort of People than thoſe that now inhabit *China*; for they were a pure and unmixed Nation, whereas the modern *Chineſe* are in a great meaſure incorporated with the *Tartars*; from whence it is eaſy to diſcern, that great Alterations muſt have happened in their Manners, eſpecially if we conſider the Character that *Rubruquis* gives the *Tartars*, which comes much nearer that of the modern *Chineſe* than any thing we meet with in the *Arabian* Writers. It appears likewiſe from the Compariſon of the Facts related by the *Arabians* with thoſe mentioned by *Marco Polo* of the People of *Mangi*, that both theſe Writers muſt have reported Things with great Fidelity, ſince they agree in a Multitude of Particulars. The Conqueſt of the Northern Part of *China* by the *Tartars*, though not expreſly mentioned, yet is plainly alluded to by the ſecond *Arab* Writer; and as to the intire Conqueſt of *China* by the ſame Nation, we owe the full Account of it to *Marco Polo*; for, without the Aſſiſtance of his Relations, it would have been a thing very difficult, if not impoſſible, to have diſcovered, that *Chi-Tſou* was the ſame with *Coplai-Khan*, or *Cublai-Khan*, Emperor of the *Tartars*, who before he became Maſter of their Country was called by the *Chineſe* *Ho-pi-lie*[m].

We likewiſe learn from this ſuccinct View of the *Chineſe* Hiſtory, that the *Tartars*, who now poſſeſs *China*, are the very ſame Nation that formerly poſſeſſed it, contrary to what ſome very learned Men aſſerted, and which was generally believed half an Age ago. We likewiſe ſee, that the reigning Family in *China* are direct Deſcendants of *Cublai-Khan*, and conſequently of *Zingis-Khan*, that famous Conqueror, whoſe Empire, as we have elſewhere ſhewn, was the moſt extenſive that has been hitherto known in the World. Theſe Things are of very great Conſequence, if we read Voyages for the ſake of improving and enlarging our Knowledge, and not merely for the ſake of Amuſement, which, however, is rather encreaſed than leſſened, by attending to theſe Circumſtances. We can eaſily apprehend, after a little Reflection, that in the Time of our *Arabian* Travellers, and even in that of *Marco Polo*, the *Chineſe* Empire muſt have been in a much better Condition, and its Trade much more flouriſhing than when it was firſt viſited by the *Portugueze*, *Engliſh* and *Dutch*. Before that Time it had not been expoſed to thoſe cruel Ravages that enſued firſt on the breaking out of their Civil Wars, and next from the laſt Conqueſt by the *Tartars*. Beſides, we can at any time have Recourſe to this ſhort Hiſtory, when we are at a Loſs as to the Facts mentioned in ſubſequent Voyages, and by comparing the Times in which they happened with the Dates that are therein ſet down, obtain an eaſy Solution of Doubts that perhaps we could never otherwiſe have got over.

It is from the Conſideration of theſe Advantages, and that as far as in my Power lies I might remove all Obſtacles whatſoever to the perfect underſtanding of this Subject, that I have determined to give the Reader in the next Section a conciſe Hiſtory of the other *Tartar* Empire in the *Indies*, I mean that of the Great Mogul, who was likewiſe a Deſcendant from the ſame Family with the great Conqueror I have ſo often mentioned. By purſuing this Method, which I have brought into the narroweſt Compaſs poſſible, the Reader will gain ſuch a previous Knowledge of a great Number of Facts as never to be at a Loſs in peruſing any of the Voyages to the *Eaſt-Indies*, either in this, or in any other Collection, which, without ſuch an Introduction, it would have been abſolutely impracticable for him to have underſtood, and that for many Reaſons, of which I will take the Liberty to mention only a few. In the firſt place then, every Voyage brings us not only into a new Country, but, if I may ſo ſpeak, introduces us into a new Company, with the Character of which, if we have not ſome previous Acquaintance, it is impoſſible for us to be at our Eaſe, whereas if we know in general who and what they are, we enter immediately into the true Senſe of the Relation, and hear all that is told us with Pleaſure. In the next place, it often happens, that either from the Fear of appearing tedious, or from ſome other Motive, the Writers of Voyages give us only ſhort Hints as to the Government of the Countries through which they paſs, or the Characters of Princes that reign in them, which would be utterly unintelligible to ſuch as never heard of them before, and yet may be ſufficient for the Information of thoſe who have a general Notion of the Poſture of things in that Country at the Time mentioned by the Author. Laſtly, we are by this means enabled to rectify the Miſtakes of ſuch Writers, to diſtinguiſh between the Truth and Falſhood of what they relate, and to form a clear and certain Judgment of the Merit of their Performances.

It may poſſibly be objected, that for the ſame Reaſons which have been offered in Support of theſe two Hiſtories of the *Chineſe* and of the *Indian* Empires, we might be obliged to write the Hiſtory of all the other Princes that have reigned in the *Upper Aſia*, which Objection, however, is not at all founded in Fact, ſince in the firſt place the Hiſtories of all the little Princes in *India* are very far from being ſo neceſſary as thoſe of the capital Empires; and in the next, how neceſſary ſoever we might think them, it is impoſſible for us to write any ſuch Hiſtories, becauſe the neceſſary Materials for them are not to be found. When therefore this Matter is ſeriouſly conſidered, it appears to be a new Argument in favour of our Deſign; for ſince there have been but two great Empires in this Part of the World, of which any juſt and regular Account can be given, and to which all Books of Voyages and Travels through the *Eaſt-Indies* muſt neceſſarily refer, it would ſeem very abſurd and unreaſonable, after all the Pains we have taken in the darker Ages of this Hiſtory, to decline that Period of it, which is at once the moſt uſeful, and will appear by far the moſt agreeable to a modern Reader, as there is not in the Compaſs of Univerſal Hiſtory any Branch ſo full of extraordinary Events, or in which there occur more ſurprizing Turns and Revolutions than in that which we are about to give.

Add to all this, that however deficient the reſt of the Oriental Hiſtories may be, we have abundant Materials for this, and thoſe too as excellent in the kind as can be deſired; for beſides the particular Relations afforded us by ſeveral Writers of Credit, who were actually on the Spot when thoſe Events happened which they record, we have very great Lights given us by ſuch of the Oriental Writers as have undertaken to explain the ſeveral Expeditions of the *Tartars*, and eſpecially thoſe of the famous *Timur-Bec*, known to us by the Name of *Tamerlane*, whoſe Conqueſts, though leſs extenſive, have, notwithſtanding, made a greater Figure in our general Hiſtories than thoſe of his glorious Predeceſſor *Zingis-Khan*. Beſides all which we have the ſingular Advantage of having a great Part of this Hiſtory taken from the very Records of that Empire which it concerns, by the Induſtry of Mr. *Manouchi*[n], who was forty

---

[m] The Change of Names is a very clear Proof that no ſort of Blame ought to lie on *Marco Polo* for writing Places after a different Orthography than what is commonly uſed; and we have this Advantage from it, that we learn the *Tartar* Appellations, and have thereby an Opportunity of comparing them with the *Chineſe*. I cannot help remarking upon this Occaſion, that in all Probability *Ho-pi-lie* is no more than the *Tartar* Name of *Khoplai* (for ſo in that Language it is written) expreſſed in *Chineſe* Characters; but for the Name given him, after he attained the Empire, of *Chi-Tſou*, it may be rendered the firſt of his Race, for *Chi* ſignifies the Beginning, and *Tſou* a kind of Violet-coloured Plume or Feather worn in the Imperial Diadem.

[n] This Mr. *Manouchi* was a *Venetian* by Birth, but he wrote his Hiſtory of *Indoſtan* in the *Portugueze* Language, which was then, and is ſtill common in the Eaſt. We owe the Publication of it to the famous Jeſuit Father *Cartrou*, who dedicated his *French* Tranſlation to the Duke of *Burgundy*, the Father of the preſent *Louis* XV. In his Preface to that Work, he promiſes ſome farther Memoirs by the ſame Hand; but I cannot find that theſe were ever publiſhed, which is the more wonderful, conſidering the great Reputation that the firſt Part of the Work acquired. As Father *Cartrou* is lately dead, it is very poſſible thoſe Papers may fall into other Hands, and yet ſee the Light.

Years in that Country, in the Quality of Phyſician to its Emperors, and had thereby an Opportunity of having free Recourſe to thoſe Records, which for the Benefit of Poſterity, as well as his own Information, he tranſcribed, and from which in a great Meaſure we have taken the Facts that are contained in the following Section.

SECTION XXII.

A ſuccinct Hiſtory of the Empire of the Great Mogul, *from its Foundation by the Great* Tartar *Conqueror* Timur-Bec, *or* Tamerlane, *to the preſent Times.*

Taken chiefly from the Oriental Writers.

1. *The Hiſtory of* Timur-Bec, *or* Tamerlane, *from his firſt Appearance in the World, to his being declared Khan of the* Tartars. 2. *His Conqueſts in the* Indies, *and ſubſequent Victories, to the Time of his Death.* 3. *The Hiſtory of* Miracha *the Son of* Tamerlane, *and his Succeſſor in Part of his Dominions.* 4. *The Reign of* Abouchaid *the Grandſon of* Tamerlane. 5. *The Hiſtory of* Sheik-Omar, *the Seat of whoſe Empire was at* Samarcand. 6. *The Life and Reign of* Babar, *the firſt of thoſe Monarchs who aſſumed the Title of Grand* Mogul. 7. *An Account of the great Revolution which happened under* Homayum, *his Reſtoration to the Empire of the* Indies, *and his Death.* 8. *The Reign of* Akebar, *and the Acceſſions made by him to the Dominion of the* Moguls. 9. *The Reign of* Jehan-Guire, *and of the Troubles that happened therein.* 10. *The Hiſtory of* Shah-Jehan, *and of the Princes his Sons, to the Time of his Deceaſe.* 11. *A ſuccinct Account of the Reign of* Aurengzebe, *and of the ſeveral Acceſſions made by him to the* Indian *Empire.* 12. *Of the Diſputes that happened after his Deceaſe among the Princes his Sons.* 13. *Of the Reign of* Badour-Shah, *and of the War carried on by him againſt his Brethren.* 14. *Of the Troubles that have happened ſince in that Empire.* 15. *The Hiſtory continued to the Expedition of the* Shah-Nadir, *or* Kouli-Khan, *with an authentick Account of its moſt remarkable Particulars.*

1. THE Empire of the *Tartars* ſubſiſted for near two hundred Years, under the Adminiſtration of the direct Deſcendants of its illuſtrious Founder *Zingis-Khan*, when a new Conqueror was born of the ſame Race; for *Timur-Bec*, or, as he is uſually called by us, *Tamerlane*, was deſcended in a direct Line from *Cabul*, who was the Great-Grandfather of *Zingis*. His Family, though not powerful, was very illuſtrious, ſince, tho' he was the Vaſſal or Subject of *Adill-Khan*, yet he was by Birth, Prince or Chieftain of the Tribe of *Burlaſs*. The viſible Declenſion of the Power of *Adill-Khan*, gave him ſome Hopes of ſhaking off his Dominion. The Weakneſs of four Princes had ſo looſened the Foundation of their Throne, that this *Adill Khan* had little more left him than the Shadow of ſupreme Authority. Whole Tribes of the *Mongals* or *Moguls*, withdrew themſelves entirely from his Obedience, and ſet up particular Princes of their own; the Reſt, who ſtill acknowledged his Sovereignty, pretended to aſſign the Meaſure of their Submiſſion, and to fix the Bounds of that Duty they were content to pay. As for *Tamerlane*, his Deſign was to throw off the Yoke entirely; but wanting ſufficient Strength for ſo bold an Undertaking, he confederated with *Huſſein*, who had exactly the ſame way of thinking; and when they had joined their Forces together, they declared War againſt *Adill-Khan*, attacked and defeated his Army, and having taken him Priſoner, tied him Hand and Foot, and threw him into a Torrent, where he was drowned. *Tamerlane*, to give the beſt Colour poſſible to ſo full a Fact, raiſed *Cabul*, who was a direct Deſcendant from the famous *Zagatai-Khan*, to the Throne, from whom in two Deſcents it came to the Poſſeſſion of *Mohammed* his Grandſon. But he who was now powerful enough to beſtow Crowns, had ſo much of Ambition, as to preſerve the Power that attended them in his own Hands, though for certain Purpoſes he ſuffered the Title to remain elſewhere. Under the Name of *Mohammed-Khan*, he made War on the Reſt of the Princes of the Family of *Zingis*, and by his repeated Victories became ſo famous, that he was quickly conſidered as the firſt or principal *Khan* of the *Tartars*. This provoked the Jealouſy of *Huſſein*, who had been his firſt Companion in Arms, ſo that of a Friend and Ally he firſt became a ſecret Rival, and very ſoon an open Enemy. Their Armies met in the Plains of *Balk*, where a Bloody Battle enſued, in which *Huſſein* was defeated and killed, and *Tamerlane* then ſaw himſelf at the Head of the whole Power of the *Tartars*, without a Competitor, and therefore having ſummoned all the Princes of the Blood of *Zagatai* to *Samarcand*, there, by a Sort of Election, aſſumed the Title of Khan, which hitherto he had not done, put on the Imperial Crown of Gold and the Girdle, which was alſo an Enſign of that Dignity, received the Homage of all who were preſent, and very rich Preſents upon that Occaſion. It is from this Election and Coronation, that the Reign of this great Prince is uſually dated, becauſe though he had the Power long before, yet his Title was never till now acknowledged, or himſelf known to the World, as ſupreme Khan of the *Tartars*, which Title he ever after bore.

2. This great Event fell out in the Year of the *Hegira* 781, in the Year of our Lord 1379, and in the thirty-fourth Year of the Age of *Timur*. He was no ſooner ſeated on the Throne of *Zingis-Khan*, than he began to form a Deſign of uniting under his Dominion all the Countries that had formerly paid Obedience to that Conqueror, with which View he inſtantly attacked the Princes of *Choraſſan*, *Sigeſtan*, and *Kandahar*, whom he reduced in a ſhort Space of Time, and thereby opened a fair Road into the *Indies*. It was in the Year of the *Hegira* 800, and *A. D.* 1409, that he undertook the Conqueſt of that extenſive Empire, at the Entrance of which he found Abundance of little Clans of Thieves, that by the Help of the ſtrong Holds which they had erected, maintained a kind of tyrannical Power over the adjacent Country. Theſe he firſt of all rooted out, and at the ſame Time deſtroyed without Mercy a Multitude of Guebres, or Worſhippers of Fire, that had ſettled themſelves on the Confines of *Indoſtan*, when driven out of their native Country of *Perſia*. He next beſieged the famous Fortreſs of *Uldugin*, which had hitherto been conſidered as impregnable; but as this was not a Taſk that required ſo great an Army as that under his Command, he employed a Part of it in reducing the adjacent Country, then under the Dominion of Sultan *Mohammed*, who finding himſelf in ſuch imminent Danger, invited all the neighbouring Princes to join him, in order to defend themſelves againſt a common Enemy, who made no Scruple of declaring that he meant to diſpoſſeſs them of all their Dominions, in order to annex them to his own. This Application had the deſired Effect; Rajah *Rana* and the Reſt of thoſe little Princes took care to aſſemble their Forces, and at the Time appointed joined Sultan *Mohammed*, who immediately marched to give the Invader Battle. The Forces of the *Indian* Princes ſurpaſſed in Number by very far the Army of the *Tartars*, but the Conduct of *Timur*, who had

ſpent almoſt his whole Life in Arms, proved more than a Balance to their Numbers. He made choice of a ſmall Plain out of which there was a narrow Paſſage, between two high Mountains, for the Field of Battle, in which he drew up about a third Part of his Army; the Reſt he drew up in two Bodies, which he poſted behind thoſe Mountains, and as ſoon as the *Indian* Army advanced, his Horſe, that were drawn up in the Plains, as if ſtruck with a ſudden Panick, fled through the narrow Paſs, and were followed by the *Indians*, who thought that the very Sight of their Army had defeated their Enemies; but they ſoon found their Miſtake, for they no ſooner entered the great Plain behind the Mountains, than the two Bodies of Horſe attacked them in Flank and Rear with the utmoſt Fury. This Engagement proved deciſive, and *Timur*, by this ſingle Victory, became Maſter of the *Indies*; that is to ſay, he put *Tartar* Garriſons into moſt of the Fortreſſes, left a conſiderable Army at *Dehli*, the Capital of the Country, and having received the Homage of moſt of the Rajahs or petty Princes, returned in Triumph to *Samarcand*, which he made choice of for the Capital of his Empire, laden with the Spoil of the *Indies*. He had not been long returned, before he had Advice that *Achmet*, whom ſome Years before he had driven from *Bagdat*, was come back thither. This News ſoon drew him into the Field again, and his Enemy retired at his Approach. This War was ſucceeded by another of much greater Conſequence, and to which he chiefly owes his Fame in this Part of the World. *Bajazet*, Emperor of the *Turks*, one of the greateſt Monarchs of that Age, and withal, one of the braveſt and beſt Captains, gave him ſome Cauſe of Provocation. *Timur* marched againſt him with his victorious Army, and not only defeated and diſpoſſeſſed him of his Dominions, but made him Priſoner alſo, and afterwards put him to Death. On his Return, after this Victory, to *Samarcand*, he formed a new Deſign of reducing *China*, out of which, at this Juncture, the *Tartars* were expelled. He marched for this Purpoſe with a moſt puiſſant Army, and being encamped at *Otrar*, was there ſeized by a Diſtemper which put an End to his Conqueſts and his Life, in the thirty ſeventh Year of his Reign, and in the ſixty-ſixth of his Age, in the Year of the *Hegira* 807, and *A. D.* 1605.

3. The great Empire of *Timur-Bec*, or *Tamerlane*, ſunk almoſt his ſoon as it roſe. He divided his Dominions amongſt his Children; and, according to his Will, the Eaſtern Part of *Perſia*, together with *Cabuliſtan* and *Indoſtan*, fell to the Share of *Miracha*, his third Son. He was a Prince of conſiderable Courage, and did not want Capacity; but, during his Father's Life-time, had been extremely unfortunate, inſomuch that he was once in Danger of loſing that Share of the Empire which had been aſſigned him. At the Time of that Monarch's Deceaſe, *Miracha* did not find himſelf ſtrong enough to eſtabliſh himſelf abſolutely in the *Indies*, he therefore made choice of the City of *Herat*[a], in the Province of *Chorassan*, for his Capital, which was indeed very conveniently ſeated for that Purpoſe, as being almoſt in the Centre of his Dominions. He marched from thence annually, at the Head of a conſiderable Army, into *Cabuliſtan* and *Indoſtan*, in order to levy the Tribute which his Father had impoſed, and which the *Indian* Rajahs rather choſe to pay, than to run the Hazard of a War.

The King of *Caſcar* was the only Prince that refuſed to acknowledge him as his Sovereign, or to pay him any Tribute. Againſt him therefore *Miracha* made a long and cruel War, in which however he was at firſt very unſucceſsful, his forces being abſolutely defeated, and himſelf taken Priſoner by the *Indian* Prince. That Monarch, by a Stroke of extraordinary Generoſity, took no other Advantage of his Victory, than to engage *Miracha* to quit all claim to Tribute, and thereupon reſtored him to Liberty. This Treaty however was but indifferently kept, for when the *Tartar* Prince had recruited his Army, he, without Scruple, renewed the War, in which he was ſo fortunate, as to defeat his Enemy, and make the King of *Caſcar* Priſoner in his turn. He did not however behave as Gratitude, or even as Humanity required; but barbarouſly ordered the Eyes of that Prince to be put out, over-run his Dominions, and kept him, during his whole Life, a Priſoner.

This baſe Action, however, drew upon him that Puniſhment which it ſo well deſerved. His *Tartar* Soldiers exerciſed before him every Day, and hearing a Diſcourſe amongſt them of the great Dexterity of the King of *Caſcar*, notwithſtanding he was blind, he thought fit to enquire into it, and being told that this Prince ſhot with the greateſt Truth to any Corner where he heard the leaſt Noiſe, he reſolved to make the Experiment, conceiving in himſelf that the thing was abſolutely impoſſible. When the Queſtion came to be decided, the captive King declared, that he would not diſcharge an Arrow at the Command of any other Perſon than the Emperor. He accordingly gave the Word, which ſcarce had eſcaped his Lips, before the Rajah let fly a poiſoned Arrow, which ſtruck him through the Body; at the Sight of which his Guards cut the unfortunate *Indian* Prince to Pieces.

Such was then the End of *Miracha*, after he had reigned forty-ſix Years. He is juſtly eſteemed the firſt of the *Mogul* Emperors; for though the Country was conquered by his Father, yet it made only a Province of his Dominions, whereas it was, ſtrictly ſpeaking, the Main of this Monarch's Poſſeſſions, as well as his peculiar Share of his Father's Empire, and as ſuch was tranſmitted by him to his Poſterity.

He was ſucceeded in his Throne by his Son *Abouchaid*, or *Abuſeyd*, in the Year of the *Hegira* 855, *A. D.* 1451. But this Prince neither reſembled his Father or Grandfather, for he was lazy and luxurious to the laſt Degree, and withal exceſſively cruel, which irritated the *Rajahs* to ſuch a Degree, that they reſolved to depoſe him, and to ſet his younger Brother on the Throne, which they accordingly did, but had very ſoon Reaſon to repent of the Exchange. *Abouchaid*, on loſing his Crown, took the Habit of a Faquir[b], and in it travelled through the *Indies*. His Subjects ſoon found him out, though he took all imaginable Pains to conceal himſelf, and they no ſooner diſcovered him, than as they had forced him to reſign the royal Robes for the Habit of a Monk, they now with like Paſſion obliged him to a contrary Exchange. He no ſooner appeared, than he ſaw his Brother totally abandoned, by which he was peaceably reſtored to his Dignity; but that he might be ſafe from future Affronts, he ordered his Brother's Head to be ſtruck off, as the Puniſhment of his Tyranny, as he pretended; but in reality, to prevent a ſecond Uſurpation.

His Government was now preciſely the Reverſe of what it had been before, for he ſtudied nothing but the Art of pleaſing his People; and though he did not, and perhaps could not, change his Temper, yet he diſſembled it ſo well, that with reſpect to his Subjects, his Hypocriſy had the ſame good Conſequences as if he had acted from real Virtue. His Depoſition however was not the laſt Misfortune of his Life, for while he was engaged in War againſt the Khan of *Samarcand*, one of the young Princeſſes in his Seraglio ſet up a new Prince, whoſe Name was *Ibraim*, who bid fair for depriving *Abouchaid* of his Dominions; but at laſt he was defeated, and on the firſt News of this, the Princeſs, who had raiſed him to the Throne, firſt murdered the Son ſhe had by him at the Breaſt, and then deſtroyed herſelf by a Doſe of Poiſon, which for that Purpoſe ſhe had concealed in her Locket. *Abouchaid* returning in Triumph to *Herat*, reigned for ſome Time with great Succeſs and Glory; but the Violence of his Temper, joined to a high Opinion of his good Fortune, drew him into another War, which coſt him both his Crown and his Life.

---

[a] This City of *Herat* is ſituated in the ſouthern Part of the Province of *Choraſſan*, in the Lat. of 34°. It is now the fineſt and moſt beautiful City in thoſe Parts, ſince the *Uſbeck Tartars* deſtroyed *Meſhed*; and the Inhabitants are very rich, chiefly through the Trade they carry on with the Subjects of the Great *Mogul*. It is in this City that the fineſt Carpets in *Perſia* are made, and the fineſt Brocades alſo; but the greateſt Advantage it enjoys is, the being a convenient Stage, in the direct Road from *Iſpahan* to *Candahar*; ſo that the Magazines of this City are not better ſupplied with their own Manufactures, than with the choiceſt and moſt valuable Merchandize of the *Indies*.

[b] This is an *Arab* Word, and ſignifies the ſame thing with the *Turkiſh* Word *Derwiſh*, that is, a mendicant Monk, one who has made a Vow of Poverty, and travels through the Country without Food, Raiment, or Shelter, but what is afforded him out of Charity. They are generally eſteemed ſacred in *Mohammedan* Countries, and every body is willing to contribute whatever Neceſſaries they want.

He had always a ſtrong Inclination to paſs for the great Diſpenſer of Juſtice amongſt his Neighbours, and therefore taking Offence at the Proceedings of *Uſum Caſſan*, a very potent Monarch of the Family of *Zingis Khan*, who had deprived one of his Relations of his Dominions, he declared War againſt him, notwithſtanding all the Pains that Prince could take to terminate the Difference between them by a Negotiation. *Uſum Caſſan*, though much inferior in Power, was much better verſed in the Art of War; and by ruining his Country, and keeping his Forces always encamped in Places that were inacceſſible, he ſo weakened the Forces of the *Tartar*, that, at laſt, he found himſelf obliged to retreat, in order to ſave the Remains of a numerous Army, worn out with perpetual Fatigue. But he was not able to conduct them, as he endeavoured, into his own Dominions, but was defeated and taken Priſoner by the ſons of *Uſum Caſſan*, who immediately conducted him to the Preſence of their Father, who received him at firſt with great Humanity, but being provoked at the inſolent Speeches of *Abouchaid*, who reproached him with not daring to meet him in the Field, at laſt ordered his Head to be ſtruck off, and put out the Eyes of his three eldeſt Sons, who were taken with him.

Such was the Fate of this inſolent and vain-glorious Monarch, equally unfortunate in the Beginning and in the Cloſe of his Reign, but in neither more ſo than he deſerved. The Chronicles of the Mogul Empire take Notice, that he left a bad Example to his Succeſſors in theſe two Points, firſt, in putting to Death his Brother, and next in his Ingratitude to his moſt faithful Servants; Circumſtances very diſhonourable for his Memory, and which ſhew how unworthy he was of ſo great an Empire, that in the Courſe of twenty-eight Years, which he ſat upon the Throne, could leave nothing but the Shame of his Vices[c] to make him remembered by Poſterity. There have ſome Doubts ariſen about the Succeſſion of this Prince, becauſe, in the great Seal of the Mogul, on which the Names of all the Emperors are engraved, there is one *Mirza-Mohammed* mentioned, whom ſome therefore would have the Son of *Miracha*, and the Father of *Abouchaid*. The firſt may be true, but not the latter, ſince it is probable, that this *Mirza-Mohammed* was his Brother, whom he put to death.

5. *Sheik-Omar*, the fifth Son of *Abouchaid*, ſucceeded his Father in the Year of the *Hegira* 874. *A. D.* 1469, and was of a quite contrary Diſpoſition: He is recorded to have been a very pious *Mohammedan*, and to have made the Study of the Khoran the Buſineſs of his Life, which is the more extraordinary, ſince his Great-grandfather *Timur* had a Religion of his own, which was a Sort of Deiſm. His Grandfather had very little Religion, and his Father none at all, though he made ſome Pretences to *Mohammediſm*. The Reign of *Omar* was a continued Peace; he never ſought to trouble his Neighbours, was contented with his own Dominions, where he ruled his Subjects with Juſtice and Moderation, and was neither diſturbed by Plots at home or Wars abroad. The only Thing remarkable in the Reign of this Monarch, is the Manner in which he amuſed himſelf; for it muſt appear ſomewhat ſingular, that a Prince, who ſeriouſly delighted in Peace, ſhould invent a new kind of War for his Diverſion.

At the End of his Garden he had a high Terras, at each Extremity of which was built a Pigeon-houſe; thither the Emperor daily reſorted, and as he fed his Pigeons with his own Hand, they flocked about him as ſoon as he appeared. He had taught theſe Creatures to live in a perpetual State of Enmity; ſo that as ſoon as the Emperor lifted up a white Sattin Standard, the Pigeons of one Houſe attacked thoſe of the other, and they with great Reſolution defended themſelves, and often ſallied out and drove away the Invaders. It one Day happened that the Emperor, deeply engaged in this Sport, flouriſhing his Standard in the Air, and having his Eyes fixed on his Pigeons, fell againſt the wooden Baluſtrade of his Terras, which, being rotten, gave way, ſo that by his Fall he broke his Skull, of which unlucky Accident he died in two Days after, having reigned happily for himſelf and for his Neighbours twenty-four Years.

6. He was ſucceeded in the Throne by his Son *Babar*, in the Year of the *Hegira* 899, *A. D.* 1493. This Prince had ſcarce taken Poſſeſſion of the Government before he found himſelf engaged in a War, for which he was every way indifferently provided. The Prince of the *Uſbeck Tartars* at that Time was *Schaibac-Khan*, who remembering that his Father had been deprived of *Samarcand* by *Abouchaid*, the Grandfather of *Omar*, he determined to lay hold of the Opportunity that offered of recovering his Dominions, knowing that the *Moguls* were much ſoftened by their Inactivity during ſo long a Peace. He made a right Judgment in this Matter; for, on his Approach, *Babar* found it impoſſible to make head againſt him, and therefore retired from Place to Place, till at laſt he took Shelter in *Cabuliſtan*[d], the Governor of which remained faithful to him, and ſoon aſſembled an Army capable of recovering what he had loſt to the *Uſbecks*.

Babar had hitherto appeared of as peaceable a Diſpoſition as his Father; but now, whether ſtung with Reſentment or rouſed by Deſpair, he ſhewed as great Courage as any of his Anceſtors, and ſeemed impatient to invade that Country which he had ſo lately abandoned. The Governor of *Cabuliſtan* however was of quite a different Sentiment, and having ſhewn his Maſter that it was infinitely more eaſy to make himſelf abſolutely Lord of *Indoſtan* than to recover the Countries he had loſt, he brought *Babar* over to his Opinion. In order however to proceed with the greater Security and Succeſs, the Emperor propoſed making a Journey through *India*, under the Diſguiſe of *Giogis*, or *Indian* Pilgrims, that they might the better judge of the Strength and Condition of thoſe whom they meant to conquer.

They executed this Reſolution almoſt as ſoon as they had formed it; and having travelled undiſcovered from one Extremity of *India* to the other, they found it inhabited by four Nations. The firſt were the native *Indians*, who ſtill kept up the Form of the ancient Conſtitution, though the Spirit of it was in a manner loſt. Their Kings ſhutting themſelves up in their Seraglios, thought of nothing but their Pleaſures, and left the great Affairs of Government to their Miniſters, who were often as indolent as themſelves, and left them in their Turn to their Domeſticks. The *Bramins* had exchanged the elevated Philoſophy of their Anceſtors for a Life of Superſtition, which amuſed the Vulgar with a falſe Religion, and ſeemed to juſtify the Men of Senſe, in having little or none at all. Their Soldiers kept their Horſes, took their Pay, and appeared at their ſtated Times in Review; but as for Service they knew it not in Practice, and the very Idea of it gave them Diſquiet. The common People were ſunk in Luxury and Sloth, miſtaking the Power of doing Evil for Liberty, and placing all Happineſs in the Purſuit of their vicious Appetites, without Danger of Reſtraint, or Fear of Reproach.

The ſecond Sort of People were the *Pattans*, a Race of *Mohammedans*, who from the oppoſite Coaſt of *Arabia* had paſſed over thither, and having firſt ſettled on the South-ſide of the River, erected there a Town, which ſtill bears the Name of *Muſilipatan*; from whence extending themſelves ſtill farther and farther, they at laſt became Maſters of the Kingdom of *Dehli*, of which they were poſſeſſed when *Tamerlane* made his Irruption into the *Indies*.

---

[c] That Vice which of all others has moſt ſtained the Glory of the Mogul Race, is Ingratitude; the firſt Imputation of which was derived from the Conduct of this *Abouchaid*. When he was obliged to fly, in order to ſave his Life, after the Loſs of his Crown, two only of his Courtiers remained faithful, and ſhared with him in all his Misfortunes. After he was reſtored, theſe two worthy Men expected ſome Share in his Favour, but *Abouchaid* told them plainly he was more obliged to them than it was in his Power to repay, and therefore he hated to ſee them; neither was he contented to baniſh them his Court, but ordered their Names to be ſtruck out of the Roll of his Servants. Hence *the Ingratitude of Abouchaid* is to this very Day a Proverb through the Eaſt.

[d] This is a frontier Province between *Perſia* and the *Indies*, and has belonged ſometimes to one, and ſometimes to the other of theſe Empires, and is thought of ſo great Conſequence to the laſt, that it is a common Saying, he who is not Maſter of *Cabuliſtan*, is not Maſter of the *Indies*.

The *Perſees* were the third Sort of People; and theſe were no other than the Remains of the antient *Perſians*, who were and are certainly the moſt innocent People in the World, and perhaps the moſt pious. As the principal Part of their Religion conſiſts in worſhipping the Almighty Author of all Things under the Symbol of Fire, the *Mohammedans*, without taking any Pains to enquire into their Principles, concluded them Idolaters; and when they conquered *Perſia*, forced them to abjure their Religion or to quit their Country. They choſe the latter, and this brought Multitudes of them into the *Indies*, where, by a laborious Induſtry, they procured a bare Subſiſtence, expoſed continually to the Inſults of the other Nations, without any thing to ſuſtain them under the Weight of ſo many and ſo great Misfortunes, ſave the Teſtimony of a good Conſcience in this Life, and the Hopes of a Reward in that to come. The fourth Sort of People were his own Subjects the *Moguls*, placed there in Garriſons by his Anceſtors, and employed in levying the Tributes impoſed by them upon the *Rajahs*.

When *Babar* and his faithful Companion had examined all Things with the utmoſt Diligence and Attention, they returned to *Cabuliſtan*, and began to prepare for the Execution of their Project. They had obſerved, that the Prince of the *Pattans*, who was in Poſſeſſion of the Kingdom of *Dehli*, was the moſt powerful of any of the *Rajahs* in the Country of *Indoſtan*, and therefore they reſolved to begin with reducing him. *Babar*, having put himſelf at the Head of a numerous Army, ſummoned this Monarch, whoſe Name was *Amwixa*, to lay aſide the Stile and Title of a Sovereign, in a Country which belonged to the *Moguls* by Right of Conqueſt. *Amwixa* anſwered, that a King, though tributary, was ſtill a King, and that ſince they diſputed his Title, he was determined to pay no more Tribute to one driven out of his Dominions, and who, by his Conduct, ſeemed unworthy of Reſpect. *Babar* having received this Anſwer, proſecuted his March towards *Dehli*, and met with *Amwixa*, at the Head of an Army much greater than his own; but as the *Indians* were Soldiers only in Shew, ſo they were broke and defeated by the firſt Attack. Their King periſhed like a brave Man in the Midſt of his Enemies; the Remains of his Army took Shelter in the Mountains of *Thebet*. *Babar* remaining Maſter of the Country, made Choice of *Dehli* for his Capital, which has continued to be the ordinary Reſidence of his Succeſſors ever ſince[c].

The firſt Care of this Prince, after his Eſtabliſhment in the *Indies*, was to frame a Body of Laws, or rather to eſtabliſh a few fundamental Maxims for the Government and Security of his Empire, that his Succeſſors might not be expoſed to ſuch Accidents as he had met with, or be obliged, at every turn, to ſet their whole Dominions on the Hazard of a Battle. The Foundation on which this Structure was raiſed, was the ſole and abſolute Right of the Grand Mogul, for ſo *Babar* was firſt called, to all the Country he had acquired by Conqueſt; and this was ſo clearly underſtood, as that it ſecured all Property to him, and made even the greateſt of his Subjects Tenants at Will, or Tenants for Life at the very utmoſt. As by this Means the whole Lands in his Dominions were veſted in the Mogul, and all the great Men in the Kingdom made dependent upon his Pleaſure, ſo by another Principle, the Bulk of the People were put as much into his Power, ſince no written Laws were allowed, but the Judgment of the Emperor eſtabliſhed what was right and wrong in his Dominions. In his Capital he gave Judgment himſelf in all Cauſes that came before him; in other Cities there were Officers who decided all Things in his Name, and whoſe Decrees were liable to be reviewed by the Mogul himſelf.

Theſe Conſtitutions were deviſed by the Governor of *Cabuliſtan*, who, as he had fixed the Emperor upon the Throne by his Fidelity, now ſecured him thereon by his Wiſdom. The Effects of theſe Settlements very ſoon appeared by the Change that was perceived in the Face of Affairs; for the *Tartars*, who had been the old Subjects of *Babar* and his Anceſtors, ſwarmed to him now from all Quarters, as did alſo the *Perſians* and other *Mohammedans*, with whom the Court and the Army were filled, and upon whom all Places of Truſt and Profit were beſtowed. The great Officers, and in ſhort all who had Preferments, civil or military, were ſtiled *Omrahs*, and the old *Indian* Princes retained their antient Appellation of *Rajahs*. We ſhall meet with theſe Words very often, and therefore it may not be amiſs to fix the Senſe of them effectually. The *Omrah* is the mere Creature of his Prince, and though he often enjoys large Tracts of Land by his Favour, as well as conſiderable Appointments, yet he enjoys both but for Life, and can leave nothing to his Children, all being reſumed by the Mogul at his Deceaſe, who is the Heir-General of every Man in his Service. The *Rajahs* are hereditary Princes in their own Dominions, which they hold indeed of the Mogul, but by certain Tenures, with which, if they comply, he has no farther Demands upon them. It often happens that theſe *Rajahs* live at Court, and are honoured with Employments, in right of which they become *Omrahs*; but at their Deceaſe the Mogul reſumes all that they poſſeſs in his Dominions, and nothing but the Principality deſcends to their Children.

After all the Obligations that *Babar* owed to the Governor of *Cabuliſtan*, he became as ungrateful to him as his Grandfather had been to the Companions of his Miſfortunes, and treated him in ſuch a Manner, that he, for his own Security, turned *Faquir*, and in that Diſguiſe ſheltered himſelf in ſome diſtant Part of the *Indies*. After he left the Court all Things ran to Confuſion, and it plainly appeared, that none was able to govern the Empire, according to its preſent Conſtitution, but him who had framed it. It was ſome Time before the Emperor diſcerned this, but at length he found it out, repented of his Ingratitude, and would very willingly have recalled his Miniſter to Court, if he had known where to have found him. His Endeavours for ſome Time were fruitleſs, but at laſt he bethought himſelf of an Expedient, which was as ſucceſsful as it was ſingular; he publiſhed an Edict, by which he ordered every Market-Town in his Dominions to ſend its *Bazar* or *Market-Place* up to *Dehli*, or to return a ſufficient Reaſon for not doing it. His Motive to this was, that he believed he ſhould be able to diſtinguiſh, amongſt theſe Returns, the Place where his Miniſter had taken Shelter. When he came to look them over, he laid his Finger on the following Anſwer from a Town at a great Diſtance from his Reſidence. The Inhabitants declared, that they were ready, and willing to obey his Imperial Decree, *but that their* Bazar *did not know the Way to* Dehli, *and therefore, if his Majeſty would be pleaſed to ſend one of the* Bazar's *of his Capital to Conduct it, theirs ſhould immediately ſet out*. *Babar* directed the Deputies that brought him this Return to ſend him inſtantly to Court the Man by whoſe Advice they made it, which accordingly they did, and it proved as he expected, his old faithful Servant the Governor of *Cabuliſtan*, whom he reſtored to his former Poſt, and to his Favour, both which he enjoyed as long as he lived. The reſt of this Emperor's Reign affords us nothing remarkable, inaſmuch as he ſpent it in profound Peace, and having lived to a good Age, deceaſed in the Year of the *Hegira* 937, *A. D.* 1230, after reigning five Years at *Samarcand*, three in *Cabuliſtan*, and thirty in the *Indies*.

7. He was ſucceeded in his Dominions by his Son *Homayum*, or *Amayum*, who very ſoon experienced how difficult a Thing it is for the Succeſſor of a Conqueror to preſerve his Dominions. He had the Aſſiſtance of his Father's old Counſellor, but, like a young Man, he did not put that Confidence in him that he deſerved; but, contrary to his Advice, and in ſpite of all his Remonſtrances, promoted to the higheſt Employments the Perſon in the World moſt capable of doing him Miſchief.

---

[c] The Name of this City is ſometimes called *Delli*, and the Reader will meet with a large Deſcription of it hereafter. It is very antient, and made a Part of the Kingdom of *Porus*; and it was in the Neighbourhood of this Place, that the great Battle was fought, which put *Alexander* in Poſſeſſion of his Dominions. There is ſaid to be ſtill remaining in this City a Column erected in Memory of that Event, with an Inſcription almoſt worn out, in Characters and in a Language now altogether unknown. The *Rajah Rana*, who was defeated by *Tamerlane*, is reported by all the Oriental Writers to have been a direct Deſcendant from King *Porus*.

The Thing happened thus: A young *Pattan* Lord, named *Chira*, who had been bred up with *Amayum* in his Father's Court, became his principal Favourite, and was advanced to the greateſt Poſts in the Government. Such a Confidence did this Prince place in him, that he made him his Generaliſſimo and Commander of the Guards about his Perſon. But *Chira*, on whom Ambition, or a pretended Love to his Country, had a much greater Influence than all the Favours beſtowed on him by *Amayum*, meditated how he might depoſe his indulgent Maſter, and reſtore the *Pattans* to their ancient Sovereignty. This great Miniſter firſt diſcovered his Ambition, it is ſaid, by changing his Name from *Chira*, which ſignifies a young Lion, to that of *Chircha*, which ſignifies the Royal or Imperial Lion. And being Commander of all the *Perſian*, *Tartar*, and *Mogul* Troops, among whom he had rendered himſelf very popular, by his obliging Behaviour; and his own People the *Pattans*, as well as the *Indian Rajahs*, being glad of an Opportunity of throwing off the Mogul Yoke, all Things ſeemed to conſpire to raiſe him to the Throne.

Amayum however being appriſed of this univerſal Diſaffection to his Perſon, occaſioned by his Favourite, aſſembled a ſmall Body of *Tartars* and *Perſians*, with whom he gave Battle to *Chira*; but their Numbers being very unequal, *Amayum* was ſoon compelled to leave the Field, and fled to the Shah of *Perſia* for Protection, after he had reigned in *Debly* about eleven Years, almoſt in continual Trouble and Confuſion. The Inhabitants of the Eaſt are extremely addicted to Augury, or obſerving the Flight of Birds, from whence the few Courtiers who attended *Amayum* in his Retreat, predicted his Return to his Empire; for, it fell out one Day, when the Weather was hot, and he was weary with Travel, that Prince lay down to reſt, when an Eagle, followed by her young ones, hovered for a conſiderable Time over his Head, and thereby ſhaded him from the Sun-beams. When he awaked, his Attendants complimented him on the Omen, which ſerved to keep up his Spirits; for it is obſerved, by all the Writers of his Hiſtory, that he bore his Misfortunes with great Dignity, and appeared as much a Monarch in his Exile, as he had ever done upon his Throne. The *Perſian* Prince received him with all imaginable Kindneſs and Reſpect, aſſigned him a Palace in his Capital, with a competent Revenue, and left nothing untried that might contribute to leſſen his Senſe of his Diſaſter, which had ſo good an Effect, that the *Indian* Monarch forgot his Cares, and paſſed his Time as comfortably as it is poſſible for one Prince to do in the Dominions of another[f].

In the mean time however, *Chircha* employed all his Thoughts in providing for the Welfare of that Nation, who had, in ſome meaſure, called him to the Throne. He was a Man of great Parts, and of a benevolent Nature; he ſaw that the only Means to make his People happy was, to enlarge and facilitate their Trade; and therefore to this he applied his Attention and his Power. He erected, at proper Diſtances in all the great Roads throughout his Dominions, Caravanſeras, or publick Inns, where Merchants might find all Conveniences, and proper Perſons to attend them at a very moderate Expence, and where Foot-paſſengers might be entertained at the publick Expence. His Example had ſuch an Effect on the richeſt of his Subjects, that they began to imitate him in the like Foundations, which proved of infinite Advantage to the Publick; and has therefore been practiſed ever ſince. The founding ſuch Receptacles for Strangers and Travellers, being accounted the higheſt Point of Charity in that and other Eaſtern Countries to this Day. Another Regulation with the ſame View did equal Honour to the Adminiſtration of this Prince, and contributed no leſs towards making him the Darling of his Subjects. There was, before his Time, no kind of Certainty in the Weights or Meaſures of this Country, but all Things were in a manner bought and ſold by hand, which was attended with many Inconveniencies. This Evil he remedied by a Law, which forbid the ſelling any thing but by Weight and Meaſure, and appointed the Standards of both to be kept in the great Towns throughout his Dominions. The Reign of this Prince was but ſhort, and he died without Iſſue, for otherwiſe he had, in all Probability, put an End to the Mogul Empire in the *Indies*. He was a very martial, as well as a very wiſe and prudent Prince in Time of Peace, and had a particular Turn for the Art of Engineering, which, by an Accident, proved fatal to him; for, having a Cannon of an unuſual Size ſent him from *Bengal*, he would needs make Trial of it himſelf, and the Piece burſting, he was killed by the Breech of it that ſtruck him on the Head, when he had enjoyed the Empire about nine Years[g].

All Things upon his Death fell into Confuſion; every one of the petty Princes had either Views for himſelf or for ſome greater Prince, to whom he was attached; and, in the Midſt of his Diſtraction, the Government remained without a Head, and every *Rajah* acted as an independent Prince in his own Dominions. While Things were in this Situation, a certain *Fequir*, whoſe Name was *Chadaula*, went privately to the Court of *Perſia*, and informed *Amayum* how Matters ſtood, aſſuring him that if he could produce but any Appearance of Force, he might be able to recover his Throne. He applied himſelf upon this to the Shah of *Perſia* his Protector, and offered, if he would aſſiſt him, to pay him an annual Tribute, and, as a Compenſation for the Expence he muſt neceſſarily be at in furniſhing him with an Army, he propoſed to make a Ceſſion of the principality of *Kandahar*. Theſe Terms were immediately accepted, and with a conſiderable Body of Foot, and twelve thouſand *Perſian* Horſe, he began his March towards the Frontiers of the *Indies*. The King of *Perſia*, at his taking Leave of him, gave him a ſhort Piece of Advice, which contributed no leſs to the Preſervation of his Dominions, than the Army with which he furniſhed him, did to the regaining them. His Advice was to keep up continual Enmity between the *Pattans* and the *Raſhpouts*, or *Indian* Soldiery, by which Means each of them would be weakened, and both of them kept within the Bounds of their Obedience.

On his entering the Confines of *India*, he found the whole Country open except only the Fortreſs of *Lahor*, in which a *Pattan* Lord was Governor, and had under his Command a numerous Garriſon, every way well provided. Of this Place however, he ſoon became Maſter by the following Stratagem. An hundred young *Perſians*, wholly devoted to his Service, diſguiſed themſelves in the Habits of Pilgrims juſt returned from *Mecca*; of theſe a Part got into the Fortreſs before it was dark, and the reſt preſented themſelves at the Gates juſt as the Day was ſhut in, intreating Admittance for that Night only. The Governor looking upon it as an Act of Religion, admitted them. But in the midſt of the Night, when the Garriſon, weary with Fatigue, were buried in Sleep, the pretendid Pilgrims fell upon the Governor and thoſe who were about him, and having maſſacred them without Mercy, delivered the Fortreſs to *Amayum*, who, by this Means, entered *Lahor* without the leaſt Reſiſtance. He marched on from thence with the utmoſt Diligence toward *Debly*. A ſingle Battle fought at the Diſtance of three Leagues from that City determined the Diſpute, and put him once more in Poſſeſſion of the Dominions of his Anceſtors. *Amayum*, upon his Reſtoration, ſhewed his Gratitude to the *Faquir Chadaula*, who firſt brought him the News of *Chira's*

---

[f] This, probably, might be, in ſome Meaſure, owing to the perſonal Behaviour of *Amayum*, who aſtoniſhed the *Perſian* Monarch by his Preſence of Mind at their firſt Interview, which happened to be in a Summer-Houſe, where there was but one Sopha, and that too ſmall for them to ſit on together. The *Indian* Prince ſaw this with Indignation, but recollecting himſelf after he had paid his Compliments to the *Shah*, who was ſtanding, he deſired him to be ſeated; and as ſoon as he had placed himſelf on the Sopha, *Amayum* ſate down by him on his Quiver, which, after the *Tartar* Cuſtom, he had hanging at his Back, which Act of Spirit pleaſed the Shah extremely.

[g] There is one Circumſtance of this Prince's Reign which ought not to be paſſed over. When he took Poſſeſſion of the Palace of *Amayum*, he treated his Empreſs with extraordinary Reſpect; and being informed that ſhe was with Child, ordered her to be ſent to *Perſia* to her Huſband; but *Amayum*, ſeized with a fit of Jealouſy, refuſed to ſee her; of which ſhe informed *Chircha* by Letter. Upon this he wrote to *Amayum*, aſſuring him that he had never ſo much as ſeen the Empreſs, and to confirm the Truth of this Fact, he ſwore it upon the Khoran; on which the Emperor received her with great Tenderneſs and Affection; and the Son, with which ſhe was then big, ſucceeded him in the Empire.

Death, by granting him an Eſtate in Lands, to be enjoyed by him and his Poſterity for ever; and this is the only *Mohammedan* Family in *India*, it is ſaid, who can claim the Property of any Lands at this Day. His Deſcendants alſo take Place of all others, and his Tomb has great Honours paid to it; but his Gratitude ſeems to have been exhauſted, by the Returns made to this worthy Man, ſince in regard to the Shah, to whom he owed all things, he neither ſhewed Kindneſs, or Juſtice, ſince he never paid him ſo much as one Year's Tribute, nor yielded to him the Principality he promiſed. Yet he remembered his Advice, and followed it very exactly, by which Means he took away from future Malecontents all Power of giving him Diſturbance, and left it as a Maxim to his Poſterity, who have practiſed it with great Succeſs, and to this has been chiefly owing the Preſervation of the Dominions he left them[h].

Amayum was in the Flower of his Age when he recovered his Dominions, but whether it was that a ſettled Melancholy had grown upon him, while under his Misfortunes, or that he had a Mind to ſhew, that in the Poſſeſſion of the higheſt Bleſſings, he had ſtill the common Fate of Mankind in his Eye, or that he was led thereto by a Cuſtom common among the *Mohammedan* Princes of his Age; ſo it was, that as ſoon as his Government was ſettled, he began to build himſelf a Tomb, upon which he beſtowed incredible Expence. He likewiſe ſettled a large Revenue for the Maintenance of a certain Number of Mollas, or Doctors of the *Mohammedan* Law, to reſide conſtantly there, and to ſpend their Time in praying for his Soul, and reading the Khoran, near the Tomb where his Body was to be laid. When this Edifice was in good Forwardneſs, *Amayum* went one Day to ſee it, and having a Carpenter's Rod in his Hand, walked upon the Battlements, and gave the Workmen ſome Directions, when, either through Wearineſs, or that he might look about him with great Eaſe, he clapped the Rule down, and leaning upon it, which being but ſlender, broke, and the Roof being ſloping, the Emperor rolled forwards, and fell from thence to the Ground; by which Accident he was killed upon the Spot, and found his Death and his Tomb together, in the Year of the *Hegira* 966, and *A. D.* 1552. The latter was finiſhed by his Succeſſor with the utmoſt Magnificence, and adorned with a Dome, which is ſo richly gilt, that it dazzles the Eyes of the Spectator by its Splendor. It ſtands a little Way without the Gates of *Dehly*, at the End of a fine Bridge, compoſed of twelve Arches, and is eſteemed one of the nobleſt Monuments in the Empire of *Indoſtan*. This Monarch ſurvived his Reſtoration two Years nine Months and fourteen Days, and reigned from his firſt Acceſſion twenty-two Years.

8. *Amayum* was ſucceded by his Son *Akebar*, or *Akbar*, then but thirteen, whom all our Hiſtorians agree wanted no Accompliſhments to adorn a Throne. He had, they tell us, a moſt penetrating Judgment, an extenſive Knowledge, an intrepid Soul, and at the ſame Time was generous, tender, and compaſſionate. He ſoon perceived that the *Moguls* and *Tartars* bore no Proportion with the *Pattans* and *Indians* under his Government, and therefore inviting the neighbouring *Uſbecks* and *Perſians* to ſerve under him, he preferred them to the principal Poſts, and gave them Wives, that they might in Time be a Balance for that Part of his Subjects whom Nature and Intereſt inclined to be diſaffected to his Government. And the greater Part of thoſe who are called *Moguls*, at this Day, are a Mixture of white People of ſeveral Nations, profeſſing the *Mohammedan* Religion; but it being found, that in a ſhort Time they loſe their Complexion, and degenerate into Softneſs, like the original Natives of the Country, new Supplies of *Perſians* and *Tartars* are encouraged to tranſplant themſelves, and theſe uſually fill the greateſt Poſts in the Government. This Prince alſo, to ſtrengthen himſelf againſt the *Pattans*, whom he dreaded moſt, took ſeveral Bodies of *Raſhpouts*, or *Raſhboots*[i], into his Service. Theſe are the braveſt People amongſt the native *Indians*, who make Arms their Profeſſion, and are Pagans by Religion; and to endear them the more, it is ſaid, he took the Daughters of the principal Rajas among the Number of his Wives, and ſuffered the Rajas to match with the *Mogul* Princeſſes; though I muſt confeſs this Part of the Hiſtory is a little difficult to give Credit to, becauſe no People in the World are ſo ſcrupulous of mixing with thoſe of a different Religion, or even with a different Sect, or Employment, as the Generality of the Pagans of *India* are; though there are ſome Sects, on the other Hand, that admit of very great Liberties.

To proceed, *Akebar* having taken all prudent Meaſures to render his Government ſecure at home, began to think of extending his Dominions towards the Sea-Coaſts, that he might come in for a Share of the Trade and Riches that the maritime Places poſſeſſed; and the firſt Enterprize of this Nature, that he undertook, was againſt the Kingdom of *Guzarat*, which extends from the River *Tapte*, upon which the Town of *Surat* ſtands, to the Mouth of the River *Indus*. This Part of *India*, at that Time, enjoyed a moſt flouriſhing Trade; the *Portugueze* in particular, who had eſtabliſhed ſeveral Colonies in this Part of the Country, imported immenſe Treaſures every Year from *Europe*, in Exchange for the Manufactory of *India*. The Prince who then reigned in *Guzarat*, was Sultan *Babadar*, a *Mohammedan*. This Sultan *Badar* had maintained a long War with the *Portugueze*, who daily encroached upon his Territories, and lately made themſelves Maſters of *Diu*, a Town which lies upon an Arm of the Sea, almoſt oppoſite to *Surat*; but both the Sultan *Badar*, and the *Portugueze*, being alarmed at the Approach of the *Mogul*, united their Forces againſt him.

It was with ſome Difficulty, it is ſaid, that *Akebar* prevailed on his Troops to march againſt the *Portugueze*. They had been repreſented at *Dehly* as ſomething more than mortal, and thoſe vaſt floating Machines armed with Artillery, with which they had heard they fought upon the Water, they were apprehenſive might be made uſe of, or at leaſt ſomething of the like Nature upon the Land. They dreaded the Encounter thereof to ſuch a Degree, that they were upon the Point of turning their Backs, and quitting the Enterprize, till *Akebar*, who had fully informed himſelf of the Numbers and Strength of the Enemy, and their Manner of engaging, convinced his Troops how much inferior this little *Guzarat* Prince, and the *Portugueze*, were to the Forces he brought with him, and putting himſelf at the Head of his Troops, in one briſk Charge he routed both the *Guzarats* and *Portugueze*. Sultan *Badar* fled, but his Children were taken Priſoners, and put to Death by the Conqueror, and the whole Kingdom immediately ſubmitted to his Power, except thoſe Towns the *Portugueze* were poſſeſſed of, which being fortified after the modern Way, bid Defiance to his Forces, as indeed a very ſlight Fortification will at this Day. Their Elephants, which are their greateſt Strength, are of very little Uſe in a Siege, becauſe a Battery of great Guns would ſoon lay them in Heaps, if they could be ſuppos'd ſo intrepid, as not to be diſordered by the very Fire, or even the Report of a Cannon.

Akebar finding *Guzarat* ſo eaſy a Conqueſt, bent his Arms towards *Decan*, which lies to the Southward of it.

---

[h] The intelligent Reader will eaſily perceive the Reaſon why this Empire has been more ſubject to Revolutions than any other, the *Mogul* having no Subjects that he can depend on but *Tartars* and Strangers, the native *Indians* remaining ſtill as diſtinct a Nation as ever, and abhorring the *Mohammedans* as heartily as the *Mohammedans* contemn them; ſo that this Government ſtill remains what it was at the Beginning, that is to ſay, Military, the Sword giving Law, and being the true Source of Power. This Obſervation will be found of great Uſe to the underſtanding the ſubſequent Part of this Hiſtory.

[i] It is a pretty difficult thing to fix the Manner of Writing this Word, which in all Probability is very incorrectly expreſſed by the *Europeans*. Moſt of our *Engliſh* Authors write it, *Raſhpoots*, or *Raſhpouts*, they are properly the War Tribe of the ancient *Indians*, and we find them very frequently diſtinguiſhed by the Name of *Queteries*. The Arms they uſe, are commonly Swords, Pikes and Bucklers; but when they appear with a yellow Cloak, it is a certain Sign that they have made a Vow either to conquer or die. On theſe Occaſions, it is common enough for them to heighten their Courage, by taking Opium, which inſpires them with a ſort of Military Fury, that differs not much from Madneſs. There is one thing remarkable in their Diſcipline, which is, that before they engage, they embrace each other, as if they were on the Point of departing on a long Journey, intimating thereby their Readineſs to ruſh into another State.

This was divided into ſeveral little Sovereignties. *Muſtapha*, a *Mohammedan* Prince, poſſeſſed that Part of the Country wherein the Towns of *Brampour* and *Acer* are ſituated, whoſe Subjects gave him the Title of *Melec*, or King. *Amanadagar*, and the Territory belonging to it, was ſubject to the Queen of *Cande*, and *Ambar* commanded the Diſtrict of *Doltabad*. Theſe Princes, though at other Times Enemies, united their Forces againſt *Akebar*, and gave him Battle, but were defeated by him with very little Loſs. The Reduction of the Fortreſſes which theſe Princes poſſeſſed, proved a Work of greater Labour; for now every one being to defend what was their own, exerted their utmoſt Force, and their utmoſt Capacity.

The Forces of *Acer* was the firſt that he attacked, an irregular Fortification, and which could have made no Defence againſt the *European* Army, but a Place of great Strength in the *Indies*, and very well provided with Artillery, ſome of which, it is ſaid, were caſt by the *Indians* themſelves, before the *Portugueze* viſited their Coaſts. King *Muſtapha* was there in Perſon; with a very numerous Garriſon, compoſed entirely of his beſt Troops. The Defence he made was worthy of his Reputation for Conduct, and for Courage, and the Army of the *Mogul* was ſo ruined by the Fatigue of this Siege, that the Emperor himſelf had Thoughts of raiſing it, when he was informed by ſome Deſerters, that the Garriſon began to want Water, which encouraged him to remain before the Place. King *Muſtapha* perceiving the Ciſterns dry, and knowing the Rainy-Seaſon to be at a Diſtance, reſolved to retire privately out of the Fortreſs, in order to throw himſelf into *Brampour*, and there defend himſelf and the reſt of his Dominions.

It was with this Deſign, that in the middle of the Night he quitted *Acer* in Diſguiſe, and before he had proceeded far, he was ſeized by the Advance Guards of the *Mogul* Army, who carried him immediately to the Emperor's Tent. When he came into the Preſence of *Akebar*, that Monarch aſked him who he was, and where he was going? To which, with great Spirit, he anſwered, that he was King *Muſtapha*, and that knowing him to be a wiſe and generous Prince, he came out to aſk his Advice, ſince they had now no Water left, and he could not bring himſelf, after living ſo long as a King, to become the Subject of another. *Akebar* bid him go back to the Place and be ſatisfied, that if Heaven intended to deliver him, he would meet with a Supply of Water by ſome unexpected Means. *Muſtapha* took his Advice, and returned to his Fortreſs. It was then about the middle of *May*, and as the rainy Seaſon does not uſually commence till the middle of *June*, he had not much Reaſon to expect what nevertheleſs fell out the Night following, in which it rained ſo plentifully, that his Ciſterns were all full by the next Morning. *Akebar*, aſtoniſhed at this Accident, left a ſufficient Body of Troops to block up *Acer*, and marched with the reſt of his Forces to beſiege *Brampour*, which, though a Place of conſiderable Strength, and well provided with every thing, did not hold out long, and *Muſtapha* ſeeing the beſt Part of his Dominions loſt, reſolved to make the beſt Terms he could for himſelf, in Conſideration of the Surrender of *Acer*. The *Mogul* granted him as good Conditions as he could reaſonably expect, and *Muſtapha* entering into his Service, had the ſame Reſpect paid him as the other Rajahs.

After the Reduction of *Acer*, the *Mogul* prepared next for the Siege of *Amanadagar*, which the Princeſs of *Cande* defending with great Courage, kept him two Months before the Place. At length, deſpairing to hold out, ſhe cauſed all her Treaſure to be melted into Bullets, and inſcribed with the bittereſt Curſes againſt her Enemies, ſhot them into the neighbouring Woods, to prevent his poſſeſſing it. Some of theſe Gold and Silver Bullets *Manouchi* aſſures us, were found in his Time, and he read the Inſcriptions on them with abundance of Delight, and one particularly of Gold, he ſays, weighed eight Pounds at leaſt. *Ambar* hearing the great Diſtreſs that this Princeſs was in, reſolved to make an Effort for her Deliverance, and at the ſame Time to keep the War out of his own Country. The Deſign was generous in itſelf, and well enough contrived, and on the Review of his Forces, it ſeemed not altogether impoſſible to have executed it; for this *Indian* Prince, by compelling all his Subjects to take Arms, had drawn together near fifty thouſand Men. *Akebar* however attacked him ſuddenly on his March, defeated him without the Loſs of a Man, and his own People being diſcontented with his Conduct, murdered the unfortunate *Ambar* in his Flight. The Princeſs of *Cande* ſeeing now no Hopes left, yielded her City, and herſelf, to the victorious *Mogul*, who not only treated her with all the Reſpect due to her Quality, but ſoon after received her into the Number of his Wives, and ſhe remained for many Years his principal Favourite. *Akebar* was now Maſter of beſt Part of the South Coaſt of *Indoſtan*, and almoſt all the Rajahs of that Country readily yielded him Obedience.

It was at this Time, that from a Motive hitherto concealed, he took Occaſion to deſtroy the vaſt and beautiful City of *Dehli*, the ancient Reſidence of the *Pattan* Kings, and the Capital of *Indoſtan*. He built a Moſque, and a Palace at *Fetipour*, and the Rajahs building alſo many Palaces near them, it ſoon became a very conſiderable City; but the Luſtre of this Place laſted not long, ſince the Emperor himſelf perceiving that the Air was unwholſome, removed from thence, and returned into the Neighbourhood of *Dehli*, where, out of the Ruins of the old City, he erected a new one on the Banks of the River *Jemma*; but even the Splendor of this new City could not pleaſe him long, and therefore proceeding farther on the River, he fixed on the little Town of *Agra*, for the Seat of his Empire. It is ſeated on a large Plain, and the River *Jemma* making an Elbow therein, the City lies round it in the form of a Half-moon. At one End he erected a noble Palace, round which the Omrahs and Rajahs built theirs; ſo that in a very ſhort Space of Time, from an inconſiderable Hamlet, it grew to be a large City, of nine *Italian* Miles in Circumference, and having no fewer than 660,000 ſettled Inhabitants, excluſive of Strangers.

The Palace of the Emperor, which ſerves for a kind of Citadel to *Agra*, is one of the fineſt Structures in the World. The Walls of it, which are about thirty-five Foot high, are of a fine red Stone, little inferior in Hardneſs and Beauty to Marble, and it is built in ſuch a Manner, that the joining of the Stones does not in the leaſt appear. It is adorned with rich and beautiful Balconies on every Story; and between the Palace and the River, there is a kind of Parade, where the Emperor ſees his Guard reviewed, and the Battles of his Elephants. On the other ſide the River ſtands another City, as long as *Agra*, and not much inferior to it in bigneſs. This is entirely inhabited by *Indians*, or, as they are now called, *Banians*, who are either Merchants, or Artificers; ſo that this City is no leſs remarkable for its Commerce, than the other for being the Imperial Reſidence of the Grand *Mogul*, and being the Capital of the *Indies*. When this great Work was accompliſhed, it plainly appeared, that this Emperor intended it for a Monument of his Glory to lateſt Poſterity, by his beſtowing upon it the Name of *Akebarabad*, *i. e.* the City of *Akebar*; but after his Deceaſe, this new Name was laid aſide, and the old one revived; ſo that this Capital of the *Indian* Empire is ſtill known by the Name of *Agra*.

His Attention to the raiſing of this new City, did not extinguiſh that Thirſt of Empire, which had appeared in the firſt Years of his Reign. On the contrary, having heard of an *Indian Rajah*, who was equally celebrated for his Wiſdom and Courage, and who was beſides illuſtrious on the ſcore of his Deſcent from the famous *Porus*, and whoſe Dominions lay but twelve Days Journey from his Capital, he immediately formed a Deſign of reducing them, the rather becauſe they lay between his hereditary Dominions and his new Conqueſts. This *Rajah* took the Name of *Rana*, which ſeems to have been common to all his Family, according to the ancient Cuſtom of the *Indies*. He was a Prince worthy of the Blood of *Porus*, and who, if he had been well ſeconded, might have reſtored the Liberty of his Country. As it was he made a noble Attempt, which will be ever remembered in the Chronicles of that Country.

He was ſoon obliged to quit the Field, and to ſhut himſelf up in the Fortreſs of *Chitor*, ſeated on the Top of an high Mountain, and ſurrounded by a River. The Siege of this Place coſt the Mogul two Years, though at the Head of the moſt numerous and beſt furniſhed Army that had ever been ſeen in that Country, and was endangered by the fouleſt Piece of Treachery that perhaps was ever committed [k]. *Akebar* pretended to raiſe the Siege, and deſired of *Rana* to have the Liberty only of entering the Place with fifty Attendants, which was granted him by the honeſt *Indian* without the leaſt Suſpicion; but after he had been very kindly entertained, and conducted to the Gates of the Fortreſs by the *Rajah* himſelf, he threw over his Neck a Chain of Pearl, ſtrung upon Mohair for that Purpoſe, and pulled him without the Place, where a Body of the Mogul's Troops made him Priſoner. He afterwards made his Eſcape, and the Mogul having renewed the Siege, he was killed on the Walls, and ſo the Place was forced to capitulate, and thereby all the Dominions of that once powerful *Rajah* were annexed to the Empire of *Akebar*, and proved a very conſiderable Acquiſition.

The Concluſion of this War could not but be very agreeable to the Emperor, who found his Troops ſufficiently harraſſed by a War of ſuch Continuance, and in which at the Beginning ſo many *Indian* Princes were engaged, who, notwithſtanding, retired into their reſpective Territories as ſoon as they ſaw *Chitor* inveſted; whereas if they had kept the Field, and harraſſed the Army of the Mogul, it is highly probable they might have preſerved the City of *Chitor*, and the Country of *Rajah Rana*, from being thus ſwallowed up by him, who meant to bring them all under his Subjection. But whether it proceeds from Religion, Humour, or Cuſtom, certain it is, that the *Banians* have an eſtabliſhed Principle amongſt them, that defenſive Wars againſt Foreigners are only lawful, and that they ought not to march out of their own Dominions, in order even to attack an Enemy that has often attempted their Deſtruction. This weak Notion has always given the Moguls great Advantages over them, and particularly this politick as well as enterprizing Prince, who, when he had torn from them a Part of their Dominions, ſuddenly laid down his Arms, and thereby put an End to the War, till another favourable Opportunity offered.

Akebar therefore, after he had ſubdued this Province, employed himſelf for ſome time in cultivating the Arts of Peace, in enlarging the City of *Agra*, and beautifying his Palaces; and among other great Works, he planted the Road from *Agra* to *Lahor*, and made it one continued Walk of ſhady Trees, though it be not leſs than four hundred and fifty *Engliſh* Miles from one City to the other. This ſtill remains as a Monument of this Emperor's Grandeur, and is an inconceivable Refreſhment to Travellers in ſo hot a Climate. He was a great Admirer of all robuſt Exerciſes, and took a Pleaſure in the moſt hazardous Uſes thereof, breaking unruly Horſes, and managing the War-Elephants when they fought; an Employment ſo very dangerous, that the Wives of thoſe who are obliged to do it by their Office, tear off their Cloaths, and the Pendants from their Ears, when their Huſbands are thus expoſed. Nay, it is reported of him, that the War he had with the Peaſants of the Country, the moſt obſtinate he ever engaged in, when ſome of them had ſhut themſelves up in a Town, and the Conductors of the Elephants were ordered to break open the Gates; upon their expreſſing ſome Reluctance to hazard themſelves in ſo deſperate an Undertaking, the Emperor commanded one of them to diſmount, and cloathed in a common Soldier's Coat, mounted the Elephant himſelf, and managed him with that Dexterity, that he forced open the Gate in the midſt of a Shower of Arrows which the beſieged poured upon him, and had the good Fortune to come off unhurt. This War with the Peaſants, which begun in *Akebar*'s Reign, laſted a conſiderable Time; for being acquainted with all the Defiles and inacceſſible Parts of the Foreſts, it was found exceeding difficult to drive them from their Haunts, and the Government is ſo ſevere upon this ſort of People to this Day, that if a Peaſant be found in Arms, he loſes his Head. Nothing is more common than to ſee the Heads of theſe Wretches hanging on the Road Sides *in terrorem*.

While *Akebar* was engaged in this War with the Peaſants, his eldeſt Son *Jehan Gaire* broke out in Rebellion againſt him, but his Party was ſoon defeated, and the Prince made a Priſoner. However, ſuch was his Father's Tenderneſs towards him, that he did not keep him long confined; but, to deter him from ſuch Practices for the future, upon his Enlargement, he made the Prince follow him into a Foreſt, where he ſhewed him the Heads of the principal Conſpirators hanging upon the Branches of the Trees. The Prince being taught, by ſo tragical a Proſpect, the Danger that attended ſuch Enterprizes, or moved by a Senſe of the Emperor's Indulgence to him, ever after continued unſhaken in his Loyalty and Duty to his Father. This Inſurrection was no ſooner ſuppreſſed, but the *Pattans*, who had been driven up into the Mountains by *Amayum*, began to make Incurſions into the open Country, and threatned to aſſume their ancient Sovereignty in that Kingdom of *Dehly*. Againſt theſe *Akebar* ſent an Army of eighty thouſand Men, who entered the *Pattan* Country, but were all cut in Pieces, or periſhed in the Deſarts.

This Misfortune obliged the Emperor to lay aſide all Thoughts of ſubduing theſe People, at leaſt for the preſent, and perceiving that the chief Cauſe of his Miſcarriage was, that his Artillery had not been ſo well played as it might have been, he reſolved to take ſome *Europeans* into his Service, and with this View he ſent for ſome *Engliſh* Gunners from on board their Ships that came to trade upon his Coaſts; and of one of theſe Gunners we have a very whimſical Story, which, as it has nothing in it improbable, I well venture for the Reader's Amuſement to relate. This Man was particularly ſkilful in his Profeſſion, but withal had a great Affection for his Bottle, and found himſelf much at a Loſs in a *Mohammedan* Country, where Wine was prohibited. He at laſt contrived a very ſingular Method for procuring in this reſpect a Diſpenſation for himſelf. The Emperor being deſirous to ſee a Proof of his Dexterity, ordered a large Carpet to be hung up at a reaſonable Diſtance, and directed him to fire at it, which the Fellow did, but pointed the Gun in ſuch a manner, that the Shot flew extremely wide. The Emperor called him, and gave him a pretty briſk Reproof, telling him, that it was a Shame for a Man to take upon him that Office, who knew ſo little of the Matter. The Gunner anſwered with great Humility, that ſince he had been debarred the Uſe of Wine, his Eyes were grown dim, but that if his Majeſty would order him a chirruping Cup, he durſt engage to hit a ſmaller Mark. *Akebar* immediately commanded that they ſhould give him a Quart, of which the Gunner made but one Draught, and then applying himſelf to the Taſk he had undertaken, he performed it with univerſal Applauſe. The Emperor upon this ordered it to be entered in the Annals of his Reign, *That* Wine *is as natural to* Europeans *as Water to Fiſh, and that to deprive them of it, was to rob them of the greateſt Comfort of their Lives.*

It was from this Accident that a Law was made, giving Leave to ſuch Foreigners as ſettled in the Empire to cultivate Vineyards, which they have ſince done with great Succeſs and Profit. He from this Time forward had a great Kindneſs for the *Europeans*, and took all imaginable Pains to engage them, as well as all other Strangers, to ſettle in his Dominions, that they might enlarge the Trade, and perfect the Manufactures of his Subjects. By this Means his Empire became every Day more and more flouriſhing, and the Inhabitants of it more and more induſtrious; yet with all theſe great Properties, and notwithſtanding he was certainly one of the ableſt Politicians in the Eaſt, *Akebar* had ſomething very extravagant, which diſcovered itſelf particularly in his Notions about Religion. His own good Senſe, aſſiſted by the Lights he received from the *Portugueze* Miſſionaries, brought him to diſcern many Abſurdities in the *Mohammedan* Religion, to which he had never been much addicted; but inſtead of becoming a Chriſtian, as the *Portugueze* Prieſts expected [l], he framed a ſtrange Project of introducing a new Religion, which very plainly ſhewed that he conſidered it only as a political Inſtitution, and as an uſeful Engine of Government. He was ſenſible of the great Inconveniences that aroſe from his Subjects being of different Faiths, and therefore he was willing to introduce a Syſtem that might reconcile them all, and at the ſame time place him at the Head of Eccleſiaſtical, as well as Civil Affairs. This Scheme of his he publiſhed at *Labor*, and at firſt it was tolerably well received, at leaſt among his Courtiers, who were ready enough to embrace any thing that might pleaſe their Maſter. In this new Religion he ſtudied to comprehend the principal Doctrines and moſt remarkable Rites of all the reſt. Baptiſm he borrowed from the Chriſtians, Circumciſion from the *Mohammedans*, a profound Reverence for the Sun from the *Perſees*, and with theſe he mingled ſomewhat of the Morality, and even of the Theological Notions of the *Bramins*, aſſuming, in conſequence of this Invention, the Title of *Shah Geladin*, that is, the ſupreme Pontiff of the ſovereign Law.

---

[k] The Siege of *Chitor* is almoſt as famous among the modern *Indians*, as the Siege of *Troy* among the ancient *Greeks*; and an infinite Number of fabulous Stories have been thruſt into this Hiſtory. Thus it is ſaid to have had its Beginning from the Character which *Akebar* had received of the beautiful *Padmani*, the Wife of *Rana*, and the moſt lovely Woman in the *Indies*. All theſe Embelliſhments I thought requiſite to leave out, that we might keep the more within Bounds, and report as near as poſſible nothing but Matters of Fact to the Reader.

But in the midſt of his Politicks there were certain Circumſtances attended theſe Proceedings, which he had not foreſeen, and that was the diſguſting all ſuch of his Subjects as were really Men of Principles, and ſincerely attached to the Faiths which they profeſſed. The *Mohammedans*, who are, generally ſpeaking, Bigots, were provoked to the higheſt Degree by what they call his Apoſtacy. The *Indians* were by no means pleaſed, and the *Perſees* remained obſtinately fixed to their old Religion, which they thought was grievouſly profaned by this new Regulation; and thus, inſtead of pleaſing all, he pleaſed none but ſuch Men of corrupt Intentions as were leaſt to be relied or depended on. The Firſt-fruits of his new Religion was a dangerous Revolt begun in the following Manner: *Muſtapha*, one of the Decan Princes, whom he had formerly ſubdued, and who, as has been before obſerved, had lived peaceably in the Mogul's Court for a conſiderable Time, about this Time retired from thence, and found means to repoſſeſs himſelf of his Country, where many *Mohammedans*, diſguſted at the Slights the Emperor had put upon their Religion, went over to him. The Prince *Pibari*, the Emperor's beloved Son, to whom he had given the Name of *Morad*, was ſent with a gallant Army to ſuppreſs this Inſurrection; he engaged the Rajah in the Province of *Cambaya*, being conſiderably ſuperior to the Enemy in Numbers, but *Muſtapha*, who was an experienced Captain, and perfectly acquainted with the Country, gained an intire Victory over the Emperor's Forces, and the Body of young *Morad* was found in the Field of Battle among the ſlain. This Stroke of Fortune, it is ſaid, peirced *Akebar* to the Heart, and he was ſo ſenſible of the Anger of Heaven, that he never after worſhipped the Sun, nor ſuffered, as in conſequence of his Scheme he had done, divine Honours to be paid to his own Perſon.

The Emperor ſoon after returned from *Cachemire*, by the Way of *Labor*, and marched Southward till he arrived at *Agra*, where mighty Preparations were made againſt *Muſtapha*. In the mean while the Emperor grew extremely thoughtful, abandoning all ſorts of Diverſions but Hunting, which he followed chiefly for the Opportunity of retiring alone into the Foreſt, and unfrequented Places. In one of theſe Excurſions, ſitting by himſelf under a ſhady Tree, it is ſaid he obſerved a certain Kind of Caterpillars creeping near him, which he killed with the Point of one of his Arrows, and ſhooting an Antelope ſoon after with the ſame Arrow, the Beaſt expired in an Inſtant, tho' the Wound was not in a mortal Part; whereupon the Emperor commanded the Antelope to be opened, the Fleſh of which appeared black and corrupted, and the Dogs died that eat of it, by which *Akebar* diſcovered how very ſubtil the Poiſon extracted from this Inſect was, and cauſed a Quantity of Pills to be made up with it, which he compelled ſome diaffected Lords to take in his Preſence, and thereby diſpatched them out of his Way [m]. He practiſed the ſame Conduct towards all whom he eſteemed Friends to *Muſtapha*, whom he found to have Abundance of Creatures in his Court, and promiſed himſelf, by this Contrivance, a ſafe and happy Reign for the future.

But it ſo fell out, that this very Art turned upon himſelf, and ſhortened his Days in the ſame Manner that it had done thoſe of his Enemies. The Perſon to whom he confided the Secret of mixing theſe Pills, had Orders to ſupply the Emperor's Box from time to time with a certain Quantity of them. In this Box there were three Partitions, in one of which he kept his Betel, which, according to the Cuſton of his Country he chewed in the ſame manner as in *Europe* People chew Tobacco; in the ſecond he had ſome cordial Pills to help Digeſtion, and in the third were thoſe Poiſon Pills. It happened one Day, that either through Hurry or Inadvertency, he miſtook the Pills in the third Partition for thoſe of the ſecond, and by this means poiſoned himſelf. The Venom operated ſlowly, but ſurely, notwithſtanding all the Aſſiſtance he received from his own Phyſicians, and from the *Portugueze*, ſo that he ended his Days in great Pain and Miſery, after he had reigned fifty-three, and lived ſixty-ſix Years. His Corpſe was interred in a very fine Tomb of his own Building, and he left behind him the Character of one of the braveſt, wiſeſt, and moſt fortunate Princes of the Age in which he lived, and ſeemed to have merited in the Courſe of his Reign, the Title he aſſumed at the Beginning of it, *Akebar* in the Language of his Country ſignifying *inimitable*.

9. *Shâb-Selim*, i. e. *the peaceable King*, ſucceeded his Father *Akebar* on the 21ſt of *October* in the Year of the *Hegira* 1014, and in that of our Lord 1605. On his aſcending the Throne, he aſſumed, as the Cuſtom is in the Eaſt, a new Name or Title, and called himſelf *Nour'odin Mohammed Jehanguir*, i. e. *the Light of Religion*, Mohammed *Conqueror of the World*. Almoſt all the *European* Authors call him *Jehan Guire*, and therefore that we may not ſeem to affect Singularity in Matters of no great Importance, we ſhall call him ſo likewiſe, that the Reader may apply what is here delivered the more readily to what he may read of this Prince in other Authors. As to the Character of this Monarch, we are obliged to ſpeak of it more largely than hitherto we have done of any of theſe Princes, becauſe the Hiſtory of his Reign depends in a great meaſure thereupon. He fell very far ſhort of his Father in Abilities, and at the ſame time exceeded him very much in his Vices. He loved eating and drinking more than became a King, and the chief Reaſon why he inclined rather to the Chriſtian than to the *Mohammedan* Religion was, becauſe the former did not reſtain him in Meats or Drinks as the latter did. He was very brave in his Perſon, though he did not affect War ſo much as ſome of his Predeceſſors; but whenever his Affairs forced him to take the Field, he ſhewed himſelf as capable of conducting his Armies as any of them. He was naturally fond of the *Franks* or *Europeans*, becauſe he found them more inclined to that manner of Life which he liked beſt, than the *Mohammedans*, whom he treated with great Harſhneſs and Severity; for he particularly affected Feaſting at that Seaſon of the Year, when by the Precepts of their Law they were bound to faſt; and if at ſuch times they refuſed to eat and drink as freely as he would have them, he threatened to throw them out of the Window of his Dining-room, under which two fierce Lions were conſtantly chained. One would imagine

---

[l] There are Abundance of ſtrange Stories related of the Conferences between this Monarch and theſe Miſſionaries, which, as I cannot believe, I will not relate, but content myſelf with obſerving, that in this Court, as well as in moſt others, the Suppleneſs of the Clergy did more Harm to Religion than their Preaching could do good. The Truth of the Matter ſeems to be, that they had one thing in View, and the Emperor another, ſo that they were continually at Croſs purpoſes, they ſtudying by Artifices, unworthy of the Chriſtian Religion, to convert him, and he labouring all he could to pick out of them ſuch things as might be of moſt Uſe to him, in which he ſucceeded much better than they.

[m] There ſeems to be ſomething contradictory in this Account of the Poiſon which *Akebar* diſcovered, ſince it is ſaid to have operated ſo ſuddenly on the Beaſt, and ſo ſlowly in Men; but if we conſider the Facts attentively, we ſhall ſoon be convinced that they are very conſiſtent. In the firſt Place the Poiſon in one Inſtance was unmixed, and in the other compounded, which muſt neceſſarily make a great Alteration in the manner of its working; and in the next the Poiſon was very differently applied; for with reſpect to the Antelope, it was thrown immediately into the Blood and Juices, whereas when adminiſtered to Men, it paſſed firſt through all the Operations of the Stomach, which, though they could not intirely deſtroy, muſt, however, much weaken its Force.

gine from hence, that he was obſtinate and cruel, and yet it is certain that no Prince was more under the Influence either of Women, or of Miniſters, than he, as will very clearly appear from the ſubſequent Part of this Hiſtory.

It has been already obſerved, that he took up Arms againſt his Father, and this Crime drew after it the Puniſhment it deſerved; for as the old Emperor *Akebar*, while his Son was under Diſgrace with him upon this Account, often threatened to deprive him of the Succeſſion, and to leave the Crown to his eldeſt Son Sultan *Khoſro*, or, as it is commonly wrote, *Coſrou*, ſo from the very Beginning of his Reign, that young Prince at leaſt ſecretly diſputed his Right to the Crown, conceiving himſelf the lawful Emperor, and his Father no better than an Uſurper; which Notion, whether well or ill founded, was the Source of thoſe Troubles and Diſturbances in the Government, which laſted for near an hundred Years. Yet it does not appear, that the Emperor ſhewed any great Jealouſy or Diſlike to this Son, before ſuch time as his Behaviour made it abſolutely neceſſary for him to treat him with Severity; and in all Probability, the Reaſon that Sultan *Coſrou* had ſo many Friends in his Father's Court, and was able to give him ſo much Diſturbance, proceeded from his own ill Management, and eſpecially from his applying himſelf too little to Affairs of State, and giving up too much of his Time to his Pleaſures. Another great Error in the Conduct of *Jehan Guire*, was his ſhewing a great Contempt for his Father's Memory, and altering almoſt every thing that he had done; whereas Sultan *Coſrou*, on the other hand, ſtudied in every thing to follow the Footſteps of his Grandfather, to ſupport the Dignity of his Character, to maintain his Intereſt with the great *Omrahs* and *Rajahs* at Court, and withal, to gain the Affections of the People. It is eaſy to diſcern from what has been ſaid, that how peaceable ſoever this Monarch's Temper might be, his Reign could not but be liable to Troubles and Diſtractions, as we ſhall ſee it was.

This Emperor removed the Imperial Seat from *Agra* to *Lahor*, which lies four or five hundred Miles to the North in a more temperate Climate, and a fine Walk of Trees from one City to the other, which was begun by *Akebar*, was finiſhed by this Prince; he made alſo large Additions to the City of *Lahor*, and built him an elegant convenient Palace, but not near ſo magnificent as that of *Agra*. Here it was that the Emperor engaged in an Amour, which occaſioned him infinite Troubles during the Remainder of his Reign; and though the Beginning of the Story have the Air of a Romance, yet as to the Subſtance of it, there is very little Reaſon to entertain a Doubt, the Diſtractions in the Royal Family, and the Wars that ſucceeded amongſt the Princes of the Blood ſufficiently atteſt the Truth of the principal Facts. His Majeſty it ſeems was walking on his Terras, under which runs a fine River, when he ſaw a Barge rowing under him, wherein was a Lady of ſurprizing Beauty ſitting under a Canopy. The Emperor let the Barge paſs by, but ſent immediately to enquire after her Name, and where her Reſidence was. The Meſſengers informed him that the Lady's Name was *Nour Mahal* [n], and that ſhe was married to an Officer who commanded five hundred Men in his Majeſty's Service; whereupon the Emperor ordered rich Preſents to be made her, and that ſhe ſhould be acquainted how much he was ſmitten with her Beauty; but the Lady vowed inviolable Fidelity to her Huſband, and would not hear any Propoſals to his Diſhonour. His Majeſty, not being able to prevail with her to alter her Reſolution, wrote to her Huſband to attend a certain General, and at the ſame time ſent to the General to put him to Death as ſoon as he ſaw him, which was executed accordingly, but not ſo ſecretly but *Nour Mahal* heard of it, and would not be put off with Accounts the Emperor ordered to be divulged, that he was killed by Accident.

When his Majeſty therefore renewed his Addreſſes, and acquainted her there was now no Difficulty in the Way, and that he deſired no more than the niceſt Virtue might comply with, to take her among the Number of his Wives, ſhe broke out into the bittereſt Invectives, and reproached him with his Treachery and Cruelty. But the Time of her Widowhood being expired, and having had Leiſure to vent her Grief, and reflect on the advantageous Offers which were made her, his Majeſty found her more complying; and upon Condition that ſhe ſhould be the firſt Queen, that her Brother ſhould be Prime Miniſter, and her Relations preſented to the higheſt Poſts, ſhe was contented to yield to the Embraces of her Huſband's Murderer. The Emperor ſolemnized his Marriage on the Arrival of the new Queen in his Palace, by a Feſtival, which laſted eight Days; and inſtead of the Name of *Nour Mahal*, which ſhe had before, he gave her that of *Nour Jehan*, or *the Light of the World*.

But, notwithſtanding one of the greateſt Emperors of the Eaſt was captivated with her Charms, and the Empire was, for ſome Time, governed by her Arts, her Parentage was but mean; and when ſhe came from *Perſia*, the Place of her Birth, with her firſt Huſband, he was no more than a Camel-Driver, though he afterwards advanced his Fortune in the Mogul's Service, and became a Commander of five hundred Men, as was obſerved before. Within the Compaſs of the firſt Year after her Admiſſion into the Haram, or Seraglio, ſhe diſpatched five of the Ladies there, who were moſt in the Emperor's Favour, by Poiſon. And ſuch was her Influence over the Emperor himſelf, that ſhe engaged him to forbear drinking, at leaſt, beyond the Bounds of Moderation, allowing him no more than nine Glaſſes at a ſitting. She had no Children by the Emperor, and but one Daughter by her former Huſband; and the great Object therefore of her Policy was, to marry this Daughter to one of the Emperor's Sons, and then advance him to the Throne. *Jehan Guire* had four Sons by ſeveral Wives, the eldeſt was born in the Life of his Grandfather *Akebar*, and was ſtiled Sultan *Coſrou*; the ſecond Sultan *Parvis*; the third Sultan *Chorrom* [o]; and the fourth Sultan *Shehriar*. It was to Sultan *Coſrou* that *Nour Jehan* intended to have married her Daughter, but this Prince, it ſeems, was prejudiced againſt her already, on account of the Influence ſhe had over his Father; and another Obſtacle was, his having married a Daughter of one of the great Rajahs, of whom he was paſſionately fond, whereupon he ſlighted the Propoſal. The Sultaneſs offered her Daughter to *Shehriar*, the youngeſt Son, Sultan *Chorrom* being already married to her Niece, the Daughter of *Aſaph Khan*. His Brother *Shehriar* was pleaſed with the Match, as the moſt likely Means to advance him to the Throne after the Death of his Father. And the Marriage was no ſooner celebrated, but the three elder Brothers were appointed to diſtant Governments. Sultan *Chorrom* was ſent to *Decan*, Sultan *Parvis* to *Bengal*, and Sultan *Coſrou*, the eldeſt, was deſigned for *Guzerat*.

But, inſtead of going to that Command, he aſſembled a Body of Troops to ſecure his Succeſſion to the Crown, which he apprehended to be his Right, even at this Inſtant, for he was bred up in a Belief that his Grandfather *Akebar* had appointed him his immediate Succeſſor; and though he was content his Father ſhould enjoy the Crown before him, he could not bear to ſee his youngeſt Brother the Favourite at Court, and with his Mother-in-law the Sultaneſs taking ſuch Steps as muſt infallibly exclude him. If this did not juſtify it, at leaſt it excuſed his Conduct, and brought many to ſide with him; but there were others who were not caught, even with this plauſible Pretence, and, among them, the very beſt Friend the young Prince had in the World.

---

[n] In the Text I have followed the uſual Way of Spelling, becauſe by that this Lady is well known to us from Mr. *Dryden*'s Play of the *Great Mogul*; but her Name more accurately expreſſed was *Nour Mahl*, which ſignifies *the Light of the Haram*, or Seraglio; and therein conſiſts the Compliment of the Emperor's changing her Name to *Nour Jehan*, in which there is a double *Entendre*, ſince it ſignified at once the *Light of the Emperor*, and the *Light of the World*. She was not only the handſomeſt Woman in the *Indies*, but a great Wit alſo, and had a fine Vein in Poetry. In a word, ſhe was the moſt accompliſhed of her Sex, and if ſhe had not had too many of their Vices, would have made a very ſhining Figure in Hiſtory. There are compleat Memoirs of her amorous and political Intrigues under the Title of *Mahir Jehanguiry*.

[o] The proper Name of this Son of the Emperor was Sultan *Khourm*, i. e. the *Prince of Joy*. He was born in the Year 1592, and was the Son of an *Indian* Princeſs, the Daughter of *Rajah Oudeſung*; and though he was the third Son of the Emperor, yet ſucceeded his Father, and his Family are ſtill poſſeſſed of the Throne of *Indoſtan*.

This was *Mohammed-Khan*, his Father's Prime Miniſter, who had always ſupported him even at the Hazard of his Intereſt. The Empreſs, who hated that Miniſter for many Reaſons, and eſpecially, becauſe he was the only Rival that her Brother *Aſaph-Khan* had in the Emperor's Favour, placed Things in ſuch a Light to her infatuated Huſband, that at laſt he gave his Conſent that this great Man, who had deſerved alike well of himſelf and of his Subjects, ſhould be murdered. The Scheme laid for this Purpoſe, had as much in it of female Management as of Malice. A Company of *Indians*, who were poſted in a Hall through which he was to go to the Emperor's Apartment, had Orders to ſtab him in his Paſſage. Had this Commiſſion been given to one reſolute Man, the Thing had probably been done; but theſe People behaved in ſo cowardly a Manner, that they diſcovered the Deſign without executing it, and *Mohammed*, who had much perſonal Bravery, forced his Paſſage into the Emperor's Apartment, where, finding him ſurrounded by Officers upon whom he could depend, he ſeized upon his Perſon, forced him to mount his Elephant, and then ſeating himſelf by him under the ſame Canopy, with a Dagger drawn in his Hand, he ſent the Empreſs Word by one of her own Spies, that the Life of *Jehan Guire* ſhould anſwer for it, if any Attempt was made to hinder his Paſſage. In this Manner he conducted the Emperor to his own Palace, where he was very ſafely guarded; for *Mohammed* was not only General and Commander in chief of the Army, but had it entirely at his Devotion; ſo that notwithſtanding this ſurpriſing Accident, there was not the leaſt Stir amongſt the Soldiers, nor any Attempt made to reſcue the Emperor out of his Hands. While he had him thus in his Cuſtody, he obliged him to continue ſober, and repreſented to him, in very plain Terms, the bad State of his Affairs, and the bad Conſequences that muſt neceſſarily attend the Intrigues of the Sultana. In the mean time he directed every thing as he was wont to do, in the Emperor's Name; levied Troops, and made open Preparations for War. The young Prince, who was all this Time in the Field, collected alſo a numerous Body of Men, the beſt Part of whom however were *Indians*; for having married a Wife of that Nation, and having always ſtudied to oblige the Rajahs, his chief Intereſt lay among thoſe People, who promiſed themſelves great Things whenever he came to the Crown.

But all their Hopes were daſhed by *Mohammed*, who releaſed the Emperor, defeated *Coſrou*, and ſent him and his Family Priſoners to the Citadel of *Guallier*. While the Prince remained in the Captivity, *Nour Jehan* made him an Offer not only of his Liberty, but to aſſure his Succeſſion to the Crown, if he would marry her Daughter, whom ſhe promiſed to divorce from his younger Brother *Shehriar*, as being an unactive Prince, and never likely to maintain himſelf upon the Throne, if he ſhould be placed upon it. But ſuch was Sultan *Coſrou*'s Contempt, or Prejudice to *Nour Jehan*'s Family, or as others ſay, ſuch was his Paſſion for one of his Wives, that he refuſed to comply with her, even in thoſe wretched Circumſtances. *Aſaph Khan*, Brother to the Sultaneſs, alſo encouraged the unfortunate *Coſrou* to perſiſt in his Reſolution, having an Intereſt to manage diſtinct from that of his Siſter's; for Sultan *Chorrom*, the third Son of the Emperor, as has been obſerved, had married his Daughter; and if Sultan *Coſrou* and *Nour Jehan* ſhould be reconciled, his Son-in-law could never hope to ſucceed. But, to make all ſure, leſt Sultan *Coſrou*, induced by the Hardſhips he ſuffered, or the Hopes of a Crown, might, at length, be prevailed on to comply with the Sultaneſs, he procured the Emperor to ſend for Sultan *Chorrom* to Court, where they agreed together to cauſe Sultan *Coſrou* to be privately murdered in Priſon. It was at firſt attempted by Poiſon, but the Prince ſuſpected the Deſign, and would eat nothing but what was dreſſed by his beloved Wife; whereupon they reſolved to take the ſhorteſt Way, and ordered the Captain of the Fortreſs to ſtrangle him, which was executed without the Emperor's Knowledge.

However, a Fact of this Nature could not be tranſacted ſo privately, but it was at laſt diſcovered; and though the Murderers were Perſons of that Conſequence, that the Emperor could not puniſh it in the Manner it deſerved, yet he, from thenceforward, determined to make his Grandſon *Bolaqui*, the Son of Sultan *Coſrou*, his Succeſſor, who appeared to be a Prince of great Expectations, and then about ſeventeen Years of Age. This Prince therefore was brought to Court, and treated as the preſumptive Heir of the Crown, while Sultan *Chorrom* was commanded to retire to his Government of *Decan*. Here he ſpent his Time in making Alliances with the neighbouring Rajahs, and by Preſents and Offers of Preferment, brought over moſt of the beſt Officers in the Empire to his Party, while the old Emperor ſpent his Days in the Amuſements of the Seraglio, or over a Bottle with his Friends; for either the Sultaneſs now indulged him with it, or ſhe had not that Influence over him, as when her Charms were in their Bloom.

It was while Things remained in this Situation, that *Jehan Guire* enjoyed the pleaſanteſt Part of his Reign. He ſpent the hot Summer Months in the little Kingdom of *Cachemire*, which all the Eaſtern Writers repreſent as incomparably the fineſt Country in the World. It is the moſt Northern Part of the Dominions of the Great Mogul, and is, ſtrictly ſpeaking, no more than a Valley ſurrounded by high Mountains. The Air is temperate and wholſome, the Country rich and fruitful, and the People valiant in War, laborious and induſtrious in Time of Peace. It was in this beautiful Region that the Emperor indulged himſelf in all the Pleaſures of a rural Life. His Palace was elegant and agreeable, but, at the ſame time, rather convenient than magnificent; his Gardens large, but irregular, and remarkable, rather for their Reſemblance to a Foreſt, than for the Decorations that are derived from Art. The Empreſs, that ſhe might ſeem to comply with the Humour of ſo kind a Huſband, condeſcended to ſhare in thoſe rural Delights, and particularly diverted herſelf with feeding tame Fiſh in her Canals, ſome of which were many Years afterwards known by Fillets of Gold which ſhe cauſed to be put round them. In the Winter Seaſon, when the rainy Weather makes it very uncomfortable living in the *Indies*, *Jehan Guire* contrived a ſingular Method of amuſing himſelf at *Agra* or *Lahor*. He cauſed a kind of Fair to be kept in the Galleries of his Palace, where the Omrahs and Rajahs kept Shops, and attended them with their Wives and Daughters. The Emperor and the Royal Family were their only Cuſtomers, and amuſed themſelves in going from Shop to Shop, cheapening Goods and hagling for them as if they were in earneſt concerned about laying out their Money [p].

But theſe Kinds of Pleaſures were frequently interrupted by untoward Accidents in the Imperial Family, and ſometimes too by Cauſes of another Nature. The wiſe and potent Shah *Abbas* was, at that Time, Monarch of *Perſia*, and a formidable Neighbour to the Mogul. He revived the Pretenſions which his Predeceſſors had on the Principality of *Khandahar*; and one Summer, when *Jehan Guire* was diverting himſelf in the Kingdom of *Cachemire*, the Shah ſent an Embaſſador to demand the Reſtitution of that City and Country, agreeable to the Promiſe made by his Grandfather *Amayum*. The Emperor ſent Orders immediately to the Viceroy of *Multan*, which is the neareſt Province to *Khandahar*, to aſſemble, with the utmoſt Expedition, an Army for its Relief; but being informed that the Thing was impoſſible, he ſent Inſtructions to the Governor of the Fortreſs of *Khandahar*, which is the ſtrongeſt Place in the *Indies*, to ſet a good Face upon the Matter, and to deliver up the City and Caſtle, as ſoon as the *Perſian* Army appeared. The Governor, however, could not believe his Eyes, and being a better Subject than a Stateſman, was unable to comprehend that any Reaſons could be ſtrong enough to induce the Emperor to part with a Place of ſo great Strength, and ſo much Importance; he therefore defended it very bravely for ſix Months, and did not even ſurrender it then, till the Breach was practicable, and Shah *Abbas* on the very Point of making a general Storm. The Conduct of this Officer was very ſerviceable to the Emperor, though not agreeable to his Orders, for it gave *Mohammed-Khan* an Opportunity of drawing together ſuch a Force as put a Stop to the Progreſs of the *Perſian* Arms, and prevented Shah *Abbas* from proſecuting the Deſign he had formed of making an Irruption into *Indoſtan*.

---

[p] This Diverſion has been much uſed by his Succeſſors, but eſpecially by his Grandſon; though it it has always given great Offence to the Omrahs and Rajahs, becauſe it obliges them to expoſe their Wives and Concubines, which tho' done only to the Imperial Family, is not born by them but with infinite Uneaſineſs, and the rather, becauſe this has ſometimes occaſioned the carrying their Wives into the Imperial Haram.

This Misfortune was quickly followed by a greater; the Emperor had given Orders for tranſporting the Treaſures of the Empire from *Agra* to *Lahor*, and *Aſaph-Khan* was directed to ſee this performed, of which he immediately gave Notice to his Son-in-law, Sultan *Chorrom*, and adviſed him to march with an Army and ſeize them on the Road; and he accordingly put himſelf at the Head of ſixty thouſand Men for that Purpoſe. The Deſign, however, was prevented by the Fidelity of the Officer who had the Cuſtody of thoſe Treaſures, and who abſolutely refuſed to deliver them to *Aſaph-Khan*, though he produced the Emperor's Order. Sultan *Chorrom* not meeting with them upon the Road, proceeded to *Agra*; and though he was not able to take the Citadel, plundered the City, and then returned into his own Province of *Decan*, with an immenſe Booty. The Emperor, incenſed at this outrageous Act of Diſloyalty, aſſembled all his Forces, and marched in Perſon againſt this unnatural Son. The Armies met in the Neighbourhood of the City of *Dehly*, where an obſtinate Engagement enſued, in which, however, the Emperor was at laſt victorious, and Sultan *Chorrom* was obliged to retire into the Mountains. The young Sultan *Bolaqui* was ſent by his Grandfather to lay Siege to the City of *Amadabat*, which was the Capital of his rebellious Son's Province. This he performed with all the Zeal and all the Expedition that could be expected, made himſelf Maſter of the Place in a few Days after he appeared before it, ſeized all the Treaſures that were laid up therein, broke to Pieces the Throne of Gold the Sultan had erected there, and diſtributed the Diamonds with which it was adorned amongſt his Officers. This Victory had, in all Probability, put an End to the War, if one of the Emperor's Generals, whoſe Name was *Abdul-Khan*, had not gone over to the Party of Sultan *Chorrom*, which gave him freſh Hopes, and enabled him, once more, to take the Field, though with a ſmall Army, with which he retired behind the River *Nerbda*, and fixed his head Quarters at *Brampour*. While he was in this Poſt, and endeavouring to recruit his Forces, very high Diſputes aroſe between his old Miniſter *Kanna*, and his new Favourite *Abdul-Khan*, which, by Degrees, grew to ſuch a Height that the former deſerted his Intereſt, and made his Peace with the Emperor. To do this the more effectually, he informed Sultan *Parvis* and *Mohammed Khan* of the diſtreſſed Situation of Sultan *Chorrom*'s Affairs, adviſing them to paſs the River immediately, and ſecure his Perſon. But *Abdul-Khan*, ſuſpecting that he would give this Advice, adviſed his Maſter to retire into the Dominions of *Amber Malec*, an *Indian* Prince, who was his Friend, by which he eſcaped his total Ruin: And, on the other hand, *Mohammed-Khan* believing that *Kanna* had deceived him, treated him but very indifferently. By this Time however the Empreſs began to apprehend that *Mohammed-Khan* intended to put Sultan *Parvis* on the Throne, in which ſhe was confirmed by the great Victory gained over the Sultan *Chorrom* at *Alabaſſen*, one of the moſt famous Battles that was ever fought in the *Indies*; ſhe therefore determined to ruin that great Miniſter, in the Opinion of a Maſter who owed his Life and Crown to his Fidelity.

It was with this View that ſhe ſent for the Traitor *Kanna* to Court, whoſe Eloquence, aſſiſted by the Influence of the Sultana, drew over the old Emperor to their pernicious Opinion, and induced him to ſend an Order to *Mohammed-Khan* to come to Court immediately, without any Attendance. He was too wiſe a Man not to diſcern upon what Motives this Order was founded, and therefore made no great Haſte to obey it; but that he was much perplexed, when he diſcovered that Sultan *Parvis* was not at all diſpleaſed at his Diſgrace, but rather looked upon it as a Piece of good Fortune, which left him an Army entirely at his Diſpoſal. *Mohammed-Khan* then ſaw that Loyalty and Probity were Virtues quite unneceſſary for Miniſters under an abſolute Government, and that in the Situation he ſtood, it was neceſſary to practiſe the ſame bold Meaſure which he had once before taken with ſo much Succeſs. He had Information, that the Court was removing from *Agra* to *Cabul*, and that the Bulk of the Army generally moved at ſome Diſtance before it. He aſſembled therefore with great Secrecy and Diligence, by the Aſſiſtance of ſome old Officers devoted to his Service, five thouſand *Raſhpouts*, of determined Courage, with whom he watched the Emperor's Motions, and underſtanding that the Army had paſſed the River *Nilab*, in the Grey of the Morning, he inveſted the Camp of *Jehanguire* before Sun-riſe, and almoſt without Bloodſhed, ſecured him, the Empreſs, Sultan *Bolaqui*, Sultan *Shiar*, and his two mortal Enemies, *Aſaph-Khan* and *Kanna*, which was, perhaps, one of the boldeſt Actions ever performed in the *Indies*.

The Uſe this Miniſter made of it was ſurprizingly generous; he told the Emperor, as ſoon as he ſaw him, that he did not come to make him a Priſoner, but to ſet him at full Liberty, and to leave it in his Power to place whom he pleaſed on the Throne after his Deceaſe. As for the two Princes, he ſent them Priſoners to the Citadel of *Agra*, and after having detained the Miniſters, his Enemies, for ſome Time in Cuſtody, he ſet them at Liberty, having firſt ſworn *Kanna* on the Khoran, not to bear Arms againſt him, which Oath he kept in a very miniſterial Manner; for the Empreſs having by her Intrigues recalled the Emperor's Army, he put himſelf at the Head of it, with a View to have deprived of Liberty and Life that great Man from whom he had juſt received both; but *Mohammed* had timely Notice of the Deſign, and made his Eſcape. He ſoon after ſaw himſelf in worſe Circumſtances than ever; for the Troops at *Agra* ſet the two Princes at Liberty, Sultan *Chorrom* took the Field with a freſh Army, and Sultan *Parvis* who was juſt reconciled to him, died of a Diſeaſe. His Affairs appeared now ſo deſperate, that his Son deſerted him, and took Part with the Court. In this Diſtreſs, the old Man preſerved nothing but his Loyalty, and his Spirits, retiring, for the ſake of immediate Safety, to Rajah *Rana*, a powerful *Indian* Prince, and yet ſo ſimple, and ſo bad a Politician, that he received his old Friend covered with Misfortunes, and in all Appearance without Reſource, with as much Affection as when the firſt Man in the Empire, and at the Head of its Armies and Councils. The firſt thing *Mohammed* thought of in his Retreat, was his reſtoring the publick Peace, and ſecuring the Quiet of his Maſter as long as he lived, which was all the Revenge he took for the repeated Injuries he had received.

It was with this View, that he wrote to Sultan *Chorrom*, and offered him his Service, not to act againſt his Father, but to ſecure the Crown to him after his Deceaſe. That Prince had married the Daughter, and was entirely under the Influence of *Aſaph*, the avowed Enemy of *Mohammed*, to whom he revealed the Propoſition made him, and aſked his Advice: He conjured his Son to accept the Offer; you cannot, ſaid he, have a better General or a more faithful Servant. Thus, in an Inſtant, the whole Face of Affairs was again changed; *Mohammed* reconciled the Emperor to his Son, pacified all the Troubles of the Empire, and put it in the Power of *Jehanguire* to ſpend the Remainder of his Days in Peace. That Monarch was now grown old and infirm, and therefore deſired to enjoy his Eaſe in the pleaſant and wholeſome Country of *Cachemire*, whither he retired, but had not continued there long, before he found himſelf troubled with an Aſthma. The Impatience natural to Age and Sickneſs, made him

---

[a] There are many Circumſtances of this Prince's private Life that very well deſerve to be recorded, if we were not preſſed both in point of Time and Room; and theſe are known with the greater Certainty, becauſe he wrote himſelf a Treatiſe, entituled, *Vakebat Jehanguiry*, or, the Commentaries of *Jehanguire*, for the firſt thirteen Years of his Reign, *viz.* from the 21ſt of *October* 1605 to 1618. In theſe are contained Abundance of very curious and pleaſant Stories; for he was wont to diſguiſe himſelf in an Evening, in order to go and drink with the Tradeſmen of *Agra*, at the common Punch-Houſes, and kept a very exact Account of his Adventures.

long once more to change the Place of his Reſidence, and accordingly he ſet out for *Labor*, and in his Way thither died at *Bimber* on the 27th of *October*, in the Year of the *Hegira* 1038, *A. D.* 1627, having reigned twenty-two Years and ſix Days, and lived fifty-eight Years, one Month and twenty-nine Days.

He was much regretted by his Subjects, over whom he reigned with much Juſtice, and with whom he lived in a manner ſo familiar, that they loved him as a Father and a Friend, as much as they reſpected him as a Prince. He was far from wanting great Qualities or good ones; the Eaſineſs of his Temper was his greateſt Fault.

The Death of the Emperor revived the Commotions in the Empire, and raiſed them much higher than ever, as the Time was now come, when the Poſſeſſion of the Crown was the only thing that could give any of the Princes a ſecure Title to his Life. There were immediately three Parties formed, and in the Space of a very few Days, two Emperors proclaimed. The firſt of theſe was *Shehriar*, the deceaſed Monarch's youngeſt Son by a Concubine, then twenty-two Years of Age, whoſe Dominions never extended farther than the Palace, and who owed the Shadow of Empire that attended him for a little while, to the Influence of *Nour-Jehan*, whoſe Daughter, by her firſt Huſband, he had eſpouſed. Sultan *Bolaqui*, the Grandſon of the late Emperor, and the true Heir of the Crown, was proclaimed by the Army, and ſoon after acknowledged by the City of *Agra*, by which Means the Empreſs and her Son-in-law fell into his Hands; he impriſoned them both, and to ſecure himſelf more effectually, put out the Eyes of the latter; ſo that his Empire ended almoſt as ſoon as it began, and indeed, he was in every reſpect ſo weak a Prince, that his Mother-in-law had no great Hopes of him, notwithſtanding all the Arts ſhe had practiſed in his Favour. The Conteſt ſeemed now in a Manner over, and Sultan *Bolaqui* thought himſelf ſo ſecure of the Empire, that he took little or no Pains to ingratiate himſelf with the principal Omrahs, or to procure the Affections of the People, which are always a Monarch's firmeſt Support. *Aſaph* and *Mohammed*, notwithſtandiug, had their Eyes upon Sultan *Chorrom*, but the Treaſure and Forces of the Empire being in the Power of *Bolaqui*, they did not yet think it a proper Time to declare themſelves.

Bolaqui reſolving to ſound his Uncle's Intentions, ſent to demand a Tribute, and Homage, for the Kingdom of *Decan*, and the other Dominions he held of the Empire. The Omrah, who was diſpatched to Sultan *Chorrom* on this Occaſion, was acquainted, that he was in ſo ill a State of Health, that he could not poſſibly tranſact any Buſineſs; the Omrah ſtill perſiſted to ſee him, which, with ſome Difficulty, he was at length permitted to do, and found the Sultan in a very weak, languiſhing Condition, as he apprehended, and vomiting Blood in ſuch Quantities, that he did not think it poſſible he could live many Days. The Omrah thereupon immediately diſpatched a Courier to *Agra* with the News, which he knew would be very acceptable to the Court. But this Illneſs it ſeems was all counterfeit, and the Blood he ſeemed to vomit was only the Blood of a Kid he held in his Mouth: However, the Deſign was ſtill carried on, Sultan *Chorrom* diſappeared on a ſudden, and it was not only given out that he was dead, but his whole Court went into Mourning for him.

The crafty *Mohammed* alſo prevailed with the Omrah who came from *Bolaqui*, to write to his Maſter, to obtain Leave for the burying the Sultan in the royal Sepulchre at *Agra*, which was readily granted; and upon the Return of the Courier, a pompous funeral Proceſſion begun, agreeable to the Quality of ſo great a Prince. *Mohammed-Khan*, at the Head of a thouſand Officers of the deceaſed, attended the Hearſe, and Sultan *Chorrom* himſelf followed in Diſguiſe. Several Bodies of the *Rajpoots*, or *Raſhpouts*, Allies of Sultan *Chorrom*, fell in with the Proceſſion, upon the Road, under Pretence of paying their laſt Duties to be deceaſed. *Aſaph Khan*, who had not declared himſelf, but remained of *Bolaqui*'s Council in *Agra*, treacherouſly adviſed the young Emperor to meet his Uncle's Corpſe, as they drew near *Agra*, who thereupon marched out with an ordinary Guard, and ſuch an Equipage as was ſuitable to the Occaſion. He was ſurprized to ſee ſo numerous a Body of Troops attending the Hearſe, and ſuſpecting he was betrayed, turned ſhort on a ſudden, and made his Eſcape, never attempting to recover *Agra*; and, indeed, he did not ſtop till he found himſelf in the *Perſian* Dominions. He looked upon the Infection to be univerſal, and very well knew, that the Conſequence of falling into the Enemies Hands was Death, or the Loſs of his Eyes at leaſt [r]. This Tranſaction ſhews, that the Stateſmen of the Eaſt are as able and as refined Politicians as the *Italians* themſelves, and within a Trifle as wicked too. But let that paſs, and let us ſee how the Affair was conducted after this Flight of the ſecond Emperor, who reigned only a few Months.

10. Sultan *Chorrom* having thrown off his Diſguiſe, mounted the Carriage which was ſuppoſed to contain his Body, and which when ſtripped of its funeral Ornaments, appeared to be a triumphal Car, in which he entered the City of *Agra* in Splendor, where he was received with the loud Acclamations of the People, who began to be afraid of the bloody Diſpoſition ſhewn in ſo ſhort a Space by his immediate Predeceſſor. The firſt thing he did, was to enquire for *Shehriar*, and the reſt of the Princes of the Blood, and being informed, that they were all kept Priſoners in one of the Apartments of the Palace, he inſtantly gave Orders that the Gates of it ſhould be walled up, and there left a Brother and three Nephews to periſh for want of Suſtenance. This Piece of Cruelty was the more extraordinary, becauſe he had but the Moment before, and out of the very next Apartment, delivered his own three Sons, who being at Court with their Aunt the Empreſs, *Nour-Jehan*, had been impriſoned ever ſince the old Emperor's Death. Whether this Act of Severity diſpleaſed the old Miniſter, *Mohammed-Khan*, or whether he was grown ſo weary of Courts, as to wiſh he might breathe his laſt in a better Air, is uncertain; but ſo it was, that as ſoon as this great Revolution was over, he demanded Leave to retire, which was with ſome Difficulty granted him, and he paſſed the Remainder of his Days in an honourable Retreat in Peace and Quiet.

The Subjects of this Empire had now all the Reaſon in the World to hope for an happy Adminiſtration; the Prince was in the Flower of his Age, drawing towards his thirty-ſixth Year, one who had ſhewn a martial Diſpoſition, great Intrepidity, and a Soul not to be broken by the Frowns of Fortune. He aſſumed with the Imperial Diadem [s], a new Name, and cauſed himſelf to be called thenceforward, *Shababo'din Mohammed Shah Jehan*, i. e. *The bright Star, Mohammed King of the World*; but our *European* Hiſtorians generally call him by the laſt Part of this long Name, *viz. Shah Jehan*, and therefore it is by that we ſhall mention him in the enſuing Account of his Reign. The Dominions he poſſeſſed were larger in Extent, and produced much greater Revenues, than any of his Predeceſſors had enjoyed; for all the vaſt Extent of Countries between the Principality of *Kandahar* to the River *Indus*, owned him for their Monarch; neither was it barely an Acknowledgment of his Superiority, but they were content likewiſe to pay him large Tributes, the Quantities of which, as well as the Title thereto, was now, through Length of Time, effectually eſtabliſhed.

Yet he had ſtill ſome Difficulties to ſtruggle with, notwithſtanding this fair Outſide of his Circumſtances. The Rajahs, however ſubmiſſive they might be, were little to be depended on, though Subjects they were Princes, and had Dominions of their own, no way deſpicable either for their Size or their Situation. In order to underſtand this Matter clearly, it is neceſſary to obſerve, that all the flat

---

[r] It was not for a long Time known where this Prince took Shelter, and ſome of the Memoirs of theſe Times ſay, that it was *Mohammed-Khan* who privately gave him a Hint to make his Eſcape, that he might have no Hand in ſhedding the Blood of any of his Maſter's Family.

[s] The Day on which he mounted the Throne, was the firſt of *February* 1628, ſo that the Confuſions, after his Death, laſted very little more than three Months. It was believed, that after the Death of *Shehriar*, the old Empreſs *Nour-Jehan*, was not diſpleaſed to ſee him mount the Throne, as he had married her Niece, and was thereby Son-in-law to *Aſaph-Khan* her Brother.

Country within the Bounds before-mentioned, was entirely and abſolutely under the Dominion of the Great Mogul. But in the Heart of theſe Territories were many little Principalities, well bounded by Foreſts and Mountains, ſo that the native Inhabitants, though no great Soldiers, were very able to defend themſelves againſt a Prince who was obliged to truſt a mercenary Army, compoſed of different Nations, and whoſe natural Subjects the Moguls, were in a manner worn out.

In the next Place, Difference in Religion was another Cauſe of Diſtraction and Diſquiet. The eſtabliſhed Faith was *Mohammediſm*, yet the Rajahs, and the greateſt Part of the People, were of the old *Indian* Religion, and there were beſides a large Mixture of Chriſtians and *Perſees.* The Difficulties that this created were ſo many, and ſo intolerable, that the two laſt Emperors were inclined to have invented a new Religion, which might have reconciled the Minds of all their Subjects; but in this, as indeed it was no great wonder, they failed; but what adminiſtered the greateſt Cauſe of Diſturbance was, the Cuſtom introduced in the Court of the Mogul, of ſending the young Princes of the Empire to govern ſeveral Provinces of it, which gave them a Habit of commanding, ſo that it was difficult, if not impoſſible, to teach them to obey even a Parent, as well as a Prince, and yet this was a Cuſtom that it was not either eaſy or ſafe to break through; for on the one Hand it was a thing very unnatural for a Father to make his Sons Priſoners in his own Palace, and on the other, it was no leſs difficult to prevent their forming Factions, if they were allowed ſuch Liberties as were ſuitable to their Birth.

The Emperor knew this by Experience in the Reign of his Father, and had conſequently much Reaſon to fear the like under his own Reign, having four Princes grown up to Mens Eſtate, and all very capable of pretending to the Crown. The eldeſt of theſe, Sultan *Dara Shekowh*, that is, *in Pomp like Darius*; the ſecond Sultan *Sujah*, that is *full of Valour*, who was a Year younger than *Dara*; the third Sultan *Auringzebe*, or as we uſually write it, *Aurengzebe*, that is, *the Ornament of the Throne*; his fourth Son was Sultan *Morad Bukkſh*, that is, *the Fulfiller of Deſires*; he had likewiſe three Daughters by his Sultanas, whoſe Names it will be neceſſary to mention, becauſe, contrary to the uſual Cuſtom, they had a great Influence over their Father, and by that Means a conſiderable Share in the Adminiſtration. The eldeſt of theſe, and indeed of all his Children, was *Jehan Ara Begum*, that is, *the Ornament of the World*; ſhe was her Father's greateſt Favourite, and entirely in the Intereſt of her Brother, Sultan *Dara.* The next was *Roſhnrai*, or *Roxana Begum*, that is, the Princeſs *of enlightened Mind.* This Lady had great Parts, and wonderful Addreſs, which ſhe employed to favour the Deſigns of her Brother *Aurengzebe.* The third was *Suria Banu Begum*; that is, the *ſhining*, or *bright Princeſs*, of an eaſy and gentle Temper, who diverted herſelf with innocent Amuſements, and had little or no Share in thoſe Intrigues, which occaſioned ſo many Diſturbances in the Empire[1]. He had beſides ſeveral other Princes and Princeſſes by his Concubines, the Names of which, as they are not neceſſary to our Purpoſe, we ſhall omit.

In regard to his Neighbours, this Emperor had not much to fear. The Kingdom of *Perſia* was at that Time governed by a weak and very inactive Prince, not capable of giving him any Uneaſineſs or Diſturbance. The *Tartars* were much altered from what they were, and beſides, their Strength was ſo much exhauſted, that he had nothing to apprehend from them. The *Indian* Nations in the South of his Territories were, generally ſpeaking, peaceable and puſillanimous People. The *Portugueze* were the only Nation with whom he was like to have any Quarrel, and that not from any Diſturbance they gave him or his Subjects, but from a natural Averſion he had to them, which aroſe from different Motives. He had ſolicited their Aſſiſtance when he was in Arms againſt his Father, and was not only refuſed it, but reproached for having deſired it againſt his Parent and his Prince, a Thing he could not either forget or forgive. His Empreſs alſo was a bitter Enemy of the *Portugueze*, on the ſcore of their Religion. She was the Niece of the old Empreſs, and the Daughter of *Aſaph-Khan*; her Name was *Tagge Mahl*, that is, *the Crown of the Seraglio*, a Woman of a violent Spirit, and yet of ſo much Art, that ſhe entirely gained the Affection of her Huſband, and is ſaid to have put him upon this War.

When it was once reſolved on, he ſent his General *Coſſam Khan* with a Body of Forces, in order to make himſelf Maſter of *Ougli*, a Place near the Mouth of the River *Ganges*, where the *Portugueze* had a Garriſon of ſix or ſeven hundred Men, who were all taken Priſoners, becauſe it ſo happened, that the Place was inveſted at that Seaſon of the Year when the Waters of the *Ganges* were ſo low that they were not able to make uſe of Boats; for, otherwiſe they might have eſcaped very eaſily. They were moſt of them conducted to *Agra*, where they were treated with great Severity; many of them obliged to turn *Mohammedans*, while ſome choſe rather to ſuffer Death, and thereby obtained the Reputation of Martyrs. Some Prieſts and Jeſuits that were taken here had, after a Time, their Liberty given them, and were ſuffered to return to the *Portugueze* Colonies. It was very happy for them that the Empreſs *Taage Mahl* was dead before the War ended; for otherwiſe they had, undoubtedly, all ſuffered. She was regretted by none but the Emperor himſelf, who, in a great meaſure, owed his Crown to her Arts, and to her Intereſt.

He built, to perpetuate her Memory, a noble Tomb, at the Expence of about ſixty Lacks of Rupees, or 750,000 Pounds Sterling. After the Cloſe of this War, and of her Death, Shah *Jehan* changed his Manner of living entirely, and gave no farther Signs of a martial Diſpoſition. His Father had been particularly fond of *Labor*, as his Grandfather had been of *Agra.* This Prince choſe rather the City of *Dehly* for his Habitation; and not far from it he erected a very fine Caſtle for his own Reſidence, built at a vaſt Expence, and adorned it with two very magnificent Gardens, laid out by a *Venetian*, who was extremely ſkilful in his Profeſſion. He was ſo delighted with this Place, and with the Improvements he had made, that he affected to call it *Shahjehanabat*, i. e. *the Dwelling-place of Shah Jehan*[2]. The enlarging and beautifying, the laying out and peopling this City, employed him for ſeveral Years, and, by Degrees, gave him ſuch a Turn for building, planting, and ſuch like Pleaſures, that he ſpent his whole Time in them and in the Delights of his Seraglio, for he was exceſſively addicted to Women, and that in a Manner ſcarce known to any of his Predeceſſors; for not content with a vaſt Number of Ladies, and thoſe the moſt beautiful the Eaſt could afford in his own Seraglio, he fell to debauching the Wives of his principal *Omrahs*, particularly thoſe of *Jaſer-Khan* and *Kalil-Khan*, which were attended with fatal Conſequences.

By degrees, he formed his Pleaſures into a kind of Syſtem, and every ſort of Diverſion had its proper Seaſon, and the Meaſure of its Expence ſettled. In this voluptuous Manner of living he ſpent upwards of twenty Years, and then the Heat of his Paſſions abating, and the Vigour of his Conſtitution being worn out, he grew, from being the moſt expenſive and profuſe, the narroweſt and moſt miſerly Prince in the World. To gratify this unkingly Thirſt of Money, he altered the whole Courſe of his Proceedings; and having cauſed two large Vaults or

---

[1] It will be neceſſary to ſet down here the Age of theſe Princes and Princeſſes, to which the Reader may have recourſe, for the better underſtanding what is ſaid of them. It may not be amiſs to obſerve, that theſe were all the Sons and Daughters of the Sultana mentioned in the Text, whoſe Name was originally *Arjemund Banu Begum*; that is, *the moſt noble Princeſs*. *Jehan Ara Begum* was born in the Year 1614, Sultan *Dara* in 1615, Sultan *Sujah* 1616, *Roſhnrai Begum* in 1617, Sultan *Aurengzebe* in 1618, *Suria Banu Begum* in 1622, and Sultan *Morad* in 1624.

[2] I follow, in the Text, the Obſervations made by other Hiſtorians, as to the Vanity of theſe Princes, in giving their own Names to the Cities they erected; but, I muſt, for my own part, obſerve, that I think the Fact is, in itſelf, a little doubtful; and I am rather inclined to think that it is the People themſelves that give theſe Names to the Cities, in order to diſtinguiſh which were the Capitals of the Empire under the Reign of particular Monarchs; and I am confirmed in this, by obſerving that theſe Names are ſtill in uſe, at leaſt in all the Court Writings.

Cel

Cellars to be made under his Palace, in one of which he kept his Gold, and in the other his Silver, caſt into ſuch large Ingots, as could not be eaſily removed or embezzled; and one great Pleaſure of his Life was to viſit theſe Receptacles of his Riches, and delight his Eyes with gazing upon them. This ſingle Vice of Covetouſneſs abſorbed and ſwallowed up all the reſt of his Deſires, inſomuch that though in the firſt Years of his Reign he had particularly piqued himſelf upon doing ſtrict Juſtice to his Subjects, yet now he gave them up to be plundered by all the Governors of Provinces, and other great *Omrahs*; and when he found they were grown exceſſively rich by ſuch Practices, he turned the Edge of his Reſentment ſuddenly upon them; and, under a Colour of puniſhing their Oppreſſions, put them to death and ſeized their Effects.

His three Sons he ſent to govern the moſt diſtant Provinces of his Empire, and kept only the eldeſt Sultan *Dara*, to ſhare with him the Cares of Government, and to be the nearer that Throne which he was one Day to poſſeſs. Sultan *Sujah* was made Viceroy of *Bengal*; his youngeſt Son *Morad*, was eſtabliſhed in *Guzerat*; and *Aurengzebe* was Viceroy of *Decan*; all of them were obliged to pay their Tribute exactly; and for their Subſiſtance in a manner that became their Rank, were compelled to have Recourſe to the ſame unjuſt Meaſures which other Governors practiſed. It was this, and the earneſt Deſire of obtaining Poſſeſſion of the Diamond-Mines, that put the laſt-mentioned Prince upon attacking the King of *Golconda*, a very unjuſt War in itſelf, but ſo remarkable for the Iſſue of it, and for the Conſequences attending it, that it is neceſſary we ſhould enter into a more particular Account of it. It took Riſe therefore in the following Manner; *Mirza Mula*, a Perſon who came into *India* in the Service of a Merchant, entering afterwards into that of the Mogul, was advanced by Degree to the moſt conſiderable Commands in the Army; but finding himſelf ſlighted by Sultan *Dara*, he went over to the King of *Golconda*, who gave him a Poſt in the Treaſury, and the Direction of the Trade of his Country; in which Employment *Mirza Mula* having amaſſed together conſiderable Sums, he endeavoured to diſtinguiſh himſelf at Court by a magnificent Equipage, and the Curioſities he purchaſed and preſented to his Majeſty and the Royal Family; and amongſt the reſt the King's Mother, the Dowager Queen, who was ſo ſmitten with the Gallantry of the *Perſian*, that ſhe denied him no Favours; which the King having an Intimation of, without taking any farther Notice of her Majeſty's irregular Paſſion, ſent *Mirza Mula* out of the Way, to the Government of *Carnate*, in which were the famous Diamond-Mines. Here he took Care to lay by the moſt curious Stones for his own Uſe; and one among the reſt he happened on, ſo large and fine, that it was not to be matched in the *Indies*, either for its Size or Luſtre, which he afterwards preſented to *Aurengzebe*. *Mirza-Mula* was not contented with what he found in the Mines, but he forced the People under his Power to bring in their Gold and Jewels, under pretence of the Neceſſities of the Government. He plundered the very Temples, and pulled off the precious Stones with which the Images were adorned; of which the King of *Golconda* being informed, determined to call *Mirza Mula* to a ſevere Account for his Rapine and Extortions; but the good old Queen let her Favourite know the Dangers that threatened him: Whereupon *Mirza Mula* immediately diſpatched a Courier to *Aurengzebe*, whoſe Government lay contiguous to *Golçonda*, to let him know that if he would march with his Army into that Kingdom, he would join him with a Body of Troops from *Carnate*, and that his Intereſt was ſo conſiderable in the Palace itſelf, that he might depend upon an eaſy Conqueſt; and to convince him of the Advantage of the Enterprize, made him a Preſent of the large Diamond above-mentioned [w].

This was the moſt agreeable Meſſage that *Aurengzebe* could have received; for he did not doubt that if he was once poſſeſſed of the Riches of *Golconda*, he ſhould bid fair for the Empire of *Indoſtan*; he marched therefore, without Delay, and joined the treacherous *Mirza Mula* with his Army. The King of *Golconda* hereupon retired, in the utmoſt Conſternation, from his Capital of *Bagnagur*, aud ſhut himſelf up in the Fortreſs of *Golconda*, which ſtands about three Miles from it. The Confederates plundered *Bagnagur*, and afterwards inveſted the Fortreſs, of which *Aurengzebe* ſent Advice to the Emperor. Sultan *Dara* was alarmed at the Progreſs of *Aurengzebe*'s Arms, and repreſented to the Shah *Jehan*, that if his Brother was once Maſter of the Diamond-Mines, his next Attempt would be infallibly againſt the Crown; whereupon Orders were immediately diſpatched to *Aurengzebe* to deſiſt from the Enterprize, and retire to his Government of *Decan*. As things were not yet ripe for the Execution of his great Deſign, *Aurengzebe* obeyed the Orders of the Court, and concluded a Treaty with the King of *Golconda*; the principal Articles whereof were, that the Mogul ſhould be reimburſed his Charges in the War; but the King's Daughter ſhould be given in Marriage to the Prince *Mohammed*, *Aurengzebe*'s eldeſt Son, who ſhould ſucceed to the Crown of *Golconda*, after the Demiſe of his Majeſty, and that *Mirza Mula* and his Family ſhould be at Liberty to retire, with their Effects, out of the Kingdom. Thus was *Golconda* delivered from the Danger that threatened it at this Time. But *Aurengzebe* had ſuch a Taſte of the Riches that Country afforded, that he fully determined to make it a Province of the Empire, if ever he ſucceeded to the Crown.

Aurengzebe, finding his Friend *Mirza* wanted neither Courage nor Conduct, and that he had a confirmed Averſion to his Brother, the Sultan *Dara*, and above all, that he was Villain enough to execute whatever he ſhould command, without Remorſe, looked upon him as a proper Inſtrument to promote the ambitious Deſigns he had in View; he took him therefore into his moſt intimate Confidence, and made him General of the Forces againſt the Kingdom of *Viſiapour*, while he himſelf ſpent his Time in amuſing the People with extraordinary Shews of Devotion, moſt exact Juſtice, and uncommon Benevolence to the Poor, which rendered him exceeding popular. In the mean time the Emperor Shah *Jehan* was taken dangerouſly ill, and it was reported in *Dehly*, and even in the remoteſt Provinces of the Empire, that he was dead; whereupon the three youngeſt Sultans, his Sons, began to make Preparations in their reſpective Provinces to puſh for the Empire. Sultan *Sujah*, or *Chuia*, Viceroy of *Bengal*, was the firſt that appeared in Arms, directing his March towards *Dehly* with an Army of forty thouſand Horſe. When he firſt ſet forward, it is ſaid, he laid his Hand on his Scimitar, crying out, "Now for a Throne, "or for a Grave." He gave out, upon the March, that Sultan *Dara* had poiſoned the Emperor, and that he was going to revenge his Father's Death: But Shah *Jehan* recovering from his Indiſpoſition, wrote his Son Word with his own Hand, that he was now perfectly in Health, and that his Brother *Dara* had not contributed to his late Illneſs, and therefore he would do well to return to his Government of *Bengal*, and repair the Over-ſight his Exceſs of Zeal had induced him to commit, by a more exact Obedience for the future. But Sultan *Sujah* receiving other Letters from his Friends at the ſame Time, aſſuring him that it was not likely that his Father ſhould recover, and that his Fortune depended on his appearing immediately before *Dehly*, the Sultan thought fit to continue his March. Shah *Jehan* thereupon removed his Court to *Agra*, being a Place of much greater Strength. *Dara* followed his Father's Court; but detached his Son *Soliman Chacu*, and with him *Rajah Jaſing*, and *Dhil-Khan*, two experienced Generals, and a gallant Army to oppoſe Sultan *Sujah*, whoſe Forces, in all reſpects, were eaſily defeated, and the Sultan himſelf, with ſome Difficulty, eſcaped to *Bengal*, where he endeavoured to recruit his Army.

---

[w] The Kingdom of *Golconda* is a maritime Country, on the Eaſt Coaſt of the Peninſula of *India*, on this Side the *Ganges*. *Aurengzebe* would never be eaſy, after he had obtained this large Diamond, till he was likewiſe poſſeſſed of the Country, which, as we ſhall ſee hereafter, he annexed notwithſtanding this Peace, to the Mogul Empire, under the Name of the Province of *Hyderabad*, which is only another Name for the Capital of this Country, called in the Text by its old Name *Bagnagur*; and that this Country was very well worth acquiring, appears from the annual Revenue which it produces to the Great Mogul, of 3,711,000 Pounds.

The Confuſions in the Empire did not end here. The two younger Sons of the Emperor were alſo in Arms, in order to diſpute the Poſſeſſion of the Empire with Sultan *Dara*. And now it was that the profound Diſſimulation of *Aurengzebe* paved the Way for his mounting the Imperial Throne, while he pretended to aſſiſt the Ambition of his youngeſt Brother. The old Pretence was that of Religion: Sultan *Dara*, he ſaid, was an Infidel, Sultan *Sujah* a Heretick, and therefore the Crown ought to be ſecured to Sultan *Morad*; for, as to himſelf, the utmoſt of his Deſire was to ſpend the Remainder of his Days near the Tomb of *Mohammed* in Acts of Mortification and Devotion. But to ſhew, that as much a Saint as he was, he underſtood the Affairs of this World as well as any of them; he aſſembled a very numerous Army, compoſed of veteran Troops, that had been employed in his former Wars, extremely well provided with every thing neceſſary, with which he joined his Brother *Morad*, and his Troops, not far from *Dehly*. The firſt Step he took was, to perſuade that Prince to aſſume the Title of Emperor, in which Quality he received and obeyed his Orders, which, however, were ſuch as himſelf dictated in his Council. As ſoon as Sultan *Dara* was informed that the two Brothers had joined their Forces, he ſent a Trumpet with a Letter from the Emperor, his Father, to each of them, aſſuring them that he was in perfect Health, and commanding them to retire and diſband their Troops, on pain of being treated as Rebels. This ſurpriſed Sultan *Morad* exceedingly, and he would willingly have attoned for his firſt Offence, by yielding the Emperor, his Father, immediate Obedience: But *Aurenzebe* prevented his Return to his Duty, by ſuggeſting that Obedience now came too late; that though the Emperor might be ſatisfied, Sultan *Dara* would be revenged, and that to ſeparate their Armies now, would be doing his Buſineſs, and giving themſelves up to Deſtruction. Theſe Arguments ſoon got the better of Sultan *Morad*'s Loyalty, eſpecially when it was farther inſinuated to him that his Father was now ſuperannuated, and that Sultan *Dara* only made uſe of his Name. *Morad* conceiving with himſelf that it was better for him to impoſe Law upon his Brethren, than be obliged to receive it from them, determined to proceed, and to acquire, if poſſible, by Arms, a Crown, to which he was not entitled either by the Laws of Nature, or the Cuſtom of his Country.

But as we are now to enter on that War which has made ſo great a Noiſe in *Europe*, as well as the *Indies*, it will be neceſſary to ſay ſomething of the Characters of theſe Princes; and the rather, becauſe ſome of them have been much miſrepreſented, and, in *Europe*, generally miſunderſtood. Sultan *Dara* was always happy in the Enjoyment of his Father's Favour, in conſequence of which he received an Education truly Royal; he enjoyed, from Nature, a very graceful Perſon, and a ſtrong Conſtitution; his Parts were not only ſolid, but bright and ſparkling, ſo that before he reached the Flower of his Age, he was Maſter, not only of all the Sciences which are uſually taught in the Univerſities, but moſt of the Languages likewiſe that are ſpoken in *Europe*. His ſuperior Knowledge, and the great Quickneſs of his Wit, joined to a philoſophical Virtue, were the Sources of his Ruin. He was, beyond Compariſon, the greateſt Prince that ever drew Breath in the *Indies*, and the moſt unfortunate; the wiſeſt Man of the Age in which he lived, yet unaccountably weak in his Conduct; one of the beſt Men that ever was bred up in a Court; and withal, the worſt qualified to live in one. Theſe Paradoxes ſhall be in few Words explained. His Wiſdom drew upon him the Hatred of ſuch as affected to be thought wiſe; his Quickneſs and Penetration rendered him leſs capable of being adviſed by ſuch as were moſt able: He had ſpent much of his Time in Books, knew the Duties of every Profeſſion, and expected that Men of every Profeſſion ſhould diſcharge thoſe Duties. He had no ſort of Craft, and deſpiſed it too much; he was ſo truly virtuous, that he knew too little of bad Deſigns to guard againſt them; and he was ſo open and ſincere, that he never ſuſpected any Man of Diſſimulation. He had a great Reſpect for the Miſſionaries, and they, in return, had taken a great deal of Pains to perſuade the World that he was a Chriſtian in his Heart; and that the Knowledge of this was one great Cauſe of his Misfortunes, which, however, is ſo far from being true, that I venture to affirm, they flowed from quite a different Fountain. He had, indeed, ſtudied Religion more than became a Prince, and left behind him a Teſtimony of it, which plainly proves the Truth of what I have aſſerted; and yet not one of the Miſſionaries have mentioned it, for Reaſons that I cannot aſſign. In ſhort, he revived the old Scheme of his Anceſtors, and had a Mind to become the Legiſlator, as well as the Monarch of the *Indies*. It was with this View that he compoſed a large and learned Work, to prove that the Principles of the old *Indian* Religion were the ſame with thoſe of Mohammediſm; and, in Support of this, he collected, with great Labour all that was worth collecting from the Works of the ancient *Bramins*, and compared theſe with the principal Paſſages of the Khoran, to demonſtrate that theſe Religions were not ſo far from each other as thoſe who profeſſed them imagined, and that there wanted nothing but a little Temper and good Senſe to bring them to a good Underſtanding[x]. This armed the Bigots againſt him, as the Steadineſs of his Conduct, and his Contempt for the Arts of a Court, ruined him, with thoſe who placed their Hopes and their Credit in being well verſed in them.

Sultan *Sujah* was the very reverſe of his Brother, except that he had a fine Perſon, a happy Conſtitution, and great Parts, for he was a finiſhed Courtier, underſtood the Art of Intriguing perfectly, and practiſed it with ſuch Succeſs, that *Jaconſing*, upon whom his Brother *Dara* had chiefly depended, was privately his Creature, and betrayed the Maſter, to whoſe Favour he owed all Things. This Prince had Spies in every Part of the Court, knew every thing that was done there, and the Sentiments of all who compoſed it. He held likewiſe private Intelligence with the principal *Rajahs* throughout the Empire, had a private Correſpondence with the King of *Perſia*; and that he might not want a religious Party to eſpouſe his Intereſt, he declared for the Sect of *Ali*, which is the eſtabliſhed Faith of the *Perſians*.

The Character of *Aurengzebe*, though directly oppoſite to thoſe of his Brethren, was very probably formed upon theirs. He had ſtrong Senſe, much Application, and a deep Reach of Thought; the greateſt Hypocrite, and the moſt profound Diſſembler in the World. Humble in Appearance, in Reality exceſſively ambitious; covetous in the higheſt Degree, and yet affecting to deſpiſe Money; devout in Shew, without the leaſt Tincture of Faith or Goodneſs in his Heart. He ſaw that his Brethren had courted Men of other Religions, and therefore he placed all his Hopes in the bigotted *Mohammedans*, whom he knew to be a powerful Party, and moſt capable of ſerving him in the Way that he deſired to be ſerved. He knew very well, that if he could not attain the Throne by his Cunning, he was not likely to preſerve his Life, and therefore he ſpent his whole Time, and applied all his Thoughts in meditating how to acquire the Imperial Diadem, and in hindering the reſt of the World from perceiving his Deſign, which he believed, and which Experience ſhewed to be the ſureſt Method of effecting it.

Morad, the youngeſt of *Shah Jehan*'s Sons, was an honeſt generous Prince, one who profeſſed *Mohammediſm* from his Heart, and was really as much a Believer as any of the Clergy could wiſh him. He loved Hunting, and other Exerciſes of that Kind, and was much given to Women. In all other reſpects he was a very amiable and worthy Prince, and if he appeared from ſome Parts of his Conduct in a different Light, it was owing to the Influence that *Aurengzebe* acquired over him, and in which he acted againſt his own Sentiments. Let us now return to Matters of Fact, and diſcuſs them in as few Words as poſſible. All the Hopes of *Aurengzebe* lay in making his Brethren deſtroy each other. His Schemes were in ſome Meaſure accompliſhed with reſpect to Sultan *Sujah*, and from his Intelligence, he knew very well, that Sultan *Dara* was not an equal Match for the Forces they had in the Field againſt him, and this gave him as much Diſquiet in one Senſe, as it did Pleaſure in another; for, as he ſaw very clearly that his Brother's Safety and Intereſt depended upon taking him off, ſo notwithſtanding the Difference of their Characters, he was afraid his Brother might ſee it himſelf, or at leaſt be ſhewn it by ſome who were about him, which made him more intent upon his Deſtruction, towards whom he profeſſed both Duty and Affection, than on that of his elder Brother againſt whom he was in Arms: Yet he covered his Uneaſineſs with a Shew of great Tranquillity, and prevented any Suſpicion that might have ariſen from his Reſervedneſs, by aſcribing it to a Spirit of Religion; ſo that while he was plotting the moſt deteſtable Villanies, the far greater Part of the Camp believed him entirely taken up with religious Meditations. He employed the vaſt Treaſures he had heaped up by the moſt unjuſtifiable Means, in Practices no leſs wicked; and by that means had conſtant Advice of whatever paſſed in all the Courts; ſo that if his Hypocriſy had ever been detected, he would have had Leiſure ſufficient to have ſecured a Retreat, and at the ſame time his Officers and his Troops were ſo devoted to him, that he had not the leaſt Reaſon to doubt their defending him to the laſt Man: Such were the Circumſtances on his Side.

---

[x] The Title of this ſingular Treatiſe is, *Mujmahal Bahrain*, that is, *the Junction of the two Seas*. Theſe ſort of Titles are, and always have been, much eſteemed in the Eaſt, as having in them ſomething of Allegory; and, at the ſame time, ſomething ſententious and very expreſſive. I cannot but inform the Reader, that theſe Lights are derived from Mr. *James Frazer*, who has not only given us the Titles and Characters of abundance of Oriental Pieces, hitherto abſolutely unknown in this Part of the World, but has likewiſe brought with him the Books themſelves, which are, indeed, an invaluable Treaſure, inaſmuch as they afford the Means of filling up that vaſt *Chaſm*, which has been ſo long left in *Univerſal Hiſtory*, for the Annals of theſe Eaſtern Countries.

Dara was not idle in the mean time, but ordered his Generals *Jacontſing* and *Caſſam-Khan*, to take a Paſs upon the River *Ugin*, which might have been maintained againſt all the Forces of the two Brothers. But *Caſſam-Khan*, one of thoſe whom *Dara* had formerly diſobliged, being in the Intereſt of *Aurengzebe*, withdrew upon the Approach of his Army, and left the Rajah *Jacontſing* to fight it out by himſelf; whereupon the two Brothers gained an eaſy Victory, making themſelves Maſters of all the Enemies Artillery and Baggage, and ſo did the Partiſans of *Aurengzebe* manage this Matter, that all the Glory of the Victory was aſcribed to him, which gave a great Diſguſt to the Miniſters and Generals of *Morad*'s Army, knowing that their Maſter's Troops had born all the Burthen of the Day, while *Aurengzebe* ſeemed to reſerve his own Forces for another Occaſion. They began now to be convinced of the ambitious Deſigns of the Diſſembler, and had, it is ſaid, without their Maſter's Knowledge, formed a Deſign to cut him off next Time he came to *Morad*'s Quarters, which *Aurengzebe*, who had his Spies in every Place, had ſome Intelligence of, and came no more to his Brother's Tent as uſual, but ſent his Son *Mohammed* to pay his Compliments, without diſcovering that he was apprized of the Conſpiracy againſt him. While the two Brothers continued their March, the Malecontents at Court came over to them every Day, and many of thoſe who ſtaid behind remained there for an Opportunity of giving Intelligence to the Enemy. Shah *Jehan* finding himſelf betrayed on every Side, and reflecting on his former Conduct, it is ſaid, in reſpect to the Omrahs, thought this univerſal Defection might proceed from a particular Prejudice to his own Perſon; he made a Ceſſion therefore of the Crown, and devolved all his Authority on his Son *Dara*, who thereupon raiſed a prodigious Army, and marched to meet the Enemy upon the 14th of *May*, 1656[y].

To ſee this mighty Army, ſays the Hiſtorian, extend itſelf on the vaſt Plains of *Agra*, would have inclined any one to believe, that *Dara* muſt have commanded Victory where-ever he went; but *Dara*'s haughty Carriage, it ſeems, had raiſed him as many Enemies as the Vices of *Shah Jehan* the Father, inſomuch that there was hardly a conſiderable Officer in the Army but had his particular Prejudices. *Dara* continued his March for four Days, till he came to the River *Chambal*, where he entrenched himſelf, and determined to wait the Motions of the two Brothers; for here his Army could be ſupplied with all Manner of Proviſions from *Agra*, and the Enemy, he knew, could not poſſibly ſubſiſt long in that barren Country, which lay to the Southward, eſpecially at this Seaſon of the Year, when the Heats are intolerable. *Aurengzebe* obſerving the Diſpoſition of the Imperial Army, and that all the Avenues to *Dara*'s Camp were fortified with Entrenchments and Batteries of Cannon, concluded it was impoſſible to face the Enemy in that Poſt. On the other Hand, he was ſenſible, that the leaſt Delay was their infallible Ruin. *Dara* would be joined in a little Time by his victorious Son, who was returning from the Purſuit of Sultan *Sujah*, and their own Troops would be diſ-heartened, and diſperſed, if their firſt Heat was a little cooled, as is uſual in all Inſurrections, where Rebels meet with unforeſeen Difficulties. In this Diſtreſs, the Rajah *Campet*, a confirmed Enemy to the Court, offered the two Brothers a Paſſage through his Country, which lay about thirty Miles higher up the River, where it was probable they would meet with no Oppoſition; for the Rajah's Territories being woody and mountainous, and the Rajah himſelf a General in the Imperial Army, *Dara* looked upon himſelf as ſecure on that Side, when, to his Surprize, Intelligence was brought him that a Body of the Enemy had actually paſſed the River, and was preparing to attack his Rear. *Dara* immediately diſpatched the treacherous *Calim-Khan* to oppoſe them, but he having a Correſpondence with *Aurengzebe*, ſuffered his whole Army to paſs the River, and form themſelves in Order of Battle, without giving them any Diſturbance; ſo that now both Armies came to a Battle on equal Terms, which was fought with very great Bravery on that Side, where *Dara* himſelf commanded; but the other Generals not doing their Duty, and ſome of them with their whole Bodies going over to the Enemy, the two Brothers, at length, obtained an entire Victory. *Dara* retired with a ſmall Body of Troops, which remained faithful to him, to *Agra*, where he ſtaid but a few Hours to refreſh himſelf, and continued his March to *Dehly*; but the Governor having heard of the Loſs of the Battle, refuſed him Admittance, whereupon he was compelled to retire to *Lahor*.

The two Brothers, with their victorious Army, advanced to the Gates of *Agra*, and inveſted the Place, which was betrayed to them in a few Days, and the old Emperor *Shah Jehan* made Priſoner. The two Brothers poſſeſſed themſelves of his prodigious Treaſures, which they found ſufficient to reward their Adherents, and ſupport their Uſurpation; and having refreſhed their Troops, and put the Government into ſuch Hands as they could depend on, they left a Garriſon in *Agra*, and continued their March towards *Dehly*, *Morad* being treated by *Aurengzebe*, and the whole Army, as their Emperor. They were encamped in the fertile Plains of *Matura*, where ſtands a noble Moſque or Temple erected by ſome of the Mogul Emperors, which *Aurengzebe* propoſed as a proper Place for the Inauguration of his Brother; whereupon great Preparations were made to perform the Solemnity on the 15th of *June* 1656. The Evening before *Aurengzebe* ſent a moſt dutiful Meſſage to his Brother, importing, that he was extremely ſorry that a ſudden Illneſs, with which he was ſeized, would not allow him to wait upon his Imperial Majeſty, in order to concert with him and his Aſtrologers the lucky Hour for his Coronation; but that if he would have the Goodneſs and Condeſcenſion to accept of a ſmall Collation at his

---

[y] We have many very authentick Relations of the Tranſactions in theſe Wars, but particularly two, the firſt by M. *Bernier*, and the ſecond by M. *Manouchi*, who were both upon the Spot, and both Attendants on the unfortunate Sultan *Dara*. I have, however, chiefly followed the latter, for ſeveral Reaſons; firſt, becauſe he made the Hiſtory of the *Moguls* his Study, and procured the Materials from which his Memoirs were compoſed, at a great Expence. Secondly, Becauſe he wrote at Leiſure, and after he had taken Time to enquire into and examine the Facts which he recorded, and ſo was the leſs likely to be deceived by common Reports. Thirdly, Becauſe he was an *Italian*, had a Head well turned for Intrigues, and appears to have been much better verſed in Affairs of State, and in the Practices of the Court, than the other Hiſtorian, tho' he was a very able and faithful, as well as entertaining Writer.

Quarters, all things might be regulated there, ſo as to prevent any Delay in a Matter of ſo great Importance[*]. Some of the principal Confidents of Sultan *Morad* could not very well digeſt this Meſſage, but fancied there was ſomething concealed under it which might be prejudicial to their Maſter, and therefore they adviſed him to return a very civil Anſwer to this Compliment, but by all means to decline the Viſit. There were, however, others, who were ſecretly in his Brother's Intereſt, who perſuaded him to go, and as Sultan *Morad* was a Prince of a very open and generous Diſpoſition, he liſtened to their Advice, and went with his ordinary Guard, and a few of his principal Courtiers, at the Time appointed, to his Brother's Tent, where he was received with ſuch high Marks of Reſpect, and with ſo much ſeeming Affection, that he laid aſide all Suſpicion, and according to his uſual Cuſtom, drank freely of ſeveral ſorts of excellent Wine, which were provided for him; but as for the pious *Aurengzebe*, he, for a Principle of Conſcience, could not taſte a Drop of that prohibited Liquor, and therefore drank Water only. At laſt Sultan *Morad*, having got his full Doſe, fell faſt aſleep, and was, by his Brother's Command, immediately removed into another Tent, attended only by his faithful Eunuch, who could not by any means be perſuaded to leave him.

In the mean time the Officers and Courtiers of *Morad* were entertained in another Tent by Perſons of equal Rank with themſelves, who were known to have ſtrong Heads, and could bear drinking. The Guards all the time attended round the Tent, and all the Muſick of the Camp playing, as if the Brothers had ſpent the Night together in Feaſting. *Aurengzebe* early in the Morning went with ſix of his Guards into the Tent, where Sultan *Morad* and his Eunuch were ſtill faſt aſleep, and having cauſed them to be bound before they were well awake, he ordered them to be put into two cloſe Litters, and ſent away privately, one to the Citadel of *Dehly*, and the other to that of *Agra*. When all was over, he directed a Meſſage, in his Brother's Name, to ſuch as were to aſſiſt at the approaching Coronation, importing, that the ſolemn Proceſſion to the Moſque was to be made from the Tent of *Aurengzebe* at a certain Hour, and therefore they were to be ready by that Time in the Temple. When the Hour fixed for the Coronation came, the greateſt Part of both Armies were drawn up in perfect Order, under Colour of preventing Diſturbances, without Arms. On a ſudden they were ſurrounded by ſeveral choice Squadrons of Horſe from the Army of *Aurengzebe*, who, as ſoon as the Proceſſion began to move, made the firſt Declaration of the Change by brandiſhing their Swords, and crying out, *May the Emperor* Aurengzebe *live for ever.* The reſt of the Army were exceedingly aſtoniſhed at firſt, but they were ſoon forced to join in the Cry, from an Apprehenſion that theſe Troops might trample them down, and put them to Death, if they diſcovered the leaſt Signs of Diſobedience. As ſoon as they joined in the Acclamations, *Aurengzebe* himſelf appeared, ſat down for a Moment on the Throne prepared for his Brother, and having inveſted himſelf with the Enſigns of the Imperial Dignity, preſently withdrew, the whole Army ſhewing the greateſt Joy at his Acceſſion, which is a Proof, that in arbitrary Governments there is no ſuch thing as Loyalty; for Slaves reverence *Power*, and not *Right*, which ought to render Princes as careful of their Subjects Privileges as of their own Prerogatives, becauſe both ſtand upon the ſame Foundation.

In the midſt of all this Succeſs, *Aurengzebe* ran a great Hazard of being dethroned, or at leaſt of ſeeing the War revived from a Quarter which, with all his Cunning, he never ſuſpected. He had ſent his eldeſt Son Sultan *Mohammed* to *Agra* to execute his Orders with reſpect to Shah *Jehan*, which he performed very punctually, ſince as ſoon as he entered the Preſence of his Grandfather, he told him in a very few Words, that he was grown old, and incapable of managing the Empire, and ought therefore to leave it to him, who in ſuch a Conjuncture was beſt able to ſuſtain it; but at the ſame time informed him, that his Father intended no Hurt to his Perſon, but was content to allow him a Palace, his Seraglio, and ſuch Amuſements as might content an old Man. The Eunuchs and the Women ſet up a loud Outcry at this barbarous Meſſage; but Shah *Jehan* bore it calmly, and with great Patience. He did ſtill more, for he gave the ſtrongeſt Proof of the Falſhood of this Pretence, and of his Capacity for governing at a Time when his rebellious Children treated him as a Dotard. He retired, as Sultan *Mohammed* commanded, and as ſoon as he was fixed in his new Apartment, he ſent to deſire another Viſit from his Grandſon, whom, as ſoon as he ſaw coming at a Diſtance, he threw himſelf on his Knees. The young Man coming to lift him up, he addreſſed him in theſe Words: " Since it is ſo, ſince I muſt be dethroned " by my own Children, I ſubmit to my Fate; but be " you courageous enough to ſnatch the Crown of the *In-* " *dies* from him, who is moſt unworthy to wear it. The " City of *Agra* is yours, you have in it a powerful Army " devoted to your Service; revenge then my Wrongs, " and ſecure yourſelf from the Cruelty of a Parent who " will never ſhew Affection to his *Son*, after treating a " *Father* as he has done *me*." Sultan *Mohammed* was ſtruck with this Diſcourſe; but as he knew that all the Officers under his Command were entirely devoted to *Aurengzebe*, he durſt not purſue his Grandfather's Advice, which, however, made ſuch an Impreſſion on him, that he never forgot it, or obeyed his Father afterwards but with Reluctance.

The People however, more ſuſceptible of Pity than of Duty, could not help murmuring at the harſh Treatment of ſo great a Monarch. *Aurengzebe* was no ſooner informed of it, than he cauſed a Letter to be written in his Father's Hand, addreſſed to Sultan *Dara*, in which he directed him to march with all the Forces he could gather, towards *Agra*, promiſing him to engage *Aurengzebe* to make him a Viſit, and cauſe him to be murdered in his Apartment. The forged Letter had its Effect upon the Mob, who immediately pronounced the Uſage of the old Emperor to be what he deſerved, and admired the Wiſdom and Humanity of *Aurengzebe*. That artful Prince, having thus ſettled all Things behind him, and having, out of the Treaſures of his Father, rewarded, even beyond their Hopes, all who had hitherto aſſiſted him in his Enterprizes, found himſelf at Leiſure to purſue Sultan *Dara*, who had again drawn a formidable Army together in the Neighbourhood of *Lahor*. That Prince was now happy in a faithful and able General, whoſe Name was *Daut-Khan*. *Aurengzebe* attempting to corrupt him, failed for the firſt Time; upon which he cauſed a Letter to be forged in the Hand of *Daut-Khan*, importing a Deſign to betray his Maſter, and contrived the Matter ſo, that it fell into the Hands of Sultan *Dara*, who, having ſuffered ſo much through ill-placed Confidence before, became now unreaſonably ſuſpicious. On the Sight therefore of this Letter, he diſmiſſed his faithful General; upon which the reſt of his Officers, and ſoon after his whole Army abandoned him, and he was forced to fly into the Province of *Guzerat*, from whence he propoſed retiring into *Perſia*.

Aurengzebe took this Opportunity of turning his Forces againſt his other Brother Sultan *Sujah*, who being informed of his March northwards, began immediately to move with his Army towards *Agra*. But *Aurengzebe* returning with a ſurprizing Celerity, prevented that Capital from falling into his Hands. However, Sultan *Sujah* had poſted his Troops ſo advantageouſly that he was not to be forced in his Camp, and kept a Communication open with ſeveral Towns, from whence he was well ſupplied with Proviſions, while his Enemies wanted all Neceſſaries, and even Water, which they were forced to bring to their Camp upon the Backs of Camels from the *Ganges*, which lay at twenty Miles Diſtance. In this Diſtreſs *Aurengzebe* ordered it to be given out, that he would decamp the next

[*] It is ſtill the Cuſtom in moſt Eaſtern Countries, but eſpecially in *China*, *Perſia*, and the *Indies*, to conſult Aſtrologers upon all great Events, and to be guided by them in the Choice of lucky Hours. Shah *Jehan* was ſtrangely addicted to theſe Superſtitions, and became thereby the Dupe of theſe Fortune-tellers to the laſt Degree. They once perſuaded him to leave his Capital, upon Pretence that the enſuing Month would be fatal to the chief Perſon in *Dehly*. He left the chief Juſtice to preſide in his Abſence, and the Aſtrologers took care to poiſon him before his Return, by which they verified their Prediction, and kept the Emperor ever after in the moſt ſlaviſh Dependance upon them.

Morning, and accordingly the Tents were ſtruck, and the Troops actually in Motion; which Sultan *Sujah* obſerving, prepared to fall upon their Rear. The Troops of *Aurengzebe* were ordered to give Way upon the firſt Attack, until they had drawn the Advance-guards of Sultan *Sujah* ſome Diſtance from their Camp, and then to make a Stand, which Orders were punctually executed; and Sultan *Sujah* obſerving his Men were over-powered, detached ſtill other Troops to ſupport them; and the Enemy doing the like on the other Side, it came at length to a general Battle. The Generals, mounted on their reſpective Elephants, advanced with the Bodies under their immediate Commands to engage each other, and the Battle was fought with great Obſtinacy, till *Aurengzebe* artfully drew his Enemy into a Field, where he had ordered Pits to be made the Night before, and covered over with Turf, ſo that they lay unperceived. Here the brave Sultan *Sujah* was advancing to engage his Brother, and perſonally decide the Fortune of the Day, when his Elephant flounced into one of theſe Pits prepared for him, from whence the Sultan found it impoſſible to diſengage himſelf ſuddenly; whereupon the Army, not ſeeing their General, imagined he was killed, and thought of nothing but making their Retreat. Sultan *Sujah* afterwards mounted a Horſe that was brought him, and endeavoured to rally his flying Troops, but it was too late; the Rout was total, a panick Fear had ſeized his Forces, and they could never be brought to make a Stand again; and *Sujah*, with great Difficulty, made his Eſcape into the Province of *Bengal*. Here he recruited his ſhattered Army, and, having poſted himſelf in an advantageous Camp, waited the Approach of the Enemy, when he underſtood that *Mohammed*, the eldeſt Son of *Aurengzebe*, was in ſome Diſgrace, and ſecretly invited him to come over to his Party, which Negotiation was ſo well managed, that he did not only deſert his Father's Court himſelf, but brought over with him ſeveral of his beſt Officers. Upon this, *Aurengzebe* had Recourſe to his old Practice of forging Letters, by which he drew Sultan *Sujah* to believe that *Mohammed* had deſerted by his Order, who thereupon treated the young Prince in ſuch a Manner that he was glad to reconcile himſelf to his Father, who fed him with fair Promiſes till he had him in his Power, and then, in a little Time, ſent him Priſoner to the Caſtle of *Gallier*[a].

Sultan *Dara*, having drawn another Army together, marched, with great Diligence, towards the City of *Amadabat*; but when he was within a few Miles of it, the Governor, who had been corrupted by *Aurengzebe*, ſhut the Gates of it againſt him; upon which, the Army he had aſſembled, ſeeing him thus betrayed, abandoned him, in order to provide the beſt they could for their own Safety. The Sultan, now entirely deſpairing of his Affairs, determined to fly for Refuge to *Perſia*; to which he was the rather induced, becauſe, *Given Khan* had the Command of a Fort upon the Frontiers, who was his Friend, and might favour his Retreat. This Man had received the higheſt Favours from the Sultan, and particularly once he ſaved his Life, when the Emperor Shah *Jehan* had commanded him to be trod to Death by Elephants for ſome Miſdemeanor he had committed. This Traitor received the Sultan with the greateſt Profeſſions of Gratitude, but immediately gave Intelligence to the General who commanded the Forces of *Aurengzebe* on that Side, that he had *Dara* in his Power, and would deliver him up. The Sultan ſuſpected the Treachery, and was meditating how he might make his Eſcape from thence, when a Detachment of *Aurengzebe*'s Forces ſurrounded the Palace, and carried *Dara* Priſoner with them to *Bakar*, which was beſieged by his Brother's Troops, being the only Fortreſs which ſtill held out for *Dara*, they compelled the unfortunate Sultan to ſend Orders to the Governor to ſurrender the Fortreſs, who obeyed, on Condition he might be at Liberty to retire into the Kingdom of *Cachemire*. When the captive Prince was brought to *Dehly*, he was ſet in an open Chair on the Back of an Elephant, with his Feet chained, and his youngeſt Children about him, which moved the Compaſſion of the People. His Brother *Aurengzebe* would not ſee his Face, but ordered him to be ſecured in a Caſtle without the Town; and, having aſſembled a Council of the principal Omrahs, he propoſed it as a Matter indifferent to him whether it were moſt adviſeable to condemn *Dara* to perpetual Impriſonment, or deprive him of his Life; by which Means he did not doubt but he ſhould diſcover which of them were in *Dara*'s Intereſt, determining with himſelf not to ſpare one of them. But theſe great Lords were all ſo wiſe as to ſave their own Lives by voting away their Maſter's, except one, who had been his declared Enemy, which, it is ſaid, gave *Aurengzebe* ſuch an Opinion of the Man, that he afterwards took him into the Number of his Friends. After long waiting the fatal Stroke, Sultan *Dara* met with it from the Hand of a common Executioner, who, with great Brutality, threw him on the Ground, and afterwards cut off his Head[b]. Some of the Miſſionaries have reported he died a Chriſtian, but as they do not produce any Evidence in Support of it, we can ſcarce credit the Fact barely on their Aſſertion.

The perſonal Hatred of *Aurengzebe* to his Brother, it is reported, was ſuch, that he ordered *Dara*'s Head to be brought him, and viewed it with great Satisfaction, and inſulting over it, ſaid, "Behold the Remains of a weak Man, who would have wreſted a Crown from me he was not able to ſuſtain." He afterwards ordered the Head to be carried to his Father Shah *Jehan*, and his Siſter *Ichan Ara Begum*, who were impriſoned in the Caſtle of *Agra*; at which melancholy Spectacle the old Emperor fell into a Swoon, but it did not break his Heart, as his pious Son *Aurengzebe* expected; nor was the Sight a leſs Affliction to the Siſter, who had always eſpouſed the Intereſt of Sultan *Dara*, and whom he had promiſed to marry, it is ſaid, if ever he poſſeſſed the Throne. Sultan *Sujah*, the ſecond Son of Shah *Jehan*, ſtill remained in *Bengal*; but upon the Approach of *Aurengzebe*'s Army, finding himſelf in no Condition to oppoſe ſo great a Force, he propoſed to retire to the Kingdom of *Arracan*, which lies to the South-Eaſt of *Bengal*, but ſeparated from it by impaſſable Mountains and Foreſts. The *Portugueze*, who were then poſſeſſed of *Chatigan*, a Port near the Mouth of the River *Ganges*, took upon them to tranſport the Sultan, with his Treaſure and Family, thither; but, it is ſaid, they ſunk the Veſſel in which the Money and Jewels were, and afterwards converted them to their own Uſe. However that be, Sultan *Sujah* arrived ſafe at *Arracan*, though it might have been as happy for him if he had periſhed at Sea with his Treaſure; for he had not been long in the Court of *Arracan*, before there happened ſome Miſunderſtanding between him and the Prince he fled to for Refuge; and not only himſelf, but his Wives and Children, were all cut to Pieces in the Year 1658. Thus miſerably died the ſecond Son of Shah *Jehan*, who firſt began the Rebellion againſt his Father.

Sultan *Chacu*, eldeſt Son of *Dara*, a Prince of great Expectation, ſtill remained ſecure from his Uncle's Cruelty in the Territories of the Rajah *Sirmager*, whom neither Threats nor Promiſes could move to deliver him up. But *Aurengzebe* ſo inſinuated himſelf into the Favour of *Sirmager*'s Son, that he prevailed with him to betray Sultan *Chacu* into his Hands; to which End, a Hunting-Match was appointed, and Intelligence given in what Part of the Country they would hunt; whereupon an

---

[a] There are ſome Writers, who tell us, that he did not ſend his Son, Sultan *Mohammed*, immediately to this Priſon, but kept him ſome Time under a Guard; but when he had taken the eldeſt Son of Sultan *Dara*, he ſent them both thither, on the 14th of *January*, 1661, and kept them there many Years, till *Mohammed* died of a natural Death, as moſt Writers ſay, but, as ſome would inſinuate, by Poiſon, which, however, is improbable; becauſe, with equal Provocation from another of his Sons, this Emperor contented himſelf with a long Impriſonment, and ſet him at Liberty before his Death.

[b] This Execution was performed in the Night, on the 28th of *Auguſt*, 1659. We are told, that a little before his Death, this Prince was aſked, by *Aurengzebe*'s Orders, what he would have done with him in caſe he had obtained the Victory. As he is a Rebel, and a Murderer, anſwered Sultan *Dara*, he beſt knows what he deſerves; which anſwer occaſioned his Death. It is highly probable, that *Aurengzebe* invented this Story, and cauſed it to be inſerted in the Chronicles of the Mogul Empire, in order to excuſe this Cruelty. At leaſt this is certain, that he cauſed the Hiſtory of his Father's Reign to be penned in ſuch a Manner as might give the faireſt Colour poſſible to the foul Actions of which he had been guilty. And as he was a Perſon of prodigious Abilities, it is very eaſy to conceive that, by his Aſſiſtance, a very plauſible Account might be drawn up.

Attachment of the Mogul's Troops formed an Ambuſcade, and carried off the young Prince, who was impriſoned in the Caſtle of *Gallier*, with his Uncle *Morad*. It was not long before he removed that Prince out of his Way; ſome ſay by a Form of Law, under Pretence that he had cauſed an Officer, ſent by *Shah Jehan*, to enquire into his Conduct, to be murdered, which, if true, was a very ſingular Act in one who had committed ſo many Murders himſelf; but, however it was, all Authors agree that Sultan *Morad* was, by his Orders put to Death[c].

It was now, in the Judgment of *Aurengzebe*, a fit Time that he ſhould be more ſolemnly inveſted with the Government, and that the Omrahs and other Officers of the Court ſhould take the Oaths, and pay their Homage to him, as was uſually practiſed on every Emperor's Acceſſion. It was very wonderful that, as Things then ſtood, either this or any Thing elſe ſhould be oppoſed; and yet he met with ſome Contradiction where he leaſt expected it. In ſhort, the Cadi, or Head of the *Mohammedan* Religion interpoſed, and declared that, according to the Precepts of the Khoran, as well as the Laws of Nature, it was forbidden to acknowledge him as Emperor, while his Father was ſtill living; and the whole Empire was well acquainted with the barbarous and bloody Methods by which he had opened a Paſſage to the Throne. To remove this Obſtacle, he ſummoned an Aſſembly of Mollas, or Doctors of the *Mohammedan* Law, to whom he juſtified his Title, by ſhewing that his Father was ſuperannuated, that his Brother had been a Contemner of the Law, and a Favourer of Infidels, that he had violated their holy Religion by drinking Wine, and had a Deſign entirely to ſubvert the Conſtitution, and introduce Unbelievers into the Adminiſtration; and that it was only his Zeal to ſee the Precepts of their Great Prophet maintained, which could have induced him to take the Government upon him; but the Cadi ſtill oppoſing his Inauguration, he procured him to be depoſed, and a more complying High Prieſt ſubſtituted in his Room, who, being convinced by his Arguments, or terrified by his Troops, made no Oppoſition to his mounting the Throne. Thus this great Point was ſettled to his Satisfaction; and from this ſecond Inauguration, he, by a ſpecial Edict, directed they ſhould reckon the Years of his Reign. All Parts of the Empire ſubmitted to him, without the leaſt Diſpute, and all the Princes, his Neighbours, ſent to compliment him upon his Acceſſion, which, however, is to be underſtood of his firſt taking the Title of Emperor; and out of the Number of theſe Princes we muſt except the famous Shah *Abbas*, at that Time Monarch of *Perſia*, who, inſtead of complimenting him on the acquiring his Crown, reproached him with his many barbarous Murders, his unnatural Behaviour towards his Father, and his Treachery towards his Brethren. This Prince carried the Matter ſtill farther when *Aurengzebe* ſent a Miniſter to his Court about ſome private Affairs, and, at the ſame Time, charged with very rich Preſents, for he cauſed the Envoy's Beard to be pulled up by the Roots, and directed the Preſents to be burnt. He likewiſe granted his Protection to all the Malcontents that retired into *Perſia*, and was preparing to have invaded the *Indies* with a moſt powerful Army, when he was taken off by Death, which, perhaps, was as fortunate an Event for *Aurengzebe* as any in his whole Reign, ſince, all Things conſidered, ſuch an Invaſion might have been fatal, not ſo much from the Power of the *Perſians*, as from the general Diſcontent and Diſſatisfaction of the People throughout all *Indoſtan*, which, however, wore off by Degrees; for, after he was once poſſeſſed of the Empire, and firmly eſtabliſhed in the Poſſeſſion, *Aurengzebe* governed as well as any of his Predeceſſors, eſpecially with regard to the common People, towards whom he behaved with great Mildneſs and Moderation, at the ſame time that he adminiſtered the Government with great Wiſdom and Juſtice.

11. The ſecond Coronation of this Conqueror of his own Family, was performed on the fifteenth of *May*, but he ordered his Reign to be dated from the twelfth of that Month, in the Year of the *Hegira* 1609, and in the Year of our Lord 1669, when he was in the forty-firſt Year of his Age. He aſſumed, on this Occaſion, according to the Cuſtom of the Empire, a new Stile, and called himſelf *Moby O' Din Mohammed Aurengzebe Alumguir*, that is, *The Reviver of Religion*, Mohammed Aurengzebe, *Conqueror of the World*. This laſt Part of his Title gave great Offence to the *Perſian* Monarch, who thought that dethroning his Father, and murdering his Brothers, did not, by any means, give this new Emperor a Right to ſtile himſelf Conqueror of the World. *Aurengzebe*, however, gave himſelf very little Trouble about what other People thought; his Actions were entirely governed by three capital Maxims, which were theſe: Firſt, he ſtudied the Khoran aſſiduouſly, was extremely exact in the Exteriors of Religion, ſhewed infinite Reſpect to the Clergy, and was remarkably exact in doing Juſtice, and hearing Cauſes, by which he engaged the Eſteem of all the zealous *Mohammedans*, and preſerved the Affections of the Bulk of his Subjects. The ſecond was, to have always a numerous Army on Foot, commanded by himſelf, for it was his Opinion that, in all abſolute Governments, he who was at the Head of the Army was, in Fact, at the Head of the Empire. His third Maxim was, to be always active, that the great Officers under him might find ſomewhat to do, and not run into Cabals for want of Employment. He puſhed this laſt Principle ſo far, that falling ſoon after his Acceſſion into a dangerous Illneſs, and fearing that ſome Advantage might be taken from thence to create new Diſturbances in the Government, he cauſed himſelf to be carried to Council in his Bed, and behaved himſelf there with as much Temper and Patience as when he was in perfect Health. Some of the great Men, however, either from real Concern, or to make their Court to him, earneſtly preſſed him to ſpare this Fatigue, and to take Care of his Health, which was of ſo great Conſequence to the Empire; to which Advice he gave this remarkable Anſwer: "That the ſame good Providence "which had raiſed him to the Crown, required he ſhould "ſpend his Time in hearing and redreſſing the Grievances "of his Subjects; and that Kings ceaſed to be Kings "when they did not govern their Kingdoms themſelves, "but left their People to be devoured by rapacious Miniſters." It is very probable, that there was much of Diſſimulation, and little of Sincerity in this Anſwer, but I beg Leave to remark, that in order to be perfect, we ſhould regard the Sayings of Hypocrites, and imitate the Actions of good Men[d].

The Treatment which old Shah *Jehan* met with after this Son of his was quietly ſeated on the Throne, was much better than he had received before, which had ſuch an Effect on the old Man, that he freely gave him ſome Jewels of prodigious Value, which he had threatened to break to Pieces, and likewiſe yielded his Conſent to the Marriage of the new Emperor with his Niece, the Daughter of Sultan *Dara*, by which he was in Hopes of ſtrengthening his Title to the Empire. But in the midſt of theſe Regulations, *Aurengzebe* could not diveſt himſelf of his Suſpicions, but remained under the utmoſt Apprehenſions of his Generals, who were conſcious of thoſe wicked Arts by which he had raiſed himſelf to the Throne, and particularly of Emir *Jemla*, whom he advanced, indeed, to the higheſt Poſts. Him he employed in a diſtant War, commanding him to invade the Territories of the Rajah of *Acham*, which lie to the Eaſtward of *Bengal*. Emir *Jemla*, being a Man of ambitious Spirit, joyfully accepted the Command, propoſing to extend his Conqueſts as far as *China*; or, however, being at the Head of ſo powerful an Army, hoped to be in a Condition to give Laws to his Sovereign. The General met with great Succeſs in the Beginning of his Enterprize. The Rajah of *Acham* was defeated, his Capital *Chamdara* plundered, and that Prince forced to retire into the Mountains; but the rainy Seaſon coming on ſooner than was expected, the Country was immediately overflowed. The Army of Emir *Jemla* found it very difficult to ſubſiſt in their new Conqueſt, and not leſs difficult to retreat; however, Emir *Jemla* did at length find Means to return into *Bengal*, of which Province he was Governor, propoſing the next Year to complete his Conqueſt of the Kingdom of *Acham*; but his Army having contracted the Bloody-Flux in that wet Seaſon, were moſt of them ſwept away, and among the reſt, Emir *Jemla*, to the great Satisfaction of *Aurengzebe*, who hardly looked upon himſelf to be Emperor while he lived. As this Officer was a Man of a very enterpriſing Genius, his Maſter took the propereſt Method to be rid of him, by feeding his Vanity, and ſeeming to expect from his Zeal, Activity, and Abilities, the Conqueſt even of the Empire of *China*, though he was ſenſible that the Countries which lay between him and that Kingdom were impaſſable for great Armies, and therefore when Emir *Jemla* was dead, he made no farther Attempts on that Side; but, to encourage others to ſerve him, he gave *Mohammed*, the Son of Emir *Jemla*, all his Father's Eſtate, which by the Laws of the Empire devolved to the Crown.

---

[c] The Method he took in deſtroying this Brother differed little from that which he had practiſed towards Sultan *Dara*; for he not only pretended to make a Sacrifice of him to the publick Juſtice of the Empire, but directed that he ſhould die by the Bite of a Serpent; which, for that Purpoſe, was ſent to the Place where he was confined, and, as ſome ſay, bit him in his Sleep.

[d] As much a Hypocrite, and as deep a Diſſembler as this Monarch was, he choſe to avow things after they were done, and truſted rather to the Colourings that he was able to give them, than to the Methods that might have been taken either to conceal or obſcure the Facts. His conſtant Topick was Neceſſity. I knew my own Intentions, ſaid he, were to make the People of my Empire happy; and that I might be able to fulfil thoſe Intentions, I ſaw ſuch and ſuch Steps were neceſſary: It was not therefore by Choice that I acted cruelly in this or that Inſtance, but I took off particular Men, that I might have it in my Power to ſhew Juſtice and Mercy to a whole Nation. This is what he has actually ſaid, or at leaſt cauſed to be ſaid for him, in the Hiſtory of his Reign, penned by his Order; and it is very eaſy to diſcern, that the ſame Excuſes may be made by any bad Man for any bad Actions.

The next conſiderable Expedition in this Reign, was againſt the Pirates, who infeſted the Bay of *Bengal*, and had fortified themſelves at *Chatagan*, and other Places, on the Mouths of the *Ganges*, and in the Kingdom of *Aracan*, which lies contiguous to *Bengal*. Theſe Pirates conſiſted of *Europeans*, or *Franks*, of all Nations, but chiefly of *Portugueze*, who frequently made Slaves of the Mogul's Subjects, burnt and plundered the frontier Towns, and rendered both the Seas and the Shores very unſafe. Againſt theſe, *Aurengzebe* ſent another of his Generals, who ſuppreſſed the Pirates, and brought that Part of *India* under as peaceable and regular a Government as any other Part of the Empire. About the Beginning of the Year 1666 there happened ſome Stirs in the Empire, occaſioned by the Ambition of ſome of his own Children, but coloured with the fair Pretences of Zeal for the Conſtitution of the Empire, and Pity for its lawful Monarch, the unfortunate Shah *Jehan*, which, however, had no other Conſequence than making the innocent old Man a Victim to the Terror of his cruel and unnatural Son, who, to ſpare himſelf any farther Trouble, and to take away all ſuch Pretences for the future, ordered the old Emperor to be poiſoned at the Age of Seventy-four [e].

This, however, did not make him the eaſier, or diſpoſe his Sons to greater Obedience. Of theſe, excluding Sultan *Mohammed*, who lived and died in Priſon, he had four, *viz. Mohammed Mauzm*, that is, *the Illuſtrious*, was exceſſively ambitious, and began very early to form Deſigns againſt his Father's Life: Once he was very near carrying his Point; he cauſed a Pit to be dug very deep, in the Place where his Father's Tent was to be pitched, which was ſo well covered, that *Aurengzebe* very narrowly miſſed being buried in it, for which Sultan *Mohammed* was for many Years confined in a Dungeon, where he enjoyed not ſo much as a Ray of Day-light. Shah *Azem*, *i. e. the Glorious*, had likewiſe engaged in Plots of the ſame Nature, which proving unſucceſsful, and he fearing they might come to be detected, fled to the King of *Viſiapour*, where he remained till the Edge of his Father's Reſentment was worn off. But the greateſt Hazard this Emperor ever ran, was from the Ambition of Sultan *Akbar*, whom he truſted with a great Army, in order to reduce one of the Rajahs, who had rebelled; but the firſt News that the Emperor heard, was, that his Son had joined the Rebel, and that they were marching towards him with ſeventy thouſand Horſe, and a proportionable Number of Foot. The Troops which *Aurengzebe* had about him, were in no Capacity of diſputing with ſuch a Force, and therefore he had Recourſe to his old Artifice; that is to ſay, he ſent a Letter to the Prince, which he contrived the Rajah ſhould intercept, wherein he commended his Son's Conduct, in drawing the Army of the Idolaters to that Place, aſſuring him, he would advance the next Day to ſuch a Poſt, where, having the Rajah's Forces between them, they might charge them on all Sides, and that it was not poſſible any of them ſhould eſcape. The Eunuch, by whom this Letter was ſent, being brought Priſoner to the Camp by the Rajah's Out-guards, and the Letter read among the Officers of the *Raſhpouts*, occaſioned a terrible Conſternation in the Rajah's Army, and notwithſtanding Sultan *Akbar* ſwore on the Alcoran it was a Contrivance of his Father's, he found it impoſſible to remove thoſe Jealouſies the Letter had created, which gave the Mogul Time to reinforce his Troops. The Rajah was afterwards defeated, and *Akbar* fled with a Body of four thouſand Horſe to another Pagan Prince; but being cloſely purſued by his Father's Troops, was forced to fly to the *Portugueze* at *Goa* for Protection, who tranſported him to *Perſia*, where he was very kindly entertained by the Shah, and afterwards, it is ſaid, married his Daughter; nor could the Mogul, either by Threats or Promiſes, ever procure him to be delivered up. *Aurengzebe*, however, fell upon the Rajah *Seva*, who had aſſiſted *Akbar* in his Rebellion, and, having taken ſeveral of his Towns, beſieged him in his capital City of *Gingy*, but they held out a Siege of many Years, nor was it taken while *Seva* lived, though the Mogul, in the mean time, ſubdued both the Kingdoms of *Viſiapour* and *Golconda*. The youngeſt of his Sons was Sultan *Kambukſh*, who had as much Ambition as any of the reſt, but he knew better how to conceal it, and therefore never took up Arms againſt him, but laboured all he could to gain his good Graces by Flattery [f].

In this Manner the Emperor ſpent many Years of his Life, without loſing any Part of his Authority, which was in a great meaſure owing to his florid Health, and his retaining the free and perfect Uſe of his Senſes. In order to preſerve them, he led a Life as regular as that of a religious Perſon, reſtrained by a certain Rule, and kept his Paſſions under ſuch Reſtraint, that he was never known to ſhew any Sign of an Alteration in his Temper; ſo that there was no gueſſing, either from his Countenance, the Tone of his Voice, or from his Geſtures, at what paſſed within. He loved Regularity extremely, and obſerved it himſelf with ſuch Strictneſs, that every-body about him knew his Duty, and knew when it was to be performed; and all who had any Petitions to preſent, or Complaints to make, knew when they might have Admiſſion. To gain Time for going through ſuch a Variety of Buſineſs, and that one Thing might not interfere with another, this was the Emperor's conſtant Courſe of Life. Early in the Morning, before Break of Day, he bathed, and ſpent ſome Hours in his Devotions; then having eaten a little Rice, or Sweetmeats, ſhut himſelf up with his Secretaries, and before Noon he gave publick Audience to his Subjects. After which he prayed again, and then went to Dinner, his Table being furniſhed only with Rice, Herbs, Fruits, or Sweetmeats; for neither Fleſh, or Fiſh, or any ſtrong Liquors, were ever brought before him. In the Afternoon he gave Audience again; which being over, he prayed a third and fourth Time. The Remainder of the Day, till two Hours after it was dark, he ſpent in the private Concerns of his Family, then he ſupped, and ſlept afterwards only two Hours; after which, it is ſaid, he read the Alcoran, and prayed almoſt all the remaining Part of the Night. And here we have a remarkable Inſtance of what vaſt Advantage an abſtemious regular Courſe of Living is towards the procuring Health and long Life, and rendering a Prince fit for the moſt important and intricate Affairs; for this Emperor, notwithſtanding he was an unwearied Hearer of Cauſes, and conſtantly directed the Affairs of ſo vaſt an Empire, and conquered ſeveral large Kingdoms, lived without contracting any Diſtemper, and neither his Judgment or Memory were at all impaired when he was near Ninety Years of Age. This Regularity was not at all the Effect either of Decay in his Conſtitution, or of Repentance on account of paſt Liberties. He was altogether as temperate in the Vigour of his Age as in the Decline of it, and from the ſame Principles of Wiſdom, Moderation, and Prudence; for it is related of him, that even in his Youth, having ſingled out a young Lady in the Haram to lie with him one Night, and ſhe had dreſſed and prepared herſelf to receive her Royal Lover, the King coming into the Apartments at the appointed Time, inſtead of going to Bed, fell to reading, and between his Books and his Devotions paſſed the whole Night without ever taking Notice of the expecting Lady. He gratified, however, his Appetites, when they were very ſtrong, from the very ſame Motives that induced him to reſtrain them, that is to ſay, that they might not diſturb or diſtract his Reaſon.

---

[e] Authors differ very much in regard to this Fact; for ſome poſitively aſſert, that he compelled his Father to drink Poiſon; and others, that Shah *Jehan* died of old Age, and thoſe Infirmities which he had brought upon himſelf by his Vices. One Thing is certain, that his being a Bigot to the *Mohammedan* Religion, expoſed *Aurengzebe* to the Hatred and Calumnies of the Miſſionaries. They very well knew that the general Character of this Prince would make any thing they ſaid of him believed; and, in the Confidence of this, it is very poſſible they may have charged him with Crimes of which he was never guilty.

[f] The Behaviour of theſe Princes plainly ſhew how much Example goes beyond Precept; for moſt certainly there never was a Father more careful of his Children's Education than *Aurengzebe*. He did not ſuffer his Sons, according to the general Cuſtom of the Eaſt, to remain till they were grown Men, in the Haram or Women's Apartment, but took care that they ſhould not only be inſtructed in the Sciences, but alſo made acquainted with the World, and for this Reaſon called them to Council, and employed them in his Armies, though for his own Safety he very ſeldom truſted them with independent Commands. In ſhort, he was a very bad Man, with very great Abilities.

He conducted his Conqueſts in the ſame manner, contenting himſelf for many Years with the Tributes of two neighbouring Kingdoms; but at length finding it neceſſary to employ his Troops, and keep his Army in Action, he in the Years 1685 and 1686, deprived the Kings of *Viſiapour* and *Golconda*, even of that Shadow of Sovereignty which till then he had left them, and bringing them Priſoners to his Camp, annexed their Kingdoms as Provinces to his Empire, and appointed Viceroys to govern them, in which State they have continued ever ſince. Theſe Conqueſts gave *Aurengzebe* the Sovereignty of moſt of the other petty States in the South of the *Peninſula*, as far as Cape *Comorin*, for theſe were ſubject or tributary to one or other of thoſe Kings before the Great Mogul ſubdued them. There are indeed ſome Rajahs or Pagan Princes in the Mountains, who ſtill govern their own People; but theſe ſeldom think fit to attack the Mogul, and are very well ſatisfied if he will let them remain at Quiet in their little Principalities. Some of them alſo are his Allies, and aſſiſted him, in the Conqueſt of *Viſiapour* and *Golconda*, and theſe are ſuffered to retain their ancient Juriſdiction. However, it may properly enough be ſaid, that the Empire of the Great Mogul has no other Boundaries than the Ocean towards the South, for the Sea-Coaſts are generally in his Power, nor is there any Rajah now left able to meet him in the Field, though ſome few of them may ſkulk in inacceſſible Mountains, and boaſt to this Day that they have not ſubmitted to his Arms.

It was in reducing theſe Kingdoms, and making freſh Acceſſions to the Empire, that this great Monarch ſpent his Time, and ſpent it in a Camp, and in the Field. He thought that every Palace, every Caſtle, had the Air of a Priſon, and therefore he ſeldom entered one, but when his Affairs would allow him ſo much Reſt; he was content to ſtay ſometimes a conſiderable Space in the ſame Camp; as particularly in that near *Galgala*, after the Defeat of his Son Sultan *Akbar*, he remained no leſs than four Years. His Magnificence appeared, however, as great in this military Life, as if, like his Anceſtors, he had founded Cities, and erected Palaces; for when he decamped at any time, no leſs than one hundred and twenty Elephants, one thouſand and four hundred Camels, and four hundred Carts, were employed in carrying the Royal Tents, Baggage and Furniture, and theſe were always ſent away the Night before, the Emperor and every Omrah in the Army having a double Suit of Tents and Field Equipage; ſo that when they came to their Ground, the Camp was always ready pitched and Proviſions of all Kinds to be had as ſoon as the March was over. It was by theſe extraordinary Precautions, and by a ſtrict Adherence to theſe Maxims, which, from a ſteady Attention to the Situation of Things in that Country, he at firſt laid down, that for ſo many Years he governed with ſuch great Eaſe ſo vaſt an Empire, and left it not only entire, but very much extended to his Children. In one thing only his Fortune failed him, which was in the War againſt *Seva-Rajah*, commonly called by our Writers of Travels and Voyages *Seva-gi*, of whom we have hitherto had ſo dark an Account, that it may not be amiſs to take this Opportunity of ſetting it at once in a clear Light. This *Seva* was originally in the Service of the King of *Viſiapour*, and would have perſuaded him to have united with other Princes his Neighbours, when *Aurengzebe* firſt attacked their Countries before he aſcended the Throne of the Moguls: But that Prince would neither liſten to his Advice, nor believe that it was given with any other View than to put himſelf at the Head of an Army, with which he might attempt Things to his Prejudice. This unjuſt Suſpicion had a very bad Effect, for it put the Rajah *Seva* upon ſeizing a Part of his Maſter's Dominions, which with ſome of the adjacent Countries were confirmed to him by *Aurengzebe*; but when that Prince had dethroned his Father, and was eſtabliſhed in the Empire, he was for depriving Rajah *Seva* of what he had before given him, in order to annex thoſe Countries to his Dominions, which was the firſt Cauſe of the War; for this Rajah *Seva* was as great a General, and a much better Man, than the Emperor himſelf; and by his Behaviour plainly proved, that if the reſt of the *Indian* Princes had been Men of like Courage and Spirit, their Kingdoms had never become Provinces of the Mogul Empire. In order to accompliſh this Deſign, and remove ſo formidable a Prince out of his Neighbourhood, *Aurengzebe* commanded his Uncle *Chaſta-Khan*, with a numerous Army, to march againſt him; upon which Rajah *Seva* retired to his Mountains, where he bid Defiance to the whole Forces of the Mogul, and was very near ſurpriſing *Chaſta-Khan* one Night in his Tent, having killed his Son, and wounded the General himſelf; and in ſhort, he ſo harraſſed the Mogul's Troops, that *Chaſta-Khan* was glad to quit the Enterprize, and return to his Government of *Aurengabad*.

Rajah *Seva* ſoon after formed a Project of ſurpriſing *Surat*, a Port of the greateſt Trade in the Mogul's Dominions. To cover his Deſign, he marched with the greateſt Part of his Troops the direct contrary Way, and while *Aurengzebe*'s Forces were preparing to oppoſe him, he, diſguiſed in the Habit of a Faquir, travelled to *Surat* on Foot, in order to view the Avenues to that City, and finding it a Place not capable of making any great Defence, at his Return to the Camp, he took with him no more than four thouſand Men, with whom he marched with the utmoſt Secreſy and Expedition, inſomuch that the Governor had no Notice of his Approach, till he came within Sight of the Town, and then thought fit to retire into the Caſtle, with the Garriſon, and the Effects of the greateſt Value. The Inhabitants alſo forſook their Houſes, and fled into the Country, ſo that the Rajah had the plundering one of the richeſt Towns in the World four Days together, without any manner of Oppoſition, except what he met with from the *Engliſh* and *Dutch* Factories, who, having Time to erect a Battery or two of great Guns before their Houſes, ſaved all their Effects; nor was he prepared to attack the Caſtles, and therefore thought fit to march off with the Plunder he had got, which was computed to amount to in Gold, Silver, and Jewels only, to the Value of three Millions Sterling at leaſt; for in the Houſe of one *Banjan* Merchant, it is ſaid, he found twenty-two Pound Weight of ſtrung Pearl, beſides a great Quantity of others unpierced [g].

This

---

[g] The Courage and Conduct of this *Indian* General is very much magnified by moſt of our Writers, on the Credit of the Relations received from ſuch as then reſided in the *Indies*, and particularly at *Surat*, when the Thing happened. But there are two Remarks that are neceſſary, in order to ſet this Action in a true Light. The firſt is, that he had formed in his Mind a Project of becoming at once a Prince able to defend himſelf againſt his old Maſter, and againſt the Mogul. It was a bold Reſolution, but at the ſame time it was neceſſary. If he had not a Fund ſufficient for an Army equal to that of the Mogul, his Force ſignified nothing, and, from being a Prince, he muſt ſoon have ſunk into a Highwayman. The Plunder of *Surat* he judged would be ſufficient to anſwer his Purpoſes; ſo that conſidered in this Light, this appears a very different Exploit from what it does in moſt of our

Relations;

This Enterprize of *Seva*'s was undertaken in *January* 1664, and though *Aurengzebe* was piqued to the Heart to ſee a little Pagan Prince contemn his Power, and plunder his beſt Towns at Pleaſure, he was not then, it ſeems, in a Condition to call him to an Account, and therefore thought fit to ſtifle his Reſentment; nay, he extolled the ſurprizing of *Surat* as one of the greateſt Actions that ever was performed, and inſinuated to the Rajahs, who attended the Court, that he was ambitious of ſeeing ſo great a Hero, deſiring they would uſe their utmoſt Art to invite him into his Service, and gave them his Word he would protect him from all Violence. *Seva* hereupon ventured himſelf and his Son in the Mogul's Camp, where they were received at firſt with all imaginable Careſſes; but after ſome Months, obſerving a more than ordinary Coldneſs in the Mogul's Behaviour to him, and having ſome Intimation that there was a Deſign to diſpatch him, he made his Eſcape, with his Son, into *Viſiapour*, where he and his Deſcendants maintained long Wars with *Aurengzebe*. That Monarch indeed outlived him, but was never able to reduce all his Country; and during the Confuſions that happened after his Death, the Poſterity of this *Indian* Prince grew ſtronger, and more powerful every Day, and partly by erecting Forts in convenient Places, partly by their Civilities to ſuch as trade with them, have eſtabliſhed a Power, that it will not be eaſy to ſubdue. According to the very lateſt Accounts we have from the *Indies*, the preſent *Sehou Rajah*, who keeps his Court at *Settara* in *Decan*, is a Deſcendant of this *Seva Rajah*. He is a Prince of the *Mobarattas* or *Ganims*, who have of late years acquired a ſurprizing Power, making great Inroads into the Mogul's Territories, and levying a Tribute from ſeveral Provinces. They have lately taken the Iſland of *Salſet*, the Caſtle and Town of *Bachaim*, with other Places from the *Portugueze*; and have above two hundred thouſand Horſe in the Northern, Southern, and Inland Provinces.

But, to return to *Aurengzebe*, of whom we have not much more to ſay. As ſoon as he began to feel the Effects of Age, and that his Strength was on the Decay, he reſolved to ſet his eldeſt Son Sultan *Mohammed Mauzm*, at Liberty, and beſtowed upon him the Province of *Indoſtan*. He gave his ſecond Son, *Azem*, the Government of *Decan*, and the Provinces depending upon it. To his youngeſt Son he gave the new-conquered Provinces, and ſhewed himſelf extremely ſolicitous about his Preſervation. A little before his Death, he was reduced very low by a dangerous Diſeaſe, which put all his Sons in Motion, and ſhewed him plainly, that they regarded much more the Example he had left them in his Conduct, than the wiſe and peaceable Leſſons he had taught them. He quieted however theſe Diſturbances; for his eldeſt Son, in Obedience to his Command, retired into his Province, but Sultan *Azem* continued to advance, yet with a ſmall Body of Troops however; and as if he came to viſit his Father, and to enquire after his Health, which the old Emperor took very kindly, embraced him, and kept him with him as long as he lived, which was not above a few Months, for he was now in a manner worn out; and yet his Senſes remained vigorous to the laſt.

He was then incamped in the Neighbourhood of *Ahmednagur*, in the Province of *Dowlatabad*, where he expired on the Twenty-firſt of *February*, 1707, having reigned forty-eight Years, and lived eighty-nine. We are told, by many Hiſtorians, that he lived to upwards of a hundred, which is a Miſtake; but we muſt not ſay the ſame as to ſuch Eaſtearn Authors as report that he was upwards of Ninety, for they reckon by lunar Years; according to which, he alſo reigned above fifty Years. It does not appear that he intended any of his Children ſhould ſucceed him in the Whole of his Empire, not out of any Want of Affection, or through Envy of their Glory, but becauſe he judged it for their mutual Intereſt, to keep that Diviſion which had been made by him in his Life-time; yet he foreſaw that this would never take Place, and therefore contented himſelf with propoſing it as a Thing reaſonable and proper, but without any expreſs Command, which he knew would be to no Purpoſe. Some of the old Captains that were about him, were deſirous that he ſhould have declared his eldeſt Son Sultan *Mohammed Mauzm*, his Succeſſor, which, at firſt, he declined; and when urged farther, he could not help telling them plainly, I have done for him what I can, I have made him King of *Indoſtan*; if he will have any thing more, he muſt aſk it of Almighty God, in whoſe Power it is. As his Will is a very ſingular Piece, and may be of peculiar Uſe, not only to the Hiſtory of the Mogul Empire, but in explaining the Character of its Author, I thought it might not be amiſs to inſert it here, eſpecially as it is as ſhort as it is curious.

A Tranſlation *of* AURENGZEBE's Laſt Will.

" I CAME with empty Hands into the World, and " with empty Hands I quit it. Whoever of my fortunate " Children ſhall chance to rule the Empire, let him not " moleſt *Mohammed Kambukſh*, ſhould he reſt contented " with the two new Soubahs. There cannot be a better " Vizir than *Emir al Omrah* [h]. Let all the King's Ser- " vants be true and faithful to *Mohammed Azem Shah*. " Whoever ſhall chance to have the Empire, let him not " turn out, or moleſt thoſe born or bred up in my Houſe. " If the Diviſion, I formerly made, proves agreeable to " my Children, it will prevent a great deal of Confuſion " and Bloodſhed.

" There are too imperial Seats, *Agra* and *Dehly*: " Whoever ſettles in *Agra*, may have the Province there- " of, *Decan*, *Malva*, and *Guzurat*; and who reſides at " *Dehly*, may have *Cabul*, and the other Provinces. I " came naked into the World, and naked I go out of it. " Let no Enſigns, or Royal Pomp, accompany my Fu- " neral. Let *Hamid o' din Khan*, who is faithful and truſty, " convey my Corpſe to the Place of *Shah Zen al din* [i], and " make a Tomb for it in the ſame Manner as is done for " *Derveiſhes*. Let not my fortunate Children give them- " ſelves any Concern about a Monument.

" There is, in my private Treaſury, Fifty-ſeven thou- " ſand three hundred and eighty two Rupees, (which " make Seven thouſand one hundred and ſeventy-two " Pounds fifteen Shillings of our Money.) Let a thou- " ſand Rupees, which make One hundred and twenty- " five Pounds of our Money, be diſtributed among the " Poor at my Funeral."

It is very remarkable, that this Monarch perſiſted, to the laſt, in maintaining his Character of a devout *Mohammedan*, and deſpiſed, after Death, all thoſe Honours which had been paid to his Predeceſſors, as much as he did the Pomp and Magnificence, and the luxurious Pleaſures

---

Relations; for they make Rajah *Seva* an able Partizan, whereas in truth he acted the Partizan only as an under Character, that was neceſſary to make him a Prince. When his Coffers were again exhauſted, he had Recourſe a ſecond time to the ſame Expedient, and, which is very extraordinary, he demanded the Sum he wanted, and ſent the Citizens of *Surat* Word of the Day and Hour when he would come to receive it, and performed it again with as much Facility as at firſt. The ſecond Remark is, that the *Indian* Rajahs going always to Court with a great number of Attendants, he ſent his Troops in ſmall Bodies, ſo that they were not ſuſpected of being in his Service, till they were actually in the Place, and then it was too late to think of Defence; for having taken their ſeveral Poſts, the People could not ſtir in any Quarter of *Surat*, without the immediate Danger of having their Throats cut. This takes off the Improbability of the Thing, which otherwiſe would be ſo great, that we could hardly credit it.

[h] This Title of *Emir al Omra*, rendered literally, is the *Prince of Princes*; for *Omra* is the Plural of *Emir*, but rendered ſignifically, and with due Regard to the Idiom of Languages, ſignifies *Prime Miniſter*. This great Officer in the Court of the Mogul, has many more Titles agreeable to the Pomp of the Eaſtern Language. He is, for Example, ſtiled, The Security of Fortune and Truſt worthy of the Empire, Chief of the Omrahs of exalted Rank; choſen among the Khans of the High Court; Manager of the Empire, and of its Riches, Director of its Fortune and Grandeur; Maſter of the Sword and Pen; Exalter of the Standard and Enſign; Vizir of true Judgment; Prop of the Empire; Supreme Manager of its Affairs; The Victorious General; The Grateful Friend, and Patron for all Vizirs.

[i] *Zen al din* ſignifies literally, *The Ornament of Religion*, and *Shah*, which ſignifies King, is a Title frequently given to *Derveiſhes*. This *Zen al din* was a remarkable *Santon*, who kept his Cell near that City, and was buried there, which being reckoned a ſanctified Place, *Aurengzebe* in his Will, directed that he ſhould be interred there. As this Prince was very zealous, or, at leaſt pretended to be ſo, for Mohammediſm, thoſe of that Religion make a great Merit of viſiting his Tomb, eſpecially on the 28th of the Month *Zeecadeh*, which was the Day he died on.

of their Palaces while living. He thought, it ſeems, that Power and Pleaſure were incompatible, and that the former ought to be preferred to the latter: How far he was in the right I pretend not to determine; but, moſt evident it is, that he took the right Method to obtain what he choſe, and to keep it when obtained. His Government, with reſpect to his Subjects in general, was exact without Severity; for, though he improved the Revenues of the Empire, and took care that the Governors of the reſpective Provinces ſhould pay into the Imperial Treaſury the Tributes levied upon the People, yet he alſo took care that there ſhould be none of that Extortion or Oppreſſion which had been practiſed under the Reign of his Father, but allowed all his Officers competent Salaries, and puniſhed them ſeverely, if they were guilty of any Exactions.

He kept up, in the ſeveral Provinces of his Empire, an Army of regular Troops, amounting, in Horſe and Foot, to upwards of Nine hundred thouſand, who were regularly paid and well diſciplined, ſo that his Sons were in Want of Soldiers, when they came, after his Death, to diſpute the Succeſſion. In his Father's Time, the Empire conſiſted of twenty-three Provinces, the Revenues of which amounted to Twenty-ſeven Millions and a half of our Money; but, in the latter End of his Father's Time, the three Provinces of *Balkh*, *Kandahar*, and *Bidduckſhan* were loſt, which produced a Revenue of Six hundred thouſand Pounds; and yet, at his Deceaſe, he left his Dominions in a better Condition than he found them, as will appear from the following ſuccinct Table of Provinces, and their Revenues, which may be depended upon, and which will be of great Uſe in underſtanding the ſubſequent Part of this Work, as well as other Books which treat of the Mogul Empire.

12. The great Emperor, *Aurengzebe*, had no ſooner breathed his laſt, than his Sons were immediately in Motion, in order, each of them, to force his Paſſage to the Throne at the Head of an Army. His ſecond Son being on the Spot, had ſome Advantage; he aſſumed immediately all the Enſigns of the Imperial Dignity, took the Title of *Mohammed Azem Shâh*, i. e. *The glorious, or, illuſtrious Monarch*; and, at the ſame Time, by the Advice of his Miniſters, poſted Guards on the Frontiers of the Province, to prevent any Correſpondence between his elder Brother and the Grandees of the Court. He made great Preſents to the principal Miniſters and Officers of the Army, and much greater Promiſes, in which he certainly acted very wiſely. But, being naturally of a haughty Temper, he could not help ſhewing it in the Letters that he wrote the Rajahs, in which he diſclaimed their Aſſiſtance, but threatened, at the ſame time, to puniſh, with the utmoſt Severity, ſuch as ſhould preſume to take the Field againſt him.

His elder Brother, *Mohammed Mauzm*, or, as he is commonly ſtiled, by our *European* Writers (from the Title he afterwards aſſumed) *Shâh Alum*, i. e. *King of the World*, was then in *Cabuliſtan*, the moſt diſtant Part of the Empire; but he ſoon raiſed Forces ſufficient to put him in a Condition to make good his Claim to the Empire; and that Kindneſs and Alacrity with which he received every Body, did him as much Service as his Arms. He wrote ſeveral Letters to ſuch Governors of Provinces as he ſuppoſed leaſt in his Intereſt, importing his great Regard for their Perſons, and his Deſire that they would remain neuter till the Empire was eſtabliſhed on a ſettled Foundation, and make Uſe of their Troops to protect the People in their reſpective Governments, from the Miſeries incident to a Civil War. This Advice they took very kindly, and followed it very exactly. When *Shâh Alum* had advanced as far as *Debly*, that Capital, without any Scruple, opened her Gates to him, and he there ſeated himſelf on the Throne of his Grandfather *Shâh Jehan*.

He marched from thence towards *Agra*, and on the Banks of the River *Chun*, both Armies met. That of *Shâh Alum* conſiſted of 150,000 Horſe, and 178,000 Foot, excluſive of the Auxiliaries furniſhed by the Rajahs and Shah *Azem*, had very near the ſame Force. The Battle was fought in the Middle of the Month of *June*, with great Obſtinacy on both Sides, and laſted for near three Days; but, at length, Fortune declared in Favour of the elder Brother, and *Shâh Azem* loſt the Field, the Crown, and his Life together. Some Writers tell us, that when he found himſelf ſurrounded, and heard one of his Brother's Sons calling out to take him alive, he was ſo tranſported with Rage and Deſpair that he killed himſelf with his own Poniard, to avoid falling into the Hands of his Enemies, of whom he is ſaid to have ſlain twenty before he fell. This ſingle Battle put an End to the Diſpute, and the Conqueror entering *Agra* in Triumph, aſcended the Throne of his Father, and was immediately owned for their Emperor, by ſuch of his Brother's Miniſters and Generals as eſcaped from the Defeat [k].

13. Sultan *Mohammed Mauzm*, or *Shâh Alum*, aſſumed, on his mounting the Throne at *Agra*, the Title of *Koteb o' din Bahadr Shâh*, i. e. *The Axis of Religion, the moſt valiant Monarch*; thence he is called by our Writers ſimply *Badour Shâh*. He declared *Mohammed Khan* his Prime Miniſter, and *Zulſekar Khan* his High Treaſurer: So that under this Reign thoſe Offices were diſtinct, though under many of the Mogul Emperors they had been enjoyed by the ſame Perſon. As ſoon as every thing was ſettled, he formed a Deſign of attacking his ſurviving Brother, upon what Provocation is not very clear; but, if what ſome Writers relate of this Monarch be true, he was not the moſt tenacious Man in the World of his Word.

After that great Battle, which gave him the Empire, he is reported to have been ſo overjoyed, that he offered the Rajahs, who had aſſiſted him, whatever Proofs of Gratitude they could poſſibly deſire, and gave them his Conſent freely, to conſider what they would aſk. After conſulting among themſelves, they deſired him to grant them the free Exerciſe of their Religion, with leave to rebuild their Pagods, or Temples, to exempt them from the Capitation of Poll-Tax, which *Aurengzebe* had impoſed upon them, to admit them to Offices and Employments; and that with reſpect to Cuſtoms and Tolls, and generally in all other Points, they might be treated in the ſame Manner as *Mohammedans*, which Privileges were all granted them by *Bahadr Shâh*, but they did not enjoy them long.

---

[k] This has been always a common Practice in the Mogul Empire, where, without Victory, no Cauſe is good, and with it none is ever queſtioned, but every Man ſubmits to the Conqueror, and acknowledges him for his lawful Sovereign To day, with whom Yeſterday it would have been Treaſon to have had the leaſt Correſpondence.

His Sons and Miniſters repreſented to him with ſo much Earneſtneſs, that he would thereby deprive himſelf of his principal Revenues, that his Finances were exhauſted, that he had Occaſion for money to maintain the War againſt his Brother, that he would make the Rajahs and Idolaters too powerful, and that they might turn their Arms againſt him: To which they added ſo many other Reaſons, that they obliged him to revoke all the Grants he had made to the Rajahs. Thoſe Princes reſenting the Violation of his Word, took Arms, not to make War upon him with their joint Forces, but to plunder and ravage the Country, as they ſtill do without any Oppoſition, about their own Territories, which are ſituated in the Mountains. In the mean time, *Bahadr Shâh*, who could not remedy it, becauſe of the War he was engaged in, advanced into the Dominions of his Brother, with an Army of fifty thouſaud Horſe, and thirty thouſand Foot.

Khamoukſh, who was in the Neighbourhood of *Hyderabad*, where he drew together the greateſt Force he was able, which, however, was far from being ſuch as might enable him to take the Field. All that he could do was to ſecure himſelf behind ſome good Retrenchments; with a Handful of Troops he made a very glorious Defence, till, at laſt, over-powered by Numbers, his Army was defeated, and himſelf mortally wounded and taken Priſoner; in which Condition, however, he continued for one Day, and then expired. Thus the whole Dominions of *Aurenzebe* were united under the Power of the eldeſt of his ſurviving Sons, of whoſe Reign no farther Particulars are recorded, except that he extinguiſhed ſome religious Diſputes at *Labor*, which, otherwiſe, were like to have excited a Rebellion. He enjoyed the Empire only ſix Years, and then died in a good old Age, univerſally regretted by his Subjects [l].

14. This Monarch was no ſooner expired than a Civil War was again kindled in the Empire; for *Jehandar Shah*, *Jehan Shah*, and *Raffeeih al Shan*, Sons to *Bahadr Shah*, having joined againſt their Brother *Azîm al Shan*, defeated and killed him. His Treaſure falling into the Hands of *Zulfecar Khan*, who was in *Jehandar Shah*'s Intereſt, they marched againſt the other two Brother, *Jehan Shah* and *Raffeeih al Shan*, and having overcome them, put them to Death. Their Deaths ſecured the Empire to *Jehandar Shah*, and *Zulfecar Khan* became his Vizir. He was a weak Prince, and ſo fooliſhly fond of one of his Wives, called *Lal Koar*, who was of an obſcure mean Parentage, and a Singer by Profeſſion, that he endeavoured to fill the Places of the greateſt Truſt and Honours in the Empire with her baſe Relations, which ſo diſguſted *Seyd Abdallah Khan*, and *Seyd Hoſſan Khan*, two Brother of great Authority in the Empire, and who had a Body of choice Troops, that they reſolved to place *Mohammed Furrukhſir* on the Throne.

This Prince, notwithſtanding he had but little Treaſure, got Numbers to join him. At firſt, he defeated *Eaz o' din*, *Jehandar Shah*'s Son; and afterwards *Jehandar Shah* himſelf was defeated near *Agra*, and was obliged to fly, though he had near 100,000 Horſe and Foot.

Mohammed Furrukhſir, Son to *Azîm al Shan*, being ſettled on the Throne, *Seyd Abdallah Khan* was made Vizir, with the Title of *Koteb al Mulück*, and *Jarba Vaſa*, that is, *Faithful Friend*, and *Hoſſan Ali Khan* made *Mir Bukhſki*, or Pay-maſter-General, with the Title of *Emir al Omrah*. The Emperor was only ſo in Name, for theſe two had the abſolute Management of every Thing; *Furrukhſir*, at laſt, with the Advice, and at the Inſtigation of *Khandoran* and *Mir Jumla*, began to contrive Means to cut off the two Brothers. They on the other Hand were intent on nothing ſo much as inriching themſelves. They turned out *Mizam al Mulluck* from his Government of *Decan*, and *Hoſſan Ali Khan* went thither himſelf. At laſt, the two Brothers finding the Emperor jealous of their Power, reſolved to remove him, and put a more paſſive Prince in his ſtead. Having got *Ajeet Sang*, the *Maha Rajah*, and the Emperor's Father-in-law, to join them, they confined him, and ſhortly after they blinded him, by drawing a red-hot Wire over his Eyes; and on the 6th of *February* 1719, offering him a thouſand Indignities and Inſults, put him to Death, after a Reign of ſeven Years. It was in this Emperor's Reign that the *Engliſh Eaſt-India* Company obtained a Firman, exempting them from paying any Duties in his Dominions [m].

The *Seyds*, after having thus traiterouſly and treacherouſly deſtroyed *Furrukhſir*, took *Reſſeeih al Darjat*, Son to *Raffeeih al Shan*, out of the Caſtle of *Selimgur*, where the Royal Family are confined, and placed him on the Throne. He had not reigned above three Months before they murdered him; and ſending for his Brother *Raffeeih al Dowlat*, placed him on the Throne, who in a few Days afterwards died a natural Death, and was ſucceeded by the preſent Emperor *Naſr o' din Mohammed Shah*, Son to *Jehan Shah*, who, being raiſed to that Dignity by the *Seyds*, *Hoſſan Ali Khan*, and *Abdallah Khan*, they kept the Power ſo much in their own Hands, that he had nothing except the Name of Emperor, which made him eagerly wiſh for an Opportunity of making himſelf independent, and revenging the Death of his Uncle's Son.

Mohammed Shah, in *October* 1720, marched with a numerous Army, from *Agra* towards *Decan*, accompanied by *Hoſſan Ali Khan*, and ſeveral Omrahs. When they came to halt, after the firſt Day's March, the Emperor called a Divan, from which, after a ſhort Stay, he withdrew. As ſoon as he was gone, *Khanderan*, and ſeveral others of the principal Omrahs, who were beſt affected to the Royal Family, drew their Swords, and falling upon *Hoſſan Ali Khan*, killed him and two or three of his Friends. When this was over the Emperor thought no more of his firſt Expedition, but marched back with his Army to *Dehli*, in order to cut off *Seyd Abdallah Khan*, the other Brother, who was in that Capital with a great Force, and who, hearing of his Brother's Murder, had taken out Sultan *Ibrahim*, Son to *Raffeeih Shan*, and proclaimed him Emperor, gathering together what Treaſure he could, and having broke to Pieces the famous Throne of *Shah Jehan*, which coſt eleven Millions of our Money, in order to raiſe wherewithal to pay his Soldiers. By the Help of this extraordinary Supply he was very ſoon in a Condition to look his Enemies in the Face, and accordingly marched with fifty thouſand Horſe to give the Emperor Battle.

It was on the ſecond of *November* 1720, that thoſe Armies came to a general Engagement, and after an obſtinate and bloody Battle *Abdallah Khan*'s Forces were defeated, and himſelf deſperately wounded and taken Priſoner. The young Sultan, whom he had brought with him to countenance his Rebellion, being taken, had no other Puniſhment inflicted on him, but being ſent back to his old Quarters the Caſtle of *Selimgur*.

Upon this Victory the Emperor made great Rejoicings, and appointed *Mohammed Amin Khan* Vizir, and returned to *Dehli*. *Abdallah Khan* being brought before him, the Emperor ſaid to him, "Traitor, ſee what thou haſt "done!" To which he anſwered, "I took you out of "Priſon, and gave you an Empire. My Brother being "murdered by your Order, as I was at the Head of an "Army, Self-preſervation directed me to make uſe of "it; Providence decreed you the Victory, uſe it as you "think proper, by treating this Clay as your Reſentment "or Intereſt may prompt you." Then the Emperor ſaid to him, "What Harm had *Furrukhſir* done to you?" To which he anſwered; "He grew jealous of mine and "my Brother's Power; and, as it was inconſiſtent with "our Intereſt to reſign it into his Hands, we thought it "dangerous to loſe any Time in removing him. Had "Providence permitted us to have been ſo prudent hitherto, we ſhould not have come to this tragical End; "but when Fate deſtines one to Ruin, it begins by blinding the Eyes of his Underſtanding." Then the Emperor

---

[l] We have not, ſince this Emperor's Reign, had any diſtinct Account in *Europe*, of what has paſt in this Empire, and therefore the Reader muſt be content with a very ſummary Relation of thoſe Matters here; and indeed theſe Reigns themſelves are ſo ſhort, that, except their Beginnings and Endings, they contain little or nothing worthy of Notice.

[m] This Firman, or Imperial Decree, is dated on the 4th of the Month *Safer*, in the fifth Year of the Emperor *Mohammed Furrukhſir*'s Reign; that is, on the 6th of *January* 1716-17. It was ſolicited by Mr. *John Surman* and an *Armenian* Merchant, on Behalf of the *Eaſt India* Company, to whom it is a Thing of great Conſequence, and at the ſame time highly honourable for the *Engliſh* Nation.

peror ordered him to be confined, and four Servants allowed to attend him; and ſaid, "As for the young Sultan "he is not to blame; ſhould he be puniſhed it would diſtract his poor Mother, let him remain with her."

In Conſequence of the great Services rendered him upon this Occaſion, the Emperor preferred all who had been active, either in killing *Hoſſan*, or in the War that followed againſt *Abdallah*. *Khandoran* was made High Treaſurer, with the Title of *Emir al Omrah*, and *Sirabullind Khan*, of whom we ſhall have Occaſion to ſpeak at large hereafter, was ſent for from *Cabul*, and appointed one of the Vizirs. It was upon this ſingular Revolution that the Mother of the Emperor *Mohammed Furrukhſir* demanded that *Abdallah Khan* ſhould be delivered up to her as the Murderer of her Son; but the Emperor refuſed to comply with her Demand, telling her that his Brother had already ſuffered for that Offence, and therefore he would not ſacrifice two Lives to expiate the Life of one. But this was not all, for he treated his Priſoner not only with Humanity, but with moſt ſurprizing Kindneſs, in Gratitude, as it may be preſumed, for the Reſpect formerly ſhewn him; for he ordered that *Abdallah Khan* ſhould lodge in the Palace of *Aſof al Dowlat*, have a Penſion of three thouſand Rupees monthly, thirty Houſhold Servants, ſeven menial ones, with Proviſions of all Kinds from the Royal Kitchin, five Women to amuſe him, and proper Guards over him. He did not live long to enjoy this generous Allowance, dying a few Months afterwards of his Wounds. Five and-forty-Women, moſt of them his Wives and Concubines, and ſome of them his near Relations, burnt themſelves in one Room the Night after he died.

One cannot but obſerve here how ſtrangly even the wildeſt and worſt founded Cuſtoms ſpread, and that too againſt all the Principles of Religion Reaſon, and common Senſe. In ancient Times, none but the Wives of *Bramins*, or *Indian* Prieſts, had the Privileges of burning themſelves with their deceaſed Huſbands, but ſince the Government fell into the Hands of the *Rajapouts*, it is cuſtomary, when any their Princes die, for one or more of their Wives to be burnt with him. There is no Compulſion to this Sacrifice as ſome People groundleſly imagine, it is intirely of their own Accord, and often they are diſſuaded from it; ſometimes, indeed, when a vain-glorious Paſſion prevails over natural Affection, the Widow's Relations would gladly have her burn herſelf, as it raiſes the Character of her Family, by making it remarkable for virtuous and loving Women; yet, according to their Religion, it is more meritorious to behave chaſtely and decently in their Widowhood until Death, than burning, becauſe one is but a ſhort Pain, and the other a State of Trial. The Moguls have endeavoured to diſcourage this Cuſtom as much as poſſible; but ſince Money is omnipotent in that Country, as well as in many others, a ſmall Bribe generally purchaſes the Conſent of the Governor or commanding Officer. Lately, the *Seyd* and *Pattan* Families[*], in ſeveral Parts of *India*, have through their exceſſive Pride got into this Cuſtom; and as it is ſtrictly forbidden by their Religion (which is the *Mohammedan*) they do it privately, by ſetting an Apartment on Fire about their Ears.

In the Year 1721-2, the Emperor wrote to *Nizam al Muluck*, then at *Decan*, deſiring his Preſence at Court, and that he would appoint him Vizir; but if he declined it, he ſhould nominate whomſoever he ſhould judge to be the moſt deſerving: To which he anſwered, "I am a *Derveiſh*, and not ambitious of ſo high a Station; I was contented with the Province of *Malva*, but when the *Seyds* "intending to diſtreſs me, I was obliged to take Arms. "By the Divine Aſſiſtance I baffled their Deſigns, and "ſecured myſelf. At laſt your Majeſty, by their Inſtigations, ſet out againſt me with a mighty Army. Here "the Almighty protected me likewiſe. In the Beginning, one of my Brothers was killed, and as you knew "me to be a faithful Servant, you laid aſide the Expedition and returned to *Dehli*, where, being ſettled to the "Satisfaction of all People, you have now condeſcended "to diſtinguiſh me, the meaneſt of your Slaves, with "this extraordinary Mark of your Favour, which I only "decline, as knowing myſelf unequal thereto, and that "there are many about your Court more capable and "deſirous of ſuch an Employment than I."

But though he refuſed to come to Court, he ſtill continued in Poſſeſſion of the Government of *Decan*; and though he acknowledged himſelf a Subject, yet he made no Remittances to Court, but appropriated the Revenues to the maintaining of an Army, which he ſaid was to keep in Awe the *Maharattas*, or *Ganims*, the *Sahou* Rajahs, Subjects in *Decan*, whom notwithſtanding he permitted to plunder and lay waſte ſeveral of the Emperor's Provinces. They impoſed a Tribute of one Quarter-part of the Revenues which they call *Chot* in many Places, and many Parts they have taken entirely to themſelves. He well knew, that with the *Maharattas* Aſſiſtance, he could deſy any Attempts that could be made againſt him from Court. The Character of this Man is truly ſingular, and deſerves to be both written and read with Circumſpection; he had not only great Power, but a very comprehenſive Genius, and was not ſo much diſtinguiſhed by his Situation in the World, as by his great Merit and wonderful Capacity; but the Reader is to obſerve, that *Decan* is to *Dehli* or *Agra*, what the moſt diſtant Part of *Wales* or *Scotland* is to *London*, and ſuch as paſſed the beſt Part of their Time there, are not the fitteſt to be made Dancing-Maſters when they come to Court. Our Governor had a good Head, but ſpoke it ſeems in a Country Tone; could execute the Functions of a Stateſman or a General, but would perhaps have made a bad Figure, if obliged to open a Ball. In Compliment to his Power, he was with much ado forced up to Court, when the Emperor's Affairs were in a very declining Way, and he was preferred to the firſt Place in the Government. All this, however, was meer Shew; for behind his Back the Courtiers made a Jeſt of him, and could ſcarce forbear affronting him to his Face. He acted at firſt as became a Man of Honour; he took an Opportunity to lay before the Emperor a true State of his Affairs, and the Neceſſity of his making a thorough Change in his Adminiſtration, if he meant to enjoy the Fortune, as well as the Throne of *Aurengzebe*.

The Emperor told his Favourites of this, who made a Jeſt of this Stateſman's old faſhioned Notions, and redoubled their Impertinences, as to his clowniſh Behaviour, which piqued him at laſt to that Degree, as to make him reſolve upon ſacrificing ſuch a Neſt of Fools and Knaves, without conſidering that his Sovereign muſt be ſacrificed with them. He firſt propoſed his Scheme to the Vizir, their Families being allied; but he rejected it on this honeſt Principle, that the Publick ought not to be given up to gratify private Prejudices. *Nizam al Muluck*, however, found enough to join with him in his Scheme; for a wanton Court will never fail of raiſing a Multitude of Malecontents, and ſuch is the Nature of Men, that the far greateſt Part of them employ their Reaſon only to gratify their Reſentments. Such therefore as fell in with the Schemes of this diſguſted Stateſman, reſolved to call in *Nadir Shah*, ſo well known in *Europe* by the Name of *Thamas Kouli-Khan*, in order to rouze the Court, or in plain *Engliſh*, to rid themſelves of a weak and corrupt Miniſtry, as vain and inſolent in their Abuſe of Power, as they were incapable of managing it for the Honour of their Prince, or the Benefit of his Subjects. Thus this great Empire was betrayed, and expoſed to numberleſs Miſchiefs, purely to gratify the Reſentments of a few, who, to revenge their own Wrongs cared not what they brought upon their Country.

It muſt be allowed, however, that they choſe a fit Time and a fit Perſon for executing their wicked Purpoſe, which they accompliſhed to the utmoſt. *Nadir Shah* having fully eſtabliſhed himſelf, and ſettled his Affairs in *Perſia*, he left his Son *Reza Kuli Mirza* to command there, and ſet out with his Army towards *Kandahar*. *Hoſſein Khan*, the Governor thereof, having laid up great Stores of Proviſions and Ammunition, held out for eighteen Months; at laſt being reduced to Straits, he ſallied out with his Men, moſt of whom died bravely fighting. *Hoſſein Khan* and his Son being taken Priſoners, the *Perſians* entered the Caſtle, and took Poſſeſſion thereof. While *Nadir Shah* was buſy in ſecuring and fortifying *Kandahar*, and bringing over to him the *Zemidars* [o] of thoſe Parts, Letters came from *Nizam al Muluck*, and *Saadit Khan*, inviting him to march towards *Indoſtan*. In anſwer to which he objected to the Difficulties of getting through the Defiles, paſſing the great Rivers, and the many Encounters he muſt expect to have with the *Afghans*, and the warlike Nations of thoſe Parts. The Oppoſition he muſt expect from *Nadir Khan*, *Soubahdar* of *Cabul*, and *Zekaria Khan*, Ruler of *Lahor*; and laſt of all, his Fate to depend on his Succeſs againſt a powerful Imperial Army. They ſoon ſatisfied him how unneceſſary his Fears were, and that before he croſſed the *Attock*, he ſhould have a Proof how able they were, and how much inclined to facilitate his Paſſage. Being encouraged by thoſe Repreſentations, he ſet out with an Army of 125,000 Horſe, *Kuzzlebaſh*, *Georgians*, *Turks*, *Khoraſanians*, *Balkhis*, &c. all inured to Fatigues and Hardſhips; they were well provided for this Expedition, and greatly encouraged thereto by the Hopes he gave them not only of enriching themſelves, but of bringing Wealth and Glory to their impoveriſhed Country, by the Plunder of *India*. In the mean time, *Nizam al Muluck* and *Saadit Khan* uſed all their Endeavours ſecretly to promote his Intereſt, and wrote to *Sherzith Khan*, Governor of the Caſtle of *Cabul*, and *Maar-Khan*, *Soubahdar* of that Province, as alſo to *Zekaria Khan*, Ruler of the Province of *Lahor*, to this Purport: “ *Nadir Shah*, being thoroughly informed of “ the State of Affairs in *India*, and that his Imperial Maje-“ ſty and favourite Courtiers employ their Time in Wine “ and Women, has come to a Reſolution to ſtrike a “ Blow at this Empire. You well know that none of “ the great Ones here are fit to take the Field, much leſs “ to reſiſt a Man who is conducted by Fortune. As this “ is the Caſe you can have little Hopes of Aſſiſtance “ from hence; the beſt you can do will be to behave “ diſcretely and ſave yourſelves.” Theſe Letters cooled them pretty much, and had the deſired Effect with *Nadir Khan* and *Zekaria Khan*. *Nadir Shah* having ſubdued *Ghorbund* and *Ghoznavi*, and garriſoned them with his own People, came to *Cabul* and beſieged it. *Nain Khan* had left it, and marched to *Peiſhor*, but *Sherzib Khan* defended both the City and Caſtle for ſix Weeks with the utmoſt Bravery, and wrote repeatedly to *Nadir Khan*, and to Court, for Aſſiſtance; but none coming, both City and Caſtle were at laſt taken by Storm, and he and his Son were put to Death.

---

[*] I ſhall take this Opportunity of obſerving, that the ſame People mentioned in ancient Writers by the Name of *Pattans*, are now called *Affghans*; and all the Northern Parts of *India*, but more eſpecially ſuch as are mountainous, are inhabited by Tribes of theſe People. They are not originally *Indians*, but are deſcended from the *Mohammedans*, that began to eſtabliſh themſelves in theſe Countries from *Arabia* and *Egypt*. They are a bold, brave, hardy, patient, and active People; and it was they that, under the Command of *Mir Vaez*, or, as we commonly, though very corruptedly, call him, *Mereweis*, and his Son, made themſelves in a manner Maſters of *Perſia*, out of which they were driven in the Beginning of his Glory by *Thamas Kouli Khan*, to whom, however, they gave a great deal of Trouble afterwards in the Province of *Khandahar*.

Nadir Shah found Treaſure, Jewels, Arms, *&c.* to a great Value, which, ſince the Great Mogul *Babar*'s Time, had been ſhut up in Vaults. When the taking of *Cabul* was known at Court, the Emperor gave Orders to get his Troops in Readineſs, and provide all Things neceſſary for taking the Field. As Rajah *Jeſſing* was more attached to *Khandoran* than to any of the other Omrahs, he repeatedly wrote to him to this Purport: “ *Nadir Shah*'s coming is “ a concerted Thing, you muſt be watchful over the Mo-“ gul Omrahs, who ſeem to be united in order to compaſs “ ſome treacherous Deſign. *Nadir Khan* and *Sherzib Khan* “ are gone; one has ſacrificed his Life to his Intereſt, and “ the other has fled to *Peiſhor*. If *Zekaria Khan*, Ruler of “ *Lahor*, makes any Oppoſition, it will give the Empe-“ ror's Army Time to advance pretty far, in order to check “ this Invader; as for us *Rajapouts*, we are ready to join “ the Royal Enſigns.” *Khandoran* knowing him to be well affected, repreſented this to the Emperor, and told him, it would be very imprudent in him to leave the Capital and take the Field; however, it was at laſt agreed, that the Army ſhould march to *Lahor*, that the Emperor ſhould accompany it ſo far, and that from thence it ſhould proceed towards *Cabul*, under the Command of *Nizam al Muluck*, and the other two Omrahs; for which Purpoſe the *Peiſhkhana* was ordered out to the Gardens of *Shalimar*; but after it was ſent thither, to every body's Surprize, *Khandoran* came back to the Palace, and delayed the March, whereas *Nizam* ſeemed to be for haſtening it all in his Power.

The Emperor's Servants, as they knew *Khandoran* [p] to be attached to their Maſter, contrived all the Impediments they could think of; ſo that *Nadir Shah* had not only Time to ſecure *Cabul*, but was far advanced in his March to *Peiſhor*, where the *Afghans* and Mountaineers very much incommoded him, and kept him in Play for ſeven Weeks; in which Time he had a great many Men wounded and killed; ſeeing there was no way for forcing the Paſſes without much Blood-ſhed, and that the *Afghans* had fortified themſelves on the Tops of the Hills, he ſent them Offers of Accommodation, to which they came into the more readily, as the *Soubahdars* had ſent no Aſſiſtance, and that they had been four or five Years without receiving any of their uſual Allowance from Court. Upon *Nadir Shah*'s paying them a certain Sum of Money, they not only let him paſs unmoleſted, but ſeveral of them liſted in his Army; the other *Afghans* hearing of this, followed their Example; ſo leaving the main Army behind, with ten thouſand choſen Horſe, *Kuzzlebaſh*, in ſeven Days he got to *Peiſhor*. *Nadir Khan*, who with ſeven thouſand Horſe had encamped without the City, not imagining he could get through the Paſſes ſo ſoon, upon hearing of his Approach with ſo large a Body of Horſe, was greatly perplexed, ſeveral of his Auxiliaries left him, and few beſides the King's Men ſtood by him, who, after a brave Reſiſtance, were defeated, and *Nadir Khan* taken Priſoner. Some *Afghans*, who, waiting the Event, were poſted on the Hills, ſeeing *Nadir Shah* prevail, came and offered him their Service; after this Victory he entered *Peiſhor*, and took Poſſeſſion thereof.

When the News of this Defeat came to the Court, *Nizam al Muluck*, *Khandoran*, *Zammir ô din Khan*, and the other Omrahs, according to the King's Orders, on the ſecond of *January* 1738-9, marched out with a numerous Army, a large Train of Artillery, and other Neceſſaries, in order to oppoſe this Conqueror, and halted at the Gardens of *Shalimar*. *Nizam*, who was the Contriver of this Storm, endeavoured all he could to prepoſſeſs the Minds of the Soldiers with a Terror of *Nadir Shah*'s Forces, and how vain it was to reſiſt him, and at the ſame time amuſed them, to divert their going too far forward; but the King iſſued out Orders, that *Nizam* and the other Omrahs ſhould advance with all Expedition, himſelf intending to follow ſoon after them. *Nizam al Muluck* and the reſt, according to theſe Orders, marched on, and encamped in the Plains of *Karnal*, which is fifty-five Croſs diſtant from *Dehli*. The Emperor alſo ſet out the 18th of *January* 1738-9, and on the 4th of *February* joined them. *Nadir Shah* having thrown a good Garriſon into *Peiſhor*, paſſed the River *Attok*, and marched on directly towards *Lahor*, the Governor of which had fortified the Place with great Diligence, and ſeemed diſpoſed to defend it to the laſt Extremity; but as he was in the Secret of Affairs, upon the Approach of the *Perſian* Army, he abandoned the Town, and retired into the Caſtle, which he held out no more than three Days.

---

[o] It will be neceſſary to explain this Word, and in order to make the Reader perfectly comprehend it, we muſt obſerve, that *Dar* ſignifies a Poſſeſſor, that is to ſay, one who holds or enjoys any thing. *Zemin* ſignifies Land, and *Zemidar* is one who poſſeſſes Land, that is, a Rajah, or little *Indian* Prince, who pays ſome Acknowledgment to the Emperor, but who is notwithſtanding the free Lord of his Inheritance. In the ſame Manner the Word *Manſubdar* is compounded from *Manſub*, a Poſt or Office, and conſequently he who poſſeſſes it is a *Manſubdar*. If, inſtead of a Salary, he has Lands aſſigned him, thoſe Lands are called *Jaguir*, and from thence the Officer is ſtiled *Jaguirdar*. The *Zemidar* and *Jaguidar* both poſſeſs Lands, but by very different Titles; for the former is a Freeholder, and the latter a Tenant at Will, by the Grant of the Emperor.

[p] This Miniſter was ſincerely attached to his Maſter, but had a very odd Scheme of Politicks, for he thought that the moſt precarious Peace was preferable to War, and therefore he was always for Negotiations and Expedients, rather than having Recourſe to Arms; by which he ſunk his Maſter's Credit, and as we ſhall ſee after, brought on his Ruin and Death.

It was natural to expect that *Mohammed Shah* ſhould ſome way or other be acquainted with the Motives that had induced this Invaſion of his Dominions, and accordingly *Nadir Shah* wrote him a Letter, dated in the Middle of *Auguſt*, in which he tells him, that he came out of pure Friendſhip, having heard that a Handful of barbarous People had preſumed to harraſs ſeveral of the Provinces of his Empire, and to lay his Subjects under Contribution, which were Things unworthy of ſo great a Monarch to bear, and from which he was come with an Army to reſcue and relieve him. The Emperor, however, took up Arms, and ſeemed determined to meet him in the Field; but the Diſputes and Heart-burnings among his Miniſters continued. As for *Khandoran*, he was ſincerely in his Intereſt, though miſtaken in his Politicks; and now he ſaw that the Empire was to be ſaved by fighting, he did his utmoſt towards carrying on the War; but the Misfortune was that the Emperor confided moſt in *Nizam al Muluck*, as indeed he was the beſt Officer in his Service; but it cannot be ſuppoſed, that he, who had been the Author of the War, and had drawn *Nadir Shah* into his Maſter's Dominions, ſhould be forward to oppoſe him; yet he marched with the reſt, and on the fourteenth of *February* an Engagement enſued, wherein the Mogul's Army was defeated, and *Khandoran* mortally wounded. This Action, however, was far from being deciſive, though the Mogul loſt ſeveral of his great Officers, and a great many Men. On the Side of *Nadir Shah*, ſeven principal Officers, and two thouſand five hundred Men were killed, and about five thouſand wounded. The Mogul's Troops, on their Return into their Camp, fell into great Confuſion, and plundered the Tents of ſuch Officers as were either killed or taken Priſoners, which obliged the Emperor to go in Perſon to that Part of the Camp, where the Forces under the Command of *Nizam al Muluck* were poſted, in order to put Things into a better Condition, by reducing the Soldiers to their Duty. It was with the ſame View that the Emperor, with that Officer, the Vizir, and other Omrahs, went without the Mourchas or Retrenchments, and drew up their Men in a Line of Battle, with a Deſign to put a Stop to the Enemy's advancing any farther; but had not the Night come on, theſe Precautions would have ſtood them in little ſtead, and that Day would have put an End to the whole Affair. About an Hour after Sun-ſet the Emperor returned back to his Tent; ſeveral of thoſe who eſcaped out of the Field, as alſo thoſe who attended the Baggage and Carriages, fled towards *Dehli*, a great many of whom were plundered and killed by the way. The Camp in ſome Places was very thin of Men, inſomuch, that when at Midnight the Emperor ſent for *Nizam al Muluck*, the Space from his Mourcha to the Emperor's Tent, which is about three Quarters of a Coſs, was found intirely empty. *Nizam al Muluck*, *Sirbullind Khan*, *Kummir ô din Khan*, and all the other Omrahs that were left, ſtaid with the Emperor in deep Conſultation until near the Morning, when each returned to his own Quarters.

On the 16th, finding the Camp thin, and being apprehenſive of the *Kuzzlebaſh*'s attacking them, they contracted the Circuit thereof, and their Mourchas into the Compaſs requiſite to contain the Number of Troops they had left, which was the Space between the Emperor's Tent and *Nizam*'s Mourcha, and there they ſtood under Arms the whole Day, every Minute expecting the Enemy's Approach. Towards the Evening a ſmall Tent was pitched for the Emperor, and all the Troops were diſpoſed of to their reſpective Poſts, where they continued under Arms the whole Night, and their Horſes ſaddled, without either Hay or Corn. The next Day was paſt in great Fear and Apprehenſion, for the Emperor ſaw plainly his Soldiers were very much diſpirited, and his Miniſters and General in a manner at their Wits End, ſo that they were as little fit to adviſe him, as he was to act without their Advice. On the 17th of *February*, *Nizam al Muluck*, with *Azim Allah Khan*, and ſeveral Horſemen, went out and pitched a ſmall Tent betwixt the two Camps, to which *Nadir Shah*'s *Aitmauld al Dowlet*, or Vizir *Kaſſum Beg Khan* came, and from thence conducted him to his Maſter, who embraced him ſitting, and made him ſtand honourably cloſe by himſelf; he gave him a Cup of Sherbet, and made him eat at the Vizir's Houſe; after which it was agreed, that *Mohammed Shah* ſhould come and ſtay with *Nadir Shah*. This Conference laſted about ſix Hours, and was immediately followed by two very remarkable Events; the firſt was a kind of Ceſſation of Arms, which was ſo much the more neceſſary, that the Emperor might be under no Apprehenſions, and that he might be the better able to bring his Troops into good Order, who had hitherto been in a great deal of Confuſion; the next was, that *Nizam al Muluck* was declared High Treaſurer, and *Emir al Omrah*, that is, prime Miniſter, ſo that with reſpect to him the End of the War was intirely accompliſhed. All the Miniſters who oppoſed him were driven from Court, and he was not only veſted with the Title, but was in fact at the Head of the Emperor's Counſels, and had the whole Power of the Empire in his Hands [q].

It is from this Time therefore that we are to date his real Concern for the Peace of his Country, which having firſt accompliſhed, his own Views he now laboured to promote. About this Time *Khandoran*, his old Antagoniſt, died of the Wounds he had received in the Battle, and was buried with more Privacy than ſeemed conſiſtent with the great Offices he had held, and the high Favour in which he had ſtood with his Maſter. It is not eaſy to conceive by what Arguments *Mohammed Shah* was prevailed upon to quite his own Camp, and truſt himſelf to that of his Enemy; but it ſeems he was now intirely guided by his new Miniſter, who very probably told him, that in the preſent Circumſtances he hazarded little by taking ſuch a Step, ſince it was in the Power of the *Perſian* Monarch to force him to accept what Terms he pleaſed, and that therefore it was better to do with good Grace a Thing he might otherwiſe be compelled to do whether he would or not. But, however it was, this is certain, that on the 19th of *February*, in the Morning, the Emperor ſitting on a Royal Litter, with a Canopy over it, followed by a led Horſe, and a Drum, and attended only by a few of his faithful Servants, and an Eſcort of about two hundred Horſe, marched out of the Camp, and when he had gone a good Way, by a Sign he forbad the Horſemen to accompany him any farther; then with his Eunuchs, and the abovesaid Omrahs, each of whom had not above two or three Servants to attend him, he went on to *Nadir Shah*'s Camp.

When he had advanced about half Way, one of *Nadir Shah*'s Miniſters came to meet him, and paid him the uſual Honours. He likewiſe aſſured him that his Maſter waited for him with much Impatience, that due Care would be taken to make this Interview as eaſy and as agreeable to him as poſſible, and that he had no Reaſon to apprehend any Danger, or the leaſt Failure in point of Decorum or Complaiſance. All this was certainly requiſite to keep up the Spirits of a Monarch in ſuch a Situation, and under ſo many Difficulties. He continued his March therefore, and as he drew near *Nadir Shah*'s Tent, he received another and more welcome Meſſage; for there *Neſr Allah Mirza*, *Nadir Shah*'s Son, who came in a Royal Litter, having alighted, paid his Reſpects according to the Form of his Country. The Emperor ordering his own Litter to be ſet down, embraced *Neſr Allah Mirza*; after which they both marched on until they came as far as the Train of Ordnance: Here all the Attendants were obliged to ſtay behind, only the Emperor with two or three Eunuchs, and the Omrahs above-mentioned, were allowed to paſs. When they came to the Door of the Royal Tent, and the Emperor was alighted, *Nadir Shah* came forth to receive him; having embraced him, he ſeated him cloſe by himſelf on the ſame Muſnidd [r]. After the accuſtomary Forms of of Salutation, and the Enquiry after each other's Health were over, *Nadir Shah* addreſſed him thus: "It is ſtrange that yould ſhould be ſo unconcerned, and regardleſs of your own Affairs, that notwithſtanding I wrote you ſeveral Letters, ſent an Ambaſſador, and teſtified a Friendſhip for you, your Miniſters ſhould not think proper to ſend me a ſatisfactory Anſwer, and by reaſon of your want of Command and Diſcipline over your own People, one of my Ambaſſadors contrary to all Laws, has been killed in your Dominions. Even when I entered your Empire, you ſeemed under no Concern about your Affairs, nor ſo much as ſent to aſk who I was, or what was my Deſign. When I advanced as far as *Lahor*, none of your People came with a Meſſage or Salutation, nay, not with an Anſwer to my Salutation to you. Afterwards, when your Omrahs were awakened out of their Lethargy and Indolence, they prevented all Means of a Reconciliation, and coming tumultuouſly with an Intent to ſtop my farther Progreſs, they brought themſelves into one general Snare, without having the Foreſight to leave any behind, who, upon an Emergency, could make Head and retrieve their Affairs. Beſides this you have fooliſhly cooped yourſelves up in your Murchas, as not conſidering, that if your Enemy was ſtronger, you could not remain within thoſe Barricadoes, without either Water or Grain; and if he was weaker, it was both unneceſſary and diſgraceful, to ſuffer yourſelves to be beſieged by him. Beſides, if you thought lightly of him, and imagined him a raſh inconſiderate Man, without expoſing your own Perſon and Reputation ſo much, you ought to have detached a faithful and experienced Officer, who in a little Time might have found Means to diſtreſs and cut him off; but if you dreaded his Experience and Conduct, you had ſtill the leſs Reaſon (after provoking him thus far) to venture your all at one Blow. Even when you had thus entangled yourſelf, I ſent you Offers of an Accommodation, but you was ſo puffed up with your own childiſh Conceits, and fooliſh Reſolutions, that you would not give ear to any honourable Overtures, or conſult your own Intereſt, until at laſt, by the Aſſiſtance of the Creator of the World, and the Strength of the Arms of the victorious Warriors, you have ſeen what has happened. Moreover, your Predeceſſors were wont to take *Jeſiah*, or Poll-Tax from the Infidels, and you in your Reign have given it to them; having for theſe twenty Years ſuffered the Empire to be over-run by them; but as hitherto the Race of *Timur* have not injured or miſbehaved towards the *Seffi* Family, and the People of *Perſia*, I ſhall not take the Empire from you, only as your Indolence and Pride have obliged me to march ſo far, and that I have been put to an extraordinary Expence, and my Men, on account of the long Marches, are much fatigued, and in want of Neceſſaries, I muſt go to *Dehly*, and there continue ſome Days, until the Army is refreſhed, and the *Peiſhcuſh*, that *Nizam al Muluck* has agreed to, is made good to me: After that, I ſhall leave you to look after your own Affairs." *Mohammed-Shah* gave no Anſwer during the whole Speech, but continued in a fixed Silence, which teſtified a good deal of Confuſion and Shame.

---

[q] We are indebted for this very exact and no leſs curious Account of this extraordinary Tranſaction, to Mr. *James Frazer*, whom I have before mentioned, and I have inſerted it here in order to render this Hiſtory of the Mogul Empire as compleat as poſſible. The Reader will perceive that at this Juncture there was a kind of Suſpenſion of the Emperor's Power, and all was at the Mercy of a Stranger. It may ſeem ſtrange, that *Nadir Shah* ſhould let ſlip this Opportunity of making himſelf Maſter of *Indoſtan*; but when it is conſidered, that the Power of the *Perſian* was chiefly owing to the Weakneſs and ill Conduct of *Mohammed Shah*, it will appear great Wiſdom and conſummate Policy in the Conqueror to act as he did. For if he had cut off the Mogul Emperor, his Subjects might have become deſperate, and *Nadir Shah*'s Army was ſo ſmall, and ſo far advanced into this Country, that he might have been ruined in his Retreat if he had not acted as he did.

There were only three of his Miniſters preſent at this Conference, and the Emperor having remained ſome Hours in *Nadir Shah*'s Quarters, returned in the Evening to his own Camp. He continued there three or four Days without well knowing what Iſſue things would come to. On the 23d, *Nizam* was ſent for to the *Perſian* Camp, where he was kept, and about Eight the ſame Night, the Vizir received a Firman from *Nadir Shah*, to this Import; "*Kummir ô din Khan Vizir*, Know, that To-mmorow, *Mohammed-Shah*, *Sirbullind-Khan*, *Mohammed-Khan Bunguſh*, and *Azim Allah-Khan*, ſhall come into the Preſence; therefore look well to your People, that they be not diſperſed, or ſtraggle abroad; when you have ſecured that Point, come you hither alſo." When the Emperor was apprized of this, he ſent for *Sirbullind-Khan*, and all the other Omrahs, with whom he held Council until Midnight. At laſt the Emperor declared, that Affairs were now gone beyond his Power, and that he muſt do one of theſe three Things; To-morrow to march out and make one deſperate Puſh, to determine his Fortune at once, or put an End to all Things and Miſery by a Doſe of Poiſon, or elſe ſubmit peaceably to what Terms might be impoſed. The Emperor's Inclination, though he did not then declare it, was for the laſt of theſe. On the 24th, *Sirbullind-Khan*, *Mohammed-Khan*, &c. were ready, each with his own Men, that in caſe the Emperor ſhould make a Puſh, they might not be unprepared, and if on ſubmitting, he ſhould go to *Nadir*, and bid them come, they ſhould follow his Fate. At Night arrived a Note from *Nadir Shah*, to this Effect; "*Sirbullind-Khan*, be of good Cheer, perfectly compoſed, get yourſelf hither, before *Mohammed Shah*, ſets out."

On the 25th, *Sirbullind-Khan*, having obtained Leave, marched towards *Nadir-Shah*'s Camp, and according to an Order, leaving his Men and Baggage on the Right-hand thereof, he with *Khan, Zad Khan*, three Horſemen, and four or five Servants, entered the Camp, and pitched a ſmall Tent for himſelf, near the *Bargah*, cloſe by *Saadit-Khan*'s Quarters. About 9 o'Clock that Morning, *Mohammed-Shah*, according to an Order, being ſeated in a royal Litter, with a Canopy and Umbrella, ſet out for *Nadir-Shah*'s Camp, attended only by *Emir-Khan*, *Iſhak-Khan*, and ſome Eunuchs. On his Arrival, he alighted at a Tent which had been pitched the Day before, by *Nadir-Shah*'s Order, for that Purpoſe, in the Front of the Camp, where he was allowed to have as many of his Domeſticks of all Sorts as were neceſſary, and 1000 *Kuzzlebaſh* Horſemen were detached as Guards round him. About Eight o'Clock in the Evening, *Mohammed* being called, went to wait on *Nadir-Shah*. After three Hours Stay he returned to the Camp, and there was an Order that none of the Omrahs ſhould be allowed to go to ſee him. In this uncomfortable Situation he paſſed all that Afternoon, and the ſucceeding Night. The next Day, all the Ordinance, and the Emperor's Baggage, were ſeized for the Uſe of the Conqueror, who ſelected out of the former two hundred Pieces of Cannon, and ſent them away; after which, out of the Treaſure he had taken, he rewarded his Army with three Months Pay by way of Gratuity, and took Care that it ſhould be diſtributed to every Man in the ſame Proportion as his Pay [s].

On the 1ſt of *March*, *Nadir-Shah* began to move towards the City of *Dehly*, having *Mohammed Shah* in his Hands, guarded by ten thouſand Horſe. On the 8th of the ſame Month, the Emperor entered the Caſtle of that Capital, under a Guard of four thouſand Horſe, before it was light, and the ſame Morning *Nadir-Shah* alſo made his Publick Entry into the City, at the Head of 20,000 Horſe, and proceeding thro' it to the Caſtle, was there received by *Mohammed Shah*, who entertained him at Breakfaſt. They ſpent the whole Day together, and *Nadir-Shah* did not retire till towards Evening, behaving all the Time towards him with much Civility and ſeeming Affection. The *Shah* likewiſe, at his Requeſt, iſſued out a Proclamation, forbidding, on very ſevere Penalties, any of his Soldiers from inſulting the Inhabitants, at the ſame Time ſtrictly enjoining the proper Officers to ſee this Proclamation duly executed, and to ſpare no Severities requiſite for that Purpoſe in puniſhing the Offenders; which Proclamation had ſuch an Effect, that very exact Diſcipline was maintained, and none of the Mogul's People ſuffered any Injury.

---

[r] The *Muſuidd* is a Part of the *Divan*, which is raiſed higher than the reſt, and is large enough for two or three People to ſit upon. It is covered with a fine Carpet, and over that there lies a Quilt of fine Linen. The placing the Emperor here was a very high Mark of Reſpect, and treating him as an Equal, ſince this was a Place to which none of *Nadir-Shah*'s Miniſters were ever admitted.

[s] This was a thing conſtantly practiſed by the *Perſian* Conqueror, on his becoming Maſter of any great City. He did the ſame thing after the taking of *Kandahar*, where he found immenſe Riches, and he did much more, when he became Maſter of the whole Wealth of this Empire, as we ſhall ſee hereafter. It was by theſe Acts of Generoſity, that he kept his Army ſo perfectly attached to him, from the Conſideration, that in ſerving him, they ſerved themſelves, and that he was not more their Monarch than their Benefactor

On the 10th, an Order was ſent to open the Magazines in the Corn-Market, and to ſee that Commodity ſold at a reaſonable Rate, which was abſolutely neceſſary, as Things were then circumſtanced. A Mob, however, was raiſed upon this Occaſion, and thoſe who would not fight for their Country, took up Arms rather than part with their Corn at a fair Price. In ſhort, the *Perſian* Officers were killed, as alſo a good Number of their Men, and in a few Hours Time the whole City was in Confuſion. About Eight the next Morning, *Nadir-Shah* mounted on Horſeback, in order to quell the Tumult, and in his Paſſage through the Streets, ſeeing Abundance of his own Soldiers dead Bodies lying about, he was extremely provoked, yet he moderated his Paſſion ſo much, as to give very juſt and favourable Orders, though at the ſame Time he detached a ſtrong Body of Horſe and Foot to reduce the People that were in Arms to Reaſon. There were ſome very dirty Circumſtances in this Affair, which it is neceſſary ſhould be explained. Some of the Mogul's Miniſters had promiſed *Nadir-Shah* a Preſent of a Crore of *Rupees*, that is, a Million and a Quarter of our Money, on his coming to *Dehly*, which however they did not raiſe, but privately excited this Tumult, by giving out, that *Nadir-Shah* was killed in his Quarters, and other ſuch like Stories, calculated for the Underſtanding of a Mob, and keeping up their Fury. The Troops that were detached to reduce them, had ſtrict Orders not to proceed to Extremities, till fair Means were found ineffectual, and even then, they were ordered to be very careful in diſtinguiſhing between the Innocent and the Guilty, by firing on none but thoſe that were in Arms, and ſuffering ſuch as remained quiet in their Houſes to reſide there undiſturbed. But as Mobs are apt to miſtake Mildneſs for Fear, and gentle Perſuaſions for a Dread of their Force, ſo the People of *Dehly*, inſtead of diſperſing, aſſembled in Crowds upon their Terraſſes, and from thence they furiouſly began to throw Stones, and either from one of theſe Terraſſes, or a Window thereabouts, a Muſket was deſignedly ſhot at *Nadir-Shah*, which miſſing him, killed one of his Officers who ſtood next him. This made him give way to his Paſſion, and to order a general Slaughter to be commenced from that very Place; the Soldiers in an Inſtant getting upon the Walls and Terraſſes, began to plunder and kill.

This bloody Scene extended from the *Saraſa Ardui*, which is before the Caſtle, to the old *Eidgah*, which is three *Coſs* Diſtance, on one Side as far as *Jittli* Tomb, and on the other as far as the Tobacco *Mandavi*, and *Poul Mettai*, the whole Streets of the *Bazar*, and the Alleys and Wards on all Sides the *Khanums Bazar*, and round about the *Jamih Miſjidd*, and the Cotton and Jewellers *Bazars*, were all plundered; ſeveral Places were ſet on Fire, and whomſoever they found in the Wards and Houſes, Streets, Alleys and Shops, great and ſmall, Men and Women, they put to the Sword, even the brute Creatures did not eſcape their Fury; ſeveral Women were made Priſoners. *Loutf Ali Khan*, the Officer who was appointed to ſlaughter and plunder towards the Square of *Saad Allah Khan*, and *Dehly* Gate, when he came as far as *Sirbullind-Khan*'s Houſe, he, in a great Surprize and Fright, came out to meet the ſaid Officer, and repreſenting to him, that the People of that Quarter were not to blame, he made him deſiſt, and ſtop his Men, on promiſing they ſhould pay a Sum of Money; but in other Places the Slaughter, Plundering and Burning went on, in a moſt barbarous Manner. *Nadir-Shah*, after he had given the Orders, returned back to the Caſtle. About Two o'Clock *Mohammed-Shah*, and *Nizam al Muluck*, waited on him, who having made great Interceſſion for the City, the Soldiers were ordered to deſiſt, and it was proclaimed by Beat of Drum, that none of the Inhabitants ſhould be any longer moleſted. The Slaughter continued from Eight in the Morning till Three in the Afternoon; about 400 *Kuzzlebaſh* were killed, and of the Citizens, great and ſmall, 120,000 were ſlaughtered, others computed them 150,000; what Treaſure and Effects were plundered, ſome *Nadir-Shah* had, and a great deal was deſtroyed by the Fire.

In ſeveral of the *Hindu*[*] Houſes, where one of a Family ſurvived, he uſed to pile thirty or forty Carcaſſes a-top of one another, and burn them, and ſo they did in the Streets; notwithſtanding which, there ſtill remained ſo many, that for a conſiderable Time there was no ſuch thing as paſſing any of the narrow Lanes. When the Slaughter began, thoſe who raiſed the Commotion diſappeared in an Inſtant, and left the innocent Shopkeepers, *Bazaris*, and many honeſt Families, to be butchered by the enraged *Kuzzlebaſh*. Several, jealous of their Honour, not only killed their Women, but laid violent Hands upon themſelves. One of theſe unfortunate Wretches in particular, when the Soldiers came near his Houſe, burned about twenty Women of his Family, and was in Expectation of their entering every Minute, and killing him; by Chance they miſſed that Houſe, but he was ſo infatuated, that finding himſelf diſappointed, he went out, and bringing ſome of them back, ſhewed them the Way to his own Houſe, telling them, there was a good deal of Money and Effects therein. After they had plundered the Houſe, they went their Way without killing him, which ſo enraged him, that he diſpatched himſelf. There were great Numbers of People, eſpecially Women and Children, burnt in their Houſes. The very next Day, the Priſoners, and eſpecially the Women, were, by *Nadir-Shah*'s Order, conducted back to their own Houſes, to the Number of fifty thouſand. About ten thouſand Women, in the midſt of the Confuſion, had thrown themſelves into Wells, of whom there were many taken out alive, two or three Days after.

On the Thirteenth, *Nadir-Shah* having an Account that a Detachment of his Troops that had been ſent to ſeize the Cannon at the *Serai* of *Rouh Allah Khan*, had been cut off by the People, a ſtrong Body was ſent thither to puniſh that Offence, which they did by cutting to Pieces five or ſix thouſand of them, and bringing in three hundred of the principal Perſons Priſoners, who had their Heads ſtruck off. The ſame Day Proclamation was made that every Man ſhould retire to his Houſe and Employment, without Fear of the Soldiers. Two Days after, as the great Number of dead Bodies that lay about the Caſtle, and in the *Bazars*, and other Places, cauſed a very offenſive Stench, they preſſed moſt of the People they met with in the Streets, and employed them in removing the Bodies; ſome, by tying Cords to the Feet, they dragged without the City; ſome they threw into the River, and thoſe whom they imagined to be *Hindus*, they piled forty or fifty of their Bodies a-top of each other and burnt them, with the Timber of the demoliſhed Buildings.

On the Sixteenth, a *Firman*, to exempt the Dominions of *Perſia* from Taxes for three Years, was drawn up, and diſpatched by a Choppar, at the ſame time the Arrears formerly due to the Soldiers, as alſo one Year's Pay beforehand, and ſix Month's Pay as a Gratuity, was given to all his People, even his Servants, and thoſe who trafficked for Neceſſaries in the Camp. On the Seventeeth, *Nadir-Shah* ſent for *Sirbullind Khan*, and told him, that he apprehended his Pretenſions of old Age and Infirmity, were calculated purely to retard the raiſing of the Money, and therefore he would adviſe him, for his own ſake, to be more expeditious, becauſe it was a Thing that would admit of no Delay. On the next Day, which was the Eighteenth, *Sirbullind Khan* went likewiſe to the Dirbar, where were preſent *Nizam al Muluck*, and *Kummir o' din Khan*, and he ſtayed there until Noon. *Thamas Khan* and *Muſtapha Khan*, preſſing them concerning the Money, *Sirbullind Khan* told *Nizam al Muluck* as follows; "I "have, a long Time ago, foreſeen this Diſgrace, and fre- "quently repreſented to the Emperor, that before Things "were paſt Remedy, he ought to take ſome Meaſure, "and not through too much Security reckon any Acci- "dent unworthy his Care and Prevention. I deſired him "to employ ſome experienced and faithful Perſon, and "to give him full Power, that with a Sum of Money, "and other valuable Things, as a Peiſhcuſh, he might "make up Matters, prevent the impending Calamity, "and live, as formerly, with the Shah, in an amicable "Manner. Every Body imagined I couched ſome De- "ſigns and Self-Views under this Advice. They them- "ſelves would contrive no Expedient, nor would they re- "ly on the Contrivance of another, until, at laſt, Affairs "are come to this calamitous and diſgraceful Iſſue." To this *Nizam al Muluck* made no Anſwer. Then *Thamas Khan* addreſſing himſelf to *Kummir o' din Khan*, repeated to him the Subſtance of what *Nadir Shah* at firſt meeting reproached *Mohammed Shah* with. Afterwards he told him, "What is paſt ſhall not be remembered. Now my Shah "wants the Money, uſe all means you can to raiſe it, and "bring not yourſelves into any further Diſgrace by being "dilatory." *Sirbullind Khan* anſwered, "Undoubtedly "we will raiſe it wherever it is to be found." *Thamas Khan* aſked him, if he had not Money himſelf, *Sirbullind Khan* ſaid to him, "If I had had Money, I would have ſent "it to you to *Khandabar*, and prevented you from having "the Trouble of coming hither."

---

[*] In order to underſtand this Word, it is neceſſary to obſerve, that *Hindu*, ſtrictly taken, ſignifies a ſwarthy, dark-coloured Perſon, and was therefore given to the original Inhabitants of the Country, found about *Dehli*, from whence it received, in Proceſs of Time, the Name of *Hindoſtan*, or, as we commonly write it, *Indoſtan*; that is, the Country of the *Hindu*'s, and many have believed, that from thence the *Europeans* derived the Name of *India*, which, however, ſeems more probably to have been taken from the River *Indus*. As for the Natives of this Empire, they are ſtill diſtinguiſhed by their old Name of *Hindu*'s; becauſe of that Mixture of Nations which now inhabit their Country, ſuch as *Moguls*, *Pattans*, *Perſians*, &c. They are a very harmleſs, inoffenſive People, very laborious and induſtrious, but exceedingly contemned and deſpiſed by the *Mohammedans* in general.

In ſhort, by what paſſed at this Meeting, it was known that *Nadir Shah*, after this Victory, and having eſtabliſhed his Power, had demanded of *Mizam al Muluck* twenty Crore of Rupees, or twenty-five Millions Sterling, (excluſive of the Jewels, Gold-Plate ſet with precious Stones, and other fine Goods, ſeized of the King's and other Omrahs) to be collected in the beſt Manner he could, out of the King's Treaſury, his own Effects, and all the other Omrahs, wealthy People, and Inhabitants. Such a Sum was not to be raiſed out of the King's Treaſury or the Omrahs Effects; for, in the King's all the Gold and Silver Coins did not exceed three Crore: But, in the inward Vaults, (which had been ſhut up and ſealed for many Years, no body knowing by whom they were ſealed, or what they contained) there was found of Gold and Silver a much larger Amount than the Money in the Treaſury. *Nizam al Muluck* contributed a Peiſhcuſh of one Crore and a half in Jewels, Treaſures, and Goods; as did alſo *Kummir o'din Khan* to the ſame Amount. *Saadit Khan* had formerly agreed to pay one Crore of Rupees, and made good thirty Lacks thereof, which was all that had eſcaped being plundered; he promiſed to ſend for the Remainder from his Soubah. *Sirbullind Khan*, on account of his Poverty, was excuſed from any Share; and three Crore of Rupees were appointed to be levied on ſome of *Manſubdar*, *Mutteſiddys*, Officers, and the rich Inhabitants, each in Proportion to his Circumſtances. Formerly *Saadit Khan* was ordered to collect this Money. After his Death, and the Slaughter and Plunder of the City, this Buſineſs was recommended to the Care of *Sirbullind Khan* and the other Omrahs, which *Thamas Khan*, at his Meeting, preſſed them about. Accordingly it was now agreed, that *Azim Khan*, *Chuchl Keiſhvir*, *Vakeel* of the *Sobbabdars* of *Bengal*, *Seta Ram*, and all the *Manſubdars* and Officers of the *Chaboutra*, &c. ſhould meet at *Sirbullind Khan*'s Houſe, and make an End of this Affair. All Officers, Inhabitants, &c. who were ſuſpected to be rich, were ordered to give in a Liſt of what Money and Effects they were Maſters of, to be laid before the Shah, that what he liked he might take, and what he forgave them they might keep; and whoever pleaded Poverty, ſuch Perſon ſhould declare the ſame by a Writing under their Hand and Seal, that in caſe it ſhould be afterwards proved that he had given in a falſe Account, he might be puniſhed. That Day the People before-mentioned came to *Sirbullind Khan*'s Houſe, and having ſtaid until the Evening, and enrolled ſome Names, returned to their own Houſes.

This Affair was proſecuted for ſeveral Days following with the utmoſt Diligence; during which Time alſo they were buſy in preparing Illuminations, on the Banks of the River, and Fire-works for the Wedding of *Neſr Allah Mirza*, *Nadir Shah*'s Son, who was to be married to the Daughter of *Jeſden Bukhſh*, Son of *Kam Bukhſh*. On the Night of the Twenty-ſeventh of *March*, the Marriage was conſummated: *Mohammed* Shah made the young Princeſs a preſent of Jewels to the Value of 50,000 Rupees, and, in ready Money, 50,000 more. Some Days after the Marriage, *Nadir Shah* ſent them Jewels to the Value of five Lack of Rupees, or 62,500 Pounds[u].

The Council for aſcertaining the Peiſhcuſh or Preſent, was continually held in the Caſtle, near the Divan of Juſtice, at which aſiſted *Thamas Khan*, *Muſtapha Khan*, and *Mohammed Shah*'s Omrahs, until the Eighth of *April* at Noon; and, during that Time, every Body was preſent at the ſaid Place, from Sun-riſe to Sun-ſet. All the *Vakeels* and Agents of the *Manſubdars*, and other Officers, gave conſtant Attendance; and, at Night, each returned to his own Houſe without having a Centry or Guard over them. In thoſe Days, and alſo afterwards, ſeveral People finding Affairs go hard with them, left their Effects and Families behind, and made their Eſcape out of the City in the beſt Manner they could, being glad, at any rate, to ſave their Lives. Several of *Mohammed Shah*'s Omrahs were obliged to ſtay the whole Day in the Caſtle in a mean Manner, and perpetual Fear, with but one Horſe and a few Servants to attend them, and at Night they returned to their own Houſes. The whole of this Month was paſſed by the Subjects of *Mohammed Shah* in a very melancholy Manner; for, notwithſtanding they raiſed prodigious Sums, yet new Demands were ſtill made and exacted from them in ſo rigorous a manner, that they frequently choſe Death, as a milder Puniſhment than thoſe to which they were expoſed: As, for Inſtance, the Agent of the Province of *Bengal*, was ordered to ſend for ſeven Crore of Rupees from thence, which is almoſt nine Millions of our Money. He, to demonſtrate the Impoſſibility of complying with this Order, anſwered, that ſuch a Sum of Money would fill a Line of Waggons, reaching from *Bengal* to *Dehly*. For this Freedom he was ſo ill treated, that, in Reſentment, he went home, murdered his Family, and then himſelf; and it would appear a Thing incredible, if we were to mention a few only of the many Examples of this ſort that happened[w].

On the Frſt of *May*, all the Omrahs were ordered by *Nadir Shah* to be at *Mohammed Shah*'s by Five of the Clock in the Morning, where they all received Preſents from that Conqueror, according to their ſeveral Ranks, conſiſting of Cloaths, Arms, and Pieces of Gold, and Silver-Stuff. About Eight in the Morning, *Mohammed Shah*, ſeated in the Royal Litter, with a Canopy Umbrella, and ſome red Litter, with ſeveral of the Omrahs, went towards the General Divan, the Omrahs being mounted at a ſmall Diſtance behind him; when they came near the General Divan, the Emperor ordered *Saad o' din Khan* to let none but the head Omrahs, and a few of the chief *Manſubdars* to go farther. At the Door of the General

---

[u] One would imagine that this was a Marriage formed upon ſome political Motive, which, however, it is very difficult to diſcover, ſince *Nadir Shah* never ſhewed any Intention of depriving the Mogul of his Dominions. It is not impoſſible, however, that he might ſuſpect, from the Condition in which he ſaw the Empire, that it could not long ſubſiſt, and might therefore incline to have a Son or a Grandſon ſo related to the Imperial Family, as, in that caſe, to form a Pretenſion to it; for otherwiſe this is a Tranſaction, for which no rational Account can be given, eſpecially conſidering the Time when this Marriage was ſolemnized.

[w] There cannot be a ſtronger Mark of Degeneracy and Corruption, than what ſome People may miſtake for Bravery and high Spirit; I mean theſe ſort of Self-murders. We have, in this Hiſtory, the cleareſt Inſtance of it; for theſe People had ſeen their Country over-run, their Friends and Relations abuſed and murdered, their Sovereign inſulted, and their Government overturned, without ſo much as one riſquing their Perſons to prevent ſuch Miſchiefs; but now, when the Means of Luxury were to be taken away, and they were in Danger of living poor, they could pluck up a Spirit and kill themſelves.

Divan, all the Omrahs alighted, and followed on foot to the Door of the private Divan, where *Nadir Shah* was; there the Emperor came out of his Royal Litter and went in. After they had mutually embraced, they breakfaſted together, and the Omrahs likewiſe had Breakfaſt given them. A little after the following Things were brought in for *Mohammed Shah*, *viz.* a Crown richly ſet with Jewels, a Sirpeach, or Fillet, to be worn round the Turban likewiſe ſet with Jewels, a Bracelet richly adorned, a Girdle of great Value, two Swords, the Handles ſet with Jewels, an enameled Cuttarry or Dagger. The Crown *Nadir Shah* put on with his own Hands, making him an Apology at the ſame time. After giving him ſome Advice he took leave of him; the Subſtance of the Advice was to this purpoſe; "In the firſt Place, you muſt ſeize all the Omrahs and *Jaguirs*, and pay each of them according to their Manſubs and Rank, with ready Money out of the Treaſury. You are to allow none to keep any Forces of his own, but you yourſelf are conſtantly to keep ſixty thouſand choſen Horſemen, at ſixty Rupees *per* Month, one with another; every ten Men to have one Dehbaſhi, every ten Dehbaſhis one Sudival, and every ten Sudivals one Hazzari. You ought to be well acquainted with the Merit of each, their Name, their Family, and Nation, not allowing any of them, Officers, Soldiers, or others, to be idle or inactive; when any Occaſion may require, detach a ſufficient Number under the Command of one whom you can truſt for Conduct, Courage and Fidelity; and when that Buſineſs is over, recall them immediately, not letting any Perſons ſtay too long in Command, for fear of bad Conſequences. You are more particularly to beware of *Nizam al Muluck*, whom, by his Conduct, I find to be full of Cunning and ſelf-intereſted, and more ambitious than becomes a Subject." *Mohammed Shah*, knowing theſe Advices proceeded from Good will, was very thankful, and deſired him, as his Empire depended on him, that he would appoint thoſe whom he thought moſt deſerving of the principal Poſts. *Nadir Shah* ſaid, "That will not be at all for your Intereſt, ſuch Officers will have little Deference for you in my Abſence. When I am gone, diſpoſe of every Poſt to thoſe whom you think moſt worthy; and ſhould they, or any of them rebel, upon the firſt Advice, I will ſend a Perſon to chaſtiſe them; if it be neceſſary, I will ſend Forces, or, on Occaſion, I can be with you myſelf in forty Days from *Kandahar*; but, at all Events, don't reckon me far off." After this, *Mohammed Shah*, taking Leave, returned back to *Aeyſh Mahl*, from whence he gave the Omrahs Leave to go home. On the Second of *May*, *Nadir Shah* ſent for *Nizam al Muluck*, *Sirbulind Khan*, and the other Omrahs, and having enjoined Obedience to *Mohammed Shah*, and threatened them, in caſe of Rebellion, took his Leave[x]. It was whiſpered, that *Nadir Shah* declared before ſome of his Omrahs, that he had acted indiſcreetly in regard to two Things; one was, his giving the Empire to *Mohammed Shah*, who being unequal to ſo great a Taſk, the Affairs of *India* would become worſe than formerly. The other his giving Quarter to *Nizam al Muluck*, who being ſo very ſubtle and crafty, it was more than probable he would raiſe a Diſturbance; but, as according to the Decrees of Providence, and the Aſſiſtance of their own good Fortune, he had once paſſed his Word to them, he would not act contrary thereto. This ſhews the Temper and Spirit of this Conqueror, and his Reſolution to do nothing that might deſtroy that Confidence which even his Enemies repoſed in him.

On the Fourth of *May*, 1739, he began his March from *Dehly*, having firſt iſſued out ſtrict Orders to all his Soldiers to join his Army, upon Pain of Death, which, with great Severity, he inflicted upon ſuch as ſtaid behind, Sixty of whom were diſcovered, and ſent after him, by the Command of *Mohammed Shah*; a larger Number was afterwards collected, and were likewiſe to have been ſent to him; but upon Reflection, the Mogul Emperor declared in Council, that as it was morally certain theſe poor People would be likewiſe put to Death, he ſaw no Reaſon why they ſhould make themſelves acceſſary to the ſhedding of ſo much innocent Blood, and therefore ordered theſe Deſerters to be ſet at Liberty. *Nadir-Shah*, when he had once begun his March towards *Perſia*; proſecuted it with great Diligence, that he might effectually ſecure the vaſt Riches he had obtained, and to which, however, he made ſome Acceſſions. Some Days before he left *Dehly*, he ſent Part of his Army before to *Lahor*; when they approached the Place, and *Zekaria-Khan* was apprized thereof, he called together all the great Men, Merchants, Serafs, and wealthy People of the City. At their Meeting it was agreed, that the Khan and they ſhould go out of the City, and ſend a Meſſage to the commanding Officer, in theſe Words; "If your Deſign be to ſlaughter the Inhabitants, lo! we are here preſent. If Plunder be your Intent, the City is deſerted, and our Effects left there; or if Money be what you want, the Soubahdar and Citizens can raiſe no more than one Crore; ſo whatever your Intentions or Orders are, that execute. This is a ſmall City, and not able to withſtand the Fury of an Army, as *Dehly* is." On the Receipt of this Meſſage, the commanding Officer thought proper to repreſent the Affair to his Maſter, who ordered him to receive the Crore of *Rupees*, and to moleſt them no further. After the Payment of the Money, amounting to 1,250,000*l.* he drew off, and joined the main Army upon their March.

It is amazing, that ſo ſudden, ſo extraordinary, and ſo dreadful a Blow as was by this Invaſion given to the Mogul Empire, did not awaken ſuch as were intruſted with the Adminiſtration of Affairs to a juſt Senſe of their Duty; and yet we are aſſured, that for almoſt two Months after the *Shah*'s Departure, there were no Steps taken to rectify thoſe Diſorders in their Government, that had produced this melancholy Event; on the contrary, the Miniſtry perſiſted in their Ill-will to each other, and were more intent on the Means of promoting their ſeparate Intereſts, or gratifying their particular Reſentments, than in contriving any thing for the publick Good, or for reſtoring their Affairs. Neither did this ſtrange Humour prevail among the Great only, but ſpread like a peſtilential Infection through all Ranks and Degrees of People. The Inhabitants, from the Terror of this Calamity, like People poſſeſſed, and in Fits, were quite ſtupefied, and not come to themſelves; and what is ſtill more ſtrange (notwithſtanding the Oppreſſions and Diſgrace the People of this Empire have met with ſince *Nadir-Shah*'s Departure) the indecent Expreſſions and beaſtly Actions of his Soldiers were the conſtant Subjects of Diſcourſe in all Companies, related with a ſeeming Satisfaction and Pleaſure, and by way of Jeſt and Drollery, not being the leaſt affected with the Reflection on their paſt Diſgrace and Misfortunes, but on the contrary ſeemed ſorry for his going away[y].

It is impoſſible to account for this, ſince the Loſſes they ſuſtained of all Kinds were incredibly great, for in Gold and Silver Coin he carried away twenty-five Crores of *Rupees*, making upwards of thirty-one Millions of our

---

[x] It is very evident, from this very ſingular and curious Converſation, that, in the Opinion of *Nadir Shah*, nothing could ſecure a Government like that of the Mogul's, but a ſtanding and well-diſciplined Army, conſtantly kept on Foot, and as conſtantly kept in good Order. The Reaſon is not hard to find out: In Countries where the People have Liberty and Property, they have no Temptations, or, at leaſt, very few, to endeavour to overturn that Conſtitution, or form a Government, by which or under which they enjoy ſuch Advantages; and in caſe their Country is invaded from abroad, they are hearty and zealous in defending it. But in ſuch Countries as are under arbitrary Princes, as none have either Liberty or Property, ſo none but ſuch as are hired will fight in Defence of that Power which belongs to one whom perhaps they fear rather than love, or, as in this Caſe, neither fear him nor love him.

[y] This is another Proof, that there is no political Diſtemper ſo hard to cure, as rivetted Luxury and total Corruption. One would naturally imagine, that there could not be in Nature a better Remedy contrived, or at leaſt one more effectual than this, which was deviſed by *Nizam al Muluck*, but even this we ſee did not operate. While the Miſchief was upon them, they ſunk under it, and groaned under the immediate Senſe of their Sufferings, but like lethargick Patients, as ſoon as the Cauſtick is withdrawn, they relapſe again into their former Condition, and ſleep as ſound as ever. We may, however, venture to predict, that the Diſſolution of this Government is at hand, and that it will not be long before we hear of *Indoſtan*'s being over-run by foreign Enemies, or a new Family raiſed to the Throne by ſome fortunate Inſurrection.

Money; in Gold and Silver Plate he carried away five Crores; in Jewels, which he took from the Emperor and the Omrahs, twenty-five Crores. He ſeized likewiſe the famous Peacock Throne, and nine others, valued at as many Crores of *Rupees*. In fine Cloths, rich Stuffs, and other valuable Commodities, he picked up ſix Crores more, ſo that in the whole, he received at leaſt ſeventy Crores, which make eighty-ſeven Millions and an half of our Money. He took with him likewiſe a thouſand Elephants, ſeven thouſand Horſes, ten thouſand Camels, and about a thouſand Artificers of ſeveral ſorts. His Officers and Soldiers acquired by Plunder ten Crores of *Rupees*, or twelve Millions and an half of our Money; the Charges of his Army, while he continued in the Territories of the Mogul, the Arrears, Pay, and Gratuities advanced them, together with the Goods they deſtroyed by Fire, and other Acts of Fury and Deſolation, could not fall much, if any thing, ſhort of twenty Crores more; and if to this we add the Loſs ſuffered by the Plunder of the City of *Dehly*, and the Ravages committed in the March to and from thence, the entire Loſs ſuſtained by the Inhabitants of this Empire, will not be exaggerated, if computed at an Arrib of *Rupees*, or an hundred and twenty-five Millions Sterling. Again, as to the Number of Perſons deſtroyed in the March from *Labor*, in the Battle of *Carnal*, in the March of *Dehly*, in the general Maſſacre there, and in the Conſequences of it, ſuch as Self-Murders, Famine, and arbitrary Puniſhments, it is believed there could not fall leſs than two hundred thouſand Perſons, of all Ranks, Ages and Sexes.

But it was not only Blood and Treaſure that paid for this Invaſion, but Dominions alſo, for *Nadir Shah* required, and obtained, an abſolute Ceſſion of all the Territories then poſſeſſed by the *Indian* Monarch on the Weſt-Side of the River *Attock*, by which Means *Peiſhor*, with its Territories, the Principality of *Cabul*, and ſeveral other Countries, were yielded to *Perſia*[1]; ſo that the Extent of that Monarchy on this Side is much larger than it was before *Nadir-Shah* came to the Crown.

Thus we have traced the Hiſtory of this *Tartar* Empire in the *Indies*, from its firſt Riſe to the preſent Times, through the Courſe of three hundred and forty Years and upwards. It is by the Help of this Hiſtory, that the ſubſequent Part of this Work will be rendered perfectly intelligible, becauſe from thence we ſee how all Parts of the higher *Aſia* changed their Government, and in a great Meaſure their Inhabitants, ſince it is certain, that from being the pureſt and moſt unmix'd People in the World, their Cities came to be filled by a vaſt Variety of different Nations, and thoſe too of different Faiths. Firſt, this was occaſioned by the utter Deſtruction of the *Perſian* Monarchy by the *Arabs*, which drove the Natives of that Country, who have ſince been called *Perſees*, and of late *Perſi*'s, into all Parts of *Aſia*, but more eſpecially into *India*, where the Manners of the People, and the Laws of their Country, very nearly reſembled their own. The *Mohammedans* next, for the ſake of Trade, came to plant themſelves in the *Indies*, where when they once found themſelves ſtrong enough, they ſeized ſuch Parts of the Country as were moſt convenient for them, and ſettled ſeveral Principalities, but particularly that under Sultan *Mohammed*, which gave the great *Timur* ſo much Trouble, when he firſt invaded *Indoſtan*, and which was afterwards ſo long famous under the Title of the Kingdom of the *Pattans*. The *Tartars*, as has been before obſerved in the laſt Section, had made ſeveral Incurſions into theſe Countries, to the great Diſturbance of the Inhabitants, who were likewiſe very much diſtreſſed by the continual Quarrels and frequent Wars among their own Princes, who by this Means weakened and deſtroyed that Force which was abſolutely neceſſary to their common Safety. It is very clear therefore, that the State of the *Indies* was much altered from what it was in the Time of the Ancients, and conſequently the Inhabitants were much leſs able to reſiſt the Attempts that were made upon their Liberties by the *Europeans*.

For, in the firſt Place, they had been totally enervated by their Luxury, which drew upon them thoſe Diviſions and Diſtractions which rendered them an eaſy Prey to the *Mohammedans* and *Tartars*. Neither was this at all cured by their Misfortunes, for though it be natural enough for a poor and hardy Nation to attain by ſlow Degrees, and unwearied Endeavours, to Wealth and Power; yet it is neither reaſonable to expect, nor does Hiſtory make it at all probable, that when once a Nation has been corrupted in its Morals, and ſoftened in its Manners, to a great Degree, it has ever recovered its former Temper and Spirit, though brought again into as great Poverty and Diſtreſs, as when it firſt ſtruggled for Empire. This was the Situation of the *Indians* preciſely, when they were firſt known to the *Portugueze*; that is to ſay, they had attained to the moſt flouriſhing Condition that perhaps ever any Nation enjoyed, and by abuſing their Wealth and Power, had ſunk into all the Depths of Luxury, by which the Yoke of Slavery had been brought upon their Necks; which though they bore with Impatience, yet they wanted both Force and Virtue to throw off, living ſtill in perpetual Feuds and Animoſities againſt each other, and delighting as much as ever in that Sloth and Love of Pleaſure which had brought them into theſe Misfortunes.

After having theſe leading Circumſtances clearly laid down to us, and our making a few neceſſary Remarks upon them, from the Lights of Reaſon and Experience, we ſhall be as well prepared as we can deſire for the Peruſal of the remaining Part of this Work, and be capable of entering fully into the Spirit and Meaning of it. We ſhall ſee how far we have Reaſon to expect, that modern Writers ſhould agree, and how far we may ſuppoſe they muſt differ from the Authors of Antiquity, though writing of the ſame Places and of the ſame People. We cannot but believe, that in the great Points of Government, and what may be called the Exteriors of a Conſtitution, there muſt be ſtill a very apparent Likeneſs between the ancient *Indians* and the modern, becauſe theſe are things permanent in their Nature, as we ſee in the Cuſtoms of the *Jews* and other Nations. Accordingly we find, that as to their Diviſion into Tribes, their Form of Government, and their ordinary Manner of living, the modern *Indians* reſemble thoſe deſcribed by the Ancients ſo much, that there can be no manner of Doubt of their being the ſame People, or of the Truth of thoſe Relations that are delivered to us from the moſt early Times.

In the next Place, we find the Religion of the *Indians* exactly in that Situation in which we might expect it, that is, exceedingly altered and corrupted, intermixed with many Notions, Fables, and Ceremonies, taken from the Doctrines maintained by the ſeveral Nations with whom they have ſince converſed. Laſtly, in reſpect to Trade, the Inhabitants of the *Indies* appear very much changed from what they were, but changed in a Manner very ſuitable to the Accidents that have befallen that Nation. They have no longer that Openneſs and Freedom in their Dealings, that Juſtice and Integrity in the Performance of their Contracts, that Regularity in their Proceedings, or that ſtrict Regard for their Words, which heretofore rendered them famous; but they are to this Day induſtrious and indefatigable, excellent in the ſeveral Manufactures to which they apply themſelves, and more attentive than ever to the concealing thoſe Secrets which relate to them. The Commodities, and the wrought Goods of this Country, are ſuch as perfectly correſpond with the ancient Accounts of them; ſo that taking things altogether, there is as much Affinity between the old and the new Relations of this Country, and its Inhabitants, as, the foregoing Particulars attentively conſidered, we can poſſibly require.

The Subject, as it has been hitherto purſued, has led us into Abundance of troubleſome Digreſſions, ſome perplexed and abſtruſe Inquiries, and through Roads into which nothing could carry an Author but the Love of Truth. If either the Search of Eaſe to myſelf, or the Deſire of acquiring falſe Fame by amuſing my Readers with pleaſant Relations, could have diverted me from the Execution of the Plan laid down at the Opening of this Chapter, I might undoubtedly have taken my Journey over plainer Ground, and through a more cultivated Country, I mean that of ſuſpicious Voyages, where we are more indebted to the Imagination, than to the Induſtry of the Writers; but I was convinced, that this kind of Hiſtory of the *Indies* was a Thing equally wanted and deſired to compleat the Univerſal Hiſtory, if I may ſo ſpeak, of Voyages and Travels; I thought I ſhould render a greater Service to the Publick in compiling what had never been digeſted before, than by tacking together Piece after Piece what had been before made publick: As this is now finiſhed, and we enter in the next Section on modern Voyages, I flatter myſelf, the Reader will, at every Step, diſcern the great Importance and ſingular Utility of the foregoing Part of this Chapter.

---

[1] The River *Attock* is a little Stream, as it is repreſented in ſome Maps, which divides the Province of *Lahor* from that of *Peiſhor*; but in Truth it is a very large and rapid River, which is fordable only in one Place, which is defended by a ſtrong Caſtle, called the Caſtle of *Attock*. So that by Virtue of this Treaty, there are four Provinces cut off from the Mogul's Empire, and annexed to that of *Perſia*, the eaſtern Boundary of which is now this River and the River *Indus*.

SECTION XXIII.

A compleat Hiſtory of the Riſe and Progreſs of the Portugueze *Empire in the* Eaſt-Indies; *their* Diſcoveries *ſet forth in their natural Order*; *the Form of their* Government *in thoſe Parts explained*; *the Cauſes of the* Declenſion *of their* Power *examined*; *and the* preſent Poſture *of their* Affairs *in this Part of the World truly ſtated.*

Collected chiefly from *their own* Writers

1. *An introductory Diſcourſe, ſhewing the Deſign of this Section, and the Method obſerved therein.* 2. *The Diſcoveries made by the* Portugueze *in the Fifteenth Century, and the Motives which induced them to attempt a new Paſſage to the* Indies. 3. *The Diſcovery of the* Cape of Good Hope, *by* Bartholomew Diaz; *and the Reaſons why it was ſo called.* 4. *The glorious Expedition of* Vaſquez de Gama *to the* Indies *by this new Paſſage, and his Exploits there.* 5. *The ſecond Voyage to the* Indies, *under the Command of Don* Pedro Alvarez de Capral, *who in his Paſſage diſcovered* Brazil. 6. *The King of* Portugal *ſends Don* Vaſquez de Gama *again into the Eaſt.* 7. *Affairs of the* Portugueze *to the Arrival of the two* Albuquerques *in the* Indies. 8. *Don* Francis d'Almeyda *ſent with the Title of Viceroy.* 9. *The noble Acts and extenſive Conqueſts of Don* Alphonſo d'Albuquerque. 10. *The great Wars carried on by, and the prodigious Succeſs of, the* Portugueze *in the* Indies. 11. *A ſuccinct Account of their Affairs to the Union of the Crowns of* Spain *and* Portugal. 12. *The Reaſons which oblige us to diſtinguiſh between their Conqueſts and Diſcoveries.* 13. *The* Maldives *and* Ceylon *firſt known to the* Portugueze. 14. *They viſit* Sumatra *and the adjacent Iſlands.* 15. *The important Diſcovery of the* Moluccas, *or* Spice-Iſlands. 16. *The* Portugueze *firſt viſit the Coaſts of* China. 17. *The Iſlands* de los Ladrones *diſcovered.* 18. *The large Iſland of* Celebes *firſt viſited by the* Portugueze. 19. *They diſcover likewiſe the Iſlands in the Streights of* Sonda. 20. *The Coaſts of* New Guinea *firſt known to the* Europeans. 21. *The Diſcovery and Conqueſt of the* Philippines. 22. *The firſt Voyage made by the* Portugueze *to* Japan. 23. *Attempts made to diſcover the Land of* Yedzo *and to the North.* 24. *The Hiſtory of the* New Philippines, *never before publiſhed in our Language.* 25. *An Account of the* Caroline *Iſlands, the laſt diſcovered in this Part of the Globe.* 26. *The Hiſtory of the* Portugueze *Commerce in the* Indies *reſumed.* 27. *Several of their principal Colonies loſt, to whom and how.* 28. *The great Declenſion of their Power in the* Indies. 29. *The Cauſes of that Declenſion inquired into and explained.* 30. *The preſent State of the* Portugueze *Settlements and Commerce.* 31. *Their Importance to the Crown of* Portugal *conſidered.* 32. *Conjectures as to the future State of their Affairs.* 33. *Obſervations and Remarks upon the foregoing Section.*

1. THE Diſcoveries and Conqueſts of the *Portugueze* take up not only ſo large a Part of their own Hiſtories, but make ſo conſiderable a Figure in thoſe of *Europe*, and above all concern the Subject of this Chapter ſo nearly, that I find myſelf obliged to treat this Matter in ſuch an Extent, as that it may anſwer the Reader's Expectations, and fulfil what I have promiſed for it in the original Plan of this Work. We have already many large and well written Books in ſeveral Languages, and ſome in our own, which promiſe a compleat Hiſtory of the Exploits of this Nation in the Eaſt; but none of theſe come up to what I have in View. They take in only a certain Period of Time, and are rather calculated to inform us of the Actions of the ſeveral Admirals, Governors, and Commanders in chief, than to give us a compleat Idea of the Riſe, Progreſs, and Declenſion of the *Portugueze* Power in thoſe Parts, which is what I aim at, and which, God willing, ſhall be performed in the Compaſs of this Section.

But to keep within due Bounds, and to bring ſo vaſt a Field of Matter within Compaſs, I have found it neceſſary for my Reader's Eaſe, and my own, to have Recourſe to the following Method. In the firſt place, I ſhall give a general and ſuccinct Account, with due Regard to Perſons, Circumſtances, and Time, of the firſt Diſcoveries and Conqueſts of the *Portugueze*, the Growth of their Empire in the Eaſt, and their ſeveral Eſtabliſhments, till other *European* Nations began to interfere with them in thoſe Parts, without running into any Digreſſions as to the Diſcoveries made by particular Perſons, and by this Means I hope to give a clear and eaſy Account of that great Alteration made in the Commerce of all *Europe*, by the Diſcovery of a direct Paſſage by Sea to the *Indies*. But as in the ſubſequent Part of this Work, it will be found extremely requiſite to have Recourſe to the particular Diſcoveries and firſt Intercourſe between the *Portugueze* and ſeveral *Indian* Nations, I ſhall next endeavour to ſtate with all the Brevity that is conſiſtent with ſuch a Deſign, the particular Diſcoveries that have been made by this Nation, or by the *Spaniards*, who acquired all that they poſſeſs in the *Eaſt-Indies*, in Right of the *Portugueze*, down to the preſent Age; and when this is done, I ſhall reſume the general Hiſtory of their Empire, ſhew the true Cauſes of its Declenſion, and conclude with a fair and diſtinct Account of their preſent Poſſeſſions in thoſe Parts.

This, I conceive, will fully anſwer our Intention of repreſenting as accurately as is poſſible the Progreſs of this Trade, which with ſo much Labour we have conducted from the very earlieſt Ages; and in this manner of ſtating it, the Matter contained in this Section, though not abſolutely new in itſelf, will, however, appear in a Light very different from that in which it has hitherto ſtood in any Collection of this ſort. It will be eaſy to diſcern, that the reducing ſuch a vaſt Abundance of Materials, as the *Portugueze* Hiſtorians, and thoſe of other Nations, who have treated on different Parts of this Subject, have amaſſed, within the Bounds of one Section, and that too of no great Size, will require great Diligence, and put me under the Neceſſity of laying aſide many Things which thoſe Writers thought worthy of tranſmitting to Poſterity. But this will be ſo far from proving in any reſpect prejudicial to the Reader, that it will on the contrary turn to his Advantage, becauſe it will free him from the Trouble of running through a long Courſe of trifling Circumſtances that have little or nothing to do with the main Point.

For as to the copious and ſwelling Panegyricks on particular Captains, the long Accounts of the Travels and Labours of Miſſionaries, and that pompous Detail of Church Hiſtory, which makes up at leaſt two-thirds of what theſe Authors have delivered, they are certainly Matters that an *Engliſh* Peruſer would be tempted to hurry over as faſt as poſſible, and therefore the Omiſſion of them muſt contribute not only to the Elegance, but to the Uſefulneſs of this Performance. Indeed, when freed from theſe and other cumbrous Circumſtances, there cannot be any thing more pleaſant or entertaining, and at the ſame time more curious and inſtructive, than this Part of our Hiſtory, in which we ſee what mighty Things may be performed by Courage, Induſtry, and Application, and how ſoon even the ſmalleſt States, by cultivating a maritime Power, become potent and conſiderable.

The little Kingdom of *Portugal* is bounded on the North and on the Eaſt by ſeveral Provinces of *Spain*, and on the South and Weſt by the *Atlantick* Ocean. It extends from 37° to 42° of North Latitude, and lies between the 7° and 10° Longitude Weſt from *London*. It is in Length from North to South about three hundred Miles, and in Breadth from Eaſt to Weſt about one hundred. The Climate is pleaſant and wholeſome, the Soil fertile in ſome Places, but not in many, ſo that they are ſupplied with Corn by us and by the *Dutch*. This Country was formerly famous for Gold, but for many Ages there has been none, or at leaſt but little of that precious Metal found there. There is, indeed, a very rich Silver Mine at *Guacaldana*, ſtill wrought with conſiderable Profit; but the principal Advantage of *Portugal* is its Situation on the Sea, and the Excellence of its Harbours. That of *Liſbon*, if we extend it from *St. Benet*'s above it, to the Bay of *Caſcais* at the Mouth of the River, is four or five Leagues long; but if we only take in that Part of it about the Town, where Ships ride in the greateſt Security from Storms and Enemies in eighteen Fathom Water, it will contain ſeveral thouſand Sail; the Entry of it indeed is hazardous without a Pilot, but on the other hand, Ships ride ſecurely when they are in it, being covered by the Hills on which the City ſtands on one Side, and by the oppoſite Banks, which are very high, on the other. There are, beſides this, ſeveral other good Ports in this Kingdom, the Subjects of which have been always famous for their Application to Maritime Affairs, and after they had driven the *Moors* out of their Country, followed them into their own, and, under the Reign of King *John the Firſt*, defeated them in a great Battle, and took from them the Fortreſs of *Ceuta*, which ſtill remains in the Power of the Crown of *Spain* *.

It was to the Zeal and Magnanimity of the Infant Don *Henry*, the Fifth Son of this King *John*, that the *Portugueze* ſtand indebted for all that Glory which they have acquired by their Diſcoveries and Conqueſts in the Eaſt, and we may juſtly conſider the Attempts made by them at this Juncture as the more extraordinary, ſince their Country was but juſt recovered from a long and dangerous Civil War, the Power of their Prince very far from being great, his Finances very low, and the Country ſo indifferently peopled, that he was obliged to have recourſe to other Nations for Men to recruit his Armies, and to ſerve on Board his Fleets, which were very far from being conſiderable; I do not mean in Compariſon of the Fleets fitted out in our Times, but of thoſe that were then employed by the Crown of *Spain*, and the Republicks of *Italy*. Yet under theſe Diſcouragements this Spirit of Trade and Navigation not only ſprung up, but proſpered; and this too, notwithſtanding that many of their Stateſmen were very averſe to ſuch Undertakings, from the Danger and Difficulties that attended them; nor could they in all Probability have been carried into Execution, but from the Zeal of the Clergy, who, out of a Deſire of propagating the Chriſtian Faith, promoted them to the utmoſt of their Power.

2. The Infant Don *Henry* Count *de Viſeo* was a Prince endowed with all the great Qualities that diſtinguiſh Heroes from other Men. He had ſhewn his Courage in his Youth in the Wars againſt the *Moors*; but he was far from valuing himſelf on the Power of deſtroying or making miſerable his Fellow-creatures, and therefore thought the proper Object of Valour was the facing thoſe Dangers that hindered the Proſecution of ſuch Deſigns as might be beneficial to the human Species. He reſolved therefore to make himſelf Maſter of the *Canaries*, which were then in the Hands of *Maciot de Bethancourt*, who held them under a Grant from the King of *Caſtille*, and who for a valuable Conſideration made over his Right to Prince *Henry* about the Year 1406. He ſent *Ferdinand de Caſtro*, who was at that time Maſter of his Houſhold, to take Poſſeſſion of them, and conceiving that they might be of great Uſe in the Diſcovery of the Coaſts of the great Continent of *Africa*, which were then very little known, he began about the Year 1410, to fit out Ships for that Purpoſe, and took *Spaniards*, and others who were ſkilled in Navigation, into his Service for that Purpoſe.

The utmoſt Limits of the South-weſt Part of *Africa*, then known to the *Portugueze*, was a Cape running out from the Foot of Mount *Atlas*, the proper Name of which was *Chaunar*, but called by the Seamen Cape *Non*, ſituated in the Latitude of 28° 10 North; and theſe Veſſels proceeded along the Coaſt to Cape *Bojadore*, in 26° North Latitude, but they had not the Courage to double it. In 1418 *Triſtan-Vaz* diſcovered the Iſland of *Porto-Santo*, and gave it that Name, becauſe the firſt ſaw it on he Feaſt of *All Saints*. The next Year the *Portugueze* diſcovered the Iſland of *Madeira*, to which they gave that Name, on account of its being covered with Wood. In 1439, a *Portugueze* Captain doubled Cape *Bojadore*, which ſome think is the ſame that in the Writing of *Ptolemy* is called Cape *Canarec*. The next Year they ſailed as high as Cape *Blanco*, in the Latitude of 20°, and ſoon after diſcovered the *Rio del Oro*, with ſeveral ſmall Iſlands upon the Coaſt. In 1446, *Nuno Triſtan* doubled Cape *Verd*, in the Latitude of 14° 40'. In 1448, in the Spring, Don *Gonzalo Vallo* ſailed to the Iſlands called *Açorres*, or the *Hawk-Iſlands*, from the Word *Açor*, which in the *Spaniſh* Language ſignifies a Hawk. They were at that Time uninhabited, and were ſettled by this Commander, who did not, however, viſit at this Time the Iſlands of *Flores* and *Corvo*, which were ſettled, as we have elſewhere obſerved, by ſome *Flemings*, and from thence were called the *Flemiſh* Iſlands.

In the Year 1449, the Iſlands of Cape *Verd* were diſcovered on the Behalf of the Infant Don *Henry*; the firſt of theſe was called the Iſland of *May*, becauſe they came thither on *May day*, and at the ſame time they beſtowed the Names of *St. James* and *St. Philip* on two of thoſe Iſlands, the Reſt remaining undiſcovered till the Year 1460. The progreſs made by the Infant Don *Henry* gave great Satisfaction to the Princes that poſſeſſed the Crown of *Portugal*, inſomuch that King *Alphonſo* IV. or rather the Infant Don *Pedro*, who governed the Kingdom during his Minority, made him a Grant of the Iſlands of *Porto-Santo* and *Madeira*. The Infant, however, judged it requiſite, according to the Cuſtom of thoſe Times, to obtain the Sanction of the Holy See, and for that Reaſon ſent Don *Ferdinand Lopez d' Azevedo* as his Embaſſador to Pope *Martin* V. who, as the thing coſt him very little, made a free Grant to the Crown of *Portugal* of all that ſhould be diſcovered on that Side as far as the *Indies*. This Bull is dated in 1444, and was confirmed by his Succeſſors, *Eugenius* IV. *Nicholas* V. and *Sixtus* IV. which occaſioned afterwards high Diſputes[b].

---

* It was very far from being my Intention to give the Reader either a Deſcription of the Kingdom of *Portugal*, or the Hiſtory of it, for both belong to the ſucceeding Volume. What I have ſaid in the Text was purely to render the ſubſequent Part of this Section perfectly clear, and well connected. By comparing the Force of the Kingdom of *Portugal* with the Conqueſts gained by the *Portugueze* in the *Eaſt-Indies*, he will be made fully ſenſible of the Truth of my Remarks, and by attending to the Situation of this Country, he will be ſatisfied, that there was nothing in it more than a Nation's turning their Thoughts to that for which Nature deſigned them; for with reſpect to *Eaſt India* Voyages, as the Art of Navigation then ſtood, the *Portugueze* were better ſeated than any other People in *Europe*.

In 1471, *Pedro d'Eſcovar* diſcovered the Iſland of *St. Thomas*, and *Prince-Iſlands*, and on the firſt Day of the next Year another Iſland on the ſame Coaſt, which for that Reaſon he called *Anno Bueno*, which is the ſame that is now called corruptly *Annobon*. In 1484, *Diego Cam*, a *Portugueze*, diſcovered the Kingdom of *Congo*, and having heard there of a Chriſtian Monarch, who reigned in *Ethiopia*, he magnified his Power ſo much on his Return, that *John* II. who was at that Time on the Throne, took a Reſolution to ſend by Land two Perſons he could truſt, to gain ſome certain Intelligence of this Chriſtian Prince, whom he judged to be Preſbyter *John*, and at the ſame time to gain the moſt ſatisfactory Knowledge they could of the State of the *Indies*. The Perſons who went with this Commiſſion, were *Pedro de Covillan* and *Alphonſo de Payva*, who had ſtrict Orders to commit to Writing whatever they judged worthy of Notice; but more eſpecially the Situation of Places, and the Navigation on the Coaſt of *Ethiopia*, by which it was judged ſome Diſcovery might be made of the Means of paſſing by a new Rout to the *Indies*. Our Travellers, who ſpoke the *Arabick* Tongue perfectly, went together to *Alexandria*, and from thence to *Cairo*, from which City they proceeded to the famous Port of *Aden* in *Arabia*, where they had an Opportunity of converſing with Traders of all Nations, and from all Parts of the *Indies*, from whom they learned many Things which were of great Conſequence to them, inaſmuch that they ſeemed to put it in their Power to give the King a good Account of the Commiſſion with which they were intruſted. Here they reſolved to part, in order, that while one made a Tour through the *Indies*, the other might go to the Court of the Emperor of *Ethiopia*. Accordingly, *Pedro de Covillan* went to the *Indies*, and having made a very exact Map of the Coaſts, he croſſed the *Arabian* Sea to *Africa*, and after having viſited moſt of the principal Ports there, came to *Sofala*, fully perſuaded, as well from the Reaſon of the Thing, as from the concurring Opinions of the Seamen he converſed with, that a ſhort and eaſy Paſſage might be found round the Continent of *Africa* to the *Indies*. Full of Joy from this Diſcovery, he made the beſt of his Way to *Cairo*, where he was to meet his Companion; but when he came thither, he was informed that the unfortunate *Alphonſo de Payva* had been murdered on the Road to *Ethiopia*. He was ſomewhat at a Loſs as to the Meaſures which he was next to take; but, after mature Conſideration, he reſolved to acquaint the King with the Diſcoveries he had made by Letter, and to continue his Journey into *Ethiopia*, that, at his Return to *Portugal*, he might be able to ſatisfy the King, in every Reſpect, ſo that his Majeſty might not be under a Neceſſity of ſending any other Perſon to make farther Enquiries. He executed his ſecond Journey with the ſame good Fortune that he did the former, at leaſt at the Beginning, and was extremely well received by *Alexander*, who was at that Time Emperor of *Abyſſinia*, who was extremely well pleaſed with the Offers made him of the Aſſiſtance of a powerful Prince, and promiſed to ſend *Pedro de Covillan* back again with Letters to the King his Maſter; but he dying ſuddenly, his Succeſſor *Nahu* treated our *Portugueze*, not only with Coldneſs and Diſreſpect, but with the greateſt Cruelty, refuſing him Leave to return home, and keeping him at his Court as a Priſoner for many Years; ſo that in *Portugal* they concluded him dead, though he lived afterwards to recover his Liberty[c].

3. The ſame worthy King of *Portugal John* II. while he endeavoured, by theſe his Embaſſadors, to gain a perfect Knowledge of the State of the *Indies* by Land, neglected not the Proſecution of what had been ſo long laboured with the ſame View at Sea. It was to facilitate this Deſign, that he employed *Bartholomew Diaz*, one of his Courtiers, and a Perſon remarkable for great Prudence, much ſkill in the Art of Navigation, as well as for invincible Courage, to proceed ſtill farther along the ſouth-Coaſt of *Africa*, which accordingly he did in the Year 1486, and executed his Commiſſion with equal Conduct and Succeſs He carried with him ſeveral Negroes, who had been many Years in his Service, and who, from time to time, he ſet on Shore, well dreſſed, with a ſmall Quantity of Goods, on purpoſe that they might inform the People of the Country how well they had been uſed, and how kindly treated by the *Portugueze*. He likewiſe ſet up Croſſes of Stone, with the Arms of *Portugal* engraven upon them, to aſſert his Maſter's Title to the Countries by him diſcovered.

At laſt, arriving in Sight of a high Cape, near which he met with very bad Weather, he loſt the Company of his victualing Bark; upon which his Crew mutinied, complaining that it was too much to endure at one time the Hardſhips of the Sea and of Famine. But Captain *Diaz* repreſented to them, that the former was not to be eſcaped by going back, and that the only Means they had of preventing the latter, was to proceed till they came to ſome Place where they could get Refreſhments; he prevailed upon them to double the Cape, and to ſail a good Way beyond it, to a Place where he erected another Pillar of Stone; and having obtained a ſmall Supply he returned, and, in his Paſſage homewards, met with his Bark again, in which, of nine Men that he had left, three only ſurvived, and of theſe *Ferdinand Colazza* died with Joy at the firſt Sight of the Captain. He continued his Voyage ſafely to *Liſbon*, where he arrived in *December* 1487, ſixteen Months and ſeven Days after his ſetting out, having diſcovered above a thouſand Miles along the Coaſt'd.

He gave the King his Maſter a very full Account of all that had happened to him, and inſiſted particularly on the Difficulty with which he had doubled that ſtupendous Promontory, which, from the ſtormy Sea about it, he thought fit to call *Cabo Tormontoſo*, that is, *The Tempeſtuous Cape*: But the King, who from the Lights he had received from *Covillan*'s Letters, knew how to form a right Judgment of the Importance of this Diſcovery, ſtiled it CABO DEL BUENO ESPERANZA, or, THE CAPE OF GOOD HOPE, which Name it has ever ſince retained: For he ſaw clearly from the Agreement between theſe Accounts, that the Paſſage was now open, and that there wanted but one Voyage more to finiſh what they had ſo much deſired, *viz.* the finding a direct Paſſage by Sea to the *Eaſt Indies*.

But while King *John* meditated this great Deſign in his Mind, and buſied himſelf in contriving the Means of executing

---

[b] This Tranſaction ſhews, that Don *Henry* was a very great Politician, for by pretending that all Countries were to be diſpoſed of at the Will and Pleaſure of the Pope of *Rome*, he ſecured his Holineſs's Conſent to whatever he demanded; and he very well knew, that whatever was beſtowed upon him by thoſe Grants, would be infallibly ſupported by the Thunder of the Church. This great Prince died in the Year 1463. The Continent of *Africa* under his Auſpice having been diſcovered from Cape *Non* to Cape *Sierra Leona*, which is in the Latitude 8° North, by which the Foundation was laid of all that was afterwards performed.

[c] I cannot help owning, that it is a little out of the Road of what is propoſed in this Sectio nto dwell on the Adventures of particular Perſons, but, as I know it is natural for an inquiſitive Reader to wiſh that he might be informed of what became of ſuch remarkable Perſons as are mentioned in the Hiſtory, I have taken Occaſion in the former Note to obſerve, that Don *Henry*, the firſt Encourager of the Diſcoveries of the *Portugueze*, ſurvived to 1463; and here I ſhall obſerve, that this *Pedro de Covillan*, who was the firſt of his Nation that ever ſet Foot in the *Indies*, lived a Priſoner in *Ethiopia* to the Year 1520. when Don *Roderigo de Lima* came thither in Quality of Embaſſador from the Crown of *Portugal*, to whom he related all his Adventures, and from whom he learned what mighty Conqueſts his Letters had produced.

[d] The Remarks made upon this Tranſaction by Sir *William Monſon* in his Naval Tracts, deſerve the Reader's Notice; the rather, becauſe he has been always eſteemed a very wiſe Man, and was, beyond Queſtion, a very able Seaman, and by no means envious of the *Portugueze*, or diſpoſed to depreciate their Labours; yet he attributes their Diſcoveries to the peculiar Providence of God in theſe Words: Before I treat of any particulars of the *Eaſt-Indies*, give me Leave to put you in mind of ſome Obſervations of mine, which will not be unworthy your Peruſal, ſeeing they are only to be attributed to God, who is the Searcher of all Hearts, and the Diſcoverer of hidden Secrets. It is ſtrange and ſurpriſing, that out of ſo many flouriſhing Nations as God hath created and civilized, he ſhould elect and chuſe the Kingdom of *Portugal* to perform this great Work of his, a Country in thoſe Days of leſs Eſteem and Reputation, of leſs Renown and Fame, and of leſs Ability and Valour, than any other Chriſtian Monarchy we can call to mind, and to aſſign them ſuch a Time to effect it, when they enjoyed a happy Peace with their Neighbours, and had no Enemy to oppoſe or hinder their Deſigns.

ecuting it in ſuch a Manner as might be moſt honourable to himſelf and advantageous for his Subjects, the great Ruler of all Things diſpoſed of him otherwiſe, by calling him out of this Life. In his laſt Sickneſs he appointed his Couſin *Don Emanuel*, who alſo married his Siſter, his Heir. This Prince who ſucceeded to the Throne of *Portugal*, 1495, was in the Flower of his Age, being then about Twenty-ſeven, and poſſeſſed, in an eminent Degree, thoſe Qualities that are moſt worthy of a Monarch. He had great Parts, much Penetration, and an excellent Judgment, yet he was ſo diffident of his own Abilities, that, foreſeeing the Execution of his Predeceſſor's Projects would be attended with a larger Expence than the Diſcoveries hitherto made had induced, he declined entering upon them, without taking the Advice of his Council, before whom he laid all the Informations that either himſelf or his Couſin King *John* had received. The *Portugueze* Stateſmen were extremely divided in their Opinions, for ſome preſſed the King warmly to tread in the Footſteps of his Anceſtors, and, to compleat with Glory, what with ſo much Reputation they had begun; while others as vehemently oppoſed his Purſuit of this Deſign, each Party ſupporting their Opinion by very plauſible Arguments.

Such as were deſirous that this new Navigation might be attempted, obſerved, that the Trade to the *Indies* had been the great Source of Power and Riches to every Empire that had been poſſeſſed of it, that Providence ſeemed to have thrown it into the Hands of their Nation, in ſuch a manner that it would not only be diſadvantageous but diſhonourable to refuſe it; that all Difficulties now were in a manner overcome, ſo that there remained ſcarce any thing but the going to take Poſſeſſion of thoſe fine Countries, and that vaſt Wealth which all the World thirſted after, though none but themſelves knew how to reach; that the engroſſing ſo rich a Trade to *Portugal* would balance their ſmall Extent of Territory, and enable his Subjects to make as great or greater Figure than the Inhabitants of Kingdoms much more potent in Appearance; that, in fine, there was no leſs Danger to be apprehended from abandoning this Deſign, than Benefit to be expected by purſuing it; ſince, in all Probability, their ambitious Neighbours, the *Spaniards*, would purſue and accompliſh this great Work, which would enable them to execute, with Eaſe, whatever they might be prompted to by their boundleſs Ambition.

On the other Side it was alledged, that there were many Things more apparently neceſſary to the Kingdom than ſuch long, ſuch expenſive, and ſuch uncertain Expeditions, ſince there were ſeveral large Tracts of Land, and particularly that ſpacious Plain between the *Ebro* and the *Tagus*, that were not properly cultivated, the Improvement of which would free them from the Neceſſity of depending for their daily Bread upon Strangers; that their Country was but thinly peopled, at leaſt, in proportion to the Numbers it might be able to maintain, if, inſtead of maritime Expeditions they turned their Thoughts towards making the moſt of what was in their Power; ſo that it was very unreaſonable to ſquander away Men that might be immediately uſeful to their Country, for the ſake of diſtant, and perhaps fallacious Expectations; that all their Diſcoveries and Conqueſts hitherto, had furniſhed him only with a few Negroes, Elephants Teeth, ſtrange Birds, and other Curioſities, in procuring which they had ſuffered many Shipwrecks, and run the Hazard of many more; that, for a Century together, they had been amuſed with theſe golden Dreams, and therefore it was high Time to awake from this Deluſion; that the Kings his Predeceſſors had been at vaſt Expences, to very little Purpoſe, in Purſuit of the like Deſigns, and that this ought to render him not only the more cautious in following their Example, but oblige him alſo to conſider the Conſequence of running an exhauſted Nation into Expences ſhe was unable to bear; that beſides the Succeſs of the Undertaking, might bring ſuch Demands upon the Crown of *Portugal*, as would greatly exceed her Forces; ſo that perhaps her Intereſts at home might come to be ſacrificed to thoſe abroad. I have dwelt the longer upon theſe Arguments, to ſhew that the greateſt and moſt ſalutary Deſigns are liable to as many Objections as the moſt dangerous and the moſt deſtructive[e].

4. The Deliberations into which the King entered upon this important Affair, though they did not abſolutely carry him from his Purpoſe, or engage him to abandon a Deſign which was, in ſome meaſure, recommended to him, with his laſt Breath, by that great Prince to whom he owed his Throne, yet they, for a long Time, retarded his Preparations, and hindered him from undertaking that Project in the Manner he had firſt intended: At laſt, however, fearing that his Neighbours might take Advantage of a longer Neglect, eſpecially as he underſtood that the *Spaniards* very vigorouſly puſhed forward their Diſcoveries, he came to a final Reſolution to wait no longer, but to make a Trial of what might be done in this Way, by ſending a few Ships only with a ſmall Number of Men, in which he endeavoured to avoid Extremes, and to ſteer as it were in the Middle, between the Opinions of ſuch as were of his Council. It was in conſequence of this Determination, that in the Spring of the Year 1497, he ordered four Ships to be equipped for his Expedition; of theſe, three were armed Veſſels, with ſome Pieces of Cannon on Board, and the fourth a ſmall Store-ſhip. We may be ſure that their Force was not very great, ſince, in the whole, it conſiſted in no more than an hundred and ſixty Soldiers and Seamen[f].

The Perſon choſen to command was Don *Vaſquez de Gama*, a Man of Quality, who poſſeſſed all the Talents neceſſary for ſuch an Employment. On the 9th of *July*, 1497, he embarked on board the *Gabriel*, which was the Admiral of this little Fleet, of the Burthen of One hundred and twenty Tons, and the ſame Day put to Sea: On the Third of *Auguſt* he left the Iſland of *St. Auguſtine*, on the Twentieth of *November* he doubled *The Cape of Good Hope*; in the Beginning of the Month of *January* he put into a Port of *Ethiopia*; and, on the firſt of *March*, he entered the Port of *Mozambique*, where the Scurvy deſtroyed many of their People, and where they were in great Danger of being betrayed, as ſoon as they were known to be Chriſtians. His Artillery, however, preſerved him, and from thence he continued his Voyage to *Mombaza*, where he again met with very perfidious Dealing. He ſailed from thence to *Melinda*, the Prince of which Country received him with great Civility, and promiſed to ſend an Embaſſador by them when they returned into *Portugal*.

Don *Vaſquez*, in Obedience to his Inſtructions ſailed from thence for the Coaſt of *Malabar*, and arriving happily at *Calicut*, there firſt heard of a puiſſant Monarch in thoſe Parts, ſtiled the *Samorin*, which is a Dignity comparable to that of Emperor; there he met, very unexpectedly, with an extraordinary Act of Friendſhip; for, on the firſt going of his Officers on Shore, they were met by a *Moor* of *Tunis*, who knew them, by their Dreſs, to be *Portugueze*; and though both on the ſcore of his Country and his Religion, it was natural for him to hate them, yet he very generouſly offered them his Service, and very ſincerely fulfilled all that he promiſed. He acquainted the *Samorin*, that a certain rich, powerful, and warlike Nation, were come from the fartheſt Parts of the Earth to ſeek his Friendſhip, and to deſire Leave to trade with his Subjects: This Repreſentation had its Effects; *Gama* was allowed not only to anchor in that Port with his Ships, but was alſo admitted to an Audience, in which he was treated with all the Kindneſs and Reſpect imaginable.

---

[e] It is evident from hence, that if any Accident or Shipwreck had attended this Voyage, there had been an End of the Deſign for ever, though it would have remained juſt as reaſonable and fit to have been undertaken as before, which I mention to ſhew how probable a Thing it is, that many great and glorious Diſcoveries have been prevented by ſuch groundleſs Oppoſitions.

[f] The Reader will eaſily perceive, from this Inſtance, that it is not a *great Force*, or a *vaſt Expence*, that is neceſſary to the Execution of an Important Deſign, but the Choice of a good Officer, one who knows what he is to do, and goes with a Reſolution to do what he is ſent to do. All the maritime Expeditions, from the Beginning of the World to this Period of Time, are not comparable to what was performed in the narrow Compaſs of *ſeven* Years Time by *Chriſtopher Columbus* and *Vaſquez de Gama*; for the former ſailed on the 11th of *October*, 1492, and the other on the 9th of *July*, 1497, ſo that, as I obſerved before, the Diſcovery of the *Eaſt-Indies* and the *Weſt*, were compleated in ſeven Years, at a *tenth* Part of the Expence that attended our *laſt Weſt-Indian* Expedition, and with a Force that would be ſcarce thought ſufficient for equipping, at this Day, *three Privateers*. I do not ſay this with any View of making invidious Compariſons, becauſe I am perſuaded that *our Admiral*, who commanded in the *Weſt-Indies*, had he lived in thoſe Times, and been intruſted with either of thoſe Commands, would have done as much as *Columbus* or *Gama*. But I make this Obſervation with this View, that our Countrymen may be ſatisfied, that as great Things as theſe may yet be done, whenever our Undertakings are conducted by *Publick Spirit*, and the Execution of them entruſted to *Officers* who are known to have a greater Regard to *Character* than *Fortune*.

But Things however did not remain long in this Poſture, for the *Mohammedans*, who were ſettled in great Numbers in the Dominions of this Prince, ſeeing that their own Commerce muſt be deſtroyed by the coming of the *Portugueze*, took incredible Pains to miſrepreſent them, as an ambitious, fraudulent, and cruel People, who meant nothing leſs than to depoſe the *Samorin* himſelf, and to conquer his Country; which Stories had ſuch an Effect on the *Indian* Monarch, that he began to form Schemes for the Deſtruction of *Gama* and his People. Don *Vaſquez* however, had very early Intelligence of his Deſign, and therefore haſtened on Board his Ships, and quitted the Coaſt. He wrote, however, a Letter to the *Samorin*, in which he vehemently complained of this Breach of Faith, juſtified himſelf from the Imputations thrown out againſt him, and adviſed the *Samorin* to return to his former Sentiments, aſſuring him that he would find his Account in changing his Commerce with the *Mohammedans* for that of the Subjects of the King his Maſter. The *Samorin* wrote him a very polite Anſwer, in which he threw the Blame upon his Miniſters and the *Mohammedans*, promiſing to puniſh ſuch as were guilty, aſſuring him, that, for the Time to come, his Nation ſhould meet with no Reaſon to complain. He added to theſe Compliments a very reſpectful Letter to the King of *Portugal*, in which he accepted the Propoſitions made him on his Majeſty's Behalf, and promiſed a free Trade to his Subjects, without Prejudice however to his former Allies.

Don *Vaſquez* having received the Letters, proceeded to the Iſland of *Angedive*, at the Diſtance of fifty Leagues from *Calicut*, where having repaired his Veſſels, and refreſhed his People, he ſet ſail from thence in order to return to *Europe*. In his Paſſage, he took Care to put into *Melinda*, where he was received with great Friendſhip, and the King, according to his Promiſe, ſent with him an Embaſſador to *Portugal*. He ſailed from thence to the Iſland of *Zanguebar*; but finding by the Way, that his Crew was much diminiſhed, he burnt the *S. Raphael*, which was commanded by his Brother *Paul Gama*, and took the Men on Board his own Ship: From *Zanguebar* he ſailed to *Mozambique*, where he took in a Supply of Proviſions.

On the 20th of *March* following, he doubled the Cape of *Good-Hope*, proceeded from thence to the *Azores* or *Terceras*, and in the Month of *September*, 1499, arrived ſafe at *Beline*, having ſpent two Years and two Months in his Voyage, and having loſt by Sickneſs and Fatigue about one hundred Men, and amongſt them his Brother. The Captain of his third Ship deſerted him in his Paſſage Home, with a View to get to *Liſbon* before him, in which he ſucceeded; but this proved rather advantageous than prejudicial to Don *Vaſquez*, for King *Emanuel* ſent ſome of his prime Nobility to meet him, receiving him, on his coming to Court, with all imaginable Marks of Favour and Eſteem, and rewarded him beyond every thing but his Merit. He created him Count *de Vidiguera*, gave him the royal Arms of *Portugal*, charged with two Does, in Alluſion to his Name of *Gama*, which ſignifies a *Doe*; and though he brought no great Riches home, beſtowed upon him large Appointments. He made alſo great Preſents to all his Officers, nor was there ſo much as a private Man on Board the Fleet, that did not receive the perſonal Thanks of this Prince, and with it conſiderable Marks of his Bounty.

So happy a Concluſion of the firſt Attempt, naturally paved the Way to a ſecond Expedition, for which the King cauſed immediate Preparations to be made, but at the ſame Time declared, that Don *Vaſquez de Gama* ſhould enjoy in Peace that Glory he had acquired, and not be obliged to hazard his Perſon again in ſo long and dangerous a Voyage. It may not be amiſs to obſerve, that this ſecond Expedition met with no Oppoſition, ſo much more powerful is Succeſs than Reaſon, and ſo much greater the Authority of Experience, than all the Arguments in the World. All Expences were now thought trifling, and thoſe who before had treated the Paſſage to the *Indies* as a Chimera, were now the loudeſt in applauding it when performed.

5. The Fleet therefore intended for this ſecond Expedition, conſiſting of thirteen Sail, ſome of which were large Ships, was ſo effectually victualled, manned and freighted, as to fill Strangers with a high Idea of the Courage, Power and Wealth of the People inhabiting that Country from which it came. Don *Pedro Alverez de Capral*, was appointed General and Commander in Chief, and carried with him Prieſts to inſtruct the Natives, if they were ſo inclined; but if not, and determined to make uſe of Force, he had fifteen hundred choſen Men on Board, which was thought a Force ſufficient to ſupport him. In the Month of *March*, in the Year 1500, he ſailed from the River of *Liſbon*, Experience having ſhewn, that was much the propereſt Seaſon of the Year for ſailing to the *Indies*. In his Paſſage, keeping out to Sea, in order to avoid the Storms that hitherto had been met with in doubling the Cape, he found himſelf near an unknown Continent oppoſite to that of *Africa*; and as the Coaſt made a very pleaſant Appearance, he thought fit to go on Shore, and took Poſſeſſion of it on the Behalf of the King his Maſter, which Country he called the *Land* of the *Holy Croſs*, but it has been ſince known by the Name of *Brazil*.

This Diſcovery appeared to him of ſuch Conſequence, that notwithſtanding he had loſt five Sail of his Fleet already, he thought fit to ſend *Gaſpar Lamidos* back to *Portugal* with the News, and one of the Natives on Board, as a Proof of this Diſcovery, and he likewiſe left twenty condemned Perſons who were put on Board him for ſuch deſperate Services, in this new found Country, and then proſecuted his Voyage[g].

In a ſhort Time after he left *Brazil*, he was ſurprized by a moſt dreadful Storm, which laſted twenty Days together, in which he loſt many of his People, and one of his Ships, on Board of which was the famous *Bartholomew Diaz*, who firſt doubled the Cape of *Good-Hope*, and who, by this unlucky Accident, periſhed with the reſt that were on Board that Ship. The General, notwithſtanding this Misfortune, continued his Voyage, and refreſhed at *Mozambique*, where he arrived with no more than ſix Sail, and thoſe too in a very ſhattered Condition. The Inhabitants remembering the Diſputes they had with his Predeceſſor, received him, if not with Kindneſs, at leaſt with Reſpect, and furniſhed him with whatever he demanded; he ſailed from thence to *Quiloa*, and then continued his Route to *Melinda*, where he ſafely ſet on Shore the Ambaſſador of that Prince, whom *Vaſquez Gama* had brought over.

He proceeded from thence with a fair Gale of Wind to the *Angedive* Iſlands, where he refreſhed and refitted at his Leiſure. The *Samorin* having Intelligence of his Arrival, ſent certain Perſons of Diſtinction to compliment him thereupon, and to invite him to *Calicut*, which Invitation he accepted, provided he had Hoſtages ſent him for his Security. This was in itſelf a pretty bold Demand, but when he came to explain himſelf as to the Hoſtages he expected, it appeared of a much more extraordinary Nature. He demanded the Catual, or Commiſſioner of the Cuſtoms, and ſome other of the *Samorin*'s Miniſters, on which that Prince heſitated at firſt, but at laſt yielded to it, and to all the other Demands made by the *Portugueze* General. On his Landing, he was received with all imaginable Civility, and immediately admitted to an Audience of the Emperor, at which *Capral*, who was naturally vain, made a pompous Diſplay of his Magnificence. The *Samorin*, to demonſtrate the Sincerity of his Profeſſions, made him a preſent of a Houſe, by a Deed of Gift, which was ingroſſed in Letters of Gold; he permitted him alſo to ſet up the Standard of *Portugal*, to appoint a Factor, or Conſul for his Nation, and to open Magazines for the effectual carrying on of Commerce; but all this fair Shew of good Intelligence and reciprocal Friendſhip ſoon came to nothing.

---

[g] This Diſcovery of *Brazil* is a plain Proof, that if *Ferdinand* and *Iſabella* had not ſent *Columbus* to diſcover *America* at the Time they did, it would have been diſcovered by the *Portugueze*; which ſhews of how great Importance it is for every Nation that aims at maritime Power, to encourage and promote all probable Schemes for Diſcoveries, which if they do not immediately ſucceed, are neceſſarily attended with theſe excellent Conſequences, viz. Breeding up good Officers, and keeping Seamen in Action; ſo that in Time of Peace, Attention to ſuch Expeditions will always ſecure a ſufficient Number of Officers and Seamen fit for the Service of their Country in Time of War, and who, if they are duly paid, and well treated, need never be compelled to do their Duty.

The *Portugueze* Hiſtorians aſſure us, that it happened through the Imprudence of their new Factor, or Conſul, whoſe Name was *Correa*, and who, on ſome ſlight Information, acquainted *Capral*, that the *Samorin* intended him ſome foul Play. The *Portugueze* General, upon this, began to ſeize the Ships of the *Indians*, and to commit other Acts of Hoſtility; upon which the Inhabitants, as might be reaſonably expected, attacked the *Portugueze* Factory, forced open the Gates, pillaged and burnt the Houſe, and of ſixty-ſix People that were in it, murdered fifty, the reſt ſaving themſelves with great Difficulty on Board their Ships. The *Portugueze* General took a very ſevere Revenge, by burning ten rich Ships that were in the Port, making Slaves of Part of their Crews, and beating down a great many Houſes about their Ears; after which he ſailed away for *Cochin*, which lies thirty Leagues from *Calicut*.

The Prince then on the Throne of *Cochin*, was called *Trimumpara*, who having Reaſons to be offended with the *Samorin*, received him very kindly and concluded a Treaty with him, into which the Kings of *Coulan* and *Cananor* deſired to be admitted. *Capral* taking great State upon him, did not immediately liſten to this Propoſal, but offered to carry their Ambaſſadors, if they thought fit to ſend any with him, into *Portugal*, aſſuring them, that his Maſter would ſend them ſpeedy and powerful Aſſiſtance againſt the *Samorin*. They readily accepted his Offer, and the General having taken on Board a rich Cargo, paid a Viſit to the King of *Cananor*, and having received the Ambaſſadors of all the three Princes on Board, he in the Month of *January* ſailed from *Cochin*, in order to return to *Europe*.

The *Samorin* fitted out a great Fleet, on Board of which were two thouſand Men, and ſent it in Purſuit of them, but the *Portugueze* being better Sailors, eaſily eſcaped this Danger. In his Paſſage home, one of his Ships unluckily ran aſhore on the Coaſt of *Melinda*, and *Capral*, to prevent the *Mohammedans* from making any Advantage of this Accident, firſt nailed his Cannon, and then ſet the Ship on Fire; notwithſtanding which, the King of *Monbaza* found Means to weigh the Artillery, and to render them ſerviceable, to the great Prejudice of the Chriſtians.

The *Portugueze* General continued his Voyage, doubled the Cape without any great Difficulty, and arrived ſafely at *Liſbon*, on the 23d of *July*, 1501. He brought Home with him a very rich Cargo, the Ambaſſadors of three Princes, and a pompous Account of the great Exploits he had performed againſt the *Samorin*. All which, however, did not procure him a very favourable Reception from his Maſter, on account of the great Loſs he had ſuſtained in this Voyage, and the Number of gallant Men who had periſhed in it, and who were not to be repaired or replaced, by all the Wealth of the *Indies*[h].

It ſeems, Don *Emanuel* had ſome Foreſight of what might happen from the haughty Diſpoſition of this Officer, and therefore had diſpatched a Squadron of four Sail to the *Indies*, under the Command of Don *Juan Nova Colleca*, a Man of great Prudence and Courage. He miſſed of *Capral* in his Paſſage, but arriving at *Melinda*, and there learning what had paſſed at *Calicut* and *Cochin*, he continued his Voyage to *Cananor*, and having complimented the King on the Part of his Maſter, ſailed from thence for *Cochin*. He met in his Voyage, a Fleet of upwards of fourſcore Sail, which the *Samorin* had ſent to attack and deſtroy him in the Port of *Cananor*. Don *Juan*, notwithſtanding the great Inequality of their Force, fought them for a whole Day, and having ſunk ten ſail of large Ships, four Barks, and other ſmall Veſſels, and killed upwards of four hundred Men, forced them to return with Shame to *Calicut*. After this Victory, he was received with all imaginable Mark of Kindneſs and Gratitude at *Cochin*, where having at Leiſure revictualled his Ships, and taken in a very rich Cargo, he ſailed for *Europe*.

He doubled the Cape without any Difficulty, and in his Paſſage from thence touched at the Iſland of *St. Helena*, of which he made ſuch a Report on his Return to *Liſbon*, as engaged the King of *Portugal* to inſtruct his Admirals to touch for Refreſhments there for the future. But a Squadron of ſix Sail that were ſent to *Brazil* at the ſame Time Don *Juan* was diſpatched to the *Indies*, had not the like good Fortune, four of them being loſt at Sea, and the two that returned brought little with them except Monkies and Parrots.

6. The Neceſſity of ſending a greater Force into the *Indies* than had been hitherto employed, was now very apparent, and therefore King *Emanuel* ordered twenty Sail of ſtout Ships to be equipped for that Purpoſe, neither did he find it more difficult to furniſh ſo large a Force with every thing neceſſary, than to fit out the ſmall Fleets he had ſent before; for now that there was a Proſpect of great Riches being got by this Commerce, he had not only the Command of the Wealth of his own Subjects, but Foreigners alſo reſorted in Crowds to *Liſbon*, ſome in ſearch of Employment, and others to employ their Money. The Buſineſs was next to find a Perſon fit to be intruſted with ſo great a Command, and the King, after mature Reflection, determined to engage *Vaſquez de Gama* to go thither a ſecond Time. That great Officer was in every Reſpect as eaſy and as happy as he could wiſh; his Reputation was well eſtabliſhed, his Fortune larger than his Deſires, and the Affairs of his Family in the faireſt Situation. But the preſenf Poſture of things made his Preſents neceſſary abroad, and from a Senſe of this he readily quitted his Retreat, and ſacrificed all the Bleſſings of Life, as became a Man of Honour, to the Service of his Country.

In the Spring of the Year 1503, he ſailed from *Liſbon*, doubled the *Cape* without any remarkable Accident, and arriving at *Quiloa*, forced the King thereof to become tributary to his Maſter, and to agree to the annual Payment of two thouſand Crowns of Gold. He ſailed from thence to *Cananor*, where he ſet the Embaſſador on Shore, made ſeveral rich Preſents to the King in the Name of his Maſter, renewed the Alliance made with him, and then ſailed for *Cochin*. While he was there, he received a Deputation from the Chriſtians of *India*, or, as they are commonly called, Chriſtians of *St. Thomas*, to whom he promiſed all the Aſſiſtance in his Power, and that he would leave, as indeed he did, a ſtrong Squadron behind him to protect them. The *Samorin* in the mean Time neglected nothing in the Power of a great Politician, or of a puiſſant Monarch, to deſtroy his Enemies. He laboured all he could to engage *Trimumpara* to betray Don *Vaſquez* into his Hands; but that Prince anſwered, that hitherto the *Portugueze* had behaved towards him with great Honour and Generoſity, and that while they continued ſo to act, he would never abandon them.

The *Samorin* had next Recourſe to open Force, and aſſembling a Fleet of twenty-nine Sail, reſolved to attack Don *Vaſquez*, when he was ready to return with his Fleet heavy laden, and conſequently in a Condition leſs able to oppoſe him. When therefore he had Intelligence that the *Portugueze* Admiral was preparing for his Departure, he ſent this mighty Force againſt him. Don *Vaſquez de Gama* ſuffered them to come as near him as they thought fit, and then attacking two of their largeſt Ships with great Vigor, the Seamen and Soldiers, after a ſhort Reſiſtance, in which they loſt three hundred Men, jumped over-board, which ſtruck ſuch a Terror into their Companions, that they immediately ſpread all the Sail they could, and bore away in the utmoſt Confuſion. In theſe two Ships that were taken, Don *Vaſquez* found immenſe Riches; for beſides Gold and Silver Plate to a great Value, there was on board one of them an Idol of a moſt horrid Shape, which weighed ſixty Pounds in Gold. In the Head there were two Emeralds for Eyes, more perfect than any that had been ſeen in *Europe*; and in the Breaſt there was fixed a Ruby of the Size of a Cheſnut; theſe and other valuable things being taken out, together with a Robe deſigned for the Idol, embroidered with Pearls, Topazes, and Diamonds, the Ships were ſet on Fire.

---

[h] I think it requiſite to add a Note here, in order to inform the Reader, that this is no Remark of mine, but taken from the *Portugueze* Writers, which is an Argument, that in thoſe Days, when a true Spirit of Virtue prevailed, it was held more honourable for a great Officer to ſerve his Country, than to inrich it; and that *Capral* was blamed, not for his want of Zeal or Courage, for he does not ſeem to have been defective in either, but for his not being ſo careful of his People as he ought to have been; for it is, and will be, a Maxim in all well governed States, that he is no Friend to his Country who is careleſs of its Subjects.

Vaſquez proceeded from thence to *Cananor*, conferred with the King on the Meaſures neceſſary to be taken in his Abſence, and then leaving behind him ſix large Ships under the Command of *Vincent Sodrez*, he ſailed for *Mozambique*, where having taken in ſome neceſſary Refreſhments, he continued his Voyage without the leaſt unlucky Accident, till he arrived at *Liſbon*, where he was received with the utmoſt Joy, and the Tribute of the King of *Quiloa*, in a Silver Baſon, was carried in Triumph before him.

As ſoon as *Gama* left the *Indies*, the *Samorin* aſſembled an Army of 50,000 Men, and marched to attack the King of *Cochin* by Land. The News of this Invaſion ſo frighted the Subjects of that Monarch, that they began to curſe the *Portugueze*, and to intreat their King to make his Peace with the *Samorin*, by delivering up ſuch of them as were in his Hands, and renouncing his Alliance with them. *Trimumpara* behaved on this Occaſion with extraordinary Firmneſs, he gave the *Portugueze* that were at *Cochin* a ſtrong Guard, and, notwithſtanding the Cowardice of his Subjects, reſolved to put all to the Hazard, rather than break his Faith.

At this Juncture *Vincent Sodrez* arrived with the Ships under his Command, to whom the King applied himſelf for Relief, and deſired he would land a Part of his Force to aſſiſt him in this Extremity. The *Portugueze* Officer was a very brave Man, and underſtood his Buſineſs perfectly; but he loved Money, and had found a very eaſy way of acquiring it, by plundering the *Mohammedan* Traders[h]: He therefore found out, that by his Inſtructions he was to act by Sea, and not on Shore, and therefore would not conſent to land ſo much as a ſingle Man. This amazed the King, and enraged the *Portugueze* that were at *Cochin* to the laſt Degree; but *Sodrez*, without putting himſelf to any Pain about their Reſentments, ſailed to the *Red-Sea*, in order to make Prizes, where his own Ship was loſt, and he and his Brother drowned.

In the mean Time the *Samorin* marched with his Army into the Territories of *Cochin*, where the King being betrayed, they forced a Paſs that led to his Capital, by which they imagined they had him intirely at their Mercy. As ſoon as *Trimumpara* was informed of this unlucky Accident, his firſt Care was to ſecure the *Portugueze*, and in order to this, he directed that they ſhould be ſent over to the Iſland of *Viapan*, which lies over-againſt *Cochin*. This Iſland was conſecrated to the moſt ſolemn Myſteries of the *Indian* Religion, and had therefore been hitherto accounted ſacred in all the Diſputes between Monarchs of that Faith; but it was alſo a Place of extraordinary Strength, and that not only from its being inacceſſible by Nature, but from the Aſſiſtance alſo of Art; and in this Iſland there were conſiderable Magazines, and a very numerous Garriſon of good Troops.

The *Samorin* carrying all before him, and a great Part of *Trimumpara*'s Subjects have deſerted their Maſter, and ſubmitted to that Tyrant, the King of *Cochin* found himſelf at laſt obliged to follow the *Portugueze*, and take Shelter in the ſame Place. The Governor of *Viapan* remained firm to his Maſter's Intereſt, and thereby preſerved him from the Rage of his Enemy; for the *Samorin* having burnt the Town of *Cochin*, ſeveral Times attacked the Iſland of *Viapan*, and was as often repulſed with great Loſs, and at laſt obliged to abandon his Deſign, and to return again into his own Dominions, the Winter Seaſon coming on, in which it is impoſſible for an *Indian* Army to keep the Field; but he left a conſiderable Garriſon in *Cochin*, and ordered ſeveral Forts to be erected, reſolving to return thither again in the Spring.

7. It was now become a ſettled Maxim in *Portugal* to ſend annually a Fleet to the *Indies*, and accordingly *Francis Albuquerque* coming with a ſtrong Force into thoſe Seas, and having joined at the *Angedive* Iſlands the Ships under the Command of *Pedro Ataida*, he ſailed directly to *Viapan*, where he comforted the King of *Cochin* on the Part of Don *Emanuel* his Maſter, and aſſured him that he ſhould receive all the Aſſiſtance from him that lay in his Power, which he performed with as much Sincerity as with Readineſs he promiſed. In the firſt place, he drove the Garriſon, which he *Samorin* had left in *Cochin* from thence, and having demoliſhed their Forts, brought the King back again in Triumph to his Capital. As this Victory, and the Uſe he made of it, gave the *Portugueze* Admiral a good Title to the King's Favour, he took Occaſion from thence to deſire the Liberty of erecting a Place of Strength for the Security of his Countrymen, that they might not be expoſed to ſuch Dangers as they had lately gone through for the future; the Propoſal was very kindly accepted, and the King of *Cochin* gave him leave to build a Fort where-ever he thought fit. In Conſequence of this Permiſſion, *Francis Albuquerque* made Choice of an Eminence, which commanded both the Town and the Fort, and the King having allowed him to cut down all the fine Palm Trees that were planted round his Palace, he quickly finiſhed the Fortreſs he had marked out in the beſt manner that ſuch Materials would permit. He likewiſe built a Chapel for the Performance of Divine Service; and thus as the *Portugueze* Writers themſelves expreſs it, their Nation became poſſeſſed of the Dominion both in Spirituals and Temporals of the *Indies*, and the King of *Cochin* without perceiving it, contributed all that lay in his Power to the introducing Strangers as Lords over himſelf and his Neighbours[i].

Under pretence of reducing ſuch as had rebelled againſt the King of *Cochin*, they made themſelves Maſters of their Countries, pillaged all their Towns and Villages at Pleaſure, and committed greater Devaſtations than the *Samorin* himſelf had done during the late Invaſion. In the midſt of theſe Proceedings *Alphonſo Albuquerque* arrived from *Portugal* with an additional Force, he ſoon added both to the Conqueſts and Alliances of the *Portugueze*. The Tutors or Guardians of the King of *Colan*, a very rich and potent Prince, whoſe Capital lay twenty-four Leagues South of *Cochin*, demanded the Protection and Friendſhip of *Portugal*, which was immediately granted, and a Factory ſettled there. The King of *Zanzibar* was ſoon after compelled to ſubmit to the Crown of *Portugal*, and the free City of *Brava*, which was a kind of Commonwealth, was obliged to pay an annual Tribute. The King of *Melinda* had Recourſe to the *Portugueze* for Aſſiſtance againſt his Neighbour the King of *Mombaza*, which ended in the Reduction of them both. Thoſe great Succeſſes terrified the *Samorin* to ſuch a degree, that in the moſt humble manner he ſought for Peace; and in order to obtain it, entered into ſuch Conditions as ſeemed ſatisfactory to the *Portugueze*, made them Reparation for the Loſſes they had ſuſtained when formerly ſettled at *Calicut*, and did every thing for them that they inſiſted upon.

---

[h] This Man has a very good Character given him by the famous *Portugueze* Hiſtorian *John de Barros*, at leaſt in Point of Courage; but it ſeems his Love of Money got the better of his Virtue and his Underſtanding. He had heard of a rich Fleet of Ships in the *Red-Sea*, and he would needs ſail in the Month of *May* to intercept them. In vain the People of the Country repreſented to him, that it was dangerous putting to Sea at that Seaſon of the Year; in vain his Pilots diſſuaded him from his Purpoſe; he was ſo poſſeſſed with the Deſire of being rich, that he had no Regard to his own Safety. After his and his Brother's Death, *Pedro Ataida*, upon whom the Command devolved, endeavoured to return with the remaining Ships to *Cochin*; but finding it impracticable, was forced to retire to the *Angedive* Iſlands, where he wintered.

[i] It is not eaſy to conceive how in ſuch a Situation the King of *Cochin* could refuſe the *Portugueze* leave to build a Fort in his Dominions, and yet it muſt be allowed, that it was an Error in Policy not to be juſtified. He was preſſed by two Difficulties equally great; but the Dangers from whence thoſe Difficulties aroſe were not equally preſſing, and therefore he choſe, as indeed any other Prince would in his Circumſtances, to run the Hazard of that which was at the greateſt Diſtance. The *Portugueze* Writers, without any Ceremony avow, that the Deſign of their General's erecting a Fort was to eſtabliſh their Dominion over the Natives, to which, however, they had no ſort of Title, except what was derived from the Pope's Bull, and the Notion of converting the People from Idolatry. With regard to the Bull, it has been treated with equal and with juſt Contempt by Proteſtant and Popiſh Writers. With reſpect to Converſion, it might be eaſily ſhewn, that Force of any kind is incompatible with the Chriſtian Religion; ſo that on the whole theſe Proceedings were grounded on pure Maxims of Policy; and all that is ſaid of Religion is a mere Pretence, by which the *Portugueze* endeavour to hide their Ambition and Injuſtice.

But as great Proſperity is apt to corrupt the Minds of Men, ſo the *Portugueze* made a very ill Uſe of this extraordinary Turn of Affairs in their Favour, ſince not long after this Peace concluded with the *Samorin*, they took a Ship of his richly laden; and notwithſtanding he applied by his Embaſſadors for Satisfaction, *Francis Albuquerque*, who then acted with ſupreme Authority in the *Indies*, not only refuſed him Satisfaction, but treated him with Scorn and Diſreſpect. This irritated that Monarch to ſuch a Degree, that he determined to renew the War, in order to revenge himſelf upon theſe Strangers, and to deſtroy the King of *Cochin*, who had ſacrificed the Freedom of the *Indians* by his indiſcreet Conceſſions to theſe foreign Invaders.

He kept, however, his Deſign to himſelf, and made ſecret Preparations for War, in order to be ready to fall upon his Enemies as ſoon as the *Portugueze* Fleet ſhould return to *Europe*. But all the Precautions he uſed could not hinder *Trimumpara* from gaining early Intelligence of his Intentions, who thereupon applied himſelf to the *Albuquerques*, intreating them to leave a ſufficient Force behind to protect their Countrymen and Allies in the *Indies*. The Requeſt was Reaſonable in itſelf, and the King of *Cochin* had the juſteſt Grounds to expect it ſhould have been complied with; but notwithſtanding what he could ſay, *Francis Albuquerque* would not be perſuaded to leave him any more than three Ships, and one hundred and fifty Men, under the Command of *Edward Pacheco*, a Man of great Courage and Conduct, and of ſuch Steadineſs and Abilities, that he was an Army in himſelf. This Step once taken, the *Albuquerques* ſailed with a rich Cargo for *Europe*, but met with very different Fates in their Voyage, ſince *Francis Albuquerque* the Uncle periſhed, with all who were on Board his Ship, none knew where, or how; but *Alphonſo*, the moſt fortunate Commander of his Time, arrived ſafely at *Liſbon*, with all the Ships under his Command, having acquired as great Fame and Riches as any that had been hitherto employed in the Eaſt.

As ſoon as the *Portugueze* Fleet quitted *India*, the *Samorin* aſſembled an Army of ſixty thouſand Men, and a great Fleet, in order to attack *Trimumpara* and the *Portugueze* in his Dominions. The Subjects of that Prince acted as ill on this, as they had done on the former Invaſion; that is to ſay, they abandoned their Prince, and endeavoured to ſave themſelves without thinking of their Country. The King behaved with his uſual Firmneſs and Conſtancy, diſpoſed all things to the beſt Advantage, and left the reſt to Providence. *Pacheco* and his *Portugueze* gained great Reputation by this War; and it was chiefly by his Aſſiſtance, that the vaſt Preparations made by the *Samorin* produced nothing but Confuſion and Shame to their Author. This Commander built another Fort for the Defence of the Haven, acted with the greateſt Alacrity and Courage by Sea or Land, where-ever the common Intereſt called him; ſo that when a new Fleet arrived from *Portugal*, and the Danger being over, he teſtified a Deſire of returning home: The King of *Cochin* gave him Letters, teſtifying how well he had behaved, and how much they were indebted to him for their Security.

At his Return King *Emanuel* paid him the higheſt Honours, ordered one of the moſt eloquent Prelates in the Kingdom to write the Hiſtory of this War, which he tranſmitted to the Pope, and other Chriſtian Princes, telling them at the ſame time, that it was as great a Satisfaction to him to have ſuch a Man his Subject, as to be Maſter of the *Indies*; and to ſhew that he did not mean to reward the important Services with Fame only, he beſtowed on *Pacheco* one of the richeſt Governments in *Africa*. Such was the noble Spirit of this Prince, to whoſe ſublime Virtues *Portugal* owes her Glory, and her *Indies*; a Prince, who knew how to ſuit the Abilities of Men to the Deſigns in the Execution of which he employed them, who judged impartially of their Behaviour, never puniſhed with any degree of Severity, or ſuffered Envy to mix with the Rewards he beſtowed on Men of Merit. Such a Prince was remarkably well ſerved at home, and highly eſteemed abroad: His Fortune made him the Delight of his Subjects; his Power rendered him the Terror of his Enemies; his Fidelity gained him the perpetual Confidence of his Allies. But it is now time to purſue our Hiſtory, and to ſpeak of the firſt Viceroy ſent by the Crown of *Portugal* to direct the Affairs of the *Indies*.

8. The immediate Acquiſition of Wealth and Power did not ſo take up the Mind of this great Prince, as to engage him in an Opinion that all Difficulties were overcome, and that there was nothing now to be thought on but making uſe of what was already in the Hands of his Subjects; on the contrary, the great things they had performed, inclined him to extend his Plan, and to think of driving the *Mahammedans* entirely out of the *Indies*. It was undoubtedly a great and glorious Deſign, but at the ſame time it ſeemed, the Strength of his Kingdom conſidered, abſolutely impracticable. Don *Emanuel* had been informed that there were three great Ports in the Eaſt, in which the *Mohammedans* were eſtabliſhed, and from whence they carried on all their Commerce to the moſt diſtant Parts of the *Indies*. Theſe Ports were *Aden* in *Arabia*, *Ormuz*, in an Iſland of the ſame Name on the Coaſt of *Perſia*, and *Malacca*, near the Streights of *Sincapour*. As their Strength was divided, Don *Emanuel* judged it not impoſſible to make himſelf Maſter of all theſe Places in their Turns, and with this View it was that he began to fit out a larger and better appointed Fleet than hitherto he had ſent to the *Indies*[k].

While he was employed in theſe Preparations, there happened a new Scene of Affairs in the Eaſt, where the *Brammins*, who were about the *Samorin*, ſhewed themſelves able Politicians, by giving him the beſt Advice that the Poſture of his Affairs would admit. They obſerved to him, that the *Chriſtians* and *Mohammedans* were equally Enemies, and that therefore the wiſeſt thing he could do was to call in the one to combat the other, that by thus waſting their Forces, they might be ſo reduced, as that he might be a Match for both. He, liſtening to their Requeſt, ſent for Aid from the Sultan of the *Mamalukes*, who were at that time in Poſſeſſion of *Egypt*; the News of which greatly terrified all the Chriſtians in the *Indies*, and occaſioned their ſending immediate Advice of it into *Portugal*.

This obliged King *Emanuel* to diſpatch his Fleet ſooner than he intended, and with a leſs Force, though it was even now very conſiderable, conſiſting of thirteen large Ships, and ſix Carvels, with a great Body of Soldiers on Board. He made choice of Don *Francis Almeyda Count de Abrantes* to command it, who had ſerved King *Ferdinand* of *Caſtile* in his Wars with Great Reputation, and gave him the Title of Vice-King, and Governor general of the *Indies*. He likewiſe aſſigned him Guards for his Perſon, a certain Number of Chaplains, and whatever elſe could be thought neceſſary to give an Air of Grandeur to his Office. On the 25th of *March* 1505, the Fleet ſailed from the River of *Liſbon*, and on the 11th of *April* following reached the Iſlands of Cape *Verd*; from whence ſtretching too far to the South, in hopes of doubling the Cape with great Eaſe, the Fleet ran into ſuch high Latitudes, as that the Seamen had many of them their Fingers frozen; but varying their Courſe a Point or two to the Eaſt, they arrived ſafely at *Quiloa*, where *Abraham*, the Tyrant of that Country, refuſing to pay his Tribute any longer, the Viceroy drove him out, and ſettled *Mohammed Anconin* in his Place, building a Fort there to keep the People the better in Subjection.

---

[k] This Scheme of Don *Emanuel*'s was actually executed in every Branch of it by Don *Alphonſo Albuquerque*; but I think it is very queſtionable, whether the *Portugueze* would not have found their Account much better in making two or three good Settlements in the *Indies*, without endeavouring to diſtreſs the Inhabitants, or to deprive them of their Liberty: In proſecuting of which Deſign, their own Succeſs ruined them, as in the ſucceeding Part of this Work we ſhall have Occaſion to ſhew.

Thence he ſailed to *Mombaza*, which is a ſmall City, in an Iſland well fortified with two Citadels, furniſhed with ſome Pieces of Cannon, which engaged the King to refuſe *Almeyda* Entrance. This, however, he forced, by beating their Forts to the Ground, and afterwards took the City by Storm, and made Slaves of a great Part of the Inhabitants. He continued his Voyage to the *Angedive* Iſlands, which are five in Number, not far from *Goa*, where, according to his Inſtructions, he built a Fort. He proceeded thence to *Cananor*, where, with the Conſent of the King, he built another Fort, and put a ſtrong Garriſon into it. On his Arrival at *Cochin*, he found things in a very unſettled Condition; for *Trimumpara*, worn out with Years, had reſigned the Crown to his Siſter's younger Son *Noubeador*, rejecting the elder, becauſe he had deſerted him on the laſt Invaſion by the *Samorin*, which occaſioned great Troubles; but the Viceroy put an End to them, and fixed *Noubeador* firmly on his Uncle's Throne[l].

About this Time a Squadron of eight Ships was ſent out to diſcover new Lands, by which was found the Iſland of *Madagaſcar*, otherwiſe called *St. Laurence*, becauſe it was firſt ſeen on the Day dedicated by the Church of *Rome* to that Saint. *Almeyda* alſo detached a Squadron under his Son *Laurence de Almeyda* on the ſame Service, who repaired to the *Maldive* Iſlands, from whence he was driven by a mighty Tempeſt to the Iſle of *Ceylon*, thought to be the *Taprobana* of the Ancients; where landing, he took the Inhabitants into the Protection of *Portugal*, and impoſed a Tribute on their King; nor was the Viceroy in the mean Time leſs employed, but defeated the *Calicutians* in a great Battle at Sea; then dividing his victorious Fleet, he committed one Part of it to *Emanuel Pazagno*, and the other to his Son, upon his Return from *Ceylon*, appointing the firſt to accompany the trading Ships of *Cochin* to Cape *Comorin*, for their Security againſt the Rovers in thoſe Seas, and the other to cruize at large about the Coaſt, for the Defence of the Iſlands and Ports. It became now an eſtabliſhed Rule among thoſe new Inhabitants of the *Indies*, that whoſoever came into thoſe Parts, without a Paſs from ſome *Portugueze* Admiral, or Governor of a Fort, ſhould be eſteemed as Enemies, and loſe both Ship and Goods, whereby they engroſſed all the Wealth of the *Eaſt* to themſelves; and the better to maintain their Authority, King *Emanuel* ſent out yearly new Reinforcements and Supplies.

In the Year 1508, fifteen Ships were fitted out, under the Command of *Triſtan de Cunha*, with which, repairing to the Coaſt of *Zanguebar*, he aſſiſted the King of *Melinda* againſt his rebellious Subjects, and burning the Cities of *Hoia* and *Brava*, ſailed to *Zocotara*, where, reducing the chief Town of the Iſland, he left a Garriſon in it, and made the beſt of his Way to *Malabar*, where, joining the Fleet of *Almeyda*, they repaired againſt the People of *Calicut*, who were now aſſiſted by a Fleet from *Arabia*, and before *Panan*, one of their Towns, gave them a final Defeat. Not long after they engaged off of *Chaul*, near *Bombay*, the Fleet of *Campſon* Sultan of *Egypt*, coming to the Aſſiſtance of the Enemy, which they entirely ruined, and every where came off Conquerors, excepting that the aforementioned Son of *Almeyda* falling in with a Squadron of *Cambayan* and *Egyptian* Ships, was unfortunately ſlain with an Arrow, as he bravely defended himſelf againſt them. The Body of this young Hero could not be found, but the Fleet returned with the melancholy News, which the Viceroy received with great Conſtancy of Mind, ſaying no more, than that his Son could not end his Days more gloriouſly than in the Service of his Country.

Alphonſo Albuquerque was now arrived in the *Eaſt* with a ſtrong Squadron from *Portugal*, with which, deſigning to ſubdue the Iſle of *Ormus*, at the Mouth of the *Perſian* Gulph, he firſt reduced the Cities *Curiate*, *Maſcate*, *Sobar*, and *Orſacan*, lying along the Coaſts of *Arabia*, then ſubject to the King of *Ormus*; after which, defeating the Enemy in an Engagement in the Port of that City, he landed in the Iſland, and prepared to inveſt the Place, when the King (called *Zarfadin* II.) gave leave that the *Portugueze* ſhould build a Fort on the Sea-Coaſts, and engaged not only to pay them an annual Tribute but to defray the Charges of the War. The Time of *Almeyda*'s Viceroyſhip being now on the Point of expiring, he reſolved to revenge the Death of his Son, and going out with a Squadron of nineteen Sail, attacked off *Diu* a great Fleet of *Cambayans*, *Egyptians*, *Calicutians*, and other of the Enemies of the *Portugueze*, by whoſe Hands his Son fell, and entirely routed them with great Slaughter, ſubdued all the Coaſt from *Diu* to *Cochin*, forcing the ſeveral Princes to yield themſelves tributary to *Portugal*.

His Commiſſion being now expired, he delivered the Government with great Reluctance to *Albuquerque*[m], and having paſſed the Cape of *Good-Hope*, in his Way homewards, was, with his Companions, unfortunately ſlain by ſome Barbarians on the Coaſt of *Africa*, through his own Imprudence; for he would needs go on Shore in ſearch of Proviſions and Refreſhments, in a Country abſolutely unknown; and there ſome of his Attendants having quarrelled about the Price of Proviſions with the Natives, he, with more Courage than Prudence, ran to their Aſſiſtance; but when he ſaw the whole Country pouring down upon them, he would have retired, and did his utmoſt Endeavour to make a Retreat to his Ship; but it was too late, the Barbarians diſcharging on him, and thoſe who were with him, a Shower of Arrows, by which himſelf, and twelve experienced Officers were killed upon the Spot; ſo that he loſt not only the Rewards which he might reaſonably have expected from his Maſter, but even wanted a decent Funeral, which, in the Opinion of thoſe who ſurvived him, was a much heavier Misfortune.

9. He was ſucceeded in his Command in the *Indies* by *Alphonſo Albuquerque*, whoſe Services had already merited much from his Maſter, and whoſe Character rendered him the fitteſt of all others to be entruſted with Power at this Time; yet he had not the Title of Viceroy, but that of General only, though his Authority was as extenſive as that of *Almeyda*, and his Succeſs in his Adminiſtration ſo extraordinary, that it acquired him the Surname of *Great*. *Fernand Coutigno*, Grand Marſhal of *Portugal*, who was come with a Fleet of fifteen Sail, and with three thouſand Men on Board, to put him in Poſſeſſion of the Government, engaged *Albuquerque* to begin the Exerciſe of his Authority with the Deſtruction of *Calicut*, which had given them ſo much Trouble, and which was likely to give them ſtill more, as long as it ſtood. This Expedition was very honourable for the new General, though it proved fatal to its Author; for while *Albuquerque* took the Citadel that commanded the Place, and ſet fire to the Town, the Grand Marſhal made himſelf Maſter of the Royal Palace, where finding immenſe Riches, his People fell to plundering, and the *Indians*, taking Advantage of the Diſorder they were in, fell upon them, and cut them off to a Man. *Albuquerque* did all that in his Power lay to prevent the Miſchief, but without Effect, and in endeavouring to ſave another he ran a great Riſque of being deſtroyed himſelf; for in his Paſſage towards the Palace, he received two dangerous Wounds, and immediately after was almoſt cruſhed to Pieces, by a great Stone thrown upon him from the Top of one of the publick Buildings. In this Condition his Soldiers took him up, and carried him on Board his Ship, and then they made a good Retreat, having loſt at this unfortunate Undertaking the Grand Marſhal, and fourſcore Men, and about three hundred wounded.

[l] This was a very deep Queſtion in Politicks, *viz*, Whether Rebellion in the next Heir deprives him of his Right of Succeſſion? But it does not appear that ever the *Portugueſe* conſidered the thing in this Light, the youngeſt of the two Nephews ſeemed to them moſt in their Intereſt, and therefore it was very natural for them to be in his.

[m] We learn from ſome of the *Portugueze* Hiſtorians, that *Almeyda* ſuffered his Jealouſy of *Albuquerque* to carry him ſo far, as to cauſe him to be ſeized, together with all his Papers, and conducted to the City of *Cananor*, where he kept him Priſoner, allowing him only three of his Servants to attend him; and though it was impoſſible they ſhould have Intelligence of this in *Portugal*, yet it ſeems they ſuſpected ſome ſuch Matter, and therefore ſent a Man of great Quality, and a ſtrong Fleet, to regulate Affairs in that Part of the World, without which, in all Probability, there might have been ſome Difficulty in perſuading the Viceroy to part with a Power of which he was ſo fond.

As ſoon as *Albuquerque* recovered, he formed a Deſign of making himſelf Maſter of *Ormuz*; and for that Purpoſe aſſembled a great Fleet, and a conſiderable Body of Troops, amongſt which were two thouſand veteran *Portugueze* that had ſerved long in the *Indies*. But when he was on the Point of ſailing, he received ſuch Intelligence as engaged him to alter his Deſign, and to reſolve upon attacking *Goa*, a large and rich City in the Iſland of *Tiçuarin*, with one of the beſt Ports in the *Indies*. This Iſland, which is about nine or ten Leagues in Circumference, was eſteemed, from its Situation, the moſt important Poſt on the Coaſt of *Malabar*. The King of *Decan* was the natural Lord of it, and the Perſon who commanded for him therein was one *Idalcon*, a *Moor* by Birth, and a Man of great Courage and Experience. He took all imaginable Care to put the Place into the beſt Poſture of Defence poſſible; notwithſtanding which, the Iſland was reduced, and the City of *Goa* taken by Storm by the *Portugueze*, aſſiſted by a Fleet and Army of an *Indian* Prince, called the King of *Onor*, under the Command of *Timoia*, his General. Don *Alphonſo Albuquerque* made his publick Entry into it on the 17th of *February*, 1510, with great Magnificence; and having ſettled every thing there, in the beſt Order poſſible, he appointed his Nephew *Antonio de Norogna* Governor of the City; *Gaſpar de Payva* General Director of the Commerce, and *Timoia* had the Charge of the Revenues, which amounted to Eighty-two thouſand Pieces of Gold *per Annum*. This Conqueſt was not eaſily maintained, for *Idalcan* returned with ſuch a Force as recovered the Place, and the new Governor *Antonio de Norogna* was ſlain in the Diſpute, which, however, ſerved only to increaſe the Deſire of *Albuquerque* to raiſe the Credit of his Nation, by ſecuring a Country and City of ſuch Conſequence, which, after a War of long Continuance, he accompliſhed; and this City became afterwards, *viz.* in 1559, the Seat of the Governor, and the See of an Archbiſhop, and Primate of the *Indies*.

The Conqueſt of *Goa*, though in itſelf of vaſt Importance, was far from ſatisfying the Ambition of *Albuquerque*, whoſe Mind was continually agitated with the Deſires of extending the Power of his Prince and his Reputation. It was with this View that he ſailed with a great Fleet to the Road of *Malacca*, where he demanded the *Portugueze* Priſoners the King had in his Hands[n]. The *Indian* Monarch put him off with fair Words and Promiſes, and the General being afraid that he might put the Priſoners to death, bore with this Treatment for ſome Time; but, at laſt, was ſo provoked, that he made an Attempt on the Place, and actually ſet it on Fire; upon which the King of *Malacca* immediately ſent the before-mentioned Priſoners, and offered to make Peace with the *Portugueze* upon their own Terms. Thoſe preſcribed by *Albuquerque* were extremely hard, for he demanded Leave to build a Fort where he thought fit, a Reparation of Damages done to the *Portugueze*, and a Sum of Money equivalent to the Expence of this Expedition.

The *Indian* Monarch, having conſulted with his Council, abſolutely refuſed to yield to them; and thereupon Hoſtilities were again begun on both Sides, which ended in *Albuquerque*'s attacking the City of *Malacca* by Sea and Land with great Fury, and, after an obſtinate Reſiſtance, it was taken by Storm, and given up to the Pillage of the *Portugueze* Soldiers; and we may gueſs at the Riches of the Place by the clear Fifth, which was reſerved to the King, and which was bought on the Spot by the Merchants for Two hundred thouſand Pieces of Gold. The General immediately cauſed a Fort to be erected for the Security of the Place, and putting a good Garriſon into it he gave the Command thereof to *Rodriguez Patalino*: He raiſed one *Utimut*, an *Indian* Lord, who, by deſerting the King of *Malacca*, had been very uſeful to him, to the Poſt of ſupreme Magiſtrate of the *Indians* and *Mohammedans*; and, having received the Compliments of ſeveral *Indian* Princes upon his Victory, he prepared to return to *Goa*. Before he quitted the Place a Conſpiracy was diſcovered, in which *Utimut* was principally concerned, who thought to have made himſelf Maſter of the Place. As his Letters were intercepted, the Proof againſt him was clear, and the General ordered him and his Son to be executed, notwithſtanding his great Age, and an Offer made him of an hundred thouſand Pieces of Gold to ſpare their Lives. After this, and ſtaying there near a Year, he determined to leave a very brave Man and experienced Officer Commander of the Forces at *Malacca*, with a ſufficient Number of Ships and Men. Theſe Precautions being taken, he ſailed for the Coaſt of *Malabar*; but, in his Paſſage met with ſuch a Storm, as deſtroyed the greateſt Part of his Fleet, with all the Riches on Board, and it was with very great Difficulty that the General himſelf eſcaped[o].

After a ſhort Stay at *Cochin*, and putting every thing there in the beſt Order they could, Don *Alphonſo Albuquerque* retired to *Goa*, where Things were in ſome Confuſion; but he ſoon reſtored them, and humbled all the *Indians* in his Neighbourhood to ſuch a Degree, that the *Samorin* himſelf ſent Embaſſadors to implore Peace, and to offer him Permiſſion to build a Fort at *Calicut*, wherever he thought fit. The Emperor of *Ethiopia* alſo ſent an Embaſſador to *Goa*, and from thence to *Portugal*; and, in ſhort, the Terror of the *Portugueze* Arms was now ſo great, that *Idalcan* and the Princes that had given the greateſt Oppoſition to the Settlement of that Nation in the *Indies*, were glad now to atone for their Indiſcretion. by offering to accept whatever Terms Don *Alphonſo* thought fit to preſcribe. Such a long Train of Succeſſes, and ſo ſplendid a Scene of Proſperity, would certainly have turned the Head of a Man of leſs Abilities than the Great *Albuquerque*, to whoſe Capacity the *Portugueze* were more indebted for their Conqueſts, than to the Armies and Fleets which he commanded.

He had, indeed, all the Talents requiſite for a Man in his Station, and with theſe ſuch a Degree of Diligence and Application, as would have enabled him to have performed great Things, if his Parts had been leſs ſhining.

He loved the ancient Frugality of his Country, and never ſuffered himſelf to be corrupted by the Power or Wealth that he poſſeſſed; and indeed he made no Uſe of either, but for the Service of the Crown. When he ſaw the Diſpoſition of the *Indians* to meaſure every thing by outward Pomp, he ſeemed to give into their Notion, and affected, upon publick Days, prodigious Magnificence: But in the midſt of all this he relaxed nothing of his former Severity, but lived, in the midſt of all his publick Splendor, as coarſely, in reſpect to his Perſon, as any private Man. In exacting the Dues of the Crown, he was ſomewhat ſevere; but, with regard to his own Fortune, he took ſo little Care of it, that, except his publick Appointments, he had ſcarce any thing he could call his own. His Officers were his Children, and he took as much Pains in teaching them their Duty as an affectionate Parent in the Education of his Sons. He overlooked Miſcarriages, but puniſhed Treachery, or Neglect of Duty, with inexorable Severity. He was extremely ready to reward, and all his Diſcourſe at his Table was of the great Actions performed by his Officers, while he was not only ſilent as to his own, but would not permit others to commend them. It was a common Saying of his, that he was afraid of nothing but Flattery; and it was obſerved, that he never preferred any who attempted to gain his good Graces that way. Let them ſerve their King and Country, ſaid he, if they would be beloved by *Albuquerque*; and his Actions were agreeable to his Words, for he diſtinguiſhed none but Men of Merit. It has been well obſerved by ſome of the *Portugueze* Hiſtorians, that the Vanity of *Almeyda* made him affect the State of a Prince, when the Power of the *Portugueze* was but indifferently eſtabliſhed; whereas the Modeſty of *Albuquerque* was moſt conſpicuous when his Victories had left him nothing to fear, and when the greateſt Princes of the Eaſt ſent their Embaſſadors to beg his Friendſhip.

---

[n] While theſe Diſputes laſted, *Sequeria*, a *Portugueze* Officer, had the Command of a conſiderable Squadron given him, which was to be ſent in order to make Diſcoveries; and as he had taken part with the Victor againſt the General, he no ſooner knew that the latter was inveſted with the chief Command, than he immediately haſtened his Departure. Sailing from *Cochin* on the 19th of *Auguſt*, 1509, he arrived on the Coaſt of *Malacca* on the 11th of *September*, and was entertained with a Shew of Friendſhip by the King, who invited him to a grand Entertainment, with Intent to have murdered him, and all who came with him; which *Sequeria* avoided, by pretending Sickneſs; the King then attempted to ſurpriſe the *Portugueze* as they landed to carry on their Commerce, in which he ſucceeded better, killing ſome, and making a conſiderable Number Priſoners. *Sequeria* revenged himſelf by attacking and plundering ſeveral rich Veſſels that he met with on the Coaſt, and then he continued his Voyage to *Portugal*. It was this Act of Treachery that induced Don *Alphonſo Albuquerque* to make his Attempt on *Malacca*.

[o] This Storm happened on the Coaſt of the Iſland of *Sumatra*, in which *Albuquerque* found a new Opportunity of raiſing his Reputation. The Ship on which he was on board ſtriking on a Rock, the Crew hurried him into his Long-boat, and juſt as they were putting off from the Wreck, the General ſaw a young Man fall from one of the Maſts into the Sea, near his Boat. He ſprung himſelf to his Aſſiſtance, caught him in his Arms, and thereby preſerved his Life at the Hazard of his own.

Yet, with all theſe Qualities, this Hero had his Faults. His Ambition was boundleſs, and carried away by an extravagant Deſire of extending the Dominions of the Crown of *Portugal*, he very little regarded whether the Meaſures he took for that Purpoſe were juſt or unjuſt. In his private Life, he was a Man of the ſtricteſt Honour; in his public Character, Regard to Truth will not permit us to ſay ſo much [p]. What we have farther to relate of his Actions, will fully juſtify this Remark. He made himſelf Maſter of *Goa* without any other Pretence than that it was neceſſary to the Crown of *Portugal*. He had ſeized *Malacca* for the ſame Reaſon: And now he meditated the Conqueſt of *Ormuz* from the like Motive, and he effected it in the following manner: He had formerly, that is, before he was declared General of the *Indies*, attempted to raiſe a Citadel there, without being able to effect his Deſign; but the Power of the *Portugueze* being now ſo much increaſed, that all the Commerce of the Eaſt depended upon them, the King of *Ormuz* had been obliged to become tributary, becauſe his City and Nation depended upon Trade; other Places could not be rich, but his Dominions could not ſubſiſt without it.

The then King of *Ormuz* was *Torun-Shab*, a young Prince of no great Abilities, and of a weak and timorous Spirit. In the Beginning of his Reign, he was entirely governed, as all Princes muſt be, who have not Parts enough to govern themſelves, by an old Miniſter, whoſe Name was *Noradin*, a Man of great Cunning, but of no enterprizing Genius, and who, to ſupport himſelf, and ſecure the Adminiſtration to his Family, brought three of his Nephews to Court, and gave them great Poſts in the Government and in the Army. *Hamed*, the youngeſt of theſe, in a ſhort Time gained, by his Intrigues, ſuch a Share of Power, that neither the King nor his Uncle had any more than a Shadow of Authority left. Don *Alphonſo Albuquerque* being informed of this, aſſembled his Army, and gave it out that his Deſign was to attack *Aden*; but, when at Sea, he directed his Courſe to the Coaſt of *Perſia*, and appeared before *Ormuz* when he was leaſt expected. He demanded that the Citadel ſhould be immediately put into his Hands, *Portugueze* Factories ſettled in the Place, and that the King ſhould abſolutely acknowledge himſelf dependant on the Crown of *Portugal*.

Torun-Shab, thinking it better to be the Vaſſal of a foreign Prince, than the Slave of his own Miniſter, exerted his Authority to leſſen his own Dignity, admitted the General into the Citadel, aſſigned the *Portugueze* ſome of the beſt Houſes in the Town for their Factory, and ordered their Flag to be diſplayed upon the Palace. *Hamed* could not help diſcovering his Impatience at a Change ſo ſudden and unexpected, to prevent the Effects of which, he formed ſome Deſigns againſt the General's Life; of which Don *Alphonſo* was no ſooner informed, than he gave Orders to ſome of his Soldiers to cut him off, which they without Ceremony performed. If the General had ſtopped here, it had been well enough, but his Projects were not of a Nature to be bounded by any thing but the abſolute Poſſeſſion of what he aimed at, and therefore, under Pretence that a Fleet was coming from *Egypt*, to make a Deſcent upon the Iſland, he demanded all the Artillery of the Place, which, he ſaid, was neceſſary for his preſerving it from the Enemy.

Torun-Shab aſſembled his Council, who declared, that in the firſt Place they knew nothing of any ſuch Deſign; and in the next, that they thought it very imprudent to comply with the General's Deſign. The Cowardice of the King, however, got the better of the good Senſe of his Miniſters; the Artillery was put on board for the preſent Service, which the General would never reſtore; but having made *Pedro d' Albuquerque* Governor of the Citadel, he ſeized fifteen of the Princes of the Blood, with their Wives and Children, and carried them away with him to *Goa*, that he might have ſufficient Hoſtages for their good Behaviour to him, who, he was conſcious, had Reaſon enough to be diſpleaſed with his Conduct towards them; and thus, for the preſent, *Ormuz* was ſubjected to the *Portugueze* [q].

A little before the Return of *Albuquerque*, he received a magnificent Embaſſy from the King of *Perſia*, who, finding himſelf in danger of ſuffering by the new Empire, erected by this General in the Eaſt, reſolved to prevent it if he could, by offering him his Friendſhip. The General received him with all the Reſpect due to the Miniſter of ſo great a Prince, and cauſed him to be entertained during the Time he ſtaid at the publick Expence, and that too with as great Magnificence as the Circumſtances of Time and Place would allow. He likewiſe made the *Perſian* Monarch very valuable Preſents, and ſuch as he very little expected; for he ſent him ſome very fine Pieces of Braſs Cannon, and various other Utenſils of War, together with ſome able Engineers to manage them, which he did for two Reaſons; firſt, that he might ſecure the ſincere Friendſhip of ſo great a Monarch, which he knew would be of prodigious Conſequence, as Things then ſtood, to the Affairs of *Portugal*, and next, becauſe he was perfectly informed that the Advantages gained over the *Perſians* by the *Turks* were entirely owing to their Artillery; and this great Politician very rightly judged, that nothing could ſerve their Purpoſes better than keeping the Force of theſe rival Empires on an Equality.

A ſhort time after the Return of Don *Alphonſo de Albuquerque* to *Goa*, he was ſeized with an Illneſs, which in a few Days carried him off at the Age of ſixty-three. He was called by the *Mohammedans Albuquerque Malandy*, becauſe he was born at *Melinda* in *Africa*, which in all the Eaſtern Tongues is called *Malanda*; but by the *Portugueze* he was ſtiled, and that very juſtly, *Albuquerque the Great*. He was the ableſt Stateſman, and by far the moſt conſummate General they ever had in the *Indies*, and left their Affairs in the beſt Situation; and yet he performed all the great Actions of his Life with very inconſiderable Force: For with thirty Ships he took *Calicut*, with twenty-one he became Maſter of *Goa*, with twenty-three he ſurprized *Malacca*, and had no more than twenty-two in his laſt Expedition againſt *Ormuz*. At the time of his Deceaſe he was meditating two Projects, which would have raiſed his Reputation ſtill higher, if he had lived to execute them; and they are both of them worthy the Character of this illuſtrious Perſon, and ſuch as perhaps would never have entered any other Head than his own.

He had ſo firmly eſtabliſhed the Power of the *Portugueze* in the *Indies*, that he ſaw no Poſſibility of the Trade's being diverted into another Channel, but by the *Turks*, who he ſuſpected would make themſelves Maſters of *Egypt*; and he very well knew, that by a right Management, the old Channel of Commerce, by the Way of *Alexandria*, might be reſtored, and would then become more conſiderable than ever. To prevent this, he inſinuated to the Emperor of *Ethiopia*, that for his own Security againſt ſuch bad Neighbours as the *Turks*, the beſt Step he could take would be to divert the Channel of the *Nile*, by cutting a Paſſage for it into the *Arabian* Sea before it reached *Egypt*. If this Deſign had taken Effect, it muſt undoubtedly have rendered the greateſt Part of *Egypt* uninhabitable, and withal would have rendered it impracticable to renew the old Method of tranſporting *Eaſt-India* Commodities from the *Red-Sea* to *Alexandria*, which was the principal thing he had in View. His other Project was to tranſport three hundred Horſe from the Iſland of *Ormuz* to the oppoſite Coaſt of *Arabia*, which is but ſeventeen Leagues, and this Party he thought ſufficient to plunder the Tomb of *Mohammed* at *Mecca*, and to burn the Relicks of that falſe Prophet, which he imagined would have various good Conſequences. One it would certainly have had, that is, it would have ſtruck all the *Mohammedans* in the Eaſt with Terror and Amazement, and have diverted that Concourſe of People thither; I mean to *Mecca*, which made the Commerce of *Arabia* famous, and conſequently would have promoted in a great Degree his other Deſign of reſcuing the Trade of the Eaſt out of the Hand of the *Turks*, and other *Mohammedan* Nations.

---

[p] If we conſider what Sentiments the *Indians* muſt have of the Behaviour of the *Portugueze*, we muſt naturally conclude, that they thought them as bloody and as barbarous as the *Tartars*; and, therefore, when we hear what the *Portugueze* call Acts of Treachery, we muſt not abſolutely attribute them to the faithleſs and wicked Diſpoſition of the *Indians*, but to their Terror and Apprehenſion of the *Portugueze*, whoſe Yoke they dreaded, and whoſe Force they knew not how to reſiſt.

[q] This City owed both its Being and its Grandeur to its Trade, and therefore we often hear it mentioned, to ſhew that there is no Place ſo uncomfortable by Situation, that may not be rendered agreable by Commerce and the Wealth that it brings in; the worſt of it is, that Luxury never fails to accompany this Abundance; and it was to the Factions that took Riſe from their Wealth and Corruption, that the King and People of *Ormuz* owed their Deſtruction.

The Death of this excellent Commander, though at ſo great an Age, proved ſome Inconvenience to the *Portugueze* Affairs, and would have proved a much greater, if his Succeſſor had not been at that time at *Cochin* with a Squadron of ten Sail, which he had juſt brought from *Portugal*. This General *Albuquerque* left all the Settlements then made in the *Indies* in perfect Peace, and in admirable Order; and he likewiſe left ſuch a Body of regular Troops as were capable not only of maintaining what was already acquired, but alſo of adding ſuch Conqueſts as the King or his Succeſſors ſhould judge neceſſary. His Funeral was performed with great Solemnity, and his Body interred in a Chapel dedicated to the Bleſſed Virgin, which himſelf had built at *Goa*, and which was much enlarged by his Son *Alphonſo Albuquerque*, who lived to the Age of fourſcore, and gave conſiderable Aſſiſtance to ſuch Hiſtorians as have recorded his Father's Actions.

10. The Perſon choſen to replace this great Genera
was *Lopez Suarez*, who was come for that Purpoſe with
Squadron of Men of War from *Portugal* to *Cochin*, wher
he received the News of *Albuquerque*'s Death. It ſeems t
have been a Maxim, and indeed it was a very right on
not to leave the ſame Officer too long in the Poſſeſſion o
ſo great a Power as it was neceſſary to veſt in the Vicero
or General of the *Indies*; and without doubt it was owin
to this Method, that ſome of theſe great Officers were pr
vented from making an ill Uſe of their great Authorit
and from ſetting up for themſelves, which all things con
dered, it is a Wonder they did not, ſince with a little M
nagement any enterpriſing Commander might have ſecur
an *Indian* Iſland to himſelf, and have brought the Inhab
ants to think it their Intereſt to defend him. *Suarez* w
no ſooner entered upon his Adminiſtration, but the Peo
of *Aden* ſent Embaſſadors to him, to let him know they w
ready to comply with his Demands, but he took no no
of their Submiſſion; and having a Deſign on the *Egypt*
Fleet, which he heard was coming down the *Red-Sea*,
to keep his People employed till their Arrival, near
Streights of *Babel-mandel*, attacked *Zeila*, a Town on
Coaſt of *Africa*, oppoſite to *Aden*, and gave the Plunde
his Soldiers and Seamen [r].

But *Suarez* too late repented him of his Neglect of
People of *Aden*'s Offers, for the expected Fleet of *E*

tians never appeared, and that City changed ſoon after its Reſolution of ſubmitting to *Portugal*. To the Loſs of this happy Opportunity ſucceeded another Misfortune; for *Campſon* the Sultan of *Egypt* being overcome by the Emperor *Selim*, and his Dominions becoming Part of the *Turkiſh* Empire, the Coaſts of *Egypt* and the *Red-Sea* were much better guarded than before, ſeveral new Forts being erected there, and ſupplied with good Garriſons. In the mean time *Andrada*, who commanded in chief at *Malacca*, made an Expedition for ſettling of Trade to the Coaſt of *China*, where he was hoſpitably entertained for ſome Months, but his People growing inſolent upon his kind Reception, committed ſeveral Violences, and he was forced to quit the Country with the Loſs of a great Number of his Followers. The *Portugueze* of *India* were now but in an indifferent State, and the new Forts lately finiſhed in *Ceylon*, and the Kingdom of *Coulan*, were ſcarce ſufficient to keep the Inhabitants in their Duty, ſo that *Suarez* being looked upon as unequal to ſo great a Charge as the Government of thoſe Acquiſitions, was recalled, and *James Lopez* appointed his Succeſſor.

He, on his Arrival in *India*, having quelled ſome Inſurrections there, and overcome the King of *Bintam*, whom he forced to accept a Peace on his Terms, repaired to *Ormuz*, and defeating *Mocri* King of *Boharim*, an Iſland in the *Perſian* Gulph, reduced it to the Obedience of *Portugal*. *Lopez* was ſucceeded by *Edward de Meneſes* in 1521, who reſtored the King of *Pacem*, in the Iſland of *Sumatra*, to his Dominions, on condition of his paying a Tribute, and giving Leave for the erecting a Fort upon his Coaſt. In the firſt Year of this Viceroy's Adminiſtration died *Emanuel* King of *Portugal*, the greateſt Prince that ever ſat on the Throne of that Kingdom, who, having reduced to his Obedience not only the Coaſts of all *India*, both within and without the *Ganges*, but of the Gulph of *Perſia*, and
covering with his Fleets the *Ethio-*

But *Suarez* too late repented him of his Neglect of the People of *Aden*'s Offers, for the expected Fleet of *Egyptians* never appeared, and that City changed ſoon after its Reſolution of ſubmitting to *Portugal*. To the Loſs of this happy Opportunity ſucceeded another Misfortune; for *Campſon* the Sultan of *Egypt* being overcome by the Emperor *Selim*, and his Dominions becoming Part of the *Turkiſh* Empire, the Coaſts of *Egypt* and the *Red-Sea* were much better guarded than before, ſeveral new Forts being erected there, and ſupplied with good Garriſons. In the mean time *Andrada*, who commanded in chief at *Malacca*, made an Expedition for ſettling of Trade to the Coaſt of *China*, where he was hoſpitably entertained for ſome Months, but his People growing inſolent upon his kind Reception, committed ſeveral Violences, and he was forced to quit the Country with the Loſs of a great Number of his Followers. The *Portugueze* of *India* were now but in an indifferent State, and the new Forts lately finiſhed in *Ceylon*, and the Kingdom of *Coulan*, were ſcarce ſufficient to keep the Inhabitants in their Duty, ſo that *Suarez* being looked upon as unequal to ſo great a Charge as the Government of thoſe Acquiſitions, was recalled, and *James Lopez* appointed his Succeſſor.

He, on his Arrival in *India*, having quelled ſome Inſurrections there, and overcome the King of *Bintam*, whom he forced to accept a Peace on his Terms, repaired to *Ormuz*, and defeating *Mocri* King of *Boharim*, an Iſland in the *Perſian* Gulph, reduced it to the Obedience of *Portugal*. *Lopez* was ſucceeded by *Edward de Meneſes* in 1521, who reſtored the King of *Pacem*, in the Iſland of *Sumatra*, to his Dominions, on condition of his paying a Tribute, and giving Leave for the erecting a Fort upon his Coaſt. In the firſt Year of this Viceroy's Adminiſtration died *Emanuel* King of *Portugal*, the greateſt Prince that ever ſat on the Throne of that Kingdom, who, having reduced to his Obedience not only the Coaſts of all *India*, both within and without the *Ganges*, but of the Gulph of *Perſia*, and of the *Red-Sea*, and covering with his Fleets the *Ethiopian* and *Atlantic* Oceans, ſhut up the Navigation to thoſe Countries from all others, thereby totally excluding the *Venetians* from the Commerce of the Eaſt, whoſe Merchants had ever ſince the Year 1269, to that Time, wholly engroſſed that Trade. He alſo ſubdued great Part of the Coaſt of *Barbary*, making himſelf Maſter of *Aſoſia*, *Tita*, and *Azamor*, near Cape *Cantin*, and defeated the Forces of the Emperor of *Morocco* in ſeveral Rencounters.

He was ſucceeded by his Son *John* III. about which Time the Viceroy of *India* appointed *Lewis de Meneſes*, with a ſtrong Squadron, to keep the People of *Ormuz* in Obedience, and ſent *Garcias Henriquez* with another to the Eaſtward to make farther Acquiſitions, which latter failed round the Iſlands *Banda Mira* and *Gumanapy*, and proceeding thence to *Tidore*, there fell in with one of the Ships that had been ſent out under *Magellan* by the Emperor *Charles* V. to make new Diſcoveries, which *Henriquez* attacked, and made himſelf Maſter of, putting to Death or making Slaves of all the *Spaniards* on board. This done, he erected a Fort in the neighbouring Iſland *Ternate*, and ſtrictly enjoined the Inhabitants not to vend their Spices to any other than the *Portugueze* [s].

The next Year *Hector Silveria* being appointed Admiral of the *Indies*, was joyfully received by the Viceroy of *Goa*, from whence he proceeded to *Malacca*, then beſieged by *Laquezimenes* the King of *Bintam*'s Admiral, and having happily raiſed the Siege, detached *Alonzo de Souſa* to the Coaſt of *Bintam*, which having ravaged, he gained a great Victory over the Ships of *Pabang*, *Patana*, and *Java*, killing great Numbers of the Enemy, and taking ſeveral Priſoners;

---

[r] The Fleet with which this Commander ſailed into the *Red-Sea* was by much ſuperior to any thing the *Portugueze* had ever been able to put to Sea before that time, and was intirely the Effect of Don *Alphonſo d'Albuquerque*'s Prudence and Diligence. It conſiſted of thirty ſeven large Ships, and at the ſame time he arrived before *Aden*, there was no Force in the *Indies* capable of diſputing with him. The Reaſon that the Inhabitants of that City would then have ſubmitted was, becauſe a great Part of their Walls remained unrepaired, ſo that they were not in a Condition to make any Defence; but when they obſerved the Slowneſs of the *Portugueze* General, and that he did not embrace an Offer of ſuch Importance with the Readineſs that he ought to have done, they loſt no Time in repairing their Fortifications, and putting their City in a Poſture of Defence, ſo as to be no longer under Apprehenſions of his Power, and then they treated him with Contempt.

[s] It appears from hence, that the *Portugueze* were the firſt who attempted to monopolize the Trade of Spices; at which the Reader may be the more ſurpriſed, ſince we do not hear at this time of any other *European* Nations that traded in thoſe Parts, and therefore this forbidding the Inhabitants to ſell Spices, might appear an unneceſſary Precaution. To ſet this Matter in a true Light, the three following Points muſt be obſerved: In the firſt place, there was a great Trade for Nutmegs carried on throughout all *Aſia*, and this the *Portugueze* were deſirous of keeping in their own Hands. In the next place, they were very apprehenſive of their being carried into the *Red-Sea*, and ſo through *Egypt* to *Alexandria*, to their great Rivals in Trade the *Venetians*; to prevent which, they kept a Squadron cruizing at the Mouth of the *Red-Sea*. Thirdly, they were afraid of the *Spaniards* from the *Weſt Indies*, the Governors in *America* making frequent Attempts on this Side, in hopes of eſtabliſhing a regular Commerce between the Kingdom of *Mexico* and the *Moluccas*; ſo that it is very plain the *Portugueze* Viceroys had Reaſon enough to apprehend their having this valuable Commerce taken out of their Hands.

ſoners; after which, proceeding to *Machian* and *Bachian*, two of the *Molucca* Iſlands near *Tidor*, he plundered them, and carried off a great Booty. The next Year *Vaſquez de Gama* was appointed Viceroy of the *Indies*; but as he was in a very advanced Age, it being improbable he ſhould live long, a Commiſſion was made out for *Henry de Meneſes* to ſucceed, in caſe of his Deceaſe before the three Years of his Viceroyalty ſhould be expired. There was a third Commiſſion to *Pedro Maſcarenhas*, appointing him Viceroy, if *Meneſes* ſhould die; and a fourth to *Lopez de Sampayo* to ſucceed, in caſe of the Death of *Maſcarenhas*. The *Portugueze* by this means were almoſt ſecure of providing, that their Acquiſitions in *India* ſhould not remain without a Head, and the Event ſhewed the good Effects of their Care; for *Gama* did not long enjoy his new Honour; but having firſt defeated the People of *Calicut* in an Engagement at Sea, died within a few Months after his Arrival at *Goa*, ſo that the Viceroyalty devolved upon *Henry de Meneſes*.

The Commiſſion by which he was to ſucceed was ſealed up with this Superſcription, *Not to be opened till* (which God forbid) *Vaſquez de Gama, Viceroy and high Admiral of the* Indies, *ſhall be departed this Life*. This being now opened by the next commanding Officers in the great Church at *Cochin*, *Meneſes*, who was then abſent from the Place, was proclaimed Viceroy, whoſe Adminiſtration was likewiſe of a ſhort Date, and diverſified with both good and bad Fortune; for after ſeveral Engagements with the *Calicutians* with various Succeſs, he defeated their Fleet in the Port of *Guleta*, and made himſelf Maſter of moſt of their Ships; ſoon after which he deſtroyed a Fleet of *Turkiſh* Ships off *Dabal*, another of *Moors* off *Zeila*, worſted that of the Prince of *Patana* and *Laqueximenes* the Admiral of *Bintam*, and then advancing to relieve the *Portugueze*, beſieged by the Enemy in the Fortreſs of *Calicut*, he performed the ſame, but died of a Wound he had received in his Leg by an Arrow, in the Year 1526.

This unlucky Accident had very bad Effects on the Affairs of the *Portugueze*, and as theſe were the Reſult of the very Precautions that were taken to avoid them, it may not be amiſs to examine them more at large. As ſoon as it was known at *Goa* that *Henry de Meneſes* was dead, all the great Officers aſſembled, in order to open the Billets by which the Succeſſor was appointed; and in opening theſe, the Authority of Viceroy devolved upon *Pedro Maſcarenhas*, who was then at *Malacca*. One of the Officers preſent, who took upon him to have more Wit than his Neighbours, thought proper to diſtinguiſh upon this Occaſion between a General preſent, and a General at a Diſtance; he ſaid, that the Intent and Meaning of theſe Subſtitutions was plainly, that the Government in the *Indies* might never want a Head; and that an abſent Head being in Effect no Head at all, it was neceſſary to open another Billet, in order to procure a Viceroy for the preſent, till *Pedro Maſcarenhas* ſhould arrive from *Malacca*[1].

This Propoſal was far enough from being univerſally approved by all who were preſent, becauſe many of them foreſaw, that under Pretence of providing againſt a ſlight Evil, or rather an Inconvenience, they were on the Point of running into a much greater Miſchief. However, *Alphonſo Mexias*, who firſt propoſed the opening the other Billet, preſſed it with ſuch Earneſtneſs, that at laſt it was complied with, and the Billet being opened, *Lopez de Sampayo* the Fourth, ſubſtituted Viceroy, took upon him that Charge, and gave the *Malabarians* a ſignal Defeat in an Engagement at the Mouth of the *Bacanor*: But *Maſcarenhas* highly reſenting it, that *Sampayo* ſhould uſurp the Viceroyalty out of his Turn, would by no means acquieſce with that Proceeding, but aſſumed to himſelf the Title and Office of Viceroy, and being forced to wait the proper Seaſon for coming down to *Goa*, took that Opportunity to repair with a Fleet of nineteen Sail to the Coaſt of *Bintam*, where he defeated *Laqueximenes*, the Enemies Admiral, together with the Fleet of *Pahang*, which came to their Aſſiſtance, when taking the City of *Bintam* by Storm, he burnt it; and the King dying with Grief at his ill Succeſs, *Maſcarenhas* appointed another in his Room, on condition that he ſhould maintain no Army nor Fleet without Leave from the *Portugueze*, but commit himſelf wholly to their Protection. This done, he went with his Fleet to *Goa*, where he deſired a Number of Arbitrators might be appointed to judge whether he or *Sampayo* was the proper Viceroy; but the latter at firſt refuſed to ſubmit to any Arbitration: Inſtead of which, contrary to all Reaſon and Juſtice, he ſeized and impriſoned him, ſuppoſing that this would put an End to the Conteſt, by frighting the Friends of his Competitor into Silence; but in this he took his Meaſures quite wrong, for this Violence, inſtead of leſſening the Intereſt of Don *Pedro*, increaſed it, ſo that at laſt he found himſelf under a Neceſſity of yielding to this Propoſition, and thirteen Judges were choſen to decide this difficult Queſtion, which by an Accident that happened in the mean time was made ſtill more difficult.

For, a freſh Squadron arriving from *Portugal*, brought more of theſe Billets, with an Order that ſuch of the old ones as were not opened, ſhould be ſuppreſſed and ſent back, and that the Government ſhould be determined by the new Billets; the firſt of which, by the Advice of *Alphonſo Mexias*, the firſt Mover of all theſe Troubles, was opened, contrary to the Opinion of the wiſeſt and beſt Men at *Goa*, who foreſaw, that inſtead of leſſening, it would augment the Doubts and Suſpicions that had thrown them into Factions already. This Billet being in Favour of *Lopez*, he affirmed, before the Judges, that both the former Nominations were void, and therefore he inſiſted only upon this laſt; and they being, for the moſt Part of his Faction, or elſe corrupted by *Mexias*, came into it at once, declared him Viceroy, and, to put an End to all Diſputes, ordered Don *Pedro Maſcarenhas* to return immediately to *Portugal*; with which Arbitration he complied, as plainly perceiving that he could hope for nothing by continuing in the *Indies*, when Things were in this Situation. On his Return to *Liſbon*, he laid the whole Proceedings before the King, together with a Memorial, in which he repreſented, that as all theſe Diſputes had been occaſioned from their not knowing certainly his Majeſty's Pleaſure, he humbly deſired that it might be declared, who it was his Majeſty intended to have named Viceroy, that Accidents of this Kind might be prevented for the future. The King accordingly heard and decided this Matter with great Juſtice and Wiſdom; for, in the firſt place, he cancelled the Decree of the Arbitrators, and ordered that the preſent Viceroy, *Lopez*, ſhould pay to Don *Pedro* twenty thouſand Crowns, as the Profits of his two Years Government, and, at the ſame time, made a Regulation for the future to this Effect, that, on the Opening of theſe Billets of Subſtitution, the Abſence of the Perſon nominated ſhould not prejudice him in any Degree, provided the Perſon named was in any Part of the *Indies* between *Cape Cori* and *Diu*, which taking in the beſt Part of the *Indies*, rendered it impoſſible that any ſuch Accident ſhould hereafter fall out as that which had occaſioned all this Confuſion.

But as Don *Lopez* had, in other Reſpects, behaved well, it was judged the reaſonableſt Courſe to leave him in Poſſeſſion of the Government, more eſpecially ſince he was obliged to part with all the Money he had hitherto acquired in it. As ſoon as the King's Orders arrived in the *Indies*, Don *Lopez* executed them in every Reſpect, reconciled himſelf to the Friends of Don *Pedro Maſcarenhas*, and behaved in every other Circumſtance as became a worthy Man and a good Subject. But no ſooner were theſe Troubles over, than new Diſturbances broke out, which occaſioned freſh Confuſions in the *Indies*.

Henry Garcias, who was at that Time Governor of the *Moluccas*, finding Affairs extremely embarraſſed by the Wars which his Predeceſſor had made againſt the King of *Tidor*, with very little Advantage, thought fit, on his firſt coming to his Government, to make Peace with *Almanſor*, who was then King of that Iſland, on Condition that he ſhould reſtore the Artillery and Priſoners he had taken from the *Portugueze*, which, in the Space of ſix Months, he undertook to do. But the

---

[1] This was the Beginning of thoſe Factions which proved afterwards ſo fatal to the *Portugueze*; for it is certain, that if they had not fallen out amongſt themſelves, they might have preſerved their Empire in this Part of the World much longer, and much more intire; but when their Governors began to impriſon each other, and take many ſuch Steps for their private Advantage, at the Expence of the publick Intereſt of their Country, we need not wonder at the unlucky Accidents that followed, or the Deſertions of thoſe Officers and Pilots, which proved the Ruin of their Commerce, by bringing Strangers of all Nations into thoſe Seas.

Face of Affairs in thoſe Parts altering ſoon after, *Garcias* repented him of the Peace, and reſolved to renew the War, believing, that if he could reduce this Iſland, it would very much raiſe his Reputation; to furniſh himſelf therefore with ſome Pretence for breaking with the King of *Tidor*, he, before the Time limited was expired, ſent to demand the Cannon and Priſoners; to which *Almanſor* modeſtly reply'd, that he would have delivered them up when the Treaty was made, if it had been in his Power; but that having lent the Cannon to a Prince who was his Neighbour, it required ſome Time to get them back. He had ſo little Suſpicion however of the Governor's bad Deſign, that, being at this Time extremely indiſpoſed, he requeſted him to ſend a Phyſician, whoſe Advice he might make uſe of his Recovery. *Garcias* accordingly ſent one, under whoſe Direction the King put himſelf, without the leaſt Reſerve, and was by him moſt baſely poiſoned. Immediately after the King's Death, *Garcias* ſent again to demand the Cannon and Priſoners, and becauſe the People deſired a Delay till the King's Funeral was performed, he having all Things ready, expecting the Event, made a Deſcent upon the Iſland, attacked the capital City, took it, and plundered it, and treated the People with the utmoſt Inhumanity [u].

As this was done without the leaſt Provocation, in a Time of full Peace, and when there was not the leaſt Intention on the Side of the Natives to renew the War againſt the *Portugueze*, it cauſed among the People of that Iſland, and of moſt of the reſt of the *Moluccas*, an implacable Hatred againſt them; ſoon after which, a Squadron of the Emperor *Charles* V. arriving there, was welcomed by the People of *Tidor*, with all the Marks of Kindneſs, on account of the *Spaniards* equal Enmity with them to the *Portugueze*, and being received into their Port, they raiſed Works for the Defence of it, in caſe of an Attack from the Enemy. The *Spaniards*, who were under the Command of *Ignigueza*, alledged, that the *Moluccas* belonged of Right to them, as being firſt diſcovered by *Magellan*, with a Commiſſion from the King of *Spain*, and that the Diſpute having been ſubmitted to Arbitration, was determined in their Favour.

On the other Hand, the *Portugueze*, under the Command of *Henriquez*, ſaid, that the unjuſt Sentence of the *Caſtilian* Arbitration had been reverſed by the Judges in *Portugal*, and that thoſe Iſlands were diſcovered ten Years before the Voyage of *Magellan* in the *Spaniſh* Service by *Anthony Abreu*, who was ſent out to make Diſcoveries by *Alphonſo Albuquerque*, in whoſe Company was *Magellan* himſelf, before he had deſerted his Country. Thus they diſputed with Words for a while, but ſoon after came to Blows, the People of *Ternate* taking Part with the *Portugueze*, and thoſe of *Tidor* and *Gilolo* with the *Spaniards*. The latter ſtruck the firſt Stroke, by beſieging the *Portugueze* Fortreſs in *Ternate*, where, at the firſt Attack, they took one of the Enemies Ships, and now the *Spaniards* and *Portugueze* had gone near to have atoned for the Miſchiefs they had done to the *Indians* by the Deſtruction of each other, but that the Emperor being engaged in other Wars in *Europe*, neglected ſo remote an Acquiſition, and for a certain Sum of Money yielded up his Right in the *Moluccas* to the King of *Portugal* [w].

This was look'd upon at that Time as very indifferent Policy, and as the Effects of his not conſidering attentively the Advantages that might have been derived to him in *Europe*, by the prudent Management of his Affairs in *America*, and this becauſe his Thoughts were entirely turned on the vain Project of raiſing an univerſal Monarchy by Force of Arms, whereas the *Portugueze* wiſely contented themſelves with puſhing on their Conqueſts in the *Indies*, and employed their Riches they derived from thence to ſecure themſelves againſt their ambitious Neighbours in *Europe*; from which Plan, if ſhe had never varied, ſhe might have eſcaped becoming a Province to *Spain*, as ſhe afterwards did, and all the unlucky Conſequences that followed from that Conjunction [x]. But it is now time to return from theſe Reflections to the Thread of our Hiſtory. Matters being ſettled in thoſe Iſlands, the Viceroy *Sampayo*, ſent out *John Deza* with a Squadron, to cruize off *Cananor*, and at the ſame Time, diſpatched *Alphonſus Melia* to the *Sunda* Iſlands, who, juſt as he had doubled the Cape of *Comorin*, met with ſome Deputies coming to *Goa*, from the Prince of *Calecura*, on the Pearl-fiſhing Coaſt, with Offers of Tribute and Submiſſion, upon Promiſe of Aſſiſtance againſt his Enemies the *Calecutians*.

In the mean time, *Deza*, upon his Station, intercepted all Ships paſſing between *Calecut* and *Cambaya*, to the incredible Loſs of the People of both thoſe Places, and landing at *Mangalor*, the Inhabitants deſerted the Town, which he plundered and ſet on Fire; after which, falling in with *Cutial* the Admiral of *Calicut*, he engaged and defeated him, and carried him Priſoner to *Cananor*; and about the ſame Time *Anthony Miranda* ſailing to the *Red-Sea*, took great Numbers of the *Arabian* Ships, and burnt ſeveral along the Shore; *Sampayo* himſelf, off *Cananor*, deſtroyed the greateſt Part of a Fleet of one hundred and thirty Sail of *Mooriſh* Ships, bound to *Mecca* with Spices, and then repairing to *Porca* (the Prince whereof was a formidable Sea Rover) he landed there, and took the Town, forcing the Prince to betake himſelf to Flight, who left ſuch a vaſt Booty to the *Portugueze*, that the Share of the meaneſt Sailor came to a thouſand Dollars. From thence he ſailed to the Northward, and near the Iſland of *Bombay*, fell in with a Fleet of the Enemies, under the Command of *Haliſſa*, Admiral of *Cambaya*; whereupon proffering a Reward of one hundred Dollars to the firſt Man who boarded one of the Enemies Ships, he immediately engaged, and having entirely routed them, committed the Fleet to the Command of *Miranda*, who, ſoon after the Viceroy's Departure, came to another Engagement with the *Malabarians*, before the Town of *Chaul*, and gave them a ſignal Defeat, killing great Numbers, and carrying off a rich Booty in Spices to *Cochin*; ſoon after which, the *Portugueze* reduced the Town of *Tanor*, made the Prince of the neighbouring Country their Tributary, and again routed *Haliſſa*, the *Cambayan* Admiral.

In the mean Time, *Nunho de Cunha* ſet out from *Portugal* with a Commiſſion to be Governor, accompanied by his Brother *Simon de Cunha*, who was conſtituted Admiral of the *Indies*, and in his Way thither, attempting to put in at *Monbaza*, in order to paſs the Winter-Seaſon there, was refuſed Entrance by the King, but forced a Paſſage into the Port, and making himſelf Maſter of the Town, gave the Plunder to the Mariners, and ſet it on Fire. Departing thence early in the Spring, he made the beſt of his Way to *India*, where he reſolved to make himſelf Maſter of the Town and Fortreſs of *Diu*, ſituate in an Iſland of the ſame Name, near the Entrance of the Gulph of *Cambaya*; to which Purpoſe, repairing thither with the Fleet, upon his Appearance off the Place, he received an

---

[u] As ſoon as this was known to the Viceroy, he ſent a new Governor to the *Moluccas*, one *George Meneſes*, between whom and *Garcias* there happened a long Diſpute, in which the latter was firſt made Priſoner, and afterwards the former: And this, notwithſtanding the *Spaniards* were actually poſſeſſed of *Tidor*, and were endeavouring to get the reſt of the Iſlands into their Hands, which ſhews the Infatuation of the *Portugueze*, who would not avoid quarelling at that very Juncture, when Union was moſt neceſſary, and when not only the Extenſion of their Commerce, but the very Being of it depended thereon, and could not be ſecured without it.

[w] We have a clear Account of this Matter, and a very good one, in Sir *William Monſon*'s Naval Tracts. The Controverſy, ſays he, to whom the *Moluccas* ſhould belong, continued between the two Crowns of *Spain* and *Portugal*, and the *Spaniards* made ſundry Attempts by Way of the *Streights*, but evermore with unfortunate Succeſs. At laſt Don *John* III. of *Portugal*, and Brother in-Law to the Emperor, willingly lent him three hundred and fifty thouſand Ducats, when he went into *Italy* to be crowned Emperor, upon Condition the King of *Portugal* ſhould no Way be moleſted in his Poſſeſſion of the *Molucca* Iſlands, till that Money was repaid; which being never done, the *Spaniards* never ſince pretended to thoſe Iſlands.

[x] I mean by this, that if the *Portugueze* had cultivated Manufactures at home, in order to ſupport and ſupply their Commerce in the *Indies*, without engaging, as Don *Sebaſtian* unfortunately did, in Wars on the Continent, and in *Barbary*, they muſt have become one of the principal maritime Powers in *Europe*, and have attained to ſuch Wealth and Strength, as would effectually have ſecured them for ever againſt the Attempts of *Spain*. But the lanching out into wild and fruitleſs Expeditions, to gratify the Humours of ambitious Princes, will prove fatal to any, but ſooneſt, and moſt ſo, to a trading Nation.

Envoy from *Badur* King of *Cambaya*, with Offers of yielding the Fortreſs into his Hands, which being accordingly performed, it was committed to the Cuſtody of *Anthony Silveira*.

Not long after the King of *Cambaya*, at the Inſtigation of the *Turks*, who were very deſirous of getting *Diu* into their Hands, made an Attempt to diſpoſſeſs the *Portugueze*, and recover the Place; but with an unfortunate Event he, with his *Turkiſh* Auxiliaries, being entirely routed, moſt of his Fleet ſunk, and himſelf received his Death's Wound in the Engagement. Soon after this, *Solyman*, the *Turkiſh* Emperor, ſent the Paſha of *Cairo* to beſiege it, with a Fleet of ſixty-two Gallies, ſix Galleons, and other ſmaller Veſſels, having on Board four thouſand Janizaries, ſixteen thouſand other Soldiers, beſides Gunners, Seamen and Pilots, which on their Arrival before the Town, were joined by eighty Sail of Ships of *Cambaya*.

The *Turkiſh* Paſha landing his Forces, battered the Fortreſs with ſixty Pieces of Cannon; but the Governor with great Bravery ſuſtained his Attack till the Arrival of *Garcias de Noronha*, the new Viceroy from *Goa*, to his Aſſiſtance, who, by a Stratagem paſſing thro' the Enemies Fleet with Drums beating and Trumpets ſounding, as if they had been ſome of their *Indian* Allies, the *Turks*, upon Diſcovery of their Miſtake, raiſed the Siege in the utmoſt Confuſion, leaving behind them their Tents, Ammunition, Artillery, and above a thouſand wounded Men, beſides the like Number that were out on Foraging; all which fell into the Hands of the *Portugueze* [y]. After the Death of *Badur* before mentioned, *Mamud* became King of the *Cambayans*, and *John de Caſtro* ſucceeded *Noronha* as the *Portugueze* Viceroy, in which Time the *Cambayans* and *Turks* made another Attempt on *Diu*, but with the like Succeſs as before, *de Caſtro* routing them both by Sea and Land, with a very great Slaughter; after which, he added ſeveral Works to the Place, and raiſed a new Citadel, in a more advantageous Situation, and of much better Materials than the former.

11. In this proſperous Manner did the *Portugueze* carry all before them in *India*, during the Reign of *John* III. who dying *A. D.* 1557, was ſucceeded by *Sebaſtian*, then an Infant. That Prince growing up, was ſo intent upon his *Indian* Acquiſitions, that he reſolved on a Voyage thither himſelf; and it was with Difficulty his Council found Means to diſſuade him from it. They did at length prevail on that Point; but could not prevent his undertaking a Deſign more hazardous than the former, *viz.* an Expedition againſt the Emperor of *Morocco*; and he embarking for that Purpoſe with a great Army, and the Flower of the *Portugueze* Nobility, on Board a numerous Fleet, landed at *Tangier*, and unadviſedly marching up into the Country, gave the *Moors* Battle near *Alcacer*, where he was cut off with the whole Army [z].

He was ſucceeded by *Henry* his Uncle, then in advanced Age, whoſe Reign is remarkable for nothing but the Diſputes about a Succeſſor to him; he dying *A. D.* 1580, *Philip* II. King of *Spain*, who had Pretenſions to the Crown, thought it moſt expedient to end all Diſputes by the Point of the Sword; and underſtanding the great Inclination the *Portugueze* had (through Hatred of a *Caſtilian* Government) to ſet *Antonio*, a natural Son of *John* III. upon the Throne, he ordered the Duke of *Alva* to march at the Head of a powerful Army into the Kingdom, who ſoon reduced it to his Obedience, forcing *Antonio* to withdraw to *England*; from whence, after ſome unſucceſsful Attempts to recover his loſt Dominions, he retired to *Paris* and died there *A. D.* 1595. The reſt of the Territories of that Crown fell, at the ſame time, into the Hands of the Conqueror, except, the *Azores*, or weſtern Iſlands, which were, at length, ſubdued to *Spain* by a great Victory obtained over a Fleet of *French* Ships ſent thither to maintain them in the Obedience to *Anthony*.

As this Subjection of the *Portugueze* to the *Caſtilians*, was very irkſome and odious to them, ſo was it attended with Conſequences very fatal to their Intereſts; for, upon the firſt Commotions in the Low Countries, *Philip* judging that one of the beſt Expedients to quell them, would be, to deprive the Inhabitants of the Advantages they received by Trade with *Portugal* and *Spain*, he prohibited all Commerce between them; for, in thoſe Times, the *Dutch* Ships made no longer Voyages than to theſe Countries, for the Commodities of *India*, with which they afterwards ſupplied the Northern Nations of *Europe*. But *Philip*'s Deſigns met with an Event very contrary to his Expectations, though they were laid very deeply, and purſued with the utmoſt Steadineſs, as well as Dexterity. The Conqueſt of *Portugal*, indeed, carried along with it the Conqueſt of the Dominions of the *Portugueze* in the *Eaſt-Indies*, and ſeemed to promiſe the *Spaniards* the entire and quiet Poſſeſſion of both *Indies*: But the Project began very ſoon to fail, for, in the firſt Place, the *Portugueze* Governors paid no more than a forced Obedience to the Crown of *Spain*; and in proportion to the Diſtance of their Settlements, the Governors were, more or leſs, circumſpect as to their Conduct. On the other hand, the *Spaniards* having many Affairs of their own to mind, and very little, if any, Concern for the true Intereſts of *Portugal*, the annual Fleets and regular Supplies were neglected, or, when ſent, proved very far ſhort of what they ought to have been. A too quick Senſe of this Relaxation of Government, induced many who were veſted with Authority in the *Indies* to make Uſe of it purely to ſerve their private Purpoſes, without regarding either the publick Welfare of their Country or the particular Benefit of ſuch as were under their Protection.

But what contributed moſt to the ſpeedy Ruin of their Affairs was, this Act of Policy, by which *Philip* II. prohibited, on their Rebellion, his Subjects in the Low Countries from trading to any Part of his Dominions, by which he abſolutely forced them on the Meaſures, by which they aggrandized themſelves at his Expence. If he had avoided this unlucky Prohibition, had treated his new Subjects kindly, and made a reaſonable Proviſion for Don *Antonio*, he might have ſecured his *Indies*, and all their Wealth, which well minded, and their Produce properly applied, would, in a ſhort Space of Time, have enabled him to put all his ambitious Projects into Execution. As it was, the *Dutch* finding an abſolute Stop put to their profitable Trade in *India* Commodities, which hitherto they had bought in the Ports of *Spain* and *Portugal*, reſolved, immediately, to try if it was not poſſible to go and fetch them from the *Indies* directly; whereas, had they been permitted to have purchaſed them in their accuſtomed Manner, this Deſign had never been thought of, but the Commerce of *India* had continued in its old Channel, without Envy or Diſturbance.

We have now conducted to its Cloſe, the firſt Part of this Section, and have ſhewn how this Navigation was opened, improved, and monopolized by the *Portugueze*, how their Conqueſts in this Part of the World were made and maintained, and how by entertaining and purſuing this Scheme of diſtant Expeditions, the ſmalleſt and moſt inconſiderable of all the Kingdoms of *Europe* became one of the richeſt and moſt potent, having it entirely in her own Power ſo to have increaſed her maritime Force as to have had no Cauſe to dread the Ambition of her Neighbours, or their united Endeavours to her Prejudice. Come we now to as clear an Explanation of the ſecond Point, which within the Compaſs of this Section we propoſed.

[y] This was one of the greateſt and moſt honourable Victories ever gain'd by the Arms of the *Portugueze*; for it was not againſt raw and unexperienced Soldiers, or againſt a General unacquainted with the Art of War, that this Effort was made, but againſt a numerous and well diſciplined Army, compleatly furniſhed with every thing neceſſary for carrying on the Siege. The Reputation of this Victory was no leſs advantageous than the Victory itſelf, ſpreading over *Aſia*, *Africa* and *Europe*; ſo that the *French* King, *Francis* I. ſent into *Portugal*, to obtain the Picture of *Silveira*, who had made this gallant Defence, in order to hang it up in his Cabinet of conſummate Officers.

[z] The Loſs of Don *Sebaſtian* was ſo fatal to the *Portugueſe*, and the perſonal Virtues of that Prince rendered him ſo much beloved by his Subjects, that they could ſcarce bring themſelves to believe (eſpecially as his Body was never found) that he periſhed in this Action: Nay, it is the ſettled Opinion of that Nation to this Hour, that he eſcaped; and it is certain, that a Perſon who called himſelf *Sebaſtian*, appeared afterwards at *Venice*, where, at the Requeſt of the King of *Spain*, he was ſeized, then examined in a full Senate, and defended himſelf ſo well, that he was ſet at Liberty. He afterwards fell into the Hands of the *Spaniards*, who impriſoned him firſt at *Naples*, and afterwards carried him into *Spain*, where he died in Confinement, affirming to the very laſt, that he was no Impoſtor, but the true King *Sebaſtian*.

12. It would require much Room, and add very little to the Reader's Satisfaction, ſhould we proſecute the Hiſtory of the *Portugueze* Empire in the Eaſt, through all the Changes and Revolutions to which it was ſubjected, from the Cauſes before-mentioned; the rather, becauſe as their Dominions increaſed, they were obliged to carry on Wars in different Places at the ſame time, with ſeveral Nations, and with great Variety of Succeſs. In order therefore to ſeparate theſe Subjects, ſo as to repreſent to the Reader what is of Importance to be known, and that in the eaſieſt and cleareſt Method poſſible, we will conſider the moſt remarkable Diſcoveries and Settlements of this Nation in the *Indies*, according to the Order in which they were made; the principal Events that happened in them during the Time they remained in their Hands, and the Manner in which they loſt them, whether to the *Indians* or *Europeans*. By this Diviſion, that Confuſion which muſt neceſſarily attend the Abridgment of a general Hiſtory, ſo pregnant with Events, will be avoided; all the Paſſages relating to the ſame Places and Perſons, will be ranged together, ſo as to give Light to each other, and render the Peruſal of them eaſy and entertaining, at the ſame time, that by being thus digeſted, every Colony, every Country will have its Hiſtory preſerved in ſuch a Manner, as that it may be eaſily compared with whatever has been ſaid before, and be with like Facility turned to, when what is hereafter ſaid may make it neceſſary.

Before we proceed to theſe Diſcoveries and Settlements, it will be neceſſary to fix the Place from which they were made [a]. *Calicut*, as we have before ſhewn at large, proved the firſt Place they viſited in the *Indies*, though the firſt Fortification they built was at *Cochin*, which lies South from it. They were ſole Maſters of the Commerce on the Coaſts of *Malabar* from the Gulph of *Cambayo* to Cape *Comorin* for about one hundred and fifty Years, which determined them to fix the Capital of their Dominions as near as poſſible to the Centre of this Coaſt, which was one principal Inducement to their ſeizing *Goa* in the manner before-mentioned. It ſtands at an equal Diſtance from *Surat* and Cape *Comorin*, in a little Iſland made by the Rivers *Mandoa* and *Quari*, about ſix or ſeven Leagues in Circumference, and at the Diſtance of about three Leagues from the Fall of theſe Rivers into the Sea. The Name of the Peninſula adjoining is *Salſette*, and the Soil is extremely rich and fertile. In the hot Seaſon the Waters are very low, ſometimes not above two Feet in Depth; but the reſt of the Year they are ſo high as to afford the largeſt Veſſels an Opportunity of entering the Port of *Goa*, which is one of the ſafeſt and moſt commodious in the Univerſe.

All the Territories adjacent to this City are held by a Treaty with the King of *Decan*, who, by yielding theſe, purchaſed a free Trade for his Subjects throughout the *Indies*, in all Commodities except Pepper, with which they were to furniſh the *Portugueze* alone. Since this Agreement many Diſputes have happened, and when their Power has been great, particularly in 1635, the Viceroys of *Goa* have treated their Neighbours with great Severity. At the Time before-mentioned, they had Intelligence of four *Indian* Veſſels bound with Pepper for *Mocha* and *Perſia*, which they chaſed and took. Their Cargoes, purſuant to the Treaty, were confiſcated; yet not ſatisfied with that, they murdered all who were on board them in cold Blood, in order to ſtrike a Terror into the Natives. This Behaviour has, as it might well be expected it would, raiſed a moſt violent Averſion in the *Indians* againſt them, which they never fail to diſcover when any Opportunity offers. There are in *Goa* many ſuperb Edifices, ſuch as the Viceroy's, the Archbiſhop's, and Inquiſitor General's Palaces; but above all, the Churches are exceedingly numerous, and ſome of them wonderfully rich. In Extent it contains about ten Miles, taking in all the Fortifications raiſed round it for its Security, which bend according to the Courſe of the River, and are ſo well furniſhed with Cannon, that hitherto they have rendered it impregnable, though it has been very hard preſſed, both by *Indians* and by the *Dutch*. It was from this City, in the Latitude of 15° 20′ North, that the *Portugueze* made their Diſcoveries, and ſent moſt of their Colonies; and having given this ſhort Account of it, we ſhall next proceed to deſcribe them.

13. The *Maldives* are ſo ſituated, that it was impoſſible the *Europeans* ſhould make many Voyages to, or be long ſettled in the *Indies*, without being acquainted with them; ſince the moſt northern of them lie but fifty Leagues from Cape *Comorin*. They extend from 8° of North Latitude to 4° of South, ſtretching in Length conſequently near two hundred Leagues; but they are not above thirty or thirty-five Leagues in Breadth in any Part of the *Archipelago*. Within this Space are contained a prodigious Number of Iſlands, ſo that even in the Time of *Ptolemy*, that is, in the ſecond Century, they were accounted 1378; but the Inhabitants maintain, that a ſmall Part of them only were then known, for their Sovereign takes the Title of Sultan of the *Maldives*, King of thirteen Provinces, and of twelve thouſand Iſles. There is in this, without doubt, a Mixture of that Pomp and Oſtentation which is ſo common in the Eaſt; but for all that, there are, unqueſtionably, many more than the Antients knew any thing of under this Monarch's Dominion. Admiral *Suarez* diſcovered them in 1507, and he made an Alliance with their King, which was confirmed by *Sequeria*, who demanded Leave to build a Fort upon the Iſland of *Male*, which is the largeſt of them, and the chief City of the ſame Name is the Capital of their Monarch.

John Gomez, who was ſent thither for this Purpoſe, met with a favourable Reception, and by dint of Preſents prevailed upon the King to agree to his Demand. He built this Fort of Wood, there being neither Stone nor Lime in the Iſland. It was extremely well ſituated, and in ſome meaſure commanded the Port, ſo that it might have been of great Service to the *Portugueze*, if he had behaved as became him; but no ſooner was the Fort finiſhed, than preſuming on the Terror of the *Portugueze* Name, he began to lord it over all the Strangers that traded thither, though his Garriſon conſiſted but of ſeventeen Men, which occaſioned a Conſpiracy of the *Mohammedans* againſt him, who attacked him when he leaſt expected it, and cut off him and all his People to a Man, levelling the Fort with the Ground. The *Portugueze* were never afterwards able to obtain any Eſtabliſhment in the *Maldives*, which is the Reaſon that ſeveral of their Authors treat them as pitiful Places, and their Inhabitants as a baſe and barbarous People, contrary, however, as we ſhall ſee, to all Reaſon and Prudence [b].

It was impoſſible for them to double Cape *Comorin*, without taking Notice of the noble Iſland of *Ceylon*, *Ceylan*, or *Ceilon*, called by the Inhabitants *Lamca*, which in their Language ſignifies the Terreſtrial Paradiſe, or Holy Land, a Name given it by its firſt King, *Vigia Rajah*, who is ſuppoſed to have flouriſhed five hundred Years before Chriſt: It was afterwards called *Ilanara*, or *Tranate*, which is as much as to ſay the Inſular Kingdom; it was alſo called *Hibenaro*, or the *Fertile Land*, and *Tenariſim*, or the *Country of Delight*. The *Arabians* call it *Serendib*, or rather *Serendive*. It is by many held to be the largeſt, and is, beyond Controverſy, in itſelf, the richeſt and fineſt Iſland in the World. The *Portugueze* ſettled here in 1506, under the Conduct of *Lawrence Almeyda*, who erected a Column with an Inſcription, teſtifying that he took Poſſeſſion of that Country on Behalf of *Emanuel* King of *Portugal*, becauſe it had no Maſter, though at the ſame time he treated with the Emperor, and promiſed him the Protection of his

---

[a] The *Eaſt Indies* in general are very properly divided into the Dominions of the Great Mogul, and the adjacent Kingdoms on the Continent, the Peninſula without, the Peninſula within the *Ganges*, and the Iſlands. The *Portugueze* falling as they did at their firſt coming into theſe Parts on the Coaſt of *Malabar*, which makes the Weſt Front of the Peninſula without the *Ganges*, acquired the happieſt Station that could be deſired for extending their Commerce, and their Conqueſts on every Side; and there is Reaſon to believe, that their fixing as they did the Seat of their Empire on this Side, contributed greatly to the Preſervation of their Dominions, notwithſtanding all the Efforts made by the *Indians* and the *Mohammedans* to diſpoſſeſs them.

[b] There is but one good Deſcription of this prodigious *Archipelago* written by *Francis Pirard de la Val*, a *Frenchman*, who was a long time Priſoner in one of theſe Iſlands, and which, as it is a Work equally curious and inſtructive, and at the ſame time exactly within our Plan, the Reader ſhall have it at large in the next Section, which will give him an Opportunity of obſerving how little Cauſe the *Portugueze* had to treat the Inhabitants of the *Maldives* with Contempt, ſince it is certain that they are one of the braveſt and one of the moſt polite Nations of the Eaſt.

Maſter, in Conſideration of 2500 Quintals of Cinnamon to be paid him as an annual Tribute.

In 1520 they built a Fort here, and began to ſettle, and afterwards obtained an abſolute Power over a great Part of the Iſland, under Colour of the Emperor's Will, who made the *Portugueſe* Heirs of his Dominions. The Trade they carried on there was very conſiderable, and next to the Viceroyſhip of the *Indies*; the Captain General of this Iſland, was thought the firſt Poſt the King of *Portugal* had to beſtow. The Commodities they drew from hence were long Pepper, fine Cotton, Ivory, Silk, Tobacco, Ebony, Muſk, Chryſtal, Salt-petre, Sulphur, Lead, Iron, Steel, Copper, beſides the three grand Articles of Cinnamon, all kinds of precious Stones except Diamonds, and Elephants.

As ſoon as the *Dutch* came into the *Indies*, they formed a Deſign of making themſelves Maſters of ſo valuable a Place. They made their firſt Deſcent in the Year 1602, and carried on ſometimes open Wars, ſometimes ſecret Contrivances againſt the *Portugueze*, till in the Space of about fifty-five Years they completely drove and wormed them out of *Ceylon*, making themſelves Maſters of *Colombo* and *Negombo*, which were the principal Places in the Iſland, and of the ſtrong Fortreſs of *Punto Gallo*, which commands the beſt Haven in *Ceylon*.

The *Portugueze* held their Eſtabliſhments here for about a hundred and fifty Years under ſixteen Captain-Generals, from Don *Pedro Lopez de Souza*, who was the firſt, down to Don *Antonio d'Amaral y Meneſes*, who was the laſt. Captain *Ribeyro*, who wrote the Hiſtory of this Iſland in 1685, and preſented it to the King of *Portugal*, aſſures us, that the Country was loſt through the Covetouſneſs and Pride of the Governors, and the Luxury, Lazineſs, and Cowardice of the Soldiers, which he charges on the inactive Adminiſtration in *Portugal*, that took no care to look into the Management of ſo conſiderable a Settlement, and which brought in ſo large a Revenue to the Crown of *Portugal*, till it was too late. - A Circumſtance ſurely that ought to be remembered, and conſidered by every maritime Power.

14. The Iſland of *Sumatra*, which extends itſelf North-weſt and South-eaſt, fronting the Peninſula of *Malacca*, is divided by the Equinoctial almoſt into two equal Parts, extending to 6° of Latitude North and South. It is about two hundred and fifty Leagues in Length, ſixty in Breadth, and five hundred in Circumference. The *Portugueze* came hither in 1508, under the Command of Don *Diego Lopez de Seguira*. They found the Country very deſireable, as being extremely rich and fruitful, and under the Dominion of ſeveral petty Princes, who were continually at War with each other.

One would have imagined that this might have afforded an Opportunity to the *Portugueze* of ſubjecting it entirely, as they did other Parts of the *Indies*; but it happened otherwiſe; for the People, by their continual Diſputes among themſelves, were become ſo well acquainted with the Art of War, that they were not able to make great Impreſſion, but contented themſelves with a few Settlements on the Coaſt, which enabled them to carry on a very lucrative Trade with the Inhabitants, not only in Sulphur, Rice, Ginger, Pepper, Camphire, Caſſia, Sandal, and other rich Woods and Drugs; but alſo in fine Tin, Iron, Copper, Silver, Gold, and Diamonds[c].

The *Dutch* began to infeſt this Iſland in 1596, and ſoon after, as their Power increaſed, began, as uſual, to exclude all other Nations; but the Inhabitants ſoon ſhook off their Yoke, and are ſtill in a great meaſure free. It is for this Reaſon probably that almoſt all our *European* Writers concur in treating theſe People as the moſt cruel, barbarous, and perfidious in the *Indies*, without ever conſidering that theſe very Epithets may be juſtly retorted upon thoſe who endeavour to deprive them of their Liberties and their Poſſeſſions, without the leaſt Colour of Right.

15. The *Moluccas*, or Spice-Iſlands, were not diſcovered by the *Portugueze* till the Year 1511, and then, as it were, by Chance. *Francis Serrano* and *Diego d'Abreu*, being ſent to make Diſcoveries, were ſeparated by a Storm; the former penetrated as far as *Ternate*, but the latter diſcovered only the Iſland of *Amboyna*, and afterwards that of *Banda*. They ſpent about eight Years in theſe Diſcoveries, which coſt *Serrano* his Life in his Return. We are indebted to a *Portugueze* Writer, whoſe Name was *Argenſola*, for a large Hiſtory of theſe valuable Iſlands, which conſiſt, ſtrictly ſpeaking, of no more than five; from whence it is ſaid they received their Name in the original Language of the Inhabitants. They are not out of Sight of each other, and lie all of them within the Compaſs of twenty-five Leagues. They are famous for producing ſeveral Sorts of valuable Spices, and are governed by three Kings. Their Coaſts are very dangerous, becauſe of Sands and Shelves: They were formerly ſubject to the *Chineſe*, then fell under the *Javaneſe*, and were afterwards ſubdued by the *Malayans*; and the *Mohammedans* had begun to ſettle in them, and convert the Inhabitants to their Religion, but a very little while before they were diſcovered by the *Portugueze*. The Hiſtory we have before mentioned is equally copious and curious, but much too long to have a Place in this Collection; yet we ſhall extract from thence a diſtinct Account of theſe Iſlands, becauſe no other Writer affords us any thing comparable thereto.

Ternate, ſays he, is eight Leagues in Compaſs; the Land is high, and they have good Water, but little Proviſions, and few Cattle, except Goats. Their chief Riches conſiſt in Cloves: They have extraordinary Parrots, which exceed thoſe of the *Weſt-Indies* in ſpeaking, and many Birds of *Paradiſe*. They have Almonds, and coarſe Tobacco. During their Wars with the *Portugueze*, they burnt all their Clove-trees, retired to the Mountains and Deſerts, and forbid ſelling any thing to the *Portugueze* on pain of Death, which reduced them to great Extremity. Though they burnt the Cloves in Deſpite, our Author ſays, their Aſhes did ſo cultivate the Soil, that it produced them in greater abundance than ever in a few Years. The King of this Iſland was the moſt powerful of all the fourteen in the *Moluccas*, and boaſted of a divine Extraction, which the ſilly People firmly believ'd. He was Sovereign over ſeventy-two Iſlands that lay in the *Great Archipelago*, betwixt *Mindanao* on the North, thoſe of *Bima* and *Corea* on the South, and the *Terra Firma* of *Papoas*, or *New Guiney*, on the Eaſt, and had his Tribute in Gold, Amber, and Birds of Paradiſe.

Having made theſe great Conqueſts over his Neighbours, he called himſelf Emperor of the *Archipelago*, where there were many Colonies of Chriſtians; but moſt of them were deſtroyed, or apoſtatized by the Perſecution abovementioned. *Argenſola* gives a particular Account of the Forces which every Iſland could raiſe, and in the Whole reckons them at 120,300 Men that were liſted, beſides Multitudes of others, and a great Number of Slaves. Many of theſe Iſlands had their particular Kings, but all ſubject to him of *Ternate*, and ſerved under him, to revenge the Death of King *Aerio*, who was treacherouſly murdered by the *Portugueze*. This great King's Name was *Cachilbabu*, *Aerio*'s third Son: He allowed the *Dutch* to trade here in 1599, entered into a ſtrict Friendſhip with them, and entertained them with Fights of Gladiators, after the Manner of his Country. The *Dutch* aſſiſted him to ſhake off the Yoke of the *Spaniards* and *Portugueze*; and he was victorious over thoſe of *Tidor*. The Place where he kept his Court was *Gammalamma*, on the Coaſt, conſiſting chiefly of one Street, their Houſes being of Wood and Cane. About a League from hence, there is a Town called *Mallayo*, incloſed with Walls of Stone, without Mortar. The Road to *Gammalamma* is not good. There are ſtill ſome Remains of Churches and other Structures, built by the *Portugueze*. The firſt Fort the *Dutch* built here was *Terlucco*; the next was the Fortreſs of *Orange*, by which they fixed themſelves ſo well, that no *European* Nation has been able to diſlodge them.

---

[c] The Revenue of this Iſland, while in the Hands of the Crown of *Portugal*, was annually conveyed to *Goa* on board a Galleon, maintained at the Expence of the Crown for that Purpoſe, and this Galleon was thus provided: The Officers were, a Captain, Purſer, Maſter, Pilot, Boatſwain, and Steward; the Men on board were, two Gunners, four *European* Seamen, twenty Soldiers, and forty common Mariners of the *Indies*, with a Conſtable or Provoſt Marſhal; for the Maintenance and Pay of which, the King allowed annually 980 962 Reeys, or 916. 17 l. 1 d. as appears from a State of the Revenues of the *Portugueze* Settlements in the *Indies*, compiled and publiſhed by Don *Edward de Meneſes*, who was Viceroy there in the Year 1584.

Tidor is larger than *Ternate*, is alſo a particular Kingdom, and produces the ſame Fruits: It lies a little South-Eaſt from *Ternate*, near the Line. The *Spaniards* aſſiſted the Inhabitants againſt thoſe of *Ternate* at firſt, but had War with them at laſt, and treated them barbarouſly, till expelled by the League above-mentioned. The *Dutch* attacked the *Spaniards* here in 1607, and afterwards without Succeſs; but, at laſt, took it by the Aſſiſtance of the King of *Ternate*, after an obſtinate Reſiſtance, and were kindly received by the King, who allowed them to ſettle Factories here. The Capital is of the ſame Name, and has an Harbour about a Stone's Throw from the Shore, dry at Low-water, and defended by a Chain of narrow Rocks, over which the Tide riſes from three to ſix Foot. The Town is very ſtrong by Nature.

Motir, *Motil*, or *Timor*, lies between *Tidor* and *Machian*. It was laid waſte during the inteſtine Wars; but the *Dutch* built a Fort at the North End of it, which encouraged the Inhabitants to return from *Gilolo*, continuing firm to the *Dutch*; the *Spaniards* durſt not attack it. *Machian* lies juſt under the Line South from *Motir*. The *Dutch* took it from the *Spaniards* in 1609, and built three Forts here. It is ſeven Leagues in Compaſs, and has ſeveral little Towns; the Inhabitants were then about Nine thouſand: It was reckoned the fruitfulleſt of the *Moluccas*, and produced the beſt Cloves. The Inhabitants were more induſtrious than their Neighbours. *Backian*, the laſt of the proper *Moluccas*, lies South from *Machian*, and was a Kingdom. The Country is large and deſert; it abounds with Sagu, Fruits, Fiſh, and, many other Sorts of Proviſions. It was formerly very potent, and had the beſt Cloves in the *Moluccas*, but was ruined by the Idleneſs of the Inhabitants. They had an Alliance with the *Portugueze* and *Spaniards*, who planted Garriſons there, but were diſpoſſeſſed by the *Dutch* in 1610, who built other Ports, and obtained a Liberty to trade without paying Cuſtom. The Iſle of *Labova* lies ſo near it that they frequently go by the ſame Name, though each had their particular King. The latter is very pleaſant, and abounds in Cloves. The Inhabitants rebelled againſt the *Dutch*, but were forced to ſubmit, and have been ſince kept in Awe by Fort *Barnevelt*.

The Iſland of *Bouro* was formerly ſubject to the King of *Ternate*; it is not very conſiderable; but while in the Hands of the *Portugueze*, was more conſiderable than it is at preſent. But the Iſland they chiefly depended upon was that of *Timor*, which is much larger than the other of the ſame Name before-mentioned, and was extremely fruitful, ſo that it ſupplied moſt of the *Moluccas* with Proviſions. Weſt from thence lies the Iſland of *Solor*, in which was a ſtrong Forteſs, wherein the *Portugueze* Garriſon held out a Siege of two Months againſt the *Dutch* Fleet and Army; and, when they ſurrendered, marched out near one thouſand ſtrong. There are many other Iſlands, which are commonly, ſince the *Dutch* Conqueſt, ſtiled the *Moluccas*, becauſe they make that Word ſynonymous with the Spice-Iſlands; whereas the *Moluccas*, ſtrictly ſpeaking, are no more than the five Iſlands firſt deſcribed. It was with the Spices they produced, that the *Portugueze* traded throughout the whole Extent of the *Indies*; that is to ſay, from *China* to the Coaſts of *Ægypt*[d].

16. The Viceroy *Lopez Suarez*, Succeſſor to the famous Don *Alphonſo d' Albuquerque*, was the firſt who thought of eſtabliſhing a Commerce with *China*; and in the Year 1517, ſent for that Purpoſe *Ferdinand Andrada*, with a Squadron of eight Ships, laden with Merchandize, together with *Thomas Perera*, with the Character of Embaſſador from *Emanuel*, King of *Portugal*. On their Arrival at the Mouth of the River *Canton*, the *Portugueze* Ships were ſtopped by the *Chineſe*, and only two ſuffered to proceed up the River, on board one of which was the Embaſſador, and the *Portugueze* Commodore *Andrada*, who was a Man of Quality and of ſtrict Honour, ſo that he ſoon gained very much on the *Chineſe*, notwithſtanding their natural Averſion to Strangers. By his Civility and polite Behaviour, he firſt drew them to trade with him, and then, by his Exactneſs and Probity, brought them to have a Confidence in him; but what had the greateſt Effect of all, and might have eſtabliſhed the Commerce of the *Portugueze* to the Excluſion of all other *European* Nations was, his giving Notice a little before his Departure, that at ſuch a Time he meant to ſail, and that if any body had Demands upon him, or any who belonged to him, they might, before that Time, apply and receive Satisfaction.

This, it ſeems, was a Thing new to the *Chineſe*, but withal ſo agreeable, as they made him the higheſt Proteſtations of Friendſhip, and aſſured him that they would willingly trade with his Nation, in Hopes of meeting with the like juſt Uſage: But this fair Proſpect did not continue long; and, as this was the firſt, it had alſo very near proved the laſt Voyage of the *Portugueze* hither. The Captains of the Ships that were left at Anchor at the Mouth of the River, were the Occaſion of this, for they landed and fell into Trade with the Natives; but preſuming on their Power in the *Indies*, they began to treat the *Chineſe* in the ſame Manner they had done other People; that is to ſay, they landed ſeveral Pieces of Cannon, and then took what Goods they pleaſed, and at what Rates they thought fit, committing many other Inſolences, ſuch as raviſhing Women, and trading with Pirates for ſuch Perſons as they had taken Priſoners, of whom the *Portugueze* made Slaves. The Viceroy of the Province quickly aſſembled a great naval Force, with which he ſurrounded the *Portugueze* Squadron, and had infallibly taken every Ship, if a Storm had not riſen, which ſcattered the *Chineſe* Fleet, and gave them an Opportunity of returning to *Malacca* with more Profit than Honour. As for the Embaſſador, *Thomas Perera*, he, though perfectly innocent, proved the Victim of his Countrymens bad Behaviour; for the *Chineſe* Court having received Advice of what had paſſed before his Arrival, not only refuſed him Audience, but ſent him back to *Canton* in Chains, where he was put into the common Priſon with the loweſt and vileſt Criminals, and there ſpent his miſerable Life for ſeveral Years; till, at length, worn out with Hardſhips, he expired in ſuch wretched Circumſtances, that he did not leave wherewith to bury him[e].

It was many Years before the *Chineſe* would ſuffer the *Portugueze* to have any Trade with them at all; but, at laſt, permitted them to ſend annually ſome Ships to the Iſland of *Sanchan*, where they were allowed to erect Tents on Shore, for a very ſmall Space of Time, in which they diſpoſed of their Merchandize. At length, in the Beginning of the Sixteenth Century, a favourable Opportunity offered, not only of reſtoring their Commerce, but of procuring an Eſtabliſhment in *China*, which is what no other Nation ever had to boaſt. The Thing fell out thus; A certain Pirate, whoſe Name was *Tſchang ſi Lao*, committed prodigious Ravages upon the Coaſts, and having at laſt acquired a great Force, he made himſelf Maſter of the little Iſland of *Macao*, and from thence not only blocked up the Port of *Canton*, but proceeded ſo far as to beſiege the City. The *Mandarines*, in this Diſtreſs, had Recourſe to the *Portugueze*, whoſe Ships were then at the Iſland of

---

[d] The King of *Portugal* likewiſe maintained a Galleon for bringing the Tributes of the *Moluccas*, officered in the ſame Manner as that mentioned in the laſt Note; but inaſmuch as the Voyage was longer, and there were more Seamen employed, the yearly Expence amounted to 3,292,99 Reys, or 2058 *l.* 2 *s.* 5 *d.* which ſhews that the publick Revenue was adminiſtred there with great Oeconomy in thoſe Times.

[e] The famous *Portugueze* Hiſtorian, *John de Barros*, though, otherwiſe, a very candid Writer, endeavours, as far as he is able, to cover and diſguiſe this Fact; but other Writers, even of that Nation, confeſs it ingenuouſly, and ſpeak of it as it deſerves. It proved, without doubt, of infinite Prejudice to their Concerns, as indeed their Pride and over-bearing Temper did in many other Places. It may be juſtly wondered that they never employed Force while their Affairs in the *Indies* were in ſo flouriſhing a Condition; but they were reſtrained from this, by their Fear that the *Chineſe* would revenge any Injuries they did them upon the Chriſtians, which is very probable; and therefore they were in the right to proceed as they did. To ſay the Truth, the *Portugueze* ſeem, of all the Nations in the World, the leaſt fit to have any Correſpondence with the *Chineſe*, becauſe of their haughty and aſſuming Temper, and of the natural Suſpicion of the Natives of that Empire.

Sanchan. They readily offered them their Aſſiſtance, and not only forced *Tchang ſi Lao* to raiſe the Siege, but purſued him to *Macao*, and there killed him.

The Viceroy having made a faithful Report to the Emperor of this extraordinary Piece of Service, that Prince, out of juſt Gratitude, publiſhed an Edict, by which he granted the *Portugueze* this little Iſland, with the Power of making a Settlement there, which they joyfully accepted, and built a good Town, which they fortified after the *European* Manner, and furniſhed it with near two hundred Pieces of Cannon. One would imagine, that this might excite the Jealouſy of the *Chineſe*, who are juſtly eſteemed the moſt ſuſpicious People in the World; but they have provided ſo effectually for their own Security, that all the Force of the *Portugueze* is entirely at their Devotion, becauſe they have not a Day's Proviſion but what they received from the *Chineſe*, and are ſo ſurrounded by their Forces, that it impoſſible for them to undertake any thing to the Prejudice of their Empire. The Poſſeſſion of this Place has been, notwithſtanding, extreamly beneficial to the *Portugueze*; for, from thence, they carried on for many Years a moſt beneficial Commerce with *Japan*, by which *Macao* became one of the richeſt and moſt conſiderable Places in the *Indies*, and many of the Nobility of *Portugal*, who had enjoyed very high Offices, choſe, at the Expiration of them, to ſettle here, where they lived in great Splendor, and at the ſame Time acquired vaſt Eſtates by Trade[f].

We ſhall hereafter have occaſion to give ſome Account of the Cauſes which brought on the total Prohibition of their Trade with *Japan*; but at preſent, we ſhall confine ourſelves to what relates to the City of *Macao*. In the Year 1639, the *Portugueze* ſent from thence two large Ships laden with Merchandize, which came to an Anchor in the Road of *Nagazaqui*; immediately on which it was notified in Form to the Commodore, or, as the *Portugueze* ſtile him, the Captain-Major Don *Vaſco Paglia d'Almeyda*, that the Emperor of *Japan*, by his Edict, had totally prohibited all Commerce with the *Portugueze*, and that for theſe Reaſons: Firſt, becauſe, notwithſtanding the ſeveral Cautions given them, they had ſtill continued to bring over Miſſionaries into his Country. Secondly, for that they had ſupplied thoſe that were already there with Proviſions and other Neceſſaries; and Thirdly, becauſe there were juſt Reaſons to ſuſpect, that they had ſome Knowledge of, and ſome Concern in, the late Rebellion of the Chriſtians in *Arima*. They had alſo a Copy of the Emperor's Edict given them, which they were directed to make publick at *Macao*, and to inform the Inhabitants of that City, that theſe were the laſt Ships that ſhould ever be permitted to anchor in any Port of *Japan*, of which they were to take Notice, and to remain aſſured, that if ever they came thither again, they ſhould undoubtedly be treated as Enemies, and put to Death without Mercy.

On their Return to *Macao*, and making Report of theſe Facts, the whole City was ſtruck with Conſternation, being ſatisfied, that the Deſtruction of this Trade would prove the Ruin of their City; to prevent which, they reſolved to make one great Effort, and to ſend a ſolemn Ambaſſy to juſtify their Conduct, and if poſſible, engage the Emperor to recall this Edict, or at leaſt to qualify it ſo, as that they might on certain Terms have Leave to ſend ſome Ships thither. The Difficulty was to find any who would charge themſelves with ſo dangerous a Commiſſion; but at laſt the following Perſons offered, of their own accord, to run the Hazard, *viz.* Don *Lewis Potz Pacheco*, who had ſerved with Honour as Commander of the Armies in the *Indies*, and who was now ſeventy-eight Years of Age; Don *Roderic Sanchez de Pardedez*, Don *Gonzalez Montayro de Carvailho*, and Don *Simon Vaz de Pavia*; all Men of Diſtinction, and who were moved by nothing but the Deſire of juſtifying their Nation, and rendering Service to their Country. On the 6th of *July* 1640, the Ship that carried theſe Ambaſſadors arrived in the Road of *Nagazaqui*, and ſent an Account to the *Japoneſe* Governors of the Nature of the Commiſſion with which they were intruſted. Their Ship was immediately ſeized, and the Ambaſſadors, and all who belonged to them, except eight Negro Seamen, were impriſoned in the Iſland of *Kiſma*, till the Emperor's Pleaſure ſhould be known. On the Return of the Courier ſent to Court with the News of their Arrival, they were ſent for before the Magiſtrates, who treated them as a Criminals, demanding of them, what it was that could induce them, after ſo fair Warning as was given them the Year before, to return thither, in direct Breach of the Emperor's Edict. They pleaded, that they were not at all within the Meaning of that Law, becauſe the Emperor forbid thereby any Attempt to trade, which was not their Buſineſs, having no Commodities of any ſort on board their Ship, but coming thither with the Characters of Ambaſſadors, which had been always eſteemed ſacred. The Magiſtrates told them, that this would not ſerve their Turns, but that they had incurred the Penalty of the Edict; upon which they were inſtantly bound and conducted back to Priſon.

The next Day, the Embaſſadors, and all their Attendants, to the Number of ſeventy-four, *Portugueze, Spaniards, Chineſe, Canarians*, and *Indians*, were again carried before Magiſtrates, who then told them, it was his Imperial Majeſty's Pleaſure they ſhould all ſuffer Death, except thirteen; which Sentence was executed the ſame Evening, which was the 23th of *Auguſt*. The next Morning before it was light, the Governor ſent for the thirteen that were ſpared, and having aſked them whether they had ſeen their Ship burnt, inquired of them, whether they would faithfully report at *Macao*, what they were commanded by the Emperor to ſay to them on his Behalf. Being anſwered in the Affirmative, they proceeded thus; "You "are then to inform your Fellow-Citizens, that hencefor"wards the Subjects of *Japan* will not receive either Mo"ney, Merchandize, or Preſents, from them any more: "You ſee we have burnt the very Cloaths of thoſe who "were executed Yeſterday. Let your People uſe any of "ours that fall into their Hands in the ſame Manner, we "conſent to it, and deſire that you would think of us no "more than if there were not ſuch a Nation as the *Ja"poneſe* in the World. This is what we have to ſay "to you."

They then conducted theſe Mariners to the Place where the Heads of thoſe who were murdered the Day before were fixed upon Poles in three Rows; the four Embaſſadors firſt, the *Europeans* next, and the Strangers laſt of all. They likewiſe ſhewed them a great Iron Cheſt, in which they told them were the Bodies of the Perſons executed, and obliged them to read a long Inſcription, ſetting forth who they were, on what Account, and by whoſe Order they were put to Death; which Inſcription ended with theſe Words: "All this is ſet forth as a Memorial of what has "paſt, and as an Advertiſement for the Time to come.

---

[f] I have taken all the Care I could to diſcover whether this Nation had ever any other Settlement in *China* than this at *Macao*, but to no Purpoſe, except that they traded for ſome Time as other Nations did, at *Canton*, and at *Ning-Po*, which is a very conſiderable Port in the Province of *Tche-Kiang*, and the firſt into which *Engliſh* Veſſels were admitted. But a late Writer, one Captain *Alexander Hamilton*, ſpeaking of this Place, which he calls *Limpoa*, inſtead of *Liampo*, by which I find it mentioned by other *European* Writers, gives us the following Story, which I believe to be true, and which therefore I ſhall relate in his own Words: "Here the *Portugueze* were once well ſettled, and had a numerous Colony, when "the *Chineſe* were Maſters of their own Country, and the *Portugueze* of the Seas. It is reported, that they had above one thouſand *Portugueze* "Families ſettled in *Limpoa*, and were governed by their own Laws. Their Trade through *China* and *Japan*, which they carried in Shipping "to *India* and *China*, made them prodigiouſly rich, which brought them into Luxury and Debauchery, and at laſt was the Cauſe of their Ex"pulſion from *Limpoa*. They began to be notorious Raviſhers of Women. They would go into the Country Villages, and carry off young "Virgins by Violence from their Parents, and when they had abuſed them as long as they pleaſed, ſent them back to their Friends. Many "Complaints had been made, but no Redreſs could be obtained. At length, when a Parcel of Virgin Hunters had gone into the Country, "upon an Expedition of that Nature, the Peaſants fell on them, and killed every Man. This Slaughter made the *Portugueze* very loud in "Complaints, and demanded Juſtice to be done on the Peaſants. The Peaſants made ſolid Replications to the Complaints of the *Portugueze*, "and deſired their Caſe might be laid before the Emperor; which was accordingly done, and the *Portugueze* were ordered to clear themſelves "of the Crimes laid to their Charge, and they not being able to do it, were baniſhed *Limpoa*, but had Liberty to carry off their Effects; and "thus ended the moſt opulent Colony at that time in the World."

" Henceforward, ſo long as the Sun ſhall ſhine upon the " Earth, let not any Chriſtian be ſo hardy as to ſet his " Foot in *Japan*; and be it known to all the World, that if " King *Philip* in Perſon, the God of the Chriſtians, or the " great *Xaca*, one of the firſt Deities of *Japan*, ſhall pre- " ſume to break this Ordinance, he ſhall pay for it with his " Head." They then gave theſe poor People an old Ship to return in to *Macao*, which they choſe rather than to be put on board any of the five *Dutch* Ships that were then on the Coaſt, and offered to ſet them ſafe on Shore in that Port[g].

In the Year 1641, arrived at *Macao* from *Europe* Don *Antonio Ferreyra*, with the News of the Revolution in *Portugal*, and that Don *Juan* Duke of *Bragança*, had mounted the Throne, and aſſumed the Title of *John the Fourth*, to whoſe Obedience they readily returned, and as a Mark of their Loyalty, preſented him with two hundred Braſs Cannon, and a vaſt Quantity of Ammunition. This Monarch, in the Year 1646, thought fit to make another Attempt in Favour of the City of *Macao*, and ſent Don *Gonzalo Sequeyra* as his Embaſſador to the Emperor of *Japan*, to inform him, that *Portugal* no longer continued ſubject to the Crown of *Spain*, which as it was the principal Occaſion of the Nation's being prohibited all Commerce with the *Japoneſe*, he hoped that a good Intelligence would now be reſtored between the Citizens of *Macao* and the Subjects of his Imperial Majeſty. The Embaſſador was very civilly received, and an Expreſs ſent to Court with the News of his Arrival. About a Month afterwards a Courier arrived with the Emperor's Anſwer, which was to this Effect: That his Requeſt could not be granted, but that he and all that belonged to him had free Liberty to depart.

In the Year 1685, another favourable Opportunity offered, which the *Portugueze*, with great Alacrity, embraced: A *Japoneſe* Veſſel being driven by a Storm from their own Coaſt, was forced to take Shelter in the Port of *Macao*, where thoſe who were on board it met with a very kind Reception, and having been entertained at the publick Expence, till they were recovered from the Hardſhips they met with at Sea, and were then put on board one of the beſt Veſſels belonging to the Port of *Macao*, and ſent back to their own Country. On their coming to an Anchor in the Road of *Nangazaqui*, and ſending the *Japoneſe* on Shore, they received a Meſſage from the Magiſtrates, importing, that they were obliged to them for this kind and generous Return, but that for the future they would adviſe them not to give themſelves the Trouble of ſending home any more of their People, ſince it would not anſwer their Ends. Since that Time the City of *Macao* has declined very much, and though it is at preſent in a better Condition than it has been, yet it is far from being ſo conſiderable as in the ſixteenth Century, as we have already ſhewn the Reader in another Place. But that it may poſſibly make a better Figure than it does, we ſhall hereafter render probable, when we come to ſpeak of the preſent State of the *Portugueze* Dominions in this Part of the World.

17. In the Year 1521, *Magellan* diſcovered the *Ladrone* Iſlands, near thoſe which he called the *Archipelago* of Saint *Lazarus*, becauſe he diſcovered them on the Feaſt of that Saint. The *Portugueze* arrogate to themſelves this Diſcovery, becauſe he was their Countryman, though in the Service of the Crown of *Spain*; and on the other hand, the *Spaniards* challenged the Diſcovery of the *Moluccas*, becauſe *Magellan* went to them from *America* in their Service; but without doubt this Title was wrong placed, ſince, as we have ſhewn, the *Portugueze* had diſcovered them long before. It cannot indeed be affirmed, on any good Authority, that the *Portugueze* had before this time viſited the *Ladrone* Iſlands; but it is very certain, they made ſeveral Voyages thither afterwards, and did not think them ſo deſpicable as they are now eſteemed; but on the contrary, drew from thence Things of great Value; and the Reaſon I have mentioned them here is, that I might have an Opportunity of acquainting the Reader, that when this Nation firſt ſettled in the *Moluccas*, they were informed by the Inhabitants, that from theſe little Iſlands they were wont to receive conſiderable Sums in Silver, and the very fineſt Emeralds they had in Exchange for Spices.

The *Portugueze* were in Hope of finding, according to this Information, Mines of Silver and precious Stones amongſt them; but on the cloſeſt Search, could meet with neither, which was the true Reaſon they never made any Settlements there. But this Account affords us room to conjecture, that before the *Portugueze* penetrated thus far into the Eaſt, there had been ſome Commerce between theſe People and the *Americans*, from whom they might receive both Silver and Emeralds. This is a Point that deſerves mature Conſideration, becauſe, if there be any Truth in this Conjecture, it will give ſome Light into the Means of peopling *America*, which hitherto has perplexed the ableſt Enquirers into ſuch Subjects. It is true, that at firſt Sight there ſeems to be no great Authority for this Conjecture, ſince it is founded on the Report of the Inhabitants of the *Moluccas*, who were, according to the beſt Accounts we have of them, a rude and barbarous People. Yet let them be ever ſo rude and barbarous they could not be miſtaken as to a Matter of Fact; they had Emeralds amongſt them, and as their Country did not produce them, they muſt know from whence they had them; and ſince this could be learned no other way but from theſe People, there ſeems to be no Reaſon why we ſhould not accept of their Account.

The Conjecture, however, does not reſt upon this alone, but upon another Fact, which cannot be diſputed; and it is this, that there are no Emeralds to be found in any of the Countries in the *Eaſt-Indies*, and yet they were ſo common there, when the *Portugueze* came firſt into thoſe Parts, that they brought conſiderable Quantities into *Europe*, from whence grew the Diſtinction of Oriental and Occidental Emeralds; whereas in Truth there never were any that could be ſtrictly and properly called Oriental, becauſe, as I obſerve, they are not the natural Produce of any Country in the Eaſt; and yet in another Senſe they might be very well ſo called, becauſe they came firſt to us from the Eaſt. I cannot help adding to this Obſervation another, which is, that there is ſome Reaſon to doubt, whether the Inhabitants of the *Ladrone* Iſlands were always ſo rude and barbarous as the *Portugueze* and *Spaniards* found them; and my Reaſon for advancing this is, becauſe I find the beſt *Portugueze* Writers agree, that the *Chineſe* had been Maſters of the *Moluccas*, and very probably of theſe Iſlands alſo, as they certainly were of ſome of the *Philippines*; and if ſo, then very probably they were more civilized while under their Dominion, and grew rude and barbarous by their being deſerted by them, and left to themſelves[h].

This will appear ſtill the more probable, if we conſider on the one hand what the *Chineſe* Writers tell us of their Emperors contracting their Dominions from Maxims of Policy; and on the other, what appears very clear to us from what we know with Certainty of their Hiſtory, which is, that the Empire had been ſubverted by the *Tartars*, and conſequently their Œconomy totally diſturbed before the *Portugueze* came into the *Indies* at all. What I would conclude from hence is, that poſſibly we may be miſtaken in our Notions of theſe Countries, and that therefore it may be worth while to enquire more narrowly into this Matter, which may poſſibly lead us to ſome kind of Evidence of an Intercourſe between the *Eaſt* and *Weſt-Indies*, before either were known to us by the Paſſages now in Uſe. But let us for the preſent return to the Diſcoveries of the *Portugueze*.

---

[g] It ſeems a little extraordinary, that the Emperor of *Japan* ſhould treat theſe People with ſo much Severity, when it appears from this very Account, that Juſtice is as regularly adminiſtered in his Dominions as in any Part of the World; but in all human Probability, he was induced to uſe them in this Manner by the Repreſentations of the *Dutch*, as to the Power of the King of *Spain*, and his Intentions of reducing both the *Indies*.
